—Bronze Star Medal . . . for meritorious service in connection with military operations . . . from 17 July 1944 to 8 May 1945 in France, Luxembourg, Belgium and Germany. Through his professional skill and sympathetic understanding, he has maintained a superior standard of health in his battalion. He has demonstrated initiative and diligence in furthering the general welfare of those with whom he served, and without thought to his own interests. His devotion to high medical standards has spurred those working under him to emulate his zeal, and is in keeping with the best traditions of the armed services. . . .

Lt. Col. Charles P. Sheldon, MC (*ES* 1931)—Bronze Star Medal . . . for meritorious achievement in Leyte, Philippine Islands, from 29 January 1945 to 6 March 1945, in connection with military operations against the enemy. As Chief of the Hospitalization Section, Office of the Chief Surgeon, United States Army Services of Supply, Lieutenant Colonel Sheldon was responsible for the supervision and planning of the hospitalization program of a major base. His advance calculations anticipated the requirements of developing operations with such accuracy that adequate base hospital facilities were provided to hospitalize all casualties from local operations and to provide care for a high percentage of all patients evacuated during the Philippine Islands campaigns. By his sound professional knowledge and devotion to duty, Lieutenant Colonel Sheldon was instrumental in providing important services for the victorious armies in the Southwest Pacific. . . .

Lt. Col. Eugene R. Sullivan, MC (*EM* 1936 & *P* 1937)—Legion of Merit . . . for meritorious services from June 1943 to August 1944. Lieutenant Colonel Sullivan surveyed the need for transfusion of fresh whole blood in the surgical treatment of the severely wounded and formulated plans for the organization, equipment, laboratory techniques, and overall operations of the blood bank system. He applied his advanced skill to the technical training of these units and his contribution helped to make possible the collection, from within the Theater, and distribution to the 5th and 7th Armies of more than 35 tons of blood without known error, mishap or spoilage. . . .

At a meeting of the Board of Trustees held on September 21, it was voted to appoint:

Dr. James A. Martin as Assistant Resident on the Radiological Service for the term beginning April 1, 1946;

Dr. Curtis Prout as an Assistant in Medicine.

The Trustees also voted to appoint the following Interns for the term beginning April 1, 1946:

Medical

James H. Averill
Willard Dalrymple
James H. Donald
John T. Finkenstaedt
John G. Freymann
Frederick C. Goetz
Rita M. Kelley
Gale H. Keyes
George W. Mellinger
George F. Odland
William D. Sohier, Jr.
Bernard G. Stall, III

Surgical

Armand L. Bengle, Jr.
Ernest S. Crawford
Thomas H. Green, Jr.
Laurence K. Groves
Falls B. Hershey
Arvil J. Hinshaw
Mahlon B. Hoagland
Edward V. Johnston
George H. Lawrence
Isaac V. Manly
Joseph K. Maloy
George S. Richardson
Clifford J. Straehley, Jr.

The General Executve Committee, at their meetings on September 19 and 26, voted to restore to their former positions on the Staff:

Dr. Leo B. Burgin, Assistant Physician to Children's Medical Service;

Dr. Edward G. Thorp, Assistant Physician.

The Committee also voted to appoint:

Dr. Alexander Albert as Clinical Fellow in Medicine;

Dr. John J. Bandeian as Graduate Assistant in Gynecology;

Dr. Nancy L. R. Bucher as Clinical Fellow in Medicine;

Dr. Alexander O. Haff as Graduate Assistant in Radiology;

Dr. Dinor W. Invernizzi as Clinical Fellow in Medicine;

Dr. Woodrow W. Schier as Graduate Assistant in Medicine;

Dr. Thomas J. G. Tighe as Graduate Assistant in Pathology;

Dr. Enrique Vivas-Salas as Graduate Assistant in Medicine.

Everyone will be relieved to know that Capt. James K. Keeley, MC, AUS (*NS* 1937) has at last been liberated from a Japanese prison camp. He had been held by the Japanese Government since 1942.

A few who have appeared at the Hospital recently:—

Major H. Thomas Ballantine, Jr., MC (*WS* 1939)
Lt. Col. Henry K. Beecher, MC (*WS* 1934)
Capt. Richard S. Cosby, MC, AUS (*EM* 1940)
Miss Betty Dumaine
Capt. Daniel S. Ellis, MC, AUS (*EM* 1941)
Col. James E. Fish, MC (*ES* 1930)
Major James A. Halsted, MC (*WM* 1932)
Lt. Irad B. Hardy, Jr., MC, USNR (*ES* 1939)
Col. Donald S. King, MC (*EM* 1920)
Lt. Col. Frederick K. Poulin, DC (*Dn.* 1942)
Major Charles L. Short, MC (*WM* 1930)
Lt. Col. Moses S. Strock, MC (*oral s.*)
Capt. Adney K. Sutphin, MC, AUS (*WM* 1943)

John Szerejko, who was so severely wounded that several surgical operations were necessary, is back on duty as an orderly at Baker Memorial.

The *New York Times* has given us permission to quote from an article by Sam Pope Brewer, published in its June 10 issue. The article is entitled "German decline in surgery noted", and contains statements made by Col. Edward D. Churchill, MC (*WS* 1922), based upon his inspection of German hospitals.

The German handling and healing of war wounded lags twenty years behind American methods, Col. Edward D. Churchill, Allied Mediterranean Forces' Surgical Consultant, said . . . after he inspected the wounded in former German hospitals.

Germany, once the world's acknowledged leader in surgery and medicine, dropped back under the paralyzing effect of the Nazi regime to a point where one leading German Army surgical consultant . . . told American investigators that he regarded the outcome of wounds in this war to be identical with conditions he observed in World War I. American recoveries, on the other hand, improved phenominally, thanks to methods that the Germans had not even attempted, such as field operating tents up at divisional clearing stations, the highly developed use of blood transfusions and the high standards of antisepsis in the field.

GERMAN EQUIPMENT OUTDATED

With Lt. Col. Howard Snyder, Surgical Consultant of the United States Fifth Army, Colonel Churchill . . . inspected six German hospital areas and examined many wounded who had been treated in German hospitals. As an example of the conditions he found in the German areas, Colonel Churchill said that of forty serious chest wounds picked at random, thirty-seven showed infection, while the American patients' average was well below 10 percent.

For blood transfusions the Germans used an antiquated syringe-type apparatus discarded years ago by the Americans. The most astonishing point, Colonel Churchill said, was that the Germans had not realized the possibilities of transfusion and would not believe, until the Americans gave a demonstration, that a single man could successfully receive more than 600 cubic centimeters.

The American investigators, who knew of the German conditions in the pre-Hitler days, were shocked at the apathy and ignorance of today's German doctors and at the complete lack of pride in achieving professional results. Technical procedure remains the Germans' focus of interest, Colonel Churchill said, and "pre-operative and post-operative care and the intelligent use of other aids to operative measures remain in the shadows."

CHEST WOUNDS OVERCOME

The fundamental difference found between the American and German systems is that the Americans have a systematic, continuous routine from the moment of wounding until the highest possible degree of restoration to health. This concentration on "reparative surgery" as Colonel Churchill calls it, results not only in a reduction of deaths from wounds but also in a great reduction in disabilities.

Infected chest wounds, which after World War I left hundreds permanently hospitalized with great gaping wounds, can now be handled so that within a few weeks the men are completely restored with normal respiratory systems.

The Germans' methods, on the other hand, are characterized by a lack of direction or any general and definitive policy in professional methods, Colonel Churchill said. The individual surgeons, he said, carried on "just about as they pleased" and field surgeons were inclined to pass over extremely serious cases with the idea that the injured men would die anyway.

The studies made during the past months convince him that the American wounded receive the highest standard treatment of any in the world and have the best chance of virtually complete recovery.

* * *

Dr. Means sent us this clipping from another *News*—this one published at the Naval Center, Bethesda, Md. We quote:—

> Capt. Clyde L. Bozart, Med. School Exec., read it, thought of euthanasia. He swallowed, read the following again:
>
> "It has been arranged for myself and two corpsmen to shoot two patients at Newton D. Baker, Martinsburg, West Va. This will involve one day's absence from the Hospital. It is requested that the attached pass requests be approved."
>
> It was signed by Lt. W. C. Lown.
>
> Relax, patients, Lieutenant Lown heads the motion picture lab at the Center.

And, of course, you've recognized the name as that of the head of our Photographic Laboratory who is on leave of absence.

Lt. Col. Elbert L. Persons, MC (*EM* 1929) sends a change of address to 723 Anderson St., Durham, N. C., and calls himself a "soon-to-be (29 Nov.) civilian M.D.! — one of the luckier members of the 65th General Hospital, thanks to that second 12 points, now 30 months old."

All material of a military nature in every issue of THE NEWS is first cleared for publication by the local Public Relations Department of the Army or Navy.

MASSACHUSETTS EYE & EAR INFIRMARY

Dr. Percy E. Ireland (*Oto-Lar.* 1935) came for the New England Meeting. He has just been released from the Canadian Army after five years of overseas service. His rank was that of Lieutenant Colonel. He saw service in England, Africa, and Italy, and was Ear, Nose and Throat Consultant to the Canadian Forces overseas. Dr. Ireland is now back in civilian life and is at the University of Toronto Hospital.

Comdr. John P. Macnie, MC (*Oph.* 1929) has been in service in the Pacific Area for three years. We understand that he expects to return to the States in the very near future.

Dr. Frank D. Carroll (*Oph.* 1935) came in to see us recently. He is associated with the Eye Institute at the Presbyterian Hospital, New York.

A letter to Dr. Schall from Lt. Richard Barton, MC (*Oto-Lar.* 1945) tells where he was last August.

Dan Reagan used to tell me that the Eye and Ear would seem pretty good to me after I had been away a few months. I am finding this to be all too true.

My Navy career thus far has been short on medicine in general and oto-laryngology in particular, except for five busy days spent at St. Albans. The operating schedule there included at least one SMR and six local tonsillectomies daily. The Navy does all its tonsillectomies under local. In addition, we had two simple mastoidectomies — one with sinus thrombosis and peri-sinus abscess and the other with a large extradural middle fossa abscess. Both cases had been going about six weeks and had received chemotherapy most of that time.

However, all this lasted briefly and I soon found myself attached to a division of destroyer-escorts. The ships were overhauled in New York, changing the anti-submarine gear that had been used in the Atlantic to anti-aircraft equipment for the Pacific.

Then I spent a month in the Atlantic, visiting Cuba, Jamaica, Porto Rico, etc. This was a most enjoyable cruise, during which I developed a deep respect for the strength of the U.S. Navy. I hadn't even seen the Pacific Fleet then!

Now, after a month in the Pacific, I am even more proud of our country's ships and bases. They are amazingly wonderful to me. The Navy which this country has built up remains an awesome force, the like of which the world has never before seen.

Destroyer-escorts are small ships and very rough. My semicircular canals have been vigorously stimulated many times! We have two types of duty — one, as a "killer group" of six, tracking submarines; and two, working as a screen for a baby carrier. This has proved rather interesting.

I am on the staff of the Commander of the Division, and the health and sanitation of the six ships are my responsibility. There are about 200 men to a ship, which gives me about 1200 men to care for. Each ship has a Chief Pharmacist Mate and a Pharmacist Mate. These men are quite remarkable and extremely valuable. They have a pill for every symptom and they can treat anything from athlete's foot to falling hair. They give all the inoculations, teach first aid, etc., and are really an omnipotent bunch!

In order to train large numbers of these men in a short time, the Navy, like the Army, has gone in heavily for "audio-visual" education. To me their training films are masterpieces that open up the field of education, especially medical education, for great improvement. "March of time" has done some especially good ones for the Navy. I am certain much more of the medical curriculum could be absorbed were instructions given in this fashion.

Remember me to everyone around the Infirmary. I hope it won't be too long before I see you again.

Dr. Schall has passed on another letter — this one from Gaston N. Duclos (*Oto-Lar.* 1943 & *Oph.* 1945).

Here is a summary of my activities since I left Boston:

On April 1 I joined the Army and went for training at Camp Borden, near Toronto (something like Carlisle). I remained there for six weeks.

Then I was posted at the Quebec Military Hospital, in charge of the E.E.N.T. Department. I enjoyed my stay there very much. It was near home, I was working with my classmates of Medical School, I was dealing with good cases, and kept my hands in the surgical field.

On July 20 I was temporarily transferred to Regina, Saskatchewan as E.E.N.T. Consultant for the Province of Saskatchewan. I am doing purely desk and paper work: I evaluate the E.E.N.T. disabilities of the returned men from overseas, determine their incapacity, and recommend compensation or advise surgery. This type of work gets to be very uninteresting and even dull. I am anxious to return to a large hospital and do some more surgery. I expect to be back east by fall and am looking forward to a good hospital posting. I will probably end up in practising in either Quebec City or Ottawa.

I joined the Army with the rank of Captain and should have my Majority in October. I expect to be discharged by next May or June.

Best regards to everyone at the Infirmary.

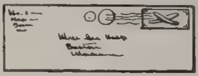
MASSACHUSETTS GENERAL HOSPITAL 1811

New addresses:—

Lt. Col. Frank L. Bauer, MC (*P* 1941), 110th Evacuation Hospital, APO 403, c/o Postmaster, New York, N. Y.
Major Howard C. Coggeshall, MC (*WM* 1935), Eighth Service Command, Army & Navy General Hospital, Hot Springs National Park, Ark.
Lt. Col. Wilfrid J. Comeau, MC (*a. in M* 1937-39), 48 Penobscot St., Bangor, Maine.
Capt. Lewis K. Dahl, MC, AUS (*r.p. WM* 1942), M.D.R.P., Brooke General Hospital, Fort Sam Houston, Tex.
Lt. John J. D'Urso, MC, USNR (*r.p. D* 1944), Dispensary, Naval Receiving Barracks, Naval Training and Distribution Center, Shoemaker, Cal.
Lt. Joseph A. Elliott, Jr., MC, AUS (*M* 1945), Medical Section, Unit A, Separation Center 45, Indiantown Gap Mil. Res., Pa.
Lt. Donald J. Emery, MC, AUS (*res. fel. D* 1941), Hdqrs. Squadron, 459th Air Service Group, APO 133, c/o Postmaster, New York, N. Y.
Lt. Sheridan S. Evans, MC, AUS (*ES* 1945), McCaw General Hospital, Walla Walla, Wash.
Capt. Henry S. Fuller, MC, AUS (*WM* 1943), U.S.A. Typhus Commission, APO 218, c/o Postmaster, New York, N. Y.
Lt. Col. Doris Knights, A.N.C., Lovell General Hospital, Fort Devens, Mass.
Col. Alexander Marble, MC (*r.p. WM* 1930), Consultant in Medicine, Hdqrs. Eighth Service Command, Dallas 2, Tex.
Capt. John R. McDaniel, MC, AUS (*ES* 1940), Savannah, Mo.
Lt. Richard B. Pippitt, MC, USNR (*EM* 1938 & *P* 1939), Bureau of Medicine and Surgery, Navy Dept., Washington, D. C.
Capt. Richard V. Riddell, MC, AUS (*ES* 1943), Co. D, 3rd Med. Bn., APO 3, c/o Postmaster, New York, N. Y.
Capt. Lloyd S. Saltus, MC, AUS (*CM* 1938), 11 Headley Road, Morristown, N. J.
Asst. Surg. John W. Smillie (*ES* 1944), U.S. Public Health Service, Nutrition Section, Bethesda Station, Washington 14, D. C.
Capt. Paul E. Spangler, MC, USNR (*WS* 1925), *U.S.S. Repose* AH-16, c/o Fleet Post Office, San Francisco, Cal.
Capt. Somers H. Sturgis, MC, AUS (*ES* 1933), Medical Replacement Pool, Fort Dix, N. J.
Capt. Robert H. Talkov, MC, AUS (*res. fel. M* 1942), Army & Navy General Hospital, Hot Springs, Ark.
Lt. John F. Tannheimer, MC, USNR (*r.p. P* 1944), U.S. Naval Hospital, Chelsea 1, Mass.
Lt. Jesse E. Thompson, MC, AUS (*ES* 1943), Ashford General Hospital, White Sulphur Springs, W. Va.

Brief bits:—

Lt. George H. Carter, MC, AUS (*M* 1943) is at Pine Camp, N. Y.
Capt. Duane H. Mitchel, MC, AUS (*M* 1943) has been assigned to the Occupation Forces in Korea.
Lt. Royal S. Schaaf, MC, AUS (*WM* 1943), who is stationed at Fort Lewis, Wash., is very proud of a new daughter.



A letter addressed to THE NEWS, but headed "Dear friends at the Mass. Eye & Ear Infirmary" has come from Capt. William F. Donoghue, Jr., MC, AUS (*Oto-Lar.* 1942 & *Oph.* 1944). It was written from Walter Reed General Hospital.

I guess it will still be a long war for most of us who must measure its termination by our return to civilian life. However, for those of us who did our tours of duty in the States it has been an easier war, I'm sure, than for those who spent years overseas.

While at home in July I finally received my captaincy, although I did not know it until the last day of my leave.

Last week I saw Katharine McMahon Mazzarano, whose departure from the eye operating room two years ago left a vacancy so difficult to fill. She is well and happy, and is supervisor of the operating rooms here at the Episcopal Eye and Ear Hospital.

Nancy and Frank Wheelock of the Terry Laboratory and ES [1943] service respectively are now here at Walter Reed. Frank is assigned to an orthopedic ward for convalescent patients and is justifiably unhappy about it.

Colonel Hampton [*c.R*] is still Chief of X-ray here and we see him quite often.

I hope we'll all be home soon.

In this letter to Dr. Faxon, Lt. Col. Albert G. Engelbach, Commanding Officer of the 250th Station Hospital, describes his present setup in Regensburg, Germany.

Much land and water have passed under my feet since I wrote you last, and many place names have become a reality—some a sorrowful mess in comparison with what they used to be.

For a while it seemed that Sunday was always a moving day. On a Sunday I left behind in England all the things I had become fond of there. After a visit at LeHavre and a rest in camp for the remainder of the week, come Sunday it was again a move across France to Verdun. Each move was toward the east, and I had about come to the conclusion I might be heading for China. But, no—here I am in Regensburg. Out through the hospital window I can watch the waters of the Danube rushing along at their breakneck speed. Across the stream, directly in view, the Regen empties itself into the Danube.

The hospital is open for business and the force is busy, though not as busy as we were. It is a civilian hospital, built in 1930 and '32. Both buildings have the most modern appointments and are generally more adaptable and more like civilian hospitals than any I have seen used by the Army to date. Operating rooms are most modern. No air conditioning, but sufficiently pleasant to make the eyes almost pop out of those who have been working in the OR. The rooms, although designed for one or two patients, are going to have more than that; but the square footage allotted will be sufficient to meet Army standards. The Out-Patient Department is being adapted from a portion of the hospital which was designed for bath therapy. Major problems which presented themselves are quickly clearing and I suspect that shortly I shall have naught but the little ones to bother with.

Although the trip here did not include going on into Munich, some day I shall have a chance to get a good look at that town. We did, however, pass alongside Dachau, one of the concentration camps from which so many prisoners had been released. There were no prisoners there when we passed through so I did not have a chance to see any of them. I am just as happy, for the description given me by others would indicate that it was not too pleasant. I did see some burning buildings, however, and gathered from a guard that that was the part which was the worst.

Nuernberg, which is not too far from here has been visited. This town shows more total destruction than any I have seen. I am told that the devastation was the result of forty minutes of bombing. Almost all the buildings within the walls of that old city are laid low. I also visited the Sports Plaz near Nuerenberg. The place is tremendous. I should judge that twelve football games could be held at one time and have room left for a couple of baseball games. This was little damaged by the war. Now it houses and is the concentration point for captured armament and vehicles.

Don't ask me how long I am going to be here. I don't know. How long would I like to stay? Well, I could be packed and ready to leave in an hour if the going were to get me home.

Later, in a letter to The News, Colonel Engelbach says:—

The News arrived today—time 11:20; devoured (before lunch) 11:59¼. Each issue is read carefully to learn what the other members of the family are doing and where they are located. That letter from [Comdr.] John Monks [*WM* 1931] was most interesting. It was told as only John could tell it.

As for myself and the hospital I am commanding—we are astride the Danube. I have yet to see the river in its blue mood as made famous in that Strauss waltz. Here it is swift and treacherous, green in color, and bordered on both sides by well cultivated farm land, except where it passes through a village or town. We are doing a general hospital business with plenty of patients. Fractures from jeep accidents, gallbladders, thyroids, chronic skin conditions, pneumonia, jaundice, enteritis, ear and eye conditions—well, almost anything you can think of comes in and gets the best attention possible.

Oh, yes—we have been designated as an Occupation Army Unit.

Our congratulations on the arrival of a son, and a mild reprimand for not keeping us up to date on his new assignments, resulted in this letter from Lt. John H. Peters, MC, USNR (*WM* 1943).

I have not let you know more about my new jobs because, to be frank, I am tired of new jobs. I have had so many ships (over 15 in nine months in Europe) and shore stations (over 20 in less than two years) that I have become trunk-happy. And now the Navy is asking me to do it again. A short time ago I received orders to a hospital in Georgia, but I have asked that they be cancelled. Thus far, my longest stay in any one job has been six months in Washington.

On June 11 my six months in Washington came to an end, and from there I went to Brooklyn, Newport, and Baltimore in connection with preparing the medical department of this ammunition ship for sea. On July 25 we were commissioned. We spent about six weeks in the Norfolk area, getting shaken down and outfitted with last minute supplies and repairs, and on September 8 took off for the Canal.

Unfortunately, our trip down was marred by a bit of engine trouble, and instead of heading for the Philippines, as originally scheduled, we are guests of the repair authorities here for an indefinite period. From here we probably go to Pearl Harbor, although the scuttlebutt has sent us 1) back to Baltimore, 2) to San Diego, 3) to San Pedro, 4) to San Francisco, 5) to New Orleans — so you can take your choice.

Best regards to all at M.G.H.

With war's end and high hopes of a speedy return home, many who have hitherto neglected to write are sending in reports of their whereabouts. One such is Capt. Charles L. Swan, Jr., MC, USNR (*WS* 1929). He has been aboard *U.S.S. Refuge* for many months.

Since leaving New York in November 1944, we have been operating with the 7th Fleet in the Philippine area. In the initial period we were busy shuttling about evacuating patients from Leyte. Later we lay at anchor off Leyte and Manila serving as a station hospital for the Fleet and the beach. We are now *en route* to Korea to evacuate prisoners of war. We hope soon to return to the States.

Am delighted to announce my promotion in rank to Captain.

Looking forward to seeing you all soon. Cheerio.

A release from Fifth Air Force Service Command, Okinawa, gives us the first bit of information we have had concerning Lt. Col. Thomas A. Warthin, MC, AAF (*a. M*) since he was stationed at Westover Field back in March 1944. The release says, in part:—

Thomas A. Warthin has been promoted to lieutenant colonel in the Medical Corps.

Currently in the Ryukyus, Colonel Warthin is Command Surgeon for the Fifth Air Force Service Command, which is the supply, maintenance, and engineering organization for the Fifth Air Force.

In addition to the silver flight surgeons' wings, Colonel Warthin wears the Asiatic-Pacific Theatre ribbon with four campaign stars and the Philippine Liberation ribbon with one campaign star.

Major Hilbert S. Sabin, MC (*r.s. U* 1941) makes his first appearance on our pages through this letter to Dr. George Gilbert Smith. Headed Ledo, Assam, it reads:—

Greetings from the land of "mystery and enchantment". I've been stationed here at the 20th General Hospital on the Ledo Road, approximately 40 miles from the Burma border, for the past six months. It's been a fascinating experience in many ways. We flew from New York, eventually arriving here via Casablanca, Tripoli, Cairo, Kurachi, and Delhi. I had a lay-over in Cairo for some time and an opportunity to see everything from the sphinx and pyramids to Shepherd's Hotel and the native dancers. The latter must be seen to be believed.

At the time of my arrival here the Burma Campaign was drawing into its final stages but we were still receiving a good many casualties, particularly among the Chinese, and even now are surprisingly busy. This unit was originally manned by personnel from the University of Pennsylvania. There's a splendid group of men on the staff, which has made life in the jungle bearable and even enjoyable. The physical setup is amazingly good. The wards and clinics are constructed of stucco, with tin roofs covered with palm thatching. We live in bamboo houses—known as bashas—which are extremely comfortable. Each officer has a Hindu bearer or "gentleman's gentleman" who performs such chores as making beds, taking care of the laundry, shining shoes, mixing drinks, and anything else one can think up for him to do—all for the princely sum of $12.50 a month, which to him is affluence beyond his wildest dreams.

I arrived here at the beginning of the monsoon season, during which blazing heat (as high as 130°) alternates with torrential rain, so that one remains soaking wet for one reason or another almost continually. Thus far I've managed to elude malaria, amoebiosis, scrub typhus, bilharziasis, Delhi boil, and the innumerable other delightful ailments endemic in this area.

The hospital is situated on a fair sized river near a fairly large mountain range. On a clear day one can see the Himalayas in the distance. Wild orchids, gardenias, papayas, mangoes, and bananas all grow in profusion in the jungle. The fauna include tigers, elephants, cobras, and jackals — the latter of which howl round our basha nightly like souls in torment.

After living out here any length of time one gets the impression that the Indian problem is utterly insoluble. Overpopulation, famine, disease, and religious taboos all combine to make efforts to better their lot the height of futility. Their agricultural methods haven't changed in the last thousand years and medical care — except for the wealthy — is unknown.

As you may well imagine, renal and ureteral calculi are extraordinarily common out here. It's a slow day when there aren't a few GI's giving birth to stones on the urological wards. Infections of all types thrive in this climate and I've seen a number of perinephritic abscesses and one large renal carbuncle — and on the whole have been quite busy. Have also, of course, seen a fair number of gunshot wounds of the kidney and urethra.

You can imagine our joy at the news of Japan's capitulation. I still can't believe we are no longer at war after all these years. Of course, going home is now uppermost in everyone's mind, but the chances of our being out of here before the first of the year seem rather remote.

I was shocked and grieved to hear of Bob Hurlbut's death in the Pacific. He was a splendid chap in every way and I know his loss is keenly felt by all who knew him.

Major Russell V. Fuldner, MC (*Or.* 1939) responded most satisfactorily to our "needling" of a few months ago. From Cushing General Hospital he writes:—

My thoughts have been only of retaliation since the reproof [for long silence] given me in the August issue of The News. Happily, I have just recalled that Heaven's worst punishment is to grant us our desires, and I hasten to pen the letter our editor has requested:

Soon after my last letter was published in The News I was sent to the Cannibal Islands. On arrival I was heartened to learn that the name had been changed to the Fiji Islands and that the native dietary had undergone a pleasing modernization. The Fijians turned out to

COL. EARLE STANDLEE, CHIEF SURGEON, CONGRATULATES MAJ. DANIEL J. HOLLAND, JR., AFTER PRESENTING HIM WITH THE BRONZE STAR MEDAL

> be kindly, hospitable people. Many of them—female and male—were of beautiful build from head down (or, as an orthopedist would say, from feet up). At Suva, the capital, are the Central Medical School and the Central Nursing School, where natives from that part of the South Seas received training as doctors and nurses. I was impressed by the earnest purpose of the students and by their general level of competence in assimilating foreign ways.
>
> My outfit in the Fijis was the 18th General Hospital, daughter by fission of the Johns Hopkins Unit. After a somewhat prolonged period spent mostly in prayer and meditation, we were moved across a large segment of the world to Assam, the place where India joins Burma. The oft-repeated sardine dialogue gained point but lost humor during this voyage: *"Going to join the swim to the Sardines' Picnic today?" "What! and be packed in like a bunch of soldiers?"* Our transport docked at Bombay, on the west coast, perhaps because the trans-Indian train trip was considered an excellent way of toughening us up. However, after the crowding aboard ship, the train seemed leisurely and spacious, like a bargain counter the week before Christmas.
>
> Assam's income appeared to be derived principally from tea, rice, and Americans. Near Burma the country becomes jungly; the large bamboo shacks which made up our hospital wards were well fitted to the scenery, but scarcely to anything else. Numbers of Chinese were about, acting inscrutable. As patients, they were cared for in American hospitals. We learned that the Chinese Army has fairly rigid views regarding narcotic trafficking—one Chinese patient who received a massive, meticulously applied bone graft for a tibial defect was executed two days later for opium smuggling. Here again we see the necessity for carefully taken histories. This incident occurred at another hospital, our own hospital receiving rather more medical than surgical casualties.
>
> Our older personnel in point of service were rotated home last spring. The wilds of Assam, on this shrinking sphere, were no more than a week distant from the airport in Washington, D.C. On returning to the States I was impressed first by the speed of the trains, and second by seeing civilian chow lines even longer than the Army's.
>
> My present berth at Cushing could not be other than pleasant and instructive: Major Bill Tobin [*Or.* 1939] and Major Nelson Hatt [*Or.* 1919] run the Orthopedic Service, and Dr. Smith-Petersen comes out to see us every so often. Like nearly everyone, though, I count my "points" as a miser his gold.

Comdr. Roy E. Mabrey, MC (*a. in S*) is back. From Chelsea Naval Hospital he writes:—

> After 20 months at Aiea Naval Hospital, Oahu, T.H., I was transferred back to Chelsea. Just after my arrival the much looked for Alnav came out with many promotions, including my own.
>
> Herb Adams [*ES* 1932], with whom I lived in Hawaii, has been assigned to a hospital ship, (*U.S.S. Tranquility*), and the last I heard was in Tokyo Bay.
>
> It is nice to be back, but there is still a lot of activity around naval hospitals.

The first word in over two years has come from Major William H. Lowell, Jr., MC (*a.r.p.* 1940). He writes this staccato note from Station Hospital, 112th AAF BU, Westover Field, Mass.:—

> THE NEWS has been following me from Burma, India, and the U. S. via Texas and Florida to here.
>
> Promoted to Major February 1944 while in CBI. Returned to the States March 1945. School of Aviation Medicine until June 1945, then School of Applied Tactics through July. After a short vacation in Vermont with the family, at long last assigned here to the Medical Service, after three years in the field.

Lt. Terry E. Lilly, Jr., MC, USNR (*ES* 1943) is aboard *U.S.S. Heermann*, berthed in Tokyo Bay. From there he sent us a delightful "UNCONDITIONAL SURRENDER" picture which is displayed on the foot-of-Treadwell-stairs bulletin board.

At last! This impressive letter from Lt. Comdr. Hugh Montgomery, MC (*EM* 1932), headed U.S. Naval Base Hospital 18, Guam.

> You are very kind to put it that way — that I must have many interesting things to write about. Most of us think that more interesting things are going on at home than here.
>
> As you probably know, this is my second time out — the first was aboard the *U.S.S. Solace* in the Southwest Pacific. Those were the tense days, with no preconceived idea about victory; and they provided the excitement of seeing many islands that are no longer in the news. Personally, I prefer those places to Guam. We have an excellent hospital here, and have the honor of taking care of great numbers of recent casualties, but the island is fast becoming another Pearl Harbor.
>
> I was here in time to get the Iwo Jima casualties that came through in enormous numbers. They were much like those from Guadalcanal, but lacked the effects of prolonged physical and mental strain that the systematic month-by-month bombings, shellings, and night fighting imposed upon those at the "Canal" and Tulagi. Few acutely maniacal patients came out of Iwo Jima or Okinawa. The latter was a bigger operation than any previously in the Pacific, but had no effects on patients not seen elsewhere. A considerable number of severely burned patients, especially from aboard ships struck by Kamikaze planes came to our hospital. We have had patients in large numbers from the *Ben Franklin*, the *Bunker Hill*, and the *Indianapolis*. The first two were nightmarish catastrophies, the last terrible in the proportion of loss of life. The patients from the *Indianapolis* were in the water about a hundred hours, with little or no food or drink, and had nasty cutaneous ulcers, generalized small pustules, and an occasional shark-bite. Perhaps the most tragic part of it was the hallucinatory experiences of those in the water, of seeing their ship below them and diving down to it. Nearly all those who survived are now in good shape, but still with us because of lack of transportation facilities occasioned by our needs for occupying Japan. We had patients from our hospital ship *Comfort* — especially sad because they were so very unnecessary. Some of the officers at this base had friends among the doctors and nurses who were killed. We are now getting officers and men who were prisoners in Japan. They are in fair shape and good spirits, but many had frightful experiences.
>
> I am rooming with Allen Brailey [*EM* 1930], who is leaving tonight for Tsingtao. John Monks [*WM* 1931] is back from Okinawa and I played tennis with him the other day. I was sorry to miss Myles Baker [*EM* 1930] when he came through here. Bunny Fay [*EM* 1929] is at one of the nearby Fleet Hospitals, and comes over to see us occasionally. We are lucky that Gordon Jones [*ES* 1939] was assigned to duty here at Base 18. He was on an LST for the past year or more in the Philippines, Iwo Jima, and Okinawa, and saw lots of action. He has taken over a burn clinic here and is doing beautiful work. (Shades of Cocoanut Grove.) Walter Garrey [*ES* 1933] has been through here several times on his way to or from Base Hospital 20 at Peleliu. I used to see Garrey in our old runs on the *Solace* from Espirita Santos (New Hebrides group) to New Zealand, when he was aboard the *U.S.S. American Legion* in the early Solomons campaign.
>
> Others who were Harvard Medical School, but not M.G.H., are our excellent Chief of Medicine, Capt. Ben Carr; our Chief of S.O.Q., about to leave for Stateside, Gene Owen; and at nearby NAMRU-2 (Nav. Med. Research Unit), Al Harris and Ken Emerson.
>
> I haven't seen Ben Tenney [*WS* 1927] since he left Mobile Hospital 5 in New Caledonia, where he always delighted me with his wisdom, but hear he was about to come out into the Pacific again this spring when his reputation as a Gynecologist found him out and he was put in charge of the Family Hospital at USNH, San Diego.
>
> Dave Halbersleben and I have worked here on chest wounds and wrote a little paper on our medical ideas. He was transferred to the *Solace* two months ago and has been enjoying her being repaired in Portland.
>
> All of the doctors out here, after experiencing the excitement of the news of the atomic bombs and Japan's setting sun, are eager to get home. Nearly all of us are reserves and want to get out of the service as soon as possible. We aren't sure we want to go back to just the same activities as before the war. We sense that enormous political changes should follow this war, are afraid their importance has not been sufficiently stressed in the press, and we wonder what parallel changes must take place in the doctors' responsibilities in practice, teaching, and research. But mostly we don't think — it is too hot and humid.

THE NEWS

No. 39 Boston, Mass. DECEMBER 1945

PATHOLOGY AND BACTERIOLOGY DEPARTMENT

Well, the old Path Lab is still doing business on Allen Street—yes, in the same antiquated structure built for James Homer Wright in 1896, just 50 years ago. The volume of work and the number of Staff and employees have grown "a bit" since then and there is now the first ray of hope that we may actually have a new building. A large building, to house not only the departments of Pathology and Bacteriology but also all the routine and research laboratories now scattered all over the hospital, is being contemplated. This would include modern animal farms and animal operating rooms. The two main obstacles in getting started are the finding of a philanthropic donor and agreement on the location.

During the past few years we have noticed that the number of surgical specimens sent to the laboratory has increased out of all proportion to the number of surgical patients admitted. In 1934 we received about 5000 specimens, and the surgical admissions to the General, Baker Memorial, and Phillips House totaled about 9000. In 1944 there were over 8500 specimens, a seventy percent increase over the 1934 figure, while the increase in surgical admissions (mostly in the Baker Memorial) was only ten to fifteen percent. The main reason for this discrepancy is the recent tendency to use diagnostic biopsies more freely. In 1934 biopsies made up only fifteen to twenty percent of the surgical specimens, whereas in 1944 they comprised about fifty percent of the specimens submitted. Two surgical specimens are now taken from many surgical patients — one a biopsy, and the other a specimen taken when the entire lesion is removed. The Radiological Department refuses, and rightly, to treat a patient until a definite diagnosis has been established by a biopsy. A large number of patients have biopsies taken while on medical wards. Now that endoscopy is used so extensively, except in cardiac, renal, and neurologic cases, most patients entering the hospital have either a bronchoscopic, esophagoscopic, peritoneoscopic, proctoscopic, or cystoscopic examination, almost always with a biopsy; and if none of these procedures is fruitful, a skin, lymph node, endometrial, cervical, or other biopsy is taken. The slogan of the Massachusetts General Hospital would seem to be, "Get a Biopsy". I do not decry this trend toward biopsies as a means of diagnosis. I believe it has produced a great improvement in the medical care of patients, and should be encouraged. The slogan might be changed to "Bigger and Better Biopsies".

The weekly C. P. C.'s, originated by Richard Cabot, continue to be popular, and during the past few years Service men stationed in and around Boston have been regular visitors. Because of the decrease in the number of our Clinical Staff, we have had to call more often on the remaining members to present the differential diagnoses and we are very grateful that they coöperated wholeheartedly. The publication of these Case Records in the *New England Journal of Medicine* means working against a "dead line" every week, and the fact that we have met this successfully is due almost wholly to the efforts "beyond the call of duty" of Miss Edith Parris. It is interesting to note that the subscriptions to the *New England Journal of Medicine* have increased during the past five years from 7,924 to over 17,000 and that a recent poll of the subscribers from the states of Connecticut, Ohio, Texas, Oregon, and Washington has shown that the Case Records is the most popular single item in the Journal.

In the summer of 1943, through the efforts of Colonel Walter Bauer, who was then Medical Consultant for the Eighth Service Command, under a grant from the Rockefeller Foundation, the Pathology Department provided the medical officers of about 100 installations in the Eighth Service Command with lantern slides of X-rays, gross specimens, and Kodachrome photomicrographs corresponding to previously published cases with which to conduct their own C. P. C.'s. This worked out so well that requests from other Service Commands forced us to ask the Rockefeller Foundation for funds to expand this project. This was immediately granted, and in the spring of 1945 we began shipping material including copies of the actual protocols for every medical officer in all nine Service Commands in this country. Thus, C. P. C.'s based on Massachusetts General Hospital cases were being conducted in most, if not all, of the Army hospitals in the country. This project is still in effect.

As in all departments, the war wrought havoc with the personnel problem. This was especially felt in the non-professional departments—secretaries, technicians, and dieners. The dieners problem was finally solved by the volunteering of a few of the "Conscientious objectors" during the periods when they were not on one of Dr. Butler's sea-water or malaria experiments.

The great loss to the professional staff was Dr. Mallory's entrance into the Service in the spring of 1943. As most of you know, he was pathologist to the Fifteenth Medical General Laboratory in Naples and served on a Medical research board investigating the Anuria problem in shock. He has just returned to this country, expects to spend a little time in Washington writing up his results, and hopes to be back with us by the first of the year.

During Dr. Mallory's absence, Dr. Sniffen and Dr. Castleman were assisted first by Dr. Mostofi, who left us after a year to enter the Army, then by Dr. Freiman, who resigned after a year because of illness, and now by Dr. Morris. Dr. Dienes and Dr. Kubik are still carrying on in their own inimitable manner.

The intern and resident situation, except for the shortening of each period from one year to nine months, has remained about the same. When Procurement and Assignment finally lets down the bar on the number of resident house staff, we are planning to increase our staff from three to six, as follows: three interns, two assistant residents, and one resident. Veterans will be eligible for any of these positions, as well as for two graduate assistantships of six months each.

Benjamin Castleman, M.D.,
Acting Chief

* * *

This fine letter speaks for itself.

Headquarters
Mediterranean Theater of Operations
United States Army
October 16, 1945

AG 201.22/034-P
SUBJECT: Commendation
TO: The Chairman of the Board of Trustees
Massachusetts General Hospital, Boston, Mass.

With the inactivation of the Sixth General Hospital after long overseas service in this command, it is fitting to extend to the Board of Trustees and the Staff of the Massachusetts General Hospital appreciation and commendation of this unit.

Established at Casablanca in the early phases of the North African Campaign the Sixth General Hospital formed the nucleus of medical service in Atlantic Base Section, North African Theater of Operations. The busy period at Rome and the subsequent establishment at Bologna continued to demonstrate the high standards of professional work maintained by its competent officers.

Credit is reflected on the officers and nurses of the Sixth General Hospital as individuals; the unit as a whole has brought great credit to the Massachusetts General Hospital.

Joseph T. McNarney
General, USA
Commanding

Here are the names of those employees who received pins on Ether Day
for ten years or more of service at the Hospital:

Dr. Edwin J. Kepler, Physician to the Mayo Clinic and Associate Professor of Medicine at the University of Minnesota, is spending a semi-sabbatical year at M.G.H. He has been appointed Physician pro tem to the hospital, and a Visiting Lecturer at the Harvard Medical School.

Dr. Kepler has been here before and is well known to the Medical Staff. He has made important contributions to the study of endocrinology, and his special knowledge in that field will make him very valuable to us, both in our research and in our teaching. It is very gratifying that Dr. Kepler elected to come here to spend his period of leave from Rochester.

* * *

A lectureship has been established at Johns Hopkins Hospital as a memorial to Miss Margaret S. Brogden, a graduate of their School of Nursing and Director of their Social Service Department from 1909 to 1931. To quote from their program folder:

"Under the terms of the memorial, eminent speakers will be invited to discuss the social aspects of medical services in the care of the patient."

On October 22 Dr. Means delivered the memorial lecture. His subject was "The clinical teaching of social medicine".

* * *

Capt. George F. Emerson, MC, AAF (*ES* 1939) stopped in at the NEWS office the other day. He had been on sick leave and was soon to return to his same assignment in San Antonio. As he put it, "I have fought the war for three years, in one place, on the same ward."

"Is THE NEWS going to continue now that the war is over and our men are coming back?"

That question has been asked so often it seems advisable to make this announcement. The answer is YES.

Countless letters during the past year or more have urged the continuance of the paper. The following is a typical example. It came from a 1925 alumnus who is out in the Pacific.

> I have been giving a lot of thought to the future of THE NEWS. I am sure you would be interested in what some of us are thinking along that line. In the first place, THE NEWS has been one of the nicest experiences of this war for me. It has enabled me to contact a good many friends I had not seen or heard of for many years. It has told me of other old friends whose paths did not cross mine. In the department reports it has given me an inkling of what was going on in the hospital. It would be a crime to let such a wonderful medium of contact die with the end of the war. It can be just as useful during peacetime in keeping our big family together as it has been in wartime. It can be of further service to those of us who are seldom permitted to return to the hospital. I am thinking of the tremendous amount of scientific progress that is constantly going on at the M.G.H. It is hard for those of us not there to keep abreast of what you are doing. It would be wonderful to have the departments enlarge their reports to cover the results of the many projects going on at the hospital and to evaluate them for us, and to give us the references to all the papers published by members of the Staff so we can know what you are doing. I can visualize a tremendously valuable organ for the perpetuation of the great MGH family. Let's not miss the opportunity.

It is reasonable to expect that THE NEWS will gradually assume a different tone when all your letters contain accounts of your professional interests, achievements, and problems instead of reports of your wartime experiences; and besides fulfilling the above function as a sort of clearing-house for your general correspondence, THE NEWS will take on more of the features of an intramural publication—all of which should be of great interest to every alumnus, wherever he might be.

Yes, THE NEWS is going to continue. As one who is very well known by every MGH-er put it the other day, "Why, I believe our Staff and alumni would rise in protest — almost to a man — if we should suggest such an idea as stopping THE NEWS."

For your consideration:

Long before the war ended, there came from all quarters of the globe proposals that a bound volume of all the Newses, up to date, be published. Various suggestions regarding its format have been submitted, many of which have been incorporated into a tentative plan for the book. At the moment, it seems as if this first volume might end with an issue three or four months from now, at which time we hope most of our men will have returned from overseas. There will be a dedicatory page, a foreword, some special illustrations, and a really useful and complete index of both authors and those mentioned in letters by the writers. The main body of the volume would run to approximately 270 pages. It would be a photostatic reproduction, bound in cloth. A fairly close estimate as to the actual cost of publication is $3.50 or $4.00 per book on a thousand-copy issue.

Many of our readers feel that this month-by-month account of the scientific contributions of our Staff and alumni to World War II and the participation of MGH-ers in military activities all over the world produce, when assembled in consecutive order, a cumulative effect too valuable to lose.

For obvious reasons, it will be necessary to carry the plan on a subscription basis. If you are interested in having such a book, please address your desire to THE NEWS. As soon as enough subscriptions are received to warrant the issue, the plan will be launched.

At their meetings on October 5 and 19 and November 2, the Board of Trustees voted:

To accede to Dr. J. Dellinger Barney's wishes that he be relieved of his duties in the Urological Out-Patient Department and to express the thanks of the Trustees and the General Executive Committee for his assistance during the war period;

To accept with regret the resignations of Dr. Champ Lyons, Dr. R. Bretny Miller, and Dr. Carl S. Sawyer.

To appoint:

- Dr. Charles H. Burnett as Chief Medical Resident, effective as of December 1 or 15, depending on his release from the Army;
- Dr. Davis W. Compton as Resident in Anesthesia, beginning November 1;
- Dr. Daniel S. Ellis as Assistant in Medicine;
- Dr. John J. Rupp as Assistant Resident in Anesthesia, beginning April 1, 1946;
- Dr. John B. Stanbury as Resident on the Medical Service, beginning January 1, 1946;
- Dr. Beverly Todd Towery as Resident on the Medical Service, for nine months beginning January 1, 1946;
- Dr. William A. Weiss as Senior Fellow in Anesthesia, effective November 1, and Dr. Gerald Shortz as a Fellow in Anesthesia, beginning December 1.

The Trustees also voted:

To create the positions of Maxillofacial Prosthetist and Periodontist and to appoint Drs. Henry J. Carney and Henry M. Goldman, respectively, to these positions;

To create a new title of Physician pro tem and to appoint Dr. Edwin J. Kepler to the position.

The General Executive Committee, at their meetings during October and on November 7, voted to appoint:

- Dr. Jane B. Cadbury as Graduate Assistant on the Children's Medical Service for a period of six months, effective as of September 24;
- Dr. Jacques A. Carlotti as Clinical Fellow to work with Dr. Paul White;
- Drs. Hugh Macdonald, Harry B. Miller, and James L. Spencer as Graduate Assistants in Dermatology.

The General Executive Committee voted to reappoint:

- Dr. James H. Currens as Graduate Assistant, assigned to the Syphilis Clinic;
- Dr. Clarke Staples as Graduate Assistant in Surgery.

The General Executive Committee report the return to the Staff of the following men, as of the dates given:

Dr. Marshall K. Bartlett, Assistant Surgeon	Nov. 1
Dr. Henry K. Beecher, Anesthetist	Oct. 3
Dr. Richard J. Clark, Assistant in Medicine	Dec. 1
Dr. Milton H. Clifford, Assistant Physician	Nov. 10
Dr. Walter E. Garrey, Assistant in Surgery	Oct. 11
Dr. James A. Halsted, Assistant in Medicine	Nov. 19
Dr. T. Stewart Hamilton, Assistant Director	Dec. 1
Dr. Sylvester B. Kelley, Associate Visiting Urologist	Nov. 1
Dr. Alfred Kranes, Assistant Physician	Nov. 1
Dr. James R. Lingley, Radiologist	Dec. 1
Dr. George A. Marks, Assistant in Surgery	Dec. 1
Dr. Spiros P. Sarris, Assistant in Surgery	Oct. 15
Dr. Somers H. Sturgis, Assistant Surgeon	Jan. 1
Dr. Richard H. Thompson, Assistant in Surgery	Oct. 11
Dr. William T. S. Thorndike, Assistant Director	Dec. 1
Dr. Howard Ulfelder, Assistant in Surgery	Nov. 1
Dr. Claude E. Welch, Assistant Surgeon	Oct. 22

In addition to the citations already mentioned in THE NEWS, the following have been received:—

Lt. Col. Milton H. Clifford, MC (*a.p.*)—Bronze Star Medal . . . for meritorious service in support of military operations against the enemy from 20 April 1945 to 11 May 1945 as Commanding Officer of a Station Hospital on Morotai, Netherlands East Indies. During this period, Lieutenant Colonel Clifford was responsible for the treatment and early return to duty of all sick, injured and wounded personnel on Morotai and adjacent islands. Although faced with a critical shortage of trained medical personnel and an unusually heavy influx of patients, a condition aggravated by the departure of the only other hospital from the base, Lieutenant Colonel Clifford, by the closest personal supervision, unselfish devotion to duty, and superior professional ability, was able to provide such efficient medical service that his installation returned an unusually high number of patients to duty in support of or in direct combat operations against the enemy. . . .

Col. Richard Collins, Jr., GSC (*ES* 1933)—Legion of Merit, Officer of the Order of the British Empire (OBE), Croix de Guerre with palm

Capt. Somers H. Sturgis, MC, AUS (*ES* 1933)—Bronze Star Medal . . . for meritorious achievement in connection with military operations in North Africa and Italy from 24 March 1943 to 8 May 1945. Captain Sturgis, an accomplished plastic surgeon in the Surgical Service of the 6th General Hospital, contributed much to the furtherance of this all important war specialty in the Mediterranean Theater. In 1943, with another officer, he toured North Africa studying the treatment of maxillofacial wounds and injuries and as a result of his work on this tour was able to submit a comprehensive report upon this type of case. Subsequently, in a series of articles he skillfully summarized his experiences with a large group of patients with maxillofacial wounds and injuries. In addition Captain Sturgis reported upon wounds and wound-healing and, in February 1945, read a paper before the Royal Army Medical Corps. His keen observation and painstaking care in reporting resulted in valuable contributions to vitally important phases of war-time surgery. . . .

Capt. Stanley M. Wyman, MC, AUS (*a.r.p. R* 1941) — Bronze Star Medal . . . for meritorious services in support of combat operations from 15 January to 29 April 1945, in Italy. Captain Wyman rendered outstanding services as a radiologist with a field hospital. Displaying great ingenuity and technical skill, he completely reorganized the x-ray department, expanded the functional and diagnostic facilities and designed innumerable ingenious devices and technical medical apparatus to promote the effective treatment of patients. The resourcefulness and thorough technical knowledge of Captain Wyman contributed immeasurably to the efficiency of the field hospital, reflecting great credit upon himself and the Medical Corps. . . .

Col. F. Dennette Adams, MC (*WM* 1918), Office of the Service Command Surgeon, Headquarters Fourth Service Command, Post Office Bldg., Atlanta 3, Ga.
Major John C. Angley, MC (*a. M*), Surgeon's Office, CAF Hdqrs., Bolling Field 20, D. C.
Capt. Donald V. Baker, Jr., MC, AUS (*ES* 1943), 15 Brown St., Cambridge, Mass.
Capt. Russel L. Baker, MC, AUS (*r.p. N* 1943), A.S.F. Reg. Sta. Hospital, Fort Ord, Cal.
Lt. Richard Barton, MC, USNR (*Oto-Lar.* 1945), Route 1, Box 330, Vista, Cal.
Lt. Ronald C. Bishop, MC, AUS (*M* 1945), Separation Center, Fort Knox, Ky.
Capt. Lemuel Bowden, MC, AUS (*ES* 1940), Station Hospital, 810th A.A.F.B.U., Laurinburg-Maxton A.A.B., Maxton, N. C.
Major Charles B. Burbank, MC (*WS* 1939), 42nd General Hospital, APO 503, c/o Postmaster, San Francisco, Cal.
Lt. James D. Clement, Jr., MC, AUS (*WS* 1944), Hdqrs. Co., 1st Bn., Separation Center "A", Camp Atterbury, Ind.
Dr. Lewis Cozen (*Or.* 1938), 2007 Wilshire Blvd., Los Angeles, Cal.
Lt. Comdr. Charles C. Derrick, MC (*P* 1940 & *EM* 1942), U.S. Naval Special Hospital, Springfield 9, Mass.
Major Gaston N. Duclos, MC (*Oto-Lar.* 1943 & *Oph.* 1945), Canadian Army, E.E.&T. Consultant, #12 District Depot, Officers' Mess, Regina, Saskatchewan.
Capt. James M. Faulkner, MC, USNR (*EM* 1925), 262 Beacon St., Boston, Mass.
Pfc Donald Giberson, 297 Cambridge St., Boston, Mass.
Dr. John P. Monks (*WM* 1931), Bedford Road, Lincoln, Mass.
Lt. Homer D. Peabody, Jr., MC, AUS (*M*), Gardiner General Hospital, Chicago, Ill.
Dr. Richard L. Pearse (*ES* 1934), c/o A. S. Pearse, Route 3, Durham, N. C.
Lt. John H. Peters, MC, USNR (*WM* 1943), U.S. Naval Hospital, Dublin, Ga.
Capt. Thomas S. Risley, MC, AUS (*ES* 1942), 24 West Ogden Ave., Hinsdale, Ill.
Lt. Col. Fiorindo A. Simeone, MC (*WS* 1936) Office of Surgeon General, Room 1115, 1818 H Street, N.W., Washington, D. C.
Asst. Surg. John W. Smillie (*ES* 1944), Nutrition Investigations — U.S. Public Health Service, 300 1/2 Broad St., Albany, Ga.
Lt. Col. Milton S. Thompson, MC (*Or.* 1934), Chief, Orthopedic Branch, McCloskey General Hospital, Temple, Tex.
Lt. Frank C. Wheelock, Jr., MC, AUS (*ES* 1943), Walter Reed General Hospital, Washington, D. C.
Major Richard G. Whiting, MC (*a. M*), U.S Army General Hospital, Camp Butner, N. C.

Brief bits:—

Capt. W. Philip Giddings, MC, AUS (*WS* 1939) is back home.

Capt. Lawrence B. Hobson, MC, AUS (*M* 1944) stopped in at the office of THE NEWS the other day. He is still doing research work in the Medical Division, Office of the Chief, Chemical Warfare Service, Edgewood Arsenal, Md.

MASSACHUSETTS EYE & EAR INFIRMARY

HOLIDAY GREETINGS TO ALL!

The Christmas Season has come again. The war is over. "Peace on Earth Good Will to Men" seems, perhaps, a trifle nearer to fulfillment than it did a year ago.

To those who are still in military service, our thoughts are with you and it is our sincere hope that you will be back with your families and friends in the very near future.

To those who are "Civilians" again, we extend our congratulations and wish you Happy Holidays with your families.

To each one, whether near or far away —MERRY CHRISTMAS!

* * *

The following men are back or are expected back early in December:

Ophthalmological Service
Garrett L. Sullivan (*Oph.* 1938)
H. Frederick Stephens (*Oph.* 1939)
Lawrence R. Dame (*clin. a. Oph.*)
**Earl S. Seale (*Oph.* 1940)
*Warren W. LaPierre
*Donald O. Howard
**S. Forrest Martin (*Oph.* 1938)

Oto-Laryngological Service
John R. Frazee (*Oto-Lar.* 1934)
Charles I. Johnson (*Oto-Lar.* 1929)
*Richard R. Goldcamp (*r. Oto-Lar.* 1943)
Edward F. Lawlor (*Oto-Lar.* 1941)
Robert G. Snow (*Oto-Lar.* 1940)
* Expect to return to complete residency
** On the way home

* * *

It was nice to see Dr. J. Thomas Schnebly (*Oph.* 1938). He came to get a few pointers on how we do things at the Eye and Ear before resuming his practice in Washington, D.C.

During his military service he was lucky at first to be assigned to eye work at the Walter Reed General Hospital, but later paid for his good fortune by serving 18 months in Greenland "in what is probably the only U.S. Army Hospital north of the Arctic Circle". While there he had his own Eskimo dog team which, as he said, was all he needed to practise successfully.

We have received word that Major Joseph A. Clough (*Oto-Lar.* 1939 & *Oph.* 1941) is about to be separated from the Army after serving 20 months in Iceland and 23½ in England. Last year he was assigned to the 160th General Hospital in England.

Following is an excerpt from a letter received by Dr. Cogan from Lt. Daniel J. Reagan, MC, AUS (*Oph.* 1943 & *Oto-Lar.* 1944).

My Army experience since leaving the Infirmary has been varied, but hardly valuable from an ophthalmic point of view. My first assignment of approximately five months at Deshon General Hospital in Butler, Pennsylvania, where I had 140 patients under my constant, and often bewildered, care, made me an Orthopedic Surgeon. From there I went to Borden General Hospital in Chickasha, Oklahoma, where I put in four quite valuable months doing aural rehabilitation work and learning things about deafness you actually don't learn in a civilian institution. Then I came to this garden spot of the universe—Narsarssuak, Greenland, the main Air Base on this island. What I have been doing here is quite amazing. I do all the EENT, including any consultations, on the many dogs which are kept here for use in dog sled rescue work on the icecap. By the way, canine ocular tissues are a lot tougher than those of humans—a fact you probably learned long ago. In addition, I do the orthopedics, the GU work, half of the general surgery, half of the anesthesia, about one-quarter of the administration, approximately one-sixteenth of the pharmacy, but a fairly respectable percentage of the griping. I am also the LMD for the Eskimo village across the fjord and have had a few interesting experiences there. These Eskimos are wonderful patients—no hypochondriacs, no neurotics, no questioning your medical judgment, but also no speak English, which reduces history-taking to an irreducible minimum.

Greenland is a truly wonderful place geographically. We are confronted by a fjord full of icebergs, mountains on all sides, and a glacier at our backs. However, the climate is very stimulating and I have become an amateur mountain climber here.

I hope to return to the Infirmary for a few months' refresher course of some kind. I'll sure need it.

Remember me to all.

Capt. Henry A. Mosher, MC, AUS (*Oph.* 1941) has written this interesting letter to Miss Robertson. Captain Mosher is with the 227th General Hospital, APO 772, c/o Postmaster, New York, N. Y.

Our unit was stationed near Reims when we first set up in France in March. We had three busy months during the Battle of the Rhine and the Battle of Germany, receiving wounded by air evacuation from the front lines. We were so far back there was no personal hazard or glamor, but the work there was interesting and worth while.

We were shifted to a staging area near Marseille in August and were set to go directly to the Orient when V-J Day came along, much to our great relief. We hoped good fortune would send us to the U.S.A., since we were all ready to sail, but our sailing date was canceled and we were assigned to take over a hospital in Marseille.

We have been located here for the past month serving troops who are stationed near here and in the staging area. It is a dirty, tough old city and our quarters are none too good, but we are having a chance to see a new and interesting part of France.

I enjoyed three weeks in England this summer attending a course in Ophthalmology given at Oxford University for a group of American officers. Lt. Col. Garrett Sullivan was one of those attending the course and it was fun to see him again. He gave us a lecture on cataract surgery that we all enjoyed very much.

The big question in the mind of every soldier overseas is, "When am I going home?" I'm no exception to the rule, but the bulletins on that subject change so frequently the answer is largely a matter of speculation. The time can't come too soon to suit me. When I do return, I hope the port will be Boston and that I'll again have a chance to see you and my other friends at the Infirmary.

The following men have appeared at the Hospital recently. We have enjoyed their visits at the NEWS office *so* much, and regret that it is not possible, because of lack of space, to publish their many interesting stories of overseas experiences. All such accounts, however, are being filed with our World War II records.

Lt. William J. Baker, MC, USNR (*WS* 1943)
Major Lowrey F. Davenport, MC (*a. M*)
Major Ward I. Gregg, MC (*WS* 1935)
Lt. Terry E. Lilly, Jr., MC, USNR (*ES* 1943)
Lt. Col. Tracy B. Mallory, MC (*Chief of Pathology*)
Lt. Col. Charles G. Mixter, Jr., MC (*WS* 1940)
Dr. Lloyd S. Saltus (*CM* 1938)
Dr. William Martindale Shedden (*ES* 1920)
Major O. Sherwin Staples (*Or.* 1938)
Dr. Somers H. Sturgis (*ES* 1933)
Lt. Comdr. Arthur T. Willetts, MC (*r. U* 1941)

Although Lt. Col. Harold H. Hamilton, MC (*r.s. PH* 1933) may arrive home before this letter can be published, what he says is much too interesting to be forfeited on that account. In fact, we're thinking of starting an "In retrospect" column so that many such letters may not be lost to our readers. From Bad Wildungen, Germany, Colonel Hamilton writes:—

I am happy to be able to send you a new address—70 Court St., Plymouth, Mass. For on this day I have that little piece of paper in my hand that starts me back home.

My old outfit, the 113th Evac., is still servicing the Army of Occupation, one of our post-V-E Day functions having been a 50-day run in Berlin, to include the Big Three Conference. We serviced the 2nd Armored, and later the 82nd Airborne Division there, along with V.I.P.'s, Russians, French, Displaced Personnel, etc. One of my best patients while there was Col. R Ammi Cutter, a good Bostonian. Through no fault of his, he had stopped a 45 calibre bullet with his leg. This incident went far to reduce accidental shootings in Berlin, which up to that time had been occurring at the rate of one per day, despite all the warnings and pleas we could bring to bear. An order soon came out, following Colonel Cutter's hard luck, that removed side-arms from our troops, except when on certain duties. Citizens of the USA are going to be shocked when it becomes known how many of our GI's have accidentally shot themselves or others with "souvenir" weapons. We have had close to 200 such cases on our service since V-E Day. Each GI is allowed to bring one pistol home with him, and I fear it won't be held down to that, so an alert to the home surgeons to be ready to handle bullet holes in the home folks, at times other than deer season, is hereby rendered. We have found the P-38, a German automatic pistol, to be the commonest offender.

Morale is high in my new outfit—the 91st Evac. This is not surprising, as they are alerted to go home. They are an old-line organization, with few of the original personnel remaining. The 113th, and others whom we leave here to service the 3rd Infantry Division and 23rd Corps Headquarters, do not smile so broadly. However, they are comfortably quartered in this little resort town down in the mountains, with excellent hunting available only a few miles away. Some of us have recently had some very exciting times in this line of sport. We have a wild pig hunt scheduled in another day or so. (I should hasten to add that we have a good hospital installation, in which we work sometimes.)

Now I believe I have said enough so that we shall have applicants for ETO medical jobs over from the States. There are plenty of medical officers here who will give way.

I have not heard from [Capt.] Clarke Staples [*gr. asst. S* 1942] for a long time, but when he last wrote he had survived a good bombing down in Burma, which blew away all his equipment and wounded him slightly. I was very pleased to read about [Capt.] D. Crosby Greene [*CM* 1940] — a made-over pediatrician and one of the best Ward Surgeons I ever had.

A few days later this letter came from Colonel Hamilton.

The October copy of THE NEWS came today, and I read with pleasure the list of decorations on old classmates like Jack Frazee and Jim Halsted.

As an addendum to my letter of a few days ago—I received a Bronze Star Medal while doing some work for the 113th Evacuation Hospital in Ninth Army. No, it did not come out of a package of K Rations, and 5 points can be something mighty important under certain conditions. This 5-point beauty dropped me out of the Army of Occupation into category IV; and, although we seem to be getting nowhere fast, we have the pleasure of knowing we are earmarked to get back to the USA some day when boats begin to travel again.

Your efforts in furnishing us with THE NEWS these past years have been greatly appreciated.

The last letter we had from Lt. Col. Donald McNeil, MC (*Or.* 1930) was written "under a leaky roof somewhere in France". This one, from Stuttgart, Germany says:—

Our hospital has been the recipient of a letter of commendation from the Commanding General of the XXI Corps for our work during the campaign for the Calmar Pocket, and recently has been presented with the Meritorious Service Plaque for our work in France and Germany. As I was responsible for starting the 51st Hospital I feel now that it wasn't such a bad idea, altho at times in the past I often wondered.

Many thanks for sending THE NEWS. It really means a great deal. Please keep it up after we all go home.

P.S. Incidentally, all members of our hospital wear four Battle Stars—Rome Arno, Southern France, the Rhineland, and Central Europe.

This fine letter — long awaited — has come from Col. Richard Collins, Jr., G.S.C. (*ES* 1933).

I am well aware of my deficiencies as a letter writer, but I was more than shaken to have it called to my attention that I had neglected THE NEWS for such a long period of time.

In January 1943 I was S-3 of the Artillery of the 87th Infantry Division and was freezing quietly in the so-called Sunny South. Much has happened since then, I must confess. Throughout that spring I labored mightily with training programs and schedules for the Artillery and had the keen satisfaction of seeing green selectees become soldiers. In the summer I was sent to the Command and General Staff School at Fort Leavenworth, where I spent two of the hottest months I have ever endured. I then returned to the Division as acting Executive Officer of the Division Artillery. That was my last experience as an artilleryman.

In the fall of '43 I went to Washington and spent nearly two months in the War Department and associated installations getting indoctrinated for a new job. I arrived in London early in December and was assigned to the G-2 (Intelligence) Division of what was then known as COSSAC and later became SHAEF. My experience on that assignment was the most interesting imaginable, but very little, if anything, can be said about it even at this time. It was a ringside seat for the greatest military venture that Europe has seen. All of us connected with it lived for months, knowing what was to come and ever fearful that through some inadvertence we would let the cat out of the bag. It made hermits of most of us. Even now I find it difficult and unnatural to tell anyone what I am doing or going to do, or where I am or where I am going.

By the time the combined command was dissolved and our long and close association with our British allies was brought to an end, I had been Deputy Head of the Operational Intelligence Subdivision for about six months. Many of us on both sides were sorry and uneasy that a partnership which had produced such results in war should have to be terminated before the even more staggering problems of peace were solved.

Since that time, I have been head of a Branch in the Office of the Director of Intelligence in the US Group Control Council. This has been much less exciting and much less interesting, but the problems to be faced are more difficult and complex than those of war. At present we are in Berlin. We are comfortably housed and messed. The opportunities for recreation are limited. We live scattered about among the Germans, which seems a bit fantastic so few months after the end of the war. There has been no trouble so far, but one wonders what the winter will bring. The individual German is beaten. He is a cringing sycophant. You cannot find one among them who has ever been a Nazi. They have denied their lord and master, Hitler. It is a revolting sight. They are working hard now to drum up sympathy, and are doing well at it. The impressionable and uninformed among us are being taken in. We need a lot of hard headed men over here who know what the score is and can be relied upon to pursue the proper course with energy and resolution.

I can say nothing at present of my plans for the future. That will have to wait. I am not involved in the present mad and uncontrolled stampede out of the Army which Congress and the press have imposed upon the War Department. It is making it very difficult for those of us who stay on for a bit to get things started.

I picked up a few extras, which help the point score, namely: The Legion of Merit, Officer of the Order of the British Empire (OBE), and the Croix de Guerre with palm. All of these reflect much more credit upon my loyal and hard-working subordinates than they do upon myself.

Please give my best regards to all my friends at the Hospital. I am looking forward to seeing them all one day. I have seen very few during the course of the war as there was little chance of our paths meeting. The last were Walter Bauer and Dutch Ludwig in Paris last spring.

Lt. James E. Conley, MC, USNR (*WS* 1941) is on the *U.S.S. Southampton,* out in Pacific waters. We appreciate what he says about THE NEWS and are glad he included a paragraph more or less about himself. We wish he'd write us a long letter soon, for his experiences must have been exciting.

My sincere appreciation for sending me THE NEWS. It has proven to be one of the most scintillating sources of information during my three years in the Navy. Even several "foreigners" encountered out in the Pacific, who had interned at Brigham or Boston City Hospital from my medical school class, have betrayed thorough familiarity with the M.G.H. News.

I saw [Lt. Comdr.] John L. Wilson [*ES* 1940] on Guam before he was to fly to Japan for duty with the Navy Air Transport Service there.

I have had the good fortune to climax my Navy career with a trip to Japan with occupation troops. Now I feel like a blustering

Lt. Col. Frederick K. Poulin, DC (*Dn.* 1942) receiving the Bronze Star Medal from Brig. Gen. Charles T. Myers, Commanding General of the Twelfth Air Force

browbeater for having participated, even in a small way, in giving these primitive aborigines such an unmerciful beating. Even the little black "Joes" encountered in the jungles of the Solomons seemed to live on a higher plane of civilization than the rural Japs.

It is my hope that The News can continue in peace, as in war, to give us who may establish outside of Boston "little known facts about well known people".

Lt. Lytt I. Gardner, MC, AUS (*CM* 1944) is another "first time-er". He covers a good deal of territory in a few words.

I have been redeployed directly from Europe to Manila. Previously I had been with the 2nd Auxiliary Surgical Group in Italy as a shock officer, working in field hospital platoons. During that service I enjoyed seeing and working with Colonel Beecher, Major "Spike" Sarris, and Capt. Phil Giddings. After V-E Day I had an opportunity to work for several weeks in a German General Hospital in the Italian Alps, where we saw many interesting cases of diphtheria and an apparently new sort of nephritis called "feldnephritis" by the Germans.

Here in Manila we are taking care of British patients who were captured by the Japs at Singapore. They have every deficiency disease known, and a few new ones. It is a great pleasure to see these fellows gain a pound or more per day.

Very best regards to all.

Lt. Harry A. Bliss, MC, USNR (*M*) has sent a brief note. We hope for a real letter soon. He writes:—

After being a transient and hence doing very little of anything for several weeks, I have been assigned to the 119th N.C.B. (a Seabee Unit) in Manila. Along with Porter Jewett [*Oph.* 1945] I've been at the Receiving Station on Samar Island in the Philippines for the past three weeks.

The sun shines pretty fiercely, and I'm pining for one of your New England autumns.

Col. Horatio Rogers, MC (*ES* 1925) could hardly be accused of garrulity—at least, as far as writing to The News is concerned. Therefore, it is good to have this note from him, passed on to us by Dr. Faxon.

Please accept my apologies for not having supplied The News with any personal data for a long time. It does not mean that I have not enjoyed every copy of that famous sheet.

I was promoted to Colonel in February, while the 6th General Hospital was still at Rome. While at Bologna I received news of my assignment to Cushing General Hospital as Chief of Surgery to replace Bobby Mason [*WS* 1924], flew home July 2, and started work here on July 17.

It is a most interesting job in one of the finest of ZI hospitals, and I expect it to occupy all my time for several months—perhaps a year.

If anyone is puzzled as to his date of release from military service, all he needs do to solve his problem is to read this epitome of the situation. Perhaps it is best to conceal the authorship until we secure permission from the writer to reveal his identity.

CIRCULAR
No. 76

ROTATION OF PERSONNEL

General	I
EM & Officers eligible . .	II
Personnel not eligible . .	III
Precedence among those eligible	IV
Miscellaneous	V

I. GENERAL. Under WD Circular No. 58, minimum periods of eligibility for relief via rotation have been established for the SWPA. Selection of home bound contingents is strictly up to the theatre commander, and it must be kept in mind that eligibility does not bestow the right to be relieved, but only establishes a basis for selection. In accordance with USAFFE Reg. No. 11-20, "Nostalgia in isolated regions", the following eligibility rules will govern the rotation of troops in this area:

II. EM AND OFFICERS ELIGIBLE. Must have spent 7 or more years in the SWPA, at least 4 of which were in regions north of the Marshall Islands. He is *ineligible*, however, if his name has been entered in the Sick Book during that period. THE FOLLOWING ARE THE QUALIFICATIONS FOR MEN DECLARED ELIGIBLE:

a. Must have at least 3 broken limbs at the time of application. Compound or linear fractures, strains, sprains, or ruptures will not be accepted; the break must be clean. The condition of each injured limb must be authenticated on MD Form No. 212P, "Minor mishaps and abrasions", in triplicate.

b. Must have been awarded the Order of the Purple Heart with at least two Oak Leaf Clusters. In addition, he must have in his possession at least five of the following medals: SILVER STAR, DISTINGUISHED FLYING CROSS, AIR MEDAL, IRON CROSS, ORDER OF THE KNIGHT OF THE BATH, NAVY CROSS, LEGION OF MERIT, ORDER OF THE SOVIET UNION.

III. THE FOLLOWING MEN EVEN THOUGH THEY MAY POSSESS THE ABOVE QUALIFICATIONS WILL NOT BE ELIGIBLE:

a. Men who, during the course of their Army tenure, have contracted any of the following diseases: Athlete's foot, Scurvy, Beriberi, Housemaids' knee, Ringworms, Malaria, St. Vitus's dance, Bubonic plague, Cold, Sore throat, Body odor, or Halitosis.

b. Men who have been in New Guinea for a period of 30 days. Exception to this rule will be those men who may be considered inured to the climate by reason of having spent at least 12 years in either the Panama Jungles, Tibet, Burma, the Eniwetck Atoll, or Georgia. In this case, the man will present a written request to his First Sergeant, asking that WD AGO Form No. O-121-J, "Previous record of uncivilized habitats", be obtained from Washington, D.C., which form will be filled out in sextuplicate, and the following documents appended:

1. Photostatic copy of graduate degrees from not less than 4 accredited universities.
2. Civilian driver's license — in duplicate.
3. Financial statement of earnings for the fiscal year ending 1 December 1943 — in triplicate.
4. Clinical history of family, friends, previous civilian employer (if any), and associate pool hall proprietors, entered on WD Form No. 224-B, "Record of past moral turpitudes"—in quintuplicate. Casual acquaintances need not be included.

IV. AMONG THOSE ELIGIBLE FOR ROTATION, THE FOLLOWING PRECEDENCE HAS BEEN ESTABLISHED:

a. Men over 55 years of age who have completed 44 consecutive years of faithful service overseas.

b. Married men with 12 or more children. Must have been formally engaged prior to December 7, 1941 — MIDNIGHT.

c. Men in lower ranks, or EM who formerly held the rank of Major General or above, providing the reduction in grade was not due to misconduct.

V. MISCELLANEOUS: If the man possesses all the following qualifications, he may then obtain IF Form No. 3774-P, "Application to be interviewed in preparation for packing "B" Barracks Bag", and having filled out the required 23 copies, will await further instructions. Men who violate the foregoing instructions by questioning competent authorities on matters pertaining to their status will be remanded to the custody of the Officer in Charge, BASE stockade, to await a General Court Martial in conformance with ISAFFE Regulation No. 30-398, "Impertinent overtures and entreaties".

No troops will be rotated before 1947, and a two-year status of limitations will be imposed on all applications. This does not prevent anyone from reapplying after the two-year period has elapsed, providing AG Form No. 8864, P-417, "Reasons for establishment of priority to regain citizenship", is executed in quintuplicate.

NO APPLICATIONS WILL BE ACCEPTED UNTIL FURTHER NOTICE AS ALL TROOPS ARE AT PRESENT FROZEN.

By Command of General G. T. hades;

R. U. HOOKED,
Lieutenant General, U.S.A.,
Cheese of Staff

No. 40 Boston, Mass. JANUARY 1946

RADIOLOGY DEPARTMENT AFFAIRS

This past November marked the fiftieth anniversary of the discovery of X-ray. It is a considerable step from the small room beneath the "Bulfinch steps", which Walter Dodd used, to the present quarters of the Department of Radiology. Although most of the conditions recognized at the present time were described within the first five years after the discovery of the roentgen ray, advances in the type of equipment and in technique have made its practical use accessible to a larger group with much greater ease.

Walter Dodd, a pioneer in the field of Radiology, was a martyr to the science, having received his first "burn" within a year of the discovery. From his earliest investigations until his death in 1916, Dodd, with the help of Joseph Godsoe, fostered the development of the science, despite constant suffering from the complications of his early X-ray reactions. In 1911, George W. Holmes entered the department and in 1916 became its Chief. During the succeeding years Dr. Holmes has established himself as a father of radiologists. His ability to consider all sides of a question before arriving at definite conclusions has been one of his many satisfying qualities with which we are all familiar. His greatest renown has come from the large number of outstanding radiologists whom he has trained — and for a teacher, there can be no greater satisfaction than this.

On March 1, 1941, Dr. Holmes retired, although circumstances forced this to be but a temporary retirement. Aubrey O. Hampton was made Chief of Service, and he conducted the department in his brilliant manner until September 1942 when he entered the armed forces. Dr. Holmes then returned to his former position and carried on faithfully until July 1, 1945, when he again retired, resuming his place on the Board of Consultation. He now intends to review his book on Diagnosis and to write a book on Radiation Therapy. We hope he will take many moments to complete this work and that it may bring with it happy reminiscences.

The department contributed its leading members in the requested age group to the armed forces. In January 1942, James R. Lingley was called to active duty and later joined the Massachusetts General Hospital Unit in those memorable Blanding days. In September 1942, Dr. Hampton was called to the Walter Reed Hospital where he has capably handled, as Chief of Service, the Department of Radiology. In June 1943, Richard Schatzki entered the Army and since March 1944 has been Chief of the Radiology Service at the McGuire General Hospital, Richmond, Virginia.

A rather constant turnover of those who make our own department run was notable until the beginning of 1945. Many of the residents, nurses, students, technicians, and secretaries entered military service. Those who stayed made it possible to keep the department going on a workable basis. In all probability, the one who has contributed the most toward keeping up our standard is Oliver E. Merrill, Physicist and Chief Technician. To those who left to fulfill their patriotic obligations we offer our sincere acknowledgment of the splendid service they gave; to those who remained and worked unstintingly we give our wholehearted thanks; to those now returning we give our warmest welcome.

During the recent years of emergency, the major difficulty, besides the loss of valuable personnel, has been shortage of film. This began in 1944 and became acute in January 1945. It reached a serious climax in August 1945, but since then the supply has gradually returned to normal. We extend our sincere appreciation to those in other departments who coöperated with us during this shortage.

The volume of work done in the department during each of the three years of war emergency has almost equalled that of 1941 — the last prewar year. What drop did occur was due to the curtailment of supplies. Our less experienced consultation service has, it is hoped, made up for a possible lack of former brilliance by earnest endeavor and hard work. Therapy, which is largely palliative, has increased greatly in extent since this hospital and the Huntington Hospital have joined forces. The Tumor Clinic is serving almost fifty percent more patients now than it did in 1941. This has been made possible by the addition of members of the Huntington staff to our own.

Research has been confined to clinical rather than experimental work. In 1944, investigation was directed toward improving the diagnostic procedures for collapse of the lung. The results of this work have been published in serial form in *Radiology* during the past year. The present major study in the department, under the direction of Dr. Holmes, is a survey of the results of treatment with the million-volt generator. This analysis will cover an eight-year period, from 1937 through 1944, and include the work done at the Huntington Hospital as well as that done in this hospital. An attempt is being made to compare results of supervoltage treatment with those of deep therapy used in the past. Other less extensive studies have been, and are being, made, and, with the department's return to "normalcy" research will play its part in the continued progress which we hope for Radiology.

In the past month we have begun to see the light, and the clearing away of many of our difficulties. As of December 1, Dr. Lingley returned to become Acting Chief of Service until the return of Dr. Hampton. Dr. Lingley's excellent service with the 6th General Hospital has previously been noted in THE NEWS. We are all delighted to have him back in his present position, and we trust that we shall be welcoming Dr. Hampton and Dr. Schatzki in the near future.

Laurence L. Robbins, M.D.,
Past Acting Chief

New Guinea Base Section has awarded the Meritorious Service Unit Plaque to the 105th General Hospital. This hospital was under the command of Col. Edwin F. Cave (*ES* 1926 & *Or.* 1928). It was one of the two Harvard Units, and approximately one-third of its professional staff was from Massachusetts General Hospital. The citation reads:—

> By General Orders No. 29, Headquarters New Guinea Base Section, 9 July 1945 . . . for superior attainment in the performance of an exceptionally difficult assignment and the achievement of a high standard of morale and discipline between 7 November 1944 and 2 June 1945.

Dr. George R. Minot (*EM* 1913) has been awarded the 1945 Distinguished Service Medal of the American Medical Association for "scientific advancement in the field of medicine". In 1934 Dr. Minot was joint winner of the Nobel Prize in medicine for his discovery of the curative effect of liver on pernicious anemia.

* * *

A grant by the Ella Lyman Cabot Trust provides a clinical fellowship in pastoral care. Rev. James H. Burns, minister of the Methodist Church in Princeton, Mass., has recently been awarded this fellowship. He will begin his new duties January 1, studying under the direction of Rev. Rollin J. Fairbanks, Protestant Chaplain to the Massachusetts General Hospital by appointment of the Massachusetts Council of Churches and Director of the Institute.

THE NEWS plans to publish, from now on, summaries of the talks given at the regular monthly meetings of the Medical Staff.

Such a meeting was held on December 3. The announcement card, sent out by Dr. Means, said "Our veterans are returning, and many of them have interesting things to tell us about their overseas medical experiences. I hope to have a series of them talk to us."

The speaker at the December meeting was Major James A. Halsted (*WM* 1932). His subject was "Gastroenterologic problems in combat soldiers". Major Halsted has very kindly sent us this summary of his talk. It will be very valuable, as a recapitulation, to those who heard him; it will be especially appreciated by those who were unable to attend the meeting.

Gastrointestinal disorders comprised a sizeable proportion of the medical problems encountered among soldiers overseas. Excluding hepatitis they could be divided into three broad groups, namely peptic ulcer, diarrhea, and functional dyspepsia. A study of 200 ulcer cases in Casablanca and a later survey of the whole ulcer problem for the Mediterranean Theatre near the end of the war, led to the conclusion that factors peculiar to Army life did not cause new ulcers and that the incidence of the disease was no greater than what would be expected among a comparable group in civilian life. However, nervous tension did cause exacerbation of previously existing ulcer. The disease was mild, rapidly responding to simple therapeutic measures. The incidence of serious complications was low. 94% were duodenal and 6% gastric ulcers. Study of psychogenic factors in 100 patients, such receiving considerable attention at the present time in various clinics, revealed that only 6% had a psychoneurosis. The personality pattern of the patient with ulcer was fundamentally different from the patient with non-ulcer dyspepsia. Peptic ulcer was not a serious military medical problem overseas.

Diarrhea outbreaks were very common, particularly during periods of offensive combat. Bacillary dysentery was the major cause of diarrhea. A considerable number of cases developed persistent and recurrent diarrhea, study of which revealed no definite causes, but anxiety with nervous tension in patients having an irritable bowel from previous infection seemed an important contributory factor. Ulcerative colitis was rare and symptomatic amebiasis was likewise not common.

Chronic non-ulcer dyspepsia was primarily a neuropsychiatric problem. It was found that if such patients among combat soldiers were diagnosed and evaluated psychiatrically in the Army area near their units, being discharged promptly from medical channels there was a significant saving in hospitalization and in manpower. If sent to hospitals in the rear they were apt to be lost for further useful combat service and their symptoms generally grew worse. A detailed psychiatric and clinical study including gastroscopy was made in 110 of these patients in the Fifth Army area. This revealed positive evidence of psychoneurosis in 84% and gastroscopic changes which have been described as chronic gastritis, occurring in 40%. There was no difference in the symptomatology of those with gastroscopic abnormalities and those without. Study of all the data led to the belief that these abnormalities might well be the result of emotional conflicts and not the manifestation of an independent organic disease.

A 22-page pamphlet, entitled *Postwar internships and residencies at the Massachusetts General Hospital* has been prepared and is now being distributed. It explains in detail the schedules to be followed regarding internships and residencies in the various services in the hospital, and contains instructions as to how applicants for such appointments should proceed. The foreword reads, in part:—

> As soon as deceleration of medical training is permitted and restrictions as to the numbers of interns and residents are removed, the Massachusetts General Hospital, in order to make places for as many veterans as possible, plans to develop a postwar schedule with an increased house staff. Not only will doctors graduating from medical school during the postwar years be offered training, the equivalent of the prewar era, but also provision will be made to amplify the experience of certain of those veterans of the Armed Forces who served their internships and junior residencies under the accelerated program. Before the war the Massachusetts General Hospital had a house staff of 85; during the war the number has been reduced to 64. By a fuller use of existing clinical facilities the postwar complement will be increased to a total of about 100.
>
> When the plan was originally made it was hoped that government funds of some sort would be available to remunerate the extra members of the house staff, but recently such information as we have been able to get makes it seem that this is unlikely. The hospital, being a charitable institution, cannot take on an increase to its budget which sixteen or more extra residents would require if paid. We regret that in the case of residents outside the regular quota we shall not be able to pay any salary. We will, however, be able to give board and room up to the extent of our facilities. This may mean some crowding. Veterans receiving appointments to the regular house staff will receive the usual salary and maintenance. . . .

* * *

1917—1945

The Hawthorne Room of the Parker House was the scene of a happy reunion on Saturday evening, December 1, when the Bordeaux Belles and the Talence Club—the former composed of nurses and secretaries, the latter of enlisted men, who served at Base Hospital No. 6, Bordeaux, France, in World War I—met to renew old acquaintances and to honor their Commanding Officer, Colonel Frederic A. Washburn, U.S.M.C., and their Chief Nurse, Miss Sara E. Parsons, R.N.

Mr. Albert E. Hunter, President of the Talence Club, presided. Scrolls illustrated with a sketch of the gate at the Base Hospital in Bordeaux and inscribed by each member of the group were presented to our leaders in appreciation of the privilege of having served under such able commanding officers. The absence of Colonel Washburn because of illness was a great disappointment, but Mr. Hunter read his letters which conveyed the thought that he was present in spirit if not in person. Miss Parsons reminisced in her inimitable way, to the delight of all. She wore a very lovely orchid corsage.

Two members of the Talence Club present had taken part in World War II—Lt. Col. Stephen S. Bean, who served in the American Military Government in Europe, and Sergt. Michael E. Gaddis, who served with General Hospital #7 in England.

A bouquet of American Beauty roses was placed between the National and State flags in tribute to those members who had passed on.

It was the consensus of opinion of all present that these reunions should be held at regular intervals in order that friendships formed so long ago may remain unbroken through the years.

A BELLE

Lincolnshire, we are here!

After its three and a half years in Florida, Africa, and Italy, the "Fightin' Sixth" returned home to celebrate with the Wives at the Lincolnshire, on Saturday evening, December first. The weatherman did his best to block the roads with snow, but sixty-seven people finally assembled in the mess line. The committee—as is becoming in a democracy—had spent long days in trying to find out how the majority wished to dress. But it is a free country, and in the end each man was supposed to dress as he (or his wife) chose. So the uniform rubbed elbows with the tuxedo and the business suit. There was also freedom of speech, and various other freedoms, and before the evening was over the Wives had heard much of the Saga of the Sixth and had seen many of its jokesters and songsters in action. In the end it was decided that, though the Sixth had not been able to spread itself on the front page of the papers, it was nevertheless composed of remarkable men; that the Wives had done a famous job in their absence; and that, after all, the blue bird of happiness was to be found nestling in the shadow of the Bulfinch dome.

At their meetings on November 14 and 21, the General Executive Committee voted to appoint as Graduate Assistants:

Dr. Benjamin Bacon, in Surgery, to work in the Gynecological Clinic with Dr. Meigs;
Dr. Martin A. Berezin, in Psychiatry;
Dr. William C. Coles, in Radiology;
Dr. Knowles B. Lawrence, assigned to the Tumor Clinic;
Dr. Frederick K. Poulin, in the Dental Clinic;
Dr. John H. Walker, in Radiology.

The following men are to return to active duty on the Staff, as of the dates given:

Dr. Edward F. Bland, Assistant Physician	Nov. 15
Dr. Edwin F. Cave, Associate Visiting Orthopedic Surgeon	Dec. 1
Dr. Edward D. Churchill, Chief of West Surgical Service	Nov. 19
Dr. Wyland F. Leadbetter, Jr., Assistant Urologist	Nov. 27
Dr. Robert S. Palmer, Assistant Physician	Dec. 1
Dr. Robert S. Schwab, Assistant Neurologist	Jan. 1
Dr. Charles L. Short, Assistant Physician	Nov. 1
Dr. Lamar Soutter, Assistant in Surgery	Jan. 1
Dr. J. Sydney Stillman, Assistant in Medicine	Nov. 21

Mary L. Carpenter (*MGH* 1941), a member of the original Harvard-Red Cross Hospital Unit which went to England in September 1941, has returned to this country. She has received her discharge from the Army Nurse Corps and is now a staff nurse here at the hospital. She is one of the first veteran nurses to return. She joined the regular Army in July 1942 and has had duty in Germany, France, and Belgium.

Ward G, as such, is now non-existent. The skin patients have been moved to old Ward I, but the designation "Ward G" will still be used. The old pavilion is being demolished to make space for the new building which is to house the Children's Wards and the Vincent Hospital patients.

The United States Cadet Nurse Corps will no longer enroll new members, as of October 15, 1945. Student nurses who were enrolled in the Corps during July and September will receive all benefits except their outdoor uniforms.

The following article, with slight modifications, appeared in Boston and New York newspapers under date of Sunday, October 21.

From Radcliffe College Mrs. Brewer Blackall
Cambridge, Mass. Director of Public Relations

A new coördinated plan for the training of selected young women who expect to make nursing their profession will be offered in September 1946 by Radcliffe College in coöperation with the Massachusetts General Hospital School of Nursing. This program will be unique in that it offers for the first time an opportunity to combine a complete liberal arts education leading to a bachelor's degree with professional education in nursing. Candidates who are admitted to this five and one-half year program will meet in every respect the requirements for the bachelor's degree, and may choose freely among the twenty-five undergraduate fields of concentration offered by Radcliffe College. No pre-professional courses will be included in the college program which might in any way limit the breadth of general education.

Students who begin their course in September 1946 will carry full work at Radcliffe College for their first year and in addition will spend three hours a week at the Massachusetts General Hospital. During the next two and one-half years, including summer sessions, instruction will be given both at the College and at the School of Nursing, and at the end of three and one-half years the student will receive her bachelor's degree from Radcliffe. She will then spend two full years in the School of Nursing, receiving her nursing diploma at the close of this period.

Applicants will be admitted jointly by Radcliffe College and the School of Nursing and must meet the entrance requirements of both institutions. Joint admissions and supervisory committees will administer the program. Throughout the course there will be close integration between the college and the School of Nursing, with no sacrifice of requirements or standards on the part of either.

A nation-wide search for young women who will be outstanding candidates for this double program will be made. The Trustees of the Massachusetts General Hospital are prepared to offer a number of scholarships and loans to successful applicants and enroll students who qualify for such aid, and all candidates enrolled will also be eligible for assistance from the Radcliffe College scholarship funds on precisely the same terms as other Radcliffe students.

This plan has been evolved as a result of the convictions of the governing boards of both institutions that the profession of nursing increasingly requires women with a broad educational background. Professional opportunities in hospital management, nursing and health education, and medical research more and more demand the graduate nurse who has the liberal arts training in addition to her diploma in nursing.

* * *

In addition to the citations already mentioned in The News, the following have been received:—

Lt. Col. John C. Angley, MC, AAF (*a.M*)—Bronze Star Medal . . . for meritorious service in support of combat operations during the period 1 April 1944 to 15 November 1944 in Italy, Corsica, and Sardinia. During this period Major [now Lt. Col.] Angley supervised malaria control activities for the Army Air Forces and in this vital mission marked success was achieved. This was due largely to his unceasing efforts and conscientious attention to the most minor details. It was imperative that the incidence of malaria and other insect-borne diseases be held to an absolute minimum in units of the Twelfth Air Forces to insure successful support in the invasion of Southern France. These units, along with units of the Fifteenth Air Force, were stationed in some of the most highly malarious areas in the world and the coördination, education and labor instigated and carried out by Major Angley required outstanding professional and executive abilities, plus the willingness to work many long hours. These qualities were responsible for holding malaria to an almost irreducible minimum in Air Force units and have been a very significant factor in the successful conclusion of Air Force operations for the period. . . .

Major Charles H. Burnett, MC (*r.p.* 1942)—Bronze Star Medal

Lt. Col. Harold H. Hamilton, MC (*r.s. PH* 1933)—Bronze Star Medal . . . for meritorious service in direct support of combat operations from 4 March 1945 to 8 May 1945, in Germany. Colonel Hamilton, as Chief of Surgical Service, performed his duties in a highly exemplary manner. Through his enthusiasm, sincerity and devotion to duty he helped develop an organization capable of rendering superior medical care to injured personnel of the Ninth United States Army. . . .

Capt. E. Ross Mintz, MC, USNR (*P* 1930 & *r.s. U* 1932)—Bronze Star Medal . . . for meritorious service in connection with operations against the enemy while serving with a corps evacuation hospital on Okinawa Shima, Ryukyu Islands, from 14 April to 21 June, 1945. Commander [now Capt.] Mintz, as chief of the surgical service, was responsible for the surgical care of over fifteen hundred battle casualties who were admitted to this hospital. He personally coördinated the functions of the admission and shock wards with the operating rooms and post-operative wards. His sound surgical judgment in directing the pre-operative care of the seriously wounded, in assignment of cases to the operating surgeons and in the supervision of the post-operative care of the patients resulted in the saving of many lives. His boundless energy, his constant presence in the shock ward, admission tent and operating rooms, and his efficient organization of the surgical teams enabled the surgical service to perform seven hundred fifty-six operations in a period of thirty-three days. The interests of the wounded were paramount and he never spared himself, often working throughout the night to assure himself that all patients received prompt and adequate surgical care. His inspiring leadership was responsible in no small measure for the successful operation of this hospital and was in keeping with the highest traditions of the United States Naval Service. . . .

. . . Letter of Commendation from Headquarters, 68th Field Hospital, to Commanding Officer, Corps Evacuation Hospital No. 2.

1. On behalf of the entire personnel of this hospital, I wish to express my most sincere thanks and appreciation to the following United States Navy personnel who were on duty with this hospital during the period 16 April to 19 May 1945: Comdr. E. Ross Mintz, etc.

2. Their high degree of professional work, coöperation, willingness to work under adverse conditions and long hours, were an inspiration to our officers and enlisted men alike. These doctors and corpsmen are a credit to the United States Navy, and I cannot commend too highly the valuable services rendered to the Armed Forces by them.

3. Their wholehearted support and valuable services rendered, prove the admirable coöperation between the Navy and the Army of our country.

4. It would give us great pleasure if you would pass a copy of this letter to each officer and corpsman concerned, and consider this a personal thanks to each and every one of them from the entire 68th Field Hospital.

Stanley F. Radyminski
Major MC
Commanding

Addendum:

. . . From Headquarters Tenth Army to Commanding Officer, Corps Evacuation Hospital No. 2. A report of this valuable service rendered in wholehearted coöperation is an inspiration; to forward this commendation is a distinct pleasure.

F. B. Westervelt
Colonel, MC
Surgeon, Tenth Army

Lt. Col. Edward G. Thorp, MC (*EM* 1931)—Bronze Star Medal . . . for meritorius service in connection with military operations, as Chief, Medical Service, 28th General Hospital, from October 1944 to 30 April 1945. Lieutenant Colonel Thorp exhibited outstanding administrative ability in planning and putting into operation a medical service of the highest calibre. When the hospital was struck by a robot bomb, he displayed remarkable courage and efficiency in caring for patients and casualties, and arranged for their evacuation to safe quarters. Lieutenant Colonel Thorp's services contributed immeasurably to the success of his hospital's mission on the continent. . . .

* * *

Lt. Col. William T. S. Thorndike, MC (*WS* 1919), who is back on our Staff as Assistant Director, gives us this account of his overseas activities.

In September 1944 I was transferred out of the 6th General Hospital and took command of a small Station Hospital, the 154th, which was stationed at the time in Civitavecchia, fifty miles north of Rome. There the hospital served the Tarquinia Airport and also some port troops. During our stay there five medical officers and six nurses from the First Fighter Squadron of the Brazilian Air Force were attached to us, and remained with us for about two months. They were very pleasant people socially and we grew very fond of them. At the time of their departure they presented our Officers' Club with a Brazilian flag which I have handed over to the Archives Room.

Just before Christmas 1944 the hospital was moved southward to the Volturno River Valley at Fagianeria. Here we served the 24th Replacement Depot and later two redeploying divisions, the 85th and the 91st, and finally closed on August 31, 1945 and were deactivated shortly thereafter. On my return to the States I was promoted to Lieutenant Colonel, effective November 6, 1945.

MASSACHUSETTS EYE & EAR INFIRMARY

The Annual Meeting of the New England Oto-Laryngological Society will be held in conjunction with the American Laryngological, Rhinological and Otological Society, Incorporated, Eastern Section, on January 9, 1946, at the Hotel Statler.

Following the all-day meeting of the Eastern Section, the New England Oto-Laryngological Society will have the Annual Dinner and election of officers at the Harvard Club. Dr. Julius Lempert of New York City will be the guest speaker.

Sir Stewart Duke Elder of London, England, visited in the United States during the month of December. We were privileged to have Sir Stewart with us at the Infirmary for a week. He is Ophthalmologist to the King and Queen, and during the war was Chief Consultant in Ophthalmology to the British Army with the rank of Brigadier. He is also the author of the outstanding standard textbook on Ophthalmology in the English language.

On December 11 the Ophthalmologists of New England gave a dinner at the Harvard Club in honor of Sir Stewart, who delivered a short talk on the nutritional diseases of the eye seen among prisoners of war.

Edward F. Lawlor (*Oto-Lar.* 1941) has been appointed Clinical Assistant in Oto-Laryngology, assigned to the December-April service.

"John"

It is with deep regret that we announce the death, on November 29, of John Blood.

"John" had been a member of the Eye and Ear Family since June 1912. During his thirty-three years as Engineer and Maintenance man he gave loyal service When anything went wrong, it was "John" who was called to rectify it. He made many friends and will be missed by all who knew him.

Our sympathy is extended to his family.

New addresses:—

Lt. Edwin F. Alston, MC, AUS (*P* 1944), Brooke General Hospital, Box 133, Fort Sam Houston, Tex.
Dr. H. Thomas Ballantine, Jr. (*WS* 1939), 507 Linden St., Ann Arbor, Mich.
Dr. Harold C. Bean (*WS* 1918), 25 Beckford St., Salem, Mass.
Lt. Robert A. Broome, Jr., MC, AUS (*M* 1944), 50th Co., Personnel Center, Fort Dix, N. J.
Lt. James D. Clement, Jr., MC, AUS (*WS* 1944), Box 554, H-1, APO 834, c/o Postmaster, New Orleans, La.
Major Ira M. Dixson, MC, AAF (*WS* 1930), AAF Regional Hospital, Smoky Hill Army Air Field, Salina, Kan.
Dr. Edwin B. Dunphy (*Oph.* 1923), 255 Woodland Road, Chestnut Hill, Mass.
Dr. Thomas R. Goethals (*ES* 1917), 34 Hawthorn Road, Brookline 46, Mass.
Dr. Harold E. Gregory (*CM* 1942), North Main St., Wolfeboro, N. H.
Dr. Harold H. Hamilton (*r.s. PH* 1933), 70 Court St., Plymouth, Mass.
Dr. George E. Heels (*a. obst.*), 51 Brattle St., Cambridge, Mass.
Comdr. Saul Hertz, MC (*a.* M), Personnel Separation Center, Fargo Bldg., Boston, Mass.
Dr. Roy E. Mabrey (*a. in S*), 270 Commonwealth Ave., Boston, Mass.
Dr. Claud E. McGahey (*a.r.s.* 1941), The Georgian, Evanston, Ill.
Dr. E. Ross Mintz (*P* 1930 & *r.s. U* 1932), 4 North State St., Concord, N. H.
Major James A. Moore, MC (*Oto-Lar.* 1940), 530 East 90th St., New York 28, N. Y.
Lt. Comdr. Stanley A. Myers, MC (*Oto-Lar.* 1937), 39 Hilton Ave., Youngstown, Ohio.
Comdr. H. Bristol Nelson, MC (*a. obst.*), U. S. Naval Hospital, Chelsea, Mass.
Major Eugene E. Record, MC (*NS* 1937 & *Or.* 1941), 41 Pilgrim Road, Roxbury, Mass.
Dr. Lloyd S. Saltus (*CM* 1938), 16 Elm St., Morristown, N. J.
Dr. Wilbur A. Sawyer (*WM* 1908), 3927 Idaho Ave. N. W., Washington, D. C.
Dr. Harry M. Spence (*WS* 1932 & *r.s. U* 1934), 4105 Live Oak, Dallas, Tex.
Comdr. H. Frederick Stephens, MC (*Oph.* 1939), 195 Thayer St., Providence, R. I.
Lt. Comdr. John L. Wilson, MC (*ES* 1940), 64 Revere St., Apt. 4, Boston, Mass.

Brief bits:—

Major Joseph M. Clough, MC (*Oto-Lar.* 1939 & *Oph.* 1941), has returned to the Eye & Ear Staff.

Dr. Clifford C. Franseen (*WS* 1932) is home from his long service in the Southwest Pacific.

Martin J. Gilbride is back as an orderly in Baker Memorial, after almost 4 years in the Navy.

The Doctors Glendy—Margaret M. (*CM* 1932) and R. Earle (*r.p.* 1934)—have moved to 911 Orchard Hill, Roanoke, Va. They extend a cordial invitation to all MGH-ers traveling that way to visit them.

Lt. Col. Trygve Gundersen, MC (*Oph.* 1930) is back on the Eye and Ear Staff.

Lt. Col. James A. Halsted, MC (*WM* 1932) received this promotion in rank, we have learned from Dr. King.

Major Daniel J. Holland, Jr., DC (*Dn.* 1938) is back at the Hospital.

Dr. Robert J. Joplin (*P* 1929 & *Or.* 1933) has also returned to the Hospital.

Lt. Col. Gustav G. Kaufman, MC (*r.p.* 1941) was promoted to this rank, according to Dr. Franseen.

Dr. Alfred Kranes (*WM* 1932) was also promoted to Lieutenant Colonel, Dr. Sylvester B. Kelley tells us.

Comdr. S. Forrest Martin, MC (*Oph.* 1938) is back, on terminal leave.

Major Arthur S. Pier, Jr., MC (*WM* 1941) is seen round the Hospital these days. We're so relieved to learn that he *did* get that ice box—two of them, in fact!

Dr. Leonard D. Rosenman (*ES* 1943) was house-hunting round Boston recently.

Major Hermann B. F. Seyfarth, MC (*a. dn. s.*) was advanced to this rank, Dr. King says.

Lt. Col. Charles L. Short, MC (*WM* 1930) received this promotion, Dr. Kelley reported.

Major Somers H. Sturgis, MC (*ES* 1933) also received this promotion—information again from Dr. King.

Major Howard I. Suby, MC (*r.s. PH* 1937 & *U* 1939) is back on the Staff.

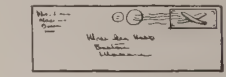
Lt. Col. Garrett L. Sullivan, MC (*Oph.* 1938) has returned to the Eye and Ear.

Major William J. Tobin, MC (*Or.* 1939), now out of military service, is returning to Washington, D. C. to resume his teaching at the Georgetown Medical School.

Capt. Lester P. K. Yee, MC, AUS (*EM* 1939 & *WS* 1941) has just returned from 42 months in the Southwest Pacific. He didn't even wait to change his shoes nor check his luggage before dashing to M.G.H. and his friends here.

Capt. Channing S. Swan, MC, USNR (*WS* 1925) reports this new rank for himself, and says that the following men have also received similar promotions:

Walter S. Burrage (*EM* 1927)
Virgil G. Casten (*N* 1929 & *Oph.* 1931)
Edwin P. Dunphy (*Oph.* 1923)
Richard W. Dwight (*WS* 1931)
Francis T. Hunter (*WM* 1926)
E. Ross Mintz (*P* 1930 & *r.s. U* 1932)
John P. Monks (*WM* 1931)
Theodore C. Pratt (*ES* 1929)



About a year ago Major William A. Perkins, MC (*ES* 1917) was sent by plane from Fort Lewis to Assam, India, where he was Chief of Surgery with the 24th Station Hospital. A recent letter, giving change of address to the 234th General, adds:—

> Though my organization seems to vary almost from month to month, yet my duties remain the same—Chief of Surgical Service. The reason for this very rapid turn-over is the present "evacuation" of the CBI Theatre. The hospitals are closing up one after the other, the personnel with high points going home, the rest transferred to other installations. I am of the latter.
>
> I hope I may continue to receive THE NEWS as long as it is published.

Capt. Joseph P. Holihan, MC, AUS (*ES* 1943) sends this epitome of his travels.

> Several months ago I thought I was going to be able to tell you my new address in person, but I missed by days being in the fortunate group that was re-routed from CBI-bound to USA-bound outfits.
>
> To recapitulate: I came overseas in January 1945, after almost a year on the west coast. Spent a short time in England, and have been in France ever since. Until August I was with the 50th General Hospital, where I received some excellent training in Orthopedics. Since then I have been irretrievably enmeshed in redeployment camps, running dispensaries, and clearly one of the superfluous medics of the ETO. The past two months would have been dull except for the fact that I have done considerable traveling in France, Belgium, and Holland. The only MGH man I've seen was Don Sweeny. I spent a very gay week-end with him and Dick Lillie (HMS '43).

Major Edwin C. Albright, MC (*WM* 1942) anticipated our comment. He begins his note with "Another silent one heard from"—underscored and enclosed within brackets—and then says:—

> After enjoying THE NEWS in silence these many months I decided it was time to speak out. I have returned from 40 months of service with the 105th General Hospital, where

it was my pleasure and good fortune to be associated with many MGH and HMS men. Needless to say, I have seen more than I cared to of Australia, Netherlands East Indies, and the Philippines. Right now I am enjoying a long terminal leave and the prospect of civilian life again.

Best regards to all.

Another "first" letter—from Lt. Henry D. Moorman, MC, USNR (*WS* 1943), written on board *U.S.S. Davison* (DMS-37) and headed Okinawa.

My ship is a mine sweeper which will be engaged in sweeping operations in the Yellow and East China Seas during the next few months. We will be based for the time being at Sasebo on Kyushu.

If Major Luther M. Strayer, Jr., MC (*Or.* 1939) considers his military life as having been dull, we wonder how much excitement would have been necessary to have satisfied him. From his home address—Lordship Road, Bridgeport, Conn.—comes this interesting account of his participation in the war.

My adventures in the Army were so routine I have hesitated to elaborate upon them, but here goes.

With the Yale Unit—the 39th General Hospital—I was mobilized 15 July 1942 and spent some time training on the wards at Camp Edwards.

We landed in New Zealand 21 November 1942, and our first casualties were those from Guadalcanal. I cherish many friendships made among the Kiwis and learned to share some of their enthusiasm for woodworking, botany, and boating. The medical work was on a very high standard of performance, due to the leadership of our commanding officers. When the work there slowed down I was sent on detached service to Esperito Santos to do orthopedics at the 25th Evacuation Hospital. The trip by air and the work there were very pleasant. Major Harry Hughes [*Or.* 1937] was Chief of Orthopedics in the nearby 31st General Hospital. Saturday afternoon conferences with his ward officers and visitors provided some most interesting discussions. Harry always managed to keep them direct and to the point. He was kind enough to ask me to operate on a shoulder case on his service while I was there.

Returning to New Zealand, the 39th General proceeded in easy stages to Saipan, and we were allowed to see Guadalcanal and Tulagi while *en route,* from which we had had many patients. Two days after arriving in Saipan I was put to work at the 369th Station Hospital where I saw flak wounds in B29 and B24 personnel before Iwo Jima, and during that campaign had charge of all the femurs that came to that hospital. Upon returning to the 39th I was made Chief of Orthopedics. The Okinawa casualties produced some pressure at times and we worked very hard during those periods. Lt. Gordon Jones [*ES* 1939] helped on the service for a time and Capt. Bob [*K.*] Brown [*WS* 1939] arrived on the island about that time, and the reunions were warm with the memories of the old M.G.H.

I was sent back on points—leaving Oct. 3 and arriving at Camp Devens Oct. 22. At present I am on terminal leave, and was notified the other day of my promotion to Major.

To me, ever since student days, the M.G.H. has stood for a certain spirit in service and practice of medicine. Away from home, The News kept that flame alive and I will always appreciate it. If there are systems of teaching and personalities in hospitals, the M.G.H. stands for the democratic—the truly American way—more than any other single institution with which I am acquainted; and, as such in these troubled times, is a never failing source of strength and inspiration.

A "first", from overseas, has come from Capt. Donald C. Balfour, MC, AUS (*EM* 1943). He writes:—

I am on the surgical service of a Station Hospital that is giving garrison medicine to the 5th Air Force, 35 miles northwest of Tokyo. We have settled down quite permanently in the stable circumstances of this occupation. I haven't missed much coming here, and I have seen E. P. Richardson, Hallowell, Burbank, and Enterline on the way. I wrote Bob Spencer from The News address given, hoping our paths would cross, but we find ourselves miles apart at sea.

I have been lucky to have seen most surgical activities in the Army in my jumps from a General Hospital in the States, through four units, to here.

Regards and Merry Christmas to all.

An Army man has gone to sea—Capt. Ralph H. Luikart, Jr., MC, AUS (*M* 1944). He writes:—

Since I was in to see you in September I have a new assignment and a new address. I am now Assistant Chief on the *USAHS Thistle.* We left New York Sept. 16; cleared Panama Sept. 22; spent 10 days in Pearl Harbor for repairs, and are now *en route* to Manila with passenger nurses—expecting to be in Manila Nov. 11 to pick up patients. We hope to be back in Los Angeles by mid-December.

These big white ships, with their red crosses, green stripes, and bright lights, are a pleasant sight. This ship is very well equipped with modern operating rooms, fluoroscopes, and everything you could ask for.

Received my forwarded copy of The News in Pearl Harbor. I enjoyed it very much, and I might add—so did the non-MGH MC's aboard.

Settle back for an exciting first visit with Capt. Stephen L. Madey, MC, AUS (*CM* 1944). Three long letters have arrived—two to Dr. Means and one to us—packed full of priceless descriptions of Luzon and of Filipino food, fauna, and flora. To us he writes:—

Somehow, out of nowhere, The News appeared today. Thank you for all it contained. I've already read it several times, each time trying to read more and more into the lines.

I'm now fighting the Battle of the Occupation, which is the great desire to get home and wrap my hands around a huge 20 cc syringe again! It would be nice to suddenly find myself in the MGH cafeteria and see ice cream again—any flavor would do.

Actually, I've had a very interesting time in the Army. I went overseas from San Fran the first week in February. First stop was Hollandia, then Leyte, and finally Luzon and Manila, that gentle "Pearl of the Orient" which is much tarnished now. Leyte was, and ever will be to me, some place akin to the fens I read about in the Beowulf Tales in my childhood days and never believed existed. It is really a miasma place full of swamps, rice paddies, nipa huts and waterlogged carabao. Out of that, I suddenly vaulted up to Manila to my present address [Office of Chief Surgeon, Hdqrs. AFWESPAC]. The address is forbidding but the job quite interesting. In my local wanderings I've seen more tetanus, typhoid, leprosy, and yaws than I will probably see again back in the States. There were over 500 cases of civilian tetanus during the months of February-May, with a high mortality.

As late as May, when I got to Manila, there was much Jap activity in local regions. Even now there are still many surrenders in the hills and out in Bataan. Manila has been pretty badly battered up, near the port, and will have to emerge very much a new city.

We live very simply in a tent camp just outside town, and go in and out by trucks over roads which often get badly rutted by the torrential rains. Thankfully, we are getting over the "rainy season". It now rains only every other day.

Always on the lookout for MGH men hereabouts, but so far have run into only one accidentally — [Joseph D.] Enterline [*MC, AUS* (*ES* 1943)] when I was down in Leyte.

Please keep The News coming. It's a treat out here.

One of Captain Madey's letters to Dr. Means contained three snapshots of Yamashita and one of General Wainwright. The pictures are on the foot-of-Treadwell-stairs bulletin board.

To continue with the letters:—

These are some of the photos another man and I took up at Baguio at the surrender ceremonies. Since then I have seen Yamashita in a prison outside Manila. He was a huge man in contrast to most Japs, and even in defeat ruled his roost with an iron hand. The day I saw him he was playing solitaire with cards, while his fellow prisoners sat around submissively and jumped at his words.

I've lived a varied career since being in the Philippines. I was in Leyte when there were still raids, then came to Manila when artillery was still outside the city and occasional snipers were picked up in the middle of town. When I was in Bataan in July there were still outposts and perimeters, and the hill Jap was still being taken in his night attempts to get into the banana groves for food. Within the last few weeks, at the Spo Dam about 30 miles away, the Japs were coming to the riverside holding all their granades in their cupped hands and with arms in the sign of surrender. Their treachery was suspected but it didn't materialize, for they threw the granades into the water and came up naked, as motioned to do.

The ancient and most colorful part of Manila is gone forever, but Dewey Boulevard and Taft Avenue are beginning to pick up some attractiveness. The city has been pretty well mauled and when it does build itself again it will have to seek its own temper, for with the mélange of different cultures abounding and its population so unintegrated for many years it will remain half formed and groping after its essence again.

Going into town I pass many curious signs —"Drive carefully. Don't kill your replacement". Every profession tries to advertise itself. A medico on our side of town has this sign painted on his house, "We Diagnose Before We Operate". A good idea almost anywhere.

In the early months of this year, whenever I heard a radio announcer say "This is the United States of America" it brought a huge sense of distance away from the citadel of home. Since V-J Day that feeling has vanished and I feel much closer to home. Uppermost in all our thoughts now is to get back and go along from where we left off. I would want to take more hospital work in medicine or pediatrics.

Meantime, all's well. Our 18-foot square tent houses four of us. We do have a wooden floor so I no longer have fun in bed with toads as I did in Leyte.

The News is a most welcome letter to have and is passed around to anyone who knows anything about Boston or Harvard. It's surprising the nostalgic reminiscences it brings to mind.

And now for the most descriptive letter of all:—

For about 20 miles around Manila most of the land is flat rolling country, backed further out by high mountains. There is much swampland near Manila Bay and the city itself seems to have been originally so, for when it rains drainage is poor and roads soon become ponds. When it is dry it's almost impossible to dig through the caked mud. Manila Harbor is huge and forms a natural arc, and I've seen hundreds of vessels of all sizes in it. Despite the early harbor destruction, all the piers are working and active—even Pier Seven, where former luxury liners come in, some 1400 feet long.

To the south, beyond Dewey Boulevard, most of the shore is faced with mud and silt-bottomed shoal, and the natives have created all manner of woven bamboo fishtraps which

Major General Paul R. Hawley, Theater Chief Surgeon, Presents the Bronze Star Medal to Lt. Col. Milton S. Thompson, MC (*Or.* 1934)

take up acres of water. The coast line is much like that in Leyte, with mangrove and nipa swamps and rice fields and paddies a little further inland. There are few towns hereabouts. The roads are mostly secondary ones.

Northward from Manila you soon hit the hills, and come across only a few scattered huts and nipa shacks. It's rough going, and the roads are none too good in the surrounding forest because of sharp turns and deep ruts. The forest is primitive and heavy. Lots of bamboo and thick interlacing underbrush. In the open spaces there is plenty of cogon grass—huge shoots 6 to 8 feet tall, with a tulip-like head.

Just outside the city are two large airfields —Nielson and Nichols Fields. Dewey Boulevard is said to have been used by the Japs for taking airplanes off the ground. It would be possible. But on the very day after the Americans hit the city, L-S B cub planes were evacuating casualties, as necessary, from some of the outer city streets.

The mountains behind Manila run in a north-south direction, blue against the sky, and with clouds rolling over them most of the time. They are the Sierra Madre range, rising up to 5000 feet, somewhat like the mountains outside Salt Lake City.

Wherever you go, out of Manila, you are always crossing little bridges, for the whole area seems to be interlaced with little rivers. Several fairly large ones pass through Manila and it's striking to see varied sized commercial boats on some, and small outriggers and houseboats on those in the Chinese section of town. The rivers passing through the city are picturesque in their many twists and sudden turns, with their low banks and scrubby growth, and with tugs, launches, bancas, and other small craft plying their way in them.

There's a huge fresh-water lake southeast of Manila. It's about 150 miles around it. It's amazing that it's so close to both the bay and the ocean. You can ride down between and see both the lake and ocean in certain spots—about 5 miles apart. It's a very shallow, dirty lake and little used. There is a lake inside a dead volcanic crater that is very worth seeing, but you have to fight your way down some 1500 feet of rocky slopes to get to it.

Most of the farming seems to be in growing rice and whatever vegetables there are. The farm animals are mainly carabao—a slow water-wallowing animal. It's common outside the city to see carabao or oxen hauling carts along the roads. There are a number of horses which are native here—small, wiry, and surprisingly strong. They haul carromatas (two-wheeled passenger buggies) seemingly forever. Every once in a while you see a good pacer among them, looking like a miniature "real" horse.

I've been to several Filipino meals, and the main staple is rice. No meal seems to be without it! There will often be fruit, mainly bananas or siniguelas (like yellow plum) or lanzones or santol (sharp-tasting small fruit). The soups will generally be some combined fruit-vegetable mixture. The main course is rice in several varieties with many kinds of vegetables which I've been able to identify (and lots that I haven't, so far). The most common ones I've learned are camotes (sweet potato), gabe (root vegetable like potato), upo (like squash), tugue (yam), camatis (small yellow-red-green tomato), and patola (squash-like). There will generally be some fish dish—prawns, shrimp, and lobster, as well as oysters, etc. Often, if this is a large meal, there will be a native chicken, fried or broiled, with extra sauces to go with the portions. For dessert I've had some wonderfully tasty dishes. There are several varieties of cocoanut here, and of one kind the juices and pulp are so made as to produce a deliciously sweet, almost caramel-like dessert sauce which is the *pièce de resistance.* There's also cassava (or tapioca), and fruit again (mangos or avocados) for dessert. Calamansis are sweet small limes and I've grown fond of them; and there are several kinds of bananas, from three inches in length to over a foot—brown-red, green, and yellow. The saguing is the eating banana and the saba is the cooking banana. Gosh, I've gotten wound up on Filipino food!

Other than the public buildings, most native houses are made from bamboo and nipa thatchings, tied together with rattan lashings. The floors are usually of split bamboo or woven matting.

Most of the natives love flowers. Gardenias are choice here, and I've seen some rare orchids, lots of mimosa, flamboyants, morning glory, and other strikingly brilliant flowers in gardens and climbing over walls.

Enough for the present. It's good to get lost for a few moments like this and forget my Army cot.

It has happened again! Too often, lately, have interesting letters from overseas and elsewhere been set up in print ready for publication, and before they could appear in The News *pages* the writers have appeared in The News *office!* In other instances, fine letters have so long awaited sufficient space that their contents, viewed in terms of the calendar, have become very definitely past history. In terms of professional and personal experiences, however, they are just as valuable today as when they were written, and often tell what the men might talk about, even now, should they drop in for a visit with you. These letters should not be permanently withheld. They represent an important part in the story of MGH-ers in World War II. Therefore, you may find occasionally, as here, a new section under the heading

IN RETROSPECT

This letter from Lt. Robert H. Hepburn, MC, USNR (*r. s. U* 1943) was written just before V-J Day. It tells us what Lieutenant Hepburn was doing immediately before the surrender, and contains another fine tribute to Lt. Robert S. Hurlbut.

Bobby Hurlbut certainly had a rare flare for words and ideas and how to mix them up for his friends in extraordinary philosophical jollity. Gosh, how furious it makes you and how much we'll miss him, but it is evident we'll never forget him and his genius.

We are now roving the Pacific clearing out patients from the forward areas in preparation for the big assault should the atomic bomb fail to end the war.

* * *

It has been impossible, because of lack of space, for us to include announcements of weddings and new babies—much as we have appreciated receiving them. But here is one that is too good to keep. On the basis of originality alone, it *demands* publication.

HEADQUARTERS
BROWN'S EXPANDING ARMY
COLORADO SPRINGS, COLORADO

13 September 1945

GENERAL ORDERS
No. 3

1. As of 0637 hours, this date, Brown's Army is augmented by one (1) man.

NAME	RANK	ASN	WEIGHT
BROWN, Mark K.	Pvt	57000003	6 lbs 6½ oz

Foll. basic tng. at Memorial Hospital, above named EM will join the home guard of this Army at 724 N. Tejon St., Colorado Springs, Colorado.

2. Foll. named EM are promoted to grades shown:

Name	Asn	Promoted From	To
BROWN, James K.	51000001	Cpl	Sgt
BROWN, Stephen R.	51000002	Pvt	Pfc

3. On completion of 10 d sk lv, Supergeneral Phyllis K. Brown, fully combat serviceable, will resume command of this Army.

4. Army Surgeon continues on extremely* d.s. at outpost hq, Saipan, M.I.

THE NEWS

No. 41 Boston, Mass. FEBRUARY 1946

PHYSICAL MEDICINE DEPARTMENT AFFAIRS

A noteworthy change in the occupational therapy and physical therapy departments during the past few years is the new designation of Physical Medicine for the combined departments. This gives occupational therapy direct medical supervision and aids in the coördination of treatment. The new name also signifies increasing interest in this specialty by physicians, and serves to separate the technicians in the field from the doctors. Bernard Baruch's gift of over a million dollars in support of recommendations made by a survey committee to stimulate research and education in Physical Medicine has aided the Massachusetts General Hospital and the Harvard Medical School in developing a training program for physicians who intend to become specialists in Physical Medicine. Fellowships to cover a three-year period have been set up. The first year is devoted to basic research in one of the preclinical sciences, particularly physiology and a three-months introductory course in biophysics at the Massachusetts Institute of Technology. The second and third years will be spent in clinical research, study, and practice of physical medicine, primarily at the Massachusetts General Hospital. The first Fellow, appointed in February 1945, was Dr. Charles S. Wise, recently discharged from the Army Medical Corps. He began his work in the Department of Physiology under the direction of Dr. Landis and is now doing some research on certain aspects of circulation. He has also completed the course at the Massachusetts Institute of Technology and will come to the Massachusetts General Hospital in March. The second Fellow, Dr. Sedgwick Mead (*EM* 1940, *P* 1941, *a.r.p. N* 1942), also just out of the Army, is well known to Massachusetts General Hospital followers. He began work in physiology at the Medical School in December.

The departments of Physical Medicine and Psychiatry at Massachusetts General also received a research grant from the Baruch Committee on Physical Medicine, for combined studies on the causes of fatigue in psychoneurotic patients and investigation of the effects produced by certain physical agents on these patients. Psychological, chemical, mechanical, and electrophysiological aspects are being investigated under the direction of Doctors Cobb, Finesinger, and Watkins. Other combined research work has been done on poliomyelitis, under grants received from the National Foundation for Infantile Paralysis. Physical therapeutic agents are being evaluated by their effect on the abnormalities recorded in electromyograms of involved muscles.

The physical appearance of the department (second floor, Domestic Building) has changed little during the war, but there have been many changes in personnel. The supervisors, Miss Lucy Morse (O.T.) and Miss Mary Nesbitt (P.T.) remained, but four out of five of the physical therapists entered the Army—one to head the physical therapy department in the Massachusetts General Hospital Unit (Miss Chandler), one to head the department in Boston City Hospital Unit (Miss Dolan). Of these four, one (Miss Hills) has now returned to her former position after service overseas. Three occupational therapists left to enter service—one as a WAVE, and two with civilian status in Army hospitals. One (Joanna Ballou Savery) has now returned to the department.

Probably our greatest war contribution has been in the training of student technicians for the Army, Navy, and Public Health Service. The three approved physical therapy schools in Boston added emergency courses to the regular schedule, so that we have been teaching the clinical aspects of therapy twelve months a year, with our maximum capacity of students per staff technician. In addition to the clinical training, regular courses of didactic lectures were also given. During the five years the department has been operating, 270 physical therapists have received training at the Massachusetts General Hospital and have graduated from their schools. Of these, more than one-half entered military service immediately, probably others later, although we do not have figures on this.

There also has been a great demand for more occupational therapists to work in Army and Navy hospitals, as well as in industrial units and civilian hospitals. The Massachusetts General Hospital has again served as a training center for students from the one approved school in Boston.

For the future, we hope to see fundamental knowledge and interest in Physical Medicine increased by the efforts of the Fellows studying in the field here and at similar centers elsewhere. The members of the Staff returning from military service are especially invited to pay us a visit and give us their ideas on rehabilitation and how to get patients well in a hurry—which they have learned to do so well.

Arthur L. Watkins, M.D.,
Chief of Physical Medicine

ETHER CENTENARY

October 16, 1946 will be the one hundredth anniversary of Dr. Morton's demonstration of the use of ether for anaesthesia in the dome of the Bulfinch building.

Plans are already being made for a suitable commemoration of this important event. It is believed that the occasion can be exploited to further medical progress. Our slogan may well be: We are celebrating a discovery; we need more discoveries; if we are to have more discoveries the public must support medical research.

A committee appointed by the Trustees is at work upon the program. Dr. Arlie V. Bock and Dr. W. T. Sherman Thorndike, President and Secretary-Treasurer respectively of the Alumni Association, are at work upon those portions of the program which are strictly alumni affairs.

Thus far the plans are as follows: In the mornings and afternoons of October 14, 15, and 16, a series of scientific symposia will be conducted at the hospital. On the evening of Monday, October 14, there will be held the dinner of the Massachusetts General Hospital Alumni Association in Harvard Hall of the Harvard Club of Boston. It is hoped that as many as possible of the members of the Association will attend—not only this dinner, but also all other items in the Centenary program.

Tuesday evening, October 15, is reserved for private gatherings.

The climax of the celebration will be in the form of a large evening meeting on Wednesday, October 16, in Sanders Theatre of Harvard University. Speakers are being chosen whose remarks, it is believed, will be of interest to the laity as well as to the medical profession. Bishop Sherrill will be Master of Ceremonies. President Conant of Harvard, President Compton of Massachusetts Institute of Technology, and Dr. Henry K. Beecher, Professor of Anaesthesia, will speak. Others will be announced later.

As plans are developed further they will be described in THE NEWS. A series of letters is also to be sent to the members of the Alumni Association.

Be sure to reserve the dates October 14-16, 1946 on your calendar.

A reception is being planned for members of the staff, nurses, and employees who served in the armed forces. It will be held at the Hospital some time in May—probably on the lawn. More detailed announcements of plans will appear in subsequent issues of THE NEWS.

The second talk in the veterans' series was given at the January meeting of the Medical Staff by Col. Donald S. King (*EM* 1920) and Col. Theodore L. Badger (*EM* 1928) who spoke on "Tuberculosis problems in the Army"—Mediterranean Theatre and European Theatre, respectively. Dr. King has very kindly given us this summary of his talk.

In World War I the plan for the control of tuberculosis in the Army was to have boards of experts examine the chests of inductees and listen for rales brought out by cough. The chest X-ray was too new a development to be used extensively at that time.

Between 1917 and 1940 the death rate for pulmonary tuberculosis in the United States had dropped from 147 to 46 per 100,000. During this time the X-ray had been proved to be much more reliable in detecting active tuberculosis than physical examination.

As a result, in World War II it was decided to X-ray all men before induction. However, the first million were accepted without X-rays, and it is estimated that 10% of the minimal lesions were missed by those who examined the films of those who were X-rayed.

In the first war three million were examined and 0.7% rejected because of rales. In the second war eighteen million were X-rayed and 0.8% rejected. But this does not mean that there was as much active tuberculosis in 1940 as in 1917 or that physical examination is as good a method of detecting active tuberculosis as X-ray. The explanation for the similar percent of rejectees by the two methods is that although there was less obviously active disease in 1940-1945, the X-ray picked out great numbers with asymptomatic but potentially active disease.

As a result of finding and eliminating most of the potentially active cases, the hospitalization rate in the present war was about 1.2 per 1000 per year, as compared with a rate of 12 in World War I.

In Africa and Italy careful study of hospital records showed that only about 750 cases were admitted for pulmonary tuberculosis, besides 265 cases of "primary pleurisy with effusion" which is also regarded as tuberculosis. The tuberculosis rate for the Mediterranean Theater was only 0.58.

Of the 750 cases, 60% were active, 20% probably active, and 20% inactive. The rate was the same for white and colored. Only sixteen women were hospitalized for the disease. Only nine cases died, six of them colored.

It is always a problem as to where soldiers who developed active tuberculosis picked up the infection. Thirty-eight of the 750 had known disease before induction. Twenty percent had a positive family history, and 10% knew of civilian exposure. Of those developing active disease, at least 80% had had X-rays at induction. Dr. Esmond Long believes that in 75% of these cases, careful study of the preinduction films would show that tuberculosis was present at the time of induction but missed in the routine reading of the films. Careful study of about 350 cases showed that about 40 of them had had close exposure to tuberculosis in the Army. These cases came from 10 Units.

In the Mediterranean Theatre, tuberculosis centers, located near ports, were important parts of the program. These centers were especially equipped for X-ray, laboratory study, isolation, and pneumothorax treatment where it was indicated. Toward the end of the war plans were being made to fly home most of the really active cases who seemed able to travel.

We are grateful to Dr. Badger, also, for this summary of his talk.

In the European Theatre the progress of tuberculosis was marked by an extremely low incidence in the Army as a whole, with a higher rate and progressive rise among the nurses. In fact, the rate at the end of the war was lower than at the beginning. Great credit for this good record goes to the Induction Boards in this country for the excellence of their survey work in weeding out the tuberculous before they could be admitted to the Army. The progressively high rate in nurses must be explained by the greater susceptibility of their age and sex with the recognized exposure of nursing and less important factors of fatigue, diet changes, and the strain of war and combat.

Spot surveys of troops stationed in the British Isles were carried out in 1943 with a mobile X-ray unit. Lt. Col. Magnus Smedal, Chief of X-ray at the 5th General Hospital, put this unit together and trained the personnel for most efficient work. A battalion of 500 to 1000 men was considered a fair cross section sample of any military unit. Both ground and air force units were surveyed—especially those who had been a year or more overseas. More than seven thousand soldiers were X-rayed. Active tuberculosis was found at a rate of less than one per thousand per year. Calcified nodes were often extensive and seen in more than 15 percent, while the incidence of fibrocalcific residues was slightly over one percent.

Most interesting were the Recovered Allied Prisoners recaptured by our advancing armies. These men presented a most extraordinary picture of starvation and tuberculosis. Captured for the most part in the Ukraine, the ended up in the mines and heavy industries of the Rhur and Metz regions where they had been living under most crowded conditions and overworked for long hours. In the course of a few days some sixteen hundred of these men were admitted to the 46th General Hospital in Besancon, France. This unit was formerly in the Mediterranean Theatre, and Dr. Murray Burns was in charge of Medicine. Other hundreds went to other hospitals in Eastern France. Forty percent of these men had active tuberculosis, ninety percent of whom were far advanced in the disease. None spoke English, most were mentally retarded by starvation, and no sort of discipline prevailed. The treatment of starvation came first with separation of infectious cases. Their disease was bilateral, acute and chronic widely disseminated, often with massive thoracic and mesenteric nodes with extensive bronchial disease. The acute ones were rapidly progressive, with a total mortality that approached 30 percent.

Pathologically, it was typically fibrocaseous tuberculosis. There were, however, many cases showing vast areas of necrosis and caseation without tubercle formation, without giant cells or epitheleoid formation, and with little or no small cell infiltration. In these latter cases one saw the picture of overwhelming infection, or the absence of constitutional response to the disease, or both. What part starvation alone played is not clear, a the contact sources of infection were massive. The handling of this great influx of tuberculous patients reflected the utmost credit upon the Hospital units burdened with their care. and a unit citation went to the 46th General Hospital for their skill in surmounting the problem.

Recovered American Prisoners of War had been a shorter time in German hands but, in spite of this, serious starvation existed. The incidence of tuberculosis, however, was not critical. All Recovered American Prisoners hospitalized at the 77th Field Hospital, in Western France, were X-rayed and showed approximately eight times the amount of active tuberculosis found in the Army air and ground forces. X-ray survey of all Recovered American Prisoners was not possible and the tuberculosis rate for the entire group cannot be determined, but it must be lower than for those hospitalized. In about 850 of these Recovered Americans Boarded to the United States from one General Hospital, there was nearly twice as much pleurisy with effusion as parenchymal tuberculosis.

* * *

As always, the Spirit of Christmas came again to the Hospital this year. In a program which covered more than an entire week, there was chorus singing in the Chapel and on the wards, recorded music, organ and violin concerts, the children's party, the adult entertainment, bell ringing on all the wards, and the Dietary Department's Christmas party. The Nurses' Candlelight Service is described otherwhere in this issue.

We are all very grateful to everyone—both within and outside the Hospital—who helped make Christmas week a success and did so much toward bringing happiness to so many troubled hearts.

The printed program was enclosed this year in a very attractive cover designed by Mr. David Christensen and made in the Occupational Therapy Department.

* * *

Dr. Faxon has received this fine letter from Colonel E. Standlee, M.C., Surgeon.

HEADQUARTERS
MEDITERRANEAN THEATER
OF OPERATIONS
UNITED STATES ARMY
Office of the Surgeon

. . . In the auxiliary role of military medicine in the North African and Italian phases of the war, the Massachusetts General Hospital has been well and ably represented. The sum total of the productive efforts and salutary accomplishments of M.G.H. doctors and nurses in this theater has been no small contribution to the successful care of our sick and wounded.

The very distinguished service of Doctor Churchill needs no emphasis. He came to our theater during the early phase of activities with a pre-conceived plan which approached perfection and which he readily and forcefully adapted to military requirements. It is my considered opinion that the work which he and his assistants did in the field of military surgery in this theater surpassed any that had previously been done and will stand out as the most authoritative on the subject. Surely no finer tribute than the saving of countless lives and the prevention of much physical disability can be his. In addition, the records of Colonels Beecher, Simeone, Sullivan, and Major Lyons have been very significant. Col. Donald King, Major Trygve Gundersen, and Major Daniel Holland were "borrowed" from the 6th General Hospital for special duty from time to time. Lt. Col. Langdon Parsons and Major Charles Burnett are among the other Bostonians who were called upon for special assignments. All performed their tasks with enthusiasm and diligence and have contributed to an exceedingly marked degree in the successful care and management of surgical cases throughout the theater.

The professional talents of the 6th General Hospital were widely used and much appreciated. These associations have been most pleasant, and with admirable pride I commend your institution for the contributions of her pupils during the war in the Mediterranean Theater. . . .

* * *

In addition to the citations already mentioned in The News, the following have been received:—

Cpl. Malcolm A. Conner, in charge of the newspaper concession here at M.G.H.—Certificate of Merit . . . in recognition of meritorious service during the period 18 June 1944 to 25 May 1945, both dates inclusive. During this period of continuous commitment of the unit [31st Medical Group], Technician Fifth Grade Conner performed his duties of Supply Clerk in a manner within the highest keeping of the service. His knowledge and understanding of supply problems and matters greatly contributed to the efficiency of the supply situation in his organization. He has shown great initiative and thoroughness in handling captured medical supplies and has helped relieve his superiors of many of these matters. His untiring efforts, devotion to duty, and thorough understanding of his duties reflect credit upon himself and his organization. . . .

Lt. Comdr. Arthur T. Willetts, MC (*r. U* 1941)—Silver Star Medal . . . for conspicuous gallantry and intrepidity in action against the enemy while serving with a Marine battalion during the landing attack at Cape Torokina, Bougainville, British Solomon Islands on November 1, 1943. Lieutenant [now Lt. Comdr.] Willetts, a surgeon attached to an assault battalion, found the beach strewn with injured men in need of immediate medical attention. The entire beachhead was subjected to enemy fire which endangered the lives of the wounded. He immediately requested a nearby assault unit to attack a nearby jungle area, and after the area was cleared of enemy troops, he established an aid station under cover of the jungle growth. Although the aid station was subjected to six enemy machine gun attacks during the day, Lieutenant Willetts never once took cover nor indicated in any way to his patients the peril of their situation. He treated more than eighty serious wounds with great professional skill. Despite his own dangerous position, his courageous bearing served to avert panic among the wounded and his gallant conduct was in keeping with the highest traditions of the United States Naval Service.

W. F. Halsey
Admiral, U.S. Navy

Col. Thomas R. Goethals has been presented with the Legion of Merit for his work as Commander of the 6th General Hospital. The award was made at Fort Devens by Brigadier General William C. Crane, Post Commander.

Helen Hewitt has returned to her former position as assistant night supervisor in the General Hospital. Miss Hewitt was a member of the Massachusetts General Hospital Unit overseas.

Helen Coghlan, also a member of the M.G.H. Unit, has returned to her former position as operating room supervisor at Phillips House.

Margaret Nelson, formerly a private duty nurse, who served with the American Nurses Corps for four years, two of which were spent in the Mediterranean Theatre, has accepted a temporary position as head nurse at Phillips House.

Mary Alice Carpenter, who served with the Red Cross Nursing Service and was stationed at the Harvard-Red Cross Hospital in Salisbury, England early in 1941, and later with the American Nurses Corps in the European Theatre, has been appointed a head nurse in the General Hospital.

The Nurses' Glee Club held its annual Candle Light Service in the Moseley rotunda on the evening of December 18. Mrs. Grace Warner Gulesian was the director. Many members of the Nurses' Alumnae Association and friends of the Glee Club were present.

To the singing of "Hark, the herald angels sing" the Glee Club filed into the darkened auditorium, each nurse carrying a lighted candle. This very beautiful feature of the program needs to be seen and heard to be appreciated.

Violin accompaniment was furnished by Miss E. M. Reade, with Mrs. Gulesian at the piano. The audience joined in the singing of several familiar carols which were interspersed among other lovely songs given by the Glee Club.

There is still time to get one of the attractive engagement calendars with their 27 full-page pictures of interior and exterior scenes about the Hospital, which are on sale here at M.G.H. Because of the unusual collection of pictures, this is a calendar you will wish to keep, long after 1946 has gone its way. But perhaps the chief reason why you should secure one is that the entire proceeds from their sale go to the endowment fund of the Massachusetts General Hospital School of Nursing.

Write to Miss Ethel V. Inglis, John Hancock Mutual Life Insurance Co., 197 Clarendon St., Boston, Mass., for your calendar. You'll agree that your $1.50 is well spent when you see what you get for your money; but you'll eternally regret it if you wait until they're all gone.

* * *

Capt. Lillian Chase, RCAMC, at present attached to the Standing Medical Board #2 D.D., Toronto, while on a short leave recently, visited the Diabetic Clinic and the Dietary Department of M.G.H. She was very enthusiastic about the psychological approach to diet problems which Miss Dagna Klisurich brings to the patients.

Captain Chase was the guest of Miss Muriel McLatchie for a week.

At their meetings on December 14 and 28 and January 11, the Board of Trustees voted:

To accept the resignations of Drs. R. Earle Glendy and Margaret M. Glendy with regret;

To accept the resignation of Dr. Rosemary V. Gorman from the position of Assistant in Medicine;

To accept the resignation of George D. Parker, D.M.D., with thanks for his service and best wishes for the future;

To accept the resignation of Dr. Edward L. Young with regret and appreciation of his services and to appoint him to the Board of Consultation;

To promote Dr. Harold G. Giddings from the position of Assistant in Surgery to that of Associate Visiting Surgeon;

To change Dr. Fiorindo A. Simeone's position on the Staff from Assistant Urologist to Assistant Surgeon;

To extend the appointment of Dr. Clito R. Damiani as Resident on the Dermatological Service from March 31 to September 1;

To appoint:

Dr. Benjamin Bacon as Assistant Obstetrician with the understanding that his practice in the Phillips House and Baker Memorial will be limited to obstetrics;

Dr. William C. Burrage as an Assistant Resident in Medicine for three months, beginning January 1;

Dr. George H. A. Clowes, Jr. as Third Assistant Resident in Surgery for a period of 8 months, beginning January 1;

Dr. Jane E. Denton as Assistant Resident in Medicine, beginning April 1;

Dr. William A. Dickson as an additional Intern on the Children's Medical Service in order to provide a rotating internship in connection with the House of the Good Samaritan;

George M. Freeman as Intern on the Dental Service, beginning April 1;

Dr. W. Philip Giddings as First Assistant Resident in Surgery, beginning December 15, 1945;

Dr. William W. L. Glenn as First Assistant Resident in Surgery, beginning December 12, 1945;

Dr. Daniel J. Holland, Jr. as Assistant Resident on the Dental Service, beginning March 1, and to continue him as Assistant Dental Surgeon on leave of absence until completion of his residency;

Dr. Byrl J. Kennedy as Assistant Resident in Medicine, beginning April 1;

Dr. Michael A. Luongo as Intern in Pathology for one year, beginning January 1;

Dr. John R. McDaniel as First Assistant Resident in Surgery, beginning December 14, 1945;

Dr. Hugh A. MacMillan, Jr. as Second Assistant Resident in Surgery for a period of 8 months, beginning January 1;

Dr. Arthur S. Pier, Jr. as an Assistant in Medicine as of December 1, 1945;

Dr. Channing S. Swan as an Assistant in Urology;

Dr. Philip P. Thompson, Jr. as a demobilization extra Assistant Resident in Medicine for a period of 6 months, beginning January 1;

Dr. LeMoyne White as Assistant Resident on the Psychiatric Service, beginning April 1;

Dr. Lester P. K. Yee as Second Assistant Resident in Surgery as of December 21, 1945.

The Trustees also voted:

That a reception for members of the Staff, nurses, and employees who served in the Armed Forces be held at a later date.

The General Executive Committee, at their meetings on January 2 and 9, voted to appoint:

Dr. William M. Jefferies as Clinical Fellow in Medicine for one year, beginning January 2;

Dr. Avery D. Weisman as Research Fellow in Psychiatry, as of January 1.

The following men have returned to active duty on the Staff, as of the dates given:

Dr. Otto E. Aufranc, Assistant in Orthopedics	Dec. 17
Dr. John T. B. Carmody, Assistant in Neurosurgery	Jan. 3
Dr. Richard Chute, Associate Visiting Urologist	Jan. 1
Dr. Neil L. Crone, Assistant in Medicine	Jan. 14
Dr. Thomas R. Goethals, Obstetrician	Feb. 1
Dr. John R. Graham, Assistant in Medicine	Jan. 14
Dr. Francis T. Hunter, Associate Physician	Jan. 1
Dr. Theodore C. Pratt, Assistant in Surgery	Jan. 7
Dr. Grantley W. Taylor, Associate Visiting Surgeon	Jan. 1
Dr. Maurice M. Tolman, Assistant Dermatologist	Jan. 7
Dr. Richard Warren, Assistant Surgeon	Dec. 21
Dr. George P. Whitelaw, Assistant in Surgery	Feb. 1

MASSACHUSETTS EYE & EAR INFIRMARY

Ophthalmological Service

Appointments:

Dr. Fred S. Thorne Dr. Trygve Gundersen	Associate Surgeons in Ophthalmology to Surgeons in Ophthalmology
Dr. David G. Cogan Dr. Merrill J. King	Assistant Surgeons in Ophthalmology to Associate Surgeons in Ophthalmology
Dr. S. Forrest Martin Dr. Garrett L. Sullivan	Senior Clinical Assistants in Ophthalmology to Assistant Surgeons in Ophthalmology

Resident Staff:

The following men have received appointments to the Ophthalmological Service, as of the dates given

Dr. Mayo J. Poppen	July 1
Dr. William Stone, Jr.	Oct. 1

We are glad to be able to report that the men listed below, who were appointed to the Resident Staff of the Ophthalmological Service but were unable to complete their residency due to military service, are returning to start their training on the dates given.

Dr. Everett C. Moulton, Jr.	Jan. 1
Dr. Warren W. LaPierre	Apr. 1
Dr. Alfred Kant	July 1
Dr. Richard B. Pippitt	Jan. 1, 1947

Dr. Bernard Zonderman and Dr. Richard Goldcamp are back to resume their residency in Oto-Laryngology, which was interrupted during the war.

In general, most of the members of the Staff who left for military service have returned to their duties at the Infirmary and it is needless to say they are most welcome. Activities are in full swing and it is beginning to seem like what we used to refer to as "normal times".

Graduate courses in Ophthalmology for veterans are to be given under the auspices of the Harvard Medical School, beginning in March. The first two months will be devoted to the basic sciences of Ophthalmology, followed by a month of Clinical Ophthalmology in May. There will also be a course in Refraction given in June.

Dr. David G. Cogan will be in charge of the two-months' basic course, and Dr. Theodore L. Terry will supervise the course in Clinical Ophthalmology. The course in Refraction will be given by Dr. Albert E. Sloane.

Because there is need for basic instruction in Ophthalmology on a much larger scale than is now available in the existing centers, there will be another course given under the auspices of the Ophthalmological Study Council of the American Board of Ophthalmology. It is planned to give this at the Boston Medical Library for approximately 100 veterans who are unable, for various reasons, to secure places in any of the established first-rate courses at the several universities. No laboratory or clinical instruction can be given to such a large group, but the purpose of this course is to furnish preparation for future residencies or preceptorships.

The New England Oto-Laryngological Society held its Annual Meeting in conjunction with the Triological Society, Eastern Section, at the Hotel Statler on January 9. Eleven papers were given during the day. The meeting was well attended.

In the evening the Annual Dinner of the New England Oto-Laryngological Society was held in the main dining hall of the Harvard Club. About 160 members and guests were present to hear the guest speaker, Dr. Julius Lempert of New York, discuss endaural surgery of the temporal bone.

New addresses:—

PFC Marjorie W. Acree, 28th WAC Hospital Co., Cushing General Hospital, Framingham, Mass.

Capt. John J. Ballenger, MC, AUS (*Oto-Lar.* 1943), Station Hospital, Camp Grant, Ill.

Major Frederick S. Coombs, MC (*r.p.* 1937), AAF Regional Hospital, Chanute Field, Rantoul, Ill.

Lt. Col. David Bruce Dill, QMC (*res. fel. M* 1925-27), Harvard University, Fatigue Laboratory, Morgan Hall, Soldiers Field, Boston 63, Mass.

Major Ephraim P. Engleman, MC, AAF (*res. fel. M* 1941-42), Chief of Medical Services Branch, Birmingham General Hospital, Van Nuys, Cal.

Lt. Comdr. Marcus E. Farrell, MC (*CM* 1934), Medical Bldg. 407, Naval Center, Bainbridge, Md.

Col. Donald M. Glover, MC (*WS* 1922), 2507 Guilford Road, Cleveland Heights 18, Ohio.

Capt. John S. Hathaway, MC, AAF (*r.p. EM* 1932), 43rd Squadron, 29th Bomb Group, APO 334, c/o Postmaster, San Francisco, Cal.

Col. Lewis W. Hill, MC (*WM* 1915), 319 Longwood Ave., Boston, Mass.

Lt. Barbara A. Jensen, NC, Submarine Base, Naval Dispensary, New London, Conn.

Capt. Frederick H. Kalil, DC, AUS (*Dn.* 1943), "E" Sq. BRAAF, Boca Raton Field, Fla.

Capt. Walter S. Kerr, Jr., MC, AUS (*WS* 1943), 48 Village Hill Road, Belmont, Mass.

Lt. Comdr. R. Starr Lampson, MC (*ES* 1936) 179 Allyn St., Hartford, Conn.

Comdr. Sylvester McGinn, MC (*a. M*), U. S. Naval Hospital, Corona, Cal.

Comdr. Richard D. Nies, MC (*An.* 1941), NATS VR 12, c/o Fleet Post Office, San Francisco, Cal.

Capt. Benjamin Tenney, MC, USNR (*WS* 1927), U. S. Naval Hospital, Out-Patient Dept., San Diego, Cal.

Dr. Robert L. Thomas, 400 -29th St., Oakland 9, Cal.

Brief bits:—

Dr. Donald V. Baker, Jr. (*ES* 1943) is on terminal leave and is planning to join the house staff at M.G.H. soon.

Comdr. Allen G. Brailey, MC (*EM* 1930) has been released from active military duty.

Capt. Richard R. Carter, MC, AUS (*r.p. N* 1942), of the 46th General Hospital, is back in civilian life.

Lt. Col. Thomas Cavanaugh, MC (*Oph.* 1940) has returned to the Eye and Ear Staff.

Malcolm A. Conner, whose letters gave us such sharp pictures of European scenes during the war, is back at his old job here in the Hospital. He was Chief Clerk in the Medical Control Office, G 5 Industry Control Branch in Heidelberg.

Capt. Perry J. Culver, MC, AAF (*EM* 1942) has been home on leave. He has returned to Maxwell Field, Montgomery, Ala.

Dr. Alfred Hurwitz (*gr. asst.* S 1942) has been discharged from the Army with the rank of Lieutenant Colonel.

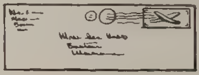
Dr. James R. Lingley (*res. R* 1930) is back at the Hospital.

Capt. Leon F. Ray, MC, AUS (*r.p. D* 1939), another member of the 46th General Hospital, is back in civilian life.

Capt. Richard V. Riddell, MC, AUS (*ES* 1943) expected, at last accounts, to be separated from the Army within a few days.

Dr. Howard B. Sprague (*EM* 1924) is out of military service.

Dr. Edward G. Thorp (*EM* 1931) has been appointed Chief of the Medical Service at the Malden Hospital.



Many of you remember Dr. John C. Whitehorn, who was a Research Fellow and Associate Psychiatrist at M.G.H. in 1936-38. He is now Psychiatrist-in-chief at Johns Hopkins. This letter from him, to Dr. Faxon, will be of interest to all of Dr. Whitehorn's friends.

> As a former member of the large MGH family—albeit in a rather peripheral relationship some years ago—I write to express my appreciation of THE NEWS and its morale function.
>
> It may be appropriate, in the interests of complete coverage of military news, to record that I had the interesting experience of being a sort of "visiting physician" to the psychiatric services of our four fighting armies in Germany during the closing weeks of the fighting there, as a member of a special five-man team. We were in the ETO about eleven weeks, for the SGO and OSRD, studying combat exhaustion, its pathogenesis, treatment, and prevention.

The copy of the citation awarded Major Richard B. Capps, MC (*CM* 1931 & *EM* 1933), published in the November number, came to us from an outside source. We now have our first direct communication from Dr. Capps, written from 112 South Michigan Blvd., Chicago.

> I returned to this country last spring, and have been Chief of the Medical Service of DeWitt General Hospital for the last six months. This hospital is designed as a special center for the study of infectious hepatitis.
>
> In December I was retired because of a recurrence of my own hepatitis. I am now back in Chicago, and expect to re-enter private practice in March.

Major Capps served with the 12th General Hospital overseas. That's all we know about his military activities. We wish he'd send us at least an outline of his experiences over there, to appear in a future "In retrospect" column.

Lt. Col. Carter R. Rowe, MC (*Or.* 1939) cancels a long, long silence with one of the nicest letters we have received. The last paragraph, in particular, is meant for all of you who are helping make The News what it is.

I remained with the 105th General Hospital, as Chief of the Orthopedic Section, until we were separated from the hospital and sent to Leyte. That was May 1945, at which time we were on Biak, N.E.I. On Leyte I was with the 118th General Hospital (Johns Hopkins Unit) which came over with us on the *West Point* in May 1942. We were very busy at first, but this quieted down later, and in September I was sent to Manila to the 248th General Hospital as Chief of the Orthopedic Section, to review the British POW's. There were Canadians from Hong Kong, Australians, New Zealanders, and English from Singapore and China and Japan. Nutritional deficiencies were advanced, beriberi being the commonest condition. There were many orthopedic conditions, but due to the poor general condition of the patients, we did only emergency work evaluated their other conditions, and made them comfortable for the earliest return to their respective countries.

I was returned to the U.S.A. in October, completing 42 months overseas. On 22 November I was separated from the service and placed on terminal leave, which extends to March 7. During my service I received two promotions: to Major in March 1943, and to Lt. Colonel on 14 December 1945.

As to my future—on March first I will be associated with Dr. Edwin F. Cave in orthopedic surgery and will let you know my living address when I am fortunate enough to find one.

None of us can tell you how much The News has meant to us. It is definitely one of the main factors in keeping Massachusetts General men together all over the world. We keep up with what goes on at the Hospital from month to month, we keep up with what our friends are doing from time to time—all of which makes for a family tie-up which is so distinctive of the General men.

"First" letters are still coming in, so it's not too late for you who have not already done so to join the "association of firsts". Here is one such from Lt. Col. E. Murray Burns, MC (*r.p. Psychiat.* 1935).

At the present time, after nearly five years in the Army, I am now on terminal leave and back in private practice in Portland, Oregon—902 Stevens Building.

I flew back from France late in September, after being on duty in that country for a little over a year, preceded by a year in North Africa.

I have thoroughly enjoyed The News, which has kept me well informed of all my associates in M.G.H. Please give my best to any of them you may meet and tell them that if they are ever out in this part of the country, I shall be happy to have them look me up.

Dr. Laurence B. Ellis (*EM* 1928) is back home. From 319 Longwood Avenue, Boston 15, he writes:—

I am once more a civilian, having been separated from the service in October. Previous to this, I served as Chief of the Medical Service of the 7th General Hospital in England until May 1945 and subsequently as Medical Consultant to the United Kingdom Base.

Like all the others who received The News while overseas, I found it one of the most welcome publications.

From Birmingham General Hospital, Van Nuys, California, Capt. Fathollah K. Mostofi, MC, AUS (*a. P*) reports his promotion in rank and adds:—

Since I have only 24 points, am 34 years old, and am in charge of the Laboratory here, it is anybody's guess as to how long I will be in the Army.

Every week we have a grand reminder of the Massachusetts General in the form of a series of Clinico-Pathological Cases which we discuss at our staff conferences. These were shipped out to us, complete with Kodachrome slides, etc., by Dr. Castleman—and do the Medical Officers enjoy it!

Lt. Murray W. Scott, Jr., MC, AUS (*WS* 1945) has sent this "first"—from USA General Hospital, Camp Carson, Colorado.

After knocking about in various Army schools for five months, I have been fortunate in being assigned to the Surgical Service here. Colorado Springs is a delightful place at the foot of Pike's Peak and adjacent Rocky Mountains. The weather is mild, and one can play golf one day and go skiing on Pike's Peak the next.

I had the interesting experience of picking up a clinical record today and seeing the name of Bill Wigglesworth [*ES* 1945], an HMS classmate and fellow MGH surgical intern. At the time it was written he was on the west coast.

We "recruits" have no word as to how long we shall remain in the Army. Regardless of the length of time, my enthusiasm to return to the surgical teachings of the M.G.H. shall not diminish.

Lt. Cornelius J. Shea, MC, USNR (*ES* 1943) sounds, from this brief letter, like an excellent candidate for the "Now-it-can-be-told" department. He writes, from U.S. Naval Mine Station, Panama City, Florida:—

I have had leave, following sea duty in which I participated in the Leyte, Mindoro, Iwo Jima, and Okinawa operations, and am now Medical Officer of a small Naval Station here.

The following news release gives us the first information we have had regarding Major J. Maxwell Chamberlain, MC (*NS* 1934 & *WS* 1937) since he sent us his address at Fort Lewis over a year ago. The release runs:—

. . . Major J. Maxwell Chamberlain is in charge of the Korean Medical Education Section, Bureau of Education, with the Military Government, in Seoul, Korea.

Entering the service in October 1944, Major Chamberlain served at various general hospitals before attending the Medical Corps School at Carlisle Barracks. Upon completion of the school, he was stationed at Kennedy General Hospital before serving as Commanding Officer of the 402nd Thoracic Surgery Detachment at Fort Lewis, Washington. Later, he was stationed at Baxter General Hospital, before leaving the States for overseas duty in June 1945. . . . Before entering the service, Major Chamberlain was Principal of Thoracic Surgery, New York State Chest Hospitals, in Cooperstown, N. Y.

A "first" from Major Charles B. Burbank, MC (*WS* 1939) arrived a few weeks ago. Because it was on display on our bulletin board it did not get into the last News. It carries several lines of heading printed in Japanese, following which Major Burbank writes:—

The letter heading should be enough, but in case you can't read it, I am at the 42nd General Hospital, APO 503, Tokyo. I arrived here from the ETO via Panama and the Philippines where I spent several weeks. I am at present Chief of Surgery and very busy.

Saw Tom Gephart [*WS* 1941] the other day. He came down from Aomori Bay, and we had a pleasant evening.

Have hopes of coming home soon, but who can tell?

It is *so* good to hear again from Major F. Thomas Gephart, MC (*WS* 1941) and to learn of his promotion. His letter is headed 167th Evacuation Hospital, and he says:—

The October number of The News contained a copy of the citation I received some months ago. However, through some error, your note indicates that I also received the Bronze Star, which is incorrect. There was just the one award. This is to help keep the records straight. [Your editor regrets she didn't understand that the additional Bronze Star caption must have applied to a citation for another person—which citation had evidently been cut from the copy of Major Gephart's award.]

During my overseas tour of slightly more than two years, I have managed to cover a fairly large area of the Pacific. Some of the stops have included New Caledonia, Guadalcanal, Bougainville, Munda, New Zealand, Suva, Russell Islands, Anguar, Peleliu, Leyte, and now northern Honshu in Japan. After becoming acclimated to life in the tropics, we find our present location—since it is somewhat similar to Boston's in temperature—rather chilly. We already have nearly two feet of snow, with more falling almost constantly.

Our field hospital was inactivated after setting up near Aomori on the northern tip of Honshu. In November the installation was taken over by an evacuation hospital and the few of us officers who remained were transferred to that unit. Our surgical service is not very active, the work here being similar to that in a garrison.

As far as one can determine, I shall become eligible for discharge with the announced point reduction effective December 31. The policy here seems to be to keep medical officers for most of the permitted sixty days after they become eligible for discharge, but I should be on my way by March first.

From our very narrow horizon, the occupation of Japan seems to be going satisfactorily. In this region, at least, there have been no apparent difficulties and the Japanese have been very coöperative. However, the majority of the civilians up here are poor, uneducated farmers who have always had a subservient existence, so we can't be sure this is true throughout Japan.

Many thanks again for sending The News. Would you mind addressing future copies to me at my home: 136 Parkview Avenue, Bronxville, N. Y.? You see, I am at least optimistic!

A letter from one of our nurses in military service is a rare treat. Dr. Meigs probably realized this when he passed on to us this letter from Leonille M. Dufault (*MGH* 1936).

After basic training at Devens, which was fairly rugged, I was assigned to Camp Edwards where I did 5 weeks of duty on an officers' ward. I had the opportunity to speak to Colonel Cave one day. Even when close to home, an MGH-er is greeted with open arms. He is very well liked there and is doing an excellent job.

Thought I knew the Cape fairly well, but while stationed there I discovered a few fishing spots and swimming beaches I never knew existed. The Cape is surely beautiful, but only a New Englander can appreciate its natural beauties—and I sure can.

From Edwards 350 of us were transferred to Columbia, South Carolina—a trip none of us will ever forget. We were in old discarded B & M coaches, with very few accommodations. No water (only GI cans for bare necessities), the lavs. were as primitive as were the cars, definitely no air conditioning, and at the end of our 2 days and nights we were a beautiful sight to behold—dirty and

Four of a kind — Lieutenants and Surgeons all
Left to right: Frank C. Wheelock, Jr. (*ES* 1943), William C. Wigglesworth (*ES* 1945), Jesse E. Thompson (*ES* 1943), and Grant V. Rodkey (*WS* 1943)
Taken at Carlisle Barracks last summer

wrinkled, but with high spirits in spite of the little sleep we could get curled up on the seats. I never ran across such a grand group of girls—all New Englanders, naturally!

From Columbia our overseas processing started—no nursing, days devoted to physical and dental exams, inoculations of all kinds, and the issuing of clothes for our new post.

After 2 1/2 weeks of "vacationing" in S. C. we were, royally this time, moved to New Orleans, where we spent 5 grand days visiting and exploring while awaiting completion of the hospital ship *Republic* which is taking us to our various destinations. We are 723 nurses being distributed to Saipan, Manila, and Okinawa—the last being my destination. This ship is on her maiden voyage since being converted from a troop transport. It was to have been in good condition, but we have run into nothing but trouble—which I'm not objecting to in the least, since it has afforded us two glorious weeks in Panama.

The city is very military in appearance. It is made up almost wholly of camps. Even the civilians live in government owned and operated projects. Supposedly stopping here for only two days, we were quartered in the most beautiful camp—an air base where palms and cocoanut trees, green grass and shrubs abound. The barracks were palatial compared with what we were accustomed to having—3-story stucco buildings with fancy red tile roofs. Always the best for the Air Corps, so they say!

Fortunately for us—although I feel sorry for the poor boys over there who are waiting for this ship to return them home—the *Republic* still needed a lot of repairs, and in the meantime we gals toured old and new Panama, visited many spots of interest, and were allowed to fill vacancies on any planes as long as the trip didn't take us out more than a day. I was up several times in regular passenger planes, and one flight I will never forget. The pilot was taking a few jeeps and some machinery in a paratroop carrier plane to one of the islands near by, and I had the privilege of sitting in the co-pilot's seat for about an hour, getting a blow-by-blow account of the workings of the plane and of the scenery below.

Yesterday we were all brought back to the ship and at 5 P.M. we pulled anchor, supposedly bound for Hawaii, Saipan, etc. Hardly out of sight of land, we encountered more engine trouble, anchored for the night, and early in the morning returned close to Panama where we have been anchored all day. Rumor now has it that we will return to port and that it will be another 2 to 3 weeks before we can start on our trip. My regrets are for the boys who may need us; for myself, I love every bit of this adventurous life. Sometimes I wonder if I wasn't born with a suitcase in my hand.

This later letter from Miss Dufault carries on from where the above left off.

When we left Panama, it was to return to the States with San Francisco our new home. Our stop-over for ship's repairs took so long that Washington canceled our orders, including our trip to Japanese waters, for which I'm terribly disappointed. Except for shifting our course to pick up an SOS from a Belgian ship five days out of Panama, our return trip was uneventful. The SOS proved to be a red hot appendix on a 23-year old sailor, operation under spinal 20 minutes after embarking. We lost about two days, but it was added experience.

In Frisco I was assigned to Letterman General—the Country Club of the medics. Bed capacity 3500 pts. During my first three weeks there, we were catering to almost nobody but prisoners liberated from the Japs—giving them renewed energy and a rest before they continued on to hospitals nearer their homes. Most of those we took in were pitiful sights—skin and bones, terrific appetites without the ability to eat to their hearts' content, scared and beaten expressions on their faces, and each one a perfect patient—the kind that makes you enjoy being a nurse.

I missed Ken Keeley [*NS* 1937] by about one week. He had been a prisoner for some three years, you know, and had stopped at Letterman for a short check up. According to a letter from his mother, he is apparently in excellent condition.

As I had four weeks of night duty out of my five in California, I saw very little of famous Frisco. The city is pretty and quaint, and lives a lot on tradition. As a ride on the swan boats is a necessary part of a trip to Boston, a visit to San Francisco is not complete until you've been on the cable cars—antique little affairs that make the steepest hills under ungodly loads. Young and old, men and women, everybody hangs onto the outside of those cars. It is fashionable to hang on. One just *must*.

With my return to the States I was sure my overseas duty was over, but last week nine of us from Letterman were given orders to report here at Fort Jackson, South Carolina, for European duty. All overseas duty for nurses is now on a volunteer basis. Anyone has the right to refuse. I was pleased with the assignment, as you might imagine.

There are over 500 of us here shipping out tomorrow for Myles Standish—a beautiful opportunity for me to get home before setting out again. Our ship, the *West Point,* is already at anchor in Boston, waiting for its female cargo. Unlike the usual troop ship movement, this will probably be a pleasure cruise, as we are carrying with us diplomats, big bugs, and several hundred Marine and Navy officers. Orders are that we *must* dress in Class A's for dinner.

Our trip across the country proved to be very interesting. Never having seen more than our eastern mountains, I was fascinated by the Sierra Nevadas with their beautiful snow-covered peaks, and the miles and miles of barren wastes and deserts were worth seeing, too. My, but our own U. S. is beautiful! A major on his way home to Alabama from the South Pacific was as anxious as I to visit as much as he could on the way across. So, at all lengthy stops—Sacramento, Ogden, Cheyenne, Omaha, Chicago, and Cleveland—we would grab a taxi and have the driver show us as much of the high lights as time would permit. How will I ever settle down again to quiet civilian nursing when all this is over? I wouldn't shout it too loudly, but far from giving up a lot by coming into the service—as many believe—it's been one exciting experience after another.

I gather from The News that many MGH men have already returned to continue where they left off. Normal times will soon be restored at dear Alma Mater.

IN RETROSPECT

Not since September 1944 had we heard from Lt. Col. Frank B. Cutts, MC (*WM* 1934). Just as we were about to send out a where-are-you, this arrived from him.

The recent receipt of a News, forwarded from Burma, reminded me that I had neglected to keep you informed of my whereabouts.

I left Myitkyina on July 30 and flew home via Delhi, Karachi, Abadan, Cairo, Tripoli, Casablanca, the Azores, Newfoundland, and New York. Since September I have been at the Woodrow Wilson General Hospital in Staunton, Va., as Chief of the Medical Service. The service is active, with a wealth of very interesting clinical material. In the past few weeks we have had a case of Addison's disease, a reticulum cell sarcoma involving multiple bones, 3 coronaries in soldiers under 30, an instance of calcified pericardium, 2 amoebic abscesses of the liver that have perforated the diaphragm, a Boeck's sarcoid, 2 cases of aplastic anemia, a case of sickle cell anemia, 2 cases of acute pancreatitis without evident gallbladder disease, etc.

From present indications I should be out of the Army by the middle of December, and after the first of the year expect to be back in Providence, R. I. (378 Rochambeau Ave.).

Major Sedgwick Mead, MC, wrote this letter, from Manila, to Dr. Means.

I left the 6th General at Bologna, being ordered to join the 170th Evac for direct shipment to the Orient. The personnel is young, enthusiastic, and competent. I find myself suddenly the fourth highest ranking and the third oldest officer in the organization! Actually, at the moment I am parked in a Replacement Depot waiting for shipment home and discharge. We are supposed to have Air Priority, but so far haven't been able to get it from the ATC. With various uncertainties, including strikes, it may be after Christmas before I get back to the M.G.H.

I have seen enough flagrant wet and dry beriberi and pellagra among American and Japanese prisoners to last me the rest of my life. Cardiac failure from beriberi heart is not at all uncommon. Some marvelous research is going begging here. There is a museum of nutritional neuropathies, both peripheral and cord.

THE NEWS

No. 42 Boston, Mass. MARCH 1946

OBSTETRICAL SERVICE AFFAIRS

The editor's request for a report from the Obstetrical Service awakened a dim memory of the book on Iceland which had one chapter entitled "Snakes", containing only the statement "There are no snakes in Iceland". A similar statement with respect to obstetrics in the M.G.H. would not be far from the truth. The hospital has an ample obstetrical staff, a small part of which carries on a fairly active private practice in the Phillips House and the Baker. It does no teaching, conducts no research, and, in fact, contributes nothing to the M.G.H. except that two of its members act as consultants to the other services. By the same token, the M.G.H. contributes nothing directly to the advance of obstetrical knowledge. This is not the occasion to discuss what should be done or whether anything should be done about this situation, but it may not be amiss to emphasize the role that an institution like the M.G.H. could play in the investigation of obstetrical problems. The most important of these problems are not concerned with the mechanics of delivering babies — no new methods of delivering babies have been devised since the invention of the forceps, and it is rather unlikely that any will be. The real problems are such matters as diabetes and nephritis in pregnancy, essential hypertension and the possible application of sympathectomy to its treatment in pregnancy, the late effects of renal infections, the significance of hormonal imbalance, and that mysterious *bête noire* of the obstetrician — eclampsia. These problems extend into many special fields and far beyond the grasp of the obstetrician. They can be attacked efficiently and effectively only by a coöperative organization of specialists. The M.G.H. is such an organization and the possible results of diverting some of its energies and abilities to the study of these problems are worthy of serious consideration.

It is apparent that any report of obstetrical affairs at the M.G.H. must be concerned with the private obstetrics in the Baker and the Phillips House. Baker 9 got through the war years without serious trouble. We had really only two major anxieties. One was the shortage of nurses, which at times was acutely felt on the 9th floor where the demands on the nursing service are exceptionally heavy. Not only must the floor be covered but also the nursery and, at unpredictable times, the delivery room. Furthermore, a patient in labor when under medication requires a nurse to watch her constantly. It was at times impossible to meet these requirements adequately, but let it be recorded to the credit of the hard worked 9th floor nurses that there were no obstetrical disasters attributable to lack of nursing care.

Our other anxiety was that some day we would find the obstetrical floor had been taken over — lock, stock, and barrel — by the surgeons. Early in 1942 the Baker obstetrical bookings were very heavy and, in fact, slightly in excess of our capacity. By the end of 1942 about half the obstetrical staff had left on military service. Of the remainder, several had found it necessary to restrict their work to the Richardson House and had ceased booking patients at the Baker. Obstetrical bookings fell off. In 1943 the hospital stay of normal obstetrical patients was limited to ten days. The result of these changes was to make some obstetrical beds available to the surgeons. For the past two years there have usually been some surgical patients on the obstetrical floor and at times they have occupied a third or more of the beds. Mixing obstetrical and surgical patients on the same floor is not in general good policy, as everyone knows, and was justified only by the dire need for surgical beds. The personnel of the Baker Admitting Office deserves commendation for their handling of this particular problem. They have never admitted unsuitable surgical cases to the 9th floor nor have they ever admitted so many that they were unable to admit booked obstetrical cases. As a matter of fact, we think the Baker Admitting Office deserves a great deal of credit in general for handling a difficult and exasperating job these past few years with remarkable success and with amazing good humor.

Most of our staff who were on military service have returned or are about to return. We welcome them all. Our Chief, Dr. Goethals, took up his duties again on February 1st. One, we regret, will not return — Dr. Meinolph V. Kappius, Flight Surgeon on the Kadashon Bay, has been missing since January 1945.

Judson A. Smith, M.D.,
Past Acting Chief, Baker Memorial

RECEPTION
TO HONOR THOSE WHO SERVED IN THE ARMED FORCES

In January 1946, the Trustees directed a committee to organize and present plans for a reception to welcome home those of the hospital family who had served with the Armed Forces during the current war. This reception was originally scheduled for some time in February. No sooner were plans begun than it became obvious that a winter date would not be feasible. A census taken from the "Honor Roll" in the main lobby revealed that 603 persons had left the hospital to enter the Services. There was no place within the hospital where so large a number of persons could gather. In fact, when one takes into consideration the professional staff, their families, the nurses and the employees of the hospital who served in the Armed Forces, the total reaches the neighborhood of 1,500 people! And then, of course, those who stayed at home will be present officially to welcome back their colleagues. This will swell the number who might be expected to attend the reception to over 2,000. It is an interesting commentary on our hospital that we can provide a "host" for the Army and Navy; yet, when they return, we have no hall big enough to play "host" to their reception.

Rather than to make use of some meeting-place outside the hospital, it seemed preferable to postpone the reception until spring, at which time it could be held on the lawn in front of the Bulfinch Building. The present plans call for an afternoon reception to be held on the Green, some time late in May. Further notices will appear as plans develop.

Dr. Francis D. Moore
Dr. T. Stewart Hamilton

The Medical Illustration Department is welcoming the Staff members' return by having a Hobby Exhibit in the Brick Corridor on or about March 15.

The new exhibition frames, donated by Dr. Arthur W. Allen and the Ladies' Visiting Committee, will be in use for the first time. It is the dream of the Medical Illustration Department to make the Brick Corridor into an Exhibition Hall by lining the walls with similar frames.

This first Hobby Exhibit will include water colors, photographs, and jewelry. The exhibitors will be Drs. Grantley W. Taylor, Somers H. Sturgis, John R. Graham, Herman B. F. Seyfarth, Daniel J. Holland, Jr., John B. McKittrick, and Edward F. Bland.

All overseas hobbyists will be welcome. If you know of any others, please notify Miss Muriel McLatchie, Extension 297.

* * *

Dr. Henry H. Faxon (*ES* 1927) has been chosen to act as Chief Marshal at the Commencement Exercises at Harvard this year.

Dr. Edward F. Bland has very kindly contributed this summary of his talk given at the monthly Medical Staff meeting, on February 4.

WAR WOUNDS OF THE HEART AND PERICARDIUM

During the winter of 1944-1945, and again at the end of hostilities in May 1945, a special survey was made in behalf of the Surgeon, MTOUSA, for the purpose of recording data from this Theater on wounds and injuries of the heart and pericardium. The complete coöperation of all medical officers in the Theater especially concerned with these cases, as well as the assistance and advice of Colonel Edward D. Churchill and Colonel Perrin H. Long, made possible the study.

The experience of individuals or even of hospitals in this restricted though important field is necessarily limited, but the composite experience which accumulated during the two and a half years from the original landings in North Africa (November 1942) to the end of hostilities (May 1945) attained considerable proportions. This report is a very brief summary of this study, with emphasis upon the lessons learned therefrom. Our chief interest was in the clinical manifestations and the anatomical features of the various injuries rather than in the details of surgical procedure. We were particularly concerned with the unsettled issue of the future hazard of retained metallic foreign bodies in and around the heart. Occasional phenomena of unusual nature were observed, such as through-and-through penetration of the heart with recovery, the widespread migration of fragments within the pericardial sac, and large metallic emboli to the heart and lungs by way of the great veins.

The material consisted of 94 cases. These were assembled from various sources, most important of which was a survey of all the evacuation and general hospitals and of the remarkably complete operative notes by the special thoracic surgical teams of the 2nd Auxiliary Surgical Group assigned to various field installations. Thus it was possible to identify many of the cases at their source and to trace their progress and their disposition through the general hospitals of the base sector. More recently the Office of the Surgeon General has furnished further follow-up data after their return to the United States. Former MGH surgeons, including Captains Edwin Cantlon, Claud McGahey, Phil Giddings, and Walter B. Crandell were directly involved with a number of these cases.

From this considerable group of patients certain features of general interest were discussed, and the details of several unusual cases presented, including X-rays and electrocardiograms. It was noted that wounds of the ventricular wall occurred in 50 cases, of the auricular wall in 5, and of the pericardium in 22. The remaining 17 patients presented a variety of conditions, including 3 with retained missiles which antedated the war by 9, 13, and 20 years respectively, and 4 others in whom metallic shell fragments migrated centrally by way of the venous blood stream from distant wounds.

Cardiac tamponade occurred in 12 cases. It was relieved by surgical intervention in 10, but was an unexpected postmortem finding in the remaining 2. In an additional 8 patients active hemorrhage of serious proportions was encountered at operation, but the escape of blood into the pleural cavity through the pericardial laceration prevented the development of tamponade. The delayed appearance of pericardial effusion two to six weeks after injury in one-fourth of those with retained foreign bodies was of special interest. Only one patient developed purulent pericarditis, and this was successfully relieved by surgical drainage and chemotherapy.

Electrocardiograms were most helpful in determining whether or not myocardial injury had been sustained in those patients with penetrating chest wounds who were not explored surgically. Missiles were removed from the myocardium of 11 patients and from the pericardium of 3 others. All made good recoveries.

The mortality figure for the series was 24 percent, which is approximately one-half the mortality recently recorded for a series of 428 cases of cardiac injuries collected from the literature since the last war. Probably three factors were chiefly responsible for this striking reduction: (1) the early administration of plasma and blood, (2) chemotherapy, and (3) expert surgical intervention close to the front lines.

* * *

OUT-PATIENT DEPARTMENTS MASSACHUSETTS GENERAL HOSPITAL AND MASSACHUSETTS EYE & EAR INFIRMARY

It always has been and probably always will be the policy of the Massachusetts General Hospital and the Massachusetts Eye and Ear Infirmary to admit and care for patients in the Out-Patient Department, regardless of the patients' ability to pay the established fees. If the fees are paid by those who can afford to do so, then more service can be given to those unable to pay.

The large deficit incurred by the Out-Patient Department in 1944 brought the Administration face to face with the necessity of either (1) reducing the amount of service to the patients and the community, or (2) increasing the income and efficiency of the Out-Patient Department. All agreed that the latter was the more desirable. Therefore, a detailed study was made of the income and expenses for the year 1944. The result of this study was the realization that the admission fee and certain other charges should be increased.

Inquiry revealed that a mounting deficit was characteristic of the Out-Patient Departments in the Boston area. The Boston Hospital Council carefully studied the situation and finally recommended that starting January 1, 1946, the Out-Patient Department admission fee should be $1.00 per clinic visit ($1.00 for each clinic visited), regardless of the patient's age or the number of times the patient had been admitted. The Hospital Council also decided that the question of admission fees should be reviewed again during 1946.

A study of the costs of certain special services, such as lumbar punctures and laboratory tests for which a charge is made, showed that in practically every instance the charge was much less than the cost.

As soon as the Hospital Council's recommendation for an admission fee of $1.00 per clinic visit was received, a meeting of the Standing Committee of the Out-Patient Department was called (December 26, 1945). The Committee accepted the recommendations of the Hospital Council but urged that as soon as possible the admission fee and special charges should be further increased to approximate the costs of services for which these charges are made.

Therefore, since January 1, 1946, the admission fee has been $1.00 per clinic visit. At the same time, the charges for certain special services were increased. These and other charges should be adjusted from time to time, in order to have the charges approximate the costs.

It is felt that all prices in the Out-Patient Department should be based on costs, so that those who are able to pay the cost of service received may do so. The Out-Patient Admitting Office will continue to remit and adjust the fees when it is felt that the patient cannot or should not pay the regular charges.

Combined Out-Patient Dept.	1944	1945
Average expense per clinic visit	$2.11	$2.62
Average income per clinic visit	1.25	1.53
Average deficit per clinic visit	.86	1.09
Total deficit	$229,016.16	$275,246.57
Number of clinic visits	267,487	252,942

Ferdinand Haase, Jr., M.D.,
Assistant Director

STAFF CLINIC

Staff Clinic is a Unit operated for the benefit of our Staff and personnel. The Chief, Dr. Robert S. Palmer, is available by appointment. He is assisted by seven Staff members, two of whom are on duty each morning. They are Drs. Wade Volwiler, Arthur Pier, Janet McArthur, Dorothea Loofbourow, Friedrich Klemperer, Alexander Albert, and Edwin Wheeler.

All of our Visiting Staff are available for consultation through the proper channels. We wish to discourage "corridor consultations" as much as possible, as valuable time is taken up and the best results are not obtained that way.

The Clinic is open from 8 A.M. to 4 P.M. Mondays through Fridays, and from 8 to 12 on Saturdays. Physical examinations are done by appointment after laboratory work is completed. Our doctors see patients up to 10 A.M. and by appointment.

The Administration's new policy of free X-rays and certain free medicine has been very much appreciated by both Staff and personnel. X-rays must be ordered by Staff or one of our consultants and must bear the Staff stamp. The same is true of prescriptions, which are taken to the O.P.D. pharmacy, then to O.P.D. Admitting for approval, then back to the pharmacy.

All persons who have been off duty because of illness should check back through Staff Clinic. A person bringing a note from his L.M.D. is given an "O.K. for duty" slip. A simple cold or stomach upset may be checked on by the Staff Nurse. Days off duty because of illness are computed not for the pay roll but for the monthly report of illness.

We are very anxious that every member of the Staff and personnel should feel perfectly free at any time to ask his Department Head for a slip which allows him to go to Staff Clinic. It is not always possible to see the same doctor on each visit, but as often as can be arranged we want each patient to choose his own doctor and plan to come on that doctor's day. Much waiting time can be avoided by making appointments when possible. Call Extension 267.

All accidents, whether in or out of the hospital, whether old or new, must be seen *first* in E.W. for accurate accident report. All accident follow-up is done through Staff Clinic.

A person going to other clinics must get a refer slip in Staff, even if he has an appointment. For example — we send a patient to Eye Clinic; they send him to Vision Room where he is given a refraction slip which he keeps until the day of his appointment; he then brings it to Staff where it is marked "Free" and he is given a Vision Room refer.

It is our hope that, with more routine physical examinations and a more careful follow-up, together with some health education, we can really do a good piece of work taking care of our own people.

DERMATOLOGY DEPARTMENT

In response to the recent letter sent to the Chiefs of all departments and clinics in the Hospital, asking if they would be willing to inform THE NEWS in advance whenever special talks are to be given at their Staff Meetings, Dr. C. Guy Lane has begun to send to THE NEWS copies of his monthly bulletins. From the February bulletin we have taken this paragraph:—

> The last Staff Meeting was held on January 18, at which time Dr. Lever discussed the use of boric acid in the treatment of skin disease. Although there have been a number of cases of poisoning from accidental ingestion of boric acid reported within the last year, its dermatologic application need not be feared under ordinary circumstances. Dr. Damiani presented a résumé of literature regarding the use of magnesium salts. Although little used for the treatment of skin disorders, these agents may be worth further study.

Although it is too late, now, for more complete summaries of Dr. Lever's and Dr. Damiani's talks to appear in this issue, it may be possible to secure these write-ups for the April number.

In January we began to publish condensations, by the speakers, of talks given at the Medical Staff Meetings. Because of the many enthusiastic comments which followed the introduction of this new column, we are hoping to publish, in the future, similar contributions from other departments throughout the Hospital.

* * *

A group of twenty-five master students from Simmons College School of Social Work attended a series of six lectures at the Hospital during early February, as a part of their hospital project devoted to the subject "Emotional component in illness".

At the first meeting Miss Cannon, Miss Barbour, Miss Kellogg, and Mrs. Eunice Allan spoke on "Orientation to the project" and "The development of Psychiatric Social Service at Massachusetts General Hospital". The rest of the program contained such subjects as psychiatric consultations on medical and surgical wards; adult and child psychiatry; problems in psychosomatic medicine; emotional aspects of chronic disease, thyroid disease, and eye and ear diseases; language problems; gastro-intestinal disease; psychiatric social service to patients with medical conditions; and the work of the Psychiatric Research Unit.

The members of our Staff who gave the lectures are Doctors Bandler, Lindemann, Cole, Beckman, Rawson, Finesinger, and Chester M. Jones.

During some of the discussions social workers contributed their knowledge of the patient and his personal and social problems as part of the complete management and understanding of the patient.

* * *

A highly prized addition has just been made to the Archives collection. The East Medical pup has set up kennel in the Archives Room! One of the duties already taken over by him is that of guarding the many priceless treasures which surround him. Another is to greet, in the cordial manner of most dogs, all visitors to the Archives Room. We hope you will enjoy him.

As is customary with all thoroughbred canines, his kennel history accompanied his arrival. To refresh your memories, should you have forgotten the important part the little fellow has played for many years in East Medical affairs, we give you the following, as written by Dr. Aub, his first master.

> The little dog was given me off a Christmas tree in Ward 30 on Christmas Day, 1914, at which time I had reached the exalted position of Pup. His name was originally "metabolism pup", I suppose because I was already interested in metabolic problems. Everybody liked the perky little toy and every House Officer, on becoming Pup, wrote his initials somewhere on the back. Before this was done, several of the older men on the Services initialed it. The first one is D.L.E. (David Edsall), then comes F.L. (Frederick Lord, our Visiting Physician), then W.W.P. (Walter Palmer, who was the first Resident at the Hospital), and J.H.M. (James Howard Means, East Medical 1913, who at that time was Walcott Fellow). I cannot make out the next initial. It might well be John Favill, East Medical 1914; then would come Phil Pearson's initials, and after that probably come mine. Every man then initialed the pup along the back to the tip of the tail. None of the letters on the back are now visible, though I think a little careful scrubbing would clarify them, for the initials along the tail are still clear.
>
> Until the fireplaces were removed from the center of the ward the pup used to sit on the mantel, getting an occasional new ribbon as the old ones wore out. For almost thirty years he was the mascot of the East Medical Service.

Dr. Means was made custodian of the critter by the East Medical House Officers at the beginning of this last war, with the understanding that the pup should be restored to the Service when the prewar program should be resumed. Since the prewar program is not to be resumed and there won't be any more Pups (with a capital P), Dr. Means, after these years of conscientious devotion to the responsibility placed upon him, felt that he should be relieved of this extra curricular duty, decided that the Archives Room was "the only fitting repository for the precious relic", and said we might have him if we promised to be kind to him. So here mr. pup is, and highly honored are we by his presence.

On February twenty-first, Miss Sally Johnson retired from the position of Superintendent of Nurses and Principal of the School of Nursing of the Massachusetts General Hospital, a position she has held for just over 25 years. During these years, as new buildings have been added and the patient census increased, the School has been doubled in size and the graduate staff multiplied many times to keep pace with Hospital needs. Over 1930 of the School's 3060 graduates have been graduated under Miss Johnson and through her leadership prepared for nursing service by a sound and progressive curriculum.

In accord with modern trends, she introduced new groups of workers to the Hospital. The ward helper, the ward secretary, the staff nurse, the assistant head nurse became new and important members of the ward staff.

In 1923, Miss Johnson was appointed Superintendent of Nurses at the Massachusetts Eye and Ear Infirmary.

Due in large part to the vision and efforts of Miss Johnson, a coördinated program leading to both degree and nursing diploma was established in 1945 with Radcliffe College.

During her busy years, she has found time to represent the Hospital and the School at professional and educational meetings and has held many important offices in the nursing organizations.

Her infinite capacity for work and her driving force are seldom equaled. Miss Johnson will be missed by her friends and co-workers at M.G.H. who have enjoyed her ready humor, appreciated her loyalty and understanding, and cherished her friendship.

Miss Johnson will be succeeded by Miss Ruth Sleeper (*MGH* 1922) who has been her assistant for over twelve years.

On Wednesday, March 20, a reception will be tendered to Miss Johnson, by the Ladies' Visiting Committee and the Advisory Committee on the School of Nursing, in recognition of her long years of service and distinguished contribution to the Massachusetts General Hospital. The affair will take place at 8:30 P.M., in the Moseley Memorial Building. All members of the hospital family are cordially invited.

The new class of 34 student nurses entered the School of Nursing on February 5. This was the smallest class admitted for a good many years. These students came from homes in most of the New England states, and also from Virginia and New York. A reception and tea was held for them and their families in the Walcott Home the day of their arrival. The tea was given, as has been the custom, by members of the Ladies' Visiting Committee and the Ladies' Advisory Committee to the School of Nursing.

Graduation exercises were held this year on February 7, at 8:30 P.M., in the Moseley Building. Bishop Sherrill, Chairman of the Board of Trustees, presided. Mr. W. K. Jordan, President of Radcliffe College, gave the address—the title being "Frontiers in education". There were two musical selections sung by the Glee Club. Miss Johnson gave her report of the School for the year just passed, and, as Bishop Sherrill reminded the audience, this was her twenty-sixth such report — a memorable record. The graduating class numbered 152—the largest ever to graduate from the School.

The first senior cadets to be assigned to the U.S. Indian Service started their term of service in February. The assignments were as follows: Miss Allene Hiller to the Turtle Mountain Agency, Belcourt, North Dakota; Miss Ann Pendleton and Miss Calista Robie to the Navajo Medical Center, Fort Defiance, Arizona.

Six senior cadets have gone to Veterans Administration Hospitals. They are: Miss Constance Miller to Northampton; and the Misses Mary Fleming, Janet French, Betty Jones, Grace Kondrup, and Anna Lawrence to Bedford.

At their meetings on January 25 and February 6, the Board of Trustees voted:

To accept the resignation of Dr. Dean K. Crystal from the position of Assistant in Surgery, effective as of January 19;

To accept with regret the resignation of Dr. Herman Groh from the position of Assistant in Dermatology;

To accept with regret the resignation of Dr. O. Sherwin Staples from the position of Assistant in Orthopedic Surgery;

To appoint:

Dr. Richard S. Dodge as Third Assistant Resident on the Orthopedic Service, to begin January 28;

Dr. Ching Tung Liu as Assistant Resident on the Neurosurgical Service for six months, beginning April 1;

Dr. Ivar Lund as Assistant Resident in Anesthesia, beginning on or about March 15;

Dr. Claud E. McGahey as First Assistant Resident on the Surgical Service, beginning February 1;

Dr. James A. Meath as Resident on the Neurological Service, beginning April 1;

Dr. Cecil Mushatt as Resident in Psychiatry, beginning January 1;

Dr. Abraham I. Perley as Resident on the Dermatologic Service, to begin immediately;

Dr. William C. Quinby, Jr. as Second Assistant Resident in Surgery, beginning April 1;

Dr. Leonard D. Rosenman as Third Assistant Resident in Surgery, as of January 25.

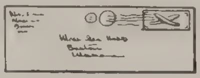
The General Executive Committee, at their meetings on January 16 and 30, appointed:

Dr. Irad B. Hardy, Jr. as Graduate Assistant in Surgery, to work with Dr. Robert R. Linton;

Dr. Chao-Hsun Wang as Clinical Fellow in Medicine, to work with Dr. Paul D. White.

The following men have returned to active duty on the Staff, as of the dates given:

Dr. F. Dennette Adams, Physician	Jan. 9
Dr. Joseph S. Barr, Associate Visiting Orthopedic Surgeon	Feb. 1
Dr. Allen G. Brailey, Assistant Physician	Jan. 1
Dr. Howard B. Sprague, Associate Physician	Jan. 1



New addresses:—

Lt. Col. Frank L. Bauer, MC (*P* 1941), 216th General Hospital, APO 758, c/o Postmaster, New York, N. Y.

Lt. Ronald C. Bishop, MC, AUS (*M* 1945), Hq. 1st Bn., Sep. Cen., Officers' Mail Room, Camp Atterbury, Ind.

Dr. H. Irving Bixby (*WS* 1924), 230 Elm St., North Attleboro, Mass.

Dr. Lemuel Bowden (*ES* 1940), Memorial Hospital, 444 East 68th St., New York 21, N. Y.

Dr. Lester A. Brown (*Oto-Lar.* 1937), 815 Doctors Bldg., 478 Peachtree St. NE, Atlanta, Ga.

Dr. F. Phinizy Calhoun, Jr. (*EM* 1938), 540 Peachtree Battle Ave., Atlanta, Ga.

Dr. Howard C. Coggeshall (*WM* 1935), 5105 Vandelio St., Dallas, Tex.

Dr. Henry S. Fuller (*WM* 1943), 3704 Huntington St. NW, Washington 15, D. C.

Lt. Col. Edward A. Gall, MC (*r.p. P* 1937), Department of Pathology, Cincinnati General Hospital, Cincinnati, Ohio.

Lt. James T. Heyl, MC, USNR (*WM* 1939), Bureau of Medicine and Surgery, USN, Washington 25, D. C.

Capt. James G. Miller, MC, AUS (*EM* 1943), 117 Holden Green, Cambridge, Mass.

Capt. Duane H. Mitchel, MC, AUS (*M* 1943), 29th General Hospital, APO 901, c/o Postmaster, San Francisco, Cal.

Dr. Eugene A. Osius (*WM* 1923), 901 David Whitney Bldg., Detroit 26, Mich.

Capt. Daniel J. Reagan, MC, AUS (*Oph.* 1943 & Oto-Lar. 1944), Squadron C, AAS-Bn. ATS, APO 858, c/o Postmaster, New York, N. Y.

Lt. Col. Francis C. Skilling, MC (*Oph.* 1933), 426 Ingraham Bldg., Miami, Fla.

Dr. Earl C. Slaughter (*Oto-Lar.* 1940), 0433 Norfolk Ave., Norfolk, Nebr.

Lt. Col. Oscar W. Stewart, MC, RCA (*NS* 1935 & *WM* 1937), Apt. 5, 3634 Lorne Crescent, Montreal, Quebec, Canada.

Dr. Charles L. Swan, Jr. (*WS* 1929), 20 Gloucester St., Boston, Mass.

Capt. Robert H. Talkov, MC, AUS (*res. fel. M* 1942), 198 Dean Road, Brookline 46, Mass.

Lt. Col. David W. Wallwork, MC, AAF (*ES* 1932), Hq. ICD, ATC, 1300th AAF BU, APO 192, c/o Postmaster, New York, N. Y.

Brief bits:—

Dr. Theodore L. Badger (*EM* 1928) was promoted to Colonel before leaving the Army.

As far as we know, Lt. Col. John F. Bresnahan, MC (*r.p.* 1918), Assistant Director at M.G.H. 1914-18, is still with the Veterans Administration in Milwaukee, Wis. It would be nice to hear from him regarding his work out there.

From the *Dermatology Department Monthly Bulletin* we quote that Major Robert N. Buchanan, Jr. (*r.p.* D 1941), has resumed the practice of dermatology in Nashville, Tenn., following his return from Italy.

Lt. Col. Bradford Cannon, MC (*a.s.*) is now Chief of the Plastic Service at Valley Forge General Hospital, where there are some 1400 patients.

Dr. A. Gordon Gauld (*ES* 1934) has been released from the Navy with the rank of Commander. He is back at his office, 330 Dartmouth St., Boston, Mass.

The Boston State Hospital has announced the appointment of Dr. Hannibal Hamlin (*r.s. NS* 1942) as research associate in neurosurgery and experimental neurology.

To quote again from the *Dermatology Bulletin*: Lt. Col. William M. Huber, MC (*r.p. D* 1937) will soon be discharged from the Army, and plans to take up postgraduate work in New York. For the past 18 months Colonel Huber has been assigned to Dermatologic Service with the Army, following several years of routine duties.

Dr. Bernard M. Jacobson, MC (*a.p.*) held the rank of Commander upon his release from the Navy.

Dr. William M. Jefferies (*EM* 1942) was discharged from the Army with the rank of Lieutenant Colonel.

Dr. G. Douglas Krumbaar (*a. obst.*) was promoted to Commander before being separated from military service.

We understand that Major Alfred O. Ludwig, MC (*EM* 1932) is back home.

Comdr. Donald H. Macdonald, MC (*Oto-Lar.* 1930) has received this promotion. He is stationed at Norfolk Naval Shipyard, Norfolk, Va.

Dr. Raymond E. Meek (*Oph.* 1926), formerly Captain, MC, USNR, has been appointed a Senior Attending Surgeon at the New York Eye & Ear Infirmary.

After 3 years of duty in the Pacific, Lt. Comdr. John M. Morris, MC (*ES* 1942) is back home on leave. He has spent the last year and a half on an attack transport. He hopes to be out of the service before long.

Comdr. Joseph C. Placak, Jr., MC (*WS* 1936) has received this promotion.

Lt. Grant V. Rodkey, MC, AUS (*WS* 1943), who has been at the Separation Center, Camp Shelby, Miss., started overseas not long ago. He promises to send his new address as soon as he knows it himself.

Lt. Comdr. Stewart P. Seigle, MC (*EM* 1942) has been advanced to this rank.

Capt. Robert P. Smith, MC, AUS (*M* 1943) writes that his duty is very active, running the medical portion of Vermont's Recruiting and Induction Station at Fort Ethan Allen.

Dr. Herman J. Sternstein (*clin. asst. Oto-Lar.*) is home on terminal leave.

Dr. Maurice M. Tolman (*a.d.*) is now on terminal leave, after several years' service in the Navy—according to that very useful *Dermatology Department Bulletin.*

Lt. Comdr. John L. Ward, MC (*EM* 1935) has received this promotion.

Dr. Charles A. Wheeler (*NS* 1935 & *WS* 1938), who has been Chief of General Surgery at Lovell General Hospital since his return from overseas, has been released from active military duty and plans to resume his practice in Leominster, Mass.

Dr. George P. Whitelaw (*WS* 1937) was promoted to Commander before he left the Navy.

Upon his release from the Navy, with the rank of Lieutenant Commander, Dr. A. Allison Wills, Jr. (*a. Psychiat.* 1937) resumed his association with the Travelers Insurance Co., as Assistant Medical Director at the home office, Hartford, Conn.

This word picture of a hectic day in the life of Lt. Col. Ian Paley Rak, MC (*a. Psychiat.*) sounds very familiar to those of us who have been wrestling with the problems of civilian life during the war years.

I am now home and on terminal leave. One of my last assignments was Psychiatric Consultant to the Allied Control Commission (US Division, Germany). In this job I concerned myself with such problems as the advisability of changing the names of Wilhelm II Strasse, Hitler Platz, and Goering Strasse, the removal of Bismarck monuments or the possible blowing up of such structures as the Nürnberg Sportstadium, all with the possible view of eradicating outward symbols of German military might and unity.

After such "world-shaking thoughts" I find myself confronted with reconversion problems much more difficult to solve. Last week my oil burner broke down, and it took an all-day hunt through electrical shops in metropolitan Boston to find a replacement motor for it. The carburetor on my wife's car was burned out, too, and the repair shop told me they couldn't get the replacement parts for it. This developed into a campaign of tactics in which I sat on the front step of the New England distributors of this carburetor till the expected shipment of new ones came in. I literally grabbed one from the truck as it was backing into the shipment door. I visited my lumber dealer in town. In previous years he smiled affably when I placed my order. This time, when I smugly ordered 1,000 square feet of knotty pine for the house, he laughed at me and began to rattle off the now familiar story of strikes, inadequate storage facilities, no kilns, government requisitions, priorities, etc., etc. In the middle of this oratory a tire on the car went flat. It was a big roofer's tack, left carelessly in my driveway by the roofers last year (They were always careful about such things) —or is it due to the state of the tires?

Two weeks ago I attended Dr. Cobb's psychiatric conference in Bulfinch. I was so hypnotized by my first sight of a living, female civilian patient in years, that Dr. Cobb's request for an expression of opinion almost didn't register.

In this state of "reconversion" I am resting in my easy chair, and having frequent tustles with the Lord when He lets some snow loose on my 200-ft. long driveway. I promise, however, I shall soon be back in psychiatric harness at M.G.H.

MASSACHUSETTS EYE & EAR INFIRMARY

The Annual Meeting of the Corporation of the Massachusetts Eye and Ear Infirmary was held at the Infirmary on February 13. The following officers were re-elected:

Henry Hixon Meyer, President
James C. Howe, Secretary
Horace W. Frost, Treasurer

The resignation of Dr. Lyman G. Richards (*Oto-Lar.* 1924) was accepted with regret. Dr. Richards is to be associated with the National Hospital for Speech Disorders in New York.

For the last three months the senior students at the Architectural School, Massachusetts Institute of Technology, have been working on plans for a new wing for the Infirmary as their thesis. These plans are now on exhibition in the Surgeons' Room at the Infirmary. This was an interesting experiment and some very constructive ideas were brought forth.

The Infirmary has been approved by the Veterans Adminstration as a training institution for returning service men wishing to continue their training in Oto-Laryngology and Ophthalmology under the G.I. Bill of Rights. The Managers voted to increase the number of residents on each Service from the normal quota of 8 to 11, thereby making it possible to appoint 8 men a year instead of 4. It is gratifying to know that so many of the Veterans wish to come here for their training. The competitive examination for the 1947 appointments to the Eye Service will be held at the Infirmary on March 2, and the largest number of applications received in many years are on file for this Service. Our one regret is that our facilities are not large enough to offer this special training to more men.

Capt. Linus A. Sheehan, (*Oph.* 1943), who has been stationed at Valley Forge General Hospital for most of the war, was one of the participating hosts for an ophthalmologic meeting held at the Valley Forge Hospital on February 9 and 10. Many members of the Staff of the Infirmary were among the invited guests at the meeting where various phases of military ophthalmic and plastic surgery were demonstrated.

Lt. Mary T. Fahey, ANC, former head nurse in the Nursery, returned to her home in Framingham on New Years' Day. She spent 15 months in the South Pacific Area — first being assigned to duty at Hollandia, New Guinea, and later at Leyte, Philippine Islands, with the 126th General Hospital.

Dr. Lawrence R. Dame (*clin. asst. Oph.*) has sent THE NEWS an outline of his military career. His present address is 78 Federal St., Greenfield.

> Thank you very much for sending THE NEWS to me while I was overseas with the 105th General Hospital. There were many items in its columns of considerable interest.
>
> I have delayed in answering your request for personal information because there is really nothing of very great importance to submit other than the general history of the Unit. I was activated into service on April 1, 1942, joined the Unit in Washington, D. C., and went with it to the west coast on the 20th of April. On May 19 we left for Australia, and after 38 months of overseas duty in Australia, the Dutch East Indies, and the Philippines, I returned to the Golden Gate on my way home, July 28, 1945. The separation centre at Fort Devens processed me on September 3 and the effective date of separation was November 3—by which time I had accumulated over 130 points, the Bronze Star, and a Lieutenant-Colonelcy as an Ophthalmologist.

This brief note from Major James S. Mansfield, MC (*gr. asst. M* 1942-43) makes us eager for the next word from him.

> I am now Chief of the Medical Service of this 750-bed Station Hospital. We are to be redeployed to another theatre, and after we arrive I'll drop a line.

Dr. Haase has passed on to us this letter from Lt. Robert H. Brown, MC, USNR (*ES* 1945). A "first letter" from Lieutenant Brown, which we were delighted to receive, was all set up in type when Japan surrendered and made the text of his letter obsolete. For that reason we are especially glad to have this account of his more recent activities.

> We landed at Baten Ko, Okinawa, yesterday. By landing I mean we dropped anchor about 5 miles out in Buckner Bay. Having business to do ashore, I went into Baten Ko in the first boat trip. The town was completely unimpressive, being the remnants of a once busy group of Navy repair and supply units. As you probably know, Okinawa was badly hurt by two typhoons last fall, and at present there are two dozen battered and beached and partially sunken ships within sight of our anchorage. The demobilization program plus the end of the war have made activities slow down to a pitiful walk, according to those who are familiar with wartime Okinawa.
>
> Ship's business carried me ashore again today, and by stringing onto the Captain's apron ties, I managed to fill the back seat in a jeep for a personal tour conducted for the Captain by a Commander attached to the Port Director's Office at Baten Ko. I believe we missed no part of the island. Let me give you a play-by-play description:
>
> First off, we headed north to the Naval Supply Depot, some 20 miles away. Here the CB's had done a marvelous job of making roads workable and airstrips safe for planes of all sizes and shapes to take off and land. We had lunch at the Supply Depot and, except for the lack of fresh fruit and vegetables, we might have been at Joe Nemo's in Scollay Square. It was, really, not too bad. On the way we had passed a few Okinawans and, as the day wore on and we approached the hinterland, I began to see them by the hundreds. They are moronic looking people, but rather interesting, I thought. Apparently China lost its control of Okinawa nearly sixty years ago. The Japs moved many of the natives away to work in their mines in Japan and sent Japs from the homeland to Okinawa. In the three generations that have passed, the Okinawan has interbred enough with the Jap so that most of them resemble Japs more than they do Chinese. There are a few Chinese-appearing natives, however. The Japs have practically made slaves of the Okinawans, who seem to plod through their heavy labor with about as much enthusiasm and signs of life as a dead mackerel. The native men seem to have a hex on their women, for when the Military Government tried to get native men to work, they protested for fear they would stand in a poor light in the eyes of their women. We saw two men overlording about 25 women as they worked in the fields. The man is supreme here and apparently life is dull.
>
> From the NSD we went over to the western side of the island where we could see the China Sea. Dividing the island longitudinally is a road, to the east of which is the Navy and to the west the Army. The CB's and Army Engineers have built a wonderful highway system. The amount of supplies that are stacked up is amazing. Apparently this was to be the final stepping off point for the Japan invasion. It is a testimony to the productive skill and the transportation system of the U.S.
>
> All along every stretch of road are hundreds of tombs which are rather interesting according to the scuttlebutt I have received about them. The Okinawans have evidently practised a Freudian type of burial pattern. The tombs are shaped like a womb, the deceased is placed in the tomb in a fetal-like position, and after nine months the youngest virgin daughter allegedly goes to the tomb and allegedly cuts the flesh away from the bones which are then pickled in Saki or some other brew. I don't know whether this is strictly true or not, but that's the way I heard it, McGee.
>
> Our trip carried us to Naha, the capital, where so much heavy fighting went on. This place is almost 110% damaged. The Army invaded on the west coast and headed south. The Marines came in on the north. According to the damage done, the largest stand apparently took place in the south. Strewn debris still marks the pillage. From Naha we went to the scene of the most horrible fighting, where the Jap caves are the most numerous. The Commander told us there were still an estimated 10,000 Japs who had not surrendered [January 24, 1946], and certainly in the native villages we passed there were many men who most surely were Japs who had filtered into the villages and posed as natives. The Military Government is gradually turning over to the natives many of the demobilized barracks, which are certainly superior to anything they had had. The people are being encouraged in agriculture and already there are evidences of fairly large crops. It is estimated that should this year's crop fare well, the natives should be self-sustaining. One of the most evident crops here is rice. The land is fairly dry, so rice is grown in paddies which are irrigated with salt water for the most part. I'm told that this makes a much poorer crop of rice than that grown in fresh water. The Military Government has also instituted schools for the natives, and the Armed Forces Institute has established Okinawa University.
>
> To go on with the trip—we headed along an increasingly narrowing road toward the Buckner Memorial. The number of U.S. military personnel thinned out, and as darkness was about two and one-half hours away, and as it was unsafe to be very far into the hinterland after dark, and as the Commander had never been there before, I naturally got nervous. We did stop long enough to pay a visit to the Buckner Memorial, located on a bleak, shell-torn hilltop. From there we headed onward to Suicide Cliff where, allegedly, many Jap soldiers and fewer Jap-urged natives hurled themselves into the coral and sea far beneath. Here every cave was suspicious looking, but after traveling about 15 miles over the bumpiest road imaginable at 15 mph or less, we came upon some MP's at a junction of this eerie road with

MAJOR JAMES K. KEELEY, MC, AAF (*NS* 1937), WHO WAS HELD AS PRISONER FOR OVER THREE YEARS BY THE JAPANESE GOVERNMENT

a more traveled highway. I, personally, would not have made this last leg of the trip without arms, but on we went without event. It is said that the Japs have infiltrated into the Army bivouacs and stolen food many times at night. In spite of having been urged by emissaries sent out to them, and in spite of the radio used near the region, very few prisoners are surrendering. Perhaps the Commander was trying to put a bit of scare into us, but I have heard from several other sources that this is correct about there still being many unsurrendered Japs. The war is over, but I must confess I felt as uncertain as I would have in the thick of a heavy battle.

We are still tentatively slated to return to Seattle, but that really means very little because a change of orders can take us to Hong Kong tomorrow. I got all hepped up about the reduction of points for doctors, only to see in writing that they would be dropped to 47 instead of the 40 I had been told. I still anticipate being home by Christmas, anyhow!

Loads of luck and best wishes to you all, my good readers, and don't fail to write once in a while.

NOW IT CAN BE TOLD

Even so, restraint is the keynote of this letter from Major James K. Keeley, MC, AAF (*NS* 1937). Here is Major Keeley's story, as told in the first communication we have had directly from him since his long imprisonment by the Japanese government. Never was a letter more anxiously awaited by all of his friends.

It is always a pleasure to be on the receiving end of communications with the M.G.H., and particularly do I feel that to be true with regard to THE NEWS. It is a most welcome journal.

After spending a year in Rochester, Minn., on a Fellowship in Surgery, the Army indicated I must not delay past August 15, 1941 in starting active military duty. So, with several other Reserve Officers I began to work in the Station Hospital, Fort Douglas, Utah. With two months' experience, the Headquarters Squadron of the Fifth Air Base Group (B-17) picked me up for foreign service. With brief stops at San Francisco, Hawaii, and Guam, we finally learned that our hitherto secret destination, PLUM, indicated Philippines, Luzon, Manila.

The outfit set up in tents on Del Monte Air Field, on northern Mindanao, December 1, 1941. The tents were taken down in a hurry one week later — our pretentious plans for barracks, clubs, swimming pools, and other facilities scrapped. Native nipa shacks that were not conspicuous from the air became ever so much like home. The B-17 squadrons that were to follow us were routed off to Australia, so we prepared to service any and all comers. And many there were who came — from Luzon, and went — south to Australia (Darwin just ten hours away). Our men waved off President Quezon, General MacArthur, and a host of other military personnel, who departed by B-17 and B-24. Finally, in May 1942, some Japs came, but they didn't "went". We all had to stay put after that.

There were about one thousand Americans taken on Mindanao, with an additional two hundred civilians. A group of us continued to do medical work at our first camp, Malaybalay, until we were moved in November 1942 to Davao, where another thousand men from Bataan and Corregidor joined us. We learned then, for the first time, how much worse they had fared at the surrender and the first few months thereafter. The local papers these days have much to say of the kindness and humanity of the Japanese General Homma during that period. The many men who died should be given a chance to speak in rebuttal.

At Davao (POW Camp #2 of the Philippines) I was in charge of the malaria patients outside the hospital, which involved 95% of the two thousand men there. The Japanese gave us minimal amounts of medicines, instruments, and supplies, and yet expected much in the way of preventive medicine in the group which was steadily losing weight and showing increasing signs of deficiency diseases. The Red Cross POW parcels helped tremendously in morale and in reducing morbidity and mortality among those who became ill. At Christmas 1942, 1943, and 1944 every man received four small boxes, each containing some sixteen items. After months of weed soup and rice, corned beef, butter, chocolate, and vegetable stew are delicacies beyond description.

During this time we had little reliable news of the course of the war, obtained from Filipinos or culled from the Japanese propagandized Manila paper. In 1944 a secret radio was constructed which brought us to the realization that it was to be a race between the Japs in their efforts to remove us from the Philippines and our troops then moving northward from New Guinea.

In July 1944 about seven hundred of us left Manila for Japan, spending two months on the way because of repeated boiler failure. Finally, in September, one hundred fifty Americans joined two hundred British POW's in the newly built stockade at Funatsu (altitude 2500 ft.), across Honshu from Osaka and Tokyo. There, with snow six feet deep in January, the men worked in day and night shifts at a factory smelting lead and zinc. The men averaged fifty pounds under weight, with ninety percent of the group showing gross dependent edema and disturbed sleep from peripheral neuritis. At this time our ration was radish soup and rice. When the warm weather came, the men could again wash their clothes and thereby greatly reduce the number of lice with which we were all infested. It was a miracle that none of the feared epidemic diseases visited us.

The B-29 bombing of Osaka and the other large cities changed the complexion of things for the Jap. Three hundred assorted POW's (nine nationalities) were set up in Toyama in a new camp — their old one in Osaka having been leveled with the rest of the city. Being made up entirely of enlisted men and civilians, without a doctor, I was moved to this camp in July 1945 to become Camp Commander and Doctor. The usual rigamarole followed: "If any man escapes, you will be shot. You are responsible." None of the boys walked out, but on September 2 in walked a couple of AAF pilots — the first free Americans we had seen in thirty-nine months.

In the few days after that we had many thrills: American food in great quantity dropped from B-29's for us, and the trip by air to Tokyo, Okinawa, and so to the Philippines, again. But here was a much changed scene: jeeps and G-I trucks, ruined buildings, G-I's and gobs, giggling Filipinos, hundreds of airplanes, and mountains of equipment. But nothing quite compared with the sight of that Golden Gate Bridge, symbolizing the United States and home. It was certainly a high spot for us all, emotionally, when we came down the gangplank, to walk again in the U.S.A.

After taking the course here at the School of Aviation, Randolph Field, Texas, I plan to resume my Fellowship in Surgery at Rochester. I am delighted that the medical checks given me since my return to the States have all been satisfactory.

THE NEWS

No. 43 Boston, Mass. APRIL 1946

MEDICAL SERVICE AFFAIRS

The Medical Services have continued to adapt themselves to the vagaries of Procurement and Assignment. The latest are the suggestions that we double our number of interns for the months of April, May, and June of 1946, which of course we cannot do, and the abrogation of the 9-9-9 program. Veterans now being eligible for residencies outside the quota, we have been able to increase our resident staff to a total of nine at the present writing. The demobilization plan which has been set forth in a special brochure lately printed, calls for twelve interns, eight regular assistant residents, two residents, and one chief resident—the term of service in each rank being one year. In addition to these there are authorized "demobilization extras" to the extent of two residents and four assistant residents. Of the nine now on duty, six are veterans. Dr. Charles H. Burnett, as Chief Resident, is doing a fine job in putting the whole new house staff program into effect. He is providing retraining for the greatest possible number of veterans by giving to each according to both his ability and apparent need. Some need more than others, therefore sometimes appointments will be made to two men for six months each instead of to one for a year. We are fortunate to have return to us, as residents, Drs. Lewis K. Dahl, John B. Stanbury, and James E. Kreisle.

As to the Visiting Staff, it may be said that all but a very few of those who went to war have been demobilized. We are grateful to Dr. Willard S. Parker (*EM* 1911) who returned to active duty at the hospital to help out during the war, and also to Dr. Henry S. Forbes.

It is a great pleasure to have with us for six months Dr. Edwin J. Kepler of the Mayo Clinic. Dr. Kepler is taking a semi-sabbatical year, and elected to come here to engage in original work and study. He received the appointment of Physician pro tem, and in that capacity has been of great assistance on the wards, in teaching, and in the work of the Thyroid Clinic.

A period of reconstruction is the logical time for reform and development. One of the greatest needs of the Medical Department is to improve and make more interesting the work in the medical Out-Patient Department clinics. During the war years and continuing, Dr. Earle M. Chapman has rendered invaluable service in keeping the clinics going at all. To those of our staff members, reduced in numbers, who struggled on there while beset by greatly increased demands of private practice and public service of one sort or another, we are grateful. Now, with a full staff again, the opportunity to raise standards of practice and quality of instruction lies before us. To take full advantage of this, a staff reorganization has been planned and will become effective April 1, 1946.

J. H. Means, M.D.,
Chief of Medical Services

(The conclusion of this article by Dr. Means will appear in the next issue.)

At the meeting of the Board of Trustees held on March 8, 1946, the following resolutions were passed:

Sally Johnson has been Superintendent of Nurses and Principal of the Training School for Nurses at the Massachusetts General Hospital since October 1920. She is a Hospital alumna of the Class of 1910 and returned to head the School after ten gruelling years of varied nursing activities. She taught at St. Luke's Hospital in New Bedford and at the Peter Bent Brigham in Boston. She left the Brigham with the rank of Assistant Superintendent of Nurses to become Superintendent of Nurses at the Albany Hospital at Albany, New York. It was during her four years there, at the time of the first World War, that she organized the nursing staff of the Albany Base Hospital for service at the front and later was Director of the Army School of Nursing at Walter Reed Hospital in Washington. In 1920 she accepted a call to return to the Massachusetts General Hospital as Superintendent of Nurses and Director of the School of Nursing, which posts she has served with the most honorable distinction ever since. Her service at the Hospital covers the past twenty-five years—the only break in the continuity being a year's leave of absence when she worked, under great pressure, at Teachers College of Columbia University to obtain her B.S. degree.

During her term of office she has seen vast changes at the Hospital. She has been faced with the many problems incident to a great building program and to the immense development of the nursing service to meet the needs of that program. She has seen two enormous new buildings erected, all to be staffed and organized by the Nursing Service, while at the same time the School has had to more than double in size to handle the new demands put upon it. The recognition of Nursing as one of the Professions, with its growth and development, has been her constant aim, and her ambitions for her chosen field have borne manifold fruits. Many non-essential duties have been taken off the Nurses' shoulders by the substitutions of ward helpers, maids, and secretaries; while the hours on duty have been reduced from twelve to eight. With the lifting of the physical burden has come a corresponding rise in tone, shown in improved bedside training and increased staff education. With the curriculum enriched and strengthened the School has blossomed under Miss Johnson's wise guidance, and her dream for a Liberal Arts degree for candidates in the Nursing Profession has finally been consummated in the recently devised coordinated program with Radcliffe College.

The war years have seen Miss Johnson in heroic light. She has stuck to her post unflinchingly, seeing with gallant pride one hundred and seventy-four nurses leave the wards for the Federal service. As the Hospital was slowly decimated, she had to cope with the endless problems of a great public institution striving to function normally during a national emergency. There were the wards to be covered, the Cadet Corps to be recruited and trained, and the great mass of volunteer workers to be fitted into the pattern of hospital life. As always, her standards have been impregnable and her courage unfaltering. With her hand on the Nursing helm she has carried her department triumphantly through the hard war years, working long days to serve a great Hospital in its hour of need. Miss Johnson is always considerate of another's point of view but is never afraid to express her own. It is her integrity, her loyalty, her independence and her dynamic enthusiasm that have endeared her not only to her pupils but also to all who have worked with her in this great organization. She is an acknowledged leader in all the principal nursing organizations. Her influence and her reputation as an enlightened and far-seeing teacher and administrator have spread throughout the nation. She has brought great honor to the Massachusetts General Hospital.

As we all know, Dr. Washburn has been serving as Director of Cambridge Hospital during the war years. On March 1, Colonel Engelbach returned from his long duty overseas and resumed his position as Director.

In appreciation of the fine way in which Dr. Washburn carried on through the difficulties of civilian work, Dr. Engelbach says: "When I left to enter the Army I was glad there was someone who, I knew, was well able to handle the job efficiently, despite any adversities that might arise— and they were legion. When I returned, Dr. Washburn gave back to me a hospital plant which is in excellent condition and a staff which has more than measured up to the many demands it has been required to meet. But—over and above all this—was the willingness on Dr. Washburn's part to forfeit well-earned and well-deserved leisure and assume this heavy responsibility as his contribution toward winning the war. This sentence from a letter I have just received from a mutual friend expresses what I mean much better than I can say it myself: 'Dr. Washburn has been a great soldier through these years.' "

Mr. Elmer C. Gray, for many years an orderly in the General Hospital, died suddenly at his home on February 28. Mr. Gray had given faithful service for many years. Before coming to the hospital, he studied law and was admitted to the Massachusetts Bar Association in 1904. He entered this hospital on June 7, 1917, as a member of the course given to orderlies, and received his certificate on July 24, 1919. He remained here until April 1920, when he went to the Salem Hospital, where he was an orderly for many years. In December 1936 he returned to duty in Massachusetts General.

Dr. Myles P. Baker was the speaker at the monthly Medical Staff meeting on March 4. His subject was "Scrub typhus in the Southwest Pacific". Dr. Baker had a considerable experience with this disease down there during the war. He has very kindly contributed this summary of his talk.

Approximately 6,000 Army personnel will have returned to the States with a history of recovery from scrub typhus—about 90% of them from the Southwest Pacific Area, where preliminary data indicate that in 1943, 1944, and the first eight months of 1945 the disease carried a mortality of about 4%.

In retrospect, experience with scrub typhus (more properly designated tsutsugamushi disease) in SWPA developed through three phases:

a) The first, from the last weeks of 1942 to the summer of 1943, was a period of recognition of a disease entity new to medical officers, and some uncertainty as to the prognosis for complete recovery.

b) The second period, extending through the remainder of 1943 and early 1944, was one of clarification of the clinical picture and epidemiological features, and of study of preventive measures.

c) There followed the appearance of scrub typhus in terrain different from that hitherto observed, and in geographical areas from which the disease had not been reported. A definite Theater policy could be established as regards the rehabilitation of convalescents from scrub typhus.

Prior to the war, scrub typhus had been recognized in the Mandated Territory of New Guinea by Gunther, an Australian, who collected 100 cases of "Endemic typhus", chiefly from an area later the site of combat, among white workmen engaged in clearing jungle. He emphasized the seriousness of a disease that carried a 20% mortality, and its similarity to tsutsugamushi disease in clinical picture and agglutination reactions with Proteus OXK. Australian and American troops, on moving into jungle combat on the Kokoda Trail and in the Buna-Gona campaign, forthwith began to develop scrub typhus. Early diagnosis was not easy. The telltale eschars were often missed. The diagnosis might be confused by the finding of malarial parasites in the patient's blood smear. The characteristic course of the fever in its second and third weeks became increasingly familiar, and in these early days often made the clinical diagnosis. Scrub typhus was a formidable antagonist in troops depleted by exhausting jungle combat—the mortality in one such group of 150 Australian cases being 25%. The first postmortem studies done on fatal American cases at Port Moresby emphasized an interstitial myocarditis, interstitial pneumonitis, and perivascular cerebral lesions. The lack of specific chemotherapy gave the disease a frightening reputation. There was not a little talk of probable residual myocardial damage. Study of convalescent patients did not, however, produce evidence of this. Most convalescents from scrub typhus were returned to duty at an average of 10-12 weeks from onset of the infection .

A Commission, headed by Dr. Francis Blake, began its comprehensive study of scrub typhus at Dobadura in October 1943. Survey of clinical cases emphasized:

1) The need for painstaking search for the eschar, usually found above the level of the hips.

2) Recovery from the blood of acutely ill patients, between the 4th and 9th days of fever, of Rickettsia orientalis, in all respects identical with the etiological agent of tsutsugamushi disease.

3) Absence of signs of myocardial insufficiency.

4) Relation of cyanosis to pneumonitis, not to heart failure.

5) Absence of specific therapy, ineffectiveness of penicillin or digitalis, and importance of nursing care and supportive treatment.

Cases of scrub typhus continued to develop in the Dobadura area after active combat had ceased. This was, in the summer of 1943, becoming a huge training area and base, with combat and service troops arriving in large numbers. Tent areas were established in uncleared jungle and unmolested kunai grass clearings. Repeatedly, in units where scrub typhus prevailed, the incidence was highest in the 2nd, 3rd, and 4th weeks after moving into the uncleared camp site. The early days of occupation were the dangerous ones, with scrub typhus breaking out 7 to 18 days after exposure to infection. Clearing the camp sites apparently did away with the trombiculid mites suspected as being the vector of the disease. Strains of R. orientalis, the cause of the disease in humans, were isolated from pools of such mites recovered from rats and bandicoots, taken in areas where scrub typhus was prevalent. From the pooled brains of rats, the same Rickettsia was recovered. The dangerous mite is the unfed larval mite of appropriate species that is infected with this rickettsial disease by inheritance from its preceding generation. Seeking a blood meal, it will accept man as an accidental host. Its preceding generation will have acquired the rickettsial infection during its larval feeding on small animal hosts infected by the bites of other infectious mites.

Control measures were accordingly directed at mite reduction by clearing tent areas of brush and grass, aiming at a dryness that would adversely affect the moisture-sensitive mites in the surface soil. Since these clearing operations required exposure to infected mites in the process, it was desirable to provide soldiers with clothing impregnated with mite-repellent. Five percent dimethylphthalate in 2% soap solution was found to be non-irritating to the skin. It was effective despite exposure to salt water and prolonged rainy weather, and suitable for troops engaged in jungle combat.

Military operations in 1943-44 confirmed the epidemiological findings at Dobadura. Two to three weeks after the parachute infantry jumped in the Markham Valley, and landing forces established beachheads at Cape Gloucester and Saidor, scrub typhus fever cases developed and continued as troops operated under jungle combat conditions. Seventy-five cases that developed on Goodenough Island in November and December 1943, followed exposure of newly arrived units setting up their area in kunai grass. Combat at Aitape and Hollandia accounted for the rise in scrub typhus cases in May 1944. The danger of infection was unpredictable. A kunai grass clearing in every detail similar to one in which scrub typhus prevailed might prove safe for troops.

The outbreak of scrub typhus at Owi and Biak in July and August 1944 presented new features:

1) It was by far the largest epidemic in number of cases. It constituted a threat to success of military operations. Fortunately, it was mild in severity.

2) Scrub typhus occurred in a different terrain; dense underbrush provided cover for mites. There were no kunai grass clearings.

At Sansopor, in August 1944, the task force developed scrub typhus in an explosive outbreak soon after landing. The dangerous areas here were unprecedented—abandoned "native gardens", with much undergrowth choking banana plants and coconut palms. Several units were hard-hit by scrub typhus. Had their landing been more severely resisted, the disease would have been a serious handicap to our task force.

In the latter two outbreaks, the use of impregnated clothing for personal protection against mites played a promising part in control of the epidemics. Bearing in mind the impression gained earlier in the year that scrub typhus patients tolerated poorly early evacuation, the Sansopor cases, in particular, were not brought out to rear bases until they were fever-free.

Further study of scrub typhus of convalescents in the New Guinea bases revealed no residual heart disease. Electrocardiographic studies did not indicate persistent myocardial damage. Rarely, a particularly hard-hit soldier was evacuated to USA because of his exhausted state or a complication such as thrombophlebitis or peripheral neuritis. The great majority of convalescents were returned to duty. It is true, however, that in at least one Infantry Division, it was common policy to reclassify within the Division scrub typhus convalescents returned to duty. For one reason or another, their stamina was not up to the mark for combat infantry duty.

No scrub typhus had been reported from the Philippines. It did, however, occur sporadically, following the typical course on Mindoro: landing in December 1944, the first case admitted on D+12, and the bulk of the 100 cases reported in January and February 1945 receding as tent areas were cleared and need for combat patrols decreased. Cases were reported from Samar, and Negros, and Luzon, usually from grassy areas similar to the kunai grass clearings of New Guinea.

SWPA experience with scrub typhus was like that of the CBI Theater, save for a smaller incidence of cases in Burma. The same increase in mortality was noted among troops depleted by jungle combat. The 5% mortality among acute cases studied at the 20th G.H. is similar to the over-all figure for the SWPA. The clinical features of the disease in Assam and Burma were in no way different from those seen in New Guinea. It is interesting that captured reports indicate that the Japanese recognized the disease among their troops in Burma, for there was no record of their doing so in New Guinea.

Experience has taught that when man exposes himself to field conditions wherein he may become an accidental host for infected larval trombiculid mites, scrub typhus will appear in hitherto unreported districts. Circumstances prevailing in the SWPA and Burma extended the map of scrub typhus and made it an important medical disease of war.

At the same meeting, Dr. Arthur S. Pier, Jr. and Dr. Lewis K. Dahl described their clinical experiences with scrub typhus cases in the combat areas.

DERMATOLOGY DEPARTMENT

Last month we said we hoped we might be able to publish in this issue summaries of the talks which were given at the previous monthly Staff meeting. In response to our appeal, Dr. Walter F. Lever very kindly sent this condensation of his speech. His subject was "Boric acid—its pharmacologic action and its toxicity".

The effectiveness of boric acid ointment and boric acid solution in the treatment of acute inflammatory dermatoses is well established. In contrast to many other topical applications, boric acid solution and ointment rarely cause irritation even on severely inflamed skin. Furthermore, specific allergic sensitization which not infrequently complicates the topical use of drugs such as sulfonamides, penicillin, and ammoniated mercury does not occur with boric acid.

Three percent boric acid solution has a pH of 4.8, approximately that of the normal skin surface. The surface of acutely inflamed, oozing skin has a pH approximating or exceeding 7. Boric acid solution tends to correct this abnormal pH. Furthermore, boric acid solution is, though to a limited degree, bacteriostatic. It acts as an astringent because it causes less swelling of the protein of the epidermis than blood serum which bathes the epidermis in oozing dermatoses. Its damaging, caustic effect on the epidermis is minimal, less than that of most other acids, since it precipitates protein only to a slight degree.

The absorption of boric acid through the intact skin is negligible, but when applied to areas denuded of epidermis it is considerable. Thus, the danger of poisoning from the external use of boric acid solution and ointment appears small, provided they are not used on large denuded areas, such as burns, and on large ulcers. As a matter of fact, only 4 cases of fatal poisoning by the external use of boric acid ointment or solution are recorded in the literature, and there is justification for doubt that boric acid poisoning actually caused the death in any of these cases.

OFFICIAL NOTICE

The Department of Pathology and Bacteriology is now providing an anti-penicillin substance (contained in certain preparations of the diastatic enzyme "Clarase") which is to be used in blood cultures taken from patients receiving penicillin therapy to counteract any inhibitory effect of the penicillin which may be contained in the patient's blood. When submitting material from patients who already have had large doses of penicillin, a notation should be made on the request slip so that Clarase may be added to the media used for culture.

To those cultures planted outside of laboratory hours the House Staff should add 0.2 ml Clarase to each blood culture flask, e.g. 0.2 ml per 100 ml of media, and a drop or two to smaller amounts of fluid media used for culture. Clarase prepared in 0.5 ml amounts in small test tubes are stored in the upper right compartment of the Bacteriology Laboratory refrigerator. The material should be handled in a pipette with strict asepsis, and once opened, the tube of Clarase is to be discarded. More detailed instructions are posted on the refrigerator.

ALL BLOOD CULTURES SHOULD BE BROUGHT TO THE LABORATORY AS SOON AS POSSIBLE AFTER COLLECTION.

Tracy B. Mallory, M.D.,
Chief of Department

In addition to the citations already mentioned in The News, the following have been received:—

Col. Edward D. Churchill, MC (*WS* 1922) — Distinguished Service Medal . . . Colonel Edward D. Churchill, while serving as Surgical Consultant, Mediterranean Theater of Operations, from October 1943 to September 1945, made a distinguished contribution to the field of military surgery. He was responsible for the introduction of reparative surgery in the base hospitals of the theater, an original concept that materially reduced permanent damage to wounded personnel and further elevated the previously high standards of American military surgery.

Col. Horatio Rogers, MC (*ES* 1925) — Legion of Merit . . . As Chief of Surgical Service, Colonel Rogers, by his outstanding ability to organize and his clarity of foresight on two occasions, placed in efficient operation in a remarkably short time the Surgical Service of the 6th General Hospital. By his example and counsel he supervised the extraction of a wealth of important medical information from the records of patients in the hospital. Not only did he himself contribute frequently to the medical literature of the Army, but he aided and guided his junior officers in contributing a total of at least fourteen articles and reports on various aspects of war surgery. Colonel Rogers' outstanding ability to inspire his officers to the accomplishment of more than routine duties resulted in many important contributions to the fund of medical knowledge derived from experiences in the Mediterranean Theater. His high professional attainments and devotion to duty are in the finest traditions of the Army Medical Service.

Lt. Col. Grantley W. Taylor, MC (*WS* 1924)— Bronze Star Medal . . . for meritorious service in direct support of combat operations from 1 March 1944 to 1 March 1945, in Italy and France. As Chief of Surgery, Colonel Taylor maintained the highest standards in the care of patients, at the same time securing the necessary rest for the professional staff, so that both the quantity and quality of the care of patients was enhanced. By his foresight, untiring efforts, and profound devotion to duty, he contributed in an outstanding manner to the superior medical service rendered by his organization.

At a meeting of the Board of Trustees, held on February 21, it was voted:

To accept the resignation of Dr. Aubrey O. Hampton with great regret;
To accept the resignation of Miss Sally Johnson with great regret;
To accept the resignation of Dr. Donald Macomber;
To accept the resignation of Dr. Daniel M. Swan;
That the title Superintendent of Nurses and Principal, School of Nursing be changed to Director, School of Nursing and Nursing Service.
To appoint:
Dr. Earl A. Glicklich as Assistant in Dermatology;
Dr. James E. Kreisle as Assistant Resident in Medicine for the period beginning February 15, and as Resident beginning April 1, without salary;
Dr. Sam M. Powell, Jr. as Assistant Resident on the Children's Medical Service, to begin April 1;
Dr. John W. Raker as Third Assistant Resident in Surgery, to begin March 1;
Dr. Laurence L. Robbins as Chief of the Department of Radiology;
Dr. Stewart P. Seigle as Assistant Resident in Medicine for nine months, to begin April 1;
Dr. Adney K. Sutphin as Assistant Resident in Medicine for six months, to begin April 1.

The General Executive Committee, at their meetings on February 13, 20, 27, and March 6, voted:

To accept the resignation of Dr. R. Wenner Machamer from the position of Clinical Fellow in Surgery, effective as of March 1;
That the title of Dr. Stanley J. Sarnoff be changed from that of Research Fellow in Surgery to Clinical Fellow in Surgery;
To reappoint Dr. Jackson M. Thomas as Graduate Assistant in Psychiatry, to begin on or about May 1;
To appoint:
Dr. Perry J. Culver as Clinical Fellow in Medicine;
Dr. Daniel C. Dawes as Graduate Assistant in Psychiatry;
Dr. William E. Flood as Graduate Assistant in Dermatology;
Dr. Carl J. Josephson as Clinical Fellow in Medicine—principally in Cardiology;
Dr. Paul Kunkel as Graduate Assistant in Medicine;
Dr. André Monsaingeon as Research Fellow in Surgery;
Dr. Eugene E. Record as Graduate Assistant in Orthopedic Surgery;
Dr. Carter R. Rowe as Graduate Assistant in Orthopedic Surgery;
Dr. Stanley M. Wyman as half-time Graduate Assistant in the Department of Radiology, for the term beginning March 1, 1946 and ending September 1, 1948.

The following men have returned to active duty on the Staff, as of the dates given:

Dr. Walter S. Burrage, Assistant Physician	Mar. 1
Dr. Sylvester McGinn, Assistant in Medicine	Feb. 1
Dr. Richard Schatzki, Radiologist	Feb. 20
Dr. George P. Sturgis, Assistant Physician	Feb. 14

MASSACHUSETTS EYE & EAR INFIRMARY

The regular spring meeting of the New England Oto-Laryngological Society will be held on Wednesday, May 8, at the Massachusetts Eye and Ear Infirmary. Dr. Oscar V. Batson, of the University of Pennsylvania, will be the guest speaker.

Clair Michael Kos (*Oto-Lar.* 1941) has been appointed Associate Surgeon in Oto-Laryngology at Duke University Hospital, Durham, N. C.

Because of the increased number of Residents now on duty, it has become necessary to make changes in the Residents' quarters. Consequently, on March 15, the Junior Residents on the Ear, Nose and Throat Service and the Senior Residents on the Eye Service, including the Resident on the Neuro-Ophthalmological Service, were housed in the East Wing of the Nurses' Home. The members of the Ladies' Visiting Committee have taken an active interest in equipping a comfortable lounging room for the men. The other Residents will continue to be housed in the "FLAT".

New addresses:—

Dr. Rodney F. Atsatt (*Or.* 1926), 1734 State St., Santa Barbara, Cal.
Capt. Russel L. Baker, MC, AUS (*r.p.* N 1943), Walter Reed General Hospital, Washington, D.C.
Capt. Frederick S. Bigelow, MC, AUS (*EM* 1943), Concord, Mass.
Dr. John D. Camp (*a.r* 1924-27), Mayo Clinic, Rochester, Minn.
Dr. Edwin L. Cantlon (*ES* 1938), Box 2496, Reno, Nev.
Dr. David H. Clement, 300 Longwood Ave., Roxbury, Mass.
Lt. John C. Coolidge, MC, USNR (*CM*), 109 C Brush St., Alameda, Cal.
Dr. Ira M. Dixson (*WS* 1930), 100 Metropolitan Bldg., Denver, Col.
Lt. Leonard P. Eliel, MC, USNR (*EM* 1942), *U.S.S. Gage* (APA-168), c/o Fleet Post Office, San Francisco, Cal.
Lt. Harold E. Elrick, MC, USNR (*M* 1944), BOQ, 1665 Rosecrans, San Diego 6, Cal.
Dr. Chester W. Fairlie, Jr. (*WM* 1942), Essex Falls, N.J.
Dr. Douglas A. Farmer (*WS* 1943), 43 Lincoln Road, Medford 55, Mass.
Major Norman E. Freeman, MC (*r.s. WS* 1935), Box 404, Auburn, Cal.
Lt. Col. Edward A. Gall, MC (*r.p.* P 1937), Bethesda Hospital, Cincinnati 6, Ohio.
Dr. John P. Gens (*r.s. U* 1943), Stony Brook Road, Darien, Conn.
Dr. C. Fred Goeringer (*Or.* 1940), 209 S. 63d St., Philadelphia 39, Pa.
Lt. Col. James Greenough, MC (*WS* 1920), Cooperstown, N.Y.
Dr. Robert A. Gregory (*r.p. N* 1933), Provincial Hospital, Fairville, New Brunswick, Canada.

Capt. Joseph P. Holihan, MC, AUS (*ES* 1943), Hq., Camp Pittsburgh, APO 806, c/o Postmaster, New York, N.Y.

Dr. Charles I. Johnson (*Oto-Lar.* 1929), 403 Commonwealth Ave., Boston, Mass.

Dr. Louis G. Johnson (*P* 1940 & *EM* 1942), Apt. 3, 3418 Stanley St., Montreal, Quebec, Canada.

Lt. Terry E. Lilly, Jr., MC, USNR (*ES* 1943), Neurosurgical Service, U. S. Naval Hospital, Great Lakes, Ill.

Dr. William H. Lowell, Jr. (*a.r.p.* 1940), 703 Asylum Ave., Hartford 5, Conn.

Capt. Ralph H. Luikart, Jr., MC, AUS (*M* 1944), State Center, Iowa.

Dr. Alexander Marble (*r.p. WM* 1930), 131 Laurel Road, Chestnut Hill 67, Mass.

Dr. John B. McKittrick (*An.* 1938 & *WS* 1939), 265 Goddard Ave., Brookline 46, Mass.

Mr. Robert S. Melville, 16 Isabella St., Worcester 3, Mass.

Dr. Charles G. Mixter, Jr. (*WS* 1940), 274 Beacon St., Boston, Mass.

Capt. Fathollah K. Mostofi, MC, AUS (*a. P*), Dibble General Hospital, Menlo Park, Cal.

Dr. Fred W. Ogden (*Oto-Lar.* 1942), 1904 Audubon St., New Orleans, La.

Lt. John R. Paul, Jr., MC, USNR (*CM* 1943), Naval Hospital, Quarters #7, Navy Yard, Charleston, S.C.

Dr. Olof H. Pearson (*WM* 1941), 32 Alpha Road, Dorchester, Mass.

Dr. William A. Reilly (*CM* 1928), 450 Sutter St., San Francisco 8, Cal.

Major Marshall deG. Ruffin, MC, AAF (*P* 1939), Biltmore Hospital, Coral Gables, Fla.

Dr. W. Beecher Scoville (*r. NS* 1938), 179 Allyn St., Hartford, Conn.

Lt. Col. Milton S. Thompson, MC (*Or.* 1934), 417 W. Houston Ave., Temple, Tex.

Dr. Roland J. Viger (*Oph.* 1937), 1414 Drummond St., Montreal, Quebec, Canada.

Dr. Alexander M. Waldron (*EM* 1938), 324 S. State St., Ann Arbor, Mich.

Dr. George P. Whitelaw (*WS* 1937), Massachusetts Memorial Hospitals, Harrison Ave., Boston, Mass.

Dr. Richard G. Whiting (*a. M.*), 226 Marlborough St., Boston, Mass.

Dr. Arthur T. Willetts (*r. U* 1941), 212 South St., Morristown, N.J.

Brief bits:—

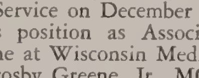
Comdr. George E. Gardner, MC (*CM* 1938) reports this promotion and his transfer to duty as Assistant to the Chief of Neuropsychiatry in the Bureau of Medicine and Surgery, Washington, D. C.

Dr. Edgar S. Gordon (*P* 1935) was discharged from the Service on December 5 and has resumed his position as Associate Professor of Medicine at Wisconsin Medical School.

Major D. Crosby Greene, Jr., MC, AAF (*CM* 1940) has received this promotion and is on terminal leave. His home address is 263 South Ave., Weston, Mass.

Lt. Col. Henry F. Howe, MC (*r.s. PH* 1934) informs us of his promotion in rank. He expects to be back at his old office, 11 North Main St., Cohasset, Mass., in May. He says it will be good to get into mufti again, and to greet old friends at the M.G.H.

Col. Ernest E. Myers, MC (*Or.* 1933) has been promoted to this rank. He is still at Bushnell General Hospital, Brigham, Utah.



The last time we heard about Capt. Robert F. Legge, MC, USNR (*Or.* 1935) was in a letter from Mrs. Legge, published in the November 1944 NEWS, which told of his participation in many of the Naval engagements in the Southwest Pacific. Now we have a note from the Captain himself. He writes:—

In July '45, I went to sea again on the *U.S.S. Thomas Jefferson,* an attack transport converted to a casualty receiving ship, and found myself Senior Medical Officer in charge of 9 doctors and 81 corpsmen. We made the Sasebo, Kyushu, Japan landing.

In November I was honored with a fourth stripe.

Since 14 January I've been at the U.S.N.H., Great Lakes, Ill. I'm Chief of Orthopedic Surgery, with from 1200 to 1700 patients on the service, and 30 doctors to help.

Just before reporting here, I called on William Snyder [*WS* 1933] and Fred Ilfeld [*Or.* 1937] in Los Angeles. They are both now back in practice.

Lt. Col. David W. Wallwork, MC, AAF (*ES* 1932) writes briefly from Westover Field, Chicopee Falls, Mass.:—

Returned from overseas on 1 February after eight months' service in the India-China Division of the Air Transport Command, where I held successively the jobs of Base Surgeon, Kunming Army Air Base, China Wing Surgeon, Assistant Surgeon of the Division, and finally Division Surgeon.

At present I am stationed here at Westover Field, fervently hoping for separation from the service.

Promoted to present rank 1 December 1945.

From 30 North Michigan Avenue, Chicago, comes this letter from Col. Ralph F. MacDonald (*ES* 1922).

Having just returned to the United States after thirty months in the Pacific may I say again how much I have enjoyed THE NEWS during that time.

I read with much interest, in the December issue, the letter by Colonel Collins [G.S.C. (*ES* 1933)], whose experience somewhat parallels mine. I, too, commanded a field artillery battalion in New Guinea until September 1944 when I was promoted to Colonel and made Division Artillery Executive Officer. A short time later I was attached to the I Corps, made the landing at Lingayen on Luzon, and then rejoined the Division for the operation to secure Baguio. We returned home by way of Japan, where we saw the destruction in that country and the effects of the atom bomb at Hiroshima. I believe that Colonel Collins and I are probably the only two surgeons who wound up in this grade in field artillery.

In New Guinea I enjoyed several visits with [Col.] Don Glover [MC (*WS* 1922)], Chief of Surgery, 4th General Hospital, where he was doing his usual superior work.

After five years in the Army I am now looking for a place to live — the most difficult problem of all.

This very welcome "first letter" from Capt. Frederic W. Rhinelander, II, MC, AUS (*ES* 1937 & *Or.* 1938) is written from Letterman General Hospital, San Francisco.

I am ashamed that my first report to THE NEWS should not be till this late date, but I have been waiting in the hope of having something more interesting to divulge than a simple tour of hospitals in the ZI during a mere 18 months in the Army. After the usual term at Carlisle, where I was greatly impressed by the Army's teaching methods, I have at least been fortunate in having been continually on busy orthopedic services in General Hospitals—DeWitt for 6 months, Hammond for 8 months, and Letterman for the past 2 months — all in California. I have witnessed and engaged in an incredible amount of late reconstruction work. It has been an orthopedist's paradise, except for the fact that long-term follow-up has been impossible. But even in the latter respect, I have been more fortunate than most of my orthopedic confreres of the M.G.H.

Here at Letterman we are now swamped with cases from the many hospitals which have been closed, and it will still be many months before the backlog of surgery can be disposed of.

Of MGH-ers in Service, I saw Jesse Nicholson several times while he was running a very large orthopedic service at Oakland Naval Hospital. He has recently been discharged from the Navy as a Captain.

THE NEWS has continually brought me great pleasure and has made me feel very close to the M.G.H. I envy those who were able to serve overseas, but I am enjoying continuing the work they started. The charts of quite a number of my patients have borne familiar signatures — particularly Otto Aufranc, Carter Rowe, Tom Gephart, and Lester Yee.

Capt. Jesse T. Nicholson, MC, USNR (*r.s. Or.* 1933) is back in civilian life. From Philadelphia he writes:—

This is to report that my tour of duty with the Navy was terminated in December. I am now relocating in a temporary office at 1726 Spruce Street. I am experiencing all the difficulties of reconversion — impatience for a new office to be completed in the Pennsylvania Hospital Clinton Street Building, and a search for a home. In spite of the practice I had in the latter while stationed in California, I find that the desired species are much rarer in the East.

It is my wish to again express my appreciation of THE NEWS which followed me so faithfully during the past four years. Its arrival is always anticipated, as it brings so many scattered friends and their activities back for pleasant reminiscences.

Dr. C. Fred Goeringer (*Or.* 1940), whose last letter told of having to "hit the fox hole" too frequently for our comfort of mind, is back home and out of military service. From Philadelphia he writes:—

It was my good fortune to leave the Philippines behind in November 1945, at which time I sailed from Manila on a hospital ship. My overseas tenure lasted 22 months and I was a happy man, indeed, when I was separated from the service on 24 November as a Lieutenant Colonel. During my last year overseas I served as Chief of Orthopedic Surgery in the Mayo Unit — the 247th General Hospital which served in New Guinea and Luzon.

In January I commenced the practice of orthopedic surgery in Philadelphia. I am on the teaching staff of the Orthopedic Service at the University of Pennsylvania. Most of my work deals with pure orthopedics, in contrast to the war wounds, fractures, and amputations with which I had to contend during my five years in the Army Medical Corps.

I should like to be numbered among those who desire a life's subscription to THE NEWS. I shall always remember the many happy moments I spent reading in that paper the many interesting items concerning my former associates — particularly during the New Guinea Campaigns when news was at such a premium. Once again, many thanks for THE NEWS and what it represents.

A restless conscience prompted this letter from Major Allen M. Boyden, MC (*WS* 1934) — our first word from him in more than two years.

I have been sorely remiss in my correspondence with THE NEWS, but can truthfully say its reception each month has been a high light. Since, unfortunately, it has not been my privilege to serve with or contact many MGH men, THE NEWS has been particularly interesting.

Throughout the war I was with the 3rd Auxiliary Surgical Group as a Team Leader—serving in the Tunisian and Sicilian Campaigns, as well as in all the European Campaigns of the U. S. First Army from the D-day landing in Normandy through to finish the war at Pilsen, Czechoslovakia. Received promotion to Major in February 1944.

In July 1945 I returned to the States by air and found myself on terminal leave in early

August. Terminal leave ended October 31—a pleasant birthday gift, indeed.

Having decided to settle in Portland, Oregon, I spent August and September locating a home and an office—both of which were difficult to find. October 1 saw me on my way to Ann Arbor, Michigan, where I remained until mid-November working in the Department of Surgery and picking up loose ends of civilian advances in surgery of the last three years. Here in Portland I am associated with the University of Oregon Medical School as Clinical Instructor in Surgery.

Recently I was delighted to see an old MGH friend—Dick Pearse [*ES* 1934], who was stopping in Portland for a few days on a tour of the West while on terminal leave. Our discussion centered on old times and old friends at M.G.H. and served to remind me that I owed you a letter.

From Tulane University of Louisiana, New Orleans, has come this note from Dr. Champ Lyons (*WS* 1933).

Following my release from the Army and my resignation from the Staff at Massachusetts General, I accepted the associate professorship of surgery at Tulane and became affiliated with the Ochsner Clinic and Foundation as a member of the surgical Staff. My appointment as Civilian Consultant in general surgery to the Surgeon General of the Army has given me an opportunity to continue my interest in problems of wound management.

Dr. Arthur A. Holbrook (*CM* 1933 & *EM* 1934) is out of military service. From 711 Goldsmith Building, Milwaukee, Wisconsin, he writes:—

I was separated at Lawson General, in Atlanta, where I thoroughly enjoyed seeing [Col.] Denny Adams [*WM* 1918]. He made my stay there far pleasanter than it would otherwise have been.

I have resumed my practice of Internal Medicine and it does seem mighty good.

Incidentally, for the record: I was promoted to Lieutenant Colonel.

Capt. Donald J. Emery, CWS, AUS (*res. fel. D* 1941) has returned from overseas. His address is 487 Walcott Street, Pawtucket, R.I. A recent short note says:—

I returned to the States last October, and am now on terminal leave. My last service was with an Air Service Group under Troop-Carrier Command. Incidentally, I have recently been promoted to Captain, Chemical Warfare Service.

Dr. Daniel M. Rogers (*CM* 1938) sends a change of address, and adds:—

An old infirmity allowed me to get no closer to the military than serving with Selective Service, but I will call attention to my change of address from Clinton, N. Y. to Wenham, Mass. I opened practice in Hamilton and Wenham in October.

It is ineffably satisfying to be within running distance of the M.G.H. again, back in New England. I hope to drop in when affairs here are under better control.

These few lines have come from Major Gordon A. Saunders, MC (*EM* 1937).

Now that I am out of the Army and on terminal leave, it is a little inept to break into print for the first time. However — I spent 39 months in the ETO. From July to December 18, 1945 I worked at Lovell General Hospital; from December 18 to January 18 I refrained completely from work; now I am back with my office in Arlington.

Although this is the first letter from Major Saunders to be published in The News, our files include a delightful letter from him, written in England in October 1943, which, due to some circumstance of the moment, failed to appear in print. Because of its "In retrospect" flavor, its references to several members of "the family", and the memories it may arouse among the participants of the darts contest and others, we are including excerpts here, even at this much later date. Major Saunders was a Captain then, with the 16th Station Hospital, having been transferred from the 5th General. He wrote, in part:—

MGH graduates are scattered rather thinly in this Theatre, except for the group at the 160th, all of whom I have seen from time to time since their arrival in Ireland just a year ago.

Yesterday I attended the fourth meeting of the AMA Society of the ETO, which has been rotating among the several general hospitals over here. This meeting was held at the Maine Unit, and contributed two MGH speakers (Milton Thompson and Bill Comeau) and an X-ray exhibit by Jack Spencer. On the way back I stopped over night at the 5th General and bumped into the still smiling Howie Suby, who has just taken Simmy's place there as G.U. chief. Also saw my ex-roommates Tom Cavanaugh and Henry Brewster, and discovered, to my horror, that they have become devotees of the game of darts and were in the middle of a furious struggle to decide the local championship.

I have seen Eric Bywaters [*res. fel. M* 1937-39] several times recently, and have been on grand rounds at his hospital in Hammersmith.

An outline of where Capt. John B. Millet, MC, AUS (*WS* 1943) has been comes in this letter from him, written from Cushing General Hospital, Framingham, Mass.

My Army career commenced with Carlisle, where the fundamentals of Army life became known to me. After a brief stay in the medical pool at Camp Pickett, Va., I was sent to the 244th Station Hospital at Camp Shelby, Miss., a 250-bed unit where I was Executive Officer for 6 months. This unit was enlarged and became the 129th General Hospital in December 1943, and I was given the position of Acting Chief of Surgical Service until more competent members arrived just prior to sailing in June 1944.

We set up in North Wales, replacing the 16th General Hospital. I was a member of the Orthopedic Section, Chief of the Physical Therapy Department, Special Service Officer, and ran the remedial gymnasium. [The capital letters in the titles—as often—are ours. *Editor*] Life in England was very pleasant and busy, with from 60 to 90 patients in my wards and my other activities. The long evenings lent themselves to bicycling over the countryside.

In December I was transferred to the 199th General Hospital. This unit made the last successful crossing of the Channel on the Belgian *Leopoldville* which sank soon thereafter with the 66th Division on board. We stayed in a small resort town east of Le Havre, and on our proposed date for moving southeastward the bulge supervened and we were shipped to Rennes, Brittany, where we took over the 127th General Hospital late in December, after a 96-hour ride in the usual boxcars.

We were quite active as a hospital until closing in June 1945. I had 77 orthopedic beds and ran the rehabilitation ward with an additional 105 beds. The countryside was as lovely as any I've seen in France and, unlike other areas, the food was plentiful for the local inhabitants. I shall never forget the orgy of a French dinner party given for me by one of my French patients which started at 7 P.M. and concluded at 1 A.M.—with no intermission between courses. I was fortunate to be able to take a trip to Le Mans and see Don Sweeny and Dick Lillie at the 177th General Hospital.

In June we left for the Marseille staging area, finally set sail in August for the CBI, and landed in New York City instead of the Philippines.

After completing a recuperative leave at home and returning to Camp Sibert, Alabama, to deactivate our unit, I have been fortunate in being assigned to the Cushing General Hospital.

A "first letter" has come from Lt. Col. Howard G. Weiler, MC, AUS (*Or.* 1932), headed Batangas, Luzon. It says:—

Since I have become eligible for separation from the AUS by the February announcement, I shall leave shortly for the States and expect to be located at my home in Wheeling, West Virginia, by early March.

During the past year I have been associated with the 315th General Hospital as Chief of Orthopedic Surgery and during the past six months as Chief of Surgical Service.

Not since he started out for the wars, back in '44, have we heard directly from Capt. Rafe Banks, Jr., MC, AUS (*ES* 1943). Letters from Robert P. Smith (*M* 1943) however—published in The News—told us that both these men were in that last terrific drive across France and Germany and finished the war together in the Bavarian Alps.

This note from Captain Banks was written from the 24th General Dispensary, Munich, Germany.

I have just finished reading the latest issue of The News and enjoyed every word of it. Without this publication I would very shortly be out of touch with many of my old friends.

As for myself, I am working here in the downtrodden ruins and wreckage of this once famous city, merely marking time until the day comes for me to "go west". Until the last two months my time in the Army had been fairly well spent. I worked for nearly two years, through thick and thin, with a good Evacuation Hospital [the 117th], but now I am part of a unit that holds sick call for the great majority of the American troops in this area. The monotony of this existence is broken each week-end by a great skiing trip to Garmisch-Partenkirchen in the Bavarian Alps.

Keep The News coming. I hope I shall be able to visit you all soon.

IN RETROSPECT

Dr. Franseen wrote this letter to his family while he was with the 249th General Hospital, Clark Field, Luzon. A note which came with the copy sent to The News says: "Our hospital was set up on the concrete slabs which were the prewar site of General Wainwright's Cavalry Command at Fort Stottsenburg. I found, when I returned home, that this letter had made the rounds of many of my friends, who seemed to be entertained by it."

Dear Folks:

It came today! That big blow I had been afraid would come. And what a blow! The Filipinos had warned us that we could expect one any time until late in the year, and that they had not been able to keep any tents up here before the war. It was an amusing coincidence that last night after supper I had driven in more tent pegs round my tent and had rolled some big rocks up to anchor the ropes to, as the pegs pull out as soon as the ground gets wet. My tent neighbors ribbed me for it, but I warned them they, too, had better get secured.

Lest they forget they were there together—Captains Rafe Banks, Jr. and Robert P. Smith, near the summit of Zugspitze, the highest Alp in Germany

There was to be a wedding at 4:30 P. M. today. One of the majors on the surgical service was to marry one of the operating room nurses. The best man was to be one of our orthopedic surgeons and the bridesmaid one of our surgical nurses. The C. O. was to give the bride away.

I took on some extra operating myself because the groom, of course, was very busy, and another of my surgical officers wanted to go to Manila to see about getting home since he had been over here for 42 months. I got through earlier than I expected, so moved an afternoon operation up to do before lunch. It was a patient who had been badly injured in a plane crash and had a compound fracture of the humerus. We had just received him from a field hospital and I had found an abscess in his wound. We decided to give him sodium pentothal to drain it.

The patient was no more than asleep when it quite suddenly became very dark and still outside. I remarked that it looked like another storm and that we had better hurry. I hadn't much more than said it when the wind and rain struck with terrific fury. The tent over our heads began to sway and flap violently. The rain drove way into the middle of the tent and blew the towels and sponges about. I had already started the operation when someone shouted, "There goes Physio!", meaning our Physiotherapy tent. I couldn't see it from where I was operating. I hurried the operation and was inserting the drains. "There goes S-2," they cried. That's our second main surgical tent, with all our fractures in traction and plaster casts. Then, at almost the same moment, there was a terrific crash of wooden poles, metal, and shattering glass. "That's S-1," the announcer cried, but I didn't have to be told that, since it was the postoperative ward attached to Surgery that went down. Whoosh! and away up went the tent roof over our heads. I was standing, finishing the operation, under the open sky in a driving rain. The tent pegs had pulled out, and one side of the roof flew way up and came down with a crash. A tent peg was still attached to the end of one of the ropes and came straight at us. It flew out again and cracked like a whip. "Here it comes again! Catch it!" I shouted to the anesthetist, for it was going straight for the patient's head. It hit the anesthetist a glancing blow on the forearm as she tried to catch it, and out it whipped again. I left the table and climbed up the frame on the side of the tent to catch it when it came back again, but this time it snapped itself free and flew out into space. I caught the rope, however, lashed it to a brace, then ran back to put a dressing on the wound. The patient was just waking up.

By that time others had come running and were holding the ropes down on Surgery, so I dashed into the next tent to see how the patients that the tent had come down upon were getting along. Everything was commotion, everybody running and shouting orders, but the shouting was very faint above the roar of the storm. As I stepped into the end of the post-op tent, which was still supported by the doorway to Surgery, I tripped over some electric wires. "Somebody throw the switch!" I shouted. At almost the same moment the lights went out, but not before a light bulb on the wire crashed with a big flash. It was almost dark under the tent and I could just make out the patients, cringing and trying to hold the tent off their faces. All who were able to get out of bed were out, hanging onto the tent ropes in the driving rain, some of them stomping round in their plaster casts. I saw at a glance that none of the patients in that end of the tent were injured, so I ducked out under the tent, but stopped short when the icy rain struck me in my operating gown that was already wet with perspiration. There were the Colonel and the Executive Officer, braced in the rain, hanging onto the ropes for dear life. I lifted the edge of the tent and went in under the other end to check the patients. There was the prospective bridesmaid, leaning over a patient who had a Miller-Abbott tube in his nose and his Wangensteen apparatus smashed to smithereens on the floor beside the bed. The poor bridesmaid was holding the tent up off the patient, her wet hair streaming down straight in front of her face. I am afraid I was unkind enough to give a little laugh, it looked so funny.

By this time the men were wrestling with the bases of the central tent poles to get them upright, and the tent was moving up again. The medicine cabinets, with all their bottles of solutions, lay in a mess of broken glass and spilled pills, mixed up with the patients' half-finished trays, cigarettes, and blankets. There was a long rip in the roof of the tent. The ward men carried the beds of two very ill patients into Surgery which had been reroofed by this time and was a little less wet, and we herded some of the ambulatory patients, with plaster casts on, into the Minor Surgery tent which was still dry.

The patient on the operating table was awake enough to look around now and said, "My feet are cold. I had some shoes when I came in here. Can I put them on, as I'll be going back right away?" "Don't be in any hurry, fellah," I said. "You've got no place to go now. We'll get you another blanket." We found dry blankets and changed the wet ones. Just then a patient buttonholed Major Mount as he was hurrying past and said, "Major, I was supposed to get some pills at 12 o'clock!" He was so serious about it we all burst out laughing, to the poor fellow's embarrassment. There were pills all over the floor! (He finally got his pills.)

We looked over at the mess tents. They were flat. The detachment had been at lunch when the storm struck and the mess tents started to go, but they left them and ran for the ward tents. They had reached S-2 in time to keep it from going all the way over on the fracture cases. When they went back to the mess tent there was mostly rain-soup for lunch.

Everything had been secured again. I saw the X-ray technicians looking over the ruins of the main X-ray machine that had been knocked over by the tent. I went back to Surgery. There the men were pushing up on the valleys in the roof between the tents where the water had collected, and the pools came down in crashing waterfalls. There was hammering everywhere as tent stakes were being driven in again, otherwise the usual calm had set in after the storm. The rain had stopped. The majority of the patients thought it had been somewhat of a lark. It gave them something to write home about. A few just looked bewildered, huddling under their blankets.

The bridesmaid emerged from the dressing room in Surgery, having shed her wet slacks and shirt, and went flitting off to her quarters in a flowing white operating gown, looking anything but angelic. One of the nurses came in from reconnoitering her quarters. "It's flat," she said. "I had just finished ironing three shirts and I was going to wear one to the wedding. I found them plastered in the latrine. I just stood there and shook my fists." Everybody seemed to have the same vindictive attitude, muttering "Now, perhaps they'll do something about it!" The post-operative tent had gone down about three weeks before and a visiting officer had suffered a fractured clavicle and laceration of the scalp. Fortunately, the only casualty this time was one set of fractured ribs. All the sterile goods in Surgery were soaked except what was in the drums.

Some of the men in Surgery had brought a couple of loaves of bread and some peanut butter and cheese from the kitchen. Coffee was brewing with hot water from the sterilizer. With the help of an amputation saw for a bread knife and throat sticks to spread the peanut butter and stir the coffee, we sat round the plaster table in the Orthopedic Room and drank coffee out of once-sterile solution bowls. The postmortem on the typhoon was in progress.

Being the newest comer to the unit, I volunteered to take the calls on the Surgical Service while the wedding party jeeped to a very neat little bamboo chapel of the Air Corps a couple of miles away. When they came back we had a buffet supper in the Officers' Club. The bride was beautiful, as always, in a white silk gown made from a parachute, and she carried a corsage of white orchids and pink phlox. The bridesmaid graced a pink net gown, or vice versa, and one couldn't but think of the amusing contrast with her appearance a few hours before. The groom and best man were resplendent in borrowed tropical worsted uniforms that almost fit them, and, wearing ties, looked "fresh from Fashion Park". I hadn't seen a uniform and tie for 18 months. There was an orchestra boasting an accordian player. They played a lively polka and there was much terpsichorean display — to much applause. The bride threw her corsage as the photographers flashed. The nurse who caught it was the same one who had been struck by lightning the day before. "Gee," she said, "I wonder what will happen tomorrow!"

My tent? My foresight hadn't been complete. I had neglected to secure the ropes holding the cap on top of the tent. It had blown open and acted as a shower head to spray my tent. But, fortunately, my bed is off a little to one side and was not much more damp than usual.

And so to bed — my day!

THE NEWS

No. 44 Boston, Mass. MAY 1946

MEDICAL SERVICE AFFAIRS

(*Conclusion of the article by Dr. Means*)

Believing that staff appointments confer benefits on doctors and that, therefore, doctors of the staff have certain obligations toward the hospital, a formulation has been made of various types of duty in the public wards and Out-Patient Department, which can be regarded as the minimum which the hospital has a right to expect. Under this plan, the more senior physicians will be asked to take on medical ward visiting for four months. The next group will be asked to take ward visiting for two months and two months of out-patient work (two days per week). A third group will be asked to spend six months (two days per week) in the Out-Patient Department medical clinic. It is hoped that the physicians who visit in both wards and Out-Patient Department will be able to correlate the two and, by being experienced in the wards, exercise leadership in the Out-Patient Department and increase the interest of the work there of their juniors. In the case of a few physicians who have a heavy commitment in special clinics, the above minimum may be waived and special clinic service accepted in place thereof. The normal route to promotion on the staff, and to medical ward work, will be through the medical Out-Patient Department clinic. In the wards, the practice of having four visiting physicians on duty at once (one each to a ward) having been found good, will be continued.

Research in the Medical Department continues apace. The several OSRD projects have been, or are being, wound up, but investigation goes on with support from new quarters. We have been fortunate in securing a grant of $23,000 per year (for five years, we expect) from the National Cancer Institute for studies on problems related to cancer. This is being used to aid studies by Drs. Aub, Albright, and Nathan B. Talbot. The breadth of support of research is indicated by the sources from which comes aid. Besides the regular budgets of the Harvard Medical School and Massachusetts General Hospital, during the past year grants-in-aid have come from the following: Commonwealth Fund, "H.N.C." Gift of the Harvard Medical School, Robert W. Lovett Memorial Foundation, Josiah Macy, Jr. Foundation, Markle Foundation, Parke-Davis & Co., Rockefeller Foundation, Proctor Fund, Mallinckrodt Chemical Works, Tutorial Fund of Harvard, and others. The Mallinckrodt Company has not only helped us in the matter of research, but Mr. Mallinckrodt is also supporting a free research bed in Ward 4.

RECEPTION FOR VETERANS

Plans have now been completed for a reception to be given by the Trustees of the Hospital to welcome home those members of the staff, nurses, and employees who have given so generously of their time and skill in the Armed Services.

The reception is to be a spring lawn party held on the Bulfinch green from noon to 2:30 P.M. on Thursday, May 23rd. The party will be an informal one, with a buffet lunch, served as the group gathers. After lunch there will be a program of speakers who have been chosen to represent the many viewpoints and divisions of the hospital's war effort. The Army, the Navy, the hospital unit, the theater consultants, and the wives, as well as the hospital on the home front, will be represented. This program will be announced in detail on the invitations to be sent out early in May.

The Trustees anticipate a large gathering of the entire hospital family, and hope that the staff members will bring their wives and children. The whole hospital—doctors, nurses, employees, volunteers, and friends—will thus have an opportunity to come together at the scene of their labors, to celebrate the war's end and the return of their colleagues.

In case of rain, the entire ceremony will be postponed to Friday, May 24th, at noon.

Dr. Chester M. Jones has just been given a $5,000 grant by the Hood Foundation, to study certain nutritional problems.

The subjects of research cannot be outlined in an article of this length. For information on that score the reader should turn to the actual publications.

As the new year began, the retraining of veterans became the first priority educational problem. In addition to the training offered by the residencies, the Harvard Medical School has started a six-months' basic training course in medicine and surgery. A share in this teaching will fall to the Massachusetts General Hospital. In April a three-weeks' "refresher" course in internal medicine will be given under the auspices of the American College of Physicians for eighty doctors. Other smaller and more specialized courses are being planned.

In the hurly-burly of all this graduate teaching, it will be necessary to see that house staff training and the teaching of undergraduate medical students is not allowed to suffer. This objective can be reached if sufficient effort is made by all concerned.

J. H. Means, M.D.,
Chief of Medical Services

* * *

On Wednesday evening, March 20, the Ladies' Visiting Committee and the Advisory Committee on the School of Nursing held a reception for Miss Sally Johnson, retiring Superintendent of Nurses and Principal of the School of Nursing of the Massachusetts General Hospital.

The Rotunda of the Moseley Building was miraculously transformed into an attractive reception room. Potted plants and cut flowers graced the several occasional tables. Soft rugs of warm color, on and about the raised platform, contributed much to the general homelike effect.

Mrs. Robert Homans, acting as a representative of the Advisory Committee to the School of Nursing, was the presiding officer and introduced the speakers. Dr. Faxon paid high tribute to Miss Johnson. He said:-

In an address to a group of Red Cross Nurses' Aides in 1942, Miss Sally Johnson set down in her clear-cut manner a statement about the personality of the M.G.H. as an institution, that can very well be applied to her as an individual. She said:

"Just a word about the personality of the M.G.H., for institutions have personality. The background of those who built and are building it is Puritan. Therefore, we do what we do, partly because it is expected of us, but chiefly because we expect it of ourselves. We expect from others little expression of appreciation of our work, and acting on this principle we express little appreciation of the work of others. It would be to the advantage of everyone if appreciation of the work of others were more frequently expressed. It is difficult for many of us to express appreciation. We have been brought up to believe that it might contribute to a lessening of effort; that it might appear to be insincere; that it might be expressed for ulterior motives or merely as a social tool. These are among the reasons why you have seldom heard appreciation of your work. I sometimes think we may be double cousins to that Vermont husband about whom Carl Sandburg writes. Speaking to his wife he said, 'When I think of how much you have meant to me all these years, it is almost more than I can do sometimes to keep from telling you so.' "

We have held back for twenty-five years from expressing our feelings in regard to Sally Johnson. Because she was a Puritan she has not expected it and because we, too, were Puritans we have not spoken our thoughts. We knew it would not lessen her effort, but feared she might think it insincere or perhaps from ulterior motives. We knew she would do her work regardless of our praise or comments.

But tonight there can be no possibility of any other motive than that of esteem and affection; and so at last, and fortunately, while she and we, too, can enjoy it, we are going to break down and tell her by our presence how much she has meant to us during all these years.

Miss Margaret A. Dieter, President of the M.G.H. Nurses Alumnae Association, spoke on "What Miss Johnson has meant to me". Dr. Means, in his usual humorous vein, included a reference to "Yankee qualities" in his remarks. Mrs. Floyd Blackman and Miss Betty Dumaine, as representatives of the Executive Committee of the M.G.H. War Service and the Ladies' Visiting Committee, respectively, presented Miss Johnson with a very lovely tray and set of after dinner coffee cups, and a beautiful silver tea service. Miss Johnson spoke on the opportunities given her at M.G.H. to serve mankind, practise her profession, and establish friendships of permanent value. She concluded by saying that the best gift she could give the General was Miss Ruth Sleeper, who succeeds her.

After the speeches, a social hour was enjoyed in the Brick Corridor, where ice cream, cakes, and coffee were served from a table made most attractive with daffodils and tall yellow candles in silver candelabra.

A spirit of friendliness, kindly humor, and genuine affection pervaded the entire affair.

At the annual meeting of the Board of Trustees, Miss Sally Johnson was appointed Director Emeritus of the School of Nursing. Miss Johnson was given a tea by the Alumnae Association on Sunday, April 7. The Walcott House living room was decorated with great sprays of forsythia and pots of beautiful flowers. Graduates and friends of the School came from far and near to honor Miss Johnson; and many others, unable to attend, were represented in the gifts which were presented to her.

At a special meeting of the Alumnae Association of the School of Nursing, a report about the School of Nursing Endowment Fund was given to the group. Miss Sara Parsons, who initiated this Fund, spoke of the days in which she felt the need of such a fund for the future development of the School. During the years, many parties and entertainments—including M.G.H. Night at Pops, the sale of Christmas cards, and the 1946 calendars—have been sponsored, to increase the Fund. The total amount has now passed the $100,000 mark, and the School Alumnae are encouraged to renew their efforts so that the interest from the Fund may be an increasingly substantial amount. As yet, none of the money has been used.

Dr. Lamar Soutter, Director of the Blood Bank, has very kindly given us this summary of his talk on "Recent changes in blood banking and transfusion therapy", which he delivered at the combined Surgical meeting on April 9.

Since the Bank opened in April of 1942, 32,200 donors have been seen, of which roughly 15% were rejected for medical reasons; 24,502 plasma or whole blood transfusions have been given in that time. The Bank has grown from a two-nurse, one-technician institution to a four-nurse, four-technician and ten-volunteer-worker laboratory. Along with growth have come certain changes in technique. The first of these is the changed system of grouping, which is now done on a basis of a very high-titre serum used for testing both donor and recipient by two different technicians. Rh grouping is now being done on all donors and on patients using a high-titre testing serum from the Blood Grouping Laboratory. Blood donors are sent to the Bank by families and friends of patients in a number in excess of requirements. If, however, a patient is unable to supply donors, he is charged a twenty-five dollar fee for each pint of blood he receives. This money is used to provide blood to cover the groups in which the Bank is low or in which there is an excessive demand. For example, blood groups are now divided into eight instead of four, as previously. These groups are O Rh+, 39% of people; A Rh+, 35%; B Rh+, 10%; O Rh—, 5½%; A Rh—, 5%; AB Rh+, 3½%; B Rh—, 1½%; AB Rh—, ½%. The smaller groups—that is, the last five on the list, comprising 16% of all people—are very difficult to cover. If the Bank has 100 bottles of blood on hand, there may be an insufficient number of bloods of these smaller groups to care for a major hemorrhage. Therefore, the Bank has been building up its donor list gradually to reach a figure of over 1,000 in order that blood will be available on short notice for these groups. At the same time, in order to cover the rarer groups if no blood is immediately obtainable, Universal Donor blood, O-, is being kept on hand, which may be given after the addition of Whitebsky's Group Specific substance, A and B, so that high-titre agglutinins in the donor's serum will not hemolyze the cells of the recipient. This blood is also available for those very rare extreme emergencies in which immediate transfusion is necessary before a blood grouping can be done.

Stainless steel filters of very fine mesh were introduced in 1942 in order to remove blood clots before the blood left the Bank, so that it might run freely through an intravenous set. This procedure reduced pyrogenic reactions to one-half their previous figure. Subsequently this has been used for plasma with good results. It has led, however, to certain abuses —namely, that of allowing blood to stand unused after filtration. This means the possibility of formation of plasma clots, the possibility of bacterial growth from air contamination at the time of filtration, and the possibility of hemolysis in a whole blood because of temperature changes. Therefore, the Bank has made it a rule that bloods must not be sent for until they are going to be used, and must then be run directly into the patient.

There has been a considerable reduction in the demands for emergency transfusions on patients who have been in the Hospital for several days. This has been achieved by doctors becoming more conscious of the fact that patients in whom there is a possibility of needing hemoglobin must have a grouping and Rh typing done upon admission. Similarly, greater attention is being paid to the fact that a patient in a rare group who may require a blood should have the blood ordered well in advance, so that the Bank may call in professional donors to cover the needs.

There has been a change in an anticoagulant used for the donor's blood from a 4% citrate solution to the acid-citrate-dextrose media. This last has greatly reduced the fragility of the red cells, permitting longer preservation of the blood, so that now it is kept for three weeks instead of seven days. This change, plus the heavy demands for plasma on the part of the Burn Project, has reduced the plasma supply of the Hospital very materially. At the present time, the Hospital has been obtaining plasma from the State for use in emergencies only.

Because of the rare possibility of hepatitis from plasma administration, the Bank has advised that plasma be used only when its administration is vital to the life of the patient.

The hours for donors are from 1:00 P.M. to 4:30 P.M. daily, on an appointment system. This does not include Saturday or Sunday. The Bank has abandoned evening, Saturday, and Sunday hours because of the very slight demand for these times. On occasion, the Bank will make special hours for donors from a distance or those who genuinely are unable to come in during the regular time. However, it has been our consistently disappointing experience to find that at those times when this effort has been made by the Blood Bank staff and the volunteer workers, the response is minimal. Less than a quarter of the donors who have demanded this special service have kept their appointments.

In regard to reactions—these are classified under the general headings of anaphylactic, pyrogenic, and hemolytic. It is possible to have combinations of these or one alone. Anaphylactic includes the group of urticaria, asthma, and similar complications. Theoretically, this type of reaction could be fatal, although no such occurrence is recorded in the literature. Blood should be discontinued in the case of such a reaction, the reaction reported, and the blood returned to the Bank. The pyrogenic is the common group. It is marked by chills, with or without fever of varying degree, and is usually due to chemical or bacterial impurities in the transfusion, tubing, glassware, or anticoagulant. These are not serious, except that it is possible for one to mask or be confused with a hemolytic reaction. Therefore, the blood should be discontinued and returned to the Bank. as with the first group. The last group is very rare but is also extremely dangerous. Its symptoms are flushing, back pain, substernal pain, and change in pulse rate with a blood pressure fall. These symptoms may all be present or in combination, or may be completely lacking; but with these reactions, there will be at some time detectable amounts of breakdown products of hemoglobin in the blood serum and urine. Blood should be collected with a dry syringe and placed in a dry test tube as soon as possible after one of these reactions, to be analyzed in the Baker Laboratory for the presence of hematin. The first urine should also go to the Baker Laboratory. These reactions are nearly always fatal in those cases in which there is a kidney shutdown. In all instances of a hemolytic reaction, the Bank should be notified immediately and the donor's blood saved, so that an investigation as to cause may be conducted and a proper system of fluid administration for the patient started, in an attempt to save the patient, if possible.

Fortunately, reactions have fallen from 10% of transfusions given in the first two months of the Bank to 1.3% for the 7,501 transfusions given in 1945. This last figure, however, owing to inadequate reporting to the Bank, does not accurately represent all the reactions for that year.

The Bank wishes, at this time, to properly express its gratitude to the volunteer workers who make its continued successful existence possible.

Miss Cannon sent us the following clipping from the *New York Herald Tribune,* of March 28. It announces the appointment of Col. Francis R. Dieuaide, MC (*p.*) as director of the Life Insurance Medical Research Fund.

Appointment of Colonel Francis R. Dieuaide, until recently chief of the tropical disease treatment branch of the Surgeon General's Office, to the post of scientific director of the Life Insurance Medical Research Fund, was announced yesterday by M. Albert Linton, chairman of the fund.

The fund was established a year ago to make grants to universities and medical schools for research on diseases of the heart and related illnesses. During the next five years it plans to disburse more than $3,000,000. Supporting the fund are 147 life insurance companies in the United States and Canada.

Before going into the Medical Corps in 1943, Dr. Dieuaide was [physician to the Massachusetts General Hospital and] clinical professor of medicine at the Harvard Medical School, a post which he is resigning.

Dr. James E. Fish (*ES* 1930), Assistant in Surgery, left on April 15 for Schenectady, N. Y., to assume his new duties as Director at the Ellis Memorial Hospital and Assistant to the Dean at the Albany School of Medicine. Dr. Fish recently returned from duty with the Army, after serving for more than three years as Chief of Surgery at the North Sector General Hospital in Hawaii.

Lt. Peter T. Brooks, MC, USNR (*ES* 1943) stopped in for a visit with us the other day. He was apartment hunting while on vacation, and goes on terminal leave May 21.

While we surmised, from his letters, that Lieutenant Brooks had participated in several major engagements in the Southwest Pacific, we had no idea of the actual number until we saw his service ribbons. He was in on the invasions of Sicily, Salerno, Naples, Guam, Saipan, Iwo Jima, Leyte, and Lingayen Gulf; and wears the European ribbon with 2 stars, Pacific ribbon with 4, Philippine Liberation ribbon (a foreign decoration) with 2 repeated stars, Commendation ribbon, and American Theatre ribbon.

Quite by accident, we stumbled upon what we consider to be some rather unusual experiences that have befallen Dr. Ching Tung Liu, one of our new Residents in Neurosurgery. In spite of Dr. Liu's reticence, we succeeded in dispelling his fears that someone might think he was seeking publicity, and persuaded him to tell us his story.

While he was an Intern in Surgery at Peiping Union Medical College, in 1937, the war in China started about twenty miles from the College, at the famous Marco Polo Bridge. "We treated the very first casualties of the war," he said. He became interested in that type of work and decided to serve in the Army. When he was graduated, in 1938, he immediately went to South China, joined the Chinese Red Cross, and worked with the Mobile Surgical Unit attached to the Chinese Army. "At that time," he said, "the only help the Chinese Red Cross was getting was from foreign sources." After Pearl Harbor the entire Unit became commissioned in the Chinese Army. All the Red Cross doctors became Lieutenant Colonels. He worked in hospitals and training schools, and spent seven months in India training Chinese medical officers while General Stilwell was in command. Later he was transferred back to China, to a Medical Training Center in Yunnan Province.

The reason Dr. Liu has come to America to study is because China has no personnel or equipment for neurosurgical cases. "In all of China there is only *one* trained neurosurgeon," he said. He came to the States in December 1944 and joined the Cushing General Hospital in order to get his training at that neurosurgical center.

This story of Dr. Liu's makes us wonder if there may not be other undisclosed experiences which our House Officers and Interns may have encountered and which, by the telling, would help the hospital "family" know each other better.

After making several unsatisfactory attempts to describe the hobby exhibit in the Brick Corridor, we have decided that no amount of superlatives could convey an adequate portrayal of the display. While we were all set for something extra-special, we had no idea there existed such really remarkable artistic talents among the members of our Staff. The items would do credit to many professional exhibitions we can think of.

There are photographs of outstanding charm; lovely paintings and black-and-whites; beautiful jewelry and carvings in plexiglass that make one's mouth water. There are typewritten bound books, written to the doctors' families, delightfully illustrated in color by the authors. But there we go again—indulging in those inadequate superlatives. You must see for yourself to believe. Come—and marvel!

The manner of arrangement of the show demands special mention. The nice new wall cases, donated by Dr. Arthur W. Allen and the Ladies' Visiting Committee, are in use for the first time. Unique captions — unstereotyped and chatty — explain the pieces and announce the exhibitors. Credit for the pleasing arrangement of the articles goes to Miss Muriel McLatchie and her assistants.

Those who have items on display are Lt. Col. Edward F. Bland, Capt. George H. A. Clowes, Jr., Major John R. Graham, T/3 Gordon Haynor, Capt. Theodore H. Ingalls, Capt. John B. McKittrick, Major Hermann B. F. Seyfarth, Comdr. Herman J. Sternstein, Major Somers H. Sturgis, Lt. Col. Grantley W. Taylor, and Capt. Stanley M. Wyman.

The first issue of *The world of the M.G.H.* appeared in April. It is a new publication, aimed at a cross section of the hospital, and is to be distributed to all employees and members of the House Staff.

Mr. Hamilton, who has been in attendance in the doctors' parking lot for nearly fifteen years, wishes to extend this message to the members of the Staff who have been in military service and to those who are still away. He says he has read every issue of THE NEWS "from cover to cover" and has kept track of you all during the war and since; and he is happy once more because nearly all of the doctors have returned.

* * *

Excerpts from the April *Baker News Letter*:

STATUS OF BEDS: On 19 March 1946 the patients on BM-2 were moved to the newly painted BM-6. The second floor is now being painted and will be opened about 15 April. The present bed capacity is 275; it will be 303 when all floors are open.

BLUE CROSS AND BLUE SHIELD: During April there will be a Blue Cross and Blue Shield drive at the hospital. By special arrangement with the Massachusetts Hospital Service, members of the Baker Staff will be permitted to join during this drive. Blue Shield will be opened to physicians in answer to the request of many who wish to join, so that when they or their families are hospitalized the attending physician might receive some compensation for his services. You may join either or both Blue Cross and Blue Shield. For further information, contact Miss de Lue, Room 144, Baker Memorial.

MISCELLANEOUS: During February 1946, 39% of all admissions were Massachusetts Blue Cross subscribers, as compared to 28% in February 1945. The percentage of patients during February who were covered by some form of hospitalization insurance was 44%.

T. Stewart Hamilton, M.D.,
Assistant Director

John D. Kenney, a past orderly at Baker Memorial, was instantly killed in an automobile accident on March 18. He enlisted in the Coast Guard early in 1941, at the age of seventeen, and received his Stoneham High School diploma while on duty in the Pacific. He participated in the invasions of the Marshalls, Admiralties, Palau, Saipan, Leyte, and Luzon, and was one of the service men selected for the color guard at the UNO Conference in San Francisco. He had received his discharge from military service in February.

Mr. MacNair says that Kenney came in to see him only four days before the accident. He was planning to return to Baker on May first for the summer, and to attend a school of pharmacy in the fall.

DERMATOLOGY DEPARTMENT

Excerpts from the April bulletin:

An interesting letter has arrived from Capt. Ralph H. Luikart, Jr., MC, AUS (*M* 1944). He has made several trips across the Pacific to bring back wounded military personnel aboard the *U.S.S. Comfort*. He has finally been assigned to shore duty in California, where his address is Station Dispensary "B", Camp John T. Knight, Oakland, Cal. Dr. Luikart hopes to return to this department at the General whenever he is discharged, but that is an indeterminate future date.

With deep regret we announce that Mrs. M. J. Romero is taking an extended leave of absence. Even the oldest former members of the Dermatology Department will remember Mrs. Romero with affection, since she has been our intravenous technician for nearly thirty years. We hope she will return to us after her visit to Scotland.

Mrs. James Downar will take over Mrs. Romero's duties. Mrs. Downar was in charge of Ward G for a number of years and has more recently been Head Nurse in our Out-Patient Department.

In addition to the citations already mentioned in The News, the following have been received:-

Col. F. Dennette Adams, MC (*WM* 1918)—Legion of Merit . . . As Consultant in Medicine, Headquarters, Fourth Service Command, from July 1944 to October 1945, Colonel Adams demonstrated exceptional qualities of leadership in training and directing the medical services of the command. He effectively coördinated a program consistently maintaining the highest professional standards for the care of the sick and wounded.

Major Robert L. Patterson, Jr., MC (*Or.* 1935)—Legion of Merit . . . for exceptionally meritorious conduct in the performance of outstanding services as Chief of the Orthopedic Section, Surgical Service, 2nd General Hospital, from 15 July 1942 to 18 January 1945. Major [later Lt. Col.] Patterson organized and administered this section with great skill, foresight and outstanding professional ability. He trained officers, nurses and enlisted men of his own and other hospital units in the principles of orthopedics and the correct treatment of fractures. Major Patterson displayed intelligence and initiative in the improvization of necessary equipment, building from materials available locally, an orthopedic table urgently needed. He performed valuable service as a consultant for the Chief Surgeon, European Theater of Operations. Major Patterson's extraordinary ability as a surgeon and his sound judgment resulted in much alleviation of suffering and saving of life. . . .

Lt. Col. Fiorindo A. Simeone, MC (*WS* 1936)—Legion of Merit . . . for exceptionally meritorious conduct in the performance of outstanding services in the Mediterranean Theater of Operations from 27 August 1943 to 1 August 1945. As consultant in General Surgery, Lieutenant Colonel Simeone personnally operated upon, supervised and observed the management of seriously wounded soldiers in the forward mobile hospitals and in fixed hospitals, always combining the accurate critical appraisal of scientific research with humane technical skill of the experienced surgeon. He initiated and conducted clinical research in the field on a succession of important and unsolved problems that surround the surgical treatment of the wounded, pointing the way in each instance to the elimination of life endangering complications. His ingenuity and precision in making and recording observations on gas gangrene and destructive wounds of major blood vessels, contributed to the introduction of methods of treatment that saved lives and preserved limbs, observations on the occurrence, nature and causes of trench feet were of aid in the introduction of successful control measures. Actively participating in the work of a Board to study the treatment of the seriously wounded, he brought to light new facts regarding the bodily disturbances that attend certain fatal complications of wounds. These observations opened the way toward the prevention and more effective management of these complications that constantly challenged the skill of forward surgeons. . . .

At their meetings on March 8 and 22 and April 5, the Board of Trustees voted:

To accept with regret the resignation of Dr. Francis R. Dieuaide;

To accept the resignation of Dr. Thomas A. Warthin with regret;

To accept the resignation of Dr. George M. Wyatt from the position of Assistant Radiologist;

To grant a Dalton Scholarship to Dr. William P. Chapman;

To grant Dr. J. Wallace Zeller the privilege of seeing private patients at the Hospital for a period of one year;

To establish a Junior Residency in Orthopedic Surgery carrying a salary of $750 per annum, appointments to be for six months or one year, according to recommendation of the Chief of Service.

To promote:

Dr. William Dickson from the position of Intern to that of Assistant Resident on the Children's Medical Service, beginning April 1;

Dr. Richard S. Dodge to the position of Junior Resident in Orthopedic Surgery for nine months, beginning April 1;

Dr. James E. Kreisle from Assistant Resident to Resident, as of April 1.

To appoint:

Dr. Victor G. Balboni as Assistant in Medicine, effective as of March 1;

Dr. Bernard D. Briggs as Fellow in Anesthesia for one year, beginning September 1;

Dr. Franklin L. DeBusk as Intern on the Children's Medical Service, beginning April 1;

Dr. Chester W. Fairlie as Assistant Resident on the Medical Service for six months, beginning March 1;

Dr. Donald Harting as Intern on the Children's Medical Service, beginning April 1;

Dr. John Homans, Jr. as Assistant Resident on the Medical Service for six months, beginning April 1;

Dr. Haukur Kristjansson as Assistant Resident in Orthopedic Surgery for three months, beginning April 1;

Dr. William Law as Assistant Resident in Orthopedic Surgery for six months, beginning April 1;

Dr. Stuart Quan as Intern in Pathology for fifteen months, from April 1 to June 30, 1947;

Dr. Edward P. Richardson as Assistant Resident in Psychiatry, beginning January 1, 1947;

Dr. David H. Riege as Intern on the Children's Medical Service, beginning April 1;

Dr. Samuel B. Thompson as Second Assistant Resident in Orthopedic Surgery for one year, beginning April 1;

Dr. Marshall R. Urist as Senior Resident on the Orthopedic Service for one year, beginning April 1.

To reappoint:

Dr. Thomas B. Brazelton as Assistant Resident on the Children's Medical Service for one year, beginning April 1;

Dr. Samuel C. Capps as Intern in Pathology for three months, beginning April 1;

Dr. William J. Emerson as Assistant Resident in Pathology for fifteen months, from April 1 to June 30, 1947;

Dr. J. Peter Kulka as Assistant Resident in Pathology for fifteen months, from April 1 to June 30, 1947.

To make the following appointments to the Surgical Resident Staff, beginning April 1:

First Assistant Residents

Dr. Rodolfo E. Herrera
Dr. Chiu-an Wang
Dr. Lester P. K. Yee

Second Assistant Resident

Dr. George H. A. Clowes, Jr.

Third Assistant Residents

Dr. Walter S. Kerr, Jr.
Dr. William V. McDermott
Dr. John B. Millet
Dr. Dexter N. Richards, Jr.
Dr. Thomas Rutter
Dr. William D. Shorey
Dr. Robert J. Tracy

The General Executive Committee, at meetings on March 20 and 27 and April 3, voted to appoint as Graduate Assistants:

Dr. Gerald G. Garcelon, in Surgery, assigned to the Tumor Clinic

Dr. G. Douglas Krumbhaar, in Surgery, for work in the Out-Patient Department

Dr. Henry H. W. Miles, in Psychiatry

Dr. Herman B. F. Seyfarth, in Dentistry

Dr. Norman J. Wilson, in Surgery, for work in the Out-Patient Department

MASSACHUSETTS EYE & EAR INFIRMARY

Dr. Edwin B. Dunphy, Clinical Professor of Ophthalmology, Harvard Medical School, and Chief of Ophthalmology, Massachusetts Eye and Ear Infirmary, has very kindly contributed this abstract of his talk, given before the New England Ophthalmological Society, on March 19. His subject was "Penicillin in ocular infections—A review of the literature".

Penicillin is usually superior to the sulphonamides for the following reasons:

(1) It is generally non-toxic by all routes of administration.

(2) Its antibacterial action is not inhibited by autolytic products and secretions.

(3) It has little, if any, deleterious effects on the regeneration of corneal epithelium.

(4) It is not incompatible with other drugs commonly used, such as atropine, cocaine, procaine, sulphadiazine, etc.

With these advantages it should be the drug of choice in treating any ocular infection known to be due to penicillin-sensitive organisms.

However, unless certain basic facts are understood regarding its distribution in the ocular tissues by various methods of administration, many cases will not be treated effectively, and much valuable time will be lost before the ocular infection can be brought under control.

The weight of experimental evidence seems to indicate the following recommendations for treating eyes infected with penicillin-sensitive organisms:

(1) Intramuscular and intravenous injections of penicillin will probably have little effect in controlling infections of the anterior and vitreous chambers.

(2) Sub-conjunctival injections may have some effect on infections of the anterior chamber, but are probably worthless in infections of the vitreous.

(3) Infections of the vitreous can probably be most effectively treated by a single intravitreal injection of 0.1 cc. of penicillin solution containing not more than 500 units.

(4) Infections of the anterior chamber will probably be controlled by local application of saturated cotton packs, or by iontophoresis. Corneal bath and sub-conjunctival injection will probably be less effective. In cases of perforating corneal injury with damage to the lens, a single injection of 0.1 cc. of a solution of penicillin containing not more than 500 units may be justified.

(5) For conjunctivitis and infected corneal ulcers, frequent instillations of penicillin drops or ointment will probably be effective. Saturated cotton packs under the lids, iontophoresis, or corneal bath should be tried in very severe cases.

The Infirmary is considering establishing an Eye Bank to be affiliated with the Eye Bank for Sight Restoration, Incorporated, in New York City. By this means, any individual may will his eyes, to be given to the Eye Bank after death. If the eyes are removed within a few hours following death, the corneas can be refrigerated and used for corneal transplant on a living subject.

Dr. Donald E. Moore (*Oph.* 1937) and Mrs. Moore came in to see us recently. Dr. Moore is now back in civilian life and is located in Syracuse, New York.

Lt. Col. George A. Filmer, MC (*Oph.* 1939), in this "first letter" to THE NEWS, reports his promotion in rank and his release from military service.

> I want to express how good it has seemed to have received THE NEWS with its information about old friends from the General and the Eye and Ear.
>
> I have spent my entire Army career here at William Beaumont General Hospital, El Paso, Texas, as Chief of the special eye center, and now—after 46 months—have received my release to return to civilian status. I intend to return to private practice of ophthalmology in Denver.
>
> I now have a Texan in the family in the form of a young daughter, born last Thanksgiving Day.

A short note from Dr. Joseph Lentine (*Oto-Lar.* 1936) says:-

> I wish to express my appreciation of THE NEWS which did such a magnificent job in keeping us up to date with "GENERAL" matters while in the service. It was a pleasure to receive the paper monthly even though it did cause a nostalgic feeling for "Beantown".
>
> At present I am on terminal leave, with an office at 520 Commonwealth Avenue, undergoing civilian conversion.
>
> As long as THE NEWS is published, please continue to send it.

Dr. Lentine was promoted to Major before his retirement from the Army.

The following men have returned to active duty on the Staff, as of the dates given:

Dr. Franklin G. Balch, Jr., Assistant Surgeon	June 1
Dr. Walter Bauer, Physician	Feb. 1
Dr. Bradford Cannon, Assistant Surgeon	April
Dr. Alfred L. Duncombe, Assistant in Medicine	March 11
Dr. Richard W. Dwight, Assistant in Surgery	February
Dr. James E. Fish, Assistant in Surgery	February
Dr. Saul Hertz, Assistant in Medicine	March 11
Dr. Daniel H. Hindman, Assistant Obstetrician	March 11
Dr. Joseph A. Holmes, Assistant in Surgery	April 1
Dr. G. Elliott May, Assistant Obstetrician	March 11
Dr. H. Bristol Nelson, Assistant Obstetrician	March 13
Dr. John H. Talbott, Assistant Physician	May 1
Dr. Augustus Thorndike, Consultant in Traumatic Surgery	
Dr. Frederic Tudor, Assistant in Medicine	April 1
Dr. James C. White, Chief of Neurosurgery	March 11
Dr. Richard G. Whiting, Assistant in Medicine	March 11

New addresses:-

- Capt. Franklin G. Balch, Jr., MC, USNR (*ES* 1925), 333 Brookline St., Newton Center, Mass.
- Lt. Col. Walter M. Bartlett, MC (*CM* 1927), 125 Michigan Ave., Decatur, Ga.
- Lt. Ronald C. Bishop, MC, AUS (*M* 1945), 280th Station Hospital, APO 872, c/o Postmaster, New York, N. Y.
- Dr. Austin M. Brues (*EM* 1932), 5715 Drexel Ave., Chicago, Ill.
- Col. Richard Collins, Jr., GSC (*ES* 1933), ODI, Hq. OMGUS, APO 742, c/o Postmaster, New York, N. Y.
- Capt. Richard S. Cosby, MC, AUS (*EM* 1940), 117 East Colorado St., Pasadena 1, Cal.
- Lt. Joseph A. Elliott, MC, AUS (*M* 1945), Headquarters, Medical Section, Personnel Center, Fort Meade, Md.
- Capt. Lytt I. Gardner, MC, AUS (*CM* 1944), South Park Drive, Reidsville, N. C.
- Capt. Joseph P. Holihan, MC, AUS (*ES* 1943), 239th General Hospital, APO 887, c/o Postmaster, New York, N. Y.
- Dr. Harry C. Hughes (*Or.* 1937), 203 Metropolitan Bldg., Denver 2, Col.
- Major S. Rodman Irvine, MC (*Oph.* 1935), 612 North Alpine Drive, Beverly Hills, Cal.
- Capt. F. George Johnson, DC, AUS (*Dn.* 1943), Regional Hospital, Camp Robinson, Ark.
- Dr. Robert D. Mattis (*Oph.* 1942), 634 North Grand Blvd., St. Louis, Mo.
- Lt. Frederic B. Mayo, MC, USNR (*a.r.p.* 1944), 144 Beach Bluff Ave., Swampscott, Mass.
- Col. Donald McNeil, MC (*Or.* 1930), 1339 44th St., Sacramento, Cal.
- Dr. Richard L. Pearse (*ES* 1934), 602 West Chapel Hill St., Durham, N. C.
- Lt. Edward P. Richardson, Jr., MC, AUS (*EM* 1943), 219th General Hospital, APO 957, c/o Postmaster, San Francisco, Cal.
- Lt. Royal S. Schaaf, MC, AUS (*WM* 1943), England General Hospital, Atlantic City, N. J.
- Lt. Frank C. Wheelock, Jr., MC, AUS (*ES* 1943), 202nd Station Hospital, APO 732, c/o Postmaster, Seattle, Wash.

Brief bits:-

- Dr. Marcus E. Farrell (*CM* 1934) has returned home from duty as a Lieutenant Commander in the Navy. His address is 318 Spring Ave., Clarksburg, W. Va. He says he enjoys THE NEWS so very much he doesn't want to miss a single copy.
- Dr. Monroe A. McIver (*ES* 1922) is now on inactive service. His address is 32 Fair St., Cooperstown, N. Y.
- Bruno Mickeleit is back at M.G.H. His overseas assignments included Haiti and Hawaii, where he served as medical photographer.
- Lt. Grant V. Rodkey, MC, AUS (*WS* 1943) has arrived in Shanghai. His address is Military Casual, 19th Base Post Office, APO 946, c/o Postmaster, San Francisco, Cal.
- Dr. Arie C. van Ravenswaay (*P* 1934) has returned to civilian practice at the C. H. van Ravenswaay Clinic, Victor Bldg., Boonville, Mo., after serving with the Army Air Forces. He was promoted to Lieutenant Colonel before his discharge.

Military addresses received for those who finished training at M.G.H. on April 1:-

- Lt. John W. Bell, MC, USNR, Chelsea Naval Hospital, Chelsea 50, Mass.
- Lt. Robert L. Berg, MC, USNR, Chelsea Naval Hospital, Chelsea 50, Mass.
- Lt. Jack S. Parker, MC, USNR, U.S. Naval Dispensary, Navy Department, Washington, D. C.
- Lt. Earle W. Wilkins, Jr., MC, USNR, U.S. Naval Hospital, Newport, R. I.

Dr. William A. Reilly (*CM* 1928) has sent us an all-too-brief note. About a year ago we learned that, while driving blackout one night in Eastern France, his driver had "bashed into a large French truck which had broken down (as they often did) and was left in mid-road (as they often were)." Dr. Reilly suffered a compound fracture of the left tibia and a fractured femur, and was sent back to the States. Now, from 450 Sutter Street, San Francisco, he writes:-

> I was put on terminal leave January 8, 1946, and promoted to Colonel. My fractured left leg and thigh are doing well.
>
> I have resumed private practice of pediatrics at the above address.

Dr. Ellsworth H. Trowbridge, Jr. (*r.p. N* 1940) has resumed private practice in neuropsychiatry at 5611 Lydia Street, Kansas City, Missouri. This letter from him includes a fine tribute to Colonel Walter Bauer (*r.p. WM* 1927).

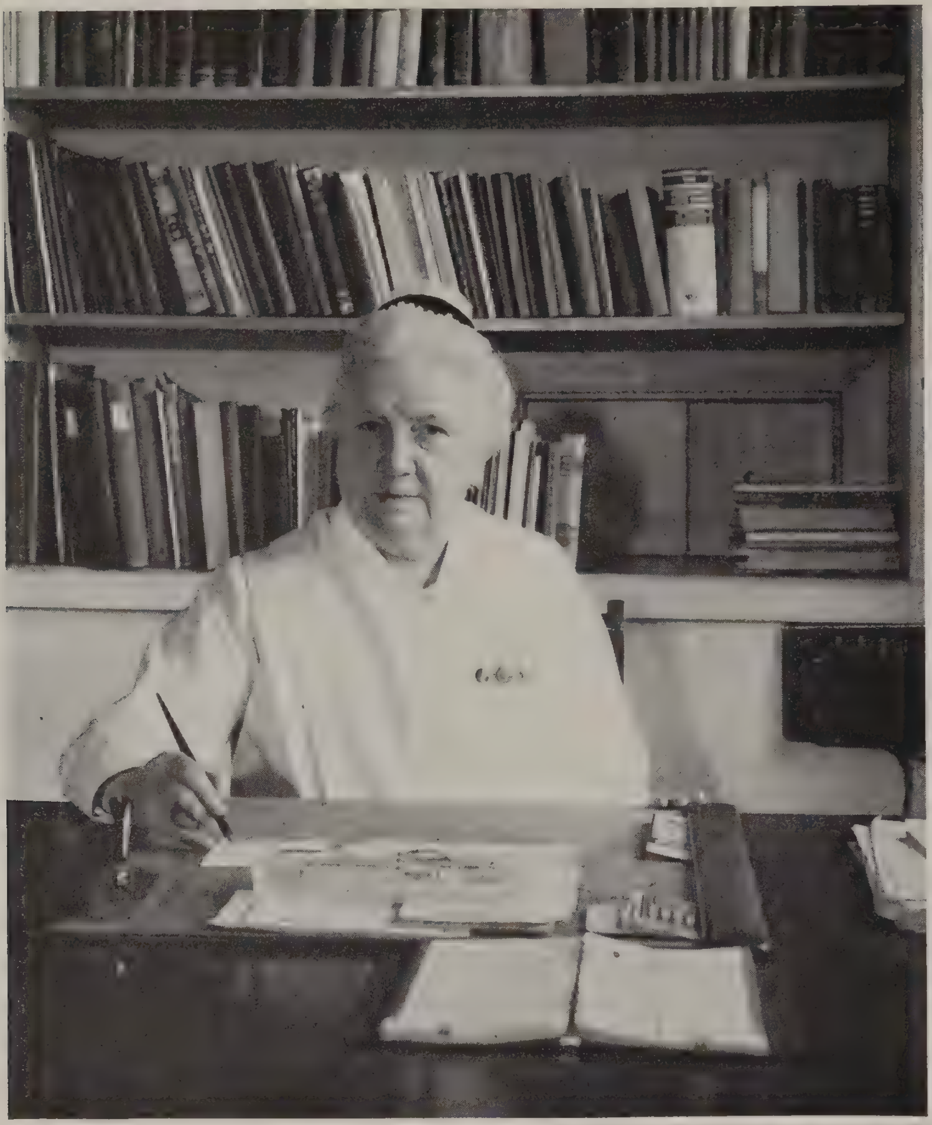
> I received notice of my promotion to Lieutenant Colonel on 21 January 1946, and completed active duty in April. My last assignment was Chief of Neuropsychiatric Service at Camp Joseph T. Robinson, Arkansas.
>
> THE NEWS has been greatly appreciated during my 4 years 7 months and 17 days of active military duty. It was a welcome and good informer of everyone's activities.
>
> Several of my most interesting experiences in the Army were spent with Colonel Bauer, Medical Consultant for the 8th Service Command, whom you all know, and who did a great service toward improving the medical practice and standards of the 8th Service Command. His visits as Medical Consultant were always enjoyed by all officers under his command.

About a year ago we published a letter from Lt. Joseph M. Stowell, MC, USNR (*gr. asst.* 1944). That he was on duty somewhere in the Pacific Area was all we could reveal, at the time. Now comes word of his transfer back to the States.

> My present address is U.S. Naval Hospital, Portsmouth, Va. I was detached from my former station at Kaneohe Bay Naval Air Station on Oahu on January 14 and had fifteen days' leave before being assigned here on the surgical service.

Not since before the surrender of Japan had we heard directly from Lt. Robert H. Hepburn, MC (*r.s. U* 1943). Therefore, this letter from him, to Dr. Fletcher H. Colby, is especially appreciated. It reveals his whereabouts and the nature of his present activities.

> I can't say we've come as far as you did—this isn't India, but it sure is China. I have been hoping steadily that we might shove off for home via Suez, but it now looks as though this ship will spend the summer in Tsingtao. If you'll look on the map you can see that it will be the end of nowhere and surrounded by Communists. We were up there last week on a sort of shake down cruise—for we've been tied up here in Shanghai since September—and, except for our ships, the Marines, and the remains of German construction, it is very Chinese—which is to say poor, poorly run, and run down. Before the war the American Navy ships "summered" in Tsingtao. They are preparing to do so again. There is one good beach up there. The water is clear—not muddy yellow like this Yangtze—so it really should be very pleasant.
>
> Our work here has let up a great deal the past few weeks. A month or so ago I had over 100 patients. Now I have 24. My 26-bed g-u ward has only 7 occupants tonight; my V. D. wards the rest. The acute drop is due to 200 patients we discharged today—150 to the hospital ship *Samaritan*, tied to our starboard gunwales, and the 50 we returned to duty. The *Samaritan* is returning to the States. [Lt.] Bob Tucker [MC, USNR (*WS* 1940)] is acting as Urologist because he's the only general surgeon there with scope knowledge and usable g-u training, gleaned at the General.
>
> My work, small wonder, has been mostly



Miss Johnson

V.D.—lymphogranuloma inguinale, G.C., lues, chancroid, but no granuloma—though in the Philippines the boys say there is a lot of it. V.D. right now is China's most lucrative export, I believe. I've seen over 100 cases a day here in the OPD during the heydays of the Christmas period.

My surgery has consisted of one dramatic nephrectomy for arterial bleeding in a ruptured kidney, hydronephrotic from congenital uretero-pelvic obstruction, two nephrolithotomies and pyelolithotomies, five ureteral stones. One patient had LLQ pain while his visible stone was on the right. I couldn't get a catheter up the 1t. but was suspicious enough of the situation to make a mid-line approach and expose both ureters. The Lord rewarded me with a nice stone from each ureter—one opaque, the other almost non-opaque.

How I miss White 10, its fascinating problems, company, (and good advice!). I've just seen by the MGH News that Howard, Uly, and Dr. Kelley are back. I wonder if Simeone and Dick Chute are, too. [They are. *Editor*] I can't wait to get back and rejoin the land of the living from this welter of waiting. Points are down to 42 May 15th, which will at last excise me from the Orient. June 15th will, in all likelihood, see me home.

Tell your children if they misbehave you'll send them to China. They should behave like angels forever after.

If you question the veracity of the slogan "Join the Navy and see the world", just ask Lt. Ben Eiseman, MC, USNR (*ES* 1943). After his "floating bathtub" days, on LST's and LCI's off the coast of France, he was sent to the Southwest Pacific. A letter, written at sea in November 1944, said he expected his next assignment would be with some Rubber Boat outfit off Antarctica, if his changes of address continued. Last October we lost contact with Lieutenant Eiseman. His Newses began to be returned to us, and we were about to send a where-are-you letter to him, c/o South Pole, when Lt. John H. Peters, MC, USNR (*WM* 1943) sent us a clipping from the *New York Times* of March 1. And where—of all places—do you suppose Lieutenant Eiseman is? In Egypt!

The *Times* article, written by Clifton Daniel, describes the recent anti-British riots in Cairo, and concludes with:-

> One episode of last Thursday's riots that has now come to light is that some victims, who had been taken to an Egyptian first-aid hospital in Cairo, received treatment from a foreigner in khaki uniform who had himself been attacked by a mob during that afternoon.
>
> While an angry crowd of several hundred waited for him outside the hospital gates, Lieut. Ben Eiseman of the United States Navy assisted Egyptian doctors in treating men and boys wounded by gunfire, sticks, stones and flying glass. "It was just like a casualty clearing station," said Lieutenant Eiseman, who had participated as Navy doctor in the landings on Normandy, Okinawa and the Philippines.
>
> Lieutenant Eiseman, who attended Yale and the Harvard Medical School, comes from Saint Louis, Mo.

What an exciting contribution to the "Now it can be told" column Lieutenant Eiseman can send us! We're all waiting for it!

Our ether collection in the Archives Department contains many items of particular interest. For instance, some of you may not be familiar with the history of the "chairman's bell" which is in the cupboard in the Trustees' Room. Among our ether papers is a copy of an article prepared for the *British Medical Journal* for December 2, 1922. An excerpt from that article, concerning the rapid spread of the news of the first public demonstration of the use of ether in surgery reads:-

> It reached London within about two months, the flame being carried in a letter from Dr. [Henry J.] Bigelow [a Visiting Surgeon at M.G.H. in 1846] to Dr. Boot of Gower Street, who immediately communicated the facts to Mr. Liston, then surgeon to University College Hospital. Liston consulted a friend, Mr. Peter Squire, a well-known pharmacist. It so happened that Mr. Squire had a nephew (afterwards Dr. William Squire) who had entered University College that October, and that this young man had made some experiments on himself with ether in the chemistry class at the College and had found out that he could bruise his knuckles across the iron ends of the classroom desks without any sense of pain at the time. Young Squire rigged up an apparatus with a glass bottle and inhaled ether in Liston's presence. Liston made a small puncture under Squire's finger-nail and was satisfied that he was insensible to pain. Liston had at that time under his care a delicate fair-haired man worn out by suppurating disease of the knee and loss of sleep from the jerks caused by eroded cartilage. On December 21st Squire administered ether to this patient and Liston amputated above the knee. Liston was famous for his speed, and the amputation was completed in twenty-seven seconds. The patient was quite unconscious during the operation, and so remained when removed from the theatre. Dr. F. William Cock gave many details of the occasion in the University College Hospital Magazine in 1911. He had consulted the notes made in the case book at the time and had conversed with three persons who were present—the late Dr. Frederick Cock (Dr. William Cock's father), his brother-in-law, Dr. Henry Maund, and Dr. William Squire, whose name has already been mentioned. It may be remembered that it was announced at the recent annual dinner of past and present students of University College Hospital that Dr. William Cock had had two chairman bells made to commemorate the first operations under ether in America and in this country. He presented one of the bells to the Massachusetts General Hospital, where the first operation under ether was performed, and the other to University College Hospital. The bells are made from the metal of an old bell in the church of Appledore in Kent (1621), and each is supported on an iron hoop made from the rails of the surgical theatre in the old University College Hospital. The stand is made from the oak frame of the old bells at Appledore (1685). Each bell bears the same inscription round the crown, NOLAE PULSATIO AMORIS RATIO. On one side is "General Hospital, Massachusetts, Oct. 16"; on the other "University College Hospital, Dec. 21"; and in the middle the year—1846. In explanation of the inscription round the crown it may be said that Nola in Campagna was the chief place for bell founding in the early times, so that its name became synonymous with bell. The inscription may be freely translated "When I do sound let joy abound".

Dr. Washburn, in his history of Massachusetts General Hospital, gives additional information regarding the bells which will be published in a subsequent issue of The News.

THE NEWS

No. 45 Boston, Mass. JUNE 1946

DERMATOLOGIC SERVICE AFFAIRS

Since the last report, Ward G has been torn down and the new Pediatrics and Vincent Building have been started on its site. The dermatologic patients have been transferred to old Ward I and the result is that we now have a G.I. ward. The fact that there are two large wards for male and female patients and not the individual rooms which we had before has reduced the flexibility of admissions, so that over the months it will not be possible to accommodate as many patients.

There has also been established, since the last report, a new dermatologic laboratory in the old orthopedic plaster room under Ward I. This room has been completely modernized and makes an excellent laboratory for research work under Dr. Irvin H. Blank. Investigations are under way at the present time concerning the bacteriology of the recurrent vesicular eruptions of hands and feet, on the activity of penicillin in various vehicles and the stability of these preparations, as well as on the removal of organisms from hands by various detergents and antiseptics. A fellowship has been established by a grant from the National Oil Products Company so that a full time Fellow will be engaged in this work after June 1st.

Monthly staff meetings have been continued. The April meeting was a joint meeting held with the Medical Department in the lower Out-Patient Amphitheatre for the discussion of lupus erythematosus. Dr. Carl S. Sawyer of the Dermatologic Department discussed chronic discoid lupus erythematosus, and Dr. Friedrich W. Klemperer of the Medical Department discussed acute and subacute lupus erythematosus, while Dr. Tracy B. Mallory discussed the pathology of lupus erythematosus.

Ward rounds are conducted at 8:30 every Wednesday morning and interesting cases on the ward are reviewed, as well as some of the interesting patients seen in other wards in consultation during the week.

Staff conferences have been renewed for the benefit of graduate students and residents. Throughout the school year, on Thursday evenings, there has been a series of thirty-two conferences on basic subjects reviewing the relationship of dermatology to bacteriology, mycology, histology, physiology, chemistry, physics of physical therapy, etc.

The Dermatology Service views the world from a much more rosy viewpoint than it did when the last report was submitted to The News. Dr. Maurice M. Tolman has returned from service in the Navy, and Dr. Alan P. Freedberg from his Army service. Dr. William R. Hill, however, is not yet available because of his work in the South Medical clinic. Two residents are now at work on the service. The residency is gradually being developed into a three-year residency, with an appointment to be made on July 1st of each year. In addition, one medical resident spends six weeks, and one medical intern rotates through the Dermatologic Service, each intern remaining ten weeks. Four graduate students, taking the one-year course in the specialty under the Harvard Medical School Courses for Graduates, are working full time in the department. While this adds somewhat to the load of teaching, it can be handled much more satisfactorily than before. Sections of the third year Medical School class are present in the Out-Patient clinic every day, but this year, with the accelerated program discontinued, there will be a vacation period from July 1st to October 14th so that the staff can enjoy a longer period of respite from routine duty.

With the return of adequate personnel it has been possible to relieve Dr. Charles E. Wells and Dr. Frank B. Colloten of further service in the department. Both of these men have served most conscientiously throughout the war, after they were due for retirement, and the service is extremely grateful for their help during this period of emergency.

C. Guy Lane, M.D.,
Chief of Service

* * *

The hospital's reception for its veterans of World War II was held on the Bulfinch Lawn on Thursday, May 23rd. After weeks of unsettled weather, we were favored with what was undoubtedly the finest day we have had to date—cloudless and warm. Four thousand invitations had been distributed and plans made for an attendance of two thousand. The Bulfinch porch, from which the speeches were given, was decorated with groups of flags of the allied nations, which were affixed to the outer columns. The National Colors and the hospital flag hung to the right and left, above the heads of the speakers, and the service flag was suspended from the railing before the lectern.

Placed strategically on the periphery of the central green were eight serving tables. Between noon and one o'clock a luncheon of cold cuts, potato salad, coffee, and ice cream was served by the Dietary Department, aided nobly by twenty-four of the House Officers. These doctors did yeoman service at the tables, in transporting food around the green, and in keeping the several serving stations well supplied. While 1,000 pounds of potato salad, 500 pounds of meat, 30 pounds of coffee, 3,336 ice cream cups, and 2,026 paper plates were being distributed, music was furnished by the Lovell General Hospital band.

As a prologue to the formal ceremonies, a white-haired veteran appeared in Civil War uniform, complete with sabre and other accoutrements. To this uniform were added the modern touches of unit insigne and at least thirty overseas stripes. After hobbling among the diners, this superannuated veteran was aided to the Bulfinch balcony by Dr. Francis D. Moore and, being introduced as Dr. Bigelow, explained his presence. He had been lost in a Replacement Depot outside Gettysburg and had only now been found and released from service.

At one o'clock the formalities were opened by Rt. Rev. Henry Knox Sherrill, Chairman of the Board of Trustees, who asked Rt. Rev. Robert Barry to give the invocation. This was followed by the playing of the Star Spangled Banner. After Bishop Sherrill had read the names of the eight members of the M.G.H. who had given their lives in the war, taps was sounded.

Dr. Churchill, who was the first speaker, emphasized the importance in the Army not only of the surgeons but of the medical men and psychiatrists. He pointed out that the results achieved in the Medical Department came from the combined efforts of these groups of doctors. Dr. Churchill then went on to show that the difficulty of adjustment to civil life on the part of many of the doctors might well stem from an unwillingness to adjust to the old standards they had left and a determination to improve those old standards. He closed on the note that the United States has now become the Mecca of the medical world; that we must be conscious of our new responsibilities; that we must be ever ready to welcome those who come to us seeking knowledge; and that we must continue to make pilgrimages ourselves.

Dr. Goethals recounted the history of the 6th General Hospital, from its activation to its inactivation. He cited the work of the members of the M.G.H. who had been with the Unit, and paid tribute as well to several of those who had joined the 6th from other organizations.

Dr. Cave, speaking for the Army in the Pacific, told of the teamwork between Army, Navy, and Air Forces in that Theater. He then outlined the experiences of the 105th General Hospital in Australia and on Biak, and the work done by the professional staff—one-third of whom were MGH men.

Dr. Robert S. Palmer, speaking for the Navy, acknowledged the work done by the wives at home. He philosophized that, should there be another war, and should the women go, leaving the husbands to cope with the children and the rationing, the war would probably be completed with more dispatch and would result in a more lasting peace. In closing he spoke of the pleasure of being back and of being recognized among familiar surroundings.

Mrs. Donald S. King, speaking for the wives, told in a most entertaining manner of their myriad problems with shortages, ration books, snow, and child discipline. She spoke of those who had helped build the wives' line of defense—Uncle Sam who brought the letters and the government check, and the hospital which stood behind them—its people always ready to help if needed.

Dr. Faxon, the last speaker, welcomed back all those of the 644 members of the MGH family who had returned from military service. He told of the fine contribution of the volunteers, and, in closing, invited all to go over to the laying of the cornerstone for the new Burnham Memorial Children's Hospital.

The War Service worker, in her white uniform and red arm band, has become a familiar figure in the Hospital during the last four and a half years.

In January 1942, several members of the Ladies' Visiting Committee asked Miss Sally Johnson if there was any way in which untrained women could be of service to the Nursing Department during the war emergency. It was decided that a daily "red basket" errand service would save time and steps for the nurses; and so, under the guidance of Miss Edna S. Lepper, two volunteers each morning went from ward to ward collecting innumerable papers, specimens for laboratories, requisitions, and so on, to be delivered about the Hospital.

Before a year had passed, this service—which became known as the War Service—had grown in leaps and bounds in the number of its errands and workers, and volunteers other than the Ladies' Visiting Committee had joined its ranks. An office and telephone in the Bulfinch Building were loaned to the group by the Social Service Department.

The wards telephoned for workers to do such errands as pushing patients or carrying medicines; besides this, patients' clothes were checked in and out. There was also daily penicillin delivery, and two workers were assigned to the X-ray Department. This required a daily team of about twenty-five workers, headed by a Captain and a Co-captain.

A few figures might be of interest: There has been a total of 150 workers enrolled, often giving as many as 380 hours daily. There have been nearly 200 requests a day from the wards for workers to do errands.

In the early days of the War Service there were errors that were committed by the worker inexperienced in hospital routine. To protect the Hospital and the volunteer, a booklet was published in the Printing Office giving full instructions on details of the work and hospital ethics. Later, the War Service Executive Committee worked out an examination for the workers which minimized errors and safeguarded its good name. Those in charge of this War Service group, which became the largest unit of volunteer service in the Hospital, were invited to go to head nurses' meetings and exchange ideas for bettering the service. This coöperation was tremendously appreciated by the volunteers.

The War Service will terminate its activities on June 22. In its place a new service will be set up which will be called the Central Errand Service for the use of the Nursing Department. There will be a Coördinator who will supervise the ward helpers and orderlies assigned to her, plus all the volunteers who can continue to serve. It is hoped that in the fall many of those who have been with the War Service will come back again.

The War Service worker has given her time and she has helped the Hospital. She has learned through, and depended upon, the Hospital personnel to guide her and help her. She is the richer for the privilege of her experience, and she will always consider herself a friend of the Hospital.

Each and every War Service worker wishes she could personally thank you all in the Hospital for the patience you have shown. In working with you, friendships have been made which will be lasting. It has been a sincere pleasure to feel we have been a part of the Massachusetts General Hospital family during the war emergency.

* * *

Members of the Plant Committee of the Ladies' Visiting Committee will be at the Hospital Monday, Wednesday, and Friday mornings between 10 and 11:30, to receive flowers, flowering shrubs, and plants. The Committee will be most grateful for any contributions for the purchase of flowers and plants for display in the Chapel, on the front desk, in the reception rooms, and in various places in Baker Memorial and Phillips House.

Please leave flowers or money contributions with Mrs. Trask at the front desk. Checks should be made payable to Mrs. Edward F. Bland, Massachusetts General Hospital.

* * *

At the meeting of the Out-Patient Department Committee on April 1, it was voted "That the doctors should be required to fill in the patient's name and unit number on all prescriptions which he writes for the patient and that the Pharmacy should be instructed not to fill a prescription unless these items are properly filled in." Therefore, starting May 1, 1946, prescriptions will not be filled with the Out-Patient Pharmacy unless they bear the patient's name and unit number.

We are very grateful to Dr. Robert S. Schwab (*r.s. N* 1935) for this interesting article about his experience on a cruiser during heavy gunfiring.

When on temporary duty as a medical officer for a large destroyer base in the Pacific, an opportunity came up for me to be a guest of the commanding officer of a heavy cruiser that was going off for three days of battle practice and night gunfiring. At the time there had been a series of rather violent controversies in one of the Naval hospitals over the effect on the human brain of loud noises and explosions in the air near by. Some persons maintained that, if the noise were loud enough and near enough, the brain could be hurt without any injury from missiles or projectiles. Others, including myself, were convinced that you could be quite close to blasts and suffer no ill effects, since the force of the air blast diminishes so quickly with distance. The opportunity to ride on the cruiser gave me a chance to settle this question very simply.

After leaving the harbor of a small Pacific island, I readily obtained permission from the commanding officer to stand, during the heavy gun practice, at a distant wing of the bridge, some 15 feet from muzzles of the second 8-inch turret. My ears were protected with cotton and I felt sure nothing untoward would happen. Gunfiring began at 2 o'clock in the afternoon. The first blast was really a surprise. The hot air from the blast blew off my hat and my glasses, neatly pulled my shirt out of my trousers and unbuttoned it, and pushed me back gently about 2 feet. The bright yellow color of the flash was blinding for about one minute. The effect was painless, although quite disconcerting. I stood there for the whole afternoon, was gently pushed around by the blast of the big gun, and never had even a slight headache. The same performance was repeated at night, with the exception that the blind effect from the bright yellow light was more alarming, leaving a huge yellow circle after-image in your mind for about 5 minutes, during which time there was complete blindness. Firing stopped at about two in the morning. No headache or other unpleasant residual was noted.

I was convinced that the mere air blast itself, unless a person were in a confined space or literally on top of the blast, would not seriously affect the human being in any physical manner except in frightening or in producing terror and anxiety. This was later confirmed in a study of some 300 so-called blast cases seen in a front area, a full report of which appeared in *The Journal of the American Medical Association.*

The regular monthly meeting of the Medical Staff was held in the Ether Dome on May 6. Drs. Sylvester McGinn, Howard B. Sprague, and Francis T. Hunter spoke on "Early experiences with malaria in the South Pacific".

Dr. McGinn has very kindly contributed this summary of his talk:—

Of 14,000 admissions to our hospital, over 80% had malaria. There were 14 deaths, three of which were due to malaria with cerebral symptoms. Arriving in the area early, we had had no indoctrination in malariology and had to learn by trial and observation. We soon learned to consider malaria as a subacute disease, like rheumatic fever, which would relapse whenever the individual's resistance was lowered—as by colds, change in climate, operations, and fatigue. Always there was the problem as to when prophylactic atabrine therapy could be omitted.

The majority of cases responded to atabrine and quinine therapy in twenty-four hours, leaving a weakened and tired patient. Only one case of "blackwater fever" was encountered. Patients with cerebral symptoms, many admitted with the diagnosis of epilepsy, became our most serious problem. Intravenous quinine given early proved to be effective therapy. Anemia was not a constant finding, but a few cases were seen with splenomegaly during acute relapses, in which acute abdominal distress and distention would be present. With iron the anemias improved and the size of the spleen would diminish, although it was observed that transfusions tended to make them larger; and, although it did not occur, it seemed they were perilously near the point of rupture. Because of frequent relapses, uncertainty as to the status of the individuals, and loss of weight and debility despite long convalescence, a tremendous loss of service time resulted, and many men never attained their former condition necessary for combat troops.

Dr. Sprague and Dr. Hunter discussed the experiences from a military point of view.

A meeting of the Surgical Staff was held in the Bigelow Amphitheatre on May 14. In addition to East and West Surgical Services, Gynecological, Neurosurgical, and Baker reports were read. Dr. James C. White talked on "Treatment of bedsores". His extemporaneous speech was based on the material in the following paper which he prepared for the American Surgical Association meeting.

In June 1944, at the Cushing General Hospital, Major W. B. Scoville began to experiment with the routine early closure of large decubitus ulcerations under the protection of systemic and local penicillin. Impressed by the early results, White, Hudson, and Kennard began, in November 1944, an investigation of this revolutionary solution of the bedsore problem in sailors and marines, with battle injuries of the spinal cord, at the U.S. Naval Hospital in Chelsea, Massachusetts. A report of the first 5 patients so treated and the impressive results achieved has already been published in the *U.S. Naval Medical Bulletin*. At the time this preliminary report was written, the authors felt that the method was safe and capable of producing a great acceleration in the rehabilitation of these seriously injured men. The most effective methods of swinging full thickness skin flaps to cover sacral lesions had not been worked out and no attempt had been made to close large decubiti elsewhere. As the U.S. Naval Hospital at St. Albans is a plastic as well as a neurosurgical center, we have had a wide choice of material for further development of this valuable method. This report summarizes further experience in 9 patients with 14 such lesions in various areas over the sacrum, iliac crests, ischial tuberosities, hips, etc.

As emphasized in the previous report, decubitus lesions are frequent and serious complications in men who have received transecting injuries of the spinal cord overseas. Under these circumstances bedsores tend to be large and multiple. The tendency of these lesions to enlarge and for new ones to form is due in great part to malnutrition and protein deficiency, with the accompanying anemia and avitaminosis. We are now thoroughly convinced that, once this fundamental state of malnutrition has been corrected and recurrent sepsis from the urinary tract and other wounds has been eliminated, the most effective solution of this problem is excision of the ulcerated areas and plastic closure by sliding in flaps of normal subcutaneous tissue and skin under the antibacterial protection of penicillin. The same is undoubtedly true of decubitus ulcers in civilian patients, although with proper nursing and better nutrition from the outset lesions of this type should rarely develop.

Surgical technique

The patient must accustom himself to lying permanently in a prone or slightly lateral position. For several days prior to operation, it has been our practice to make sure that the lower bowel is thoroughly evacuated by manual removal of faecaliths and colonic irrigations. In preparation for the operation the patient is given 30,000 units of penicillin intramuscularly and sedation with a barbiturate and morphine. No anaesthesia is ordinarily needed. The scarred, infected edges of the ulcer are first trimmed with a safe margin, together with the superficial layer of granulations over its entire base. When—as is sometimes the case—there is undermining, the granulations under the flap should also be excised. Avascular areas where sloughs are adherent must be cut back to a fresh vascular base. In one case we were forced to remove the coccyx and to rongeur away a portion of the lower sacrum on account of the presence of osteomyelitis.

Although preliminary cultures were always taken and the bacterial growth heavy, we have not found it necessary to pay any special attention to the type or quantity of micro-organisms, provided the flaps are sutured without tension and maintain an adequate circulation. In spite of the presence of B. coli, proteus, and anaerobic streptococci, penicillin has proven an efficient antibiotic. However, it has recently been suggested to us that sulfasuxidine, if given for a period before and after these plastic procedures close to the anus, might also prove helpful by reducing the number and virulence of the faecal organisms.

One of the fundamentals of plastic surgery is accurate approximation of skin margins without undue tension, and unless this rule is adhered to strictly the results are apt to be disappointing. In cases where it was felt that simple undermining and suture resulted in too much tension, one or more skin flaps were outlined and switched over the ulcer, and the bed of the flap closed by drawing the skin edges together, after mobilizing by undermining. The flaps must be planned very carefully and accurate measurements made before being raised. In none of the cases in this series have we resorted to using the delayed flap method, although probably this would have been a help in one case. We feel sure that by delaying the flap—in other words, raising it in stages and not trying to complete the operation in one stage—we could close larger defects.

The best donor site for flaps to cover ulcers over the anterior superior spine is the skin just lateral to the spine on the side of the thigh, and to cover ulcers over the greater trochanter we have slid a flap from the lateral surface of the buttock.

Absolute hemostasis and the avoidance of hematoma formation is essential to primary healing, and the greatest of care is required to accomplish this. A hematoma will always prevent primary union, and the time taken to obtain hemostasis is well spent. The liberal application of fibrin foam soaked in thrombin to any points which show a tendency to ooze should help prevent this complication.

We have used 00 plain catgut sutures for the subcutaneous tissue, and silk for the skin. The suture lines are reinforced by sutures of fine stainless steel wire in mattress fashion, tied over small discs of X-ray film to prevent cutting into the skin. The dressing is composed of several layers of gauze, over which mechanic's cotton waste is placed, and the entire dressing held firmly in place by elastic adhesive strapping for firm, even pressure.

After operation, the patient with a plastic repair over the sacrum is kept on his face or side to keep the weight of his body off the flap, and he is not permitted to lie on his back for fourteen days. Penicillin is given intramuscularly in doses of 15,000 Oxford units at three-hour intervals over this period. In order to prevent early soiling of the surgical dressing after plastic closure of decubiti in the region of the buttocks, the patient should be fed a low residue-constipating diet and liberal doses of paregoric for the first week, followed by an enema just before the first postoperative dressing. This is normally done on the sixth to seventh day, and most of the skin sutures are removed at that time. The wire tension sutures are removed on the twelfth to fourteenth day. If there is evidence of hematoma formation, the clot is evacuated and the cavity packed with gauze soaked in a solution of penicillin. Secondary suture to obliterate the cavity may be undertaken later if deemed necessary.

Results

After six of these operations there was primary union; and in a second group of six patients, although there was a minor separation of the suture line, the wound healed cleanly and well. Even in the instances of minor separation most of the patients were able to be up in a wheel chair within two weeks and the final result left little to be desired, as the area of the former lesion was covered with full thickness, freely movable skin, with an underlying pad of fat.

Troublesome postoperative complications resulted in only two patients. A single instance of major postoperative sepsis occurred. There was late recurrence of a bedsore after successful closure in three cases.

The lesson to be derived from the first two discouraging instances of secondary ulceration after successful plastic closures is that the procedure should be undertaken only in reasonably well nourished individuals who are past the stage of recurrent bouts of sepsis, either from the urinary tract or from other wounds. This state is far easier to attain in civilians, who never should become severely undernourished and in whom complications outside the urinary tract are relatively infrequent. Out of a group of thirty wartime paraplegic patients, five remain to date with decubiti which we have been unable to attempt to close because of continued malnutrition or sepsis.

DERMATOLOGY DEPARTMENT

Dr. Carl S. Sawyer has very kindly sent us this summary of his talk, given at the joint meeting with the Medical Staff on April 25.

Lupus erythematosus is a rare disease characterized by its chronicity, scarring, and disfigurement. The lesions usually appear in butterfly distribution on the faces of young women. There is erythema, scaling follicular plugging and atrophy. In the scalp, the atrophy causes permanent alopecia. Lesions may vary from bright red macular lesions to dull red thick scaly lesions.

There are four general types:

1. Early acute discoid lesions
2. Chronic active crusted lesions with beginning atrophy
3. Late atrophy
4. Subacute dissemination

The cause is still unknown and the idea that it was a tuberculous process has been disproven. No specific infective agent has been discovered. It is now generally considered to be a cutaneous manifestation of a systemic illness and is possibly one of a group of vascular diseases which includes periarteritis nodosa, dermatomyositis, rheumatoid arthritis, scleroderma, and possibly erythema nodosum and erythema multiform. Foci of infection and metabolic disorders may have some relation to the cause, and many of the cases are hypersensitive to actinic rays.

The treatment has been largely empirical. Topical therapy should be soothing and protecting. Attention should be paid to the general health. Heavy metals, such as bismuth subsalicylate and gold sodium thiosulphate, may help in some cases but should be used with caution, as both have been known to initiate an acute exacerbation. Vitamin B in large doses helps. Vitamin A has been tried recently because of its known effect on follicular and hyperkeratotic lesions. One of the most effective agents on selected cases with discrete lesions is carbon dioxide snow.

Dr. Friedrich W. Klemperer has sent us this brief of his talk, given at the April 25th meeting.

Acute disseminated lupus erythematosus is a condition not infrequently encountered on the medical wards. In most cases this disease attacks women of childbearing age. It is characterized by fever, a typical skin rash, arthritis, serositis, nephritis, leukopenia, adenopathy, and often splenomegaly. Endocarditis of the Libman-Sachs type may be present but seldom is of clinical importance. Anemia is common, and thrombocytopenia with resulting purpura may be part of the syndrome. The course of the disease is variable. Complete remissions are encountered, but more often the disease is progressive to death through inanition, bronchopneumonia, or renal failure. According to our present knowledge, the ultimate prognosis in disseminated lupus erythematosus is always hopeless.

The diagnosis is easy in patients who present all or most of the symptoms just mentioned. However, a number of patients have come to the wards who presented only a few of the characteristic features. Some of these patients have died without ever developing the complete syndrome, as, for instance, a woman who never exhibited more than fever, arthritis, adenopathy, and severe renal involvement. Whether this and similar cases should be classified as lupus erythematosus disseminatus will probably remain an unsolved question as long as the etiology of the disease remains unknown. There is no good evidence that disseminated lupus erythematosus, which is a most serious generalized illness, is in any way related to the benign skin lesion of the discoid type.

Treatment of disseminated lupus erythematosus can be only symptomatic and supportive. Penicillin is without effect, and sulfonamides are contraindicated because in our experience their use has been followed by fatal exacerbations. Our limited experience with gold or X-ray therapy has been quite disappointing.

And Dr. Tracy B. Mallory has sent us this abstract of his talk, given at the same April meeting.

Acute disseminated lupus erythematosus is a baffling disease to the pathologist. A wide variety of pathologic lesions may be found involving, on occasion, almost every organ in the body, but none is constant and none is pathognomonic. In the series of 24 cases which I studied in collaboration with Dr. Walter Bauer and Dr. Eric Bywaters, lesions were found at autopsy with the following frequency:

Pneumonia	22
Pleuritis	20
Lymphadenopathy	20
Splenomegaly	18
Nephritis	17
Pericarditis	16
Dermatitis	14
Endocarditis	5
Angiitis	3

Joints were not examined with sufficient frequency to include in the table but were involved clinically in 16 cases.

The pneumonia was a banal terminal infection. The pleuritis and pericarditis were either serous or adhesive. Endocarditis was uncommon, in contrast to other published reports; but was usually of the nonbacterial Libman-Sachs type. A few examples of the "wire-loop" glomerular lesion and of diffuse glomerulonephritis were seen, but the most common type of involvement was a focal glomerulitis. The spleens showed periarterial fibrosis in most instances and degenerative changes in the corpuscles in many. Changes in the lymph nodes seemed fairly characteristic. Lymphoid hyperplasia is followed by degenerative changes in the corpuscles leading eventually to complete atrophy. In an occasional case extensive caseous necrosis was observed. The joint changes consisted of synovitis with fibrinous exudation and a predominantly mononuclear type of infiltration of the synovia and periarticular structures, but no destruction of cartilage.

In a few cases, wide-spread vascular lesions were found. In one case, this took the form of pure endarteritis. In another, the lesions were typical of periarteritis nodosa.

* * *

Excerpts from *The Baker Memorial News Letter* for May:

DEXTROSE: The restrictions upon the use of dextrose solutions have been lifted, there being an adequate stock on hand for present needs. Our thanks are given to the staff members who cooperated with us during the days of shortage. We hope it will not be necessary in the future to reimpose restrictions.

SOUNDSCRIBER: A soundscriber has been placed in the surgeon's dressing room, B.M. O.R. It is believed that the machine will prove a convenience to those who dictate operative notes.

STATUS OF BEDS: On 15 April 1946 B.M.2 was opened. The Baker is now operating at its full capacity of 303 beds. Nevertheless, the need for beds remains greater than the supply. All staff members are urged to keep the length of hospitalization of their patients as short as possible.

EXPERIMENTAL DRUGS: The General Executive Committee has decided upon the following procedure with regard to use of experimental drugs: Any member of the staff desiring to use such a drug would first obtain approval of the Pharmacy Committee. He would then take to the Pharmacy the supply of experimental drug, furnished presumably by the manufacturing firm. The pharmacist would then affix a special label either to the original container, or, if the drug is to be divided into smaller units, to each individual container. These containers could then be sent or taken to the ward.

T. Stewart Hamilton, M.D.,
Assistant Director

In addition to the citations already mentioned in The News, the following have been received:—

Lt. Col. Bradford Cannon, MC (*a.s.*)—Legion of Merit

Col. Richard Collins, Jr., GSC (*ES* 1933)—Legion of Merit . . . for exceptionally meritorious conduct in the performance of outstanding services from 15 January 1944 to 9 May 1945. As Chief of the Research Section and later as Deputy Chief of the Operational Intelligence Sub-Division, Supreme Headquarters, Allied Expeditionary Force, Colonel Collins was responsible for the production, collation, evaluation and distribution of operational intelligence to the Allied Armies in the field. He spared no effort to gain a complete knowledge of the enemy from which could be deduced the state of his combat readiness and the productive capacity of his industry. The wide military knowledge, sound judgment, initiative and cooperative attitude exhibited by Colonel Collins in the execution of these duties inspired both superiors and subordinates alike and contributed materially to the successful campaign of the Allied Expeditionary Force. . . . Croix de Guerre with palm . . . Le General de Gaulle, President du Gouvernement Provisoire de la Republique Francaise, Cite a l'Ordre de l'Armee: Colonel Richard Collins, Jr., GSC, "Pour services exceptionnels de Guerre rendus au cours des operations de liberation de la France." Cette citation comporte l'attribution de la Croix de Guerre avec Palme. Paris, le 27 Juin 1945.

Signe: de Gaulle

[We had hoped to publish the text of the British citation (OBE) which Colonel Collins also received—and still hope to, later. The letter which accompanied the above citations says: —"Our English cousins, in their own inimitable way, take their own time in furnishing such things."—*Editor.*]

Lt. Comdr. John L. Ward, MC (*EM* 1935)—Commendation . . . for meritorious service in the performance of duty as Venereal Disease Control Officer and as Medical member of the Army-Navy Disciplinary Control Board in the Ninth Naval District from 22 August 1944 to 17 December 1945. Lieutenant Commander Ward demonstrated outstanding qualities of leadership in effectively safeguarding the health and well being of Naval personnel in the Ninth Naval District. Responsibilities of the kind assigned him required for their proper execution not only a high degree of technical skill and scientific training, but in addition an evangelistic enthusiasm that is rare and is invaluable when found. His vision, tact, determination, devotion to duty and sound realistic administration of control measures and his cordial and effective relations with Army Service Force Commands have resulted in achievements beyond measure in the protection of health and mind, which have contributed in a most practical way to the successful prosecution of the war and which were in keeping with the best traditions of the U.S. Naval Service. . . .

Members of the senior class of student nurses were guests of the Alumnae Association at their regular meeting on April 30. The guest speaker was Dr. Thomas R. Goethals, recent Chief of Staff of the 6th General Hospital. His talk was illustrated with colored slides shown by Dr. Stewart Hamilton. After describing the mobilization of the Unit, Dr. Goethals gave an intensely interesting account of the services and experiences of the doctors and nurses overseas.

At our request, Mrs. Elizabeth Upton Wright (*MGH* 1927) has sent the following:—

I served with the 16th General Hospital, which acted as a large Evacuation Unit. We all treasure the citation awarded the Unit. It reads:—

5 Sept. 1945

Hq. Theater Service Forces
European Theater

1. Meritorious Service Unit Plaque

. . . awarded for superior performance of duty in the performance of an exceptionally difficult task and for the achievement and maintenance of a high standard of discipline during the respective periods indicated, to:

The 16th General Hospital
1 December 1944 - 31 March 1945

While operating a tent hospital under hazardous conditions, this organization efficiently treated thousands of casualties. The technical skill, initiative, and *esprit de corps* exhibited by the personnel of the 16th General Hospital were in keeping with the highest traditions of the armed forces of the United States.

Mrs. Wright concludes with:—

There were two other MGH nurses in the 16th General besides myself—Barbara E. Bitzer [*MGH* 1936] and Doris Carpenter Southway [*MGH* 1922]. Both occupied posts of responsibility and were a great credit to the MGH tradition.

At their meetings on April 18 and May 3, the Board of Trustees voted:

- To accept the resignation of Dr. G. Burnham Beaman from the position of Assistant in Psychiatry;
- To accept the resignation of Dr. Neil L. Crone from the position of Assistant in Medicine with regret;
- To accept the resignation of Dr. James E. Fish from the position of Assistant in Surgery with regret;
- That the appointment of Dr. Edward P. Richardson as Assistant Resident in Psychiatry become effective July 1, 1946 instead of January 1, 1947;
- To appoint Dr. Stanley J. Sarnoff as Second Assistant Resident in Surgery for the period April 1-May 1;
- To appoint Dr. Masao Yatsuhashi as Third Assistant Resident in Surgery, beginning April 1.

MASSACHUSETTS EYE & EAR INFIRMARY

The regular Spring Meeting of the New England Oto-Laryngological Society was held at the Infirmary on Wednesday, May 8. The weekly conference was held in the morning.

The following men have been appointed to the Resident Staff, Ophthalmological Service:

Henry F. Allen	April 15, 1947
David H. Scott	July 15, 1947
William L. Smith	October 15, 1947
1st Alternate	Frederic B. Breed
2nd Alternate	Howard A. Blazer

A welcome visitor at the Infirmary recently was Dr. Henry A. Mosher (*Oph.* 1941). Dr. Mosher has lately returned to civilian life after Army service.

On Tuesday afternoon, April 30, a very delightful tea was held in the Directors' Dining Room of the Infirmary, in honor of Mrs. Leslie M. Ware, who recently resigned as Executive Secretary of the Infirmary. The tea table, most attractively arranged with spring flowers and tall pink candles, was presided over by Miss Helen McAskill and Mrs. Joseph MacDonald, former members of the Infirmary "family". On behalf of the doctors and employees of the Infirmary, Miss Annie M. Robertson presented Mrs. Ware with a beautiful bag and a gift of money.

Since joining the staff in October of 1926, Mrs. Ware has been a valued and conscientious worker, always ready to serve in every possible way. During the difficult war years she carried an especially heavy load cheerfully and with her usual competence. She will be greatly missed. The best wishes of all her former associates go with her to her new position as Secretary to the Chief of Ophthalmology.

From 937 Missouri Theatre Building, 634 North Grand Boulevard, St. Louis 3, Missouri, comes this letter from Dr. Robert Dean Mattis (*Oph.* 1942). It is the first one we have received from him. Maybe he'll write again and tell us about his experiences with the 32nd Evacuation Hospital.

> Not many copies of THE NEWS got through to us, but the ones which did were perused thoroughly, were saved, and handed on to kindred souls we occasionally met, who were either of the General or the Eye and Ear, or were interested in them. It was a splendid idea, and I am glad THE NEWS is to be continued indefinitely, in order that those of us who are so far away and are still so interested in the goings on there may be kept in touch. Belatedly, I thank you and hope you will convey my congratulations to the persons responsible for initiating the publication. Am happily out of the Army, back in practice, and doing clinical work with the Washington University School of Medicine.

The following note has arrived from Dr. Marc Anthony (*Oph.* 1929), from Old National Bank Building, Spokane 8, Washington.

> I was released from the Army December 31, 1945, because of the age limit. As my duties the past two years consisted of fighting the battle of Boston, you can see that the war was very easy on me and my family.
>
> It's great to be home again.

Dr. James I. Farrell (*Oph.* 1932) writes that he was released from the Navy on February 26 and is back in private practice at 250 Genesee St., Utica 2, N. Y.

New addresses:—

Dr. Gilbert L. Adamson (*r.p. N* 1930), Winnipeg Clinic, Winnipeg, Manitoba, Canada.

Capt. Robert K. Brown, MC, AUS (*WS* 1939), 369th Station Hospital, APO 244, c/o Postmaster, San Francisco, Cal.

Dr. George A. Filmer (*Oph.* 1939), 1331 South Marion St., Denver 10, Col.

Dr. Francis M. Findlay (*ES* 1924), Masonic Bldg., Kingman, Ariz.

Dr. James K. Keeley (*NS* 1937), Mayo Clinic, Rochester, Minn.

Lt. Henry J. Kowalski, MC, AUS (*M* 1945), 29th General Hospital, APO 1054, c/o Postmaster, San Francisco, Cal.

Dr. Henry A. Mosher, MC (*Oph.* 1941), 58 Cambridge Ave., Dayton 6, Ohio.

Dr. Stanley A. Myers (*Oto-Lar.* 1937), 146 North Cadillac Drive, Youngstown, Ohio.

Dr. Jesse T. Nicholson (*r.s. Or.* 1933), Pennsylvania Hospital, Clinton Street Bldg., 330 South Ninth St., Philadelphia 7, Pa.

Capt. Charles W. Robertson, MC, AUS (*P* 1942 & *ES* 1943), 14 Poplar Place, Boston, Mass.

Dr. John L. Shaw (*r.s. U* 1937), 507 Medical Arts Bldg., Memphis, Tenn.

Dr. William M. Shedden (*ES* 1920), Chief Surgeon, Veterans Administration Hospital, Lake City, Fla.

Dr. Philip Solomon (*Psychi.* 1936-37), 249 South Wetherly Drive, Beverly Hills, Cal.

Dr. David R. Weir (*r.p. P* 1938), 2186 Middlefield Road, Cleveland Heights, Ohio.

Brief bits:—

Capt. Donald C. Balfour, Jr., MC, AUS (*EM* 1943) is still in Tokyo. His address is 76th Station Hospital, APO 1007, c/o Postmaster, San Francisco, Cal.

Dr. Harold E. Dyer (*a. dn. s.*) is out of the Navy and has resumed dental practice at 363 Marlborough St., Boston.

Lt. Sidney W. Ellery, MC, USNR (*ES* 1943) returned from Okinawa last February and has been assigned to the Naval Hospital, Santa Marguerita Ranch, Oceanside, Cal.

Capt. William R. Eyler, MC, AUS (*CM* 1943) is home on terminal leave. His last assignment was with the 97th General Hospital in Frankfurt, Germany. His present address is 87 Pleasant St., Wakefield, Mass.

Dr. William M. Huber (*r.p. D* 1937) is working with Dr. J. Gardner Hopkins in Dermatology and Syphilology at the Vanderbilt Clinic, Columbia-Presbyterian Medical Center, New York, N. Y.

Military addresses received for those who finished training at M.G.H. on April 1:—

Lt. Cecil F. Baxter, MC, AUS, 2nd Basic Class, Co. A, Army Medical Department School, Fort Sam Houston, San Antonio, Tex.

Lt. Joseph W. Gardella, MC, AUS, Hq. Med. Sect. Separation Center, Fort George G. Meade, Md.

Lt. Jack S. Parker, MC, USNR, 1838 N. Herndon St., Arlington, Va.

Lt. James M. Stewart, MC, AUS, Moore General Hospital, Swannanoa, N. C.

A new address for Capt. Donald N. Sweeny, Jr., MC, AUS (*WS* 1941) has come from Mrs. Sweeny. She writes:—

> Captain Sweeny is still in Germany and expects to remain there for several more months. His address is: 130th Station Hospital, APO 209, c/o Postmaster, New York, N. Y. He is Chief of Surgery in that hospital, which is in Heidelberg.
>
> I haven't the slightest idea whether he will be back in time for the Ether Day celebration or not. If he is, we both want very much to be there; but we have learned to plan on nothing in the Army. His two years overseas will end October 13, and he should be eligible for return then.

Malcolm A. Conner, our hospital newsdealer, has submitted this article which acquaints us with the functions of another department of military affairs. As Chief Clerk of the Office of Production Control for Medical Supplies in the Western Military District of Germany, Conner's work brought him into close contact with the economic setup as it existed in Germany at the close of the war.

> My position gave me the opportunity to witness the start of the carrying out of the policy for control of German industry, as directed by the United States Government and administered by the United States Army. The work proved to be very interesting, because as time went on those of us connected with it were able to get a pretty good picture of the economic structure of Germany, how it had been developed during the war, and the extent of damage inflicted upon it from Allied bombings.
>
> Shortly after the war, orders were issued from Supreme Headquarters directing that each branch of the service set up a Production Control Agency, to survey and operate all manufacturing facilities which came under the jurisdiction of that particular branch of the service. For example, cement plants would go to the Engineer Corps, textiles to the Quartermaster, and plants producing drugs and pharmaceuticals to the Medical Department. The Chief Surgeon of the Seventh Army ordered the 31st Medical Group Headquarters to start immediately the task of surveying every factory in the Western Military District which could produce any medical supplies.
>
> An officer and I were sent to Frankfurt on Main, because this area had the largest concentration of plants. We had a German interpreter assigned to us by Military Government. The form used to survey every plant was known as "Industrial Investigation Report Form C". This was found to be entirely inadequate from the start, because a completed form failed to give a clear and concise picture of the production capabilities of a plant, and the questions were so phrased that they could be taken to mean several different things. For example, in section 16 of this report the question is asked: "Give a list of your major operating supplies and sources", and on no two reports which we received back were the interpretations the same. Some plants listed their packing materials, others the amount of raw materials on hand, and still others the amount of lubricating oil used by their machinery. The information desired was "supplies which contribute to the manufacture of a product but do not become a part of the finished product itself". That these reports were not suitable is borne out by the fact that shortly before I left Germany the Army had decided to resurvey all plants because they did not feel they had correct and adequate information with which to proceed toward future plans for control of German industry.

Reception for veterans—guests beginning to gather on the Bulfinch Lawn

There are in and around Frankfurt four large I. G. Farben factories. We were mainly interested in the Hochst plant, located just on the outskirts of Frankfurt. This is one of Farben's largest outfits and produces a great quantity of medical supplies ranging from ether to typhoid vaccine. The one thing that strikes you as you near the buildings is that they were never touched by the bombing raids. Frankfurt is almost leveled, yet there stands this huge plant with not a brick out of place. I had the opportunity of going through all of it and observing the different methods used in manufacturing. They had been producing insulin, laughing gas, ether, and various other medicaments, but at that time they were practically closed down from lack of coal. The average daily consumption was 550 tons of coal per day when they were operating at normal capacity, and the number of employees totaled 13,783—which, according to their reports, included displaced persons. The following is an extract from their report stating the condition of their machinery and equipment. *This was after the war.* "Buildings and equipment are intact to such a degree that by far the greatest part of the manufacture can be started at any moment. Attention must, however, be drawn to the fact that prolonged stoppage will further effect corrosions of the chemical machinery, thus causing possible serious break-downs of the plants, especially when the stoppage will continue during the winter months. The most important technical and research data and records are at hand." Their yearly production of insulin was 550 million units, and about 70,000 liters of various vaccines.

After completing the survey at Frankfurt, an officer and I were placed on detached service to the Surgeon's Office, Headquarters of the Seventh Army, which, at that time, was stationed in Augsburg. Our job was to take charge of the Production Control Agency which had just been set up. Later on, the office was moved to Heidelberg, and it was then that we began to get some idea of the size of the job that lay ahead of us. Who was going to furnish the necessary personnel and transportation to maintain contact with the various plants? On what basis were we going to be allowed to allocate raw materials? What statistics and figures would we have to use to determine the amount of output of medical supplies which would be needed? Who was to have charge of the distribution of the finished products? Were the American authorities going to set and pay a fixed price to the German manufacturer? And who would determine the wage scale to be used —if any? The big E. Merck plant at Darmstadt was turned over to our control, and the question then arose as to whether it would not be better to halt production within all small plants and let Farben and Merck produce all the supplies needed—which they were perfectly capable of doing.

On September 1, 1945 all Production Control personnel were transferred to Military Government, and then became known as G-5 Industry Control Branch. Up to this time little headway had been made with the countless problems, but now they were increased even more. Arguments immediately arose as to whether we were to have the final say in the opening and closing of plants, or if it was to be done by the individual military government detachments. For several months, our major problem was how to get our requests through the proper channels in order that we might obtain necessary fuel for the continued operation of factories producing vital medical supplies.

Each month every plant would submit a PCA Form II Report, which would be an itemized account of their total output for the month, but we had no way of knowing where this was going. Normally, most of it would go to hospitals, wholesale drug houses, and drug stores, but there was also the possibility that a good deal of it might be finding its way onto the black market. We started a survey of all drug stores in the Heidelberg area, with the idea that if we could get some definite figures on shortages, the same could be applied to other areas of the occupied zone and thus furnish us with some gauge for production. The main shortages in most all cases were narcotics, alcohol, and bandages. The German people are great users of patent medicines—a large number of which are made from root extracts—and there seemed to be a pretty good supply of these on hand. The Rector of Heidelberg University prepared a very useful and extensive report on shortages which existed in hospitals at that time.

Due to the very large number of amputations in the German Army, the hospitals were becoming overcrowded with German soldiers who were ready to be discharged but had no artificial limbs. It finally became necessary to freeze all raw materials in every factory producing orthopedical appliances and to put all their employees at work making artificial limbs. There were no plants producing any X-ray machines or spare parts, therefore it was necessary to send into the Third Army Area for any equipment of that type which was needed. One of the largest manufacturers of surgical and hypo needles, and a large plant manufacturing dental supplies and equipment were located at Frankfurt. The huge Degussa plant in Frankfurt, which would correspond in some respects to the American Cyanide Co., was already asking for permission to obtain certain raw materials in order to go into experimentation with the sulfa drugs.

It is plain to see that the amount of work necessary for the carrying out of any adequate control policy is enormous, and calls for personnel with a high degree of skill in their respective fields. This work is important. Upon it, in my estimation, rests the future security of our Allied forces in Germany—and, perhaps to a greater extent than we realize, the future peace of the world.

THE NEWS

1811

No. 46 Boston, Mass. JULY 1946

MAY was "cornerstone month" at M.G.H. Two were laid.

Following the reception for the returned veterans on May 23, the cornerstone of the Burnham Memorial Hospital for Children was laid by Mr. John R. Macomber, President of the Massachusetts General Hospital Corporation and member of the Board of Trustees. Following the laying of the stone, Dr. Allan M. Butler, Chief of the Children's Medical Service made the following address:—

> It is characteristic of the Massachusetts General Hospital that as it honors the activities of its members in the past, it simultaneously is busy building for the future.
>
> The laying of the cornerstone of the Burnham Memorial Hospital for Children today at the Massachusetts General Hospital provides for a sound expansion of the services which this great institution has been rendering in the care of infants and children throughout New England for over thirty years. This diagnostic and special treatment clinic may well be used as a model for efficiently applying to the medical care of children the medical facilities of a community. Its importance cannot be measured in terms of the one hundred and fifty beds now to be available for infants and children within this institution, but rather by the fact that the total professional knowledge and hospital and laboratory facilities of this large general hospital are available to the care of the patients who come to its Children's Service.
>
> The services available to children in this institution are not only those of the Pediatric Service with the wide consultant opinion and technical skills of the general Surgical and Medical Clinics of the Massachusetts General Hospital, but also of the highly developed specialist services that have made this hospital famous throughout the world. The total significance of this is probably appreciated only by enumerating these services. They include the clinics in thoracic surgery, neurosurgery, orthopedic surgery, urological surgery, dermatology, endocrinology, adolescence, radiology, psychiatry, and neurology together with the Departments of Anesthesia, Physical Therapy, Social Service, Pathology, Bacteriology, and Chemistry. In addition, there are the services provided by the hospitals which are an integral part of the Massachusetts General group; namely, the Gynecological Service of the Vincent Memorial Hospital, the Tumor Clinic of the Huntington Memorial Hospital, and the Eye, Ear, Nose and Throat Services of the Massachusetts Eye and Ear Infirmary.
>
> The difficulty of reduplicating such facilities for the care of children in anything but a general hospital can readily be appreciated.
>
> The new building will permit expansion of the activities of this Children's Service in the medical care of and research in diabetes, metabolic disturbances, nutrition, rheumatic and other infections, growth and development, endocrinology and psychiatry that has already made this service so outstanding.
>
> It is, therefore, particularly appropriate that this building be dedicated to the efficient utilization of the resources of this community, the Massachusetts General Hospital and the Harvard Medical School in improving the medical care of infants and children.

On May 28—a day more like November than May—the cornerstone of the new Vincent Memorial Hospital was laid by Miss Dorothy Rackemann, President of the Vincent Club. Mr. Henry C. Everett, Jr., President of the Board of Trustees of the Vincent Hospital, presided; and Dr. Joe Vincent Meigs, Chief of Staff, and Dr. Theodore P. Ferris, D.D., Rector of Trinity Church—both Trustees of the Hospital—were the principal speakers. The six-story building will also include the wards of the Burnham Memorial for Children.

At the ceremony—which was attended by members of the Board of Trustees, the Board of Managers and the Staff of the Vincent Memorial Hospital, the Board of Managers and many members of the Vincent Club—Dr. Ferris likened the Vincent Memorial to a triangle. He said:—

> The triangle, usually a symbol of disunity, is here a most happy union of the church, the theatre, and the hospital.
>
> First there was the church—the parent of both the theatre and the hospital. In the especial case of the Vincent, it was the founder of the old Trinity Dispensary, run by members of Trinity Church for the ill and needy women of the parish. Because those working with the dispensary recognized the need for immediate hospital treatment for many of their women patients, the hospital was first planned.
>
> The theatre, which had its outgrowth from the old mystery plays performed before the altars in medieval churches, is represented by Mrs. J. R. Vincent, the well-loved actress who lived and worked in Boston for fifty-two years, for whom the hospital was named; and by the Vincent Club, whose annual shows help in its support.
>
> Finally, there is the hospital itself—an obvious child of the church, whose monasteries and hospitals, from the time of Constantine, cared for the ill and needy. Its first home, after the Trinity Dispensary, was in Chambers Street.
>
> In a world of discord and disinterest, the efforts of each part of this triangle for the other two is inspiring. It proves to the world what can be done when thinking people of the hospital, the theatre, and the church work together to relieve human suffering. It shows what can be done if anyone cares enough to do it.

Mr. Everett then introduced Mr. John R. Macomber, who represented Dr. Faxon and who expressed the pleasure felt by the Trustees of Massachusetts General at having the Vincent Hospital join its family.

Dr. Meigs then spoke. He said:—

> I wish to thank all the members of the Board of Trustees, under the Presidency of Mr. Henry C. Everett, Jr., for the wonderful support they have given us during the change of the Vincent Memorial Hospital from South Huntington Avenue to the Massachusetts General Hospital. They have been of the greatest assistance. Without them the building could never have been built or financed. We must also thank the Vincent Club for the extraordinary generosity it has shown through the many years. It has given over $500,000.00 to the Vincent Memorial Hospital, and $35,000.00 this year. This is certainly a contribution that should be remembered throughout the history of the Vincent Club.
>
> Also, I wish to thank the members of the Board of Lady Managers who, under the able leadership of Mrs. Henry McB. Parker, have been so coöperative and have stood by me through thick and thin, no matter what I have said to them. They have always been my great supporters.
>
> Then again, I should like to thank Dr. Faxon and the Trustees of the Massachusetts General Hospital. The Trustees have been superb in their coöperation and help in the building of this hospital on their grounds. Dr. Faxon is a very superior Director and has been helpful in innumerable ways. We have had our troubles at times, but we have always come out of them satisfactorily. To him I can only say that I wish everyone with our transitionary problems could have a Director of a hospital who is as thorough and as helpful as he.
>
> The Vincent Memorial Hospital will have had five changes: from the Trinity Dispensary to Chambers Street, to South Huntington Avenue, to the White Building, and finally into the new building. The Staff has changed from the original group of Dr. Wolcott and Dr. Ingraham at the Dispensary, to Drs. Morris and Anna Richardson and Dr. Wolcott at 44 Chambers Street, to the Hospital on South Huntington Avenue with Dr. Jones, Dr. Brewster, Dr. Simmons, Dr. Greenough, and Dr. Garland—all of whom were its great supporters. Of the younger group at that time were Dr. Allen, Dr. Miller, Dr. McKittrick, Dr. Whittemore, and Dr. Leland. I, as a connecting link between the latter group and those still younger, became Chief. It was my duty to take the lead in the moving of the hospital to the White Building where Drs. Parsons, Bartlett, Simmons, Ulfelder, Sturgis, Gregg, Soutter, Ingersoll, and I have had such pleasure working. They are the fourth generation of the Vincent. The fifth is in the offing. When the new building is completed we will continue to staff it; but in the next eight or ten years, it is the younger men who will be our hope and we shall expect them to continue the fine work which has always been done by the Vincent Memorial Hospital.
>
> The clinical work on South Huntington Avenue was superb, the clinical work at the White Building has been excellent, and the beginning of laboratory investigation under Mrs. Ruth Graham has been most satisfactory. The fifth group or generation has a real tradition to live up to and it is my hope that they will surpass it. We wish them Godspeed.

The Vincent Club's connection with the hospital started in 1892, through the interest of some young graduates of Mrs. Shaw's School for Girls, in the work of their physiology teacher, Dr. Lena V. Ingraham, who was also a surgeon at the Vincent Memorial Hospital. These girls gave a fete with "tableaux vivants" in a drawing room on Commonwealth Avenue and turned over the entire proceeds, $494.50 to the hospital. The check for $35,000.00 that the Vincent Club gave to Mr. James J. Minot, Treasurer of the

Board of Trustees of the Vincent Memorial Hospital, at its annual meeting preceding the laying of the cornerstone, included membership dues and the profit on this year's show and program.

An event of high importance took place at the McLean Hospital on May 17, when the new Scientific Research Laboratory was dedicated.

The ceremonies began at 11 A.M. and continued into the evening. The program opened with an address by Dr. Cecil K. Drinker, Professor of Physiology, Harvard School of Public Health, on "Research at the McLean Hospital". This was followed by a talk on "Biochemical problems related to psychiatry", by Dr. Jordi Folch, Director of the new Scientific Research Laboratory and Assistant Professor of Biological Chemistry at Harvard Medical School, after which luncheon was served and time allowed for inspection of the Laboratory and Hospital. Some two hundred invited guests and distinguished scientists were received by the Board of Trustees at this time.

In the afternoon three lectures were given. Dr. Stanley Cobb, Chief of Psychiatric Service at Massachusetts General Hospital and Bullard Professor of Neuropathology at Harvard Medical School, spoke on "The integration of medical and psychiatric problems"; Dr. Herbert S. Gasser, Director of the Rockefeller Institute for Medical Research, spoke on "Protocol for a review of psychiatry"; and Dr. Wilder Penfield, Chief of Neurological Service at Montreal Neurological Institute, talked on "Neurosurgery as an avenue of approach to psychiatric problems".

In the evening there was a reception and dinner at the Harvard Club, and the closing address was given by Dr. E. A. Strecker, Professor of Psychiatry at the University of Pennsylvania, whose subject was "The psycho-biology of psychiatric research".

* * *

So many requests have come for the publication of the full texts of the speeches given at the reception for returned veterans of World War II, held on May 23, that we are including them here, so that all those who could not attend the reception may read what was said on that occasion.

Dr. Edward D. Churchill, for the Theater Consultants:

The expected penalty for asking a surgeon to speak about the war is to listen to an accounting of achievements in the care of the wounded. Actually, however, the treatment of wounds was but a small fraction of the work of doctors in World War II. It made the headlines because in the minds and hearts of those at home, wounding was the dreaded uncertainty.

The physician had a great responsibility in maintaining the health of the fighting force to preserve its strength. In his role as either psychiatrist or internist, he encountered difficulties that were made easy for the surgeon. The surgeon is the senior practitioner of the battlefield—his mission there is clear to even the most unenlightened layman. The demands he makes for his patients are largely anticipated, and rarely refused. This is not always the case with the internist and still less with the psychiatrist who must struggle against ignorance and intolerance to bring help to a command in need of sound troops and troops in need of a sound command.

All therapy, by surgeon or by physician, is secondary in time of war to the role of the expert in preventive medicine. The effect of epidemic disease on the fate of military campaigns is common historical knowledge.

Just as all medicine and medical science combined in the crisis of war, there is an abundance of problems in which a combined approach is now necessary in peace. We have returned to a standard of medicine unsurpassed by that existing in any country of the world. It stands like the White Building in contrast to the crumbling ruins of Cassino or Manila. We are already receiving a pilgrimage of visitors and students from every corner of the globe. Let us prepare ourselves to receive them with generosity and dignity and extend a helpful hand to their ambitions to restore their shattered standards of medicine.

I cannot imagine that the inhabitants of Mecca have a great incentive to make pilgrimages of their own. Perhaps they drop over to Medina, occasionally, which is also a Holy City. Let us be careful not to lose the American habit of making pilgrimages, as smugness and self-satisfaction have wrecked many a famous school of medicine.

These are but minor examples of the problems we are facing. Speaking to the hospital family that is assembled to welcome back its members from the Armed Forces, I may say, as spokesman for these veterans, that we are glad to be back. We will not admit to a classification as prodigal sons, but we return with all humility to do our part in maintaining and extending the service of the Massachusetts General Hospital. To carry on the trifold mission of the hospital—care of the patient, research, and education—offers as great a challenge as our war service, now completed.

Dr. Thomas R. Goethals, for the 6th General Hospital:

The 6th General Hospital was activated at Camp Blanding, Florida, on May 15, 1942. Forty months later, on September 15, 1945 it closed its headquarters at Leghorn, Italy, and reverted to reserve status.

Following activation, the Hospital spent eight months in training at Camp Blanding. On February 20, 1943 it opened station at Casablanca in French Morocco. In the middle of May 1944 it was transferred to Italy, where, after an interim period of staging near Oran and in the vicinity of Naples, it reopened for admission of patients near Rome. At this location it was actively employed from June 30 to December 22, 1944, thereafter staging in the same site for about four months. It opened station at Bologna on April 30, where it functioned for over three months after V-E Day. Its final move was to Leghorn, where it was deactivated. In summary, the Unit spent eight months in training; twenty-four months in professional activity; seven months in staging and movement; and one month in administrative involution or deactivation.

The Hospital admitted and treated 28,966 sick and injured patients, of whom 18,052 were cared for at Casablanca, 8,171 at Rome, and 2,743 at Bologna. Gross mortality among these patients, of whom 64 died, was 0.221 percent of all admissions.

To the original organization of the Unit the M.G.H. contributed, directly or indirectly, 81.7% of the officers, approximately 65% of the nurses, half of the dietitians and physical therapy aides, 15.6% of the enlisted strength, and 40% of the attached Red Cross personnel. The Army and Red Cross supplied the balance. While normal attrition of active military service later caused diminution of the MGH quota in the unit strength, the stamp or imprint of the parent institution remained on the 6th General Hospital throughout its history.

Only brief mention is here possible of some of the sons and daughters of the M.G.H. who contributed to the success of the Hospital's mission. King, Rogers, Rae, Lingley, Talbott, and Sullivan organized and trained their services to the highest operating standards, and indoctrinated their subordinates so thoroughly that the absence of any service chief from the Unit for any reason caused no flagging in quantity or diminution in quality of the work accomplished. Miss Knights imparted like influence through her principal assistants to the Nursing Service. Thorndike organized the office of the Registrar completely and effectively, and kept the turnover of patients moving smoothly at all times. Hamilton, originally Adjutant, later Executive Officer, maintained complete coördination of the professional and administrative divisions of the Hospital from start to finish.

Several members of the Unit were transplanted to positions of greater responsibility in other organizations. Parsons, Ludwig, Taylor, and Townsend were transferred to other hospitals as service chiefs during 1943 and 1944. Thorndike was placed in command of a station hospital. McKittrick, Cantlon, Ellis, and Burrage were removed from the roster to serve in other hospital and tactical units. Miss Barbour was promoted upward from the 6th to a position of higher authority at A.R.C. headquarters.

The Hospital was well served by many who did not count the M.G.H. in their ancestry. Colonel Knott, the original Executive Officer, performed invaluable work in organizing the detachment and in supervising the details of shipment overseas. Captain Smith not only acted as Plans and Training Officer at Blanding, but was equally effective as Receiving and Disposition Officer. Captain Worthy, initially Detachment Commander, served with great credit on three clinical services. Captain Fowler left nothing to be desired as Supply Officer. Captains Ottesen and Jones, the former as Adjutant and the latter as Commanding Officer, Detachment of Patients, and later Registrar, were alert, intelligent, and resourceful in all demands made upon them. Major Parker, successor to Jackson Thomas who had been detached at Blanding, was the only professional service chief not an MGH man, notwithstanding which he fitted into the pattern easily and competently.

The enlisted detachment, commanded by Major Herwick and supervised by Lieutenant Singer as Special Service Officer, were a credit to the Unit in every sense of the word. Well trained and intelligent, they elicited a letter of commendation from the Base Commander before the Hospital had been established more than six weeks in Casablanca. The first decoration awarded to a member of the 6th General Hospital was awarded to S/Sgt. Clarence A. Roth. In early 1945 four men of the detachment won their commissions, among them Harry E. Munro of the M.G.H.

True to scientific tradition, many members of the staff contributed to the medical literature of the war. Rogers wrote on pilonidal sinus; Halsted on chronic dyspepsia and other gastro-intestinal disorders; King on tuberculosis and primary pleural effusion; Bland on rheumatic fever, rheumatic heart disease, and on war wounds of the heart and pericardium; Short on arthritis; Kranes on hepatitis and leishmaniasis; Sturgis on burns, and, in collaboration with Holland, on maxillofacial injuries; and Bartlett on Vitamin C deficiency.

Several members of the Unit contributed much to the Medical Department in the Theater while on detached service with higher headquarters or with other organizations. Sullivan was instrumental in organizing the

Blood Transfusion Service for the Theater. King, in addition to acting as consultant to the British Prime Minister, served for a time in 1945 as Theater Medical Consultant, later assuming command of the Hospital. Rae and Lingley also were involved as consultants to Very Important British Personages. Gundersen was Ophthalmologic Consultant to the Theater — in fact, if not actually in name. Aufranc was called upon to coördinate the knowledge of amputations and physical therapy gained during the war in the Mediterranean Theater. Lingley organized and established a station hospital. Kelley commanded a hospital train. Holland and Sturgis made valuable statistical contributions to the subject of maxillofacial injuries, in addition to their report of their own work.

Time prevents elaboration of the services rendered by Arnold, Bailey, Davenport, Faxon, Frazee, Harrison, Lawrence, McGahey, Mead, Sarris, Seyfarth, Welch, and Wyman; and by the Misses Pittman, Coghlan, Hollister, Canning, and Chandler, to name but a few of the nurses and physical therapists. All did their part to the fullest measure, and contributed even more than was necessary to the success of the Unit as a whole. The 6th General Hospital reflected credit on itself and on the military service of which it was a part, and on its parent, the M.G.H., as well.

Dr. Edwin F. Cave, for the Army in the Pacific:

To speak for the Army in the Pacific is not possible without also giving praise to the Air Force and the Navy as well, because it is likely that in no theater of war was there greater interdependence of the three Services than in the Pacific, particularly early in the war in 1942. We of the 105th General Hospital realized this only too well, because the Battle of the Coral Sea was being fought in May as we gathered in San Francisco for our take-off to Australia, and the Battle of Midway was decided about a month later as we landed in Melbourne on the 4th of June, 1942. These sea and air battles were a long way from the southern tip of Australia, but they stopped the Japanese and made possible the getting of supplies and personnel to Australia and New Zealand, from where the New Guinea and Solomons campaigns were launched late that year.

Of the four Army General Hospitals in Australia in 1942—the Hopkins, Cleveland and Maryland Units, and the 105th or Harvard Unit, and in New Zealand the Yale Unit—we, the 105th, were the farthest advanced but still were approximately 2,000 miles from the jungle fighting in New Guinea over the Owen-Stanley Mountains. Therefore, you can well imagine the problems of evacuation in these early days. Each General Hospital did, however, supply two portable hospitals of 4 officers and 25 enlisted men each for these campaigns. These units took good medical care to the front lines for the first time in the war. They set up their tent hospitals in the jungle a few hundred yards from the combat areas for approximately six months, and for a job well done under most trying conditions they deserve enthusiastic commendation.

Our General Hospital, on the other hand, was delightfully situated 60 miles west of Brisbane in East Central Australia in a subtropical climate. We began caring for patients one month after our landing and were consistently busy turning over a thousand cases a month throughout most of our two-year stay. Our associations with the Australians were pleasant, both socially and professionally, and we did our best to promote cordial international relations, in that many of our enlisted men married Australian girls and some had sizable families when we departed from that country 29 months after our arrival.

October of 1944 found us moving from Australia to the small coral island of Biak in the Dutch East Indies, just one degree south of the equator. Here our hospital site for 2500 beds was literally carved out of the jungle which when removed left a fine white coral surface very suitable as a base for tentage, and in spite of heavy rainfall there was no mud. I need not remind those of you who served in the tropics of the climate on this coral island, and those of you who were not there can well imagine what the heat was like in midday. Had it not been for the fact that we were kept busy with wounded and sick men who had been fighting under much more frightful conditions, I am afraid our morale might have sunk pretty low. As it was, on our third overseas birthday in April 1945, one of our nurses wrote a song for the celebration entitled "And now we wanna go home", two outstanding lines of which were: "We like all the natives, the bugs and the heat, but snow in New England would be a great treat". However, we managed to survive, and our stay in the East Indies was, from a professional standpoint, the most interesting part of our whole overseas service. Here we were established from November 1944 to May 1945. Practically all of our patients—almost 11,000 in seven months, mostly from the Philippine battles—came and went by air, for by this time the efficiency of evacuation from the fighting lines to the hospital and thence to the States was made possible by the great increase in strength of the Air Force.

Our overseas service was gratifying. We had a happy outfit, and I must pay tribute to the personnel of my unit—officers, nurses, and enlisted men—one-third of the professional officers coming from the Massachusetts General Hospital, many of whom served continuously in the Pacific for as long as 42 months, if not with the original unit then with some other hospital to which they had been transferred to assume positions of greater responsibility. They served, I will not say entirely without complaint, but they did their jobs and did them in good spirit. Therefore, I continue to believe in the affiliated units as sponsored by the various medical schools and hospitals; and in spite of some of the criticism leveled at them—most of it friendly—during the two great wars, if another war comes the Army will surely call again for affiliated units as it did in 1940.

Finally, I am certain that no man or woman from the Massachusetts General Hospital serving anywhere in the Armed Forces had anything but a tremendous sense of pride in having been a part of this hospital before the war. We think there is no hospital quite like it, and I know that every one of us was keen to return to our work here. The M.G.H. NEWS, so characteristic of the hospital, brought happiness to all of us all over the world. Those who originated this publication, and those who carried it on, have the greatest thanks from all the hospital's Service men and women. It is just one reason why we are all proud to be members of the Massachusetts General Hospital family and why we are so glad to be back in it.

Dr. Robert S. Palmer, for the Navy:

I am deeply conscious of alone bearing the responsibility and the honor of representing the Navy service at this ceremony, with my ranking colleagues of the Army and with a distinguished representative of the service men's women. I am disturbed now, as I have been before, Mrs. King, that in war and in the celebrations of victory, the women follow the men.

Some time ago I was indulging in the returned veteran's major vice — telling war stories to a group of wives. I was impressed by how much the women missed in war, and the fancy struck me: in the next war why don't we send the wives of the Unit to Florida for the first winter, then to North Africa and sunny Italy for two or three years, and leave the men at home to cope with the children and the dishes? From my experience of the war between the sexes, a man's war fought by the women would be more to the point and they would make a peace that would stick.

I should like to report for my block of veterans — whom, to be sure, I represent by appointment and without their consent — that reconversion is going just dandy. Happily we are very busy. I go to the Out-Patient clinic each morning and there are the veterans, practically crowding out the patients. In the afternoon I go to the record room, and there in each little cubicle is an eager and agile-minded veteran trying to make sense of the hurried and illegible records made by our colleagues of the home front. We should give them warning that we may make something of the cases they worked up while we were standing round in various quarters of the globe waiting for something to happen, and remind them that the best way to become an expert is not to be bothered by actual patients.

There are many changes since we drew our swords in defense of the republic. At first there were many strange faces, and we know our faces were strange to many. However, the younger House Officers are beginning to speak to us — even let us see a case; and sometimes a grave fourth year student will tell us the answers. It is very heartening in a confusing world to find some people who are so much more certain of everything than we are of anything. However, with more and more veteran Residents back to ride herd on the students and House Officers, our egos are improving by the minute.

And so we face the future in good camaraderie. The future looks bleak, indeed, at times, in the economic aspects of medicine, except to those who espouse a thing called socialized medicine. As you know, this is a scheme whereby all medical care of all patients costs nothing, and this nothing is equally divided among the doctors. In facing our future, perhaps laughter is wiser than tears. I like to recall the conversation overheard by the last Seabee to leave in evacuating natives from the Bikini atoll. Two apes were sitting disconsolately on a fallen log. The one turned to his mate: "Mary, do you see what they're fixin' to do to themselves?" Said she: "Uh huh. I s'pose we'll have to start the whole thing over again."

The changes on the minds and hearts of all of us are those irrevocable ones — those left at home whom we found gone when we returned and those of us who have not and will not come back. To me, the single thing that has made us all feel welcome and assured us that our places in the MGH family have remained intact has been the tacit recognition by all that, at home and abroad, both sacrifices and rewards have been unequally distributed and for the most part unknown, as is inevitable; but that together in our various posts we are proud to have shared in writing another page for our generation in the history of the hospital which we love.

Mrs. Donald S. King, for the Wives:

The courage necessary for a mere wife to climb to the porch of the Bulfinch Building to speak from the same platform as these great gentlemen and world warriors could only be aroused by very great admiration and very deep affection for the wives of the veterans of this hospital. My humble presence here is in tribute to them. To be here as their representative is a very great honor.

After our husbands had departed it was our only wish to help them win the war. So we studied history, and even anthropology, to learn the customs of wives of warriors in other times and other lands.

We learned: that in some districts of Borneo, when a Dyak is out head hunting, his wife must wear a sword day and night in order that he may always be thinking of his weapons; and she may not sleep during the day nor go to bed before two in the morning, lest her husband should thereby be surprised in his sleep by an enemy.

We learned: that among the Sea Dyaks of Banting in Sarawak the women must wake very early in the morning and open the windows as soon as it is light; otherwise their absent husbands will oversleep themselves. The women may not oil their hair, or the men will slip. The women must cook and scatter popcorn on the veranda every morning; so will the men be agile in their movements.

We learned: from an old historian of Madagascar, that while the men are at the wars, and until their return, the women and girls cease not day and night to dance, and neither lie down nor take food in their own houses. They believe that by dancing they impart strength, courage, and good fortune to their husbands.

Well — we tried *all* these various devices and many others for helping our husbands win the war, but we did not find that even continuous dancing stopped the old Desert Rat from rushing eastward toward Suez, nor that "scattering popcorn on the veranda every morning" slowed down the Japanese as they poured into the Malay Peninsula. So, eventually, we turned to other duties that might better profit the cause of the Allies. Some of these would seem quite odd to the women of Borneo, as they did to us. For example —do you remember cutting out large pieces of black paper to fit the kitchen windows, to make a safe place to gather when the enemy should swoop out of the sky by night? And do you remember that fascinating problem in arithmetic when, brandishing yardsticks in all directions, we measured the cubic feet of air in the whole house and, with the final answer — correct or not, no one could ever know — we stood in line at the high school for fuel oil coupons? Less bizarre, but just as necessary, was the housekeeping, baby tending, making out of tax returns, paying the mortgage, and *shovelling snow*. (This has been a splendid winter for our husbands to return! More than one has naively asked, "Who shovelled the snow while I was away?") No, we did not spend much time in dancing — certainly it could not, in one's wildest moments of exaggeration, be called "continuous dancing".

But today we are grateful beyond words that those years are over. So, instead of stressing the hard times, such as when the children were all sick at once or when there was a very difficult decision to be made alone, let us remember those who helped to build our impenetrable line of morale. Among them, one dear old man was a tremendous help. He brought us *those letters* that kept us going, and he brought us *those stiff light blue checks* that paid the grocer. God bless *Uncle Sam!*

And there was another great source of help and comfort which was symbolized by the words of another man, nowhere near so old. Shortly after the service for the M.G.H. Unit at the cathedral, I met Dr. Washburn on the Cambridge subway. As we parted he said, "If there is anything I can ever do for you, please let me know."

That, we felt and knew, was the way this hospital stood behind us. The fact that we were the wives of the men sent out from the Massachusetts General Hospital in this Second World War gave us not only pride, but a sense of belonging and security and heart warming friendship that helped us to surmount every difficulty.

God bless the Hospital!

* * *

M.G.H. is very proud that three of its Staff were among the fourteen American doctors who sailed on the *Queen Mary* on June 20, on a 3-months' teaching mission in Czechoslovakia. Dr. Paul D. White heads the group. With him went Dr. Joseph C. Aub and Dr. Otto Krayer.

The mission, sponsored by the Unitarian Service Committee, is to acquaint Czechoslovak medical men with advances made in American medicine during the time when Czechoslovak medical schools were cut off from the outside world by the 7-year Nazi occupation.

Dr. Kurt H. Thoma, Oral Surgeon and Chief of Dental Service, has been elected president of the American Academy of Oral Pathology.

The War Department recently announced the appointment of Dr. Wilfred Bloomberg (*r.p. N* 1931) as one of eighteen outstanding civilian neuropsychiatrists who will serve as consultants to the Secretary of War as part of the Army Medical Corps' peacetime program.

Mrs. Horner, our Health Supervisor for staff and personnel, has sent the following letter to all Department Heads.

Dr. Robert S. Palmer, Health Officer of the Hospital, and Dr. Helen S. Pittman, our Pulmonary Consultant, are very anxious that every employee of the Hospital should know that it is possible for him to have a chest X-ray, free of charge, through our Staff Clinic.

Our house officers, nurses, dietitians, the nursing office, and the dietary lay personnel have had chest X-rays, routinely, for a long time. Recently, we have added the Maintenance, Linen Control, and Social Service Departments.

As of March 1, 1946 we started doing chest films on all new employees as part of the regular pre-physical examination. That leaves a group in various other departments who were employed previous to March 1, and who might not be reached for some time.

Please have every employee in your department bring his Unit Number to Staff Clinic any day from 8 A.M. to 4 P.M. He will be given a requisition for a chest film which will be taken in the General X-ray any day at 8:30 A.M. or 4 P.M.

We hardly need to emphasize the importance of chest X-rays. The responsibility is ours to protect not only our patients but also all of our employees. We feel sure you will want to do your part in making ours a model health community by making it possible for every person in your department to have a chest X-ray.

* * *

In addition to the citations already mentioned in The News, the following have been received:—

Major Bradford Cannon, MC (*a.s.*)—Legion of Merit . . . Major [later Lt. Col.] Cannon, as Assistant Chief and later as Chief, Maxillo-Facial Plastic Section, Valley Forge General Hospital, from March 1945 to December 1945, performed and personally supervised thousands of plastic surgical operations. By his professional skill, sound judgment, and conscientious devotion to duty, he was instrumental in making it possible for young men who might otherwise have been maimed for life to return to useful and normal careers.

Capt. William E. Eaton, MC, USN (*D* 1907) —Legion of Merit . . . The President of the United States takes pleasure in presenting the Legion of Merit to Capt. William Edward Eaton . . . for service as set forth in the following citation: For exceptionally meritorious conduct in the performance of outstanding services to the Government of the United States as Medical Officer in Command of the United States Naval Hospital, Great Lakes, Illinois, during the early part of World War II. Displaying exceptional initiative, judgment and professional ability, Captain Eaton expertly administered the activities of his command in treating the sick and handling epidemics in this institution and throughout the Ninth Naval District and was in a large measure responsible for the expeditious return to duty of a large number of patients. In addition, he directed the establishment of a Hospital Corps School which trained thousands of hospital corpsmen, including WAVES, to meet the needs of the rapidly expanding Navy and Marine Corps. His tireless efforts, professional skill and conscientious devotion to the varied and complex details of his assignment reflect the highest credit upon Captain Eaton and the United States Naval Service.

For the President

(signed) James Forrestal
Secretary of the Navy

MASSACHUSETTS EYE & EAR INFIRMARY

Dr. Karl Riemer (*Oph.* 1943) has returned from service with the Navy in the Pacific. He has been appointed Senior Clinical Assistant at the Infirmary.

The postgraduate course in Ophthalmology for thirty former Army and Navy medical officers, which started March 4, ended June 22. The first two months were devoted entirely to the basic sciences and the last two to clinical subjects.

Dr. Henry A. Mosher (*Oph.* 1941), who has returned from service with the Army, will practise in Boston. He will be on service at the Infirmary shortly.

Mrs. Eunice W. Wilson, Director of Social Service at the Infirmary, read a paper entitled "Methods of incorporating basic eye information in the training of social workers" at the National Conference of Social Work, held in Buffalo last May. This paper is to be published in the next issue of *The sight-saving review*.

The Residency in Oto-Laryngology has, by vote of the Board of Managers, been increased to twenty-seven months. We now have nine residents, with an added Laboratory Service which includes work with the Bacteriological Laboratory and with Dr. Mallory's Laboratory. The Residency also includes duties with private ear, nose and throat patients in both Baker Memorial and Phillips House.

Dr. David W. Brewer entered as Resident on the Oto-Laryngological Service on June 1.

The American Board of Oto-Laryngology was represented at its recent meeting in Chicago by Dr. Harris P. Mosher, President, and Dr. LeRoy A. Schall and Dr. Werner Mueller as Directors.

Dr. Francis L. Weille presented a paper before the American Laryngological Society at its meeting in Chicago, May 30, on "The problem of recurring secondary frontal sinus infections".

The Infirmary was represented at the recent National Ear, Nose and Throat Society meetings at Chicago by Drs. Harris P. Mosher, LeRoy A. Schall, Philip E. Meltzer, Moses H. Lurie, Francis L. Weille, Maurice G. Evans, Werner Mueller, Harold G. Tobey, and Robert L. Goodale.

Dr. Gerald M. Fox, of Johannesburg, South Africa, is here for an eight-months' stay at the Infirmary. He had six years in the South African Army, and is anxious to learn American methods in Oto-Laryngology.

At a meeting of the Board of Managers held at the Infirmary on May 8, the following appointments were made:

Dr. Charles H. Allman, Associate Surgeon in Oto-Laryngology
Dr. Joshua C. Drooker, Assistant Surgeon in Oto-Laryngology
Dr. Edwards W. Herman, Consulting Surgeon in Oto-Laryngology
Dr. Edgar M. Holmes, Associate Surgeon for Plastic Operations
Dr. Varaztad H. Kazanjian, Consulting Surgeon in Oto-Laryngology
Dr. Vincent J. Kelley, Associate Surgeon in Oto-Laryngology
Dr. Joseph Lentine, Assistant Surgeon in Oto-Laryngology
Dr. George H. Poirier, Consulting Surgeon in Oto-Laryngology
Dr. Lyman G. Richards, Surgeon in Oto-Laryngology assigned to Bronchoscopy and Esophagoscopy
Dr. John R. Richardson, Associate Surgeon in Oto-Laryngology
Dr. Harold G. Tobey, Consulting Surgeon in Oto-Laryngology

It was also voted that Dr. Philip E. Meltzer be relieved as Surgeon in Oto-Laryngology so that he may devote his entire time to his duties as Chief of Service to the Winthrop Fund for the Study of Deafness.

At a meeting of the Executive Committee, held on May 20, the following appointments were made:

Dr. John J. Ayash, Clinical Assistant in Oto-Laryngology
Dr. Gerald M. Fox, Graduate Assistant in Oto-Laryngology
Dr. George T. Noel, Graduate Assistant in Oto-Laryngology

At their meetings on May 17 and 31 and June 14, the Board of Trustees voted:

To accept with regret the resignation of Dr. Ashton Graybiel;
To accept with regret the resignation of Dr. T. Stewart Hamilton from the position of Assistant Director;
To accept the resignation of Dr. Marius N. Smith-Petersen as Chief of the Orthopedic Service with great regret and appreciation of his services.

To appoint:

Dr. Fred Alexander as substitute Assistant Resident in Medicine for six weeks, beginning July 1;
Dr. Peter T. Brooks as Third Assistant Resident, beginning May 1;
Dr. William R. Eyler as Assistant Resident in Radiology, beginning July 1;
Dr. Harlan I. Firminger as Resident in Pathology, beginning July 1;
Dr. Knox R. Freytag as Assistant Resident in Dermatology and Syphilology, beginning July 1;
Dr. Frederick C. Gevalt, Jr. as Assistant in Medicine;
Dr. Arthur C. Guyton as Third Assistant Resident, beginning May 20;
Dr. Norman P. Hill as Assistant Resident on the Medical Service for a period of six months, beginning June 1;
Dr. Joseph S. Lichty as Assistant Director;
Dr. Charles G. Mixter, Jr. as First Assistant Resident in Surgery, beginning June 3;
Dr. John M. Morris as Second Assistant Resident in Surgery, beginning April 30;
Dr. Richard V. Riddell as Intern in Pathology;
Dr. Bertram Selverstone as Resident on the Neurosurgical Service for the term October 1, 1946 to December 1, 1947;
Dr. Robert P. Smith as substitute Intern in Medicine for six months, beginning July 1;
Dr. Robert H. Talkov as Assistant in Medicine.

To reappoint:

Dr. Edwin A. Robinson as a Dalton Scholar;
Dr. Philip P. Thompson as Assistant Resident for an additional three months, July 1 to October 1.

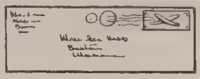
To promote to the position of Associate Obstetrician:

Dr. Robert H. Barker
Dr. A. Gordon Gauld
Dr. Samuel B. Kirkwood
Dr. John L. Newell
Dr. Charles P. Sheldon
Dr. Benjamin Tenney
Dr. Allen P. Winsor

To transfer Dr. Alfred O. Ludwig from the position of Assistant Physician to that of Assistant Psychiatrist.

The General Executive Committee, at meetings held on April 17 and 24, during May, and on June 5 and 12, voted to appoint:

Dr. Kenneth A. Evelyn as Clinical Fellow in Medicine for the year 1947;
Dr. John G. Feder as Clinical Fellow in Medicine;
Dr. Ivan D. Frantz as Clinical Fellow in Medicine, to work with Dr. Aub;
Dr. Frances V. Gardner as Clinical Fellow in Medicine;
Dr. Gordon S. Myers as Clinical Fellow in Medicine, to work with Dr. Paul D. White;
Dr. Donald L. Rose as Research Fellow in Physical Medicine for August and September;
Dr. Henry Saltonstall as Clinical Fellow in Surgery, beginning June 1;
Dr. Harrison J. Shull as Clinical Fellow in Medicine;
Dr. Walter Somerville as Clinical Fellow in Medicine;
Dr. Alan J. Stinchfield as Clinical Fellow in Orthopedic Surgery, beginning June 1;
Dr. Charles K. Waigner as Research Fellow in Dermatology, beginning June 10.



New addresses:—

Lt. John W. Bell, MC USNR (*ES* 1946), *U.S.S. President Hayes,* c/o Fleet Post Office, San Francisco, Cal.
Lt. Harry A. Bliss, MC, USNR (*M*), 79 Nottingham Terrace, Buffalo 16, N. Y.
Dr. Donald T. Chamberlin (*P* 1931 & *NS* 1931), 1390 Sherbrooke St. West, Montreal, Quebec, Canada.
Col. Richard Collins, Jr., GSC (*ES* 1933), 378 Bacon St., Waltham, Mass.
Dr. Robert H. Detwiler (*CM* 1940), 3260 Wilson Blvd., Arlington, Va.
Dr. William F. Donoghue, Jr. (*Oto-Lar.* 1942 & *Oph.* 1944), 69 Chestnut St., Springfield, Mass.
Capt. William E. Eaton, MC, USN (*D* 1907), Navy Regulations Board, Room 3515, Navy Bldg., Washington 25, D.C.
Lt. Sheridan S. Evans, MC, AUS (*ES* 1945), Regional Hospital, Fort Monmouth, N. J.
Dr. Alfred O. Ludwig (*EM* 1932), 101 Bay State Road, Boston, Mass.
Dr. Richard McGovney (*Or.* 1930), 1515 State St., Santa Barbara, Cal.
Dr. Hugh Montgomery (*EM* 1932), 308 Maloney Bldg., University of Pennsylvania Hospital, S.E. Cor. 36th and Spruce Sts., Philadelphia 4, Pa.
Dr. Marshall deG. Ruffin (*P* 1939), University Club, 16th St. N.W., Washington, D. C.
Lt. Murray W. Scott, Jr., MC, AUS (*WS* 1945), 13th General Hospital, APO 660, c/o Postmaster, San Francisco, Cal.
Rear Admiral Harold W. Smith, MC, USN (Ret.) (*SS* 1903), 4000 Cathedral Ave. N.W., Washington 16, D. C.

Brief bits:—

Dr. Luke Gillespie (*a. obst.*) has been released from military service and has returned to the practice of Obstetrics and Gynecology at 214 Bay State Road, Boston 15, Mass.

Dr. Benjamin L. Huntington (*WM* 1940) "escaped from the Army", as he put it, on January 11, and is "back in harness" in Med. O.P.D.

Dr. Harrison E. Kennard (*WS* 1934) is out of the Navy and plans to return to civilian work after a summer vacation. His address is 246 Dudley Road, Newton Center, Mass.

Dr. Oglesby Paul (*WM* 1943) stopped in at the office of THE NEWS recently to tell us he is out of military service and expects to be back at M.G.H. soon. His home address is 81 Pinckney St., Boston.

Asst. Surg. John W. Smillie (*ES* 1944) has been transferred from Albany, Ga. to Cumberland, Md., to head a small Nutrition Field Unit consisting of biochemist, technician, nurse, dietitian, and clerk. His new address is Nutrition Unit III, U.S. Public Health Service, Box 1087, Cumberland, Md.

Dr. Faxon has received this fine letter from Vannevar Bush, Director of the Office for Emergency Management, Office of Scientific Research and Development, 1530 P Street NW., Washington, D. C.

> It is a pleasure to express to you my personal and official appreciation of the aid that the Massachusetts General Hospital has given in the war effort through the work which it has performed under contract with this Office.
>
> The outstanding contribution of American science and industry to the winning of the war has been recognized and commented upon throughout the country. That contribution was the result of teamwork with the Armed Services and within the ranks of organized research. It was the opportunity and privilege of the Office of Scientific Research and Development to foster and share with American universities, medical institutions, and industry in this collaborative endeavor. The gratitude of OSRD to individuals for their unselfish cooperation in war research under its auspices has been expressed in certificates of merit, and this letter supplements that expression to extend this gratitude to the Massachusetts General Hospital as an organization.
>
> As we go forward into a world in which peace has been won through this concerted effort, our greatest assurance for the future lies in the continuance of the spirit which made the accomplishment possible.

Unless something unexpected happens in the meantime, the next issue of THE NEWS will be given over largely to the interesting letters which have come from many of you. They have already been set up in print, but so much of immediate concern has been going on at M.G.H. during the last few months that, with regret, these letters have been withheld for lack of space. However, you will soon learn where many of your friends are and what they are doing—all over the world, from Boston to the Orient. Your August NEWS should make good summer reading.

THE LAYING OF THE CORNERSTONE OF THE BURNHAM MEMORIAL HOSPITAL FOR CHILDREN

VINCENT MEMORIAL HOSPITAL-1946

THE LAYING OF THE CORNERSTONE OF THE VINCENT MEMORIAL HOSPITAL

THE NEWS

No. 47 Boston, Mass. August 1946

Interest and excitement grow apace as the time for the Ether Centennial draws nearer. The September and October issues of THE NEWS will contain reports of all additional arrangements that have been made for the event between now and then.

Our May number carried an article regarding the first use of ether in England for major surgery, and a story about the "chairman's bells". Dr. Washburn, in his history of Massachusetts General Hospital, says that our bell "has been rung and its history explained at numerous assemblies on Ether Day, usually at the Alumni Dinner." Dr. Washburn's history then quotes this letter from Dr. F. William Cock (whose father was present at the first operation performed under ether in England), written on February 18, 1920, to Mrs. Grace W. Myers who was then Librarian of Treadwell Library. The letter reads:—

> 19, Randolph Road,
> Maida Hill, W.9.
> London, England
>
> My dear Madam:
>
> Eight years ago you wrote to me about a little paper, in three numbers, I had printed in the Univ. Coll. Mag., giving an account of the first major operation under ether in Europe. I believe I sent you them. You were good enough to let me have a number of "Ether Day" addresses afterwards.
>
> In my paper I gave an illustration of the present situation of the operation theatre railings [The railings were from the University College Hospital in London, where the first operation under ether in England was performed.] in front of my cottage at Appledore in Kent. In placing them there, there were a few pieces of the wrought-iron strap work over. It struck me that I might add to the friendly feeling existing between the two kindred nations, especially in the medical branches thereof, if I had these worked up into a little memento of that remarkable incident. So I have had them made into the arch of a chairman's bell. The bell itself was cast from some of the old bell metal of the Appledore peal when it was recast, mixed with some of the new metal which was used when the two new bells were made for Westminster Abbey, which were first rung in commemoration of the Peace. The block which supports the bell is made from a piece of the old Appledore bell frame which was dated 1685.
>
> I have had the bell made in duplicate, the other being for the Chairman's use at the Annual Students' Dinner of University College Hospital, London. Now if you have a dinner of the Hospital on "Ether Day", I would like to offer this to the Hospital for the use of the Chairman on that or any other suitable occasion which occurs from year to year.
>
> . . .
>
> May I express the hope that when the bell rings the sound may bring to memory those ties of blood and friendship which exist between us. The little sentence at the head of my pamphlet, "Semper sussurrat memoria sed aliquando clamat", is true, and I hope on the occasion of the ringing of the bell, its chime may renew the friendly feeling between the land of origin of the teaching of anaesthesia and that older and motherland which so gladly accepted the lesson.
>
> I may add that when I mentioned the idea to our dear friend, Wm. Osler, he was enthusiastic in his encouragement and said that he wished he could bring the bell to you himself. Nothing could have gratified me more, if that had happened, but it was not to be. . . .
>
> The bells were cast by Mears & Stainbank, Whitechapel Road. The oldest bell founders in England, 1580.

* * *

The following appeared in the June issue of *Annals of surgery*:—

> A group of surgeons, who formerly served as members of the U.S. Armed Medical Corps in the North African and Mediterranean Theaters of Operations, recently organized The Excelsior Surgical Club. Patterned somewhat along the lines of the Eclat Club which, in a comparable manner, grew out of World War I, The Excelsior Surgical Club has as its objectives the promotion of the social intercourse of the members and the advancement of their knowledge of the science of surgery.
>
> A principal and outstanding activity of the Club is to be the Edward D. Churchill Lecture honoring the former Surgical Consultant of those Theaters, Dr. Edward D. Churchill. . . . The Lecture, to which the medical public will be invited, will form an integral part of each annual meeting. The Club plans that each Lecture will be a foremost scientific presentation. To that end, Dr. Alfred Blalock, Professor of Surgery, Johns Hopkins University, has been secured to give the first Churchill Lecture at the first regular meeting of the Club in Boston on October 25-26, 1946.

Dr. James G. Miller (*EM* 1943) stopped in at the office of THE NEWS one day not long ago and gave us an account of his military activities in the Office of Strategic Services. It was an exciting story. He said there were about seven selection centers, covering this country, China, and Europe. There men who volunteered for "secret and hazardous duty" were selected for training as secret agents for the government. They were removed to secluded spots, divested of uniforms and all evidences of military rank, and given various tests aimed toward screening out men of superior ability and moral fibre for vital undercover work. They were tested on their ability to keep a secret, to observe, etc. Experiments were made to see if they would divulge secrets when under the influence of liquor. They were watched to find out if they talked in their sleep, and those who did were rejected. Each man was given a four-day observation, during which time he was constantly watched — day and night. Dr. Miller said that the agents were closely observed during their operations at the front and were so carefully trained that no one agent could detect another.

The March issue of *Fortune* contains an excellent article, "A good man is hard to find", which describes in detail some of the tests used in the O.S.S. A book on the subject, entitled *Assessment of men*, is to be published by the Service next January.

Dr. Miller, who has been Assistant Professor of Psychology at Harvard since last February, is on leave of absence for about a year, so that he may serve as Chief Clinical Psychologist in the Neuropsychiatric Service of the Veterans Administration, Washington, D. C. Dr. Miller said that about 62% of all veterans in hospitals at the present time are psychiatric, and that there were more psychiatric casualties than surgical in the war.

At a meeting of the Board of Trustees held on June 21, 1946, the recommendation of the General Executive Committee was accepted, whereby a Section of Diseases of the Nervous System be set up of which the Neurological, Neurosurgical and Psychiatric Services should be members in order to establish closer cooperation between these Services, and that Dr. Charles S. Kubik be made Chief of the Neurological Service (effective June 30, 1946).

The Trustees also voted:

To accept the resignation of Dr. James B. Ayer as Chief of the Neurological Service, effective June 30, 1946, with great regret and deep appreciation of his services to the Hospital, and to appoint him to the Board of Consultation;

To accept the resignation of Dr. John L. Ward;

To appoint Dr. George W. VanGorder as Acting Chief of the Orthopedic Service pending the report of the ad hoc committee to be appointed by the Chairman;

To appoint Miss Ruth Sleeper, Mr. Donald Moreland, Dr. Joseph S. Barr, and Dr. Charles L. Clay to the Social Service Advisory Committee.

The General Executive Committee, at their meetings on June 19 and 26, and July 3, voted to appoint:

Dr. Mandel Cohen as Clinical Fellow in Medicine;

Dr. Lewis L. Engel as Research Fellow in Medicine (Biochemistry);

Dr. Elwyn Evans as Clinical Fellow in Medicine;

Dr. Andre D. Glinos as Research Fellow in Medicine;

Dr. Benjamin S. Golub as Graduate Assistant in Neurology for six months, beginning July 1;

Dr. Gilman W. Haven as Graduate Assistant in the Dental Clinic;

Dr. Oglesby Paul as Clinical Fellow in Medicine.

The Committee also voted:

To recommend to the Trustees that Dr. Isaac M. Taylor, Assistant Resident, be granted leave of absence from July 1 to October 1 and that Dr. Robert E. Barkin be appointed as Substitute Assistant Resident to cover Dr. Taylor's duties.

OFFICIAL NOTICE

At the meeting of the General Executive Committee, held on June 26, the following recommendations of the Radioactive Isotope Committee were approved:

1. Dr. Joseph C. Aub was elected Chairman and Secretary.

2. It was voted by the committee that they should be allowed to ask for consultation from the scientific community. It was also voted that the following people be asked to serve as consultants to the committee:

Physicists Dr. Kenneth Bainbridge of Harvard University, Dr. Robley D. Evans of M.I.T.

Pathologist Dr. Shields Warren, Harvard Medical School, and the three as yet unappointed fundamental scientists who are to be working with the radioactive isotope project at the Harvard Medical School.

3. It was voted that this committee should report its program and decisions to the following committees of the hospital:

a. Executive Committee

b. Hospital Research Committee(as yet unestablished)

c. Tumor Clinic Committee

4. It was voted that this committee should function as follows:

a. To grant yearly approval of projects in relation to the use of isotopes, both radioactive and heavy, and of physical apparatus involving their use.

b. To correlate and index all such projects.

c. To sanction and supervise the therapeutic use of these agents in this hospital.

d. To authorize physicians allowed to use these agents in this hospital.

e. To investigate and make recommendations for the protection of workers in this hospital involved in all projects where these agents are being used.

f. To establish and maintain the contacts with outside sources for obtaining these agents for use in this hospital. It is recommended that when any of these agents are acquired from outside sources for use in the Massachusetts General Hospital they should be acquired through this committee.

g. To serve as consultants for questions arising from outside sources.

Committee:
Joseph C. Aub, M.D.
Francis D. Moore, M.D.
Rulon W. Rawson, M.D.
Milford D. Schulz, M.D.

The regular monthly meeting of the Surgical Staff was held in the Bigelow Amphitheatre on May 28. In addition to the East and West Surgical Services, Urology, Orthopedic, and Phillips House reports were read. Dr. Francis D. Moore spoke on "The application of isotopes to surgical research". Dr. Moore has very kindly sent us this abstract of his talk.

The word "isotope" means "same place" or "same phase" and denotes an element occupying the same position chemically as another element but differing from it in weight. Most of the common elements of the earth's surface are mixtures of various isotopes, and of late the application to many problems of isotope production and detection has expanded rapidly—and in many fields, ranging from determinations in submicroscopic life up to "atomic" explosions in the air over Japan.

The basic pattern for biological research with radioactive isotopes was laid many years ago when continental workers studied some problems relative to the biology of lead, using radium as a "tracer". The possibilities of such methods remained limited and application to a wide variety of biologic problems was impossible until the last decade when, with the development of the cyclotron, a host of radioactive isotopes of common, biologically important elements became available. A tremendous upsurge in this type of research has since taken place, and for a few years it was almost a monthly, and even in some cases a daily occurrence for physicists to discover a new isotope! As each element in the periodic table was bombarded with deuterons in the cyclotron, a study of the reaction products yielded many hitherto unknown isotopes of previously known elements.

Many of these substances were radioactive and by their radioactive emissions announced their presence in the tissues, body fluids, and in the test tube.

The Massachusetts General Hospital has been a pioneer in biological work with these substances. In 1938 Drs. Means, Roberts, Hertz and others started work with radioactive iodine in relation to thyroid physiology. In its peculiar organ specificity iodine is almost unique among the body's elements. Futhermore, the radioactive isotopes of iodine emit gamma radiation which penetrates the tissues of the patient and can be detected externally with a Geiger counter. This fortunate combination of circumstances plus a convenient half-life gave to the iodine work a peculiar clarity and interest which attracted wide attention and is quoted in most of the articles one may read on the biologic application of isotopes. This work has recently blossomed into the treatment of thyrotoxicosis with radioactive iodine and in the application of these methods to the diagnosis and treatment of thyroid tumors as well as the further elucidation of thyroid physiology. Present work in this field is being carried out by Drs. Means, Rawson, Cope, and Chapman at the M.G.H.

Even prior to this iodine work, Dr. Aub and his associates were at work on problems of growth and permeability, at the Huntington Memorial Hospital, using radioactive materials. When Dr. Aub's laboratories were moved to the Massachusetts General Hospital in 1942, this work was transferred *en bloc* to this hospital and continued, transferring its orientation to shock and trauma during the war.

The Surgical Service, however, has not been dormant and can claim some sort of distinction for having been one of the first surgical services in the country to start work with these interesting substances. In 1941, under the aegis of Dr. Aub and his group, work was commenced on radioactive colloids, making some of the common colloidal di-azo dyes radioactive by synthesis into the molecule of two atoms of radio bromine. This work was of interest because these dyes concentrate in abscesses and tumors and because one might hope by such means to diagnose abscesses from outside the patient by the use of a Geiger counter or to treat tumors by injecting the radioactive dye. This work was done under considerable difficulty because of the very small amounts of radioactive substances which were available at that time. Now, with the great expansion in radioactivity research engendered by the atomic bomb and the development of the "chain-reacting pile" as a means of producing radioactivity, these problems are being reopened and reinvestigated by workers in many places, and it is with considerable gratification that we now find workers in Philadelphia and Berkeley, California, reinvestigating these problems with the higher amounts of radioactivity obtained from the atomic bomb plants.

In 1942 the interests of the Surgical Service shifted to the study of water balance in burns, a problem encouraged by the government OSRD contracts, and pursued throughout the war. Up to the present time, research has been carried out on the Surgical Service employing radioactive isotopes of sodium, chlorine, bromine, potassium, iodine, phosphorus, iron, and hydrogen. The end-point detection involved in these research problems (with the exception of iron) have been carried out by our own investigators in the surgical laboratories; the radioactive materials have been obtained largely from the Massachusets Institute of Technology cyclotron.

The development of the atomic bomb has attracted wide public attention to the problems of nuclear physics and has made "neutron" a household word. The developments relative to the bomb have also given rise to much interest in the research world and we read daily in the papers of thousands of dollars being poured into work with radioactive isotopes, especially as applied to the problem of malignancy. There are many rewards to be found in this field and many new discoveries will be made. Some will doubtless apply to the field of malignancy, but many others will be useful and important in everyday problems of the physician and surgeon.

The types of research problem which can be investigated with isotopes can be divided into several categories:

1. Membrane equilibrium and permeability. This is the basic contribution of radioactive isotopes to research. Reaction rates, permeability rates, equilibrium ratios and cell permeability can be studied with radioactive isotopes in a fashion that is impossible by other means. In this way we have studied capillary permeability, red cell permeability, the changes in permeability of skin cells to sodium after burns, and from methods falling into this category, we may look to the future to find many answers to questions concerning water balance, electrolyte administration and pre- and postoperative care. The central problem in this therapeutic field at the present moment might be described in a few words as "potassium deficit". Is there a need for potassium in parenteral fluid therapy? If so, how great is the need and how does one know when the need has been satisfied? These and related problems can best be solved by the judicious use of isotopes.

2. "Tracing" elements or molecules in the body. By the use of radioactive substances the distribution and reactions of various organic and inorganic compounds can be traced in the body. The classic work of Schoenheimer and Rittenberg, in which heavy stable isotopes rather than radioactive substances were used, is an example of studies in this field which have clinical significance. From their work we find that all the protein in the body is in a constant state of flux and equilibrium, and that there is no such thing as storage or inert protein. By similar methods we may in the future discover the site of the formation or action of various hormones, the distribution of nutritional essentials in the body, the fate of drugs and cancer-forming compounds.

3. The location of certain elements or molecular configurations from outside the patients. The use of iodine in this connection has already been mentioned. After iodine is given to the patient, a Geiger counter can be placed over the thyroid and the amount taken up by the thyroid can be roughly estimated. Work on the detection of abscesses has also been mentioned. Future work in this field holds much of interest relative to circulatory physiology, circulatory velocity, the effect of certain types of sympathetic surgery on circulation in various areas in the body, and other studies. In using this technique, one must always bear in mind the fallacies and pitfalls of externally placed counter measurements as they are affected by various thickness of tissue and other biological factors.

4. The measurement of body "areas". By the use of isotopes one can measure with some degree of accuracy the exact amount of certain areas of body fluid in the body and the amounts of certain elements present. This type of work is at present the main concern of the Department of Surgery as it relates to isotope investigation. We can measure the extracellular space with sodium and the total body water with deuterium. We can measure the total body potassium with radioactive potassium and we can measure the degree of potassium utilization by the development of a potassium tolerance test that depends upon the urinary excretion of a measured dose of radiopotassium. In this way a chemical "dissection" of the human body can be carried out on the living patient. Previously, a complicated quantitative analysis of a human cadaver would be the only way of getting the same data.

5. Treatment. The treatment of various sorts of radio-sensitive diseases with radioactive isotopes is an obvious application of these materials. Thyrotoxicosis has been men-

tioned, as has thyroid tumor. Radio phosphorus has been developed as a means of treating certain types of blood dyscrasia, and polycythemia vera. The future of this field lies not so much in the further application of inorganic ions to the treatment of tumors as it does in the discovery of specific organic chemical configurations which are taken up in tumor tissue and which can be rendered radioactive so as to administer selective internal radiation to tumors.

One cannot discuss this field without stressing the hazards of radiation, and a committee has recently been formed in this hospital to review isotope research being carried out here with the hope of avoiding such hazards. The purpose of this committee is not only to correlate work and avoid unnecessary duplication or expenditure, but also to safeguard the patients and the workers from radiation which may be dangerous. Five years ago when one or two millicuries of a radioactive isotope was regarded as mammoth production, dangers to the worker were not as great as they are now when the cyclotron can make 170 to 200 millicuries of radiosodium in a few hours. Such large amounts of activity can be dangerous to both worker and patient; realization of these hazards must be brought home to all those involved and proper precautions taken. Members of the Isotope Committee are Dr. Joseph C. Aub, Chairman, Dr. Milford D. Schulz, Dr. Rulon W. Rawson, and Dr. Francis D. Moore.

Future trends in this field will be watched with interest by physicians and surgeons alike. It is essentially a collaborative type of investigation and has always involved coöperation at least between the physician and the physicist. Now we must extend this coöperation to the various services in our hospital so that the knowledge and skill of the Medical Service, Pediatric Service, Surgical Service and others can be brought to bear upon problems that concern us all—problems to be solved by the tools of the physicist.

New addresses:—

Dr. Robert H. Barker (*WS* 1937), 57 Upland Road, Brookline, Mass.
Capt. Addison G. Brenizer, Jr., MC, AUS (*WS* 1942), 119th Station Hospital, APO 246, c/o Postmaster, San Francisco, Cal.
Dr. Carl F. Haub, Childrens Hospital, 1740 Bainbridge Ave., Philadelphia, Pa.
Lt. James M. Judd, MC, AUS (*ES* 1944), Surgical Service, Valley Forge General Hospital, Phoenixville, Pa.
Dr. Samuel B. Kirkwood (*WS* 1934), 7 Swan Road, Winchester, Mass.
Lt. George R. Livermore, Jr., MC, AUS (*WS* 1943), Box 143, Brooke General Hospital, Fort Sam Houston, Tex.
Dr. Alfred O. Ludwig (*EM* 1932), 101 Bay State Road, Boston, Mass.
Dr. James G. Miller (*EM* 1943), 504 South Garfield St., Arlington, Va.
Comdr. Joseph C. Placak, Jr., MC (*WS* 1936), Harvard Club, 374 Commonwealth Ave., Boston, Mass.
Dr. Robert G. Snow (*Oto-Lar.* 1940), 202 East South Temple St., Salt Lake City, Utah.
Dr. W. T. S. Thorndike (*a. dir.*), 301 Beacon St., Boston, Mass.
Dr. John L. Ward (*EM* 1935), Box 27, Lake Bluff, Ill.

Brief bits:—

Dr. Frederick S. Bigelow (*EM* 1943) has been separated from the Service and plans to return to Boston soon. "What more could one want?" he writes.

After Dr. John W. Ewell (*WM* 1937) finishes the graduate course at H.M.S. in August, he joins the Staff of the University Department of Health at Yale. Dr. Orville F. Rogers (*WM* 1913) is Director of the Department.

Dr. Francis C. Skilling (*Oph.* 1933) has been released from the Army and expects to begin private practice in ophthalmology at 442 Ingraham Bldg., Miami 36, Fla.

Dr. George F. Sutherland (*a. Psychi.* 1941) left the Army with the rank of Lieutenant Colonel. His address is 2744 West 1st Ave., Vancouver, British Columbia.

MASSACHUSETTS EYE & EAR INFIRMARY

Dr. Linus A. Sheehan (*Oph.* 1943) has just been discharged from the Army and will open an office for the practice of ophthalmology in Providence. He will attend the Eye Clinic here once a week.

Dr. Julio Quevedo (*Oto-Lar.* 1941) was recently elected President of the Guatemala Medical Association.

Dr. Aram Roopenian (*Oto-Lar.* 1944) is now separated from the armed forces and will soon be on the active Staff of the Ear, Nose and Throat Department of the Infirmary.

Dr. Lyman G. Richards (*Oto-Lar.* 1924) is President-Elect of the American Laryngological, Rhinological and Otological Society.

Dr. George Keleman (*clin. asst. Oto-Lar.*) left on June 28 for a six-weeks' lecture tour of several South American cities, including Rio de Janeiro, Buenos Aires, and Montevideo. He will lecture on pathology of the ear, nose and throat, and will wind up this lecture tour by a two-weeks' rest in Mexico City, returning to Boston on September 1.

After a serious illness, Miss Anita Mangaracine is welcomed back to the Infirmary as bacteriologist.

Dr. Manuel A. Astor, of Santurce, Puerto Rico, spent a week at the Infirmary recently.

Dr. and Mrs. Schall and daughter Nancy leave July 28 for a vacation in Guatemala.

Dr. Lawrence A. Holt and Dr. Warren A. LaPierre entered as Residents on the Ophthalmological Service on July 15.

MASSACHUSETTS GENERAL HOSPITAL 1811

Dr. Faxon has received this letter from Dr. Robert F. Loeb, Chairman of the Board for Coordination of Malarial Studies, 2101 Constitution Avenue, Washington 25, D. C.

> As you know, during the war malaria constituted the most important medical problem of the Armed Forces, and a large number of studies were conducted under the auspices of the Board for Coordination of Malarial Studies and supported by the Committee on Medical Research of the Office of Scientific Research and Development. The results of these researches have proved gratifying beyond expectation, and the ends achieved have been in a large measure due to your cooperation.
>
> At its final meeting on 4 June 1946, the Board unanimously requested me to express to you its profound appreciation for the support and cooperation which you, your administrative officers, and the volunteers have given to this great endeavor. It is our sincere hope that the volunteers may be made to feel that they played an important part in the work of the Board.

Lt. Grant V. Rodkey, MC, AUS (*WS* 1943) is a patient in the same hospital in China where he has been in charge of the Orthopedic Service. He had just been transferred to Nanking when he suffered a cervical spine injury while riding in a jeep. Lieutenant Rodkey would very much appreciate hearing from any of his friends. His address is: China Service Command Station Hospital, APO 906, c/o Postmaster, San Francisco, California.

This is a letter we are very proud to publish. It comes from Capt. William E. Eaton, MC, USN (*D* 1907), from the Navy Department, Washington 25, D. C.

> Upon my detachment, 31 October 1943, from command of the Naval Hospital, Great Lakes, Illinois, where I had been for four and a half years, I reported at the Bureau of Medicine and Surgery, Navy Department (the office of the Surgeon General of the Navy, Admiral McIntire) and took up duty as Chairman of the Post War Planning Board, Member of the American Medical Associations Committee on Post War Medical Service (Dr. Roger I. Lee, Chairman), and also as Head of Washington Office of the Materiel Division of the Bureau.
>
> I was engaged at first with matters of Medical Materiel for the Navy overseas forces; later with property disposition, surplus property, contract termination, and inventory control. About May 1945, Post War Planning became urgent and I dropped my other duties to devote my entire time to the duties as the chairman of the Post War Planning Board, and prepared the demobilization plans and prospective post war plans of the Medical Department of the Navy. This work was more or less developed and completed by February 1946.
>
> On February 25, 1946 I was ordered and reported for duty as a member of the Board to revise Navy Regulations in the Office of the Secretary of the Navy—a work in which I expect to be engaged for some time to come.
>
> On 27 April 1946 I was awarded the Legion of Merit, which was presented by Vice Admiral McIntire, Surgeon General of the Navy.
>
> I continue to go out to Chicago periodically, as Navy and American Medical Association Member, for the meetings of the American Medical Associations Committee on Post War Medical Service.

From 11 Lawn Avenue, Oneonta, N. Y. comes this "first" letter from Dr. James Greenough (*WS* 1920), acquainting us with his war duties.

> I had the rather unique experience of spending my military career of 3 years, 8 months, and 10 days in one spot — with the exception of 3 days at Governors Island, being assigned on the way in, and 3 days at Fort Dix, being "unassigned" on the way out. The one spot was Fort Monmouth, New Jersey. I reported there 23 June 1942 and was assigned as Chief of the Surgical Service at the Station Hospital. In June 1944 the hospital was designated as one of the two regional hospitals in the 2nd Service Command. I was promoted from Major to Lieutenant Colonel 16 September 1944. The hospital was changed back to a station hospital in January 1946, and I left in February, to be discharged to terminal leave in March. Since then I have been (and I might say with some difficulty) procuring an office in Oneonta and resuming a civilian surgical practice. The office address is as above.

My residence is Box 22, Cooperstown, N. Y., which I believe would be the best permanent address.

The work at Fort Monmouth I found to be very interesting. The hospital capacity was raised successively from 350 to 500 to 750 to 1200. The Fort is the home station of the Signal Corps. It expanded during the war from 1200 to about 30,000. With the addition of regional hospital activities it was the recipient of general hospital type cases, from an added strength of about 50,000. All our patients were from troops on the way over and their dependents, with the exception of a few casualties among returning soldiers from North Atlantic storms during the last winter and a large group of "reconditioners" who were sent to us through most of 1945.

Our Surgical Service ran from 200 to 350 daily census. In most respects our work was identical with that of a civilian general hospital. Of course, we saw very few children or aged, and our female practice was, naturally, far below civilian average. However, there were many dependents living in the vicinity — so many that our average number of deliveries per year was well over 400.

As you can see, there was nothing very exciting for me to relate. Nevertheless, the work was interesting and very instructive. I can truthfully say that the three and a half years was as interesting as any I have experienced.

I enjoyed receiving The News and I believe I have every copy to date. I hope that with the cessation of hostilities it will not die. Just because we are all returning to our civilian status seems no reason to discontinue an enterprise which has brought the graduates —at least those not immediately around Boston — in closer touch with the hospital, its activities, and its graduates. [See your News for December 1945, page 3, for assurance of continuance of the paper. *Editor*]

A few months ago we reported Dr. Eugene A. Osius (*WM* 1923) back at his office, 901 David Whitney Building, Detroit 26. A recent note from him says, in part:—

I was released from the Navy last November, and after a short sojourn through the South with my family, resumed my surgical practice in February. It has been very gratifying to see many old patients returning. Our hospitals are quite full and we have been very busy, in spite of the strikes for which Detroit is famous — or infamous, I do not know which.

I always enjoy receiving The News because it puts me in touch with many of my old friends, and I certainly hope it will continue to be published.

I am looking forward to being at the General for Ether Day and its attendant celebrations, and shall undoubtedly see a great many old friends I have not seen for many years.

Dr. Paul E. Spangler (*WS* 1925) is back home and in private practice at 816 Pittock Block, Portland, Oregon. He was already on military duty with the Navy, as Chief of Surgery and Executive Officer of a mobile hospital at Pearl Harbor when the attack came on December 7, 1941. His unit was cited for distinguished service at that time. One of Dr. Spangler's early letters said, "I have the questionable honor of performing the first operation of this war." In a recent letter he writes:—

I am slowly getting used to civilian existence again. Had a nice visit with Frank Balch [*ES* 1925] just after he was separated from the Navy, before he started to drive home.

I certainly enjoy The News and hope it can be made a permanent organ of the hospital so that those of us far away may keep a little more closely in touch with things which are taking place at M.G.H. It is one of the few good things that came out of the war, and I hope nothing will be done to cause it to perish.

From the Children's Hospital, Boston, comes this note from Dr. Thomas H. Lanman (*ES* 1918).

I was separated from the Service last March. I haven't much to say other than that I was decorated, and that is very old news now. I did enjoy getting The News — as we all did —particularly when I was out of the country, and I want to thank you for the fine work in keeping up the morale of the men in the Service.

The Medical School has asked me to edit a diary I kept for three and a half years when I was in the European Theater with the 5th General Hospital. It might be that some extracts from this would be of interest to you.

Dr. Herbert D. Adams (*ES* 1932) reports his return home and gives us an account of his final duties with the Navy.

In August 1945 I left U.S. Naval Hospital, Navy #10, Aica, T. H., for duty aboard the hospital ship *Tranquillity,* AH 14, which was to have covered the invasion of Japan. Fortunately, this did not come off, and I got orders to Chelsea and was finally discharged from the Navy. Received promotion to Commander.

Am back at my old job as general and thoracic surgeon, Lahey Clinic, but remain in the Naval Reserve and have received an appointment as Consultant in Thoracic Surgery at the U.S. Naval Hospital, Chelsea, Mass.

We are so glad to have this letter from Dr. Walter B. Crandell (*r.s. PH* 1941).

It has meant a good deal to me to receive The News — not only while overseas, but in the months since I have been back. To one with a great interest in the M.G.H. and the many friends of my all too brief stay there, The News has been invaluable, particularly with so many men out of the Army and treading new paths. It is satisfying to know which direction they are taking and in what part of the country I might be able to see them again.

As for myself, I have opened an office for the practise of General and Thoracic Surgery at 108 East 81st St., New York City. I have been appointed Instructor in Surgery at New York University College of Medicine, Assistant Visiting Surgeon to the 3rd Surgical Division, and to Chest Surgical Section at Bellevue Hospital, New York.

To swing away from professional news—we have bought a house in Bronxville. Our third daughter, Elizabeth Bain, was born April 24, 1946.

May I express again my gratitude for having received The News, and may it continue to flourish.

This most interesting letter from Capt. Lytt I. Gardner, MC, AUS (*CM* 1944) carries us on from where the last one left off.

When our Evacuation Hospital (the 170th) landed at Manila after a 54-day boat trip from Leghorn, Italy, through the Panama Canal, we found the Pacific war ended and our usefulness as an evacuation hospital over. Fortunately, most of us found plenty of professional work on detached service to the 248th General Hospital, which at that time was taking care of British, Australian, and Canadian patients who had been POW's of the Japs on Formosa and Japan itself. These fellows had every parasite in the books, combined with multiple deficiency diseases, of which beriberi was the most prominent. A formidable therapeutic problem with these patients was generalized edema which developed when they were put on adequate diets. A few developed true beriberi heart failure.

While in Manila I had one long chat with Steve Madey (*CM* 1944), whose letters in The News I have read with much interest.

Recently I arrived back in the States and am in the replacement pool at Brooke General Hospital, Fort Sam Houston, Texas. I was pleased to find Fred Alston (*P* 1944) in the Laboratory at Brooke, which is a Histopathological Center. Fred is doing most of the pathology here, and is turning out a fine job of it. John Seed (*EM* 1946) is running the Blood Bank, and George Livermore (*WS* 1943) is on the Surgical Service.

Best regards to all at the M.G.H.

Another "first"—and how good it is to get them! This one is from Col. Ernest E. Myers, MC (*Or.* 1933), headed Letterman General Hospital, Presidio, San Francisco.

I am still in the Army, but expect to return to Lexington, Kentucky, soon. As a matter of fact, my un-"freezing" letter came today. As you may know, certain of us doctors were "frozen" in the Service after we were eligible for separation — since December, for me. This was necessary in certain fields, particularly plastic surgery and amputation work, because of a dearth of trained doctors.

From September 1942 I was Chief of the Orthopedic Section, and of the Amputation Center started in April 1943, at Bushnell General Hospital. In May of this year I was transferred here to Letterman, to make ready for the transfer of the Amputation Center from Bushnell to this hospital — Bushnell closing June 30.

A new shop for limb-making has been made and equipped here by transfer of our machines and supplies and personnel from Bushnell, and about 130 patients were sent here. To care for them, two ward officers were also transferred, plus three physiotherapists; two amputee instructors in driving and the use of prostheses came also. All have been trained particularly in the care of the amputee. This has meant a reorganization job for me, but it will be finished soon.

Having celebrated my fourth anniversary in the Army, I shall be very glad to return to Lexington and try my hand at private practice again. My job as Chief Surgeon at the Shriners' Hospital for Crippled Children there will be mine again, so I shall keep busy while scrambling for office space and a home to live in.

My short stay at Letterman has been pleasant, and I have enjoyed renewing friendship with Capt. Fred Rhinelander [*ES* 1937 & *Or.* 1938]. He is now Chief of the Orthopedic Section at Letterman.

This letter from Lt. George L. Nardi, MC, USNR (*ES* 1945)—his "first"—tells us what he's been up to and gives us information about several other MGH-ers.

I left the General last summer with Hank Moorman [*WS* 1943] in his old Ford. We made it down to New York in record time but got lost out on Long Island, and it had been dark for quite a few hours before we managed to find our destination. Hank and I had a compartment from New York to Chicago and had a great time all the way. We then went out to Aurora (which is Hank's home) and had a party as only Moorman can give. Tom Wrisley and Mrs. Wrisley were there. Tom was with the Army and stationed at Vaughn Hospital at the time.

After this our ways parted. Hank went to Norfolk to sun himself at Virginia Beach, and I did my sunning and indoctrination at USNH in Memphis. After three weeks down in the land of cotton, I received orders to San Francisco to pick up the *U.S.S. Picking* DD 685. Duty aboard a tin can was a pleasant one. The only surgery I did was suturing a cut tendon which one of the men incurred one day while loading ammunition. I'm afraid I'm a poor sailor because when the anchor came up the doctor went down, and it took a few days after we got out of the Golden Gate before my stomach settled down. We cruised around and had pleasant times playing with the new radar gear aboard, and were on our way to Okinawa when we received orders to come into San Diego for decommissioning.

I left the *Picking* in October and went up to Great Lakes Naval Hospital, where I was joined by Terry Lilly [*ES* 1943]. The two of us were on the neurosurgical service. Both of us were permitted to do a good bit of work and the six months at Great Lakes were profitable ones surgically. We did tantalum cranioplasties, peripheral nerve surgery, and opened quite a few backs for discs and tumors. Lilly was made Chief of the Neurosurgery Department.

Not long ago I received orders down here at U.S. Naval Air Facility, Columbus, Ohio. This is a large Naval Reserve Station for flight training. Ex-pilots come in whenever they can and are checked out in the latest aircraft so that the nation will have a large group of pilots who are competent to fly and fly well.

I hope to be out soon, and plan to return to the General in the fall. Moorman writes he is going back to Boston this summer. Bill Richardson [*WS* 1945] has been floating about in the Pacific for many moons. John Tannheimer [*r.p. P* 1944] is supposed to be aboard the *U.S.S. Solace* in Shanghai harbor. Emerson Drake [*a.r.s.* 1945] called me on the phone a month or so ago. He had left the *U.S.S. Refuge* in San Francisco, and he and Mrs. Drake were driving across the country to USNH, Sampson, where he is now stationed.

I hope this letter gives you a little information about myself and some of the other MGH alumni. [It does, indeed. We wish more of you would write this same kind of letter. *Editor*] I must say that in my travels and contacts I have found the M.G.H. has a very enviable reputation and I'm proud to have been a House Officer there.

In a letter to Dr. Faxon, Lt. Raymond V. Randall, MC, AUS (*WM* 1946) says:

At present I am at the Medical Service School in Texas. The address is Co. D, 4th Basic Officers' Class, Army Medical Department Schools, Fort Sam Houston.

There are quite a few fellows from M.G.H. down here. In the past two weeks I have run across Joseph Gardella (Med.), John Seed (Med.), Carl Gottschalk (Med.), Phil Wilson (Surg.), Sterling Edwards (Surg.), Huntington Porter (Neuro.), and Richmond Holder (Psy.) [all of whom finished at M.G.H. this last spring]. Undoubtedly there will be others in the classes to follow.

For a short time I was stationed at the Separation Center at Fort Dix, where I saw Edward Doisy [*M* 1945] several times. He is in a Post Dispensary and is enjoying his tour of duty.

The weather here is very, very hot and not infrequently it makes me wish for several days at Steele Hill Farm with four or five feet of snow on the ground.

Over two years ago we published a delightful letter from Dr. (then Major) Edward A. Gall (*r.p. P* 1937), in which he told of finding himself, because of an interim of waiting, "well versed in such exotic fields as pipe-laying, steam-fitting, and house-painting". Nothing but changes of address and a report of his promotion to Lieutenant Colonel had come from him since, until this letter.

I feel, frankly, not too newsworthy, but here you have it.

The metamorphosis from O.D. to mufti occurred with little to do in January of this year. The wrench of transition was of such intensity that it took all of five days to move from the excitement of the Separation Center to the "peace and quiet" of my civilian laboratory. My military record was most unpretentious: 45 months; 2 promotions; reasonably fortunate assignments and duties, all at fixed Zone of the Interior institutions. Intermittently there were opportunities to carry out a miscellaneity of studies in mumps, meningococcemia, malaria, infectious mononucleosis, and the ubiquitous hepatitis. Some have emerged in print, some will, and some simply served to fill the larder of experience.

I have returned to my prewar haunts as Pathologist to the Bethesda Hospital, and in addition as Assistant Professor of Pathology at the University of Cincinnati Medical School. Currently, I have also become Surgical Pathologist at the Cincinnati General Hospital.

Having been a civilian for the past few months, I can sum up my reactions succinctly. I like being one!

Both my wife (a one-time supervisor of Ward 4 and an MGH graduate) and I look forward to each issue of THE NEWS.

As far as we know, Dr. Louis A. Goldstein (*r.s. Or.* 1937) spent most of his time overseas with the 19th General Hospital. This short note, from 501 Professional Building, Rochester, N. Y., reports his return home.

I returned home from the European Theatre of Operations in October 1945 and was separated from the Service several weeks later, somewhat to my surprise. I am now back in the old groove in Rochester, having resumed my prewar associations and activities.

Capt. William K. Livingston, MC, USNR (*WS* 1922) sends this "first" from U.S. Naval Hospital, Oakland, California. The letter reveals the kind of work Captain Livingston has been doing during the war and since.

I have had but one assignment for the whole of the war. I have had no sea duty and no front area experiences to report. My work at this hospital has been confined to peripheral nerve casualties. A very fine clinic gradually evolved, which was at its best in the few months before the war ended. It is disappointing now to see it disintegrating. My son, Ken, has been associated with me for the past 18 months, and is now leaving the Navy to join the neurosurgical unit of the Lahey Clinic. He has done fine work here on both our peripheral nerve wards and on the brain service. We have had several other fine young men working with us, and they have accomplished a lot for our patients, not only in repairing war damage to nerves, but in reconstruction of hands, tendon transplants, and the like.

Nerves take a long time to grow, but we have had a splendid group of patients and they have kept up a fine morale. They have the best indoor baseball team on the compound, in spite of their physical handicaps. They call themselves the "Limp Gimps". It has been a pleasure working with these lads. Some 1200 men have been studied and treated here, and we still have about 300 under our care, although they are going out at the rate of four or five each day now.

My only battles have been with directives and red tape. I wish I might have seen more action, yet I don't regret my assignment a bit. It has been a grand experience.

I have enjoyed reading each issue of THE NEWS, and always find items about friends with whom I have lost touch.

Best wishes to all at M.G.H.

All of us remember the several interesting letters which came from Dr. R. Earle Glendy (*r.p.* 1934) while he was serving with the 16th General Hospital in England, France, and Belgium. Last winter we reported the new address in Roanoke, Virginia, for the Doctors Glendy. A recent letter from there reads, in part:—

After I was separated from the service, I spent a very happy two months in Boston, renewing old friendships and acquaintances at the Massachusetts General while preparing to move my family to Virginia. I am now engaged in the private practice of internal medicine and cardiology in this city, and am associated with all the local hospitals.

Dr. Margaret Glendy, my wife, who was on the staff of the Children's Service at the General for many years, is no longer in practice but is well occupied with plenty of pediatrics at home, including a recent siege of the mumps in which both she and I were unwilling victims.

We miss our associations at the General and look forward to visitors from Boston, to whom we extend a cordial invitation whenever they come this way.

We knew that Dr. Alexander M. Waldron (*EM* 1938) had returned from the Southwest Pacific, but this letter from him tells us what he has been doing since his release from the Army.

I returned from thirty months overseas in October 1944 and then spent one year at the Regional Hospital at Fort Knox, Kentucky, as Chief of the Medical Section. I finished my terminal leave last March as a Lieutenant Colonel.

After taking a month's vacation in Florida, I came back to Ann Arbor where I renewed my practice of internal medicine and have been taking some review work at the University Hospital. Two former residents from M.G.H. gave quite a few excellent lectures in their respective fields during this time — Dr. Frederick A. Coller [*WS* 1914] and Dr. Louis H. Newburgh [*WM* 1909]. Recently Dr. Chester Jones spent three days in Ann Arbor, conducting clinics at the University Hospital, and made a tremendous hit. Dr. Tom Ballantine [*WS* 1939] is on the Neurological Service under Dr. Max Peet, and is doing very well.

I am going to try to get down for the Ether Day celebration but am afraid it may interfere with my examinations for the Board of Internal Medicine.

Dr. Marshall deG. Ruffin (*P* 1939) writes, from Suite 916, 1835 Eye Street, N.W., Washington 6, D. C.:—

I am no longer in the Army. I have been in the practice of medicine and psychiatry for the past two months. While returning to civilian life from four years of Army regimentation is a grand experience, it, nonetheless, is not without its confusion, frustration, and almost bewilderment.

This "first" letter from Capt. Addison G. Brenizer, Jr., MC, AUS (*WS* 1942) tells of much traveling about and a promotion in rank.

The "tickler" letter from your office has prompted this note.

My Army career has been checkered, even if routinely dull and lacking in glamour. After six weeks at Carlisle, I went successively to Brooke, Birmingham, and Madigan General Hospitals, and had a bit of "camping out" at Fort Lewis prior to sailing for Guam with a small surgical team. During nine months there I served on the orthopedic, thoracic, and general surgical sections in the 204th General Hospital and had a short period of processing returned prisoners of the Japs. After the veterans were returned to the U.S. or had dropped in the traces I became Chief of the General Surgical Section and settled down to our routine of treating appendicitis and jeep casualties.

In February 1946 I was sent to Saipan to replace Robert K. Brown (*WS* 1939) as Chief of Surgical Service at the 22nd (then 369th) Station Hospital. By the time you receive this note I shall have been sent back to Guam to the 119th Station Hospital (formerly 204th GH), where I shall probably remain until the Army reduces the criteria for my discharge from 39 months' service. The Army apparently expects me to pay rather dearly for the pleasant years in which I got my training at M.G.H.

Since I came to the Marianas late last spring I've seen only a few MGH men — Lt. Col. E. J. Ottenheimer, Comdr. John Wilson, Major Max Chamberlain, and Lt. Henry Moorman.

I hope THE NEWS will continue to come. It

has been a valuable and much appreciated link with home.

I'm looking forward to my return to Boston, to see old MGH friends and to meet my second daughter (now 14 months old) for the first time.

No longer a "silent one" is Capt. Robinson L. Bidwell, 2nd, MC, AUS (*ES* 1943). From the 98th Field Hospital, Yao, Honshu, Japan, came this interesting account of his various assignments and comments on general conditions out there. It was written six months ago.

My conscience has been telling me for some time that I should write to thank you for the pleasure I have derived from each and every copy of THE NEWS. To read the published letters from friends, acquaintances, and one's past instructors is a real touch from home—and, believe me, from out here, the M.G.H. really looks like home.

My own war record has been most dull and uninteresting, which is one good reason for my not having written before. Leaving M.G.H. in January of '44, I went through the usual Army medical basic at Carlisle. From there to Thayer General Hospital for a brief six weeks of surgery.

I was next stuck in Stark General Hospital in Charleston, S. C., for some three months. This was, at the time, a very large Debarkation Hospital. Tremendous numbers of patients came in to us by hospital ship, stayed about three days, and left for other hospitals via hospital train and planes. This gave you just about time enough to start licking your lips over a really good case before it was yanked out from under your nose. It also meant that for some three weeks you would have absolutely nothing but empty wards to look at—then two or three ships would arrive at once, a couple of thousand patients would pour into the hospital, and the resulting chaos would ruin the temper of an angel.

Just as I was beginning to consider ordering a strait-jacket tailor-made, a kind fate moved me to Lawson General Hospital, in Atlanta, Ga. Here I spent a most enjoyable and personally very profitable six months on the Neurosurgical Service. We had a large section—1,000 beds at the time I left—and a very fine Chief, who ran the section on teaching-hospital lines. The staff was young, the hospital pleasant, and a most enjoyable time was had by all.

From there, War Department orders alerted me for overseas service in February 1945, and sent me to Fort Lewis, Wash., to join what was called the 894th Medical Professional Service Detachment. This was, I found out on arrival, a collection of mobile surgical teams gathered under one headquarters. There were General, Orthopedic, Neurosurgical, Chest, and Maxillofacial teams in the outfit, and a very fine group of men. Unfortunately, like so many opium dreams, this one did not last. The outfit broke up, and in April I moved to Camp Beale, Calif., to join the 98th Field Hospital, with which I have remained to the present.

The 98th embarked from Seattle for Hawaii in June, on one of the most unusual Army transports going—the luxury liner *Matsonia*, ex of the San Francisco to Honolulu run. What with very comfortable cabins, fine meals served by skilled Matson Line waiters, and steward service for late snacks, the five-day crossing passed very rapidly and pleasantly. We did not function as a hospital on Oahu, but spent a little time on detached service in some of the long-established General Hospitals in Honolulu. The rest of the time was spent in sun-bathing, swimming, exploring coral reefs, and cursing at the heat. (Don't let anyone tell you Honolulu doesn't get hot!)

We were originally scheduled to take part in the invasion of the Japanese home islands—to go ashore, in fact, on the first day of the invasion of Honshu. The coming of peace, of course, changed that, and I am still thanking a merciful fate, for many of us would have been a bit shopworn if the invasion plans had gone into effect.

With the coming of peace, we were named to be part of the occupation troops, with the 6th Army. We were attached to the 98th Division, which had previously been on guard duty in the Territory of Hawaii, and embarked for Nippon in early September. (May I remark at this point that there is one heck of a lot of blazing hot and uninhabitable ocean between here and home.) Landing was made at Wakayama, Honshu, on September 27, since the harbor of Osaka, our destination, was, and still is, unsafe due to mines. From Wakayama we moved by one of the very modern Jap railways to this little town of Yao, a suburb of Osaka, and the base of action of the 98th Division.

At present, we still do not have our complete hospital set up. We are running a purely temporary and entirely medical unit of 75 beds, in the office buildings of a gelatine factory. This is to take care of all the URI's and other such crockery for the time being. In the meantime, we are evicting the Japs from a seven-story office building in what is left of the city of Osaka.

I say "what is left" advisedly, for our Air Corps really earned its salt around this section of the country. Riding through and around Osaka, which was a heavy industrial city of 3,000,000 population, one sees not blocks, but miles of the city absolutely laid flat. The only buildings left standing are a very few in the center of the city, and these were not war factories. Gas, water, and electrical services are badly disrupted. Public transportation is in very poor condition, and there are few trucks or busses, and fewer passenger cars on the road. Those that are in use run, not on gasoline, but on gas from a charcoal burning device built on to them, and the odor they leave behind is far stronger than the vehicle itself.

Speaking of odors—this is a land of stenches. Either all Japanese have complete paralysis of the olfactory nerve at birth, or it sets in within the first year of life. For an American to ride the twelve or so miles between Yao and Osaka is, the first time, a new adventure in smells. After that, it is a definite ordeal. The travelogues which speak of the smell of cherry blossoms have obviously never been here, or they could never lie like that in print. Sanitation and living conditions are unbelievable, and indescribable until one sees them. One can best say that sanitation neither appears as a word in the Japaness language nor as a fact in the Japanese life, and that decent living conditions are rare. Conditions of bare existence are much more common.

As for some of the famed products of Japan—only a few are evident, and frequently those are of high price and dubious quality. Silk is very expensive and not too common, due to the fact that the extensive silk industry was demoralized years ago in favor of the war effort. Lacquerware is to be seen everywhere, but still rather expensive and much of it not very good. Almost all metalwork is at tourist prices.

OFFICIAL NOTICE

The Electroencephalographic Laboratory plans to conduct an investigation to determine the *absolute* value of the electroencephalogram as interpreted entirely on its own wave form without reference to the clinical history or findings of the patient and as compared with a *correlated* interpretation in which the complete clinical history and findings of all laboratory procedures and the course in the hospital would be included and a review of the electrical tracing at that time.

In order to do this, all members of the Staff who would be interested in coöperating in this investigation are requested to send the patient's clinical record up to the Brain Wave Laboratory, when the clinical data is all in, for the second interpretation of the electroencephalogram. There will, of course, be no additional charge for this second correlative interpretation.

Robert S. Schwab, M.D.
John A. Abbott, M.D.

At the meeting of the Board of Trustees held on July 12, it was voted:

To promote Dr. James P. Whittemore to the position of Assistant Resident on the Children's Medical Service for one year, to date retroactively from April 1, 1946 to April 1, 1947;

That Dr. William A. Law, Assistant Resident on the Orthopedic Service be allowed to terminate his service on June 30, 1946 and that Dr. Haukur Kristjansson be reappointed Assistant Resident on the Orthopedic Service for the term July 1 to December 31;

To reappoint Dr. David G. Freiman as Assistant Pathologist;

To grant leave of absence to Dr. Isaac M. Taylor, Assistant Resident in Medicine, from July 1 to October 1, and to appoint Dr. Robert E. Barkin as Substitute to cover Dr. Taylor's duties.

The Trustees also voted to appoint:

Dr. Francis T. Gephart as First Assistant Resident in Surgery, beginning August 1;

Dr. Robert S. Grier as Assistant in Medicine;

Dr. William N. Jones as Intern on the Orthopedic Service for one year, beginning July 1:

Dr. Gustav G. Kaufmann as Assistant in Medicine;

Dr. Peter H. Knapp as Assistant Resident in Psychiatry, beginning January 1, 1947;

Dr. Raymond F. Kuhlmann as Assistant Resident on the Orthopedic Service for one year, beginning October 1;

Dr. John B. McKittrick as Assistant in Surgery Pro Tem during Dr. Leland S. McKittrick's absence;

Dr. Edwin H. Mulford as Assistant Resident in Neurosurgery;

Dr. Benson B. Roe as Second Assistant Resident in Surgery, beginning July 1;

Dr. John E. Stewart as Assistant Resident on the Orthopedic Service, beginning January 1, 1947;

Dr. Elenore C. Zaudy as Assistant to the Children's Medical Service, beginning September 1;

As Interns for the term of one year, beginning July 1, 1947:

Medical

Warren Bennett
Robert J. Brockhurst
Hugh Chaplin, Jr.
Amos I. Chernoff
Lincoln D. Clark
Carol C. Dickson

William P. J. Peete
James M. Shannon
Weldon W. West
John A. Williams
Edward H. Wilson, Jr.

The General Executive Committee, at their July meetings, voted:

That Dr. Lane's request that Dr. Clito R Damiani's appointment as Resident in Dermatology be extended to October 1 be granted;

To approve the appointment of Dr. Frances E. Jones (Bonner) as Graduate Assistant in Psychiatry for one year, beginning in September;

To appoint Dr. Vincent P. Dole, Jr. as Clinical Fellow in Medicine;

To appoint Dr. Henri L. M. LeBrigand as Research Fellow in Surgery.

The General Executive Committee appointed the following Graduate Assistants:

Dr. Charles B. Burbank, in Surgery
Dr. Brown Dobyns, in Surgery
Dr. John J. D'Urso, in Dermatology
Dr. William H. Timberlake, in Neurology

The following Graduate Assistants were reappointed for the term July 1 through December 31:

Medicine

Herbert Barry, Jr.
Winifred Chase (Pulmonary)
James H. Currens (Cardiac)
Anne P. Forbes
Isadore H. Jaffee (Allergy)
Carl J. Josephson (Cardiac)

LOUIS HERBERT BURLINGHAM

Doctor Louis H. Burlingham (*WM* 1907) died on June 24, 1946. To his fellow interns, his associates in hospital administration, and many other friends his loss is a heavy blow.

He was born in Willimantic, Connecticut, in 1880, was graduated from Yale University in 1902, and received his M.D. at Johns Hopkins in 1906. He was a House Officer at Massachusetts General Hospital from 1906 to 1907 and Assistant Director from 1907 to 1912, when he was appointed First Assistant Superintendent at Peter Bent Brigham Hospital. He remained there until 1917, when he left to become Administrator of the St. Louis Children's Hospital and Superintendent of the Barnes Hospital in that same city. In 1937 he was forced to resign because of failing health.

Doctor Burlingham was a Trustee of the American Hospital Association from 1919 to 1921, and was elected its President in 1928. Besides belonging to many other professional and social organizations, he was a Member of the Medical Superintendents' Club.

A man of high character, and a lovable and faithful friend has left us.

F. A. W.

* * *

Dr. Paul D. White and Dr. Robert L. King, a prominent Seattle surgeon, are planning to send an expedition to the North Pacific very soon to study the heartbeat of a whale. Dr. White has taken the heartbeats of other great mammals, and his interest in the whale began several years ago. Governor Gruening of Alaska has arranged with the U. S. Wildlife Service for their coöperation in the undertaking.

* * *

In addition to the citations already mentioned in The News, the following have been received:—

Col. Thomas H. Lanman, MC (*ES* 1918)—Commendation . . . I commend you for the superior manner in which you have performed your duties as Commanding Officer of the Convalescent Hospital [Waringfield, Northern Ireland] from 29 July 1942 to the present date [19 November 1942]. You have had the difficult task of blending personnel from several different organizations into one highly efficient, harmonious unit. It was through your utmost loyalty, devotion to duty, and zeal that the many perplexing problems arising during this time were solved in such a superior manner.

It is desired to commend you also for the outstanding results achieved in the successful treatment of the hundreds of jaundice patients in your hospital, making possible the return to duty of a large percentage of the cases.

Your accomplishments and reputation in the service of your country are comparable to the enviable reputation you enjoy as an outstanding teacher in civil life in one of our leading American Medical Schools.

(signed) Leroy P. Collins
Brigadier General, U.S.A.,
Commanding

This communication is forwarded with pleasure and is completely concurred in.

(signed) M. G. Keeler
Colonel, M.D.,
Commanding

26 June 1945

Commendation . . . It is my desire to commend you for your exceptionally meritorious performance of duty as Surgical Service Coordinator and Surgical Consultant for the 12th Hospital Center from 6 June 1944 to 6 June 1945. The record of but 71 deaths among 79,046 battle casualties treated in the hospitals of this Center is a magnificent tribute to your capabilities.

Your skillful guidance of younger surgeons and your understanding judgments of their problems contributed immeasurably to the successful integration of the units. Your loyalty and devotion to duty was an inspiration and challenge to all officers with whom you served. Your sound surgical advice unquestionably saved many lives. Your contribution to the over-all highly successful mission of the 12th Hospital Center is inestimable.

For a job well and faithfully done there remains for you a great sense of personal satisfaction. I wish to add to it my heartfelt appreciation of your fine service to the sick and wounded of the Armed Forces of the United States Army.

(signed) Asa M. Lehman
Colonel, Medical Corps
Commanding

Legion of Merit . . . For exceptionally meritorious conduct in the performance of outstanding services as Surgical Consultant, 12th Hospital Center, from 6 June 1944 to 8 May 1945. Colonel Lanman displayed outstanding judgment, zeal and devotion to duty in directing the surgical policies for the care of thousands of battle casualties. His exceptional services have resulted in the saving of life, the prevention of serious complications, in shortening the time of incapacity, and conservation of manpower. The superior services performed by Colonel Lanman reflect great credit upon himself and the armed forces of the United States. [Dated 2 October 1945]

Two very important honors have been conferred upon Dr. Marius N. Smith-Petersen, our Chief of Orthopedic Surgery, by his native country, Norway. THE NEWS takes great pride in publishing extracts from two letters received by Dr. Smith-Petersen.

March 18, 1946

. . . On the 7th of May, 1946, the University of Oslo will hold a Ceremonial Graduation of all those who have proceeded to the Degree of Doctor since 1938. On the same occasion there will be a creation of Doctores Honoris Causa, and the Senate has decided to confer upon you the Degree of Doctor Honoris Causa, as you have previously been informed by telegram. The Senate has the honor to invite you to be present on this day.

(signed) Otto Lous Mohr, Rector
University of Oslo

June 13, 1946

. . . I have the honor to inform you that according to a letter just received from the Foreign Ministry in Oslo, it has pleased H.M. the King of Norway to appoint you Commander of the Royal Order of St. Olav for your valuable service to Norwegian interests through many years. I wish to convey to you my heartiest congratulations, together with the expression of my gratitude for your great service to my compatriots.

(signed) R. Christensen
Consul General

We are told that this is the highest honor or decoration that is awarded by the King of Norway.

Lost and *not* found department: Mail sent to the following people has been returned to the office of THE NEWS, and all attempts to reach them through last known home addresses have failed. We are trying to bring our military records up to date. If you know the whereabouts of any of the persons listed, we would appreciate your sending that information to the editor of THE NEWS. In each instance, the military rank is the last we knew.

Capt. Robert K. Brown, MC, AUS (*WS* 1939)
Major Francis H. Chafee, MC (*gr. asst. M* 1942)
Major J. Maxwell Chamberlain, MC (*NS* 1934 & *WS* 1937)
Major Roy B. Cohn, MC (*P* 1933, *ES* 1936, *r.s. NS* 1934, *WS* 1937)
Lt. Col. Kendall A. Elsom, MC (*res. fel. M*)
Major Russell V. Fuldner, MC (*Or.* 1939)
Major Phillip H. Gates, MC (*McLean Staff*)
Capt. Arnold M. Gordon, MC, AUS (*CM* 1929)
Capt. Thorolf E. Gundersen, MC, AUS (*r.p. N* 1941)
Capt. Henry M. Hills, Jr., MC, AUS (*Or.* 1942)
Lt. Wayne Hobbs, MC, USNR (*a. M* 1921-42)
Major William R. Hockwalt, MC (*Or.* 1931)
Major T. Wiley Hodges, MC (*Or.* 1941)
Lt. William L. Holt, Jr., MC, USNR (*r.p. N* 1937)
Major Ernest B. Howard, MC (*a. M*)
Lt. Col. Gilbert T. Hyatt, MC (*WS* 1931 & *Or.* 1934)
Major Frederic W. Ilfeld, MC (*Or.* 1937)
Lt. Gordon E. Jones, MC, USNR (*ES* 1939)
Lt. Albert W. Kitts, MC, USNR (*CM* 1941)
Capt. John T. Lambert, MC, AUS (*WM* 1942)
Capt. Pembroke N. MacDermot, MC, RCA (*CM* 1930)
Major James S. Mansfield, MC (*gr. asst. M* 1942-43)
Capt. Robert E. Mason, MC, AUS (*M* 1943)
Flight Lt. Donald Murnaghan, MC, RCAF (*res. fel. & gr. asst. M* 1940-42)
Capt. Louis Nathan, MC, AUS (*Or.* 1930)
Lt. Gardiner Pier, MC, AUS (*WS* 1943)
Lt. Col. Reno R. Porter, MC (*res. fel. M* 1939-41)
Lt. Comdr. J. Maurice Robinson, MC (*r.p. R* 1936)
Lt. Henry N. Russell, Jr., MC, AUS (*CM* 1939)
Capt. James D. Schuler, MC, AUS (*CM* 1939)
Lt. Arthur S. Spangler, (*r.p. D* 1945)
Lt. Col. John D. Stewart, MC (*ES* 1930)
Capt. Guy R. Sweeney, MC, AUS (*gr. asst. M* 1942-43)
Lt. Marian A. Wenger, MC, USNR (*res. fel. Psychi.* 1941-42)
Capt. George M. Wyatt, MC, AUS (*a. R* 1942-46)

MASSACHUSETTS EYE & EAR INFIRMARY

The Howe Laboratory of Ophthalmology at the Massachusetts Eye and Ear Infirmary is setting up experiments to use radioactive isotopes in studying intraocular fluid formation and glaucoma. The research project, which it is hoped will be under way by September 1, is one of the first in which these substances have been used in work on diseases of the eye.

This research at the Howe Laboratory is not an entirely new undertaking. It was started in 1941 with radioactive forms of sodium, chlorine, and phosphorus obtained from Harvard's cyclotron, but was interrupted by the war. Its resumption will be aided greatly by radioactive carbon which has become available to medicine only recently, and by new methods and equipment for measuring results.

In the eye experiments, which are conducted on rabbits (some of which have glaucoma), radioactive isotopes are used to trace the amount of chemical elements absorbed from the blood stream and secreted in the eye fluid. It is hoped in this way to discover whether an abnormal concentration of one of the substances of the eye fluid accompanies the disease.

Most of the work, which will require considerable special knowledge and special apparatus, will be under the supervision of Dr. V. E. Kinsey. To defray the initial expenses, a gift of $500 has recently been made to the Howe Laboratory by Mrs. Elizabeth Kidder, a patient of Dr. Edwin B. Dunphy, who is herself a sufferer from glaucoma.

At a meeting of the Executive Committee, held at the Infirmary on July 15, the following appointments were made:

Dr. Henry A. Mosher (*Oph.* 1941) Senior Clinical Assistant in Ophthalmology
Dr. Aram Roopenian (*Oto-Lar.* 1944) Clinical Assistant in Oto-Laryngology

---

Dr. Virgil G. Casten (*Oph.* 1931) is to resume his duties at the Infirmary as of September 1.

Dr. John H. Thomas completed his service at the Infirmary on July 31 and has begun practice in Ohio. Dr. Thomas served as Oto-Laryngological Resident from August 1, 1943 to October 1, 1944, and as Ophthalmological Resident from December 1, 1944 to July 31, 1946.

Dr. John Thomas Rambo will start service as Resident in Oto-Laryngology on September 1.

Dr. Wendell C. Irvine (*Oph.* 1941) has written us this most interesting and cordial letter.

It has been a pleasure to receive THE NEWS regularly, particularly during the time I was in the Service. Without exception, each copy revealed something of particular interest to me, even if it was only the mention of some old friend or the amusing and often plaintive contributions of fellow doctors who, for the most part, echoed far more vividly than I could have done the complaints and yearnings common to us all.

It was always a source of regret during my four and one-half years of Army Service that I did not have the opportunity to meet more of my friends from the Eye and Ear and M.G.H.; but during my sojourn in the ETO (England) I was happy to have had a visit with Garrett Sullivan, and also was disappointed in being just a little too late to see Doctors Edwin Dunphy, Tom Cavanaugh, Henry Mosher, and Bob Mattis.

I cannot recall any experiences that were not of the nondescript Army type. My combat experience was confined to two minor skirmishes, one with a V-1 and one with a V-2 in London. My only regret is that I could not frighten them as much as they frightened me.

Since leaving the Service ten months ago I have been practising with my uncle and my cousin — the latter Dr. S. Rodman Irvine, also a devout Eye and Ear alumnus. My pleasure at being back in civilian life needs no further comment, and I trust that any and all of my friends who are or have been at the Eye and Ear or M.G.H. will not fail to pay me a visit at 727 West Seventh Street, Los Angeles, California, when they come west.

We can always count on something interesting when we open a letter from Capt. Daniel J. Reagan, MC, AUS (*Oph.* 1943 & *Oto-Lar.* 1944). This one was written from the Station Hospital, Newfoundland Base Command, ATLD-ATC, APO 862 c/o Postmaster, New York, N. Y.

I wrote a letter to Dr. Cogan which was published in THE NEWS last December. Since that time I have had a somewhat varied and peculiar Army life. In December I was made Commanding Officer of the 188th Station Hospital at Narsarssuak, Greenland, and during the succeeding four months lived a hectic administrative life, interspersed with trips to Eskimo villages and other places of interest in Greenland. Although I nearly succeeded in breaking my neck becoming a Greenland mountaineer, I lived through my detention in that garden spot of the universe. My last month there was very interesting, being occupied in collaborating on a dental and ocular survey of the Eskimo villages in southern Greenland, the results of which may be published some day. The survey was subject to all the difficulties inherent in traveling in Greenland, requiring that we proceed by small boat and walk over mountains, carrying our own food, in order to reach the various villages. For the past two months I have been stationed at Fort Pepperell, Newfoundland — a beautiful post, and actually civilized. I hope to be back in the States very soon.

From an eye and ear, nose and throat point of view, my life overseas has been quite sterile There has not been enough specialized work to keep me really busy. However, my life has been interesting sociologically, beneficial physically, and sometimes trying climatically.

Hope to see the Hospital, the Infirmary, and many of my friends soon. THE NEWS has been a great source of pleasure and interest during my stay in the Army.

New addresses:—

Dr. Richard T. Barton (*Oto-Lar.* 1945), 405 North Bedford Drive, Beverly Hills, Cal.

Dr. Raymond M. P. Donaghy (*NS* 1939), Mary Fletcher Hospital, Burlington, Vt.

Capt. Lytt I. Gardner, MC, AUS (*CM* 1944), Fitzsimons General Hospital, Denver, Col.

Dr. Hannibal Hamlin (*r.s. NS* 1942), 1101 Beacon St., Brookline 46, Mass.

Dr. Paul Scott Hansen (*EM* 1939), 1421 State St., Santa Barbara, Cal.

Dr. E. Porter Jewett (*Oph.* 1945), 575 Park St., Attleboro, Mass.

Dr. Edward C. Lambert (*EM* 1943), Children's Hospital, 219 Bryant St., Buffalo, N. Y.

Lt. John H. Peters, MC, USNR (*WM* 1943), 123 Marvel Road, New Haven 15, Conn.

Dr. Carter R. Rowe (*Or.* 1939), 262 Beacon St., Boston, Mass.

Dr. John H. Talbott (*past a.p.*), Buffalo General Hospital, 100 High St., Buffalo 3, N. Y.

Lt. Col. Milton S. Thompson, MC (*Or.* 1934). Annex IV, Brooke General Hospital, Fort Sam Houston, Tex.

Dr. Arthur M. Walker (*EM* 1925), Department of Medicine and Surgery, Veterans Administration, Washington, D. C.

Brief bits:—

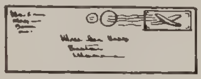
Dr. Staige D. Blackford (*EM* 1927) left the Army with the rank of Colonel. He is now at University Hospital, Charlottesville, Va.

Dr. M. Morris Pinckney (*WM* 1932) is back in private practice at Medical Arts Bldg., Richmond, Va. He was advanced to Lieutenant Colonel before his release from the Army.

Dr. Ralph F. Traver (*ES* 1930) is now Chief Surgeon at Veterans Administration Hospital, Bath, N. Y.

Dr. Lewis A. Vance (*P* 1937 & *r.p. R* 1939), who was a Commander during the war, has resumed private practice at 262 Beacon St., Boston, Mass.

Dr. Arthur T. Willetts (*r. U* 1941) has joined the Summit Medical Group, 129 Summit Ave., Summit, N. J. He says, "I am busy, and this keeps me out of trouble."



It is always good to hear from our 1946 alumni who are now in military service. This letter from Lt. Robert S. Shaw, MC, AUS, from 5th Basic Class, Army Medical Department School, Fort Sam Houston, San Antonio, Texas, brings us news about several of them.

My class of interns is quite well represented here. We have Jim Stewart, John Seed, Ray Randall, Albert Stunkard, Dwight Fowler, and Carl Gottschalk. Joe Gardella is also in the school here, and appears to be bearing up remarkably well.

I saw P. D. Wilson, Jr. the other evening. He is quite content, and is assigned to permanent duty on the Orthopedic Service of Brooke General Hospital here in San Antonio.

All of his friends will be glad to know that Dr. Dana L. Farnsworth (*WM* 1935) will soon be permanently located near Boston. This letter from him explains why.

I was released from active duty in the Navy in October 1945, following three and a half months at a new hospital in Palm Beach and nearly two years at the National Naval Medical Center, Bethesda, Maryland. Since that time I have been back in my old position as Director of Health at Williams College, but in September I am moving back to the Boston area, since I have been appointed Director of the Medical Department at Massachusetts Institute of Technology. After September 20 our new address will be 52 Old Concord Road, Belmont.

This is the first letter in over two years from Dr. Lloyd E. Hawes (*EM* 1939, *CM* 1940, *a.r.p. R* 1942). His address is 7 Newbury Street, West Somerville 44, Mass.

My career in the Army was entirely in the United States. I started at Halloran General Hospital, Staten Island, and then was transferred to Rhodes General Hospital in Utica, where I remained in charge of the X-ray Department for two and one-half years. Promotion to the grade of Major occurred in July 1945. The life at Rhodes was very similar to that in a civilian hospital, although the pressure of work was very great.

With the closing of Rhodes in May I filled out my 45 months of duty, as required of a specialist in Radiology, as Chief of the X-ray Service at Halloran General Hospital. Separation occurred on July 1.

Although the Army career was filled with work and the X-ray films of about 80,000 patients were seen by myself, I should like to say that the position of Radiologist in the Army Medical Corps was very pleasant and profitable. The mass production of X-ray films, the expediting of technique, and the numerous types of filing which were constantly demanded should prove of benefit in civilian practice.

Lt. Terry E. Lilly, Jr., MC, USNR (*ES* 1943) will probably be out of the Navy and into his canoe before this letter from him can be published. It was written July 4.

There has been little of a newsy nature from this sector except for the final wind up of my Navy career. George Nardi (*ES* 1945), who had kept me company here at Great Lakes since my arrival in December, was transferred to Columbus, Ohio. This took the spirit out of our MGH surgical team, leaving only a job to be done.

I go to the separation center to strip off the blue and gold on July 15 — with no regrets. This is a late date, considering the comparatively short service of many of my fellow companions making this last stand for the Naval Reserve. It also puts one on the back row in the veterans' rush for the bottleneck of postgraduate training.

Feeling my freedom, however, I shall be in the vast lake country and wooded regions of northern Ontario. My wife and I are going to the Timagimi Forest preserve for a summer of canoe-tripping.

For your file on MGH men in the Service, I am enclosing a chronological summary. I was most fortunate, you will see, in first-assisting two excellent surgeons for the major portion of my active duty.

Best regards to all. I hope to be at M.G.H. on Ether Day, but not with the north woods beard as pictured in Miss Meehan's file — as far as I know, the only picture I left behind at the General. That one I could not retrieve.

A "first" from Dr. Benjamin V. White (*res. fel. Psychi.* 1937-38) says:—

My naval career was never tinged with a degree of excitement which would make particularly interesting news — two years on the staff of the Naval Medical School in Bethesda, and a little better than a year attached to the air-conditioned hospital ship *Benevolence*. We were in Tokyo Bay at the time of the surrender and had the privilege of screening the first American prisoners of war who were liberated.

I was released from active duty on May 8 and have been spending the past three months making preparations to resume practice, limited to gastroenterology, here in Hartford.

Capt. James J. McCort, MC, AUS (*r.p. R* 1944) is Chief of the X-ray Service at McCornack General Hospital, Pasadena 2, California. A "first" letter from him says:—

My Army experience has been noteworthy for its lack of excitement. All twenty-two months of it have been spent in the Zone of Interior — the first part as Chief of X-ray

Therapy at Lawson General Hospital until its recent closing, and now as Radiologist in this institution, a plastic and eye center.

The last letter we had from Dr. John B. McKittrick (*An.* 1938 & *WS* 1939), published in September 1945, told us a little about what must have been exciting experiences in North Africa, Italy, and with the 7th Army in Southern France. In reply to a recent request for information, to bring him up to date, he writes:—

> I feel very ungrateful at having to be prodded for a little news about myself, especially when it is the MGH News that asks for information. I thoroughly enjoyed The News overseas and continue to do so.
>
> Since I have been back in the States, which is now almost a year and a half, I have been variously employed — first at Walter Reed, which period terminated with my discharge from the Army, and subsequently as assistant to my brother in surgery here in Boston. Aside from generally keeping Leland out of trouble, I have done a little work on the side at the Massachusetts General in the Out-Patient Department and teaching surgical technique to the third year students. Just by the way, the Palmer Memorial Out-Patient Department has also occupied a certain portion of my time.
>
> There really isn't much more to say except that my wife has had another son, making it three of a kind — a pretty good poker hand in any man's language.
>
> I hope it won't be too long before all letters from all the MGH men will have civilian postmarks. The Army seems a long way behind me now, so you see the human organism is very adaptable — or, should I say, forgetful.

It is good to hear again from Dr. Milton L. Miller (*EM* 1932), after more than two years of silence except for changes of address. A note from him says:—

> After forty-two months in the Medical Corps of the AAF, I was released from Service with the grade of Lieutenant Colonel. I worked at my specialty (psychiatry) in the Army, and had a good deal of experience with war neuroses, on which I published several papers for medical and psychiatric journals.
>
> Prior to the war, I was for some years on the Staff of the Chicago Institute for Psychoanalysis. Now I am remaining in California, and have begun the practice of psychoanalysis and psychiatry at 337 South Beverly Drive, Beverly Hills.

We are always especially appreciative of letters from those of you who write, without being nudged, to tell their friends what they are doing. Such a one is Dr. Harold I. Meyer (*WS* 1925).

> I always enjoy getting The News and reading about my many friends. I thought some of you might be interested to know of my promotion last July to Senior Attending Surgeon of St. Lukes Hospital here in Chicago. I am also a Senior Attending Surgeon at Cook County Hospital, and Assistant Professor of Surgery at the University of Illinois College of Medicine.
>
> I shall make every effort to be back for the Ether Centenary in October.

To report his return to private practice and to do his best to make us Bostonians uncomfortable and envious, come winter, Dr. Edward Parnall (*Or.* 1932) writes, from 702 East Central Avenue, Albuquerque, New Mexico:—

> I was separated from the Army in April 1946 and have been located in this beautiful city since May.
>
> If anyone out in cold, damp Boston gets tired of the climate there, I would like him to see this place. Here we have *climate;* you folks have *weather!*

A report on what Dr. Joseph Stokes, Jr. (*WM* 1921) was doing for the Army appeared way back in the second issue of The News. Since then—silence. Now this welcome reply to our query as to his present activities.

> I have read the copies of The News with such great interest as to warrant a reply to your plea for a few data.
>
> I am still working with the Army Epidemiological Board, as Consultant to the Secretary of War, despite the fact that it has had a reconversion streamlining. While in the Mediterranean Theatre during the final winter of the war, to study methods of preventing epidemic hepatitis for the Epidemiological Board, I had the great pleasure of seeing many members of the 6th General Hospital and other old House Officers from the M.G.H., including many surgeons who developed the successful surgical teams operating close to the line of combat.
>
> I hope very much to get back for the Ether Day celebration with [Isaac] Starr [*WM* 1922] who is now Dean of the School of Medicine, University of Pennsylvania.

Dr. Stokes is Professor of Pediatrics at the same School of Medicine.

We are so glad we wrote Dr. Wilbur A. Sawyer (*WM* 1908) for an account of himself, for everyone is going to find this letter, which came in reply, one of the most interesting we have ever received. His letter is headed 3927 Idaho Ave. NW., Washington 8, D. C.

> It is stimulating to get your letter suggesting that an account of my present activities might be of interest to readers of The News. I must put some words on paper before the reaction subsides.
>
> Your reference to military service reminds me that I have become one of the ancients among the graduates of the West Medical Service, and that my active Army service was really in World War I, in which I was Major in the Medical Corps. So, in the recent conflict I have had to content myself with civilian duties as Consultant to the Secretary of War and Director of the Commission on Tropical Diseases of the Army Epidemiological Board, Honorary Consultant to the Medical Department of the Navy (again with regard to tropical diseases), Member and onetime Chairman of the Subcommittee on Tropical Diseases of the Medical Division of the National Research Council, and Member of the Ethnogeographic Board.
>
> While my duties with these organizations required frequent attendance at meetings in Washington and a tour of investigation on the west coast, my main activity was as Director of the International Health Division of the Rockefeller Foundation in New York and Director of the related war organization, the Rockefeller Foundation Health Commission. My part of all this war work came to an end when I retired from the International Health Division and resigned my several war relationships. This left me free to join up with the United Nations Relief and Rehabilitation Administration on June 1, 1944, as Director of Health and head of the Health Division. Since then I have been entirely occupied with emergency efforts in the health field to repair the unprecedented widespread destruction resulting from the war, to help governmental health authorities to get quickly on their feet, and to insure against the expected widespread epidemics. My quarter-century of public health experience with the International Health Division and the previous years with the State Board of Health of California and the Army stood me in good stead in facing this new responsibility.
>
> The liberated countries in need of assistance have received the most attention. At the peak of operations the health staff of UNRRA included about 1200 professional persons. There are now over a thousand of them, including 456 doctors, 527 nurses, 29 dentists, and about 30 sanitary engineers. The largest numbers are assigned to the care of displaced persons in Germany, but many are serving with UNRRA's country missions.
>
> In connection with the organization and supervision of this work I have visited many countries, to confer with UNRRA's health officials and the national health authorities with whom they are coöperating. This has given me occasion to visit Poland, Germany, Greece, Italy, and China, and the opportunity to view the unspeakable damage, destruction, and destitution which this war has inflicted. My interest was, of course, to anticipate the resulting threat to the health of millions and prepare to give advice and assistance in corrective and preventive measures.
>
> On the brighter side of the picture is the fact that we have not had sweeping epidemics in the liberated countries to the degree expected. The march of medical science since the first World War and the increase of trained public health personnel have made it possible to keep even typhus in check. I was astonished in Poland to find that typhoid fever was a much greater and more difficult problem than typhus, which seemed well in hand. Diphtheria is one of the most prevalent of epidemic diseases in the northern part of continental Europe. Tuberculosis and venereal disease have greatly increased, as would be expected. The main problems are more those of familiar diseases than those of the exotic. Yellow fever, on which my associates and I worked for so many years in Africa, Brazil, and New York was completely controlled in the armed forces through the method of immunization devised by us in the Laboratories of the International Health Division. Cholera was entirely absent from Europe, though moderately prevalent in China, and plague made only a very brief European appearance in Italy.
>
> It will not be long now before the Health Division of UNRRA will be handing over its responsibilities to the health departments of the several governments and the expected World Health Organization of the United Nations. These responsibilities will include the administration of the International Sanitary Conventions of 1944. It will then be possible, I hope, to take some long-deferred vacations and visit the scenes of my early professional life, including the good old M.G.H.

Constance H. Smith (*MGH* 1943) is on duty at U. S. Naval Hospital, Oakland, California. This letter from her shows how closely she is following MGH affairs.

> During the past year one of the best means of my keeping in contact with many friends and acquaintances has been The News. I have read the many letters with interest, and the long ones dealing with medical topics have been quite as interesting and informative as those of a more personal nature. Each month I have passed my copy on to other MGH-ers who have read it from cover to cover, I know.
>
> My travels in the Navy haven't taken me outside the continental limits, although I have been far from my former associates. Before many months I hope to be back in "Bean Town", to visit old friends and familiar places.

A "first" has come from Lt. Jesse E. Thompson, MC, AUS (*ES* 1943). He writes:—

> This is to inform you of a change of address. With the closing of Ashford General Hospital I was transferred to Walter Reed, to continue work started on the surgical treatment of hypertension. This is the Army's vascular center, and there is a great deal of most interesting pathology to be studied. But it will certainly be good to get back to M.G.H., where I hope to be before too many more months elapse.

I want to tell you what a pleasure it has been to receive The News regularly and to be able to keep up with the goings on at the General.

We hadn't heard from Dr. Thomas V. Urmy (*EM* 1928) for a long time and were very glad to receive this letter from him telling about his plans for the future.

I left Camp Chaffee in August 1945 on overseas orders which were canceled after I reached Camp Beale, California, the staging area. After several months' delay I was assigned to Madigan General Hospital at Fort Lewis, Washington, where I served from December 1945 to March 1946 as an Assistant Chief of the Medical Service, and from then until I went to the separation center in May as Chief of the Medical Service.

Since returning to Boston I have not resumed my former practice, and will go to Williams College as Director of Health in September.

From 2328 Fernwood, Pittsfield Village, Ann Arbor, Michigan, comes this note from Dr. A. Burgess Vial (*ES* 1943).

We have just got a place we can call our own for about two months. Prior to this I have had no real address to give you with any certainty it would apply by the time you got the letter. Living space here in Ann Arbor is pretty scarce.

I finished my job with the 94th Division last December, did a few days' service with the 71st, with Bob Holden (*HMS* '43), got a ticket home, played with my family for a few days, and then started here in the University of Michigan Medical School, reviewing my basic sciences and waiting for a place in surgery.

Please keep my News coming. I thoroughly enjoy hearing about the Hospital and the men who were there when I was.

A long time ago we had a letter from Capt. Royal S. Schaaf, MC, AUS (*WM* 1943) all set up in print and ready for publication. It was at a time when things were happening fast, and before the letter could appear in The News the information it contained was past history and misleading. Now comes another, which reads quite as much like a letter to the "family" as did the previous one.

The best news I have to write is that on 7 July I was separated from the Army and am soon to begin an Assistant Residency on the Medical Service of our M.G.H. During the intervening time my wife and little girl and I are traveling the country, seeing the friends and family so long distant from us.

From England General Hospital I progressed to Fort Dix for three months with the Post Surgeon's Office, behind which imposing facade lurks the daily sick call. My Captaincy limped through the last of April, followed shortly by the welcome word of separation.

While at Fort Dix I was able to re-establish rapport with George Carter (*M* 1943) and to meet his fiancee. He has since been separated himself, and was married in July. Have received a letter from Bob Spencer (*EM* 1943) telling of his getting a three-years' fellowship in Surgery at the Mayo Clinic; he has been separated from the Navy and is in Denver. John Peters (*WM* 1943) is Assistant Resident in New Haven.

Dr. Samuel B. Beaser (*gr. asst. M* 1942) writes briefly, from 636 Beacon St., Boston:—

Returned from the Caribbean a few months ago. After a short sojourn at Lovell General Hospital I was released to civilian practice—a transformation which I heartily enjoy.

Dr. Otto D. Sahler (*r.p. R* 1942) was in Ireland, the last we heard about him, way back in 1944. This letter from him is most welcome. It is headed 501 Grand Avenue, Asbury Park, N. J.

After leaving the 160th Station Hospital, the offspring of the 6th General, I was transferred to the 90th General as Chief of the X-ray Service. We went to France in August 1944, and there from time to time I saw some of the men in the 5th General — especially Howard Suby who had been with us in the 160th. After V-E Day I began a series of transfers that took me to the 305th, 48th, and 117th General Hospitals, then the 150th, 168th, and 121st Station Hospitals. I came home with the last named, landing in New York in October 1945. Was discharged at Fort Monmouth. After loafing around for a while I started practice in Radiology here in Asbury Park, and am Assistant Radiologist at Monmouth Memorial Hospital, Long Branch, N. J., Fitkin Memorial Hospital, Neptune, N. J., and Riverview Hospital, Red Bank, N. J.

It seems a bit peculiar to be working harder than usual at this time of the year, but since we are a seashore resort community this is our busiest season. A new race track opened recently in this county and we can expect to be even busier, for there will be a big influx of people from New York. So far as I know, I am about the only MGH man here, but there are several Harvard men who are among the outstanding surgeons in this county.

My wife and I were in Boston last November for a visit and at that time we held a get-together at the home of Ed Thorp for some of the 160th group. Howard Ulfelder was there, and it was nice to see the old familiar faces once again. It was the first time I had seen Ed Thorp since a very nasty rainy day in Normandy when I found him extricating his long frame from his pup tent. I was able to recognize the tent by a pair of bright blue pajamas he had out front on the wash line.

If all goes well, I hope to get up to Boston for Ether Day and see some of the old gang again. If anyone from Boston gets down to the North Jersey Shore it would be a pleasure to have them drop in.

I had the pleasure of listening to Dr. Linton and Dr. Smithwick at the New Jersey State Medical Society meeting in Atlantic City last May.

Capt. Thomas S. Risley, MC, AUS (*ES* 1942) has written a "first". It is headed 424 Elgin Avenue, Forest Park, Illinois. He says, briefly:—

I have refrained until now from communicating my experiences in the Service to you, for they have not been adventuresome nor as interesting as most communications you receive.

Upon leaving the M.G.H. in October 1944 I was assigned to Hines Hospital in Illinois and have had an extremely interesting and profitable time doing vascular surgery. At present I am on a general surgical service, working under the new Chief of Surgery at Hines.

We are glad to report that Dr. Jack Spencer (*r.p. R* 1934) is back from overseas. A recent note from him says:—

After finishing my terminal leave the first of the year, being discharged as a Colonel, I came back and am now associated with Dr. Langdon T. Thaxter [*D* 1915, *EM* 1916, & *r.p. R* 1928] here at 31 Deering Street, Portland 3, Maine.

Dr. Means has passed on to us this very interesting letter from Lt. Henry J. Kowalski, MC, AUS (*M* 1945), headed Seoul, Korea. It is the first word we have had directly from Lieutenant Kowalski.

A short time ago I joined that vast trek of fighting men destined for the Orient, who bear the dubious honor of being called "Occupation Troops", and I now find myself in that ancient land, Korea.

On March 23 I was one among many at Camp Beale, California, waiting to be processed for overseas service. By some quirk of fate six of us were suddenly picked up from some line or other (there were always many lines made up at Camp Beale) and rushed post haste to the harbor at San Francisco where a huge ship, the *Admiral Sims,* was ready to go to sea. It happened that some 3,000 men were being sent to Korea on this mighty vessel, and just before sailing time somebody had the temerity to discover and report that everybody had forgotten all about the doctors. We were they.

Our task was to run the dispensary. We had a hard time finding it but finally did. Our little place proved to be a paint storehouse far aft. It was not very clean and was plethoric with many half-empty cans of battleship gray, many of which were not lashed fast. The first few days of the voyage were stormy indeed, and consequently the dispensary was surprisingly popular. A lot of paint broke loose and spilled and mingled with some merthiolate similarly spilled, and with each toss and pitch and roll little orange and gray rivers worked their tireless way from port to starboard and back again, coating everything they touched with a tenacious dirty gray slime. Among these conditions we diagnosed NCA.

Korea is the end of the line in name as well as in fact. Until just recently there had been no rotation policy as far as MC's were concerned and bitterness had reached an all-time high. Gradually, out of the chaos, some organization seems to be making its presence felt, but things are still indefinite.

Enteric fevers, parasitic infestations, bubonic plague, hemorrhagic smallpox, typhus—all these afflict the natives. But the more serious ravages seem to be fairly well controlled by the American Military Government.

I have a fairly good assignment, being on the Medical Service of the only General Hospital in all of Korea. The classification officer was Major J. Maxwell Chamberlain [NS 1934 & WS 1937]. An excellent thoracic surgeon, he did nothing but paper work in Korea. This is the first time since leaving you and being in the Army that I have been on the Medical Service, and it feels like living again.

The Koreans are called "Gooks" by GI Joe. I have discovered that they are not quite as clean as the pictures in the *National Geographic* would have you think. As soon as I acquire a suitable assortment, I shall send you some pictures of native Koreans, and I think you will find them interesting.

Dr. Faxon has received a letter from Lt. Nathan D. Munro, MC, USNR (*ES* 1942). The address is 1203 South West Avenue, Jackson, Michigan. The letter says:—

I will soon be out of the Navy and am now thinking about opening up an office.

My thanks and congratulations for The News, which was mighty nice to get when I was in the Service. It enabled me to see a few of the fellows.

With good luck, I shall attend the Ether Day meetings.

This letter from Dr. George E. Heels (*a. obst.*) should have been directed to all of you who, by your letters and articles so generously contributed, have made The News what it is.

Since we are all back again, I think it is appropriate to express my sincere thanks for The News. To receive it was a real pleasure and an event to be looked forward to. Two copies reached our Unit in England—Al Englebach's and mine—and they were both very well thumbed to gather news of mutual friends.

It is good to be back; and, in spite of Labor, no butter or sugar, etc., it's still the land of "Milk and Honey".

THE NEWS

MASSACHUSETTS GENERAL HOSPITAL 1811

No. 49 Boston, Mass. October 1946

NEUROLOGICAL SERVICE AFFAIRS

Dr. James B. Ayer's retirement as Chief of the Neurological Service, after almost 20 years as Head of the Department, has already been announced in the August issue of THE NEWS. Various members of the Staff have felt that a short history of the Service and its growth would be of general interest at this time.

The Department of Neurology had its beginning in 1872, when the Board of Trustees created the office of Electrician and specified that his "duties shall be to take charge and proper care of all magnetic and electrical apparatus . . . , and administer magnetism and electricity to patients, whenever called upon by the Physicians and Surgeons". Dr. James Jackson Putnam was given the appointment, but the next year his title was changed to Physician to Out-Patients with Diseases of the Nervous System. From the very first Dr. Putnam urged the advisability of a house service for neurology. In 1907 he wrote, "All large hospitals have 'special' out-patient services, ... Looking at the matter in a large way there is surely no reason for discriminating sharply between out-patient departments and wards." But he was ahead of his time and his arguments failed to obtain a house service. In 1903 neurology had been assigned two beds.

In 1911 the Staff consisted of: Chief of Service, James J. Putnam; Neurologists, Henry C. Baldwin and E. Wyllys Taylor; Assistant Neurologists, Walter E. Paul, Joseph H. Pratt, and George A. Waterman; Assistants, James B. Ayer and George Clymer.

Dr. Clymer is still an active member of the Staff. One may see him almost any day in the out-patient clinic, and during the war he was more than ever generous of his time. He is our representative on the Social Service Advisory Committee.

Dr. Charles A. McDonald was appointed to the Staff in 1916 and has been actively connected with the department ever since. He has been particularly stimulating in the staff conferences and in his work with patients and students in the Nerve Clinic.

In 1912 Dr. Putnam retired. Dr. E. W. Taylor was appointed in his place.

In a hospital report for 1912 it was stated that investigation of the effects of salvarsan on syphilitic disorders of the nervous system was being carried out, and added that the work was seriously handicapped by a lack of beds. The work referred to was largely in the hands of Dr. Ayer, who in 1914 reported on the use of salvarsanized serum (Swift-Ellis treatment) in neurosyphilis.

Under Dr. Taylor's administration the activities of the Service continued to increase. Emphasis was placed on the teaching of clinical neurology and neuropathology, and on correlation between symptoms and post-mortem findings. In 1920 a spinal fluid laboratory was started by Dr. Ayer, who early in his career as a neurologist became interested in the cerebrospinal fluid. His development of the cistern puncture in the human, which he reported in 1920, was an outstanding contribution in the field of neurology. This and his later studies concerned with the dynamics and chemistry of the spinal fluid have been of great value in the diagnosis and localization of spinal tumors.

In 1926 Dr. Taylor reached the retiring age, and in the same year a neurological and neurosurgical ward was finally opened on the first floor of the Bulfinch Building (Ward 22 — male, and Ward 26 — female). Dr. C. S. Marshall was the first resident. In 1927 Dr. Ayer was appointed Chief of Service. During his administration and largely through his efforts and support, great progress in the department was made. The neurological and neurosurgical wards were moved in 1934 to temporary quarters in the Baker Memorial, and in 1940 were assigned to their present location on the 11th floor of the new White Building.

Early in the course of the house service a weekly staff conference was established. For a time the meetings were held in the examining room situated between the male and female wards, but after a short time were moved from these rather narrow quarters to the old medical staff room and eventually to the Ether Dome, where they are still held every Thursday morning. Interesting cases of the neurological, neurosurgical, and psychiatric services are demonstrated and discussed. The meetings are largely attended by members of the department, medical students, visiting physicians, and members of other departments of the hospital. Since 1930 mimeographed summaries, indexed and bound, of all the cases shown during the year, with follow-up notes, have been distributed to staff members and a small group of outsiders.

Contacts with other services, originally stressed by Dr. Putnam and Dr. Taylor, have been maintained and enlarged. Medical house officers are assigned to neurology for a part of their training. There is also a representative from the eye department, and once a month a combined neuro-ophthalmological staff conference takes the place of the regular Thursday morning meeting. Dr. Madelaine R. Brown and Dr. John A. Abbott are attached to the South Medical Department as representatives from our Service.

Since 1927 a number of special clinics and laboratories have been established.

Dr. Ayer always had in mind the need for checking clinical diagnoses and for utilizing every possible opportunity for correlating symptoms and anatomical findings, in order to improve our general knowledge and diagnostic ability. He was instrumental, in 1928, in having a neuropathologist added to the staff of the pathology department.

In 1934 the Language Clinic was started under the direction of Dr. Edwin M. Cole (*r.p. N* 1932). This clinic is working with reading disabilities, stammering, aphasia, and other language difficulties. A laboratory for testing cortical function by psychometric methods was started by Dr. Cole in 1944 as an adjunct to the study of language disorders and organic brain disease.

An outstanding achievement has been the work on myasthenia gravis. The Myasthenia Gravis Clinic was begun in 1935 under the direction of Dr. Henry R. Veits and Dr. Robert S. Schwab. They have devised systematic and precise methods of diagnosis and treatment of myasthenia gravis, and have now had a total of almost 200 patients whom they have studied with meticulous care and whose treatment with prostigmine and accessory measures they have supervised. A movie film, made by them, on the history, diagnosis and treatment of myasthenia gravis, has been shown in many parts of the country.

The Electroencephalographic (E.E.G. or Brain Wave) and Electromyographic Laboratory, which belongs both to psychiatry and to neurology, was established in March 1937, and from the beginning has been under the direction of Dr. R. S. Schwab (*r.p. N* 1935) who, since 1940, has been assisted by Dr. M. A. B. Brazier and Dr. J. A. Abbott. In addition to routine electroencephalography and electromyography, this laboratory has studied many special problems and is now engaged in extensive research in the field of psychiatry, and on infantile paralysis, myasthenia gravis, and other neuro-muscular diseases.

Dr. M. R. Brown has been especially interested in vertigo and has organized a Vertigo Clinic.

Dr. J. A. Abbott is in charge of our large Epileptic Clinic.

Physical therapy, which in a way was the earliest designated function of neurology, when Dr. Putnam was appointed Electrician, was carried on for many years in the Nerve Out-Patient Clinic by Mr. Frederick Jackson, Miss Ruth Dupee, and Miss Mary Lynch. In 1939, with greatly increased and modernized facilities, physical therapy was installed in the Domestic Building. Since this change, it has been under the direction of Dr. Arthur L. Watkins (*r.p. N* 1938). Aside from routine physical therapy and muscle testing, special problems in infantile paralysis, nerve regeneration, and fatigue are being studied. Dr. Watkins and his associates give a course of instruction and training for technicians in physical therapy.

This, I am afraid, is an inadequate account of the growth of neurology both before and during Dr. Ayer's term of office. I am pleased to report that Dr. Ayer has been attending our staff meetings, and I trust we may continue to have the pleasure of his company and the benefit of his counsel.

Other news items from the department:

It's how you take it, by Dr. G. C. Caner, was published in the spring of 1946. This is a concise book on mental hygiene, intended primarily for late teen-agers, but equally interesting to adults, and particularly to parents, teachers, and physicians.

Dr. Schwab and Dr. Cole have been appointed Consultants in the Veterans Administration — Dr. Schwab in Neurology, and Dr. Cole in Aphasia.

Dr. Viets is playing an active part in the work of the National Foundation for Infantile Paralysis.

Dr. A. S. Rose has had an active part in the research work on malaria which was carried on under Dr. Allan M. Butler, and is also working on the treatment of neurosyphilis with penicillin.

Charles S. Kubik,
Chief of Service

There is still a shortage of microscopes and those that are available are very expensive. The hospital is in need of microscopes and would appreciate it very much if any alumnus who is not using his microscope currently would lend it, until the scarcity is over, or perhaps sell it to the hospital. Obviously, microscopes of recent vintage would be preferred. Please address all inquiries or information to:

Dr. Benjamin Castleman, Pathology Laboratory.

Dr. Faxon received a post card from Dr. Paul D. White, who headed the group of fourteen American doctors who were on a 3-months' teaching mission in Czechoslovakia. The card is dated August 3, and says:—

> Joe [Aub] and I wish you could see us housed in medieval splendor (with some of the comforts of home) in this land of castles, churches, historic events, and rich farms. Bouzov, the castle shown in the picture, is a very fine one — selected for his summer holidays by Himmler, but now Moravian once more. It belonged to the Teutonic knights and was on the route of the Crusaders.

It is interesting to compare the present manner of appeal for funds for continued research at Massachusetts General Hospital with the way in which money was raised in the early 1800's to start the construction of "a hospital for insane and other sick people".

In our Archives collection is a copy of the *Columbian Centinel,* a Boston newspaper, dated October 14, 1815. It contains a long article, the heading of which reads:

> The Editor of the Columbian Centinel is requested by the Trustees of the Fund for a GENERAL HOSPITAL to give the inclosed address, with the caption, insertion in his paper, as soon as convenient.
>
> MASSACHUSETTS GENERAL HOSPITAL
>
> In February 1811 the Legislature created a corporation by the name of the Massachusetts General Hospital and endowed it with the estate called the Old Province House, valued at the time of the grant, at *forty thousand dollars.*
>
> This donation was accompanied with the condition that a further sum, not less than *a hundred thousand dollars* should be acquired by private subscription or donation within five years (since extended to ten) from the date of the Act of Incorporation. . . .
>
> It became the duty of the Trustees of the Fund, under the powers confided to them by the Corporation, to open a subscription to raise the sum of *one hundred thousand dollars.* Circumstances put it out of their power to offer the subscription books to the public before the month of March 1814. Notwithstanding the pressure of the times, there was subscribed within six weeks no less a sum than *forty-eight thousand dollars.* The Trustees thought it inexpedient to press the generosity of their fellow citizens further at that time.
>
> They have it now in view, in the republication of their Address on the nature, objects and necessity of a General Hospital, to induce the opulent and benevolent of every class to remember this institution among the objects of their charity, in the hope that it will soon be in the power of the corporation to remove the reproach which the want of a respectable hospital now so justly attaches to this prosperous and wealthy community.
>
> It is not intended to solicit donations by private application to individuals. All good citizens who shall read the address, will feel it their duty to contribute in proportion to their ability and will require no further solicitation. The public attention is earnestly called to the facts contained in the Address.

Then follows a transcription of the entire address, dated January 8, 1814 and signed by the eleven members of the Fund Committee. We are quoting a few paragraphs, because of their unique style of expression and statement of facts, and their applicability to our present drive for funds.

> The undersigned . . . find themselves compelled, not less by a sense of duty to the Institution committed to their care than by the most imperious obligations of humanity, to appeal, in behalf of both, to the virtue, the pride and sentiment of a generous and highly privileged people.
>
> . . . Certain we are, that could the number of individuals which, in consequence of the want of such an establishment have fallen victims to disease and neglect; could the nature of their sufferings be realized, in all the aggravation of their circumstances, there would be no need of solicitation or appeal. The charity of our fellow citizens would anticipate all our desires. Their benefactions would flow in upon us like water.

After exposing, in detail, the conditions which prevailed in the Almshouse, where the indigent and those sick in mind or body were all housed together under one roof, the address continues:

> . . . The undersigned are also deeply impressed with the belief that it would be better the proposed Institution should wholly fail, than that it should be commenced upon a cramped and niggardly scale. Much of the utility of such an establishment depends upon its *reputation.* If, through the deficiency of funds . . . it cannot afford the comforts which it presupposes; if it cannot give to the sick the retirement and repose their situation demands . . . it will soon sink in their estimation and in that of the public. In such an event, the real benefits of the Institution cannot be realized. And it is obvious that the general interests of charity must suffer from defects really resulting from the inadequacy of the funds, but which will be apt to be attributed to the supposed inadequacy of such establishments to their purposes.
>
> Besides, the undersigned are willing to confess that they are not ambitious of being the guardians of a charity *merely nominal*; they are satisfied that the sum, affixed by the Legislature as the condition of its grant, is so small, when compared with the wealth of individuals and the greatness of the State, that no plea, arising from "the hardship of the times", "the general embarrassment of affairs", or "the claims of other charities", can, or ought avail the community. If such a proposal as this fail, it will be in the judgment of the undersigned, decisive of the fate of the establishment. It will then be apparent that *the will is wanting* in the public to patronize such an undertaking; and that the honor of laying the foundation of a fabric of charity, so noble and majestic, must be left for times when a higher cast of character predominates, and to a more enlightened and sympathetic race of men.

So ends the address, dated 1814.

And now again, in 1946, M.G.H. is seeking funds for an equally worthy purpose.

Contrary to general public opinion, this hospital is not a state owned institution, nor is it supported by state funds. Rather, it is a private hospital supported by private contributions. That is why it is turning to the public in its quest for funds to erect and maintain its Institute of Medical Science and for the Massachusetts General Hospital Research Fund which will finance the essential research work to be carried on within the institute.

The past war gave tremendous impetus to medical research. At Massachusetts General Hospital many research projects were undertaken at government request and with government funds. Those completed during the war now benefit all men. But many, many other projects started at M.G.H. still remain uncompleted. Work on these must be carried on. With the war ended, government funds were suspended, and Massachusetts General Hospital must receive private contributions if it is to carry on these vital projects.

That is why we have just launched a fund raising program. Contributions to Massachusetts General Hospital's Institute of Medical Science Fund will be devoted to erecting and maintaining the institute's building in which to integrate the major research laboratories now scattered throughout the hospital. Donations to the Massachusetts General Hospital Research Fund will provide the personnel and equipment essential for the carrying on of the research within the building.

Today's research is tomorrow's treatment. The techniques and apparatus developed through research today will be those used for curing human ills and alleviating human suffering tomorrow. The research needed to develop better apparatus and techniques for this treatment obviously requires further money.

At their meetings held on August 9 and September 6, the Board of Trustees voted:

To accept with regret the resignation of Dr. Richard Collins, Jr. from the position of Assistant in Surgery;
To accept with regret the resignation of Dr. Emory O. Lewis as Radiologist, effective September 1;
To accept with regret the resignation of Dr. Edward C. Reifenstein, Jr. as Clinical Fellow in Medicine, effective September 15;
To accept with regret the resignation of Dr. John H. Talbott from the position of Assistant Physician, effective August 1;
To grant leave of absence to Dr. Ira T. Nathanson so that he may go with a commission to Japan to study cancer;
That Dr. Benjamin Tenney's title be changed from Associate Obstetrician to Assistant Obstetrician;
To extend the appointment of Dr. Beverly T. Towery as Assistant Resident in Medicine to December 31.

The Trustees also voted to appoint:

Dr. Frederick S. Bigelow as demobilization extra Assistant Resident in Medicine for a period of nine months, beginning September 1;
Dr. Harry A. Bliss as Assistant Resident in Medicine for nine months, beginning September 1;
Dr. Charles B. Burbank as an Assistant in Surgery pro tem;
Dr. George H. Carter as Assistant Resident in Medicine for nine months, beginning October 1;
Dr. Ernest Craige as Assistant Resident in Medicine for nine months, beginning October 1;
Dr. Charles H. DuToit as demobilization extra Resident in Medicine for one year, beginning January 1, 1947;
Dr. Harold E. Elrick as Assistant Resident in Medicine for nine months, beginning October 1;
Dr. Chester W. Fairlie as demobilization extra Resident in Medicine for one year, beginning January 1, 1947;
Dr. Allan L. Friedlich as Assistant Resident in Medicine for nine months, beginning October 1;
Dr. Robert D. Griesemer as Resident on the Dermatological Service, beginning October 1;
Dr. Charles W. Robertson as First Assistant Resident in Surgery, beginning September 1;
Dr. Royal S. Schaaf as Assistant Resident in Medicine for nine months, beginning August 15;
Dr. Donald P. Todd as Assistant Resident in Anesthesia, beginning September 1;
Dr. Stanley M. Wyman to the position of Radiologist, beginning September 1.

The General Executive Committee, at meetings held during August and on September 4, voted:

That Dr. Stewart P. Seigle, Assistant Resident in Medicine, be allowed to terminate his service on September 30 rather than December 31, and that Dr. Chester W. Fairlie, Assistant Resident in Medicine, who was to have completed his service on August 31, be allowed to substitute for Dr. Seigle from October 1 to December 31;
That Dr. Harrison J. Shull, recently appointed Clinical Fellow in Medicine, is to report for service on September 16 and will remain here for one year.

To appoint:

Dr. Robert W. Butler as Graduate Assistant in Surgery, to work in the Rectal Clinic under the direction of Dr. Hayden;
Dr. Thomas L. DeLorme as Graduate Assistant in Neurology, beginning October 1;
Commander Richard W. Garrity as Clinical Fellow in Neurosurgery, to work under the direction of Dr. James C. White;
Dr. John B. Hamblet as Clinical Fellow on the Children's Medical Service, beginning August 15;
Dr. Rodolfo E. Herrera as Clinical Fellow in Surgery, beginning August 1;
Dr. Howard Hoffman as Graduate Assistant in Urology;
Dr. John A. Isherwood as Graduate Assistant in Radiology, beginning October 1;
Dr. Henry D. Moorman, Jr. as Graduate Assistant in Pathology, beginning September 1;
Dr. William L. Palazzo as Graduate Assistant in Radiology, beginning January 1, 1947;
Dr. Nils B. Skanse as Research Fellow in Medicine;
Dr. Joseph B. Stull as Graduate Assistant in Radiology, beginning January 1, 1947;
Dr. John G. Wiswell as Clinical Fellow in Medicine (Allergy), beginning August 31.

In addition to the citations already mentioned in THE NEWS, the following have been received:—

Josephine C. Barbour, American Civilian, American Red Cross (*Chief of Social Service*) — Medal of Freedom . . . for exceptionally meritorious conduct in the performance of outstanding services in the Mediterranean Theatre of Operations from February 1943 to July 1945. As Director of Hospital Service, Sixth General Hospital, both in North Africa and Italy, Miss Barbour displayed outstanding leadership in the direction of this service. Under her guidance it became one of the major operating departments, serving hospitalized troops with a high degree of efficiency. Her devotion to duty and initiative in handling problems for which no precedent existed was mainly responsible for the success of her mission. The outstanding accomplishments of the Hospital Service reflect great credit upon Miss Barbour and her organization. . . . Awarded by the Commanding General, Mediterranean Theatre of Operations.

Major Howard I. Suby, MC (*r.s. PH* 1937 & *U* 1939) — Bronze Star Medal . . . for meritorious service in direct support of combat operations from 1 January 1945 to 8 May 1945, in France. Major Suby, Chief of the Urological Section and Rehabilitation Officer, performed his duties in a highly commendable manner. As a result of his untiring efforts, the required time of hospitalization was effectively reduced and the maximum number of patients were salvaged for continued military service. His activity on behalf of the sick and wounded exemplifies the highest traditions of the Medical Department and reflects great credit upon himself and the armed forces. . . .

Major William T. S. Thorndike, MC, (*WS* 1919) — Commendation . . . It is with much pleasure and appreciation of the fine work of Major [later Lt. Col.] Thorndike as Commanding Officer of the 154th Station Hospital that I forward this citation. . . .

(signed) M. C. Stayer
Major General, A.U.S.

Lt. Col. Claude E. Welch, MC (*ES* 1934)— Commendation . . . During World War II the Medical Department carried out its mission with outstanding success. This achievement was made possible only through the combined efforts of all Medical Department personnel. Your service with the Medical Department has been exceptional when compared with others of the same grade of similar position, and I wish to commend you for your oustanding contribution as Chief, General Surgical Section, 6th General Hospital.

(signed) M. C. Stayer
Major General, A.U.S.

Major Lester P. K. Yee, MC (*EM* 1939 & WS 1941) — Commendation . . . for work done after the landing on Luzon. . . .

(signed) Robert L. Gillman II
Lt. Colonel, M.C.
Commanding

While the 6th General Hospital was in Rome, during the war, the nuns of the Order of the Good Shepherd very graciously turned over their building to the Hospital and furnished flowers for the chapel. In appreciation of their kindness, Mr. Joseph A. Chapman, who was Captain in the Laboratory Service of the Sanitary Corps, with the 6th General, suggests that members of the Hospital who are interested in sending donations of money, food, or clothing to these Good Shepherd nuns send their donations direct to Mother Mary Angelique (Hanley), Via Aurelia 168, Rome, Italy, or to Mr. Joseph A. Chapman, 115 East 61st Street, New York, N. Y., and he will forward them.

There have been several unusually interesting cases in Ward G this summer, one of which was severe benzol poisoning accompanied by a skin eruption which suggested a leukemid. During August there were three cases of oral moniliasis in the ward at the same time.

Invitations to the Ether Centenary, sent to the following people, at the addresses given, have been returned. Information regarding the present abode of any of those listed below will be greatly appreciated.

Dr. Grace L. Austin (*r.p. D* 1930), 25 Albert Ct., Kensington SW 7, London, Eng.
Dr. Knox H. Finley (*WM* 1934 & *r.p. N* 1936), 25 Shattuck St., Boston, Mass.
Dr. Elvira Goettsch (*CM* 1931), 3975 Broadway, New York, N. Y.
Dr. Lauren Holmes Goldsmith (*CM* 1923), 384 Peachtree St. NE, Atlanta, Ga.
Dr. Hugh P. Greeley (*WM* 1910), 905 University Ave., Madison, Wis.
Dr. Richard W. Greene (*M* 1945), University Hospital, Syracuse 10, N. Y.
Dr. Marshall G. Hall (*P* 1934), 1171 Canton Ave., Milton, Mass.
Dr. John W. Hammond, Jr. (*CM* 1911 & *WM* 1914), 112 East 74th St., New York, N. Y.
Dr. Eleanor J. Herring (*a.r.p. CM* 1944), Vanderbilt Hospital, Nashville, Tenn.
Dr. Nicholas S. Pickard (*Or.* 1940), 1103 Grand Ave., Kansas City, Mo.
Dr. George B. Pierce (*WS* 1900), address unknown
Dr. Charles R. L. Putnam (*SS* 1895), 333 East 68th St., New York, N. Y.
Dr. Logan H. Roots (*WS* 1933), Hua Chung College, Hsichwo, China.
Dr. Leon Rosenfeld (*res. fel. S* 1945), last address M.G.H.
Dr. Margaret S. Shipley (*EM* 1943), 310 Kenoza Ave., Haverhill, Mass.
Dr. William L. Smith (*WS* 1892), 94 North Main St., Brockton, Mass.
Dr. Clarence A. Splithoff (*Or.* 1942), Children's Hospital, Boston, Mass.
Dr. Daniel V. Troppoli (*N* 1927), 66 Bluff Road, Barrington, R. I.
Dr. Warren E. Wheeler (*CM* 1934), Kellogg Foundation, Battle Creek, Mich.

MASSACHUSETTS EYE & EAR INFIRMARY

The Massachusetts Eye and Ear Infirmary, in collaboration with the Perkins Institution and the Massachusetts School for the Blind, has just conducted for a second time a brief summer school project for a group of babies from two to four years of age, all of whom were born prematurely and were suffering from retrolental fibroplasia. The unusual 12-day program, held early in September at the Perkins Institution, was visited by representatives from organizations interested in blind children from half a dozen surrounding states.

The program was balanced between lectures on child care for the mothers and a model nursery school for the babies. The summer school is a carefully integrated part of the study of this new and baffling threat to the eyesight of premature babies, carried on by Dr. Theodore L. Terry and the Pathological Laboratory at the Infirmary for the past six years.

Again this year the project has resulted in much mutual education. The mothers and babies attending the session have received expert guidance in their adjustment to the child's handicap and to a normal life in the home for the blind child; and the doctors and social workers and nursery school experts have learned new methods of evaluating what is normal development for babies who are both premature and blind, and have gained new insight into the problems of caring for this most appealing group of handicapped children.

An authoritative group of doctors, social workers, and nursery school educators advised on the program and served on the sponsoring committee under Dr. Terry and Dr. Gabriel Farrell, Director of the Perkins Institution. The nursery school was under the direction of Miss Pauline Moor, who has been visiting the children in their homes during the last six months. Miss Frances Marshall, psychiatric social worker at Perkins, was in charge of the project, with Miss Ruth Butler, medical social worker assigned to the research at the Infirmary, and Mrs. Eunice Wilson, Director of the Infirmary's Social Service Department, to assist in carrying out the program.

The next meeting of the New England Oto-Laryngological Society will be held at the Infirmary on Wednesday, November 20. Vice Admiral Ross T. McIntire, Surgeon General, U. S. Navy, will be the guest speaker.

On August 13, Dr. LeRoy A. Schall, Chief of Otology and Laryngology, addressed the Guatemalan Medical Association. Following the address, Dr. Schall was made an Honorary Member of the Association.

On return from his vacation in Guatemala, Dr. Schall reported that both of the Quevedos—Arturo (*Oph.* 1933) and Julio (*Oto-Lar.* 1941) — represent the best in their specialty in their country.

In a recent letter to Dr. Schall, Dr. Mercer G. Lynch (*Oto-Lar.* 1936), who held the rank of Major in charge of the Ear, Nose and Throat Department of the Walter Reed Hospital, Washington, D. C., states he is now out of military service and back in New Orleans where he has recently become associated with the Ochsner Clinic.

Dr. Gaston N. Duclos (*Oto-Lar.* 1943) visited the Infirmary within the past month. He reported that he has been discharged from the Canadian Military Service and is planning to start practice in Montreal, where he is a consultant to the Military Hospital.

Dr. George Kelemen (*clin. asst. Oto-Lar.*) has returned from his lecture tour in South America. He has been made Honorary Member of the Oto-Laryngological Societies of Brazil, Chile, and Peru. He has also been made Corresponding Member of the Oto-Laryngological Club of Buenos Aires, Argentina.

Back after war service, Dr. Linus A. Sheehan (*Oph.* 1943) has resumed his work on the Eye Service.

Dr. Arthur M. Morrissey (*clin. asst. Oph.*) is out of military service and has resumed his practice in Medford.

Lost and *not* found department: We thank those of you who have sent in addresses of some of the people included in this department last month.

In addition to those already listed, mail from the following has been returned to us, and all attempts to reach them through last known addresses have failed. In each instance, the military rank is the last we knew.

Lt. Wallace C. Bedell, MC, USNR (*ES* 1945)
Major Thomas S. Claiborne, MC (*WM* 1934)
Lt. Stewart Clapp, MC, AUS · (*NS* 1939)
Lt. Calvin R. Coggins, MC, AUS (*gr. asst. Dn.* 1942)
Asst. Surg. Harvey S. Collins (*M* 1944)
Major William D. Davidson, MC (*Or.* 1933)
Capt. Harold I. Harvey, MC, AUS (*res. fel. Psychi.* 1941)
Capt. Alfred F. Knoll, MC, AUS (*a.r. NS* 1941)
Lt. Col. Francis D. Pierce, MC (*WM* 1931)
Capt. Henry C. Thacher, MC, AUS (*CM* 1942)
Lt. Col. Henry M. Thomas, Jr., MC (*WM* 1917)
Lt. Comdr. Ernest D. Thompson, MC-V (S) (*a. Or.*)
Capt. Oliver W. Welch, MC, AUS (*EM* 1935)
Capt. John C. Wilcox, MC, AUS (*CM* 1937)

New addresses:—

Dr. James E. Conley (*WS* 1941), 425 East Wisconsin Ave., Milwaukee 2, Wis.
Lt. John D. Crawford, MC, AUS (*CM* 1945), 279th Station Hospital, APO 755, c/o Postmaster, New York, N. Y.
Lt. Joseph A. Elliott, MC, AUS (*M* 1945), Murphy General Hospital, Waltham 54, Mass.
Dr. George F. Emerson (*ES* 1939), 270 Commonwealth Ave., Boston, Mass.
Dr. Norman E. Freeman (*r.s. WS* 1935), 263 Molino Ave., Mill Valley, Cal.
Dr. John E. Goodman (*Dn.* 1944), c/o Dr. Peter A. Dempsey, 56 Melville Ave., Dorchester 24, Mass.
Dr. Joao Cruz Guimaraes (*r. Oto-Lar.* 1946), Rua Alexandre Ferreira 148 (Jardim Botanico), Rio de Janeiro, Brazil, South America.
Capt. S. Grant Holmes, MC, AUS (*CM* 1943), Fort Sheridan Regional Hospital, Fort Sheridan, Ill.
Comdr. Richard D. Nies, MC (*An.* 1941), Fleet Air Command, Naval Air Station, Quonset, R. I.
Dr. George C. Prather (*ES* 1925), 1180 Beacon St., Brookline 46, Mass.
Dr. John A. Reidy (*Or.* 1939), 1101 Beacon St., Brookline, Mass.
Dr. William R. Richardson (*WS* 1945), 2754 Bush Blvd., Birmingham 8, Ala.
Capt. James D. Schuler, MC, AUS (*CM* 1939), Kern County General Hospital, Bakersfield, Cal.

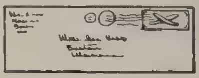
Brief bits:—

Dr. Robert E. Carroll (*ES* 1943) paid us a call the other day. He arrived in the USA in August, after spending 16 months in the Southwest Pacific with a special orthopedic team which expected to participate in the invasion of Japan. He visited China, stopped off at Hawaii, and returned home via Panama. He was promoted to Captain while in the Service. He is now on terminal leave, and his home address is 72 Dudley St., Fall River, Mass.

Dr. George H. Carter (*M* 1943) left the Army with the rank of Captain.

Dr. John R. Mote (*WM* 1937) is now Medical Director of the Armour Laboratories in Chicago. The address is 1425 West 42nd St., Chicago 9, Ill.

Before returning to the States, Dr. Edward P. Richardson, Jr. (*EM* 1943) spent a year in Hawaii doing neuropsychiatric work in a General Hospital.



This most welcome letter has come from Lt. Col. R. Nelson Hatt, MC (*Or.* 1919).

This morning, while clearing my desk preparatory to the closing of Cushing General Hospital, I came upon a memo from your office. I feel very apologetic for not having responded sooner, for of all the mail received both overseas and at home, THE NEWS has always seemed like a personal family letter.

Since returning to the Z.I. I have been occupied as Chief of the Orthopedic Section, first at England General Hospital, and then since August 1945 at Cushing. With the closing of Cushing as an Army hospital, I shall have finished my tour of military duty and shall return to civilian status.

About twenty-three years ago, I left the Massachusetts General Hospital to open the Honolulu unit of the Shriners Hospital for Crippled Children. After a little over two years at that post, I returned to take over the New

England unit at Springfield, where I carried on until entering the Service in 1942. Through the years, the "call of the islands" has never ceased, and upon my release from the Army I am returning to take charge of the Honolulu unit and spend my declining years far removed from the austere New England winters.

In closing, again I must express my gratitude for THE NEWS, and through you to wish all my old friends a fond Aloha.

A very nice letter has come from Dr. William L. Palazzo who has received a future appointment as Graduate Assistant in Radiology. The letter says, in part:—

It will be a privilege and an honor to join the great brotherhood of those who work at Massachusetts General Hospital, when I begin my appointment on January 1, 1947. I have no special problem on which I expect to work, except that I wish to learn Radiology at its best. To that end I shall devote my entire energies.

We suggest that other future appointees write and tell us something about themselves. A good way to get acquainted ahead of time.

Dr. Means has passed on to us this "first" from Lt. Albert J. Stunkard, MC, AUS (*EM* 1946). It brings us news about several of the hospital family.

It's been four months now since I left the General, and I've never thought back more fondly. The more irrelevant things become down here, the more M.G.H. stands out as something with purpose and, well — relevance.

My first assignment was the hospital at Fort Ord, in a beautiful part of California next to the Monterey peninsula. Nice for scenery. The hospital had nearly 200 patients, and a staff of 45 medical officers. During the last month I got charge of the medical ward, about the time they opened it to veterans, and soon had about 30 patients. There were cases of recurrence of several tropical diseases which made for an interesting and responsible month. Then I contracted a long overdue case of measles, and finished my California period in a blaze of macules.

Arriving in Texas there was an MGH reunion. Phil Wilson [*ES* 1946] was installed at Brooke doing orthopedics. Joe Gardella [*M* 1946] and Ray Randall [*WM* 1946] were finishing in a class ahead of us and have left—Ray for a research job with the atom at Oak Ridge, and Joe into the wild blue somewhere. In this class are Jim Stewart [*M* 1946], who has just received orders for the Mediterranean Theatre of Operations, which we tell him means Trieste; John Seed [*EM* 1946] and Earl Gottschalk [*M* 1946], who are as yet unassigned. John, for some unknown reason, is the only one who has a specialist rat-rating— in internal medicine. My orders have just come through for Yokohama.

It does give one a certain satisfaction to feel he is finally a part of our national policy, after some years of lingering guilt. And this is giving us an opportunity to catch up culturally and geographically. Japan will certainly influence me in a way I would not have considered but for the Army.

When this course is finished I hope to get back to Boston for a few days, to which I am really looking forward.

Please give my regards to the people I knew.

From the Medico-Dental Building, Sacramento 14, California, comes this letter from Dr. Carl E. Horn (*Or.* 1940).

My last letter, from Torney General Hospital, was written only a year and a half ago but it seems very much longer off, due to the many changes since then.

I was transferred to Birmingham General Hospital, Van Nuys, California, as Chief of the Orthopedic Section there when Torney closed, soon after the war in the Pacific ceased. Birmingham closed in March 1946, and since I needed a month or a few points to allow my discharge, I was sent to Madigan General Hospital, Fort Lewis, Wisconsin, in the same capacity. The break came in May when I was released from active duty, with my actual termination of Service in August.

My wife and I vacationed on Vancouver Island in British Columbia for several weeks. The fishing on the Campbell River was excellent. Both of us took a number of cutthroat trout that were beauties. The Canadian geese would zoom in to land like B-29's. Grouse and deer were very plentiful but were not in season. Needless to say, we enjoyed the vacation immensely.

Since July I have been in practice here with Dr. Thomas R. Haig [*Or.* 1924]. There is a great deal of orthopedic work to be done in this area and hospital facilities are good. Therefore, I plan to make this my permanent home.

Major William S. McCune, MC (*WS* 1937) gives us an over-all picture of his military activities in this letter which recently arrived from Ward 4, Walter Reed General Hospital, Army Medical Center, Washington 12, D. C.

Entering the Army in 1943, I was fortunate enough to be included in a class which was studying neurosurgery at Columbia University under Dr. Tracy Putnam [*ES* 1923]. Following this course, we studied the practical aspects of neurosurgery at Walter Reed General Hospital and I was then assigned as the Neurosurgeon at Woodrow Wilson General Hospital in Staunton, Virginia. In December 1943 I was sent to Halloran General Hospital to study penicillin under Major Champ Lyons [*WS* 1933] and spent a very profitable month with him. In January 1944, being transferred back to Walter Reed General Hospital, I served on the Neurosurgical Service for one year, and in February 1945 I was transferred to the General Surgical Service. There I had the pleasure of being associated with John McKittrick [*An.* 1938 & *WS* 1939] whom I followed as Chief of the General Surgical Section in August 1945. In March 1946, after separation from the Service, I was appointed Attending Surgeon at the Veterans Hospital in Washington and Assistant Professor of Surgery at the George Washington University School of Medicine.

Because of an attack of acute hepatitis, I have recently been returned to active duty for purposes of hospitalization and have been spending the past two months in a rather unusual type of active military duty in a recumbent position as a patient at Walter Reed.

THE NEWS has been reaching me regularly for the past three years, and I have never missed a word in reading accounts of MGH friends throughout the world.

Dr. Foster L. Matchett (*Or.* 1934) is out of the Army and in private practice at 1727 Gilpin Street, Denver 6, Colorado.

Since you last heard from me, I was very suddenly discharged home on 98 points, after having moved up from New Caledonia, where I spent 21 months with the 29th General Hospital. We were moved on to Okinawa, where I remained for a period of 11 weeks, after which I was transferred on an LST (1075) over to Korea, where we set up the 29th General Hospital at Seoul to carry on general hospital facilities for the entire peninsula. After being there only a few weeks, such a hullabaloo had gone up in Washington about releasing doctors with high points that my 98 got me on the first plane headed for the U.S.A. I was flown home over the southern end of the peninsula in a C-46; and after a very enjoyable, rather low flying journey over the Japanese Sea, the southern portion of Honshu, and over the Inland Sea, I passed Fujiyama and then had the pleasure of flying at an elevation of 2000 feet over the Imperial Palace before I landed at Atsuki air field. After spending 18 hours in Tokyo, I boarded a C-54 on the night of October 16, 1945 and flew over Iwo Jima to Guam, Kwajalein, Johnston Island, Hickham Field, and then on home to Hamilton Field in California.

The entire 9000-mile trip took less than 48 hours of actual flying time, and from the time I started from Korea to the time I was in California only 79 hours elapsed. It took me longer to go from Hamilton Field to Denver and Fort Logan, where I was mustered out, than it took me to come from Seoul to the U.S.A.

I was released from the Army on October 26, and after a trip with my wife to Cleveland, Philadelphia, and New York, I returned to the practice of orthopedics in Denver. I, like many others, was unable to get back my original office in one of the downtown office buildings and spent two months sharing rooms with a very good friend of mine. During this period, three of us purchased a house and are now living in the lap of luxury. It is a rather suburban portion of Denver, in an area similar to where those offices are occupied by the aristocrats of the orthopedic services of Boston. We like it very much and will probably never wish to go downtown into the big office buildings again.

After working my head off for the first six months after my return, I was fortunate in acquiring an associate in the person of Dr. William F. Stanek, an American Board Orthopedic Surgeon, a graduate of Harvard in 1934. He also has had 44 months in the Army as the Chief of several orthopedic services in three different hospitals in the United States. The two of us now have a partnership in orthopedic surgery known as Drs. Matchett and Stanek.

Any of our old friends from the East or from the Army who may chance to come to the Mile High City will surely be welcome here. We would like to see you again and visit and talk over some of our old war experiences.

I want you to know that THE NEWS has been just like a letter from home.

Three years ago, when the allies were closing in on Benito, THE NEWS published a letter from Dr. Churchill in which Capt. Alfred Yankauer, Jr., MC, AUS (*CM* 1941) was mentioned as being in the Mediterranean Theatre. A recent letter from Dr. Yankauer places him at 33 Riverside Drive, New York, and tells us what he is doing.

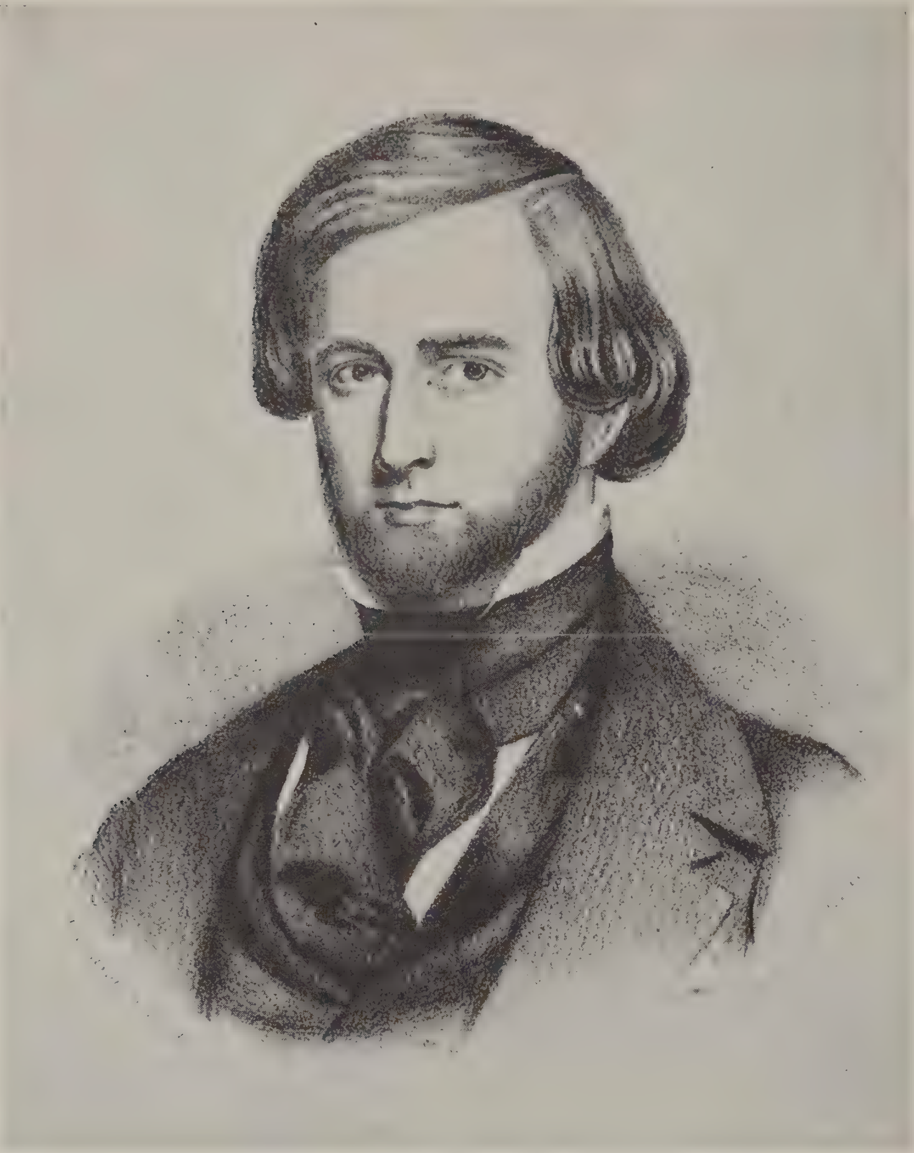
I am at present preparing myself for work in the field of Public Health and Preventive Medicine under the aegis of the New York City Department of Health. I plan to pursue graduate studies in this realm at Columbia University this fall. Prior to my present experience I had spent a few months on a research project in New York City public schools, which was a great relief after four years in the Army — three of them in the MTO. My Army functions were largely administrative, but involved a wide variety of experience and change of locale. I find the present work fresh and interesting and am constantly amazed by perspectives which I had seen only dimly, if at all, in the past.

THE NEWS has been a continuous source of pleasure, and I am glad it is to continue its mission.

Dr. Thornton Scott (*r.p.* 1939) reports his return to private practice at 200 West Second Street, Lexington, Kentucky. He writes:—

This is a quite belated letter to tell you how much I enjoyed THE NEWS while I was in Service and at the present time.

After serving twenty months aboard the *U.S.S. Missouri* I was separated from the Service with the rank of Commander on Decem-



William T. G. Morton, M.D.
Copy of a lithograph print made by J. H. Peirce from a portrait painted by William Hudson, Jr. in 1844 — two years before Morton's first demonstration of the use of ether at M.G.H. Morton was 24 years old when the portrait was painted.

ber 3, 1945, and am now back in the practice of internal medicine in Lexington, Kentucky. There was little in the way of news which I would have been allowed to disclose while aboard ship; and now that the war is over, the memory of many things which seemed exciting and interesting has been greatly dimmed by the passage of time. I might say that The News was not only of great interest to me, but to many of my shipmates.

We are always disturbed when our records show that, as far as direct word to the contrary from any one of our men is concerned, he is still stranded on some Pacific island or pacing the floor at some Replacement Depot in Europe awaiting transportation home. It is, therefore, with much relief that this communication from Dr. Sedgwick Mead (*EM* 1940, *P* 1941, & *a.r.p. N* 1942) was received.

Since my last letter to Dr. Means, from Manila, there are only brief and happy endings. I am afraid of only two things in the Army — replacement depots and hospitals. But my experience in the Replacement Depot at Manila was a delightful surprise. Among other things, we had the best food I encountered in the Army.

On 8 November 1945 I arrived by ship at San Pedro and was soon flown home. Terminal leave expired March 11.

Since December I have been a Baruch Fellow in Physical Medicine and Research Fellow in Physiology at Harvard Medical School.

Dr. Mead's home is in Littleton, Mass.

Dr. Robert H. Talkov (*res. fel. M* 1942) is back in private practice at 375 Commonwealth Avenue, Boston. A note from him says:—

I wish I had something of interest to tell you concerning my military service. I had a very peaceful time of it, working in hospitals in the country and a twenty-two-month quiet interlude in the Caribbean area. The most exciting aspect of it all was my return to civilian life, effective May 31, 1946.

At present I am in private practice, doing internal medicine with special interest in arthritis. I shall be associated with the Arthritis Group under Dr. Bauer at M.G.H.—also the Arthritis Clinic at the Beth Israel Hospital.

A "first" has come from Lt. J. Robert Spencer, MC, USNR (*EM* 1943)—and glad we are to receive it. The letter reads:—

My failure to notify you of a change of address resulted from not having one — that is, for more than three months at a time since I left the *U.S.S. Bradford* last November. I have, however, continued to receive The News, which is most welcome, I assure you.

After returning to the States last November, I was assigned to the medical service of the Naval Convalescent Hospital, Glenwood Springs, Colorado, in charge of the Physical Medical Department — an entirely new experience for me, but a profitable one (the patients, of course, excepted). The hospital was decommissioned in February, and I was sent to Denver for recruiting duty. Finally, I received my separation from the Navy in August, and will drift about until I begin a 3-year surgical appointment at Mayo.

Please allow me to add my expression of gratitude for The News. I shall continue to follow it with much interest.

Everyone will be interested in this letter from Dr. Vernon Cantlon (*ES* 1935)—another of the kind we like to receive, telling us our men are back and what they're doing and where.

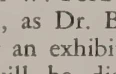
I can give you two new addresses, for Edwin Cantlon [*ES* 1938]—my little brother—is in the same office with me at 130 North Virginia St., Reno, Nevada. We are practising surgery together, and I assure you it is a great pleasure to work as a team. Hardly a day passes that we don't have an occasion to pass some remark in reminiscence of our work at the General, such as "Remember the time Beth Vincent said 'Blow, blow, for —— sake blow' ", or "the time Dr. Allen commented on the beauty of Kodachrome pictures of the intestinal contents as seen at the Mayo Clinic."

We have the nucleus of a small MGH group here—Dr. Edwin representing the West Service, Dr. Sam Clarke [*Oph.* 1939] representing the Infirmary, while I represent the East Service. We all three wish you would send us a Medical Resident or a Pediatrics Resident to help round out the group. Dr. Fred Anderson, who was a contemporary student at the M.G.H. but who unfortunately got mixed up with the Peter Bent Brigham, is also here. We all manage to help each other out.

Since I last wrote you, I continued aboard the *U.S.S. Cook Inlet*, a small seaplane tender involved in air sea rescue operations. At the end of the war we went to Okinawa, Korea, and Sasebo, Japan. I was finally discharged on April 18th, and after 15 or 20 minutes of rehabilitation resumed work. A short time ago I completed my American Board Examination in Surgery.

Haven't seen any other MGH men in Reno recently, but I did get a phone call from Bob Brown as he was going through Reno *en route* to Colorado. I also spent some time with Roy Cohn, who is on the Stanford Lane Staff in San Francisco. I am looking forward to return visits from Ed Hamlin, Butch Donaldson, and others who have visited with me previously in Reno.

Thank you again for sending me The News. I agree with all the others that it has been a most pleasurable publication.



Mrs. William W. Ford is doing a real "yeoman's job", as Dr. Beecher has put it, in arranging an exhibition of letheon items which will be displayed in the Brick Corridor, in the Archives Room, and in other places about the hospital during the Ether Celebration. Mrs. Ford is also helping on an exhibit which will show the contrast between methods used in 1846 and 1946 in administering anesthetics.

Probably no one knows more about the history of anesthesia than does Mrs. Ford, and we are very fortunate to have her help and advice at this time.

THE NEWS

No. 50 Boston, Mass. November 1946

ETHER DAY

In the year 2046, in the month of April or May, the Ether Day Committee will doubtless be holding a meeting in the historic private dining room of the one-hundred-year-old George Robert White Building. In this dining room were held the meetings at which the one hundredth anniversary of the first public demonstration of ether anesthesia was planned in 1946, and it would be only fitting to adjourn from the new restaurant in the office building to this old spot to discuss the two hundredth anniversary.

At this meeting the programs and notes from the one hundredth anniversary celebration will be taken from the Archives and discussed in detail. The many newspaper articles and clippings concerning the 1946 celebration, as well as the reactions of various members of the Staff, are perused with interest. On the basis of these experiences of one hundred years before, the new celebration can be planned.

The scientific symposia, it will be said, were a great success. A tent was placed on the Bulfinch lawn — a lawn still preserved in 2046 — and here about one thousand people heard interesting discussions of Surgery, Degenerative Joint Disease, Anesthesia, War Wounds, and Social Problems of the Hospital. The symposia were not only well attended, but were enthusiastically received. The details of the program were arranged by Dr. Henry K. Beecher, the first Dorr Professor of Anesthesia. The programs were designed to describe the state of knowledge at that time, and outlined some of the future developments in these fields. Dr. DeBakey's forewarning of the civilian wounds to be encountered in an atomic war was not borne out in war, as conflict was narrowly averted in the crisis of 1958. The Oak Ridge disaster of 1970, however, showed many of his prophecies to be true. Since that time, however, peace has reigned and the subject of war wounds and the medical care of the wounded has waned. The topic of Degenerative Diseases, so ably discussed in the program of which Dr. Aub was chairman, is still a burning question in 2046. Various medical treatments and surgical maneuvers have been greatly perfected; people still grow old, however, and it has long since become accepted that it is one of the blessings of nature that man is not afflicted with immortality. Interest in this subject has, however, been maintained.

The symposia on Anesthesia were generally regarded, at the time they were given, as among the most outstanding in the program — especially the morning program on Tuesday when various prominent investigators in the fundamental sciences outlined their thoughts and discoveries relating to the basic problems of anesthesia, nerve conduction, and the levels of consciousness. In the one hundred years since that date, developments in science have gone forward in this field more than in any other field discussed at the symposia in 1946. It will be important again in the two hundredth anniversary to bring up to date and summarize the tremendous strides in these sciences lying at the borderline between biology and psychology.

The symposia on the Physiologic Changes Incident to War Wounds, conducted on Wednesday morning, consisted of a connected account of the researches done by a group from this hospital in the second World War. Their special effort was concentrated on an attempt to find the underlying causes of the anuria of severe wounds, and a working explanation was evolved by Dr. Tracy Mallory which seemed to fit the facts of the case and jibe with experimental evidence from other sources. The social position of the hospital in the community, discussed Wednesday afternoon, was then an important question and the fifty years which followed were to see many revolutionary changes which, however, left an intact Massachusetts General Hospital, free of government controls and run by a competent administrative and professional staff.

The committee in 2046 will have to give serious consideration to the evening festivities, because in 1946 they were so much enjoyed and so well attended. On Monday evening the House Pupils' Alumni Association dinner at the Copley Plaza was attended by over five hundred people. The discussions after dinner by Drs. Churchill and Snyder were of great interest, and the motion pictures shown by Dr. Stafford Warren of the explosions of the atomic bombs at Bikini were of interest and were a macabre prophecy of things to come.

Tuesday evening the Plymouth Theatre was taken by the hospital celebrants, where a light comedy by an outstanding playwright of the period, Noel Coward, was enjoyed as a bit of comic relief from the more serious nature of the other proceedings.

Wednesday evening at Sanders Theatre a dignified and impressive ceremony was held, at which the chairman of the Board of Trustees of the hospital, the Right Reverend Henry K. Sherrill, presided, and speeches were given by Dr. Beecher, Dr. Fosdick of the Rockefeller Foundation, Dr. Evarts Graham, Professor of Surgery at St. Louis, and Dr. Karl T. Compton, President of Massachusetts Institute of Technology. The impression of the multitude there was one of great appreciation of the thoughts expressed by the speakers.

Taken in all, the celebration in 1946 was fitting and impressive as an anniversary of America's outstanding contribution to medical science. In 2046 the committee will indeed have to spend time and thought to equal it. F. D. M.

The three letters which follow should mean much to any of you who have been associated with M.G.H. within the last hundred years.

The first one is addressed to Bishop Henry Knox Sherrill, Chairman of our Board of Trustees, and reads:

THE WHITE HOUSE
Washington
September 21, 1946

Dear Bishop Sherrill:

It gives me great pleasure to extend to you greetings on the one hundredth anniversary of the first public demonstration of the use of ether which took place at the Massachusetts General Hospital on October 16, 1846. It is a significant occasion not only for the immediate results of the demonstration which took place in your Bulfinch Building on that date, but also as it was the opening event in one hundred years of research at the Massachusetts General Hospital.

The Surgeon General of the Army and the Director of the Office of Scientific Research and Development have both congratulated the Massachusetts General Hospital on the effective assistance which you gave in the war effort. As in war, so in peace, the people of this country can count on institutions like the Massachusetts General Hospital to pioneer to achieve results in curing the ills of mortal flesh.

Again let me extend my heartiest congratulations to you and the other members of the Board of Trustees, the Staff of the Hospital, and the whole hospital community.

Very sincerely yours,
HARRY TRUMAN

The second letter, of the same date, reads:

War Department
THE CHIEF OF STAFF
Washington

Dear Dr. Faxon:

I welcome this opportunity to extend greetings to the Massachusetts General Hospital on the occasion of the 100th Anniversary of the first public ether operation. That significant advancement in the field of surgery established a great tradition of medical research which has continued with remarkable results throughout the century.

The Sixth General Hospital, which served with distinction under my command in North Africa and Sicily, was staffed by the Massachusetts General Hospital. I am sure the comradeship, born in the war years, will be a source of lasting satisfaction to the men and women of your famous hospital and will perpetuate a feeling of unity and forward the advancement of your great profession.

Sincerely,
DWIGHT D. EISENHOWER

The third is from Field Marshal Viscount R.A.L.G. Alexander, the Supreme Allied Commander, addressed to Bishop Sherrill.

> It is indeed a great pleasure to salute the Massachusetts General Hospital on the occasion of this outstanding anniversary of the first public demonstration of the use of ether in surgery which took place at your hospital one hundred years ago this time. Many of the staff of the hospital served under my command of A.F.H.Q. in Italy with distinction. The work of the Sixth General Hospital in World War II in the cause of relieving suffering and assisting in the war effort reminds us all of the past, of the Massachusetts General Hospital in World War I, when previously the Sixth Base Hospital did such splendid work on the Western Front.
>
> It gives me great pleasure to send the heartiest greetings and to wish all my friends who are now back at their peacetime jobs best wishes and congratulations.
>
> Sincerely yours,
>
> Alexander of Tunis,
> F.M.

An album of photographs, which apparently belonged to Dr. William T. G. Morton, has been presented to the Archives Department by Mrs. Ellen Morton, widow of Dr. Morton's son. The album contains many interesting photographs of well known people. It is on display in the Archives Room. Its pages will be turned from time to time, so that the entire collection will finally have been exhibited.

The Board of Trustees, at their meetings on September 20 and October 4, voted:

To rescind the vote accepting the resignation of Dr. Thomas A. Warthin, as Assistant in Medicine;

To create the position of Resident in Neuropathology and to appoint Dr. Mary Lorraine ~~Canon~~ Gannon to this position;

To terminate the appointment of Dr. Claud E. McGahey as Resident in Surgery, as of October 1;

To promote Dr. Alan P. Freedberg to the position of Assistant in Dermatology;

To promote Dr. John M. Morris to the position of First Assistant Resident in Surgery, beginning October 1.

The Trustees also voted to appoint:

Dr. Thornton Brown as Assistant Resident on the Orthopedic Service for one year, beginning October 1, 1947;

Dr. David W. Compton as Assistant Anesthetist, beginning November 1;

Dr. George E. Donaghy as Assistant Anesthetist, beginning October 1;

Dr. Dana L. Farnsworth as Assistant Physician;

Dr. Elmer M. Franz as Assistant Resident on the Orthopedic Service for one year, beginning July 1, 1947;

Dr. Gerald S. Greene as Assistant Resident on the Orthopedic Service for one year, beginning April 1, 1947;

Dr. Arthur R. Hartwig as Assistant Resident on the Orthopedic Service for one year, beginning January 1, 1948;

Dr. George L. Nardi as Third Assistant Resident in Surgery, beginning October 1;

Dr. Thomas S. Risley as First Assistant Resident in Surgery, beginning October 1;

Dr. Charles W. Robertson as Resident in Surgery, as of October 1;

Dr. Charles E. Rounds as Dental Intern for the period September 23, 1946 to June 30, 1947.

In addition to the above, the following notices have been received from the Director's Office:

Dr. Andre Monsaingeon has resigned his position as Research Fellow in Surgery, as of September 11;

Dr. Richard S. Rodgers became Resident on the Urological Service on October 1;

The following have completed service:

Dr. Alexander O. Haff, as Graduate Assistant in Radiology

Dr. John Homans, Jr., as Assistant Resident in Medicine

Dr. Stewart P. Seigle, as Assistant Resident in Medicine

Dr. Tetsuo Sugiyama, as Resident on the Urological Service

Dr. Adney K. Sutphin, as Assistant Resident in Medicine

Dr. Philip P. Thompson, Jr., as Assistant Resident in Medicine

Dr. William D. Shorey will be assigned to the Salem Hospital for six months, beginning October 1, where he will hold the title of Surgical Resident;

Dr. William C. Quinby, Jr. will be assigned to the House of Mercy Hospital, Pittsfield, Mass. for a period of six months;

Dr. Thomas Rutter, who has been at the Salem Hospital for the past six months, will return to the Massachusetts General Hospital as Third Assistant Resident in Surgery.

At their meetings during September and on October 2 and 9, the General Executive Committee voted:

To accept the resignation of Dr. Alexander Albert from the position of Research Fellow in Medicine, effective as of September 15;

To reappoint Dr. Fred Alexander as Graduate Assistant in Medicine, as of September 1;

To appoint as Graduate Assistants:

Dr. Clito R. Damiani, in Dermatology

Dr. George F. Emerson, in Surgery

Dr. John G. Flynn, in the Children's Medical Out-Patient Department

Dr. John W. Irwin, in Medicine (assigned to the Allergy Clinic)

Dr. Theodore M. Leary, in Surgery

Dr. Raymond E. Militzer, in Surgery (assigned to the Tumor Clinic)

Dr. Benjamin Riggs, in Psychiatry

Dr. James P. Robb, in Neurology

Dr. Philip P. Thompson, Jr., in Medicine

Dr. Chiu-an Wang, in Surgery

To appoint as Clinical Fellows:

Dr. Henry H. Brewster, in Psychiatry

Dr. Walter Pick, on the Children's Medical Service

Dr. William P. Rogers, Jr., in Anesthesia

Dr. Hans H. Wandall, in Surgery

Dr. Joseph E. Warren, in Medicine

To appoint as Research Fellows:

Dr. Frederic C. Bartter, in Medicine (to work with Dr. Albright)

Dr. Ching T. Liu, in Neurosurgery

Dr. Kurt H. Thoma, Oral Surgeon and Chief of our Dental Service, has been appointed Lecturer in Oral Surgery at the Graduate School of Medicine, University of Pennsylvania.

The Institute of Pastoral Care has completed another successful summer of clinical training for theological students and clergy. There were three sessions of six weeks each, two of which were given at M.G.H., and the third held at the University Hospital, Ann Arbor, Michigan. A total of 51 men were enrolled, including 7 Course Assistants. Eleven different denominations and 16 states and provinces were represented. It has been proposed that the training program next year be extended to include women who are professional religious workers.

OFFICIAL NOTICES

It has been felt to be advisable to caution both the Visiting and House Staffs of the Hospital against the use of plasma except in those instances wherein its use is an absolute necessity, because of the danger of transmitting homologous serum jaundice through its use. Present knowledge indicates that this disease follows about 2/10 of 1% of all cases of plasma administration. The incubation period is from 60 to 160 days. The outcome is fatal in a variable percentage of cases. Some writers report as high as 10 to 15%. Plasma is more dangerous than whole blood because it is ordinarily pooled. In the past year and a half in this Hospital there have been three patients on whom the diagnosis was made at autopsy who had previously received plasma. It is probably advisable not to use plasma as a substitute for whole blood unless the latter is unobtainable, as it is not an adequate substitute. Plasma is most useful in cases of hemoconcentration without blood loss, as in burns. The use of plasma for these cases, however, should be controlled by frequent hemoconcentration determinations or with the advice of someone well versed in this form of therapy.

The use of plasma in nutritional disorders is very rarely justified. Although protein nutrition can be maintained by plasma, large amounts are required, from 4 to 6 plasma transfusion units per day, and would cost the patient from $100 to $150 per day, except in cases where Red Cross plasma is available.

Although the Hospital does not want to take a stand prohibiting or governing the use of plasma, it would like to strongly recommend that the doctor who orders it be perfectly certain that the indications are clear and that the necessity for its administration outweighs the hazard of its use.

General Executive Committee
N. W. Faxon, M.D., Secretary

All members of the Staff desiring to prescribe Streptomycin in the General Hospital will consult Dr. Charles H. Burnett. If Dr. Burnett leaves the hospital he will designate the medical resident on duty, who will act as his deputy.

There are three factors which should be considered in the use of Streptomycin:

1. The supply is likely to be inadequate for the total demand for some period of time.

2. Streptomycin is not as effective in the treatment of many infections for which it will be requested as is penicillin for most of the infections for which it is used.

3. The readiness with which organisms develop a resistance to Streptomycin demands the institution of adequate therapy at the inception of treatment and the continuation of such therapy until the maximum effect has been attained.

To facilitate the effective use of the limited supply under these difficult circumstances, it should be clearly understood that no Streptomycin will be dispensed until (a) a specific organism has been isolated; (b) the sensitivity of the organism to Streptomycin has been determined, except that in cases of tularemia and H. influenzae infections permission for the use of the drug may be granted pending determination of the streptomycin sensitivity. Inasmuch as this puts a heavy strain on the bacteriological laboratory, everyone is urged to keep the number at a minimum. At present the bacteriological laboratory cannot do more than four examinations per week. The charge for examinations will be

General Hospital	$5.00
Baker Memorial	7.50
Phillips House	10.00

N. W. Faxon, M.D.,
Director

New addresses:—

Capt. A. Merton Bassett, MC, AUS (*res. fel. M* 1941-42), Pine St., Los Gatos, Cal.

Dr. H. Stanley Bennett (*res. fel. An.* 1942), Department of Biology, Massachusetts Institute of Technology, Cambridge, Mass.

Dr. Francis H. Chafee (*gr. asst. M* 1942), 454 Angell St., Providence, R.I.

Col. Richard Collins, Jr., GSC (*ES* 1933), 3812 South 9th St., Arlington, Va.

Lt. Gordon M. Freeman, DC, AUS (*Dn.* 1946), Brooke Army Medical Center, Fort Sam Houston, Tex.

Dr. Russell V. Fuldner (*Or.* 1939), 165 Dwight St., New Haven, Conn.

Dr. R. Nelson Hatt (*Or.* 1919), Shriners Hospital for Crippled Children, Honolulu, T.H.

Lt. Gordon E. Jones, MC, USNR (*ES* 1939), 317 West 10th St., Winfield, Kan.

Major James S. Mansfield, MC (*gr. asst. M* 1942-43), c/o R. M. Lawton, Jaffrey, N.H.

Dr. Donald Murnaghan (*res. fel & gr. asst. M* 1940-42), 206 Oakwood Ave., Toronto, Canada.

Dr. George M. Noss (*gr. asst. Dn.* 1939-43), 31 Bay State Road, Boston, Mass.

Dr. William R. Richardson (*WS* 1945), 2754 Bush Blvd., Birmingham 8, Ala.

Dr. John C. Snyder (*WM* 1939), Department of Public Health (Bacteriology), 695 Huntington Ave., Boston 15, Mass.

Dr. Guy R. Sweeney (*gr. asst. M* 1942-43), 10 Turrell Road, Medford, Mass.

Dr. Howard G. Weiler (*Or.* 1932), 409-10-11 Central Union Bldg., Wheeling, W. Va.

Brief bits:—

The engagement of Martha Merrill Robinson, daughter of Dr. and Mrs. Carl M. Robinson of Waites Landing, Falmouth, Maine, and Dr. William C. Burrage (*EM* 1941), son of Dr. and Mrs. Thomas J. Burrage of Chadwick Street, Portland, Maine, was announced on September 28.

Dr. Ephraim P. Engleman (*res. fel. M* 1941-42) has been relieved of active military duty and has gone into the practice of internal medicine at 450 Sutter St., San Francisco 8, Cal.

Dr. Lawrence K. Lunt (*WM* 1916) is moving to Colorado, where he is "tentatively planning to practise in Denver". His new address is Box 110, Route 3, Littleton, Col.

Dr. Ian Paley Rak (*a. Psychiat.*) announces his return to the practice of psychiatry and neurology at 422 Beacon St., Boston, Mass.

Lt. John W. Ratcliffe, MC, USNR (*WS* 1946) was in Boston recently on a special assignment, viz: to attend his own wedding. His new address is Staff LSM (R) Squadron 4, Annex 2, USNAB, Little Creek, Va.

Dr. Stanley W. Stanulonis (*gr. asst. M* 1941-42) is out of military service and is taking a graduate refresher course at Harvard.

Dr. David W. Wallwork (*ES* 1932) writes that he has used up his terminal leave and is now a full-fledged civilian again. His address is 5 Third St., North Andover, Mass.

MASSACHUSETTS EYE & EAR INFIRMARY

Dr. Theodore L. Terry (*Oph.* 1928), nationally known eye surgeon, who died suddenly at his office on September 28, had had a long and distinguished career in ophthalmology. He was Ophthalmic Surgeon on the Staff of the Massachusetts Eye and Ear Infirmary and, until recently, Assistant Professor in charge of postgraduate teaching in ophthalmology at the Harvard Medical School.

Dr. Terry was a member of the American Board of Ophthalmology and a past president of the New England Ophthalmological Society. He was also trustee of the Association for Research of Ophthalmology, a member of the American Ophthalmology Society, the American Academy of Ophthalmology and Otolaryngology, and the American Association for the Advancement of Science. He served as a Diplomate of both the National Board of Medical Examiners and the American Board of Ophthalmology.

He received his M.D. at the University of Texas in 1922. After serving as house officer at the Massachusetts Eye and Ear Infirmary, he joined the Staff here in 1928, and in 1933 was appointed hospital pathologist, a position which he held at the time of his death.

Perhaps Dr. Terry's best known work has been his research into the increasing incidence of blindness among premature babies. For the past six years he had been carrying on a study at the Infirmary pathological laboratory with a large group of these premature babies who are blind. The disease has come to be known as retrolental fibroplasia, the name given to it by Dr. Terry. This study in which he has done so much valuable pioneer work will be continued at the Infirmary during the next year with Dr. V. Everett Kinsey, also on the Staff of the Howe Laboratory, in charge of the medical research.

Dr. Harry M. Nicholson (*Oto-Lar.* 1913), on a recent visit to the Infirmary from Canada, reported that he is now located at 515 Medical Arts Building, Hamilton, Ontario.

Another recent visitor, still on leave of absence with the Army, was Dr. Daniel J. Reagan (*Oph.* 1943 *& Oto-Lar.* 1944) who is now stationed at Westover Field, after having been in Greenland and Newfoundland.

Dr. Mercer G. Lynch (*Oto-Lar.* 1936) is now associated with the Department of Otolaryngology of the Ochsner Clinic and is Assistant Professor in the Department of Otolaryngology at Tulane University. He is also a member of the American Academy of Ophthalmology and Otolaryngology, the American Medical Association, and the Southern Medical Association. He served with the rank of Lieutenant Colonel as a member of Base Hospital No. 24, and later was in charge of Otolaryngology at the Walter Reed General Hospital.

On October 1, Dr. Alfred Kant and Dr. Mayo J. Poppen started service as Ophthalmic residents, and Dr. William Stone, Jr. as Ophthalmic extern.

A talk describing the corneal graft operation was given by Dr. Edwin B. Dunphy, Chief of Ophthalmology, at the first fall meeting of the Ladies' Visiting Committee on October 9.

A note from Dr. Richard T. Barton (*Oto-Lar.* 1945), saying he would be unhappy to miss a single issue of The News and asking that his name never be crossed off the list of subscribers, bears the address 405 North Bedford Drive, Beverly Hills, California.

Dr. Schall has received this most interesting letter from Lt. Horst J. Heinicke.

Greetings from Northern Italy!

My assignment in Venice, after having come to Europe last November, was comparatively short. I had the good fortune to be transferred from my Aid Station in Venice to the 15th Field Hospital here in Udine early in the year and have been stationed here ever since. Despite my rather meagre training at the Infirmary, they put me in charge of the EENT Department here. As you may imagine, I ventured very little in the way of eye surgery, in spite of having received the order to act as Ophthalmologist — among other things!

The hospital has since been renamed the 391st Station Hospital. It serves the occupation forces in the Venezia-Guilia area and Trieste. Everything is fairly quiet here. Of course, if one is so inclined it is possible to watch a demonstration and (its usual consequences) a riot in Trieste and thereabouts every week or so. The inhabitants get very excited about it all, but as a rule no one is seriously injured. The people stand about in the streets talking and getting in the way of our vehicles. It has often seemed to me that they start these demonstrations and street fights out of sheer boredom.

One thing that impressed me a great deal while visiting Trieste recently was a long, long train, said to leave daily, carrying UNRRA supplies from our ships into Jugoslavia — great coils of wire, vehicles, food, etc. The train crosses "main street", and in passing blocked me from getting to my jeep in the parking space for fully half an hour.

Naturally, I have been looking forward eagerly to the time when my sentence in the Army would be completed, allowing me to return to Boston. Whatever the experience of others in this regard, the doctors of the 88th Division have been poorly oriented as to the date of their release. In fact, the Division Surgeon advised us several weeks ago that we might be held here 60 to 90 days beyond the time we should be eligible for discharge. This, coupled with the fact that doctors in the ETO with equivalent length of service were already on the way home a month ago, has aroused a good deal of resentment.

However, according to the latest directive, I shall be home in November. Replacements from the States persistently recite dire tales concerning living conditions and monetary inflation in the U.S. I can report that most of us would rather "suffer" in the U.S. than live a life of "luxury" overseas.

Mail will reach me through my home address: 31 Tottenham Road, Rochester 9, New York.

In our September issue of THE NEWS we told you about the high honors that had been awarded Dr. Marius N. Smith-Petersen, Chief of our Orthopedic Surgery, by the King of Norway and the University of Oslo.

Dr. Milton H. Clifford has brought us copies of two Norwegian newspapers which contain articles regarding Dr. Smith-Petersen's work in Norway during his recent visit there. Dr. Carroll B. Larson (*Or.* 1938) accompanied Dr. Smith-Petersen on the journey.

We are indebted to the Clifford family for this translation of one of the newspaper accounts.

Professor Smith-Petersen has performed 25 major hip operations at Ulleval Hospital, Oslo, and has taught his methods to surgeons from many countries.

On their two-months' holiday, Dr. Smith-Petersen, formerly a native of Grimstad, Norway, came from the Massachusetts General Hospital with his assistant, Dr. Carroll B. Larson, to perform gratis a series of complex operations. This work was a gift and favor to Free Norway. The Professor, with his wife and Dr. Larson, returned to America on the *Stavangerfjord.*

A brilliant feast was given them, prior to their departure, by the Surgical Staff and patients of Ulleval. With a warm and deep-felt speech of thanks, one of the patients presented both the Professor and his assistant with beautiful silver plaques. The 25 donors were thankful patients whom the surgeons, through their operations, had saved from pain and invalidism. Some of them had been chained to the sickbed from childhood, some could move only on crutches, while others had a greatly reduced capacity for work because of their hip sufferings.

Dr. Carl Semb, Chief Surgeon at Ulleval Hospital, on whose service the operations were performed in the presence of Danish, English, Swedish, and Norwegian surgeons, says, "Professor Smith-Petersen is one of the world's leading orthopedists. He has taught us his own methods. He has worked out his own method of treating hip sufferings and makes by this method a whole new joint. He has demonstrated this every day before a large gathering of surgeons; and to me personally he has presented his own instruments.

"The arthroplasty method will be possible to perform at Ulleval Hospital and other Norwegian hospitals from now on. . . . We have also had great joy in other fields of surgery here at Ulleval by Professor Smith-Petersen, and now Norwegian surgeons go regularly to Massachusetts General Hospital to see and learn. . . .

"Both Professor Smith-Petersen and Dr. Larson did their work without compensation. Professor Smith-Petersen refused a sum of money we wished to give him from a trust fund to cover some of his expenses during his stay here. That money will now be used for the benefit of one of our Norwegian doctors."

* * *

DERMATOLOGY DEPARTMENT

The first Staff Meeting of the fall season was held on September 27 in the Out-Patient Department. Three cases were exhibited. The first was pemphigus of the mucous membranes with probable secondary monilial infection. The second was lichen planus simulating psoriasis. Last were a mother and daughter with a pigmentary disturbance. The diagnoses suggested were incontinentia pigmenti and livido reticularis. Several members of the Staff spoke on their experiences while in military service. Dr. Tolman showed lantern slides of atipical cases of lichen planus due to atabrine. Dr. Damiani spoke on his experiences in Iceland. Dr. Perley discussed dermatology in the Pacific Theatre. Dr. Wainger and Dr. D'Urso also related some of their experiences. It was announced by Dr. Lane that a study of vitamin A in skin diseases will be carried on by Dr. Wainger and suitable cases should be referred to him.

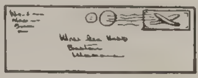
The first Quarterly Meeting of the New England Dermatological Society was held in the Out-Patient Department on Wednesday, October 9.

Word has been received that Dr. William E. Flood (*a.r.p. D* 1942) has started practice in Fort Worth, associated with Dr. Porter Brown. The address is 1106 Medical Arts Building, Fort Worth, Texas.

Dr. Ralph H. Luikart, Jr. (*M* 1944) writes that he will be discharged from military service in the near future and contemplates returning to M.G.H. to further his training in dermatology.

Dr. Damiani has completed his term as our senior resident and will open an office for the practice of dermatology at 16 Norwich Street, Worcester. Dr. Perley succeeds as senior resident. Dr. Hugh MacDonald has completed a year's postgraduate training and plans to start practice in Illinois. Dr. Harry Miller has finished a year, but will stay on for another month. He has already reopened his office in Connecticut.

Dr. John J. D'Urso and Dr. J. L. Spencer will continue for a second year of postgraduate work. Comdr. John H. Cox, MC, and Dr. Basil C. Gray began the graduate course in October. Commander Cox was transferred here from the Norfolk Naval Air Station. Dr. Gray practised in upper New York state before entering military service.



Since last June this letter to Dr. Barney from Lt. Robert H. Hepburn, MC, USNR (*r. s. U* 1943) has been set up in print, awaiting space for publication. It is too interesting to be forfeited, even though Dr. Hepburn is now back home.

My early wanderings seem remote and hard to recall in the face of this Shanghai impact. I went to the Naval Hospital at Newport, R. I. when I left you in January '44. Thence to Quoddy Village, Eastport, Maine, in April '44, where I and 3,000 Seabees plodded around in mud. I'll bet you know Eastport. In spring, its cold muck is remembered forever on a brief few weeks' acquaintance.

On the way across to Seattle, as our first stopping point *en route* to Pt. Barrow, Alaska—where we were going oil prospecting in the 4th Naval Petroleum Reserve—I came down, luckily, with catarrhal jaundice. This resulted in a delightful summer at Bremerton Naval Hospital, in all the warm brilliance of our northwest. I remember your once saying how nice it would be to live in Seattle. I tried it (Bremerton, just across the bay) and it was beautiful. My wife and I lived in a tiny apartment off a garage, and had chickens and enormous tomato plants right outside the window. I loved even the chickens. After Sue had worked all day on a drawing we'd often say, "Wouldn't Dr. B. love to do that one, and if he were only here to show us how!"

In October we drove back across the country—going around Mt. Rainier, across Washington, nicking Oregon, down through Idaho, Wyoming, Nebraska, Iowa, Indiana, Ohio, Pennsylvania, New York, to New London, the Submarine Base. I lost $200 on the ancient Dodge I bought, but it carried us faithfully to a million-dollar memory.

Winter '44-'45 at the Sub Base was cold and wet; but, with Sue and Hartford right there, it was an unbelievable reward for catching catarrhal jaundice.

April of '45 we spent in New York while we gathered together the *U.S.S. Repose.* After commissioning, May 26, we took our shake down to Norfolk, Va. Sue followed, and after two weeks at Old Point Comfort we parted as the "Posey" shoved off for the Pacific.

After a trip from Pearl Harbor to Frisco we set off for Okinawa, only to have the war end before we got going.

Since September 30 we've been in Shanghai, doing a land office business in V.D. I've had six stone cases (kidney or ureteral), one nephrectomy for a ruptured kidney, one transurethral, and a row of varicoceles, hydroceles, orchidopexies, and the like. The extraordinary amount of chancroid and lymphogranuloma venereum was a complete novelty to me. I'm now quite an expert (if I dare admit it) in these dark subjects.

Points will free me in April, at last; so, my old boss, you may see me again soon, before I become so oriental (or bald) you won't recognize me.

And now, from 179 Allyn Street, Hartford, Connecticut, comes this note:—

A number of your issues of THE NEWS have caught up with me here in Hartford. The astronomical news apparently hasn't reached you that I am reclining, as of three months, in civil life. My practice of urology is somewhat inaccurately and too politely so-called, but I think I can identify its beginning along with my efforts on the lowest rung of the g-u ladder at the Hartford Hospital.

This brief note arrived last June from Capt. Fathollah K. Mostofi, MC, AUS (*a. P*), from Section 5, Madigan General Hospital, Fort Lewis, Washington.

Another transfer—again because the hospital (Dibble General) was inactivated. This being the second time, I have now specialized in what one does in closing an Army General Hospital.

The above has been followed by this letter from Captain Mostofi, headed William Beaumont General Hospital, El Paso, Texas.

A request for discharge from the Army, after 24 months of service, led to transfer to this hospital in August. The laboratory is the largest and best equipped that I have had. The climate is certainly a great contrast to that in the state of Washington.

We are conducting an extensive postgraduate teaching and training program for RA Medical Officers who were forced to do administrative work during the war and who are presently expected to take over all the professional work. I am not convinced that this is the right approach to the problem of teaching these men and certainly feel that this is very inadequate, unless supplemented with additional training.

We have as little formality as one could have and still be in the Army, and no one could ask for more congenial and less formal RA Colonels and Lieutenant Colonels to work with than are in this group.

Since my last note, I have been certified by the American Board of Pathology (Anatomical Path. Section), and had an eight-day visit with my family who are still in Southern California.

Asst. Surg. John W. Smillie (*ES* 1944) gives as his new address Communicable Disease Center, USPHS, 605 Volunteer Building, Atlanta 3, Georgia, and adds:—

In August I was reassigned here as Epidemiologist, and spent August in South Central Mississippi working on an epidemic of dysentery.

I note that mail sent Harvey S. Collins (*M* 1944) is being returned. Last June I heard he had left the Nutrition Clinic of the Hillman Hospital and had gone to Europe to do nutritional field work.

While this letter from Lt. Robert A. Broome, Jr., MC, AUS (*M* 1944) was addressed to Dr. Means, a postscript asks that it be passed on to The News. It is Lieutenant Broome's "first", and is headed 279th Station Hospital, APO 755, c/o Postmaster, New York, N.Y.

After my momentary but refreshing visit to the M.G.H. last April, I returned to Fort Dix and then went to Camp Kilmer for shipment overseas. I was lucky enough to be sent to the European Theatre. We sailed from New York on 20 May — many of us, myself included, very anxious to come; others, chiefly those with families, not so anxious. There were over a hundred MC's on the *General Brooke*, along with a shipment of between two and three thousand German prisoners of war being repatriated.

One of my medical school classmates and I were put in charge of one of the holds full of prisoners, and then it was that I first realized how little of my college German I remembered. We got along somehow, though, and since I've been here I've been able to refresh my memory at least enough to converse and understand, however imperfectly.

We landed at Le Havre, came through Paris (only 5 hours there) and Frankfurt to the replacement depot at Marburg. Marburg is a beautiful and very old town of about 40,000 inhabitants. It has rough cobblestone streets, steep hills, and some beautiful buildings dating from medieval times. The medical school of the University of Marburg is in operation now.

Lucky again, I was sent to Berlin, where I'd hoped from the first to go. I arrived here in the middle of June, and am working on the Medical Service in the 279th Station Hospital — a 500-bed hospital (formerly 750) and the only American hospital in Berlin. Food and quarters are good; and, as Army medical work goes, one can't complain. Believe it or not, only yesterday a patient was admitted to my ward with frank hypothyroidism. I haven't seen any thyrotoxicosis here yet, although with young female dependents arriving constantly, there will probably be some before long. We see a moderate amount of rheumatic fever, nephritis, malaria, and post-diphtheritic neuropathy and myocarditis. As you doubtless know, the brand of diphtheria here in the E T is severe, and these complications are common. Interesting to me was a recent case of Reiter's disease — if it can be called a disease rather than a syndrome. It occurred in a middle-aged male civilian, and seeing the patient certainly made me long for my reprints and the other easily available literature which we take for granted in the States.

Berlin is, of course, an interesting city — what remains of it. Two weeks ago I went to Potsdam, which is practically totally destroyed by one night's bombing, except for the buildings in the Park Sans Souci, where are located the old and new palaces of Frederick the Great and his descendants. These palaces are, of course, very beautiful.

A few days ago several of us went to the Robert Koch Institute to see some of the research that still goes on there, and to see the tomb of Koch. While there we met Dr. Kleine, who used to work with Koch, and who used to be the Chief of a South African institute for the study of trypanosomiasis. Soon I plan to go and meet Dr. Warburg, who is still the head of the Warburg Institute for research in cellular physiology. That will probably be more than usually interesting, for I understand that Dr. Warburg is far more a master of our language than I am of his.

The statements with regard to our discharge from the Army are still not entirely clear; but when that time does come, I hope very strongly to be able to come back and work at the M.G. H. again.

From 422 Beacon Street, Boston 16, comes this note from Dr. Donald T. Chamberlin (*P* 1931 *&* *NS* 1931).

I returned from England last December in command of the 187th General Hospital. After getting through the maze of transferring the command and inactivating the unit, I went to Canada where I had a teaching position at McGill. Very quickly it became apparent that I could never live happily outside my native land, so I came back. On 16 September I opened my office at this address for the practice of Gastroenterology.

My terminal leave was over in April and I reverted to inactive reserve status with the rank of Colonel. It is great to be a civilian again after five years, and even greater to be back in Boston.

In our September issue we reported that Dr. M. Morris Pinckney (*WM* 1932) is back home and in private practice. This letter from him to Dr. Faxon gives us our first clue as to where he was stationed during the war.

I am thoroughly ashamed of myself for not having written to The News in so many years. I greatly enjoyed each issue and, needless to say, read every word. However, since our Unit was at all times so near the Sixth General and since we so often saw our friends there, we did not write separate letters to The News for fear of duplicating their information. There were four or five MGH alumni in our Unit and we had many pleasant visits with your group.

I am looking forward to future issues of The News.

While men are supposed to be exasperatingly inefficient as correspondents, our experience has been that letters from our nurses in the Service have been sharply in the minority. This letter to Dr. Faxon from Lt. Col. Kathleen H. Atto (*MGH* 1922) will be read with great interest by all of Colonel Atto's friends. Her address is 97th General Hospital, APO 757, c/o Postmaster, New York, N.Y.

After almost twenty-five years in nursing and almost four and a half in Service, I am having a new and interesting experience — that of being for the first time a patient. It is amazing how much one can be around hospitals and yet not appreciate what actually happens to the patient and how radically treatments can change.

I was operated upon about a week ago and after three hours in the operating room (they tell me), a transfusion and an intravenous, I dangled that evening and got up twice the next day. Since the third day I have been up practically all the time and on regular diet; and now, with sutures out, I feel as if nothing had happened. Are they doing that sort of thing at M.G.H. or is it strictly Army SOP?

What nursing care I have required has been efficiently given by Lt. Leonille Dufault (*MGH* 1936), whom I knew as a very young student. While all the nurses have been fine, it has been a great comfort to have one of our own.

My present position is Director of Nursing CBS — a position similar to the one I held in Second Service Command. Although I was not fortunate enough to get overseas during the active phase of the war, I am enjoying my present experience and trust I will be given the opportunity to complete my overseas tour. The picture changes so completely from day to day one never knows.

Our headquarters are in a beautiful spot, undamaged by the war, about twenty-five miles from Frankfurt. From here my travels take me to all parts of Germany.

I have been told there is an impression at home that we have so much German help in our hospitals that the nurses are not working. I can assure you, from both observation and personal experience, this is not the case. Our numbers are being reduced rapidly by redeployment and our services expanding because of the number of dependents, to the point where it is difficult to cover adequately, but the nurses are doing the nursing.

I have completely devoured each issue of The News that has reached me. I have read with interest accounts of new developments at M.G.H. I know they will meet with success, as all previous ventures have — as all ventures so carefully considered and planned do.

It seems strange to realize that Miss Johnson is no longer there. I trust she is enjoying her well-earned retirement. With Miss Sleeper at the helm she should have no fears about the progress of the School.

Maybe, with the shooting war over and private practice the only concern of the day, more "firsts" will arrive from our alumni. Here is one from Dr. William H. Blodgett (*Or.* 1940).

I have been out of the Army since the first of the year. I spent three years in the ETO, two years in England and one in Paris, as Chief of the Orthopedic Section in the 217th General Hospital and as Seine Section Consultant in Orthopedics.

During all this time The News was received regularly (though sometimes delayed by transportation difficulties) and was a constant pleasure. The whereabouts of many of my friends from the General always seemed to be a surprise, because one had the feeling that everybody else was in the old groove while you were the only one in a pup tent (in which I spent only two weeks, by the way). I must say I have had a constant sense of guilt for not having written you regarding my activities, but they always seemed unimportant to the person in question.

Since January I have been back in the practice of Orthopedics with my father at 603 Kales Building, Detroit 26, Michigan.

Dr. Parker C. Carson (*r. s. Or.* 1940) is out of the Navy and back in private practice at 20 Maple Street, Springfield, Mass. A recent letter says:—

I spent most of my time during the war at the U.S.N. Base Hospital No. 8, located on Oahu near Pearl Harbor. During my stay in Hawaii I had occasion to see many of my MGH friends. I returned to Chelsea about a year ago for a brief stay before separation from the Service.

I reopened my office last January and have been busy ever since. I hope to get down to Boston occasionally for Grand Rounds with Dr. Smith-Petersen.

This nostalgic letter has come, as a "first", from Dr. Richard S. Cosby (*EM* 1940). His office is in the Parkway Building, 117 East Colorado Street, Pasadena 1, California.

I have put off writing until I should become better acquainted with this bewildering,

Luncheon on the Bulfinch lawn, at the Ether Centenary
1946

scrambling, and growing town that is Los Angeles.

After leaving the beloved General on the first of April, 1942, to enter the 105th General Hospital with the good friends you all know, there is little of general interest to describe until the end of January 1946 — a gala day at Dix, when the military elected me to shed the khaki. From there, some unusual "homing" instinct drove me to Southern California via a short stop at Boston. Here, teaching plus private practice is the order of the day — the teaching in association with the University of Southern California, the practice in Pasadena.

Divers other gents, viz: Ed Evans, Bill Shuman, Glen Gummess, and Walter MacLaren — all HMS '38 — have suddenly popped up in this flowering wilderness to lend comfort to one not yet completely "assimilated". But "assimilation" is inevitable (or so the natives imply), and so cardiology will undoubtedly give way soon to swimming, tennis, and skiing. But just to put the record straight, I do miss the General, and let no one tell me otherwise.

A short but welcome note has come from Dr. Wilfrid J. Comeau (*a. in M* 1937-39), from 48 Penobscot Street, Bangor, Maine.

I was separated from the Army in October 1945, after thirty-four months in various general hospitals in England. I resumed private practice as a cardiologist at the above address, and have been quite busy.

I looked forward each month while overseas to receiving The News, and I find that my interest has not diminished since I have returned to civilian life.

A while back we received this letter from Dr. John W. Norcross (*EM* 1937). Much in the way of an interesting story seemed to be hiding behind the words, and we wrote Dr. Norcross asking him if he wouldn't send us something for the "Now it can be told" column. While awaiting his reply we publish the letter in hand so that all his friends may know where he is.

I have returned home again and am back at practice at the Lahey Clinic. I want to apologize for not writing you while still on Okinawa. To be truthful, I was waiting for the war to end so that censorship would be removed and I could write a more interesting letter. Then I just didn't get around to it before the time came for me to return. The experience was most interesting and I was always busy; but after the war, it was hard to stay there practising on gooks when I felt I could do so much more for our own civilians.

My home address is 29 Nod Hill Road, Newton Highlands.

Almost three years ago we reported that the name of Lt. Walter C. Graham, MC, AUS (*r.s. Or.* 1940) had appeared on the staff list at Valley Forge General Hospital. Now a "first letter" has come from him. During this interval he has been promoted to Lieutenant Colonel. He writes:—

I am still in the Army but expect to be released from active duty soon. At the present time I am Chief of Orthopedic and Hand Service at the Valley Forge General Hospital. When I am discharged from the service, I expect to return to Santa Barbara, California, and take up Orthopedics where I left off.

We have greatly enjoyed The News, which has kept us in contact with all our old friends among the alumni and on the staff at M.G.H.

I was recently presented with the Legion of Merit, apparently for work done at the Valley Forge General Hospital.

We had had nothing but changes of address from Capt. Duane H. Mitchel, MC, AUS (*M* 1943) until Dr. Means sent us this letter from him. He is still with the 29th General Hospital, with the APO changed to 1054, c/o Postmaster, San Francisco, California.

You would think that after two years overseas I should have a few war experiences to relate similar to those printed in The News; but, fortunately or unfortunately, I've been assigned to this General Hospital during most of my overseas duty and have not been in combat. While in New Caledonia we were actually farther from hostilities than you were in Boston. We arrived on Okinawa four days after the campaign was officially over, and except for a few light air raids and an occasional night infiltration by a starving Jap trying to find the mess hall, we had no excitement. Now we are located in a Japanese University near Seoul, Korea—becoming more convinced each month that the statement "The winning of the peace is more difficult than the winning of the war" contains an element of truth.

THE NEWS

No.51 Boston, Mass. December 1946

HENRY KNOX SHERRILL

The history of the Massachusetts General Hospital is the biography of the great men who have made it. Henry Knox Sherrill is one of these great men. His association with this hospital began in May 1917 when he became Chaplain of Base Hospital #6. In 1928 he was elected a trustee. From 1934 he has served as Chairman of the Board. In September 1946 he was chosen as Presiding Bishop of the Protestant Episcopal Church of America. Since this will require his residing in New York, on November first he tendered his resignation as trustee, after serving for eighteen years.

Possessing remarkable executive ability, Bishop Sherrill has wisely directed the affairs of this hospital. The erection of the White Building, the successful guiding of the institution through the critical war years, the formulation of comprehensive plans for the future, will long be remembered as the result of his leadership.

His humor, humanity, and honesty, as well as his ability and farsighted vision, have endeared him to everyone in the Massachusetts General Hospital. The high morale and spirit of service, so prominent a feature of this hospital, have been fostered by his presence and his example.

We wish him happiness and success in his new position. We shall miss his cheerful laugh, his stimulating presence, and his wise counsel. We are thankful that he has been one of us for these many years. To him we extend the same message with which he cheered the departure of the 6th General Hospital:

> "We shall miss you
> We are proud of you
> God bless you"

N. W. F.

Miss Morse, Supervisor of our Occupational Therapy Department, is about to leave for Czechoslovakia. Miss Morse will head a unit, sponsored by the Unitarian Service Committee, whose mission is to set up a Physical Medicine program in Czechoslovakia. Miss Morse expects to be gone for almost a year.

Everyone knows about the work done over there this past summer, under the same sponsorship, by the group of fourteen American doctors, headed by Dr. Paul D. White. Dr. Aub and Dr. Krayer also went with the mission. M.G.H. is very proud that once again a member of one of our services should be named to head the new unit.

The Medical Staff meetings were resumed on November 4, when Drs. Joseph C. Aub and Paul D. White gave accounts of their summer in Czechoslovakia. Dr. White showed some very interesting pictures. The News hopes to publish briefs of their talks in an early issue.

The monthly Dental Staff meetings were resumed on November 19, and will be held on the third Tuesday of each month at 7:30 P.M. in the OPD lower amphitheatre. These meetings are open to all hospital members, and many interesting subjects have been scheduled for the winter. The November 19 subject was "Dental implications in cardiac disease".

* * *

Don't miss seeing Dr. Barney's drawings which are being shown at the Art Museum! There are forty-one pieces on exhibition. The painstaking detail and delicate handling of each of his subjects surpasses anything we have ever seen before. The drawings include—but, no, we won't tell you anything more about them. Words would not do them justice. You need to see them for yourself.

The drawings will be on exhibition until December 8, but don't wait till the last minute lest you fail to get there. You'll be eternally sorry if you miss out on them.

At a meeting of the Board of Trustees held on October 18, it was voted:

To accept with regret the resignation of Dr. Robert K. Brown from the position of Assistant in Surgery;

To appoint Dr. Gardner C. Quarton as Assistant Resident in Neurology for one year, beginning October 15;

To appoint Dr. Stanley J. Sarnoff as Third Assistant Resident in Surgery, beginning January 1, 1947.

The General Executive Committee, at their meetings on October 23 and 30 and November 6, voted:

That the appointment of Dr. William W. L. Glenn as First Assistant Resident in Surgery be terminated as of December 1;

That Dr. LeMoyne White be promoted to the position of Resident in Psychiatry for the term January 1 through March 31, 1947 and that Dr. E. Peirson Richardson be promoted to the position of Resident in Psychiatry as of April 1, 1947, when Dr. White will return to his old position as Assistant Resident;

To approve the recommendation that Dr. Ching Tung Liu's appointment and service be considered as that of Resident instead of Assistant Resident on the Neurosurgical Service, and that his diploma read "Resident";

To appoint as Graduate Assistants:

Dr. Rose T. Kronenberg, in Psychiatry
Dr. Leonard T. Kurland, in Medicine
Dr. Roger G. Metcalf, in Medicine
Dr. Richard L. Miner, assigned to the Dental Clinic

To appoint as Research Fellows:

Dr. Edgar H. Norris, in Pathology
Dr. Donald R. Wilson, in Medicine, to work with Dr. Albright
Dr. Masao Yatsuhashi, in Surgery, to carry out investigative work in the hematological problems of the Blood Bank, from October 1 to April 1, 1947

To appoint Dr. John Gardiner as Clinical and Research Fellow in Anesthesia;

To appoint Dr. James A. Grindell as Clinical Fellow in Medicine, to work with Dr. Paul D. White.

* * *

The News is going to publish transcriptions of several of the speeches given during the three-day Ether Celebration. We start off with the address delivered by Dr. Fuller Albright (*WM* 1926), a member of our Medical Staff. Dr. Albright is Associate Professor of Medicine at Harvard University, and is an eminent endocrinologist and a student of the calcium metabolism in renal stones. He was one of the speakers on Dr. Aub's symposium on "Progress in the study of degenerative diseases". The subject of his speech, which was illustrated by fascinating lantern slides showing hand-drawn diagrams, was "The aging of bone and treatment thereof".

You all know what is meant by the expression, "the facts of life"; one might use as the title of our symposium here today, "the facts of old age". My particular part is to discuss the changes in the skeleton in old age and the causes therefor.

Twentieth Century Man

I will start by contrasting certain anatomical findings and physiological processes in a comparatively young individual, with those in an elderly individual. For the young individual, let us take one born at the turn of the century, let us say January 12, 1900, and let us call him "20th Century Man". I will now synthesize 20th Century Man, putting in only those structures which concern the present discussion.

First, I will give him an outside skin, and, to add a little realism, four rudimentary appendages. [This is where the diagrams began—this one showing a vertical rectangle with rectangular appendages. *Editor*]

Secondly, I will put in a gastro-intestinal tract and a kidney with an outlet to the outer world.

Thirdly, I will fill the body with fluid and set aside one compartment of fluid to represent the blood serum. The serum compartment is of importance since it can be sampled with a syringe and thus its chemical constituents can be analyzed. Throughout the body fluids I will put calcium ions represented by black dots and phosphate ions represented by white dots.

I will now introduce into the center of this synthetic man a large black quadrangular area to represent the skeleton. At the two ends of this skeleton I will attach a structure which represents the body musculature. Finally, I will introduce outpocketings of the body surface to represent the teeth.

The synthesis now becomes a little bit more complex and, I might add, controversial. The skeleton is composed of an organic matrix into which is deposited a calcium-phosphate-carbonate salt, called dahlite. Much of the skeleton is in the form of a maze of interlacing trabeculae so that the surface area is tremendous. From a structural point of view there are two types of surface—one where bone is being laid down and one where it is being resorbed. Where bone is being resorbed one sees osteoclasts which are large cells with multiple nuclei. It is my belief, not my conviction, that the levels of calcium and phosphate ions in the body fluids are held at such heights by the kidney, in its role of regulator of homeostasis, that dahlite is being constantly resorbed at bone resorbing surfaces. The black arrows [shown in the slide] indicate the passage of calcium from bone-resorbing surfaces (indicated by osteoclasts), to body fluids, to kidney, to outside world.

But bone formation and bone resorption occur at one and the same time. Obviously, there must be some local factor where bone is being laid down which favors the precipitation of the calcium-phosphate salt, dahlite at this point. Where bone is being laid down one can see osteoblasts laying down uncalcified matrix (i.e. osteoid). It is highly probable that there is a localized increase in phosphate ions at bone forming surfaces due to the action of phosphatase or phosphorylase or both in splitting off inorganic phosphate from organic phosphate compounds.

I will introduce a series of arrows to indicate the movement of calcium in the body; these arrows speak for themselves, by and large. Note that the teeth have only ingoing arrows. One can acalcify a tooth but not decalcify it.

I will introduce in the left lower quadrant of my synthetic man a structure to represent the steroid-producing endocrine glands. These include the male and female gonads and the adrenal cortex. The steroid hormones circulate throughout the body and stimulate various structures. Of these, the most spectacular, if not the most vital, are the structures which constitute the secondary sexual characteristics and which give to the body many of its contours. It will be also noted in the slide that they stimulate production of axillary hair. I would emphasize here, however, their marked somatotrophic action; thus, it will be seen that they stimulate muscle growth, skin growth, and bone growth. One almost gets the impression that they stimulate all tissues. However, there is one interesting exception—the hair on top of one's head. This, as shown by Dr. James Hamilton, is inhibited by one of these steroids. In slide 9 I will introduce a new wing to the structure representing the steroid-producing glands. Here steroid hormones of a different kind are manufactured. These steroids have an action opposite to that of the other steroids on certain of the tissues; thus they inhibit growth of these tissues rather than stimulate growth. Their importance is brought out only in certain diseases and in certain conditions where the body has to mobilize its resources because of danger from without.

This, then is Twentieth Century Man.

Ether Day Man contrasted with Twentieth Century Man

Let us now contrast "Ether Day Man", born October 16, 1846 (making him 100 years old) with Twentieth Century Man.

In examining Ether Day Man one is struck with how many of the changes can be explained on the basis of atrophy. Thus, his skin is thin and when wrinkled forms waves with sharp crests as compared with the waves with rounded crests produced when the skin of 20th Century Man is similarly wrinkled; the muscle mass and the bone mass are likewise decreased. Moreover, the steroid-producing glands are decreased in size and in respect to their production. The axillary hair is scanty; certain secondary sex characteristics are less prominent than previously; etc., etc. The teeth are somewhat of an exception. To be sure, many have fallen out because of atrophy of the structures in which they were imbedded or have been pulled out because of decay. The teeth which remain are not atrophied, albeit riddled with caries perchance.

Now let us examine the bone tissue more closely. It will be seen that the decrease in bone mass is due to a decrease in bone formation in the presence of a continued normal degree of bone destruction; in other words, the osteoblasts are not laying new bone matrix as rapidly as in 20th Century Man. The problem is one of decreased anabolism rather than increased catabolism. It seems probable that this same discrepancy is present in other tissues where we are not so fortunate as to be able to differentiate between decreased formation and increased destruction.

The problem with the skeleton, therefore, is not one of calcium-phosphorus metabolism but one of tissue metabolism; that bone matrix which is laid down is normally calcified; with continued bone destruction and decreased bone formation, the net result is a loss of calcium from the skeleton and hence an increase in calcium excretion in the urine. It must be added, however, that as the skeleton becomes depleted the total amount of bone destruction decreases, although the amount of destruction per unit of bone probably remains unchanged. Therefore, in time the calcium excretion in the urine decreases and finally may even reach a very low level.

In looking for the cause of the atrophy of multiple tissues in Ether Day Man, the question arises whether atrophy of the steroid producing organs occurs first, and leads secondarily to atrophy of other organs, or whether old age *per se* causes atrophy of all tissues. This question can easily be put to the test. If the atrophy is secondary to decrease in steroid production, it should respond to steroid therapy. It does, at least to a certain degree. Thus, from the studies carried out in my laboratory by a multitude of researchers, it has been shown that the atrophy of bone which occurs in old age is offset by the administration of estrogens and/or androgens. It has been further shown that androgens stimulate protoplasmic anabolism with the retention of nitrogen, phosphorus, potassium, and sulphur in the proportions in which they are found in protoplasm.

Times of onset and cessation of production of certain steroids

Since the steroids probably have an important role in the problem at hand, let us examine the production of certain of these in relation to the age of the individual.

In the female the ovarian hormones, estrin and progestin, are first produced in any quantity at puberty (alias menarche). Their production stops rather suddenly at the menopause. Our knowledge concerning these two hormones is facilitated by the fact that their presence is indicated by the menstrual cycle. There is another key steroid hormone about which our knowledge also is quite clear. I speak of the adrenal cortical steroid hormone which has a somatotropic action somewhat similar to the male gonadal hormone, testosterone, and the production of which in the female governs the growth of axillary and pubic hair and the excretion of 17-ketosteroids in the urine. For convenience, I will call this hormone the adrenal-cortical "nitrogen" or "N" hormone. The onset of its production is usually fairly synchronous with the onset of the menarche, but in certain instances the two are dissociated. Dr. Lawson Wilkins of Baltimore has told the speaker that he has seen a group of seven children in which the axillary and pubic hair production started very precociously while the menarche came at the usual time. Then, in the condition, ovarian agenesis, where the ovarian tissue is congenitally lacking, the production of axillary and pubic hair and of 17-ketosteroid precursors, in many instances appears at the normal time for the menarche, albeit in reduced amounts for reasons which need not be discussed now. In short, there is an "adren-arche" with respect to the "N" hormone without a menarche. The production of axillary and pubic hair and of 17-ketosteroid precursors continues after the menopause, from which I infer that the "adrenopause" with respect to the "N" hormone and the menopause are not simultaneous. However, there is an "adrenopause", as very elderly women have very scanty axillary and pubic hair and very low 17-ketosteroid excretions in the urine.

Now let us turn to the male. Since the androgens made by the interstitial cells of the male gonads have an action similar to that of the adrenal cortical "N" hormone, it is impossible as yet to draw a curve differentiating the two hormones. In all probability, the gonadal hormones and the adrenal cortical "N" hormone start at the same time at puberty. They cease, not at the time of the female menopause, but probably at the time of the female "adrenopause".

From the above discussion it is seen that senility is ushered in by a puberty in reverse. It is further seen that there are two steps in the turning-off of steroid production in the female, the menopause and the "adrenopause". Since estrin has a marked effect in stimulating osteoblasts, the first of these steps is followed by osteoporosis. The relatively early onset of the menopause in the female accounts for the fact that osteoporosis is so much more common in females.

Interpretations

When it comes to the interpretations, one must be extremely cautious. I think it can be said with assurance that one of the striking characteristics of old age is the atrophy of multiple tissues; it can also be said that the administration of certain steroids partially overcomes this atrophy. The $64 question is whether the atrophy which occurs is a basic evil of old age or a compensatory blessing in disguise. The increased life expectancy of women over fifty as compared with men of the same age is perhaps an argument in favor of the menopause constituting a compensatory adjustment. The speaker prefers not to take a stand on this important issue.

New addresses:—

Dr. Robert K. Brown (*WS* 1939), 144 Downing St., Denver 3, Col.

Lt. Eileen Glynn (NC) USN (*MGH* 1936), U.S. Naval Hospital, Naval Station, Norfolk, Va.

Dr. Claud E. McGahey (*a.r.s.* 1941), Warren St., Hudson, N.Y.

Dr. J. Robert Spencer (*EM* 1943), 1130 5th Ave. SE, Rochester, Minn.

Dr. Henry C. Thacher (*CM* 1942), 987 Memorial Drive, Cambridge, Mass.

Brief bits:—

Asst. Surgeon (R) Harvey S. Collins (*M* 1944) is on duty with the United Nations Relief and Rehabilitation Administration and is at present stationed in Europe. His address is U.N.R.R.A.—Vienna, APO 777, c/o U.S. Army, Postmaster, New York, N.Y.

We discovered, quite by accident, that Dr. James T. Heyl (*WM* 1939) is out of military service and is on the staff at Peter Bent Brigham Hospital. It would be nice if we might hear from Dr. Heyl himself.

Dr. Floyd H. Jergesen (*Or.* 1942) has announced the opening of his office for the practice of orthopedic surgery at 384 Post St., San Francisco 8, Cal.

Dr. Louis Nathan (*Or.* 1930) is back in private practice. His office is at 276 Commonwealth Ave., Boston, Mass.

Dr. William A. Weiss, Senior Fellow in Anesthesia, completed his service on October 31. His address now is c/o Mr. J. L. Wertzberger, 5013 Walton Ave., Philadelphia 43, Pa.

Lt. Comdr. Herbert C. Moffitt, Jr., MC (*EM* 1942) is back from the Southwest Pacific. He writes:—

I am now on terminal leave. Please change my address to 1818 Broadway, San Francisco.

After several months of terminal leave I expect to be an Assistant Resident in Medicine at the University of California Hospital here in San Francisco.

MASSACHUSETTS EYE & EAR INFIRMARY

An Eye-Bank, to which people in New England may donate their eyes after death for use in the cornea transplant operation, is being opened at the Massachusetts Eye and Ear Infirmary. The Eye-Bank is a branch of the already famous Eye-Bank for Sight Restoration, Inc., New York City, and is the second such affiliated bank to be established in the country, a branch having been started in Chicago in the spring.

The Sponsoring Board of the new Eye-Bank, made up of outstanding ophthalmologists from all over New England together with prominent churchmen and laymen, met at the Infirmary late in October. At the meeting, they appointed as Executive Committee: Dr. Edwin B. Dunphy, Chief of the Eye Service at the Infirmary and one of the first to suggest the establishment of an Eye-Bank for New England; William S. Ballard of the Junior Chamber of Commerce; and Henry Hixon Meyer, Boston attorney and Chairman of the Infirmary's Board of Managers. The Sponsors also voted that the New England Eye-Bank be under the auspices of the Eye and Ear Infirmary.

Mrs. Henry Breckinridge, Executive Director of the Eye-Bank for Sight Restoration in New York, outlined for the meeting the purposes and functioning of the parent Eye-Bank which was established in 1945. She pointed out that a branch bank here will not only insure an easily available supply of corneal tissue for surgeons qualified to perform the operation, but also will help encourage and extend the knowledge and skill required for this comparatively new eye surgery.

Dr. Garrett L. Sullivan, of the Infirmary Staff, has already been to New York for two weeks' intensive study of the latest techniques in the corneal graft operation. The Eye-Bank for Sight Restoration has awarded nine scholarships, donated by individuals, to young eye doctors who have been trained and have then gone to medical centers where previously there had been no one qualified to perform the operation.

Mrs. Breckinridge concluded her talk by saying that the national Eye-Bank has been amazed at the interest shown by the general public in the whole subject of research on blindness. Public response, she said, not only by the donation of eyes but also by financial contributions, was making it possible to do extensive studies in eye pathology and on injuries to the cornea.

A description of the operation itself was given to the Sponsor group by Dr. Brendan D. Leahey of Lowell, the eye surgeon who has performed the most corneal graft operations in New England. Dr. Leahey explained that the operation can restore or improve sight in only one form of blindness—that caused by opacity of the cornea when the rest of the eye and the optic nerve are normal.

Dr. Dunphy then stated that here in Massachusetts there are no legal obstacles to the procedure of eye donation. The donation is made beforehand on a special blank sent by the Eye-Bank on request. The New England bank expects to have such blanks ready to send out shortly.

Donors are asked not to make the gift a part of their wills, as a will is not effective immediately. Eyes must be enucleated by at least one hour after death. Because of such medical technicalities, it is at this time necessary for the donor to die in a hospital. But, for this very reason, it is desirable for a large number of persons to sign the donor blanks so that a sufficient number of eyes will be available at all times.

Almost any eye that has a perfect cornea can be used. The eyes are stored, under proper refrigeration, at the Eye-Bank until they are passed on to the doctors who use them. It has been known to be possible, today, to preserve the tissue for as much as 72 hours.

At the initial meeting of the Sponsor group, full coöperation of a number of leading hospitals in this area was assured by hospital representatives present. The Boston City Hospital was the first to offer the new Eye-Bank an actual eye, on the very day the Bank was founded. Other hospitals will be welcomed to affiliation as fast as the Eye-Bank gets under way.

Mrs. Edward M. Galagher, Jr., Chairman of the Boston Red Cross Motor Corps, was at the meeting in connection with the Corps' coöperation in getting eye material delivered with the necessary promptness, as in New York. A gift of money, sufficient to get the branch here started, was reported by Mrs. Richard C. Curtis, Treasurer of the Ladies' Visiting Committee at the Infirmary.

The New England Ophthalmological Society and the New England Oto-Laryngological Society held conferences at the Massachusetts Eye and Ear Infirmary on November 19 and 20. On the second day, the conferences were held in conjunction with the Eye and Ear Infirmary Alumni Association and were climaxed by the Alumni Association Dinner at the University Club at 6:15, at which Dr. Edwin B. Dunphy, as President of the Association, presided.

On the morning of the 19th, the Ophthalmological Society held a surgical clinic in the Infirmary operating room. The Howe Lecture on "Heredity and variation in clinical ophthalmology", by Dr. W. J. B. Riddell of Glasgow, Scotland, was delivered in the late afternoon at the Harvard Medical School. The regular business meeting of the Society in the evening was concluded with another paper by Dr. Riddell, this time on "Ophthalmological education".

The ophthalmological sessions on Wednesday were under the auspices of the Alumni Association and consisted of a surgical clinic in the morning and papers in the afternoon, with Dr. Frederick H. Verhoeff presiding. The Oto-Laryngological Surgical Clinic on Wednesday morning was also under the Alumni Association, and both groups met at the buffet luncheon given by the Infirmary at 1 P.M.

In the afternoon, the Oto-Laryngological Society, with Dr. John D. Rice presiding, heard a number of papers. The guest speaker of this afternoon session was Ross T. MacIntire, Surgeon General of the United States Navy, who spoke on "Oto-Laryngology in the United States Navy".

Dr. Michael J. O'Connor (*Oph.* 1946) has recently been awarded the Legion of Merit Medal from the War Department for work done while in the Air Surgeon's Office, Headquarters of the Army Air Forces, Washington, D.C.

The following doctors have completed their service at the Infirmary and have gone into private practice:

Dr. Paul E. Floyd (*Oph.* 1946), 102 Main St., Farmington, Maine
Dr. Jose Guimaraes (*Oto-Lar.* 1946), Rio de Janeiro, Brazil
Dr. Bernard Zonderman (*Oto-Lar.* 1946), 29 Bay State Road, Boston, Mass.

The last address we had for Dr. Lyman Richards (*Oto-Lar.* 1924) was Pearl Harbor. A recent note to The News says:—

> I have opened an office at 1101 Beacon Street, Brookline. I am Consultant in Oto-Laryngology at the Cushing Veterans Hospital in Framingham and also at the Chelsea Naval Hospital. I have resumed my former position as Chief of the Bronchoscopic Clinic at the Eye and Ear Infirmary.

The News was very glad to receive a short note from Dr. Harry M. Nicholson (*Aural* 1913), in which he speaks of "the delightful visit" he and Mrs. Nicholson had in Boston. He adds:—

> I feel that I will again be a candidate for space in The News before very long.

Dr. Percy E. Ireland (*Oto-Lar.* 1935), who served with the Canadian Army in England, Africa, and Italy, and as Ear, Nose and Throat Consultant to the Canadian Forces overseas, sent this short letter to The News. Dr. Ireland's office address is Medical Arts Building, Toronto.

> After a long service in the Army (since 1939) I was finally discharged in September 1945. At that time I returned to duty at the University and at the Hospital teaching appointments I previously held. Since that is over a year ago, a few things have happened. I have seen a good many of my friends from the Eye and Ear Infirmary during my two visits at the Medical Meetings. Also, I have been appointed to the chair of Professor of Oto-Laryngology in our own Medical School at the University of Toronto.
>
> I was always very much interested in receiving news of the people I was associated with during my time in Boston. I have made one visit back since returning from abroad, and am planning to attend one of the New England meetings, which are always very stimulating.

Lt. Col. Merrill Moore, MC (*gr. asst. N* 1933-34) has returned home, bearing a decoration and citation for his outstanding work in China. Under Colonel Moore's direction, Nanking was sprayed with DDT, as a result of which the disease rate among our troops dropped to one percent.

Last May we received an interesting letter from Colonel Moore, written after he reached Nanking. Lack of space prevented its publication until now. It serves to fill in the gap in Colonel Moore's military record since the time he was sent home on sick leave from the Southwest Pacific.

I had expected to have more leisure after I returned home last summer from the Philippines, and I did for the few months I spent at Squantum on sick leave; but when I reported in at Bushnell General Hospital at the end of the summer, they sent me right back to full duty. I was ordered first to Fort Oglethorpe, Georgia, then to Fort Devens, Mass., where I served as Chief of the neuropsychiatric section at Lovell General Hospital. It was very pleasant being stationed so close to home.

Although I had enough points to get out of the Army if I wished to (and could understand how anyone would feel who did), I decided not to get out and volunteered to remain on active duty for as long as I am needed. It may be quite a while yet, as the Army still has plenty of work for psychiatrists to do. It is interesting and useful work, from my viewpoint. I have been seeing the cream of clinical psychiatric material for many months now, and I feel I am learning many valuable things from it.

Suddenly, toward the end of January, I received orders to go to China on a special assignment that sounded very exciting. I am much pleased about this, for I have always wanted to see China and will find it especially satisfactory to work here. It begins to look as if this duty will be the most pleasant I have had so far. In fact, it is as if I had been eating bread and spinach for a long time, then suddenly was handed a nice dish of ice cream and cake. I feel that way about it, plus a wish to share my ice cream and cake with others. My family will come over before long—when the families come.

I didn't have time to write a Christmas letter, as I wanted to do. By working hard, the hospital staff at Lovell got nearly all of the 5,000-plus patients home for the holidays (many of them for the first time in two or three years), which was something, and much more gratifying than any Christmas round robin I could have written.

I am still keeping notes, with the aim of writing them up some time. This experience of seeing China will make another chapter. I have already started roughing out my book—that is, to cover as far as I have gone, geographically, in the last four years. Starting with New Zealand, it includes New Caledonia, the New Hebrides, Guadalcanal, New Georgia, Green Island, Bougainville, Treasure Island, New Britain, Mussau, Hollandia, and Leyte—not to mention a lot of smaller places. It is not exactly the sort of thing that goes well into sonnets, but may make interesting prose some day. If it doesn't, it's my fault.

We have Dr. Means to thank, along with a few others of our Staff, for passing on to us many letters received from our men in military service. We wish more members of the Staff would make such letters available for publication in The News. This one came to Dr. Means from Lt. Raymond V. Randall, MC, AUS (*WM* 1946).

After being on temporary duty in Washington, D.C., Fort Dix, New Jersey, and Fort Sam Houston, Texas, I have been assigned to Oak Ridge, Tennessee—the "Home of the Atom Bomb". Just how long I shall be here I do not know. With all the talk of a Civilian Atomic Commission, the situation here is definitely not stable. I hope I shall be here for many months more, however, because there is much here to be learned.

At the Army Medical Field School in Texas I saw many men from the MGH Medical Services. Among those were Drs. Gardella, Seed, Gottschalk, Stunkard, and Stewart. The Surgical Service was also well represented, and there were many classmates from Medical School. John Seed writes that he is now firmly entrenched in the laboratories at Edgewood Arsenal, Maryland. You will be interested to know that Evan Colkins is there also. Several days ago I received a letter from Carl Gottschalk saying he is now at Fort Knox, Kentucky. He is working in a dispensary, but hopes to be transferred to the Armoured Medical Research Laboratories at that same post.

Oak Ridge is a most unique town. The whole area is tucked away between three chains of hills, the middle chain separating the plants from the town proper. The area consists of some 59,000 acres which are miles from the nearest city, Knoxville. My introduction to Oak Ridge was very dramatic. An Army car awaited me at the airport, some forty miles from Oak Ridge, when I landed at two-thirty in the morning. We drove down a super-highway for about twenty miles and then, without warning, turned off on a small side road which slowly but steadily threaded its way up into the hills. After many miles of this dark and winding road, we came upon a deep ravine. The bridge which crossed this ended at a sentry gate, blocking the entrance to the pass between the first chain of hills. All I could think of was the crossing of a moat into a large castle. Beyond the gate we sped along an excellent highway over another, or middle, chain of hills. Suddenly the lights of the town burst into view and there was the mythical city of the Second World War.

Soon after arrival I was very fortunate in being able to get quarters—a small four-room cottage near the ridge of the third chain of hills. It overlooks most of the town and surrounding valley. Priscilla joined me at once, and we are now well settled in our new home.

You would like Oak Ridge very much. And it is a painter's paradise. I doubt if the laurel groves of Elysium are more beautiful! Right now the trees on the hillsides are turning color and each hill is a revelry of red, green, yellow, and orange. Certainly this spot is as beautiful as Thoreau's Walden. However, I imagine when the trees have lost their leaves and the cold comes this country will be somewhat bleak. There are not many evergreens, as in New England, to clothe the hills in winter.

Please give my best regards to everyone around the Hospital. I hope to be back in Boston for a short visit before the turn of the year.

Last September we reported that Capt. Jesse E. Thompson, MC, AUS (*ES* 1943) had been transferred to Walter Reed General Hospital. A more recent letter to Dr. Mixter reveals the above promotion in rank and tells us about the kind of work Captain Thompson is doing.

With the closing of Ashford I was, by a streak of luck, transferred to Walter Reed; and, thanks to your giving me a neurosurgical number, I was placed in the midst of one of the busiest services it has ever been my fortune to be associated with. I have enjoyed the professional part thoroughly.

I have never seen so many ruptured discs before in my life, in both officers and enlisted men. We have been very conservative in operating on them. At the present time we have about come to this: Unless a man is almost incapacitated from pain, we do not even do a myelogram, much less an operation, and we don't operate on the ones we do the myelograms on unless the latter is positive. In other words, we have not been doing myelograms unless we are pretty certain of operating on the patient anyway. We have been having good luck, and have been picking out great loose fragments with dramatic post-op results.

All the other centers are closing, so most of the remaining cases are being transferred here for final disposition. We are rapidly getting rid of them, and hope that the separation criteria will be lowered accordingly for us. At the present time, I can get out next June and hope to go back to Boston and the M.G.H.

We have been withholding a most interesting letter from Lt. Robert H. Brown, MC, USNR (*ES* 1945) until sufficient space would enable us to publish it in its entirety. It was written to Dr. Haase several months ago, and we give it to you now because of its graphic pictures of conditions in the Philippines as they were then.

My orders came on July 26 transferring me from Annapolis to the *U.S.S. LST #23*. I flew across the country to San Diego, took a luxurious sleeper train to 'Frisco, and joined my ship in San Francisco Bay. The LST had 4 Navy docs and 30 Navy pharmacist mates, and was otherwise Coast Guard manned. We were to have participated in the Honshu invasion, but, luckily for all, war's end came while we were at anchor in 'Frisco. We sailed for Pearl Harbor on August 18, arrived on the 28th, and received orders to remove all medical personnel from the LST.

After three weeks of absolute leisure I finally got orders to fly to this present ship to relieve its medical officer. I flew in a C-54, a huge four-engined job, from Honolulu to Guam, and thence to Samar. From there the trip to Luzon was made in a C-47, a cargo variety of the DC-3. We stopped briefly at Manila and then Clark Field. The end of the milk run was at Lingayen Air Strip, a spot near where General MacArthur made his landing. Next, I hitched a ride in the back of a 2 1/2 ton truck to San Fernando, where my ship was alleged to be routed. This rattling ride of 3 1/2 hours was interesting in that it afforded me a more leisurely view of the countryside and of the native villages in particular. North of Lingayen Air Strip it became quite mountainous in comparison with the marshy rice land southward. There were battle-scars all along the way, and I would gather that the Army had it pretty rough against the Japs in this treacherous country.

San Fernando proved to be an oasis in the desert of filth and destruction. The harbor is very beautiful, except for the hulls of sunken Jap ships, which stand pretty far out of the shallow water. Opposite the Navy Section Base is a double range of mountains, the lower of which is nearer than the higher range. They remind me of the tiers of keys on an organ. While we were there the tail end of a typhoon alerted all personnel. Fortunately, nothing worse than seething seas and multiple cloudbursts ensued.

A few days later one of my fellow transient officers saw our ship pull into Lingayen Gulf and head south. Unfortunately, she dropped anchor too far out and for too short a time for us to be able to reach her. So we rode a boxcar from San Fernando to Manila where the *Waukesha* was headed. It took 11 hours to make the 120 miles. The cars made those of the "40 & 8" look like Pullmans. There were no lights, toilets, or drinking water. I slept on my luggage with a Filipino soldier practically on top of me. One of the soldiers had a couple of chickens with him which made no noise until the middle of the night when one of the troops sat on them.

Manila is a destroyed city. Any description you may have read of her damaged buildings could not possibly have been exaggerated.

The sewage disposal is extremely poor. Drinking water is scarce. Endemic there are many diseases to which white military personnel are susceptible, including malaria, amoebic and bacillary dysentery, plus the whole gamut of venereal diseases. Military personnel are advised that prostitutes are 100% infected. Prices are inflationary, and the soldiers and sailors add to the inflation by purchasing all kinds of worthless trinkets at almost fabulous prices. Cigarettes cost anywhere from $5.00 to $7.50 a carton. The old walled city was a bastion of Jap resistance and a bloody one at that. In this area are many truly old buildings, some over 300 years old. Nothing was left standing except for the shells of former buildings. The walls of many of these are in the neighborhood of two feet in thickness.

I spent a day haunting the Port Director for information as to where my ship was to drop anchor. After some first class red tape busting I was able to get transportation to the harbor front and thence to the ship. An LCM (Landing Craft Medium—56 ft.) took me out, the jaunt being about 7 to 8 miles. It took all of an hour to make it. Let me tell you I was sure glad to report aboard for duty.

The ship is a castle compared with the accommodations I'd had since leaving Oahu. The medical department is very well equipped. We have 3 main rooms: a medical office and laboratory, a sick bay which cares for 6 patients, and an operating room-dispensary which has, in addition to an excellent batch of surgical equipment, a small X-ray machine. We have a couple of medical storage rooms, a prophylaxis station, and an X-ray dark room besides the main three spaces. There are 4 pharmacist mates. The medical library is very good as to textbooks—in fact, is a source of joy to me. Unfortunately, we do not rate many journals. However, there is enough reading matter to keep me busy until I get back to the States and can pick up more. We're equipped to do Bacteriology, including Kahn tests, and have a good microscope to boot.

The ship is an AKA (Amphibious Cargo Assault), which means that she carried landing craft (LCM's and LCVP's) with the cargo necessary to maintain a beach party for a while. There is room aboard for a small landing party—about 100 to 150 men and 15 officers. She is about 460 ft. long, makes 16 knots easily, is very spacious and, more important, comfortable except in heavy seas. She was the first AKA to unload in Tokyo, and left Tokyo Bay just as the Missouri and others were arriving. We shall soon be headed for Japan (my first trip) for her third trip.

A recent letter reports Dr. Brown as back home. It says:—

My delay in notifying you of my separation from the Navy and of my new address (5 Garfield St., Foxboro, Mass.) is a poor way to express sincere gratitude for having received THE NEWS so regularly.

An off-the-record addition to the above information is that I am a Surgical Resident at the newly organized Cushing Veterans Administration Hospital at Framingham. There are many MGH people there, as you probably know. Dr. Henry H. Faxon can probably give you a more inclusive impression of the scene there. [How about it, Dr. Henry H.?]

Thank you again for a splendid job of reporting. You have managed to include in your editing a very continuous flow of the spirit which one feels while under the roof of the hospital.

The kind of letter we like to receive—one that tells us at some length what the writer is doing these days—has come from Capt. Ronald C. Bishop, MC, AUS (*M* 1945). It is headed 280th (US) Station Hospital, Lesum, Germany, APO 751, c/o Postmaster, New York, N.Y., and is addressed to "Dear friends at M.G.H."

I'm sure my "first" is way past due. At first I neglected to write because I didn't have much of interest to write about. The past few months I have been so busy it has been difficult to keep up with my correspondence.

My Army career since I left M.G.H. in June 1945 can be roughly divided into three periods. The first period was one of training and assignment; the second was spent in separation centers; the third includes my overseas service. Needless to say, the third period has been the most interesting, but I'm sure I would trade all the experiences for a trip back to the States right now.

I can cover in a very few words the first two periods mentioned above. Two months at Carlisle oriented me in the Army, gave me a few road marches and the infiltration course, and taught me a little bit about motor maintenance. After my tour of duty at Carlisle I had six weeks of temporary duty at Moore General Hospital on the Dermatology and General Medicine wards. I then spent one of those awful months in a replacement pool at Stark General Hospital in Charleston, South Carolina.

After my long wait in Charleston, I finally got orders to the Separation Center at Fort Knox, Kentucky, and the second period was started. From October 1945 to February 1946 I spent doing physical examinations with that mass production method for which the separation centers have become so notorious. This time was spent at the separation centers at Fort Knox and Camp Atterbury, Indiana.

For eight months I hoped long and loud that I would not have to go overseas, but the ax finally fell February 2 and I was off on a POM leave. From there it was Fort Jackson, South Carolina and Camp Kilmer, New Jersey. On March 6, 1946 I boarded the old faithful ATS *George Washington* with about 200 other medical officers. The trip across was interesting and the Atlantic favored us with two days of 30-40-foot waves. We landed at Le Havre March 16 and saw our first evidence of the war which had ceased almost a year before. The harbor still had masts of sunken ships sticking up through the surface. The only stable pier was a temporary one which had been constructed by the Army. The city was in ruins. These ruins were interesting to us at that time, but now it is interesting for us to see a city which has the majority of its buildings intact.

From Le Havre we took a scenic trip across northern France to Saarbrucken, up to Frankfurt, and then to Marburg. This was a three-day trip in third class coaches with wooden seats. I'm sure that the boys had things a lot worse during combat, but we thought this was pretty rough.

At the 3rd Reinforcement Depot in Marburg our shipment was scattered to the four winds. It happened that I was assigned to the 280th Station Hospital which was, at that time, just outside Marburg. This was to be "home" for the next six months.

I was assigned to the Medical Service and drew the ward with upper respiratory infections. I had a fast service—from 2 to 10 admissions per day and carried a census of from 40 to 64 patients. Along with my cases of pharyngitis and tonsilitis, I had an occasional case of pneumonia and even an acute rheumatic fever now and then. I also had several cases of diphtheria.

After two months on this ward I was transferred to the general medical ward. There I had a wide variety of cases including malaria, pneumonia, enteric infections, and rheumatic fever.

About the first of July I went into my present "specialty". I became ward officer on the venereal disease ward and venereal disease control officer. I must admit that my "controls" don't seem to be accomplishing much, but here I am presiding over them.

When the 280th moved up to the Bremen Enclave I again assumed control of the venereal disease ward. There certainly has been a wealth of experience and I have seen a lot of early syphilis. At the present time I have two cases of granuloma inguinale on my ward. I had previously thought this was a disease that existed only in the textbooks and the tropics. I have learned different.

That is enough for now about my professional activities. The real high light in my time in the ET was a week in Switzerland which I had early in July. This took me to Basel, Lucerne, Interlaken, Montreaux, Bern, and back to Basel. Needless to say, the scenery was something to behold. The Rhone valley with its vineyards, the Lake of Geneva, and the Lake of Lucerne were tops. It was wonderful to spend a week in relatively normal cities. The US influences made it seem almost like home. Buicks and Chevrolets were quite common. Store windows were filled and we were able to do quite a bit of shopping. I was very reluctant to go back to work after this trip.

At the present time I am anxiously awaiting that day when I will be sent back to the U.S. This state of anxiousness has only been intensified by the news from home that Nancy and I have become the proud parents of Christine Elizabeth, 7 lb., 7 oz. She was born October 6. I certainly don't want her to be walking and talking before I get a chance to see her.

I received my promotion, effective September 10. I will accept that "demotion" to civilian status as soon as it is offered!

This is a "first" from Capt. Homer D. Peabody, Jr., MC, AUS (*M* 1945). Let's hope it isn't the last. He writes:—

Since leaving the M.G.H. I have been in the Army within the U.S. Have done duty at Indiantown Gap Military Reservation and Gardiner General Hospital in Chicago. At present I am Chief of the Medical Service at Station Hospital, Fort Totten, New York.

I have enjoyed getting THE NEWS very much in the past sixteen months—hearing about the activities at the M.G.H. and of my former associates. Please keep it coming.

The only word we have ever had from Dr. Bruce R. Merrill (*r.p. Psychi.* 1941) was the bare announcement, back in September 1943, that he was a Lieutenant in the Navy. A second "where are you" letter from us resulted in the following, which bears the address 39 Fernwood Drive, San Francisco 16, California. Let's hope we hear more from Dr. Merrill after he gets going again.

I delayed answering your previous note because I was in the midst of moving and didn't know what my address would be.

My wife and I have settled in San Francisco, with the above as our home address. She is the former Lucy M. Vassion, who was a nurse in the Phillips House.

I am going to open an office for the practice of psychiatry at 240 Stockton Street, San Francisco 8—when, as, and if the builders manage to get some work done in it.

I miss the East some, and the General a lot, but it is also pleasant to come back home.

My most sincere regards to all.

Dr. Wilfred Bloomberg (*r.p. N* 1931) has, at our request, sent us an outline of his military activities. He writes:—

I was separated from active duty with the Army on May 1, 1946. My career was comparatively uneventful. I was on duty from July 1942 to October 1943 as Psychiatric Advisor to the First Service Command Recruiting and Induction Headquarters. From October 1943 to August 1945, I was First Service Command Consultant in Neuropsychiatry. From September to November 1945 I went briefly to the Pacific Theatre and served for a short time as Associate Consultant to Headquarters, AFWESPAC, in Manila. I returned then and resumed my old assignment as First Service Command Consultant until May 1, 1946. I was promoted to Lieutenant Colonel in January 1944, and Colonel in March 1946. In December of 1945 I was awarded the Legion of Merit for my activities as Consultant.

I have just recently undertaken my new duties as Chief of the Neuropsychiatric Service at the Cushing Veterans Administration Hospital where I expect to be for the immediate future,

DR. WASHBURN, TALKING WITH DR. FAXON AND LT. COL. STAFFORD L. WARREN, AT THE ETHER CELEBRATION. DR. WASHBURN'S DAUGHTER, MRS. T. STEWART HAMILTON, IS JUST LEAVING THE GROUP.

working in close association with a number of other Massachusetts General Hospital men.

We published several very interesting letters from Dr. Alexander Marble (*r.p. WM* 1930) during the war. This note from him tells us of his present professional activities.

After five years in the Army, I returned to civilian life on January 10, 1946. I have resumed the practice of Internal Medicine at 81 Bay State Road, Boston, and am again engaged in seeing patients, teaching, and research. I have appointments as Instructor in Medicine at the Harvard Medical School and as Physician to the New England Deaconess Hospital. I also have a part time assignment as Consultant in Internal Medicine for the Veterans Administration in New England.

During and since the war, I have enjoyed very much keeping in touch with MGH friends by reading The News.

During the war Dr. Norman E. Freeman (*r.s. WS* 1935) was stationed in India, with the 20th General Hospital, for over two years. This letter, written from 450 Sutter St., San Francisco, California, reports his return to civilian status.

I am enclosing my subscription for The News, with the hope of having the pleasure of still receiving such fine accounts of the activities at the General.

Upon my discharge from the Service in May 1946—with the rank of Lieutenant Colonel—I moved to California, and at present have the appointment of Associate Clinical Professor of Surgery at the University of California Medical School. I am restricting my activities to Vascular Surgery and, in addition to teaching and practice, have started in on some investigative work in the Laboratory of Experimental Surgery on the Physiology of Major Blood Vessels.

With my wife, who was formerly in the Child Guidance Clinic with Miss Evarts, and our four children we are living in Mill Valley, just across the Golden Gate Bridge from San Francisco.

It was a disappointment for me not to have been able to get back for the Ether Day celebrations.

During 1936-42 William V. Consolazio worked here at M.G.H. as a chemist, with Drs. Paul D. White, Cohen, and John Talbott. Perhaps he may be best remembered for his work in making sea water safe for drinking. All of his old friends will be glad to read this letter from him. His address is Naval Medical Research Institute, National Naval Medical Center, Bethesda 14, Maryland.

I was separated from the Navy as a Commander in August 1946, and spent the following 45 days just loafing about. I am now back at the Naval Medical Research Institute as head of the Chemistry Department, picking up where I left off on separation day.

As soon as the civilian complement here at NMRI is complete we expect to resume experimental work on the study of man and his environment—more of the past studies, including heat, cold, altitude, pressure, and whatever happens to be the latest means that man has discovered of polluting the atmosphere.

I enjoy receiving The News and hope it will carry on the good work.

This delightful letter has come from Dr. ("Ex-Major") S. Grant Holmes (*CM* 1943).

Dottie tells me she wrote you of Southern England and the Riviera last Christmas; so only six months as Dermatologist in Southern Bavaria remain to be told of my two grim war-years in the playground of Europe, before the Army forced me to spend the summer on the sunny sands of Lake Michigan.

With the first chill of autumn, we coaxed our two-ton house trailer with our one-ton car toward San Antonio via New Orleans and considerable et cetera. At Fort Sam Houston I "retired" a few days ago, in favor of a residency in dermatology and syphilology with Dr. Chester Frazier at the University of Texas Medical Branch Hospital in Galveston. It proves to be a happy appointment.

Our home is now drawn up on a magnificent stretch of Gulf beach just beyond the tide (we hope), where we are ready to welcome all refugees from a Northeastern winter.

THE NEWS

No. 52 Boston, Mass. January 1947

SURGICAL SERVICE AFFAIRS

The most pleasant happening on the Surgical Services during the past year has been the reassembling of our Visiting and Resident staffs. As of January 1, 1947, there will be twenty-four Assistant Residents and Residents on the Surgical Services. Of these, twenty-two will be surgeons returned from active military duty with the Army, Navy, or Air Forces, and representing all theatres of war. In addition, certain veterans have come and gone during the year, having secured sufficient hospital service to refresh their experience with civilian surgery and afford them time to find an advantageous opening elsewhere. Our great regret has been the inability to provide places for the large number of applicants, many of whom had a brief start in surgery as an intern at the Massachusetts General Hospital during the war period. The number of surgical beds, however, establishes a fixed ceiling for the number of residents who can share profitably the educational material of the service. Despite the fact that the Trustees authorized additional places for veterans, we have been handicapped in making full use of these places by the closure of surgical beds because of the shortage of nurses. Up to now, the Surgical Services have borne the full brunt of this restriction, for sound administrative reasons; but as there is no immediate relief in sight for the shortage of nurses, studies are being made to distribute this loss of beds more equally among the services of the hospital. A direct result of closing 30% of the surgical beds is a change in the educational balance of cases admitted, because the admission of emergency disease and malignant conditions is given priority, to the exclusion, in part, of what may be called routine elective surgery.

During the year a new problem in education which we are in no way prepared to meet has presented itself—the influx of observers and graduate students from foreign countries. There are two groups of these foreign surgeons: the ones that come as observers for a few weeks can be fitted into the schedule of conferences and rounds; another group, however, desires to stay for several months or a year and the resources of the hospital are severely taxed to meet such requests.

American Medicine has grown as a tree with its roots in the Medicine of the Old World. It has received strong nourishment, particularly from the English schools of physiology and the German schools of pathology, and in addition from every other country in the world in which new concepts in medical science were being developed. This tree has been protected from the ravages of war and its fruit is now being sought by doctors from less fortunate parts of the world. It will take skillful planning and organization to make the fruit of American Medicine available to the world without breaking the branches that bear it. There seems little doubt that the crowding of conferences and rounds with visitors is having a deleterious effect on the educational programs of undergraduate students and resident staff. These are strong branches of the tree of Medicine and their integrity must be guarded closely. At the same time, however, this new responsibility must be met, and only the beginning of the pilgrimage is apparent at this time.

During the past few years the writer has had the opportunity of an association with young surgeons from all parts of the country, and has had the privilege of coming to know intimately representative groups from several teaching hospitals by a prolonged overseas association with their affiliated units in Army service. It is a source of real satisfaction to be able to report to the alumni of the Massachusetts General Hospital that the graduate training given here, as judged by its end products, stands out as second to none. The conduct of graduate training by the resident system is a responsibility of the staff that is second only to the care of the patients. Neither of these functions, however, is either static or perfect, and complacency regarding them cannot be accepted. With the prolongation of surgical training period to the length now recommended by Specialty Boards and the College of Surgeons, continuous efforts must be directed toward providing an adequate educational return to the young surgeon who is making such a sacrifice to obtain it. Not only must the educational return be enhanced, but a greater degree of financial support for these young men is imperative. Graduate training started as a projection of undergraduate education, but is now far more than that. It should be envisioned as a temporary period of supervised practice in the life career of the individual, during which he receives remuneration that permits him to start supporting a family and to enjoy living conditions better than those of an undergraduate student dormitory. Just where funds can be obtained for this purpose is not clear. As patients are lifted from the status of recipients of charity to citizens protected by a social security program, the residents who do a major share of the work in the treatment of their illness deserve a just share of any funds that may be provided for their professional care.

There is no doubt that the improved operating facilities provided by the White Building have facilitated surgery to a remarkable degree. With this, however, there has come another development of as great significance, namely, the erection of a professional department of anesthesia, under the direction of Dr. Henry K. Beecher. The development of anesthesia is sometimes taken for granted by the Surgical Staff, but it is an ancillary of Massachusetts General Hospital surgery that constantly receives admiring comment and study by surgeons from other clinics and other countries. The graduate training program of the Department of Anesthesia has been expanded greatly, and applications are received from all parts of the world.

The year 1946 has been a restless and unproductive year in many respects. It has been a year devoted to the study of navigation charts and the taking of soundings. Accumulated deficits in graduate training are being cleared; research programs are concluding lines of work undertaken as special contributions to the war effort. The evidence on which to base decisions regarding the course that the Surgical Services may take in the future is becoming more clear. It should not be regarded as a static year, however, but as an inevitable postwar period during which an inventory of our resources could be taken. The Surgical Department of the hospital is now ready to approach the problems of the postwar world with vigor and, we hope, a sound and forward-looking program.

Edward D. Churchill, M.D.,
Chief of West Surgical Service

We are proud to announce that in the recent Community Fund Campaign, Massachusetts General went over the top in its drive toward the $9,000 quota set for us by the Community Fund. Our contributions amounted to $11,579.77, making our Hospital achievement 128%. This exceeded our figure of last year by $957.

In February 1946, at the Institute for Living, Hartford, Connecticut, the Eastern Association of Electroencephalographers was formed, to have get-togethers four or five times a year of scientists and doctors working in this field in different institutions. Robert S. Schwab, M.D., head of the Brain Wave Laboratory at the Massachusetts General Hospital, was elected the first President. Dr. Herbert Jasper of the Montreal Neurological Institute was made Vice President, and Dr. Charles Stephenson of Hartford, Connecticut, was elected Secretary. Meetings were held in Hartford, New York, and

New Haven. It was decided to have the fifth meeting at the Massachusetts General Hospital on December 4 and 5, 1946 and to arrange to have a distinguished outside speaker.

In the summer of 1945, Dr. Mary A. B. Brazier of the Brain Wave Laboratory at the Massachusetts General and a research physiologist attached to it, made a trip to England, which is her home, and visited the laboratory of Mr. W. Grey Walter at the Burden Neurological Institute, Bristol, England. On her return to our Brain Wave Laboratory, Dr. Brazier's account of the automatic analyzer of brain wave records, perfected by Mr. Walter, were so enthusiastic that after the Eastern Association of Electroencephalographers had been formed, arrangements were made to invite him to this country to address their fifth meeting at the Massachusetts General. In order to finance this trip, a lecture tour was arranged and financial support was obtained from the Rockefeller Institute, the Mayo Clinic, University of Iowa, the Institute for Living in Hartford, Connecticut, and the following societies: the Boston Society of Neurology and Psychiatry, the Association for Research in Nervous and Mental Diseases, and the Epilepsy League. In the course of correspondence with Mr. Walter, it was decided that he should not only plan to talk about his new analyzer but should bring one with him for demonstration purposes, and that the Brain Wave Laboratory of the Massachusetts General Hospital and the Department of Psychiatry, under Dr. Stanley Cobb, who together hold research grants from the Office of Naval Research at Harvard University, should arrange to purchase this machine.

To refresh the reader's mind about the nature of what a brain wave is, the following should be of help. If two small discs of metal are fastened to the scalp of a human being and connected through suitable amplifiers—very similar to radio sets—to a recording pen that writes on moving paper, a wavy line is produced that is called an *electroencephalogram.* Normal people show a pattern of a mixture of 10 per second waves (alpha waves) and 18 per second waves called beta waves, which are about 25 millionths of a volt in height. Abnormal waves are both slower and of higher voltage, and some are faster and of higher voltage. There are also various combinations of abnormal waves found in patients with diseases of the nervous system. Patients with brain tumors have localized abnormal waves and this has been helpful in neurosurgery. Patients with epilepsy, injuries to the brain, encephalitis and other neurological diseases usually have abnormal electroencephalograms. In 1937, the present Electroencephalographic Laboratory was first opened in an abandoned kitchen of the Bulfinch Building on the first floor. For a while it was an extraordinary novelty, but after six months it was accepted by the Hospital as a valuable diagnostic precedure and, from that time on, the electroencephalograms have been made for all departments of the Hospital, including the Out-Patient Department, at the request of the physicians, just as X-rays and other tests are done. In 1939, it was called the Brain Wave Laboratory.

For example, in a recent survey of a hundred consecutive cases, done in the Brain Wave Laboratory, 88 agreed with the final clinical diagnosis. In six, the examination was wrong; and in six others, it was of no diagnostic value at all. In six of the 88 examinations, the electroencephalograph findings were the sole localizing signs in establishing the presence of an intercranial lesion. In the rest, one-half of which were normal, the electroencephalograph confirmed the clinical diagnoses and was not essential. The diagnoses were made by visually inspecting the waves as they appeared on the paper, making some manual wave counts and, through experience over many years, coming to a final conclusion. (About 2500 records are examined each year.)

The present staff consists of Dr. Robert S. Schwab, Director of the Laboratory; Dr. John A. Abbott, Clinical Associate, who has interpreted a large part of the records; and Dr. Mary A. B. Brazier, Ph.D., who is the research physiologist and is most active in the problems under investigation. Miss Margaret Gray has been senior technician since 1937. Miss Theresa Delaney is secretary. There are, in addition, four other technicians and an engineer, Mr. James Casby, as well as another secretary.

About three years ago, during the war, Mr. Walter and his co-workers began to work on a method of mechanically analyzing the electroencephalograph as it came off the machine. The main reason for this was that the visual inspection of the wave lines was unable to pick up certain wave frequencies that are hidden in the wave form and give a more exact analysis of just what waves make up the electroencephalogram. His first machine, two years ago, was found to be practical and began to show in his laboratory that wave analysis by mechanical means gives more information to the electroencephalographer than could be obtained by visual inspection alone. It served as an additional tool to the ordinary inspection of the record that most of us have depended upon. In no sense did Mr. Walter and his workers expect that the wave analysis obtained from this machine would displace the ordinary interpretation of the lines themselves. Since by means of this apparatus it appeared that our knowledge of the physiology of the brain might be increased, it was decided to arrange this meeting in December at the Massachusetts General Hospital around the whole subject of analysis of brain wave records, and invite the workers in this field in this country to meet with Mr. Walter and discuss the whole problem.

Mr. Albert Grass of Quincy, Massachusetts, who has built and designed electroencephalographic apparatus since 1936 and whose machines are most generally used throughout the United States, built an automatic analyzer in 1939. Dr. Frederick Gibbs, who was then at the Boston City Hospital and Harvard Medical School, working with Mr. Grass, published a good deal of material on the use of their analyzer. The main difference between the Grass analyzer and that of Mr. Walter is that the former analyzes small parts of the record after the record has been obtained and requires that the record be photographed on a film. This means that the analysis of the record does not appear on the same paper as the actual tracing itself and is not available at the time the record is taken. Dr. Gibbs and Mr. Grass felt, before the meeting, that the automatic analysis of records was of little clinical value in the interpretation.

The actual meeting and demonstration lasted two days, and was attended by about 60 members of the Eastern Association of Electroencephalographers and 20 to 30 guests. The program included papers on manual analysis of records by Dr. Brazier of this Laboratory and Dr. Engel of Rochester, New York; reports on the new analyzer from the Neurological Institute of New York by Dr. Paul Hoefer; a series of demonstrations of his analyzer by Mr. Walter; and papers and discussions by Dr. Gibbs and Mr. Grass, as well as other contributions. The main difference of opinion between Mr. Walter and Dr. Gibbs was whether the apparatus is really of clinical value to the workers using electroencephalographs. It is fair to say that the majority of the audience felt that the matter would be better decided by giving the analyzer an adequate trial in this Hospital. It was felt, certainly, by the members of the staff of the Brain Wave Laboratory—Dr. Abbott, Dr. Brazier, and Dr. Schwab—that the use of the analyzer was probably of clinical value in certain records and undoubtedly promised very fruitful results in the research programs to which this Laboratory is committed. For example, in one of the Navy contracts being undertaken here, subjects are examined by means of the electroencephalograph while breathing 15% oxygen. The ordinary inspection of these records shows little difference, if any, from the records when normal air was breathed. Careful wave counts, using a distribution curve, as worked out by Dr. Brazier, showed a significant slowing on the lower oxygen mixtures. It is expected that the more accurate electronic analysis of the electroencephalograph as it goes through the record, which can be repeated every ten seconds in order to get an average, will provide more information about the effect of these very mild, low oxygen experiments.

It is quite obvious—as the apparatus is very complicated to run, understand, and interpret—that it will be many months before the staff of this Laboratory are fully familiar with it and its application. For the first part of this coming year, therefore, the apparatus will be used to examine normal and research problems. Until more is known about it, it will not be available as a clinical instrument to the routine patients coming to the Laboratory.

We hope, by the addition of this apparatus, to throw more light on the fundamental physiology of the brain; and, in the future, we may be of greater clinical service to the Hospital.

Robert S. Schwab, M.D.,
Director of the Brain Wave Laboratory

Regular Gastro - Enterological House Rounds are being held in the Ether Dome at 10 A.M. on Wednesday mornings. The purpose of these Rounds is to provide an opportunity for various members of the Staff—Medical, Surgical, Neurosurgical, Psychiatric, and Roentgenological—to review at regular intervals important and interesting gastro-intestinal problems present in the Hospital. Patients presented at these meetings will be chosen primarily from the Medical and Surgical wards. As is the practice in other special House Rounds, consideration will be given to individual cases which present diagnostic or therapeutic difficulties; but in addition, an attempt will be made to evaluate various therapeutic and diagnostic procedures as matters of general Hospital usage.

Members of the Hospital Staff and visitors are cordially invited.

Chester M. Jones, M.D.
Francis D. Moore, M.D.

The following talk on Poliomyelitis was given by Dr. Arthur L. Watkins, Chief of Physical Medicine, at Neurology Grand Rounds on November 14.

The general principles behind the use of physical therapy for patients with poliomyelitis can be briefly stated.

In the acute stage, while the patient is still febrile and there appears to be progressive invasion by the virus, rest is thought to be of utmost importance. The patient is placed flat in a bed with a firm mattress; a footboard and supports including sandbags and pillows are used to maintain neutral position of the extremities. For relief of pain, hot woolen packs are applied to those areas where the muscles are found to be sensitive to pressure and stretching. In the acute stage they may simply be laid on to avoid excessive handling of the patient. The frequency of application is dependent upon the severity of the sensory symptoms and the general condition, varying between every half hour to 3-4 times a day and at night to provide relaxation. Even in this early stage of the disease, some attempts are made to maintain the pattern of normal muscle action. This is done by passive movement of the extremities through that arc of motion which is painless. The patient does not have to assist and should not resist this motion, although he may concentrate on the feeling of movement in the muscles involved. These passive motions may be repeated several times a day, depending on the general condition of the patient, as they usually aid relaxation. During the rest periods, positioning to prevent deformities should always be maintained.

In the convalescent stage, when the patient is afebrile and there is no evidence of progressive paralysis, the aim of physical therapy is to salvage all available motor units and develop coördinated muscular contraction. A careful individual muscle strength examination is done and the plan of muscle re-education is based upon these findings. Wherever limitation of joint motion because of contracture or shortening of muscles is found, hot packs are applied every two hours, or more or less often, depending on the severity of these symptoms. Very little resistive exercise is used during this stage, the emphasis being on developing control of individual muscles which are weakened and avoidance of substitution by stronger muscles. The patient may be said to be in this convalescent stage as long as there is continued significant improvement in muscle strength noted. In general, the period of most rapid recovery has been found to be in the first three months, and at a slower rate thereafter.

In the second six months—or, in the milder cases, earlier—more strenuous exercises are given by increasing resistance to develop muscle strength, and less emphasis is placed upon avoidance of substitution; in fact, it may even be encouraged in some instances. At this time braces and other orthopedic appliances may be used to support weaker muscles and prevent deformities, particularly when weight-bearing is commenced. Surgical procedures are usually reserved until a year or more after the onset of the disease, to allow for maximum improvement of muscle strength.

We have done special studies of the electromyographic findings in the various stages of poliomyelitis. These findings can be briefly summarized as follows: In the early stages partially paralyzed muscles and also those with no paralysis exhibit hyper-irritability upon passive stretching, whereas completely paralyzed muscles exhibit little or no electrical activity upon any stimulus. Another interesting finding is that of disordered innervation. By this we mean simultaneous activity in opposing muscles during motion, instead of normal reciprocal innervation. This is quite striking and includes even synchrony of individual action potentials in the more severely paralyzed extremities. Electromyograms are also used in connection with evaluation of strength and give us a record of improvement by measuring the total amount of electrical discharges during work performance. Other information obtained from these records is the finding of spontaneous electrical discharges from resting muscles. These have been associated most often with clinical appearance of improved muscle strength and have enabled us to make a prognosis of some recovery of muscle power.

In regard to prognosis, we have studied the degree of improvement of muscles and classified it according to the initial strength at time of maximum paralysis. The muscles which were completely paralyzed showed very little improvement at the end of six months, only 10% of them being graded as Poor and none as Fair or better. The muscles originally graded as Trace also showed a rather poor recovery rate, but 20% did reach Fair or Good power. The Poor muscles showed a better percentage of improvement; but the Fair muscles, particularly Fair plus, reached Good or Normal power in six months in over 80% of the cases. These studies indicated a rather striking pattern of recovery in cases of poliomyelitis, particularly in those muscles whose maximum loss of power did not exceed 50%.

NOTICE

People sometimes like to remember their departed friends or relatives by making a memorial gift to a charitable institution rather than a floral offering. To this end, the Massachusetts General Hospital established, a number of years ago, what is known as a Memorial Gifts Fund and suggested that donations could be made in memory of departed friends or relatives. The following form for such a donation was drawn up:

I am enclosing $.................. to be added to the
Massachusetts General Hospital Memorial Fund
in memory of ....

Please send a card of acknowledgment to

....

An engraved card for acknowledgment reads as follows:

MASSACHUSETTS GENERAL HOSPITAL
BOSTON

THE MASSACHUSETTS GENERAL HOSPITAL
HAS RECEIVED FROM

....

A CONTRIBUTION IN MEMORY OF

....

WHICH IS GRATEFULLY ACKNOWLEDGED
BY THE TRUSTEES

It is felt that more people would be interested in this if it were better known, which is the reason for this notice.

N. W. Faxon, M.D.,
Director

Dr. Francis F. Foldes (*a. an.*) spoke on "Anesthesia considerations in oral surgery" at the December meeting of the Dental Staff. We are hoping to publish a summary of this talk in an early issue of THE NEWS.

Dr. William H. Sweet, Assistant in Neurosurgery, will speak on "Tri-facial neuralgia" at the next meeting, January 21.

DERMATOLOGY DEPARTMENT

Excerpts from a recent Department Bulletin:

At the October Staff Meeting, Dr. Irvin H. Blank spoke on the topic "Penicillin ointments". A summary of his remarks is as follows:

A suitable vehicle for penicillin should have four characteristics: (1) It should carry the penicillin to the skin and hold it there; (2) it should release the penicillin to the skin; (3) penicillin should be stable in it; (4) it should not irritate the skin. In commercial and MGH penicillin ointments, each of these requirements is probably satisfied except the second. In an attempt to find a vehicle which would release its penicillin to the skin, many hydrophilic oils have been investigated. The techniques used in this work were described. None of the vehicles so far employed has proved entirely satisfactory, but some of the carbowaxes show the most promise.

The November Staff Meeting was addressed by Dr. Charles K. Wainger, who outlined the work that he and Dr. Blank have been carrying on in the study of dermatitis of the hands.

Our department has recently enjoyed a visit from Dr. Niels Danholt, Professor of Dermatology at the University Hospital, Oslo, Norway. Dr. Danholt has been making an extensive tour of this country, visiting and observing a number of dermatological services.

The Ether Day Centenary brought us the pleasure of visits from Dr. John E. Dalton of Indianapolis, and Dr. Robert N. Buchanan of Nashville. Both are former residents in our department.

Dr. Harry Miller has left us after thirteen months of postgraduate work and has opened his office in Hartford, Connecticut.

Mrs. Anne J. Krush, our Social Service worker, has been a great help in assisting underprivileged patients. She will be assisted for the next few months by a second-year student in Medical Social Work from Simmons College.

The Board of Trustees, at their meetings during November, voted:

To accept Bishop Sherrill's resignation as Chairman of the Board with profound regret;
To elect Mr. Francis C. Gray as permanent Chairman;
To accept with regret the resignation of Dr. James R. Lingley from the position of Radiologist;

To appoint:

Dr. Erik W. Andersen as Assistant Resident in Anesthesia, beginning May 1, 1947;
Dr. Joseph S. Barr as Acting Chief of the Orthopedic Service as of December 1, and to further appoint him as permanent Chief subject to his appointment by Harvard Medical School as Clinical Professor of Orthopedic Surgery, this to become effective when the appointment as Clinical Professor is made;
Dr. Roy V. Buttles as Second Assistant Resident in Pathology for the period July 1, 1947 through June 30, 1948;
Dr. John R. Newstedt as Third Assistant Resident in Surgery, beginning December 1.

At their meetings on November 13, 20 and 27, and December 4, the General Executive Committee voted:

To promote Dr. Michael A. Luongo to the position of First Assistant Resident in Pathology for the period of one year, beginning January 1, 1947;
To reappoint Dr. Volta Hall as Graduate Assistant in Psychiatry;

To appoint:

Dr. Lytt I. Gardner as Clinical Fellow on the Children's Medical Service for the period November 15, 1946 through March 31, 1947;
Dr. Katherine Kiehl as Graduate Assistant to the Children's Medical Service;
Dr. Ralph H. Luikart, Jr. as Graduate Assistant in Dermatology;
Dr. John J. McGraw as Research Fellow in Pathology, beginning January 1, 1947;
Dr. Cecil Mushatt as Graduate Assistant in Psychiatry, beginning January 1, 1947;
Dr. Charles E. Richards as Clinical Fellow in Medicine, to work with Dr. Rawson, beginning January 1, 1947;
Dr. Suzanne T. van Amerongen as Clinical Fellow in Psychiatry;
Dr. Bertrand G. Wells as Clinical Fellow in Medicine, assigned to the Cardiology Laboratory.

The General Executive Committee approved the following changes in the Medical House Staff:

That Dr. Frederick S. Bigelow's appointment as Assistant Resident be extended from June 1, 1947 to October 15, 1947;
That Dr. Harry A. Bliss' appointment as Assistant Resident be extended from July 1, 1947 to October 15, 1947;
That Dr. George H. Carter's appointment as Assistant Resident be extended from July 1, 1947 to October 15, 1947;
That Dr. Ernest Craige's appointment as Assistant Resident be extended from July 1, 1947 to October 15, 1947;
That Dr. Lewis K. Dahl be made Chief Resident as of January 1, 1947 for one year, to replace Dr. Charles H. Burnett who is completing his service as of that date;
That Dr. Charles H. DuToit be appointed Resident for one year, beginning January 1, 1947, to replace Dr. Lewis K. Dahl;
That Dr. Harold E. Elrick's appointment as Assistant Resident be extended from June 1, 1947 to October 15, 1947;
That Dr. Chester W. Fairlie be appointed Resident from January 1, 1947 to January 1, 1948, replacing Dr. Beverly T. Towery;
That Dr. Allan L. Friedlich's appointment as Assistant Resident be extended from July 1, 1947 to October 15, 1947;
That Dr. James E. Kreisle's appointment as Resident be extended from April 1, 1947 to April 1, 1948;
That Dr. Isaac M. Taylor be appointed Resident for one year, beginning January 1, 1947, replacing Dr. Stanbury.

In addition to the above, the following notices have been received from the Director's Office:

Dr. Norman P. Hill, Assistant Resident, has had his appointment extended through December 31, 1946;
Dr. Harrison E. Kennard was reinstated as an Assistant in Surgery, as of November 29;
Dr. Royal F. Schaaf's appointment as Assistant Resident has been extended from May 15, 1947 to October 15, 1947.

Helen Britta Fenton (*MGH* 1906) passed away in La Jolle, California, on September 26. Miss Fenton was a pioneer in Public Health Nursing. She was a member of the first class in Public Health at Simmons College. She continued her studies at Teachers College, Columbia University, and was graduated from the University of New Mexico with the first B.A. to be given in Nursing.

Miss Fenton's work with the Milk and Baby Hygiene Station at Parmenter Street was the beginning of her work in Boston. Later, working under the Red Cross during the First World War, she had a similar work in the cantonments in South Carolina and Georgia. After the war she was a Red Cross representative in Arkansas and Oklahoma, developing the Home Nursing work in the rural communities. After a year's rest from nursing, spent at Teachers College, Miss Fenton accepted the position of State Supervisor of Public Health in New Mexico, where she remained until 1940. She left to join the Staff at Stanford University, which position her health did not permit her to continue.

Miss Fenton was gifted with personal and professional qualifications which made her successful and beloved in whatever work she undertook.

VINCENT MEMORIAL HOSPITAL

The Vincent Memorial Hospital is now well under construction. It is the hope of the contractor that the building will soon be bricked in so that internal construction can take place all winter. There are hopes that the building will be finished and ready for occupancy some time this summer. It is the desire of the Vincent that, at the dedication, all Massachusetts General Graduates who are interested will be present to wish the newest member of the Hospital success.

J. V. M.

Plans are already underway for the Vincent Club's fifty-fifth anniversary show for the benefit of the hospital, which will take place at New England Mutual Hall on Wednesday evening, March 19, Thursday evening, March 20, Friday evening, March 21, and Saturday afternoon and evening, March 22. Mrs. Alfred Kidder, II, Chairman of the Program Committee, has already had two meetings with the provisional members of the Club. It is the yearly responsibility of these new members to secure the advertisements for the show program.

At the second meeting, on December 23, the entire provisional membership had the opportunity of meeting Dr. Meigs, who told about some of the history as well as the future plans for the Vincent Memorial Hospital.

* * *

This briefest of statements has come from Dr. Henry F. Allen (*ES* 1943). It seems as if, in the light of his experiences overseas, Dr. Allen has more he could tell us if he would.

> I became a civilian last December and am now studying ophthalmology under the auspices of H.M.S. Have a residency on the Eye Service, starting next April.

* * *

When the gremlins look about to choose a place for their mischief, they always seem to pounce upon the most conspicuous spot possible. In the picture in our December issue—plain for all to see—there was the eagle insigne on Colonel Warren's shoulder. And yet, the caption called him a mere Lieutenant Colonel!

We immediately sent Colonel Warren an apology, and hasten to include here a correction of our error.

MASSACHUSETTS EYE & EAR INFIRMARY

Dr. Franklyn D. Burger, Senior Clinical Assistant in Ophthalmology at the Massachusetts Eye and Ear Infirmary, died on November 25. Dr. Burger had been an assistant in Ophthalmology at the Harvard Medical School since 1941, and was a member of the Army-Navy National Research Council Vision Committee. He also was Ophthalmologist for Northeast Airlines and Trans-World Airlines.

Dr. Burger was on the staff of the Infirmary and the Peter Bent Brigham Hospital, and was also on the consulting staff of the Children's Hospital, the Free Hospital for Women and Children, and the Cambridge Hospital. He was a member of the Harvard Club, the Aero-Medical Association, the Airline Medical Directors Association, New England Ophthalmologist Society, Norfolk District Medical Society, and state and national medical associations.

Miss Catherine Guyer, who was a nurse at the Infirmary for sixteen years, died in Boston on November 29. She was a graduate of the Brattleboro Hospital in Vermont.

At a meeting of the Social Service Advisory Committee of the Massachusetts Eye and Ear Infirmary on December 5, Miss Jean Hughes, Medical Social Worker for the Winthrop Foundation, gave an account of the program carried on by the Foundation for the pre-school children with hearing difficulties.

The Winthrop Foundation was established for scientific research in the cause and relief of deafness. It undertakes to help three types of patients: those with otosclerosis, young adults and children with hearing defects with no ear pathology, and the pre-school children who have sufficient hearing to make use of hearing aids.

There are many real and difficult problems facing both the child with impaired hearing and his parents, Miss Hughes explained. Even with hearing aids, these children need intensive work in speech training. Never having heard sounds well enough to imitate them normally, they need help in learning to hear and then to speak. This vital instruction requires special knowledge, skill, and patience over an extended period, to be effective.

At present, two teachers trained in teaching the deaf come in five afternoons a week to give individual instruction to a group of these children. There are a number of children, however, who at present must wait for this needed instruction.

Miss Hughes went on to point out that often these youngsters are behavior problems. This is sometimes due to lack of understanding of their handicaps by their parents, or because of the child's frustration at being unable to express himself.

The Social Service Department at the Infirmary is attempting to assist the children to develop as normally and naturally as possible. In order to help the parents with the child's problems, a social evaluation is made regarding the parent's attitude toward the handicap, the economic status of the family in relation to providing specialized educational training, and the child's social behavior and adjustment.

Most of the parents are eager for instruction and suggestions regarding the child, the Social Service Department finds. For this reason, it is felt that group instruction for the parents on how to deal with the handicapped child, as well as individual case work help, would be advantageous developments for the future.

In conclusion, Miss Hughes brought to the Committee's attention the lack of community resources available to serve a large group of handicapped children. This lack, she pointed out, intensifies the contribution the Infirmary can make in developing a further program of study and understanding of the needs of the child who is hard of hearing.

The Infirmary reached its quota for the Community Fund on November 21, and on November 27 went over the top with a final total of 114.9%.

Dr. John H. Tucci, formerly Assistant Anesthetist at the Massachusetts General Hospital, is now full time Anesthetist at the Infirmary.

Miss Irene Zurawinski, who was formerly the Dietitian at Stillman Infirmary, came to the Massachusetts Eye and Ear Infirmary in November as Therapeutic Dietitian.

Dr. Michael J. O'Connor completed his course in Ophthalmology on December 1 and has now opened an office at 4 East Congress Street, Tucson, Arizona.

Dr. John E. McKeigue started his residency in Oto-Laryngology on December 1, having recently returned from service overseas in the Army.

The annual Christmas Party for the Infirmary personnel was held in the Nurses' Dining Room at 3:00 P.M. on December 20.

THE NEWS was very glad to receive this letter from Dr. Donald E. Moore (*Oph.* 1937).

> I have been greatly in arrears in my correspondence, due to very much increased activity in my practice and getting my home fixed up since I came out of the Service. There are times when I wish there were many more hours than twenty-four in the day. It has been most gratifying to return to my office because so many of my old patients have come back.
>
> Mrs. Moore has resigned from her position as Director of the Nurses Aids in the local Chapter of the American Red Cross after teaching that course for four years. She enjoyed her work very much and disliked the fact that the interest waned after the war was over. Nevertheless, I know she is greatly relieved to have more time for her home activities and other outside interests which she neglected because of the demands for her time at the Red Cross.
>
> I recently attended the Alumni Reunion and was glad to meet so many of the old stand-bys of the Infirmary.
>
> Mrs. Moore joins me in sending best regards to all our friends at the General and the Eye and Ear.

Dr. Herman J. Sternstein (*clin. asst. Oto-Lar.*) writes, from 416 Marlboro Street, Boston:

> My present activities and interests are happily those of Mr. Plain Citizen, M.D., back again in civilian practice since the middle of February 1946. Although the reorientation was permeated at first with a thick tropical haze, the "fog" has since lifted, thanks to the work-out on the spring service at the Infirmary. Except for momentary flash backs, it is difficult to realize that I had been away for a period of four years.

You who have not written to THE NEWS for a long time can help toward perpetuating our reputation for up-to-the-minute reporting. Make a New Year resolution to send us a letter during January.

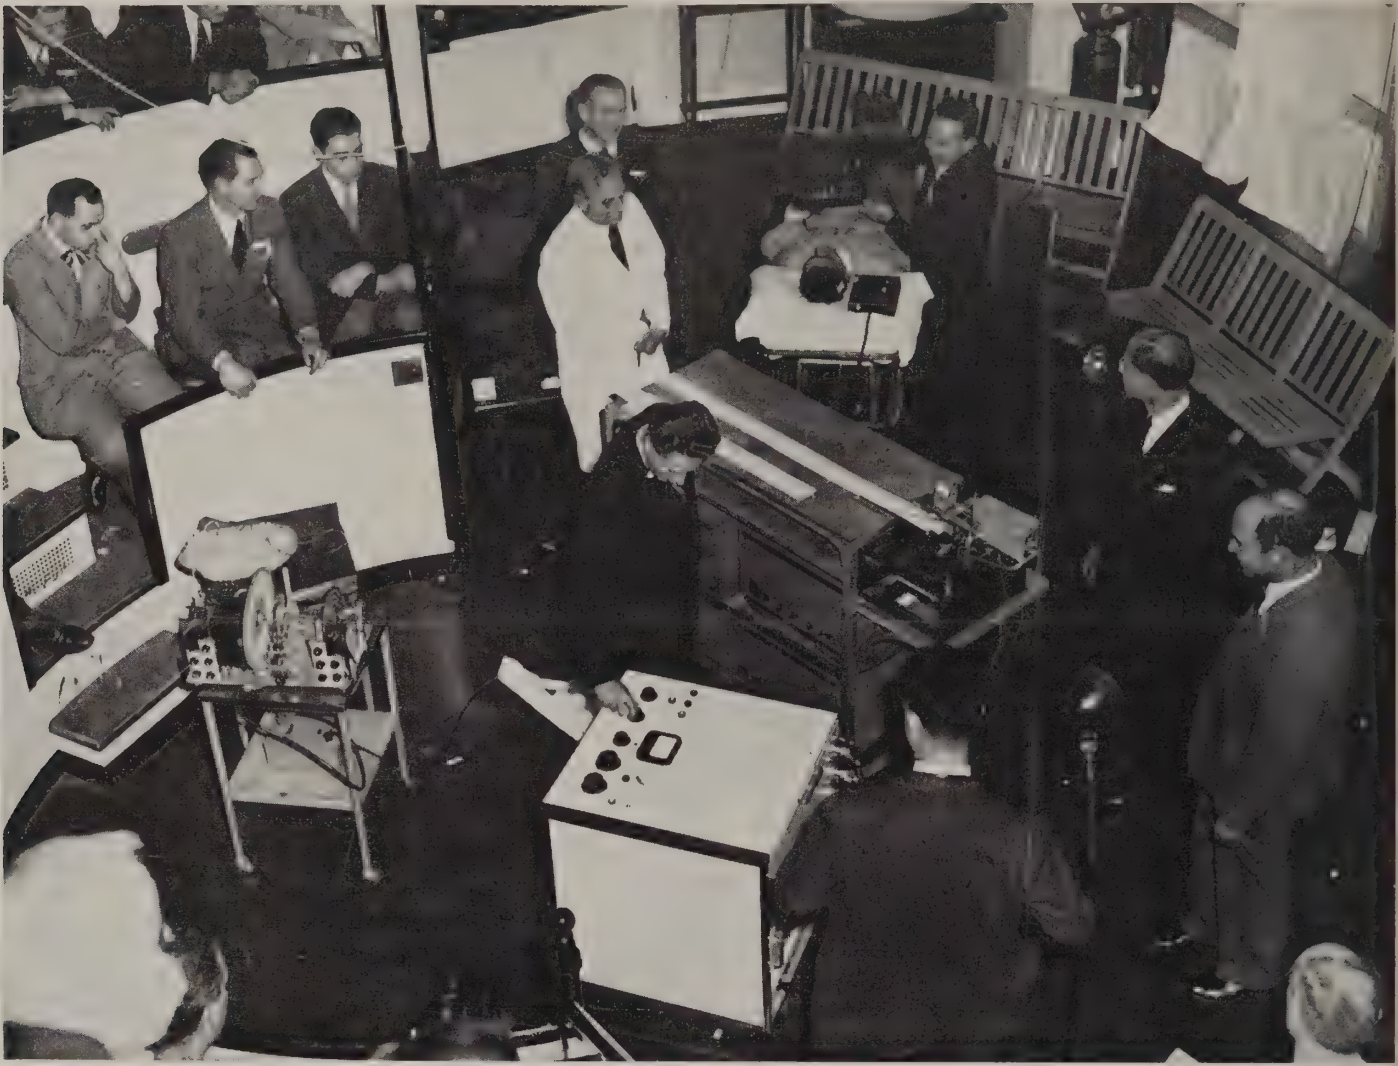
New addresses:—

- Lt. Carl W. Gottschalk, MC, AUS (*M* 1946), Armored Medical Research Laboratory, Fort Knox, Ky.
- Dr. Herman P. Grossman (*a.s. Oph.*), 210 Angell St., Providence, R.I.
- Dr. Aubrey O. Hampton (*r.p. R* 1927), Garfield Hospital, Washington, D.C.
- Dr. Frederick H. Kalil (*Dn.* 1943), 814 Elm St., Manchester, N.H.
- Dr. Sylvester B. Kelley (*ES* 1931), 412 Beacon St., Boston, Mass.
- Dr. George Mixter, Jr. (*WS* 1943), 18 Pinckney St., Boston, Mass.
- Dr. Cornelius J. Shea (*ES* 1943), 16 Leslie St., Dorchester, Mass.
- Dr. Fred A. Simmons (*WS* 1935), 330 Dartmouth St., Boston, Mass.

Brief bits:—

- Capt. Duane H. Mitchel, MC, AUS (*M* 1943) traveled from New Caledonia via Okinawa to Korea during his Service overseas. He arrived back in the States last July, is out of the Army, is taking the refresher course at Harvard Medical School, and starts here on the Medical Service this month;
- We had a nice call from Dr. Robert D. Mattis (*Oph.* 1942) when he was here for the Ether Celebration. He is instructor in Ophthalmology at Washington University, St. Louis, Mo.
- Dr. Joseph C. Placak, Jr. (*WS* 1936) is out of military service. He will finish the refresher course at Harvard Medical School December 15, after which he will resume the practice of surgery at 10515 Carnegie Ave., Cleveland 6, Ohio.
- Dr. Philip Solomon (*Psychi.* 1936-37) announces the opening of offices for the practice of Neurology and Psychiatry at 416 North Bedford Drive, Beverly Hills, Cal.

A very brief "first" has come from Capt. Edwin F. Alston, MC, AUS (*P* 1944). From Brooke General Hospital, Box 133, Fort Sam Houston, Texas,



Demonstration of the Brain Wave Analyzer on a patient in the Ether Dome
(This picture was taken by Mr. Withee of our Photographic Laboratory)

he writes:

> This delayed information about myself is due simply to lack of variation from routine upon which to report.
>
> My wife (Ann Ogden, Medical Art 1945) and I have spent all of our Army time here at the Brooke General Hospital, where I am the Pathologist.
>
> My Captaincy came in September.
>
> We have just been alerted for overseas duty, but remain unexcited about it. We have been alerted before.
>
> We miss Boston and the M.G.H. terribly—not to mention all of our friends there.

At last that boat arrived for Capt. Rafe Banks, Jr., MC, AUS (*ES* 1943). He's now back home at 143 Erie Avenue, Decatur, Georgia. A recent note from him says:

> Arrived in New York harbor 31 July 1946, separated Fort Bragg 6 August, and completed terminal leave 2 October.
>
> At present my time is completely filled with some very pleasant work. On 15 September I began as an instructor in Anatomy at the Emory University Medical School and also am doing work in the Pathology Department of Grady Hospital. This will keep me very busy until 15 June 1947. After that I hope to continue with my surgical training.
>
> Give my very best regards to all my friends at the good ole M.G.H.

A post card is better than nothing, but we still wish we might have had more from Capt. Sheridan S. Evans, MC, AUS (*ES* 1945)—particularly as it was his "first". The card says:

> I have now completed over a year's service on the Surgical Staff at Station Hospital, Fort Monmouth, New Jersey, and expect to finish out my Army stay here. I have been fortunate in being able to continue work in surgery while being in the Army, but am looking forward to returning to the M.G.H. this summer.

We are always glad when our men can drop their military titles and once again sign themselves just plain M.D. Such news has come from Dr. James B. Graeser (*WM* 1929) in this note, headed 2938 McClure Street, Oakland 9, California.

> I began active duty in the Navy as a Lieutenant Commander on December 16, 1941 and was discharged as a Captain on November 12, 1945. I was overseas in the Pacific Theatre from July 1942 to April 1943.
>
> I returned to my practice in December 1945, and was finally able to acquire a suitable new office in August. I am now enjoying the comfort of space and adequate facilities.

This note from Dr. Theodore L. Badger, MC (*EM* 1928) gives only the briefest summary of his military activities.

> I returned from the European Theatre in July, after 39 months overseas. For two years I was Chief of Medicine at the 5th General Hospital, and was subsequently transferred for consulting work in medicine and tuberculosis in France, England, and Belgium. For the last six months I was Medical Consultant of the Normandy Base Section.
>
> After returning from overseas I was almost immediately separated from active duty, and returned to the practice of medicine and chest diseases.

Another "first". We begin to wonder who will have the unenviable distinction of being the "last first". Don't let it be you!

Dr. John J. Sampson (*WM* 1923) has sent us a very interesting account of a heavy schedule. He writes, from 490 Post Street, San Francisco 2, California:

> I was separated from military service with the rank of Lieutenant Colonel on February 19, 1946. I then returned to my position as Associate Clinical Professor of Medicine at the University of California, and Chief of the Medical Service at Mount Zion Hospital, San Francisco. Two recent postwar appointments are: Consultant to the War Department in Internal Medicine, with approximately one day a week spent at Letterman General Hospital at San Francisco, and Consultant in Cardiology to the Veterans Administration installations in California, Nevada, and Arizona.
>
> Have continued doing investigative work, as well as teaching, and recently attended the Inter-American Congress of Cardiology in Mexico City, where I met Howard Sprague and Burton Hamilton. This meeting prevented my attendance at the Ether Day Centennial, which I especially regretted after receiving reports of the interesting sessions and the opportunity I missed of seeing my friends.

THE NEWS

No. 53 Boston, Mass. February 1947

RESEARCH ON DISEASES INVOLVING THE AUTONOMIC NERVOUS SYSTEM

Contributions to the treatment of cardiovascular disease and of states of abnormal visceral and secretory activity, and control of otherwise intractable forms of pain from the internal organs by surgical intervention on the autonomic nervous system have come in an ever-increasing stream from this hospital during the past twenty years. Chronologically, the autonomic nervous system studies began in 1927 with the attempt to relieve suffering in intractable angina pectoris, which led to the discovery of the exact anatomical pathways responsible for the transmission of pain from the heart and to new surgical procedures which permit its certain relief. With the establishment of the Peripheral Vascular Clinic in 1929 under Dr. Arthur W. Allen, interest was focussed on sympathectomy for the increase of peripheral circulation in Raynaud's disease and in thromboangiitis obliterans. Through a concerted attack on this problem by a group of investigators in the experimental laboratory and in the clinic, more effective operative methods were developed. These have resulted in producing a greater increase in circulation through the upper extremity without a disfiguring Horner's sign and in a notable reduction of major lower extremity amputations in patients with threatened gangrene. During this same period, the study of gastrointestinal motility and pain by Dr. Chester Jones and Dr. William Chapman, and the use of diagnostic procaine block have permitted surgical interruption of many hitherto intractable forms of gastric, biliary, pancreatic, and intestinal pain. These studies in sensitivity of the gastrointestinal tract are now expanding into Dr. Francis Moore's and Dr. Chapman's investigation of gastric motility and secretion, and the effect on peptic ulcers of cutting the vagus nerves.

In the period from 1935 to 1946, in which Dr. Reginald H. Smithwick held the assignment for evaluating surgical procedures for lowering blood pressure in essential hypertension, he did much to improve previous technical methods and to establish their effectiveness in the control of this disease. His outstanding contribution — the combination of splanchnicectomy with more extensive thoracolumbar sympathectomy — permits a very complete denervation of the adrenal glands and vascular tree in the lower half of the body, with a great improvement in postoperative results. Upon his departure from the Massachusetts General Hospital to become Professor of Surgery at Boston University, the General Executive Committee decided that further studies on the hypertensive group of patients could be carried on most effectively by a small group of the staff who are interested in all aspects of this fundamental problem — not only in the clinical approach, but also in the related fields of cardiology, ophthalmology, and pathology. What was first proposed as a committee for the study of hypertension has been rapidly expanded to a somewhat larger group for the unified study of surgical and medical intervention on all diseases in which the autonomic nervous system is the common denominator.

With the establishment of this new committee, the hospital is embarking on an interesting project for interdepartmental research. Dr. Kenneth A. Evelyn, formerly in charge of biophysical research for the Royal Canadian Air Force in Montreal and Assistant Professor of Medicine at McGill University, is to be in charge of the new research laboratory on the twelfth floor of the White Building. Through the kindness of the Trustees, it has been possible to secure the use of the north wing and to set up constant-temperature rooms with special apparatus for the measurement of blood flow and study of visceral activity and sensation under controlled conditions. The laboratory and clinical investigations already planned and the staff personnel who will be in charge of these projects are as follows:

I. Investigation of peripheral and visceral blood flow in normal and hypertensive individuals; observation of the effects of extensive sympathectomy; effects of drugs; effects of parasympathetic denervation; effects of psychologic stimuli. — Drs. K. A. Evelyn and J. C. White.

II. Investigation of peripheral blood flow in normal individuals and patients suffering from peripheral disorders of circulation of either a vascular or neural origin; effects of drugs and sympathectomy with special reference to the quantitative increase in blood flow after various operations. — Drs. K. A. Evelyn, R. R. Linton, F. A. Simeone, and J. C. White.

III. Study of pain mechanisms in patients with causalgia, angina pectoris, aortic aneurysm, atypical gastrointestinal tract pain, and genito-urinary pain; observation of these patients before and after treatment by ablation of the visceral nerve supply or by drugs affecting neuromuscular transmission. — Drs. C. M. Jones, W. P. Chapman, F. D. Moore, P. D. White, and J. C. White.

IV. Study of renal and adrenal function in patients subjected to various surgical procedures on the autonomic nervous system. — Dr. F. A. Simeone.

V. Study of hepatic function and circulating blood volume in patients subjected to various procedures for the treatment of hypertension, peptic ulcer, and peripheral vascular disease. — Dr. F. A. Simeone.

VI. Investigation of the role of the parasympathetic nervous system in the regulation of gastric secretory and motor activity; its role in the transmission of impulses from brain to stomach and from brain to colon, with special reference to peptic ulcer and ulcerative colitis. — Drs. F. D. Moore, W. P. Chapman, and C. M. Jones.

VII. Clinical investigation of hypertension — the effectiveness of medical therapy (drugs, diet, psychotherapy) as compared with surgical therapy. An investigation of the applicability and effectiveness of various surgical procedures and diagnostic devices. — Personnel: *Medical*: Drs. P. D. White, R. S. Palmer, D. G. Loofbourow, and K. A. Evelyn. *Surgical*: Drs. R. R. Linton, F. D. Moore, W. H. Sweet, C. E. Welch, F. A. Simeone, and J. C. White. *Pathological*: Dr. B. Castleman. *Ophthalmological*: Dr. D. G. Cogan. *Roentgenological*: Dr. S. M. Wyman (cardiovascular) and Dr. M. D. Schulz (gastrointestinal).

In order to carry out these plans, two steps are necessary which are quite new to the organization and administration of the Massachusetts General Hospital: 1) cutting across conventional compartments of surgery, medicine, and neurology in order to pursue the problems of visceral and vascular innervation in the most effective and practical manner; and 2) underwriting the budget required to pay the salaries of a full-time investigator, secretarial and technical help, as well as for a large quantity of expensive apparatus. No funds for work of this sort are available from the Harvard Medical School, and therefore the committee is undertaking to obtain as much help as possible from foundations interested in medical research and to make up the deficit from money derived from the care of private patients. The administrative difficulties in getting such an ambitious project started are considerable, but the promise of reward in terms of medical advance should far offset the effort necessary to make it pay good dividends.

James C. White, M.D.

MASSACHUSETTS GENERAL HOSPITAL RESEARCH COUNCIL MEETING

February 25, 1947—4:30 P.M.
Bigelow Amphitheatre—White 3A

Competition of antitoxin and lecithin for Cl. welchii lecithinase.
Drs. P. Zamecnik and F. Lipmann
The effect of oral streptomycin on the intestinal flora.
Dr. L. W. Kane
Disseminated encephalomyelitis experimentally produced by the use of homologous antigen.
Dr. L. Raymond Morrison
The excretion of 11-oxycorticosteroid-like substances by normal and abnormal subjects.
Drs. N. B. Talbot and F. Albright

Benjamin Castleman, M.D.,
Secretary

The regular monthly Medical Staff meeting was held in the Ether Dome on January 6. Dr. Dwight J. Ingle of Kalamazoo talked on "Some studies on the role of the adrenal cortex in organic metabolism". Tea was served in the Medical Staff Room before the meeting.

Dr. Lewis W. Kane, Assistant in Medicine, will be the principal speaker at the February 18 meeting of the Dental Department. His subject will be "Penicillin, streptomycin, and oral infection". The meeting will be at 7:30 P.M. in the Lower Amphitheatre.

NOTICE

In conjunction with the fund raising activities being conducted, the hospital for some months past has been embarked upon a publicity program conducted through the public relations firm of Gilchrest-Spriggs & Company. Because many staff members can aid this program through their own activities, a brief explanation of the program is reported herein.

The general themes we are trying to develop are:

1. To point up the Massachusetts General Hospital's leadership.
2. The hospital's importance to the community and the nation.
3. Its achievements and successes.
4. The fact that everything achieved is developed for the ultimate good of the patient.
5. That this excellent work must be financed if it is to be continued.

Staff members often may be able to further this program through one or more of the following ways:

1. If you see a story in your work and/or department, bring it to our attention.
2. If you are preparing an article for a medical publication which you think contains matters of general interest and ones which can be translated into lay language, let me have a copy of it for the Public Relations office.
3. If you are planning a meeting of a scientific group here, or are to attend such a meeting elsewhere, let me know about it.
4. If you are going to address any such group, let me have a copy of your talk. If the talk is to be extemporaneous, then please let me have a digest of what you think you will talk about.
5. If you plan to make public utterances, will you try to identify yourself with the Massachusetts General Hospital and your department within it? This applies when being introduced to speak before a meeting and in the program of that meeting, when making a radio broadcast, when writing articles for publication, when being interviewed by newspapers or magazines, etc.

Any suggestion you may have that will further our efforts will be appreciated.

David C. Crockett
Administrative Assistant
Board of Trustees

If you are a person with four (or more) free hours a week, can't you arrange to give some time, as a volunteer, to Massachusetts General Hospital? Unless you are directly familiar with the situation here, you may not know that volunteers are needed now even more than they were during the war.

In trying to decide how to make the strongest possible appeal to all of you who can help the hospital during this serious emergency, it seems as if the words of Dr. Faxon, in a letter sent recently to all our present volunteers, best expresses what we would say. Dr. Faxon's letter reads, in part:

> Although we are entering the second year of peace, the need for volunteer service such as you have so generously given to this hospital is still critical. Our nursing shortage is still acute and we are not yet able to obtain the necessary civilian help for the efficient running of our various departments. We sincerely hope you will be able to continue your volunteer work with us, for without your help our co-operation will be greatly hampered.
>
> As you probably know, our Volunteer Service has a new Director, Mrs. Paul G. Courtney. Her responsibilities are great in securing and keeping the necessary workers to carry on important duties throughout the hospital. If you have any friends who would like to work with you here at the hospital, she would sincerely appreciate hearing from them.

* * *

Mrs. Genevieve C. Chase, our Record Librarian, retired on January 1, after forty-seven years of service at Massachusetts General. Miss Louise Seymour has taken her place.

Dr. George W. Holmes, past Chief of our Radiology Department and now a member of our Board of Consultation, was recently "showered" with nearly one hundred congratulatory messages upon the occasion of his seventieth birthday. The greetings came from all over the United States and even from China. The telegraph operator in the town of Belfast, Maine, where Dr. Holmes now resides, says their office had never been so busy in all the years of its existence.

Miss McLatchie, Head of our Medical Illustration Department, gave a very interesting talk in Boston on December 10, before the local Biological and Medical Artists. We have secured this abbreviated version of her speech.

Methods of operative technique for the medical artist in the operating room vary with the individual. The majority of artists make sketches. Some of the sketches are really in the form of shorthand notes which only the artist understands. Other artists, in a few quick strokes, are able to make a readable portrayal of the operation. Carl Adams, former artist of the Walter Reed Hospital, carried only a notebook for notes. Mr. Adams's method is excellent if the pictorial memory has been well trained.

The surgeon rarely pauses in his work for the artist. He knows that the photographer must have a clear field, minus as many hands and instruments as possible; but the artist must find his own best location—preferably behind the surgeon and on a high stool. Nearly every artist has had experiences which make exciting stories afterward. One time, forgetting the narrowness of my high stool, I leaned forward in a tense moment for a better view. The stool began to sway toward the patient, and for a matter of seconds—that seemed like hours—I teetered back and forth, completely surrounded by sterile equipment and staff. I dared not fall in either direction, and even though my gown was sterile no one dared give me a helping hand. The sighs of relief were almost explosive when I finally gained control of the stool. [*See* page 6 for an illustration of this episode.]

The artist peeks around and over shoulders. The neck is stretched to giraffe-length while peering over some giant surgeon, or the back and shoulders are bent into a U-curve while peering into a deep wound. If the artist is lucky enough to be standing on a wide stool, two or three visiting surgeons may balance themselves precariously on the space that is left, and elbow room is nil.

The subject tonight is: What operations are better portrayed by the artist and what is better photographic material. About half of the operations we sketch in our department are from descriptions, surgeons' sketches, movies, or photographs. The reason is, mainly, that the surgeon forgets to call the artist or photographer, suddenly realizes he has performed some unusual operation, and so gives his verbal description. If he has had movies taken and later wishes to publish his procedure, the artist either traces the steps from the screen or he sketches as the movie is slowly run off. Here is an example: A surgeon came to me one day and said, "I want the drawings of so-and-so operation redrawn. The perspective is all wrong." I told him I would be glad to redraw them; that, since they had been done three years before, my ideas of perspective had improved. I suggested we use his movie of the operation and trace the steps, to avoid any errors. He said, "You traced them last time. I don't want that kind of perspective. I want *your* perspective." In other words, he wanted a composite picture of all the different views. On postoperative sketches made from the surgeons' reports on patients' records — days, months, and even years after the operation—only the artist can help, because there is as yet no camera that can change words into photographs.

Photographs of operations are brought to us for drawing, not because they are not good photographs, but because halftone reproductions may lose too much detail and line cuts from pen-and-ink drawings not only are cheaper but lose very little detail in reproduction.

There are some operations that are definitely more photogenic than others. For example, most of the time brain surgery is excellent for photography. I asked a brain surgeon recently why he did not have a photographer called instead of me. He said, "Because I don't want all those wires from the encephalograph to show." So I dodged under and over wires to get the sketch. The inguinal ring, hernias, and mastectomies are also excellent for photography.

We photographers and artists can work together. If either of us recognizes his techniques to be inadequate for illustrating the surgeon's point of view, we can suggest to the surgeon whether the artist or photographer be called in. We can do a great deal toward training the doctors to recognize the type of technique to employ.

Very deep wounds are certainly better for the artist. As an example—Dr. Smithwick's operation. The sympathetic trunk lies along the vertebral column. It is small and difficult to see, hence must frequently be described as the surgeon feels and dissects. To get the sketches, the artist must use a combination of mental telepathy and his own anatomical knowledge.

There are special operative techniques of suturing, clamping, etc. which the camera would have difficulty in catching. In fact, if you were to glance in on the artist after an operation you might find her busily sewing imaginary tissue so that all the steps in the procedure are clearly defined.

Gastric ulcer and cancer are not always visible, and the surface of the stomach is quite normal in appearance. The artist in that case can study the specimen after the operation and, by means of broken lines or stipling, incorporate the tumor in the steps of the operation. However, the location of the tumor can also be indicated in the same manner on the black and white photograph.

Another manner in which we can work together is by placing insets on the photographs. This, by the way, clarifies the first step in the operation by having an inset of the patient in position, showing the line of incision. Don't forget that the photographer and the artist are usually called in after the patient has been draped. The insets I have placed on photographs have been in halftone, thus saving the publisher the necessity of making a combination line and halftone plate.

We have also added anatomical insets in photographs, so that the field of operation is immediately recognized. This is especially helpful to the doctor and also to students who are still a little hazy on their anatomy. Lettering and arrows on photographs are also helpful. This does not mean that the photograph is poor, but, as in our drawings, labeling the main tissues exposed clarifies the picture. I used to think it an insult to my drawing when a doctor asked for labels, but in the teaching world labels are needed.

In a recent discussion on sin, one person's definition was: Sin is anything you do that in any way hurts another person. This slogan should be adopted by every medical artist, for errors in drawing may guide a beginner into difficulties. However, photographers are responsible in a similar way, for their photographs are permanent records.

* * *

Last month we told you we would try to secure a transcription of the talk given by Dr. Francis F. Foldes (*a. an.*) at the December meeting of the Dental Staff. Dr. Foldes was most coöperative. Together, we tried to cut down the speech so that it might appear all in one piece. However, your editor rebelled at forfeiting so much valuable material and finally decided to publish most of the address, even though it may run into more than two instalments. Here is Part I on the subject, "Anesthesia considerations in oral surgery", as given by Dr. Foldes.

The history of the development of anesthesia is a history of coöperation between dentists and physicians, with the dentist taking the initiative in more than one of the most important phases of its development.

The safety of the patient and the consideration of the surgical problem are the two points of view I should like to follow in this discussion.

The first decision the oral surgeon or dentist has to make when an operative procedure is indicated, is what to do in the office and what needs to be done in a hospital. The answer to this question is not only dependent on the type of the procedure, but also on a number of other factors. The most important of these is the physical condition of the patient. A comprehensive past history should be obtained and a thorough physical examination should be made on every patient who is to have general anesthesia. If necessary, these should be supplemented with various laboratory studies—X-ray, ekg., etc. Special attention should be given to those conditions which are adversely affected by the biochemical changes produced by the various anesthetic agents, or by the changes in oxygen tension or respiratory mechanism. It also should be kept in mind that some diseases change the ability of the organism to excrete, decompose, or detoxify certain agents used in connection with anesthesia. Some of the pathological conditions that have to be considered in these relationships are: diseases of the circulatory system, diseases of the respiratory system, thyroid diseases, kidney diseases, liver diseases, diabetes, allergic conditions, blood dyscrasias, xanthomatoses, etc. In the presence of such conditions, general anesthesia should not be administered in the office. The pathophysiological disturbances caused by any disease should be compensated as well as possible before anesthesia is administered.

Another important factor that speaks for or against the performance of a procedure in the office is whether or not the person administering the anesthesia is capable of handling any emergencies that might arise in connection with it. A further important consideration is the availability of equipment necessary for resuscitation —suction, laryngoscope, endotracheal tubes, etc.

The next question that must be answered is what agent and method should be used. Before this question is discussed, some of the pharmacological properties of the most frequently used anesthetic agents and drugs used in premedication should be reviewed.

Generally speaking, on the basis of their most outstanding properties the anesthetic agents can be divided into three groups. In the first group—the chief exponent of which is nitrous oxide—belong those agents whose chief property is analgesia. Loss of consciousness or relaxation can only be obtained with these agents if they are used in very high—often in toxic—concentrations or doses. The second group consists of agents that primarily produce sleep and loss of consciousness. Their analgesic effect is secondary and can only be obtained with large doses. They produce satisfactory relaxation only after the use of toxic doses. The best known members of this group are the barbiturates. The third group, which can be called the group of true anesthetic agents, consists of drugs that produce analgesia, loss of consciousness, and relaxation, in the given order, in therapeutic concentrations. The most commonly used member of this group is ethyl ether. Recently another type of agent has been used with increasing frequency in anesthesia: curare. The outstanding property of this drug is relaxation, without loss of consciousness or analgesia.

Nitrous oxide is perhaps the most frequently used agent for minor dental procedures. When properly used, mixed with at least 20 volumes percent of oxygen, it is one of the least harmful of all the anesthetic agents. If the oxygen concentration is decreased below 20 volumes percent, nitrous oxide becomes increasingly dangerous. It has been shown repeatedly that the dangers of nitrous oxide-oxygen anesthesia are inversely proportional to the oxygen concentration of the mixture. Serious complications, and not infrequently fatalities, followed the use of such mixtures containing inadequate amounts of oxygen, but still they are being advocated by both dentists and anesthetists. It should be kept in mind that nitrous oxide, despite its considerable analgesic effect, is not a potent agent. Its potency can be increased by proper premedication, its effect can be supplemented by the simultaneous use of other agents (especially local anesthetic agents), and also by allowing the patient to inhale the maximal safe concentration for 5 to 7 minutes before the surgical procedure is started. To try to push higher the nitrous oxide concentration and decrease the available oxygen, thereby producing hypoxia, with or without manifest cyanosis, is a procedure that cannot be condemned strongly enough. It should be realized that under such circumstances the surgery is done not under anesthesia, but in hypoxia, or anoxia. It is true that very often propagators of this method escape without any manifest damage to the patient, but it is also true that complications and fatalities occur much more frequently than when nitrous oxide is used with adequate oxygen. If it is found that, despite careful premedication, nitrous oxide-oxygen does not produce satisfactory anesthesia for the contemplated procedure (and the potency of nitrous oxide varies considerably with different individuals), there should be no reluctance on the part of the surgeon or anesthetist to supplement nitrous oxide-oxygen with local anesthesia or with some other general anesthetic agent. Nitrous oxide-oxygen is also of great value as a supplementary agent with local or pentothal anesthesia.

In recent years pentothal anesthesia has been employed with increasing frequency in dentistry and oral surgery. The fact that the anesthetist and the anesthesia apparatus is completely out of the way is a great advantage to the surgeon. Induction and recovery is pleasant, almost never complicated by nausea and vomiting. These advantages, however, mask grave dangers. The reflex irritability in general, and especially that of the vagus, is markedly increased under light pentothal anesthesia, and is not completely abolished even in deep anesthesia produced by pentothal. Painful stimuli from any part of the body—and especially from the region of the head, face, and neck—can produce severe laryngeal spasm. Similarly, any foreign material—blood, mucus, gastric contents, etc.— that gets in contact with the interior of the larynx can cause laryngeal spasm. The spasm can be so severe that if suitable measures are not instituted rapidly, the patient may die of anoxia. For the prevention of laryngeal spasm, the following precautions are advisable: No patient should receive pentothal anesthesia without premedication with atropine—0.4 to 0.6 Mgs. If there is a possibility that foreign material might come in contact with the larynx, an endotracheal tube should be used, after careful local anesthetization of the larynx and the pharynx. Whenever pentothal anesthesia is given, facilities for the administration of oxygen under positive pressure and equipment for the introduction of an endotracheal tube should be readily available. The danger of laryngeal spasm will be diminished if an analgesic agent is used together with atropine in premedication. The use of an analgesic will also diminish the amount of pentothal used for a given procedure. The amount of pentothal can also be cut down by combining it with local anesthesia, and/or nitrous oxide-oxygen. It must be kept in mind that certain patients — noncompensated diabetics, hypothyroids, anemics, etc.—have very low tolerance for pentothal. The amount of pentothal necessary to induce a healthy normal adult can be fatal to these patients. Induction with pentothal should be slow and cautious. The rapid injection of a given quantity—0.25 to 0.5 Gms. —of pentothal is dangerous and is to be condemned. After the injection of every few cc. of 2.5 percent solution, the administration should be interrupted for about 30 seconds to allow time for the pentothal already injected to exert its effect. If this practice is not observed, serious overdosage can result.

Despite the competition of pentothal, ethyl ether is still the most widely used anesthetic agent for major oral surgery. In the hands of well-trained anesthetists it is a safe agent, and its contraindications—use of cautery, extensive kidney or liver damage, etc.—are few. Induction of ether anesthesia can be made pleasant by the use of nitrous oxide-oxygen. Its major drawback is that recovery is frequently accompanied by nausea and emesis.

Vinyl ether and ethyl chloride are usually employed for dental and oral surgical procedures of short duration. Both these agents have the advantage of rapid induction, but recovery is complicated by nausea and emesis just as frequently as after ethyl ether. Their toxicity (especially toward the liver) is higher than that of ethyl ether, particularly if they are administered over a longer period of time. They are usually used by the open drop method. The patient is anesthetized till a suitable depth is obtained, then the administration is discontinued and the procedure is carried out rapidly, before the patient recovers.

In the last two or three years curare found its place in the armamentarium of the well-trained anesthetist. In oral surgery its use is indicated when maximum relaxation is necessary in poor-risk patients. Its use should not be attempted by persons not trained in its administration. It should be used in conjunction with an analgesic and a hypnotic agent—nitrous oxide-oxygen alone, or with a small amount of pentothal—for it is a very disagreeable experience for the patient to become completely paralyzed without loss of consciousness and to undergo an operation without being able to indicate that he feels pain. Its use should not be attempted without an endotracheal tube and equipment for the administration of oxygen under positive pressure. This is necessary because its use is often followed by complete paralysis of the respiratory muscles.

(*The continuation or conclusion of this article by Dr. Foldes will appear in the next issue.*)

The Board of Trustees, at their meetings on December 13 and 27, voted:

To accept the resignation of Dr. Lincoln Davis with great regret and to ask the Chairman to write him a letter expressing the Board's appreciation of his great services to the Hospital;

To accept the resignation of Dr. Friedrich W. Klemperer with regret;

To appoint:

Dr. John G. Flynn as Assistant Resident on the Children's Medical Service, beginning January 1;

Dr. Elmer F. Franseen as Junior Resident on the Orthopedic Service for one year, beginning January 1;

Dr. Richard B. Holmes as Assistant Resident in Radiology, beginning July 1;

Dr. Duane H. Mitchel as Assistant Resident on the Medical Service for one year, beginning January 1;

Dr. Henry D. Moorman, Jr. as Second Assistant Resident in Surgery, beginning January 1;

Dr. Edwin W. Peterson as Assistant Resident on the Medical Service for one year, beginning January 1;

Dr. Truman G. Schnabel, Jr. as Assistant Resident on the Medical Service, beginning January 1;

Dr. Clement A. Smith as Consultant to the Children's Medical Service;

Dr. John L. Wilson as First Assistant Resident in Surgery, beginning January 1;

To increase the ward rates to $8 per day plus extras on January 1, 1947, with the understanding that on March 1, 1947 this figure would be revised by reference at that time to the actual operating figures for the year 1946; the object of this revision to determine figures which would represent approximately 90% or more of the cost of operation per patient day; the Hospital to follow the present custom of remitting charges when necessary and admitting emergency cases irrespective of ability to pay.

That cost shall not include depreciation.

That in the Baker Memorial the present room rates of $7, 8, 9, and 9.50 be increased $2, making them $9, 10, 11, and 11.50. No change to be made in extras at present; both room and extra charges to be readjusted on March 1, 1947, if found advisable.

That room rates in the Phillips House be increased $2 for all rooms under $15 per day and $3 for those over $15 per day, making the room rates $11, 13, 13.50, 14, 14.50, 15, 20, and 21.

At their meetings on December 11, 18, and 31, the General Executive Committee voted to appoint:

Dr. Robinson L. Bidwell as Graduate Assistant in Neuropathology for six months, beginning January 1;

Dr. Thomas H. Coleman as Clinical Fellow in Medicine, beginning January 1;

Dr. John H. Cox as Graduate Assistant in Dermatology for the term January 1 through June 30;

Dr. John L. Fromer as Graduate Assistant in Dermatology for the term January 1 through June 30;

Dr. Basil C. Gray as Graduate Assistant in Dermatology for the term January 1 through June 30;

Dr. Y. Y. Liu as Research Fellow on the Urological Service for a period of one year;

Dr. Albert F. Nyssens as Clinical Fellow in Medicine;

Dr. Frederick W. O'Brien as Graduate Assistant in Radiology, beginning July 1;

Dr. Donald Rose as Research Fellow in Physical Medicine for the period January 23 through May 31;

Dr. Arthur S. Spangler as Clinical Fellow in Dermatology, beginning January 1;

To reappoint as Graduate Assistants in Dermatology for the term January 1 through June 30:

Dr. Clito R. Damiani
Dr. John J. D'Urso
Dr. Ralph H. Luikart, Jr.
Dr. James L. Spencer

It was further voted to grant Dr. Janet W. McArthur a leave of absence for the calendar year 1947.

New addresses:—

Dr. Richard T. Barton (*Oto-Lar.* 1945), 120 South Lasky Drive, Beverly Hills, Cal.

Dr. Richard J. Clark (*WM* 1933), 21 Sheffield West, Winchester, Mass.

Dr. Harvey S. Collins (*M* 1944), Harvard Medical School, Department of Nutrition, Boston, Mass.

Dr. Richard S. Cosby (*EM* 1940), 1060 East Green St., Pasadena 1, Cal.

Capt. William E. Eaton, MC, USN (*D* 1907), Navy Department, Navy Regulations Board, Bldg. T-3, Room 1115, Washington 25, D.C.

Dr. A. Gordon Gauld (*ES* 1934), 1180 Beacon St., Brookline, Mass.

Dr. Luke Gillespie (*a. obst.*), 1180 Beacon St., Brookline, Mass.

Dr. William W. L. Glenn (*a. r. s.* 1941), Jefferson Medical College, Philadelphia, Pa.

Dr. John S. Harter (*WS* 1935), 1410 Castlewood Ave., Louisville 4, Ky.

Dr. Richard S. Hawkes (*WM* 1933), 47 Deering St., Portland 4, Maine.

Dr. Margaret B. Hussey (*a. D*), 6 President's Lane, Quincy, Mass.

Dr. Norman P. Johnson (*EM* 1925), 2510 Rand Tower, Minneapolis 2, Minn.

Dr. Eugene E. Record (*NS* 1937 & *Or.* 1941), 308 Commonwealth Ave., Boston, Mass.

Dr. S. Peter Sarris (*WS* 1939), 56 Broad St., Lynn, Mass.

Dr. Donald N. Sweeny, Jr. (*WS* 1941), 18618 Steel Ave., Detroit 21, Mich.

Brief bits:—

Dr. John R. Paul, Jr. (*CM* 1943) is out of the Navy. He is a resident in pediatrics at Wisconsin General Hospital. After two years there, he plans to return home to South Carolina. His present address is 4002 Hammersley Ave., Madison, Wis.

Dr. Edward T. Smith (*Or.* 1937) has been appointed Chief of Staff at Hermann Hospital, Houston, Tex.

MASSACHUSETTS EYE & EAR INFIRMARY

The Anesthesia Department at the Massachusetts Eye and Ear Infirmary has just been reorganized in personnel, equipment, and procedure. It is being set up in accordance with the latest and most efficient standards, under the direction of Dr. John H. Tucci, Anesthetist, and with the enthusiastic coöperation of Dr. Schall, Chief of the Ear, Nose and Throat Service, Dr. Dunphy, Chief of the Eye Service, and Mr. Hill, our Assistant Director.

The equipment at the Infirmary has been brought completely up to date with the latest gas machines, masks, and so on, to make possible the most efficient administration of anesthesia in delicate operations on the eye, ear, and throat. For example, the Infirmary now has a gadget that will give the patient helium and gas, under pressure, through a tracheotomy tube, to simplify the equipment needed in the operation and yet anesthetize quickly and painlessly a patient who is having difficulty with his breathing at best.

In line with this modern efficiency is the case record file that has been established for the department. Dr. Tucci has set up the punch card system that will enable the doctors to gather data from hundreds of case records, for research or for scientific papers and the like, almost with the flip of a mechanical lever. For example, one mechanical process — and all the patients who have had headaches after taking procaine will be sorted out.

This is the way the punch card system does the job. Each category of diagnosis or symptoms has a code number. There are sixty or seventy code numbers for each card, under a code system now being used by anesthesia departments in all leading hospitals. Next, the individual card is checked according to the patient's individual case history. The card is then punched on the checked numbers, so that when a doctor wishes to look over all the case histories of patients suffering from a certain set of symptoms, all he has to do to get their names and file numbers, is to run the cards through a machine that sorts out those with the same punch holes.

The newly organized department at the Infirmary is in close coördination with the Anesthesia Department at the Massachusetts General Hospital. This coördination brings six student nurses from the MGH Training School to the Infirmary Anesthesia Department for several weeks of special training in anesthesia for eye, ear, nose and throat operations. This period of special training is about to be considerably increased.

The department also offers specialized training to the House Officers at the Infirmary who rotate their service every three or four months, and to Residents and Fellows at the General who come over for any specially interesting cases or to lend a hand when the work is heavy. The permanent staff of three anesthesia nurses are Miss Florence Morrissey, Mrs. Irma Brose, and Mrs. Kathryn Goss.

A year ago, anesthesia was administered by an outside doctor for a separate fee, 43% of all operations being so handled. Now, with the reorganization, all but 3% of the operations are taken care of by the department.

There is another even more important gain in the gas therapy at the Infirmary that has resulted from having an anesthetist of outstanding ability in charge of the department. Dr. Tucci is here for preoperative and postoperative consultation and examination of cases. This, obviously, makes for greater medical efficiency in suiting the anesthesia to the last minute condition of the individual patient. And the fact that Dr. Tucci is here to watch over the patient, after the operation, is already paying off in what he, himself, speaks of as "lower postoperative morbidity".

Mr. John F. Bowen, construction superintendent of the John Bowen Construction Company of Quincy and former Navy officer serving aboard a submarine chaser in the Pacific Area during the war, was nominated on December 10 by ex-Governor Tobin as a member of the Board of Managers of the Infirmary, to succeed Dr. D. Harold Walker whose term expired then.

On December 30, thirty-eight members of the personnel of the Infirmary were awarded pins by Dr. Faxon for their long periods of service. Dr. Faxon expressed the appreciation of the hospital for their distinguished records; and after the presentation, tea and sandwiches were served. The service pins were given to those listed below.

Those who have been at the Infimary from 10 to 19 years include Miss Frances M. Hernan, Chief of the Accounting Department; Miss Marion D. Floyd, Mr. James Connolly, and Mr. John Evans from the Dietary Department; Mrs. Kitrena C. Akins, Miss Mary Foley, Miss Nellie Morgan, and Mrs. Belle Roberts from the Housekeeping Department. Dr. Faxon, Dr. Elek Ludvigh, and Dr. Tracy B. Mallory also received pins. In the Nursing Department were Miss Annie M. Robertson, Assistant to the Director, Miss Dorothy M. Tarbox, Miss Hilda G. Blaisdell, Miss Henrietta I. Olson, Miss Walborg L. Peterson, Miss Eileen M. Gilmartin, Miss Elizabeth A. Ward, Miss Edna McCarthy, Miss Anna H. Remick, Mr. Francis Carney, Miss Mary Trowbridge, Mr. Robert Whalen, and Miss Renee Spiesman.

Also in this 10 to 19 year group were Mr. Vincent Farley, Miss Thelma Farmer, and Miss Lillian A. Peck of the Out-Patient Department; Mr. Albert F. Kelley, Protective; and Mrs. Ruth B. Adair and Miss Leah F. Cook of the Social Service Department.

Those who have served the Infirmary from 20 to 29 years are Mrs. Elizabeth T. Farley of the Accounting Department; Miss Frances Opper, secretary; Dr. Alexander S. Macmillan, Roentgenologist; in the Nursing Department, Miss Ruth M. Hutchinson, Miss Florence Morrissey, and Miss Anne Raymond (the latter's award being made posthumously); Mr. John McInnis, orderly; and Mrs. Helen F. Kirwin of Social Service.

There were two members — Mr. Charles Fowler, orderly, and Mr. Albert Maver in the Out-Patient Department —who have the distinguished record of having given service at the Infimary from 30 to 39 years.

Dr. Burton E. Lovesey has just received two medals for his exhibit of gladiolus at the Annual New England Gladiolus Exposition, one being the New England gold medal, the other from the Massachusetts Horticultural Society. Dr. Lovesey explains that the exhibit showed the color range of gladiolus — the ten primary colors and shades from white through smoky grey. On his farm in Natick, Dr. Lovesey does his own gardening and takes care of 100,000 gladiolus.

If a typographical error in reporting a man's military rank is all that is required to elicit a "first", we're seriously considering reporting all colonels as privates and all lieutenants as generals when we refer to any of our "silent ones" in the future. Such an error, plus an apology for the mistake, brought forth the first word we have had from Dr. Stafford L. Warren (*WM* 1924), Professor of Radiology and Medical Advisor to the Manhattan District. From the School of Medicine and Dentistry, University of Rochester, P.O. Box 287, Crittenden Station, Rochester 7, New York, Dr. Warren writes, in reply to our apology:

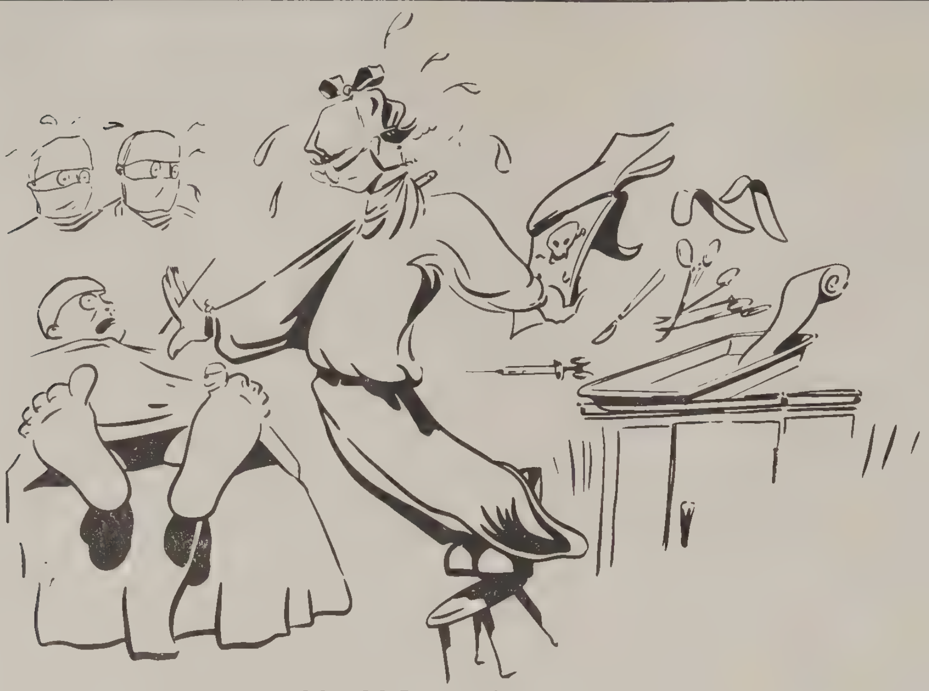
> I wouldn't bother about correcting the slight error in my rank. Those who wish to be picayunish can look at the insigne in the picture. I'm out of the Army now, anyway.
>
> In regard to my war job, I was Chief of the Medical Section of the Manhattan Engineering District (atom bomb project), having responsibility for hospitals, public health, plant safety (industrial radiation hazards), and medical research behind the cloak of security; led a party into Hiroshima and Nagasaki, Japan; and was Chief of the Radiological Safety Section at Bikini. I am now civilian consultant to the Manhattan District.
>
> Had lots of work and excitement, no injuries, too much travel, too many 'phones and too much talking under the difficulty of a tight security. Had good confreres in every situation who did their jobs in full measure and who deserve the credit for our perfect record of no injuries from radiation during the war period. I am still worried about how war can be outlawed, now that the atomic bomb is an actuality.
>
> That was a nice picture of Dr. Washburn and Dr. Faxon in THE NEWS, and I appreciate your sending it to me.

Along in December a letter came from Dr. Henry S. Fuller (*WM* 1943). Because it was addressed not only to THE NEWS but to "the Hospital Staff" and contained cordial Christmas greetings to everybody, it was placed on the foot-of-Treadwell-stairs bulletin board and its contents did not get into our January issue. The letter is headed London School of Hygiene and Tropical Medicine, University of London, and says in part:

> The news from this end of the line is all good. I am enjoying the course at this School and, in addition, am doing some laboratory work in connection with my interest in rickettsial diseases.
>
> Everyone is most helpful and hospitable. I surely do admire these people in England for what they have gone through and the splendid way they have taken it.

All of us who are complaining about New England winters or the high cost of living should feel rather subdued after reading this letter from Capt. Frank C. Wheelock, Jr., MC, AUS (*ES* 1943). Captain Wheelock is still with the 202nd Station Hospital, APO 732, c/o Postmaster, Seattle, Washington, and his letter tells what it's like up there now in seldom-heard-from Alaska. Incidentally, this is another "first".

> I have been planning for a long time to write and thank you for sending THE NEWS to me. It is certainly appreciated by my wife and myself, especially as we are in a rather isolated spot—namely, Nome, Alaska.
>
> My career in the Army, compared with that of some of my colleagues, has been so unspectacular that even now I hesitate to write of it. I had been first at Carlisle and then at Walter Reed General Hospital when, in February 1946, I was sent here to be surgical officer at the small Station Hospital on the Air Base, and am now also the CO of the hospital. There is very little surgical work to do, but from time to time an interesting case comes up. Most of the time I am just signing my name to the hundreds of daily, weekly, bimonthly, and monthly reports!
>
> We have on the ward at present a seventy-four year old man who is interesting from two standpoints. First, as a patient because he survived the onslaught of a 1 1/2-ton truck which ran completely over him, and secondly as a source of colorful information about the history of the locale. He came here in '98 and mined until '26, making and losing a large amount of money. He then trapped for a few years, and finally became an Army tugboat skipper. The wild tales about Nome as a gold-rush town are all apparently true, but the present day town is very calm and tame. There are about 1500 people here, half of whom are Eskimo. The sole major business prior to the war was gold mining, and now it is working for the Army. The post is reputedly located on some of the richest land in the area, and scattered about are several gargantuan dredges resembling mechanized dinosaurs. Although no large scale mining has gone on since 1943, it is still possible to pan gold on the beach in the spring; but I, for one, found it very hard work for the return.
>
> Physically, the town of Nome is very unattractive in the summer. The streets are dirt and most of the buildings are wooden shacks piled close together. There is no grass nor trees; and, as only the top three feet of soil thaws, the water—piped on the surface—runs only three or four months of the year, depending on the temperature. There is, therefore,



Miss McLatchie's dilemma

(One of several amusing cartoons drawn by Robert H. Ullrich, a freshman in Miss McLatchie's Medical Illustration course, after hearing the talk given by her before the local Biological and Medical Artists. A transcription of the speech is on another page in this issue.)

no sewage system at all. In the winter the snow covers the ugliness of the town and it never melts nor becomes dirty. When the wind isn't blowing it is not uncomfortable to be out in temperatures below -20. It is surprising how warm it feels when it gets up to -5.

It is very expensive to live in town. For example, milk is 95c a quart, water 10c a bucket, electricity 15c per kilowatt hour, and bread 25c for a very small loaf. Strangely enough, there have never been shortages of meat or butter and the stores are still selling the refined flour.

As for the people here, the Eskimos are ridden with tuberculosis to an alarming degree. Gradually sanitorium facilities are being obtained for them, but there is still a tremendous amount of work to be done. I would estimate that 30% of them have or have had active clinical tuberculosis. On St. Lawrence Island, near by, the rate is said to be as high at 84%. Diphtheria seems to be endemic, as a few cases crop up from time to time.

Needless to say, I am looking forward with impatience to my discharge date in the late spring and a return to real surgical work again.

My best to all at the M.G.H., and congratulations on your centennial exercises which I was indeed sorry to miss.

We are very grateful to Dr. Means for letting us have this letter to him from Lt. James M. Stewart, MC, AUS (*M* 1946). Lieutenant Stewart is with the 61st Station Hospital in Italy. His APO is 782, c/o Postmaster, New York, N.Y.

After reading several *New England Journals* this evening, my thoughts naturally turned to the M.G.H. Now that I am "permanently" settled over here, a few lines are in order.

After almost three weeks of waiting at Camp Kilmer, along with nine other members of the 5th A.M.D.S. Class from Texas I shouldered my field pack and boarded the *Stevens Victory*. Although many of the enlisted men were seasick the first day out, we actually had an easy eleven-day crossing to Leghorn, with a minimum of rough weather. The trip was exciting medically, largely because of an appendectomy performed three days out of New York. The transport surgeon had had an assistant residency in surgery and was making his third crossing on the *Stevens*. Naturally, the decision to operate was made at 1:00 A.M. The ship's dispensary was remarkably well outfitted with surgical table, lighting, and instruments. With the ship steadied at half speed, the offending appendix was successfully removed under drop ether anesthesia administered by one of our group of ten medical officers. Two others assisted, while another one and I served as instrument men and suture nurses. The patient did very well, walking off the ship in Leghorn.

After several days of waiting, we were interviewed by the Theatre Surgeon and assignments were made. Six of the men were assigned as Battalion Surgeons to the 88th Division in northern Italy. One has gone to Foggia, a most lonely spot in the "desert" of southern Italy. One went to the Station Hospital in Rome, while two of us are here at the 61st Station Hospital in Leghorn.

After giving up all hope of practising much medicine while in the Army, I am most decidedly lucky to be stationed here. This hospital is now the largest in Italy and the one through which flow all cases awaiting evacuation to the United States as well as the more difficult problems. I am now Ward Officer on the Contagious Disease Ward, with tonsillitis cases, pneumonia, meningitis, and tuberculosis filling the majority of beds at the present time. We have been rather light on the ward, with 20-30 patients, and I have been spending most of my time on the General Medical Ward which has had 60-75 patients. Here we have about 15-20 patients with peptic ulcers, some with hemorrhage. This high incidence of ulcers rather surprised me after hearing that ulcers were very rare in the Army during the war. This is the high seasonal incidence for infectious hepatitis, of which we have seen a good deal. There are some interesting renal problems, hypertensives, rheumatic fevers, asthmatics, a case with an undiagnosed pulmonary tumor, and a dozen skin problems. I have seen no hyperthyroidism as yet. What has amazed me is the diversity of cases we have and the numerous problems presented. It has been a pleasure to get back to work after several rather lean months, medically speaking.

At the hospital here are several Harvard men. Lt. Richard Greene (*EM* 1945) is now working down town at the Dispensary. Capt. Ted Groff, Class of 1944 and Presbyterian, is working on the Medical Service; and Capt. Robert Ray, 1943, Brigham and Children's, is Chief of Surgery.

The town of Leghorn is a rather tough, dirty seaport with not much of historic interest. Most of our week ends have been spent in Florence which is only sixty miles away. In contrast to Leghorn, that is a delightful city. The officers are quartered at the Hotel Excelsior for 25c a day, with steak dinners for 10c. The beautiful churches, castles, monasteries, and art treasures were untouched by the war. Only the bridges across the Arno were destroyed, except for the famed Ponte Vecchio whose ends were heavily mined. It has been a truly exciting and stimulating experience to explore the beauties of that city.

Last week end I paused over my steak dinner and wine to wonder how Mickey Stunkard is enjoying Korea and Yokohama. I scarcely envied him, and only hope he drew a good medical assignment.

I should like to be remembered to all at the M.G.H. I hope I shall be able to return to Boston before so very long.

Through the kindness of Dr. Allen, who has passed on to us a long and interesting letter, we have learned the whereabouts of Lt. Jack A. Cannon, MC, AUS (ES 1944). He is Chief of the Surgical Service at the 248th General Hospital at Clark Field. His APO is 74, c/o Postmaster, San Francisco, California. One paragraph of general interest in the letter reads:

Perhaps being in a place like this distorts one's viewpoint a little, but I often find myself thinking about what a very wonderful place the Massachusetts General Hospital is. It is just about perfect. To have the privilege of operating again on White 3 would be about as pleasurable a thing as I could imagine. I suppose a lot of it is due to what one is brought up on, but it seems as though there couldn't be a finer group of nurses, there is no better way of putting up a lap. kit, no better collection of instruments, no more perfect way of folding sponges, no better operating light, and certainly no better dissecting scissors than are to be found there. It's amazing how I miss those good Swedish scissors—even though many of them were dull from long use. I'm certain there are no good scissors in the Army. Granted, they are all new, but they all have rounded ends, are heavy and ungainly, and no matter how new they are, they just don't cut worth a damn. I did manage to find one pair that got in by mistake which are just fair. I have my name on them, and you can be sure that no one but the "chief" uses them. Another thing I miss sadly are good old Mass. General "half-sheets" for draping. In the Army a sheet is a sheet and there is no half way about it. Worse still, they don't let us tear any in two. We did finally succeed in stealing a table, the height of which is adjustable, and this is a great relief. However, the light remains bad and is hung so low that a fellow my height just can't operate under it. I think I always have appreciated the wonders of the old Mass. Gen., but never more than now. It is certainly with regret that I realize I probably never will be back except to visit, as I'm afraid I shall have to try to get started in California, since that is where my roots are.

Lt. Robert S. Shaw, MC, AUS (*WS* 1946) has a new address — Headquarters ANC TS-EAA7, Wright Field, Dayton, Ohio. A very welcome letter from him tells us what he is doing there.

I arrived at the above address by a very circuitous route, as is told by the envelope of my last News which bears five different addresses. That is the primary incentive for this letter, for I want very much to be sure I continue to receive The News. It is one warm link to my surgical past, which seems very far away, indeed.

I am working in the aero medical lab here, completely surrounded by jet planes, heliocopters, and rocket ships, doing stress analysis on animals. It's an interesting and valuable experience in physiological research, but—like the rest of us—I'm eager to get back into the white suit.

THE NEWS

No. 54 Boston, Mass. March 1947

ENDOSCOPIC AFFAIRS

The development of Endoscopy at the Massachusetts General Hospital may be of some interest to readers of THE NEWS. About 1931 the writer, at that time doing general surgery, remarked to Dr. Chester Jones that he believed the medical profession should have a satisfactory method of examining the inside of the stomach. Dr. Jones agreed, but up to that time no safe and satisfactory method of gastroscopy had been devised. Rigid tubes with or without lenses had been used but mostly abandoned because the results obtained had not justified the dangers involved in making the examination. In 1932, however, the Wolf-Schindler flexible gastroscope was invented, and the first one ever used in the United States was introduced at the Massachusetts General Hospital on April 6, 1933 by Dr. Chester Jones, Dr. Charles Johnson, and the writer. Strangely enough, the first patient examined had a gastric lymphoma which is the most difficult of all diagnoses to make; it is, therefore, not surprising that the diagnosis was not made preoperatively!

Gastroscopy soon became recognized as a valuable adjunct to radiology in the diagnosis of gastric disease. It has not been used as a routine procedure, but has quite properly been reserved for cases in which other methods of study had failed to establish a positive diagnosis. Gastroscopic examination has been found valuable in the diagnosis of gastritis, gastric ulcer, and benign and malignant gastric tumors. Gastroscopy has now been accepted in all large medical centers throughout the world.

About 1934 it became apparent that, with the development of thoracic surgery, increased use of bronchoscopy and esophagoscopy would be essential. It occurred to Dr. Churchill that possibly one individual might make endoscopy a special field, and that the endoscopist would work in close association with the Thoracic Clinic in bronchoscopy and esophagoscopy, and with the Gastro-intestinal Clinic in gastroscopy. At about the same time, Dr. Allen called attention to Ruddock's work in peritoneoscopy and suggested that an endoscopist might add that examination to his field. These suggestions have been carried out, and after a trial period of about ten years the position of Endoscopist has been created. This position is rather unique in medical practice, the nearest approach to it being in Philadelphia where some laryngologists confine their work almost exclusively to peroral endoscopy. The growth of endoscopy has been rapid; in 1936 the writer made 214 endoscopic examinations; in 1946 the number had almost exactly tripled to 636. Since 1933 he has performed 2372 bronchoscopies, 667 esophagoscopies, 2004 gastroscopies, and 726 peritoneoscopies.

The future of endoscopy is assured, but it is not clear who will make the various examinations. The trend in bronchoscopy and esophagoscopy seems to be away from the laryngologists toward the thoracic surgeons. At this hospital, Dr. Davenport, an internist with a special interest in diseases of the chest, does some of the bronchoscopies and esophagoscopies. Similarly, Dr. Halsted, who is interested in gastroenterology, makes some of the gastroscopic examinations. Peritoneoscopy, although given its chief impetus by an internist, is usually done by surgeons, and Dr. Wallace of our Surgical Staff is doing some of the peritoneoscopies.

The teaching of endoscopy to undergraduates has been very limited. Naturally, the average physician will not perform any endoscopic examinations himself, but he should know when to call the experienced endoscopist in consultation. Unfortunately, our House Staff get no instruction in endoscopy. Their schedule is too full and usually their interest centres in major surgery. Instruction in bronchoscopy, however, is given to residents on the laryngological service, who come over from the Eye & Ear Infirmary, and to residents in anesthesia. The special reason for teaching the latter group is because of the great importance of immediate aspiration of postoperative secretions. Graduate instruction in endoscopy is offered through the Harvard Medical School, Courses for Graduates.

Does the endoscopist learn more and more about less and less until finally he knows everything about nothing? We hope not! The bronchoscopist comes in contact with many of the most interesting pulmonary cases in the hospital; the esophagoscopist has an opportunity to diagnose many diseases of the esophagus and has particular satisfaction in treating benign strictures; the gastroscopist is confronted with many of the most difficult problems in the differential diagnosis of gastric disease; and the peritoneoscopist not only has a look at many obscure pathological conditions in the abdomen and pelvis, but also saves a good many unnecessary exploratory laparotomies. The biopsies obtained at many of these endoscopies frequently establish a definite diagnosis.

In conclusion it may be said that the endoscopist enjoys his work, believes in its importance, endeavors to widen his horizon with new techniques and improved instruments, and — looking extralumenally as well as intralumenally—foresees an interesting future.

Edward B. Benedict, M.D.,
Endoscopist

* * *

The General Executive Committee has awarded the Warren Triennial Prize of $500 for the year 1946 to Paul C. Zamecnik, M.D., Lydia E. Brewster, A.B., and Fritz Lipmann, M.D. for their essay entitled "Studies on Cl. welchii lecithinase". The subtitles of the work are: Part I—A manometric method for measuring the activity of the Cl. welchii lecithinase and a description of certain properties of this enzyme. Part II—A study of the competition of lecithin and antitoxin for Cl. welchii lecithinase.

MASSACHUSETTS GENERAL HOSPITAL RESEARCH COUNCIL

On January 7, the Massachusetts General Hospital Research Council sponsored a symposium on "Problems concerning the intracellular electrolytes". The speakers and their subjects were as follows:

Dr. Fuller Albright—The role of potassium as a base in nephropathy.
Drs. Allan M. Butler and Nathan B. Talbot—Potassium losses in dehydration and their repair, including the parenteral administration of a potassium-containing solution.
Dr. Oliver Cope—The need for potassium in the dehydrated and depleted surgical patient.
Dr. James H. Currens—The electrocardiographic changes incident to altered metabolism of body potassium.
Dr. Nathan O. Kaplan—The use of intravenously administered phosphate ion in the treatment of diabetic coma.
Dr. Francis D. Moore—The determination of total body water and solids with isotopes: Means for the diagnosis of potassium deficiency; the lethal rate of potassium injection in rabbits.
Dr. Paul C. Zamecnik—Trace metals as enzyme activators.

The above program is published now, even at this late date, in order that our readers may know about the various problems being studied and discussed by the Research Council.

The program for the February meeting was in our last issue.

The next meeting of the Research Council will be held on March 25 at 4:30 in the Bigelow Amphitheatre. The subjects and speakers will be:

The biochemical and physiological mechanisms underlying the electrical activity of the brain.
Drs. M. A. B. Brazier and J. E. Finesinger
Some observations on the role of vitamin

C in aqueous humor formation.
Dr. J. Everett Kinsey

Carboxyl nitrogen changes in incubating human saliva.
Dr. David Weisberger

The effect of roentgen irradiation on epiphyseal growth — an experimental study.
Drs. J. S. Barr, E. A. Gall, J. Reidy, J. R. Lingley

The Board of Trustees, at their meetings during January, elected Mr. Francis W. Hatch and Mr. John E. Lawrence as Trustees.

Governor Bradford appointed Dr. W. Jason Mixter and Professor Francis O. Schmitt of Massachusetts Institute of Technology as Trustees. Mrs. Robert Homans and Rt. Rev. Robert P. Barry were reappointed.

The Chairman of the Board announced that he had appointed Mr. Ralph Lowell and Dr. W. Jason Mixter to the Committee on Nurses.

The Trustees voted:

To accept the gift of a replica of a statue of Dr. Samuel Cabot from Mrs. Henry Lyman and to refer the placing of it to the Committee on Memorials;

To accept the resignation of Harold E. Dyer, D.M.D. from the position of Assistant Dental Surgeon;

To accept with regret the resignation of Dr. Curtis Prout from the position of Assistant in Medicine;

To promote Dr. Toufic H. Kalil to the position of Radiologist, as of January 1, 1947;

To appoint:

Dr. Bedford F. Bolyston as Assistant Resident on the Orthopedic Service for one year, beginning April 1, 1948;

Dr. George H. Carter as Assistant Resident in Psychiatry for one year, beginning January 1, 1948;

Dr. William C. Coles as Resident on the Radiological Service for the term February 21 to July 1;

Dr. Albert B. Ferguson, Jr. as Assistant Resident on the Orthopedic Service for one year, beginning April 1, 1949;

Dr. Howard P. Haswell as Assistant Resident in Anesthesia for one year, beginning April 1;

Dr. Walter S. Kerr, Jr. as Second Assistant Resident on the Urological Service from April 1 to October 1, it being understood that, subject to competent and satisfactory service he will be advanced to First Assistant Resident from October 1, 1947 to July 1, 1948 and to Resident from July 1, 1948 to July 1, 1949;

Dr. William G. Kuhn, Jr. as Assistant Resident on the Orthopedic Service for one year, beginning October 1, 1948;

Dr. Ralph H. Luikart, Jr. as Assistant Resident on the Dermatological Service for the period January 22 to July 1, to replace Dr. Freytag who has been ordered into the Army, and to continue him as Assistant Resident for the term beginning July 1;

Dr. Sydney R. McPherson as Assistant Resident on the Orthopedic Service for one year, beginning January 1, 1949;

Dr. LeMoyne White as Resident in Psychiatry for one year, beginning July 1.

At their meetings on December 11 and 31, through January, and on February 4, the General Executive Committee reappointed as Graduate Assistants for the term January 1 through June 30:

The General Executive Committee voted to extend the appointments of:

Dr. William A. Dickson as Assistant Resident on the Children's Medical Service to March 31, with leave of absence during that period;

Dr. Ivar Lund as Assistant Resident in Anesthesia for six months, to October 6;

Dr. Abraham I. Perley as Resident on the Dermatological Service for the period July 1, 1947 to July 1, 1948.

The Committee voted to appoint:

Dr. William H. Amspacher as Clinical Fellow in Surgery;

Dr. India H. Balch as Graduate Assistant to the Children's Medical Service;

Dr. Jean L. Camus as Clinical Fellow in Medicine, to work with Dr. Fuller Albright;

Dr. Pedro M. Catoggio as Clinical Fellow in Medicine, to work with Dr. Bauer;

Dr. William B. Clapp as Graduate Assistant in Medicine, to work in Allergy;

Dr. Stephen M. Clement, II, as Clinical Fellow in Psychiatry, to work in the Out-Patient Department and Laboratory;

Dr. Jane Denton as Clinical Fellow in Medicine and Anesthesia;

Dr. Paul H. Harwood, Jr. as Graduate Assistant in Psychiatry;

Dr. Charles L. Holt as Clinical Fellow in Medicine, to work with Dr. Paul D. White;

Dr. Frederick H. Kalil as Graduate Assistant in the Dental Clinic;

Dr. Josip Matovinovic as Clinical Fellow in Medicine;

Dr. Sedgwick Mead as Clinical Fellow in Physical Medicine, beginning January 27;

Dr. Gordon Prewitt as Clinical Fellow in Medicine, to work with Dr. Paul D. White;

Dr. Alfredo Segers as Clinical Fellow in Surgery, to work in the Tumor Clinic.

Dr. Fritz Lipmann, our Research Chemist, has sent us this interesting account of his recent trip to France.

It was my good fortune to be among those invited as guests of the French Government to come to France for the celebration of the fiftieth anniversary of the death of Louis Pasteur. The central meeting was held in Paris on November 18-25, and was followed by smaller manifestations throughout France. The anniversary offered a fine opportunity to survey the immense influence of Pasteur's work on modern chemistry, biology, and medicine. A memorable meeting, with emphasis more on the present than on the past, was planned and arranged by the National Union of Intellectuals, with the support of various branches of the Government. Very fittingly the title was chosen, "Congrès des Sciences Pasteuriennes".

For most of the participants this meeting was a first occasion after the war to exchange thoughts on an international level. Nearly a hundred guests from 23 countries had gathered, not mentioning the large additional influx due to parallel meetings of the UNESCO. From this country came Mansfield Clark, Cori, Heidelberger, Perrin-Long, Stanley, Werkman, and myself. The largest delegation was from England: Fildes, Knight, Bernal, Miss Stephenson, Quastell, the penicillin trio—Fleming, Florey, and Chain—and others. Engelhardt was the most prominent representative from Russia, and Szent-Györgyi from Hungary. Kluyver of Amsterdam was there to introduce the meeting on Fermentation; Winge from Copenhagen talked on Yeasts.

The main topics of the scientific meetings were: Bacterial toxins (B. C. J. G. Knight); Bacteria (Stephenson); Immunity (Heidelberger); Virus and phages (Stanley); Antibiotics (Chain). There were meetings on Infectious diseases (Castex, Argentina); Tropical diseases (Da Fonseca, Brazil); Diseases of insects (Malenotti, Italy). There was a session on Beer and other fermented drinks, and a whole section on Soil bacteria and soil biochemistry. One of the most memorable lectures was the recount by Bernal of Pasteur's discovery of molecular dissymmetry, tracing the influence of this discovery down to our modern concepts of molecular structure.

Although these lectures and discussions were of highest level, the most productive part was, nevertheless, informal conversations at lunch and supper, and during evenings. More than half of the guests were lodged together in the Hotel Palais d'Orsay. This soon became the meeting center for guests and hosts. Our meals were taken there, the lunches and suppers including an agreeable measure of light wine. A quite extraordinary session came about through an almost accidental being together of those best able to judge the quickly changing situation in muscular metabolism. Recently Szent-Györgyi and his collaborators had published from Hungary the rather revolutionary finding of a multiplicity of the contactile proteins, discovering actin as a separate unit in addition to myosin. Szent-Györgyi opened the session. With Cori, Dorothy Needham, Bernal, Kalckar, Rakine, myself and a few others listening, a highly interesting discussion followed. Significantly, it reflects on the philosophy of this discussion that it converged eventually on the question of how to arrange exchange of members between groups. With techniques of muscle protein separation still in development, it was agreed that the observation of minute, but indispensable, details may often not be separable from the "skill" of the respective worker. Essentially, it appeared, the results of the Hungarian workers have been confirmed by various laboratories, but some important details are still undecided.

From Paris small groups went on to take part in Pasteur celebrations elsewhere in France. I gladly accepted the invitation to go down to Lyons and Marseilles. This journey became a quite unusual experience. I was in very agreeable and interesting company with Dr. Engelhardt of Moscow, whose work on muscle biochemistry had recently become one of the most widely discussed topics. We were only three in all, and scientifically we two shouldered the greatest burden. As the first foreign guests after the war, we were received with greatest enthusiasm, a rather large fraction of which was focussed on each of us because of our small number. Our first stop was Lyons, quite famed as one of the important intellectual centers of France. It has a fine Medical School, built shortly before the war with the support of the Rockefeller Foundation. We talked before the students, who appeared in such numbers that the largest auditorium could not take them all.

The meetings in the provinces had been planned by the branches of the National Union of Intellectuals, affiliated with the central group which had arranged the Paris meeting. The organization of all phases of the journey should be highly praised. In spite of the density of the time schedule, the arrangements functioned perfectly everywhere. From Lyons a six-hour train ride brought us to Marseilles. After foggy weather in the upper Rhone valley, Marseilles appeared especially bright and gay. With brilliant blue sky, the two days there were indeed the only really sunny days of the whole journey. November is the rainy month in middle Europe.

In Marseilles two meetings were arranged for us—one being a public Pasteur celebration, the other speeches before students at the University. The public meeting, held in a huge cinema hall, was quite a surprise to me. There, at shortest notice, I found myself thrust into the role of a representative of the United States. Before an assembly of flags, reminding one of a meeting of the U.N., I had to give an address of welcome and bring greetings from this country. On the following day, at the University, the students gave us all a roaring welcome. But when the guests were separately introduced, the most emphatic applause greeted me—not so much, I am sure, because of scientific achievement but rather because the memory of the liberation was still very fresh in Marseilles.

So far, very little has been said about the general situation in France. The outward picture to the guest is that of relative normality—relative, one soon discovers, because it can be bought only at a high price, even measured in dollars. Since before the war, many prices have increased tenfold against a threefold increase in pay level. Fortunately, the distribution is not uniform. Clothes are very high. Food—particularly outside of Paris—seems more reasonable, although it is difficult to obtain. As everywhere in Europe, coal is scarce; one room only is warmed, generally by electric heat; that room forms an oasis in an otherwise frigid apartment. In laboratories, it is usual to meet people working in their overcoats. This present situation is, however, already a vast improvement and people appear rather resigned to the "minor" evils. Indeed, particularly among young scientists, there is prevalent a feeling of change, expectation, and progress.

The regular monthly meeting of the Medical Staff was held on January 27. Dr. Otto Krayer, Professor of Pharmacology at the Harvard Medical School and Consultant in Pharmacology at Massachusetts General, talked on "The prospective therapeutic use of thiol compounds". Dr. Krayer has very kindly sent us this summary of his speech.

In order to find antidotes for the blister-forming chemical warfare agent, Lewisite, Peters and his collaborators (1) used the pyruvate oxidase system *in vitro,* poisoned by Lewisite, to find and examine substances which could reactivate this system.

On the basis of the available evidence (2), thiol compounds appeared to be promising. Simple dithiols proved to be very potent, foremost among them, 2,3-dimercaptopropanol (British Anti-Lewisite or B.A.L.). The reason for its great efficacy is its ability to form stable ring compounds with Lewisite, as well as with other organic arsenicals.

The dithiols have not only been proved to be effective in the treatment of Lewisite poisoning, but they are also promising therapeutic agents in the treatment of some of the side effects of the antisyphilitic agents of the arsphenamine group (3). Exfoliative dermatitis has been successfully treated. In hemorrhagic encephalitis the treatment improves the chances of recovery. (In jaundice, the results are doubtful and the treatment is probably not advisable.)

Acute poisoning due to heavy metals or heavy metal compounds is another prospective field for the therapeutic use of thiols. Experimental and clinical evidence is available with regard to inorganic mercurial compounds; and good clinical results have been obtained in the treatment of acute poisoning from corrosive sublimate (4). The acute disturbances of cardiac function—due to organic mercurials like mersalyl (salyrgan)—produced experimentally can be immediately abolished by mono- and dithiols (5).

2,3-dimercaptopropanol is administered locally in the form of 5-10 percent ointments, or, on the eye, in the form of a 5 percent solution in peanut oil. For intramuscular injection, a 10 percent solution in sterile peanut oil can be used. The watery solution of 2,3-dimercaptopropanol is not stable. (Stable water soluble compounds for intravenous use are being prepared.)

Total amounts up to 3 Mg./Kg. intramuscularly are without side effects, except for very mild reactions in a small percentage of individuals. Toxic effects occur in 50 percent of the cases when 5 Mg./Kg. is injected. For appropriate dosage and way of administration of 2,3-dimercaptopropanol in severe or mild arsenical poisoning and in acute mercury poisoning, the report of the Council of Pharmacy and Chemistry (6) should be consulted.

Here is the continuation of the talk on "Anesthesia considerations in oral surgery" by Dr. Francis F. Foldes (*a. an.*), given at the December meeting of the Dental Staff.

Premedication is a very important factor in the success of any anesthesia. The most important goals of premedication are: sedation, analgesia, decreasing of the reflex irritability of the vagus, diminishing of the secretory activity of the respiratory and gastrointestinal tract, and diminishing of sweating. These objectives are reached by the combination of two or more agents. Perhaps the most frequently used drug of this group is atropine. Atropine has a marked parasympathicolytic effect. It decreases the reflex irritability of the vagus, diminishes secretions and sweating, and accelerates the heart. Its usual dose is 0.4 to 0.6 Mgs. Children and very old individuals receive proportionately less. Scopolamine possesses all the properties of atropine and in addition has a marked sedative effect. Its usual dose is 0.2 to 0.4 Mgs. Occasionally, if used in too large doses, it produces excitement instead of sedation. This is more apt to happen with old patients.

Although it is not always justified, morphine forms a part of almost every preoperative medication and is extensively used as a postoperative analgesic agent. It is still one of the most potent analgesics in use. Many derivatives of morphine are used to alleviate pain. The usual dose of morphine is 8 to 16 Mgs. Young children and old persons are very sensitive to morphine, and the dosage for such patients needs to be reduced more than most other drugs. Patients with defective liver function or high blood cholesterol (myxedema, nephrosis, etc.) are also very sensitive to morphine. Morphine also possesses a marked sedative effect, and unfortunately it depresses respiration. Its use in premedication is indicated when the patient is in acute pain, when it is necessary to increase the analgesic effect of an anesthetic agent (nitrous oxide, pentothal), or when the method of anesthesia (local, block, etc.) requires painful manipulation on the conscious patient. Many anesthetists, on the basis of theoretical considerations, condemn the use of morphine in connection with pentothal anesthesia. Clinical experience indicates, however, that the combined analgesic effect of a moderate dose of morphine and pentothal is greater, and the following respiratory depression is less, than if pentothal is used as a sole anesthetic agent for the performance of a painful procedure. It must be kept in mind that morphine causes nausea and vomiting in a large percentage of cases, especially if the patient has no acute pain. The nauseating effect of morphine can be frequently diminished by the simultaneous use of atropine or scopolamine. The use of morphine offers no advantages when used for the premedication of ether anesthesia. When the patient to be anesthetized with ether is not in acute pain, the desirable sedation can be obtained from a moderate dose of barbiturate, without the depressive effect that morphine exerts on respiration.

In the last few years demerol, a synthetic analgesic, has gained increasing popularity in premedication and postoperative care. Its chemical structure and pharmacological properties are between those of morphine and atropine. It is a potent analgesic, has some atropine-like effect, does not cause nausea, and in comparable analgesic doses it is less depressant for the respiration than morphine. Unfortunately, it is habit forming. Its regular dose is 50 to 100 Mgs. It is indicated wherever morphine is used, and it seems to be preferable in connection with pentothal anesthesia and in postoperative care when the avoidance of respiratory depression and nausea is desirable.

It should be pointed out that the use of the long acting barbiturates is contraindicated in kidney insufficiency, and short acting barbiturates are to be avoided in liver damage. Not enough is known of the fate of the ultrashort acting barbiturates—pentothal—but for the present it seems to be safe to avoid their use in severe liver involvement. Short acting barbiturates should be used in premedication; the use of long acting barbiturates is indicated in combination with analgesics in postoperative sedation.

The region on which the dentist and oral surgeon perform their activities is such that interference with the mechanism of respiration is difficult to avoid. It is here that the anesthetist can be of great help to the surgeon. Despite the apparent difficulties, it is the duty of the anesthetist to see that the patient has a free, unobstructed airway at all times, that the inhaled mixture contains sufficient oxygen, that the aspiration of blood and infected material is avoided, and that neither the anesthetist nor his equipment is in the way of the surgeon. All these criteria can be best fulfilled by the use of an endotracheal tube. The tube can be passed through either the mouth or the nose—the route to be determined by the contemplated surgery and the pathological condition of the patient. In dentistry and oral surgery, nasal intubation is used more frequently. The nasal endotracheal tube may be passed blindly, or it may be introduced under direct vision with the help of a laryngoscope. Many anesthetists prefer blind intubation, but we believe that whenever the mouth can be opened sufficiently, without danger to the patient, the introduction under direct vision is to be preferred. It is evident that trauma to the patient's pharynx and larynx can in this way be more easily avoided. Once the endotracheal tube is in place, it can be connected to the anesthesia machine in such a manner as not to interfere with the surgeon's activities. The pharynx can be packed with gauze around the endotracheal tube, thereby preventing aspiration of foreign matter, while free airway is maintained. On description, this method may seem to be cumbersome and time consuming; but, actually, in the hands of a good anesthetist it takes only a few extra minutes, and these minutes are well spent. Many of the best oral surgeons prefer to perform even relatively minor procedures on the unconscious patient under endotracheal anesthesia. It is safe to say that, in oral surgery, when a procedure is extensive or complicated enough to warrant general anesthesia, the use of an endotracheal tube is indicated. True, it is almost always possible to perform most operations without the use of the tube; but is it wise to risk even one lung abscess or one asphyxial death from aspiration, just to avoid the use of the quite harmless endotracheal tube?

When, for any reason (congenital deformities, type of injury, lack of trained anesthetist, etc.), the endotracheal method cannot be employed, endopharyngeal insufflation is the second-best choice for the administration of inhalation anesthetic agents. Two fair-sized soft rubber catheters are introduced through the nose into the pharynx. One of them communicates with the outside and serves the purpose of exhalation. It can also be used for aspiration of foreign matter from the pharynx. The other catheter is connected with the anesthesia machine and serves the purpose of introducing the anesthetic agent.

If possible, the hit-or-miss method of anesthetizing the patient to a suitable depth with an inhalation agent, then discontinuing the anesthesia and looking on while the surgeon races for time, should be avoided. It is evident that under such circumstances careful surgery cannot be performed, and the risk of aspiration is also increased.

Whenever possible, surgery should be performed under local or regional anesthesia on conscious patients. With optimal premedication, the skillful surgeon or anesthetist can make feasible the performance of many oral-surgical procedures under local or regional anesthesia, even on sensitive patients. This is still the safest method. If, for some reason or other, it is necessary to have the patient asleep, the general anesthetic agent should be used together with local or regional anesthesia whenever possible. The combination of local anesthetic agents with pentothal or nitrous oxide-oxygen or both is highly recommended. With these combinations, the patient can be carried in such a light plane of anesthesia that consciousness is almost always regained a few minutes after the surgery is finished.

At the end of the operation the surgeon must carefully aspirate the mouth and pharynx. The anesthetist should introduce a catheter through the endotracheal tube and aspirate the trachea. The aspiration should be continued while the endotracheal tube is being removed.

Bandages applied around the neck should be placed with great care. It is a frequent occurrence that the constricting effect of tight bandages becomes manifest when the patient's recovery has progressed so far that the airway must be removed. The removal of the airway may be followed by marked interference with respiration and serious hypoxia might result.

It is a good practice to leave an oral or nasal airway in place after the anesthesia is discontinued. Oral airways provide a better respiratory exchange than nasal ones; on the other hand, nasal airways are tolerated much longer and need not be removed until the patient is fully conscious.

(*To be concluded in the next issue*)

The next monthly meeting of the Dental Department will be held on Tuesday, March 18, at 7:30 P.M. in the OPD Lower Amphitheatre. Dr. Herbert Barry, Jr., Assistant Psychiatrist, will speak on "The psychology of pain". We hope to publish a summary of Dr. Barry's talk in our next issue.

DERMATOLOGY DEPARTMENT

The December Staff Meeting was addressed by Dr. David I. Macht, co-author of the Pels-Macht test and the Macht-Ostrow test. Dr. Macht's description of his work in phytopharmacology was most interesting. The newer Macht-Ostrow test involves the use of a radiated specimen which is less phytotoxic and gives a better gauge of improvement when pemphigus serum is tested. Dr. Macht also reported on the treatment of seven cases of pemphigus by roentgen radiation applied over the liver and spleen in doses of 60 r to 100 r at weekly intervals.

Three cases were presented at the meeting. The first was a 56-year-old white woman with lupus erythematosus of ten years' duration affecting the ears and scalp. Within the past six weeks she had developed lesions on the dorsal aspects of the forearms and hands which were diagnosed clinically as lichen planus rather than dissemination of the lupus erythematosus. The lichen planus was verified histopathologically. The second case was an unusual example of tinea capitis in a 22-year-old woman. It was a single area of kerion. Trichophyton gypseum had been isolated. The last case was a 32-year-old man with a peculiar transverse rectangular band of deep pigmentation all the way across the upper forehead. This was an obvious Berlocq dermatitis. The cause had not been ascertained. It was announced that a special alcoholic solution of vitamin D_2 has been made up for the treatment of lupus vulgaris and related conditions by the Charpy method. Dr. Crawford is following all of these cases.

One case was shown at the January meeting—a 5-year-old girl with a linear lesion extending from the right pectoral region all the way down the anteromedial aspect of the right arm and forearm. Although the history indicated a duration of only three weeks, the diagnosis of nevus linearis was strongly considered; lichen planus linearis was the alternate choice.

At the February meeting Mr. John T. Murphy, Head of Pharmacy at the hospital, discussed the formulas for dermatologic remedies to be included in the contemplated revision of the MGH formulary.

Dr. Lane has announced that the Ophthalmologic Service has requested the cooperation of the Dermatology Department in establishing a list of blood donors for herpes zoster patients with ophthalmic involvement. All cases will have their blood types and Rh reaction determined. These patients should be turned over to Miss Hamilton when they are first seen in the clinic.

Dr. Hugh MacDonald, a graduate student last year, writes from Peoria, Illinois, that he has opened an office and is faced with an epidemic of tinea capitis. We wish him success.

The postgraduate conferences through March will be on the topic of histopathology. Dr. Walter F. Lever, Assistant in Dermatology, is the instructor.

MASSACHUSETTS EYE & EAR INFIRMARY

The Massachusetts General Hospital was the first among the larger hospitals to become officially affiliated with the Eye Bank program established at the Massachusetts Eye and Ear Infirmary. As the program develops, all major hospitals in this area are expected to participate in providing this service to New England.

At 8 o'clock Thursday morning, January 30, Dr. Edwin B. Dunphy, Chief of Ophthalmology at the Infirmary and a member of the Eye Bank's executive committee, received a call at his home from Dr. R. P. Stetson at Phillips House. Dr. Stetson reported that one of his patients, who had died at 7:30, had given previous instructions for his eyes to go to the Eye Bank.

Dr. Dunphy had the hospital procure witnessed verbal approval of the next of kin by telephone, and made arrangements with Dr. A. R. Irvine, resident at the Infirmary, to enucleate the eyes before 8:30, thus insuring that they would be in suitable condition for use in a corneal graft operation. The next of kin, meanwhile, went to Phillips House and gave written permission for removal of the eyes, one copy of which was filed at the hospital and the other sent to the Eye Bank.

At 9:30 the eyes, accompanied by a history card giving medical information about the donor, were under examination in Howe Laboratory at the Infirmary. When it was ascertained that the cornea was in good condition, the Eye Bank called Dr. Brendan D. Leahey in Lowell, the surgeon who had submitted the first request for eye tissue.

After Dr. Leahey had made arrangements for his patient, he notified the Eye Bank that the operation would be performed that afternoon and the eyes should be delivered as soon as possible to St. John's Hospital in Lowell. His patient, he said, had been waiting for six months, and would be the fourth in one family to have such an operation. He reported that this entire family had hereditary dystrophy, or cloudiness of the cornea, and the other grafts were successful with excellent visual results.

The Eye Bank set the wheels in motion to have the eyes delivered. A call to the Lowell Red Cross revealed that none of their Motor Corps cars were in Boston at the time, so the Motor Corps of the Boston Metropolitan Chapter was asked to render the transportation service. A driver picked up the eyes at 11:55, delivered them to St. John's Hospital shortly after 1 o'clock, and the operation was performed by Dr. Leahey at 4 o'clock.

Thus the program of the Eye Bank began to function, making possible restoration of sight to those whose blindness is caused by a damaged cornea. Twice previously the Eye Bank had received gifts of eyes, but they had been left for this purpose in the wills of the donors. The wills were not probated in time to have the eyes removed within one hour after death—in one case they were not removed until two days after death—and therefore the tissue was not fresh enough for use in corneal graft operations. However, they were used for research — an important part of the Eye Bank program of potential benefit to the general field of eye surgery.

The Eye Bank now has donor blanks available and more than 500 are being distributed to persons who have already expressed the wish to have their eyes used by the Eye Bank after their death. These are the official forms adopted for use throughout the country by the Eye-Bank for Sight Restoration, Inc., the national eye bank in New York City, with which the local eye bank is affiliated.

Incidentally, the official name is now BOSTON EYE BANK, instead of New England Eye Bank, although the area served remains the same.

On Wednesday, February 19, the Annual Meeting of the New England Oto-Laryngological Society was held at the Infirmary. Dr. LeRoy A. Schall presided at the regular Wednesday Clinical Meeting, during which cases from the Infirmary were presented; and at the afternoon meeting, with Dr. John D. Rice presiding, Dr. Milford D. Schulz spoke on "Radiation therapy". The Annual Dinner was held at the Harvard Club in the evening, and after a business meeting Dr. Carlton Stewart Nash of Rochester, New York, spoke on "The Oto-Laryngological Consultant in compensation and liability actions".

Dr. Richard Thomas Barton (Oto-Lar. 1945) writes that having returned from the Navy, he is now associated with Dr. Pierre Viole and is the Ear, Nose and Throat Consultant at the Wadsworth General Hospital — the Veterans Administration Facility in Los Angeles. Dr. Barton's address is 120 South Lasky Drive, Beverly Hills, California.

Dr. Robert D. Mattis (*Oph.* 1942) proposes that the Alumni of the Massachusetts Eye and Ear Infirmary contribute to a special fund to be used to help House Officers finish research problems which they would otherwise be unable to continue because of lack of financial support. The fund could also be used to help the House Officer during a severe illness. Dr. Mattis writes as follows:

> Let us form a compassionate gift fund which should be self-perpetuating—fluctuating within limits, it is true, but relatively painless to the donors, scaled to their expected ability to pay, and, we hope, an acknowledgment of gratitude for the training given them and of their obligation to guarantee the same opportunity to the young men of the future.
>
> This is the formula: Let each alumnus, each year, send to the fund a sum in dollars equivalent to the number of years since he has graduated. After five years in practice the alumnus certainly won't miss $5.00, which represents only .05% of a $10,000 income and is a bare scratch into the charity deduction on Federal Income Tax. If the alumnus manages to last for thirty years after graduation ("he should live so long") his total sum of the contribution over the years would amount to the magnificent sum of $465.00, or a yearly average of $15.30. Is there a single alumnus who ever got so much in any other way at such a low cost in back payments?
>
> Assuming (conservatively) that there are 200 living alumni (there were 150 at the meeting this year) and the average number of "years out" of the men is fifteen (low), then we may expect, if such a plea is heeded, that there would be a yearly influx of more than $3,000 for this valuable cause. And, if the good will persisted, it would represent an endowment of over $100,000 at a conservative rate of interest.
>
> Then, if each man to whom such a compassionate grant be given, in due time returned his gift to the loan fund, a quite large permanent endowment could be built up out of which, in the distant future, the income could be used to offer a regular stipend to the House Officers—perhaps eventually eliminating *this* fund as unnecessary.
>
> Certain points have been raised: Some asked who would administer the fund, and suggested most forcibly that it *not* be the hospital, but a *committee of the surgeons,* answerable to no one but the Association. Several suggested that because of the compassionate nature of the fund the identity of the recipients be withheld but that the facts of the case be made a matter of record, unless the recipient wished the case open for inspection. It was suggested that when the recipient shall have returned the gift in full, he be given the case file, and at that time it be announced that he had been a recipient of the fund and that he had made his return contribution in full to the permanent loan fund.
>
> Several asked what would be done if in any one year there should be more money contributed than was disbursed. It was suggested that occasionally—say, every other year—prizes of $300, for example, be given to the House Officers (ophthalmic and oto-laryngological) who had done the best piece of research in the preceding two years. Also, some suggested that the overages, if any, be turned into the permanent (Loan) fund.

New addresses:—

Dr. Robinson L. Bidwell, II (*ES* 1943), 62 Mt. Vernon St., Boston, Mass.
Dr. John A. Breen (*dn. s.*), 154 Bay State Road, Boston, Mass.
Dr. Bradford Cannon (*a.s.*), 330 Dartmouth St., Boston, Mass.
Surgeon (USPHS) Burnet M. Davis (*r.s.* 1942), Park Lane Hotel, Piccadilly, London W-1, England.
Dr. Joseph A. Doherty (*a. dn. s.*), 419 Boylston St., Boston 16, Mass.
Capt. William E. Eaton, MC, USN (*D* 1907), Navy Department, 3275 P St. NW., Washington 7, D.C.
Dr. Henry B. Ruley (*NS* 1939 & *WS* 1941), Oak Ridge Hospital, Oak Ridge, Tenn.
Dr. Carl S. Sawyer (*a.* D), R.F.D. #1, Franklin, Mass.
Lt. William R. Waddell, MC, USNR (*WS* 1944), U. S. Naval Hospital, Chelsea 50, Mass.
Dr. James W. Watson (*M* 1944), Harvard Club, Boston, Mass.

Brief bits:—

Dr. Frederick S. Coombs (*r.p.* 1937) was separated from the Army in May 1946 with the rank of Lt. Colonel, and resumed the practice of Internal Medicine at 403 Home Savings & Loan Bldg., Youngstown, Ohio.
After returning from the Pacific last July, Dr. E. Porter Jewett, Jr. (*Oph.* 1945) opened an office for the practice of Ophthalmology at 21 West St., Worcester 2, Mass.
Dr. Stephen L. Madey (*CM* 1944) left the Army last fall as a Major and has been on the pediatric staff at Bellevue Hospital, New York, since November. His mailing address is Box 283, Great Neck, Long Island, N. Y.
Dr. Kazuo Yanagisawa (*Or.* 1944) announces the opening of his office for the practice of Orthopedic and Traumatic Surgery at 50 East 52nd St., New York 22, N. Y.

Randall, Shaw, and Stunkard have all mentioned Lt. Carl W. Gottschalk, MC, AUS (*M* 1946) in their letters, but not a word from the man himself till now. A postscript to this letter to Dr. Means says it might be passed along to THE NEWS, so here it is.

> Along with most of the other House Officers who finished in April of '45, I spent the summer at Fort Sam Houston, Texas; but, unlike the others, I rather enjoyed the summer, as it gave me an opportunity to collect a number of butterflies I had never caught before.
>
> Labor Day week end several of us had an interesting drive down to Mexico City. We went slowly through the high mountains, and during the last 150 miles of the trip one couldn't help but notice the high incidence of easily visible thyroid enlargement in the young Indian women walking along the side of the road. Mexico City is quite a fascinating place, and it is certainly the city of contrasts it is said to be. Unfortunately, we didn't see a bull fight.
>
> Since September I have been stationed here at Fort Knox—at first in a dispensary, but for the last few months at the Armored Medical Research Laboratory. I had no idea such a pleasant place as this existed in the Army. The lab is under the direction of 7 or 8 civilian physiologists—all well-qualified investigators—and about 25 medical officers work under their supervision. Most of our work is a study of the effect of varying environments on healthy soldiers.
>
> Several of the men are working with an instrument developed during the war. It is the Infra-red Gas Analyzer and is used to measure CO_2, CO and water vapor concentrations in the air. They are using it to measure metabolic rates (computed in a backward fashion from the CO_2 output) under various conditions. It has the great advantage of giving almost instantaneous point by point determinations over any length of time instead of having to use the Douglas bag method.
>
> Although I have been more fortunate than many others in the Army, I still can't help but remember the pleasant days at the M.G.H. and long to get back to Boston.

A "first" has come from Capt. J. Wister Meigs, MC, AUS (*r.p.* 1943). It is headed 3224 Cathedral Ave. NW., Washington 8, D. C., and says:

> A few weeks ago I accepted a position as instructor in Occupational Medicine at the Yale School of Medicine. Of course it won't start until I am out of the Army, which event takes place before June 30 of this year.
>
> My Army experience has been very interesting to me, though most of the medical brethren seem to think there's something very odd about anyone who finds a shred of interest in medical administration. My military problem has been to help with the planning for occupational medical care for civilian employees of the War Department in Army industrial plants through-

No. 1 in a series of photographs of Staff Members
Dr. Nathaniel W. Faxon — Director

out the country, and has been fun to work on because of its freshness, if nothing else. The vast size of the Army's problem and the need for a new point of view have led me to decide that it is worth at least a year's trial after I get reconverted to civilian life.

The first word since early '44 has come from Dr. Maurice M. Pike (*Or.* 1929). He makes up for the long lapse with this very interesting and cordial letter, written from 64 Garden Street, Hartford 5, Connecticut.

I know I am extremely late in expressing to you my appreciation of having received The News from the Massachusetts General Hospital throughout my service in the Army. This regular contact with our Boston friends was most appreciated, and I regret that I have not complied sooner with your request for information concerning my whereabouts.

I spent the major portion of my Service— three years— at Dibble General Hospital, Menlo Park, California, where I was Chief of the Orthopedic Surgery Service, going there with the rank of Major and being promoted to Lt. Colonel in September 1945. I left there in June 1946, as the hospital was about to close, and returned to an inactive status on August 7, 1946.

During my stay in that hospital, we had an extremely active service devoted to battle casualties only, with a very close association with the plastic surgery and with surgery of the blind. We were fortunate to have associated with us one of the Army's Hand Surgery Centers under the direction of Dr. Sterling Bunnell.

I was most happy to note in a recent News the elevation of Dr. Joseph Barr as Chief of the Orthopedic Service at the Massachusetts General Hospital and wish him the best of success in this new undertaking.

This note from Capt. Murray W. Scott, Jr., MC, AUS (*WS* 1945) arrived just too late to get into our last issue. Maybe by this time Captain Scott is back in the States and out of the Army, but we include his letter so that his friends may know he has probably left Japan by the time this reaches them.

I am still at the 28th (formerly the 13th) General Hospital in Osaka, Japan. I've been most fortunate in getting much valuable surgical experience during my eight months in Japan.

I expect to leave here some time in February and be separated from the Army shortly thereafter. I begin an appointment in general surgery at University Hospitals in Cleveland on 1 July 1947, but hope to work in a visit with MGH friends between then and now.

All of us enjoyed the letter from Lt. Raymond V. Randall, MC, AUS (*WM* 1946), written from Oak Ridge, which was published in our December issue. A post card, with change of address to 1923 Culver Road, Rochester, New York, has just come from Lieutenant Randall. He writes:

As you can see by the numerous changes of address, I do not stay long in one place.

Please keep The News coming. It is a wonderful way of keeping up with the goings-on at M.G.H. and with those of the MGH family still in the Services.

We are glad to report another man back in civilian life. Dr. John F. Bell (*Or.* 1941) writes from 288 Main Street, Burlington, Vermont:

I have intended for a long time to write and tell you of my activities in the ETO.

Although I arrived on the continent as a Battalion Surgeon for a Field Artillery outfit, I was soon transferred to an Evacuation Hospital where I served as Orthopedic Surgeon throughout the campaign in Holland and Northern Germany.

I missed going to the Pacific by a hair's breadth. Was retained on the Riviera for three months and then returned to Germany and Austria where I did orthopedic and general surgery in general hospitals.

I have been released from the Army in order to take the position of Associate Professor of Orthopedic Surgery at the College of Medicine of the University of Vermont, and have been fortunate enough to find a house in Burlington.

May I again express appreciation for The News and the fine work it has done in keeping us informed about one another?

Dr. William A. Perkins (*ES* 1917) was Chief of Surgery with the 234th General Hospital in India the last time we heard from him. This letter reports his return to private practice at 2490 Channing Way, Berkeley 4, California. He writes:

Separated from the Army in grade Lieutenant Colonel. I spent the next succeeding weeks traveling about the western states ostensibly engaged in taking care of certain business matters, but actually trying to get the wanderlust out of my system so I could settle down to private practice once more. This has finally been accomplished after a fashion, so that now I have an office as well as a home in Berkeley.

Dr. John H. Fay (*EM* 1929) has responded to our questions about his activities in the Navy. He writes:—

Your pleas for information are hanging round my neck like a string of albatrosses.

After assorted duty on the east coast from March 1941 to November 1943, I became attached to USN Mobile Hospital #11 at Shoemaker, California. After six months in California, the Navy Department decided that this appellation was inappropriate and the outfit was rechristened US Fleet Hospital #111. In late August 1944 we sailed on a forty-five-day, all-expenses-paid, Cook's tour to Guam.

After building said Hospital and opening same in January 1945, we were busy with casualties from Iwo Jima and Okinawa and then gradually subsided into tropical lethargy until separation on points in October 1945.

The medical population of Guam was heavy and on the whole has been well-documented in The News. MGH alumni in considerable bulk—Allen Brailey, Hugh Montgomery, Bob Schwab, and John Monks come instantly to mind, and numerous others flitted past. Incidentally, there were five members of the HMS class of 1927 stationed on the island at one time. This must constitute a statistical record of some sort, which is probably limited by a Standard Error of plus or minus 2.14159 and had best be left alone, anyway.

For no good reason, I was promoted to Captain while on terminal leave.

Robert S. Melville was employed at M.G.H. as a laboratory technician, working with Dr. Talbott, before the war. He went to Camp Blanding with the original 6th General Unit and served overseas with the same group. We were very pleased to get this letter from him the other day, written from 431 East Jefferson Street, Iowa City, Iowa.

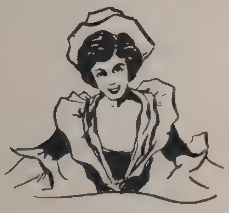
Since I was discharged from the Army last February I have done a variety of things. For the first four months I led a life of ease, reveling in doing as I pleased—a little reading and studying and catching up on much of my printing of negatives taken overseas.

In May my wife and I went to Wellfleet on the Cape, where we relaxed at my parents' place. For the summer, we both worked as technical assistants in the Marine Experimental Station of the Lankenau Institute for cancer research, stationed in North Truro. Our work was very interesting and instructive, and we had the added pleasure, of course, of working practically on the beach.

Since September I have been registered as a Graduate Student out here in the State University of Iowa, working for my Ph.D. in Biochemistry. I am enjoying the studying very much, although it is quite a change after ten years of non-studying; but my friends all tell me the first two months are the hardest, and at least I am over *that* hurdle.

THE NEWS

No. 55 Boston, Mass. April 1947



THE VINCENT MEMORIAL HOSPITAL

The Vincent Memorial Hospital has been the Gynecologic Service of the Massachusetts General Hospital for the past five years. During that time we have endeavoured to teach the House Officers the proper method of handling gynecologic patients on the wards of the hospital. Our department has been satisfactory as far as it has gone, but we have no Out-Patient Clinic where we may teach our interns the simple things which are so essential for them to know.

We have, I believe, taught them surgery of the pelvis; and I think that at the present time all the House Officers and Residents who graduate are capable of doing whatever surgery is essential as far as the usual gynecologic diseases are concerned. For the past year our ward beds have been cut down so, that our Service has run on an average of only fourteen to fifteen patients, as against the customary twenty-three or twenty-four. For that reason we have not had so much material or so many teaching advantages as we have had in the past.

Our Service has been staffed by members of the Surgical Service. Dr. Langdon Parsons, Dr. Somers Sturgis (who is now back from having spent one year doing research with Dr. John Rock at the Free Hospital for Women), Dr. Howard Ulfelder, Dr. Francis Ingersoll, Dr. Fred Simmons, and Dr. Marshall Bartlett have all been on service. We have Gynecologic Rounds on Thursday afternoons from four to six o'clock. On these Rounds all the patients on the wards are seen, all the new ones examined and discussed, all the patients who are being discharged from the hospital are discussed, and any questions of importance that come up are talked over at that time.

Our new building is now well on the way and by next fall it should be open. On the ground floor there will be offices for Dr. Meigs and Dr. Sturgis, a large laboratory which will include the Vaginal Smear Laboratory, as well as a physiological and chemical research laboratory. There will be one ward for Ward Patients and there will be one ward for Private Patients, making forty-six beds in all. It is my hope that there will be a Resident in charge of the care of the patients—both ward patients and private patients—in the Vincent Hospital. A forty-six bed service should be a very satisfactory one. We will have a technician in the Pathology Laboratory under Dr. Mallory, and I am sure Dr. Mallory hopes to designate one of his men for special interest in Gynecological Pathology. We hope we can make the best use of our material for teaching the Resident Staff, undergraduate students, and postgraduate students.

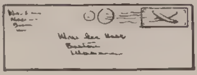
The Vincent Memorial Laboratory has done a large amount of research work on the vaginal smear technique, and this work has become of extreme importance in the hospital. We are doing cytologic smears for the diagnosis of carcinoma of the vagina, cervix, and endometrium, and are now beginning to study cells to aid in diagnosing carcinoma of the bladder, ureters, kidneys, lungs, bronchi, peritoneal fluid, etc. We are making a special study of radiation changes in cells, under the direction of Mrs. Ruth Graham. We are all very much interested in radiation reaction. We are endeavouring to decide how we can best choose patients for surgery, as distinct from those who should have X-ray and radium treatment. It has long been our impression that many patients who should do well with radiation do not, and that perhaps these patients should be operated upon. It is our endeavor to separate these two groups. Mrs. Graham has already published articles in *Surgery, gynecology, and obstetrics,* under her own name, demonstrating the value of radiation reaction in cells in the vagina. She demonstrates the method's importance as a prognostic test.

As soon as the new Vincent Laboratory starts functioning next fall we hope to commence research into the causes of abnormal bleeding and other problems. We should have a very excellent setup and we should be able to accomplish a good deal. Up to the present time our Service has done, we believe, satisfactory work and we feel sure that in the future we can do a good deal more.

Joe V. Meigs, M.D.,
Chief of Service

* * *

Dr. Smith-Petersen sailed for Norway on March 22. From there he will go to England, where he will speak before the British Orthopedic Association and lecture at Leeds Medical School. After this, he will return to Norway before coming back home. His sole purpose in making the trip is to check up on the patients upon whom he operated during his visit to Norway last fall.



This very unusual letter, from Mr. John J. Sullivan, 72 Linden Street, Brookline, is a valued addition to our Archives material. It was written along in the fall, just after our Ether celebration. When we interviewed Mr. Sullivan, to get his permission to publish his letter, he said that what he had written fell far short of expressing his appreciation of what had been done for him at Massachusetts General and for the kind and expert attention he received from doctors and nurses alike.

Here is his letter:

On November 9, 1900, I was etherized in the Amphitheatre where ether was first used for major surgery. I was then a permanent member of the Brookline Fire Department and was knocked down by a runaway horse, resulting in a thigh fracture of the left leg. It was a rainy night and I was wearing a rubber coat and rubber boots which helped to prevent any other injury. I remember trying to sit up and failed, and noticed my left foot lying flat on the ground. The man who took hold of my feet started to lift me, but my leg bent at the fracture and I swore and said to carry it on top of the other leg. I believe that was when the compound wound was caused, before he carried both legs together.

As I was laid on a stair platform I started to shiver and a police officer gave me a hot drink of liquor and warmth was immediate. A horse ambulance was used then and the springs were weak and struck down on the axle, bouncing me in the stretcher. I was compelled to lean over and place a hand on the floor to prevent jostling.

On arrival at the hospital, the attendant who removed my clothes remarked, "What a mess you are in", supposedly because of mud and blood, as it must have taken at least one hour to reach the hospital. I was unaware of the compound wound, but when I entered the Amphitheatre I can remember a woman standing on my right and a man at my head I could not see. When they placed the cone on I smiled, as I wondered why something did not happen. Then a sharp command, "Take long breaths." After a few there was a click in my head, then a steady buzz. I guess I took too fast and too deep breaths.

On regaining consciousness I was being given injections in the arm, but when the nurse started to give me injections in the shoulder and liquor to drink I asked what that was for. She replied, "To keep you quiet." I said, "I am old enough to obey and do not care for any liquor. I will be quiet."

A Dr. Johnson was Senior House Officer and took care of me, followed by Dr. Alden, then Dr. Fred J. Murphy. One day during dressing, Dr. Beach came along and said, "He can't stand much more of that." I would grasp bars at the head of the bed and help turn my body to get at the wound. I was then placed on a Bradford Frame, and was I pleased, for then I did not have to move during dressing.

After discharge Dr. Murphy had to lance a lump on the wound, supposedly a small bone splinter. My family doctor performed a similar operation under cocaine.

At the age of 69, while I was preparing for a double hernia operation by Dr. Augustus Riley, he picked up my leg and remarked, "Who did that fine job? They gave you a beautiful leg."

Words cannot express the deep appreciation a patient feels toward the doctors and all the others for what they did, but in the heart of the patient they are always remembered through life.

The Secretary of the Moroccan Medical Society writes that he would be delighted to have former members of the 6th General Hospital submit original articles for publication in *Maroc Médical,* the journal of the Society. Dr. Sedgwick Mead is the American correspondent for this journal, the excellence of which is a tribute to the energy of the Casablanca group of physicians. It is a bimonthly publication, and for each issue Dr. Mead prepares a translation of a résumé of some outstanding article in American medical literature.

Those interested in submitting articles may address

M. le Docteur Lépinay
5 Boulevard de Marseille
Casablanca, Maroc

THE WORK OF THE CORTICAL FUNCTION LABORATORY

The Cortical Function Laboratory, under the supervision of Dr. Edwin M. Cole, was organized over two years ago. The work of the laboratory is based on the theory that patients with brain disease may have varying degrees of impairment of both intellectual and motor abilities. The objective of the laboratory has been to establish a testing program and to obtain a battery of tests that will be effective for detecting the presence and extent of impairment of these abilities or functions. Tests are made of memory, intelligence, motor performance, and language usage, with investigation of dominant handedness, educational background, and occupational level, as well.

Tests made in over 500 cases have yielded specific patterns and indicators of brain disease. Tests for aphasia are of localizing value in cases of language disturbance. It is thought that greater assistance in localization of disease will be obtained from further accumulation of data.

The facilities of this laboratory, which is situated on the eleventh floor of the White Building, are available to patients of any department of the M.G.H., and to Baker Memorial and Phillips House patients referred by members of the Staff.

Edwin M. Cole, M.D.,
Assistant Neurologist

At the February meeting of the Medical Staff, Dr. Charles Dent, Ph.D., M.D., Research Assistant, Medical Unit, University College Hospital, London, spoke on "A new technique for amino acid analysis, and its application to the investigation of the amino aciduria in fanconi syndrome".

Dr. Dent described a really fascinating new method for separating amino acids, which depends upon their relative solubilities in water and certain organic solvents.

If a square of hygroscopic filter paper have placed in one corner a few drops of an unknown solution containing amino acids, and then if its edge be dipped in an organic solvent, the latter will spread up by capillary attraction through the whole piece of filter paper, carrying the amino acids along with it. But the amino acids will travel at different speeds in accordance with their relative solubilities in water and the organic solvent. The process can be stopped at any point by drying and developed with a reagent which produces a color reaction so that one gets a row of spots, each one of which represents a pure and different amino acid. After getting migration of this sort in one dimension, one can rotate the filter paper through 90 degrees and dip the edge in a different organic solvent and repeat the process as before. One ends up, then, with a square of filter paper with spots dotted over its surface in two dimensions. It is possible then, by their latitude and longitude—so to speak—to determine precisely which amino acid each spot represents.

This is an amazingly simple and brilliant use for scientific purposes of a familiar phenomenon — namely, that of trying to take a spot off one's white trousers with carbona. This, it will be recalled, invariably leaves a ring. And if one tries to remove the ring, another ring is produced. Dr. Dent said he felt as though he had discovered a new world, because the method can probably be used for many more substances than amino acids. Our Dr. Engle immediately started using it for steroids, and the Albright group had already begun using it for amino acids.

At the March 3 meeting, Dr. Chester M. Jones and his colleagues presented the following program:

I. Diagnosis and therapeutic value of trocar biopsies of the liver.
Drs. Chester M. Jones and Wade Volwiler
II. Vitamin needs in liver disease.
Dr. Perry J. Culver

Dr. Volwiler has kindly brought us this brief of his talk.

Accurate knowledge as to the state of any diffuse liver disease, other than simple acute epidemic infectious hepatitis, usually requires histologic examination. Complete clinical and laboratory data often do not indicate the type or stage of the underlying pathologic process. Liver biopsy frequently provides the essential histologic information needed for correct clinical decisions as regards (1) the differential diagnosis between intrahepatic and extrahepatic biliary obstruction, (2) the type of intrahepatic disease present, (3) the stage of a known intrahepatic disease existing, (4) the specific therapeutic program to be followed, and (5) the evaluation of a given therapeutic program.

Trocar liver biopsy generally provides a better and deeper sampling of diffuse intrahepatic disease than does peritoneoscopy and usually causes much less discomfort to the patient. We have had one death in our 235 such biopsies performed with Dr. Clifford Franseen's modification of the Iversen-Roholm needle. Needle biopsy of the liver by others has been reported in 1700 cases, with a mortality of 0.42%. Such statistics compare very favorably with those cited by Ruddock and Benedict for peritoneoscopy, wherein the mortality ranges between 0.5% and 1.0%. Seventy-nine of our biopsies were essential to a correct clinical diagnosis. Sixty-five of our procedures were accomplished transthoracically in patients with normal sized livers.

So-called cirrhosis is not a single disease entity and is highly variable in its histologic manifestations. We have observed strikingly different histologic pictures in patients having almost identical clinical histories, physical examinations, and laboratory data. In these individuals, the relative desirable duration of intensive treatment, the immediate clinical response to be expected, and the long-term prognosis of the hepatic disease may often be indicated by the initial histologic picture.

Trocar liver biopsy is a useful tool for the study of the pathologic physiology of human liver disease. Of particular interest to us has been the serial use of this procedure in correlation with clinical and laboratory data to evaluate accurately various therapeutic programs for the acute fatty liver due to malnutrition and alcohol. We are much indebted to the House Staff and to the Visiting Physicians for their kind cooperation in this project, which will require many more such observations before definite general conclusions can be drawn as to the proper ratio of dietary fat and protein and the efficacy of various vitamin and lipotropic supplements. The critical data assembled to date at the M.G.H. suggests that the foundation of successful therapy in this disease consists of an adequate protein and caloric intake, that supplements of vitamins and lipotropes are superfluous to such a diet, and that such supplements do not protect against damage when the dietary regime is poor.

Dr. Perry J. Culver has, also very kindly, sent this summary of his part of the program.

This is a preliminary report of some of the results from a study of the nutritional needs in various broad groups of diseases, with special emphasis upon vitamin requirements and utilization. The talk today will be limited to an analysis of the findings in eight cases of cirrhosis of the liver. Dr. Volwiler has already presented the liver biopsy slides of some of these cases and has outlined their clinical course, showing the improvement due to high protein diets without other supplements.

During the past decade, the necessity of using supplemental vitamins in the treatment of cirrhosis has been accepted without question. Much has been written about the needs of vitamins in liver disease, but there has been little quantitative experimentation to establish what doses of vitamins are needed and, what is more important, there has been no critical analysis of the effect of vitamins alone upon the course of cirrhosis.

First, we shall briefly review some of the literature to learn why this state of affairs has existed. In the development of our knowledge of the etiology of cirrhosis, it has become obvious that one of the predisposing factors has been dietary deficiency of a number of substances; and because of the appearance during the course of cirrhosis of various clinical manifestations attributable to vitamin deficiency, it has been assumed that lack of vitamins was one of the causes for cirrhosis. Consequently, in 1937 Patek suggested the use of high vitamin therapy in alcoholic cirrhosis and in 1941 Patek and Post established a new milestone in the regimen of therapy by outlining a diet rich in protein and vitamin supplements. Without doubt, the prognosis of their cases was improved, but they did not evaluate the individual effects of these additions.

Let us turn to the results of experimental hepatic injury in animals as reviewed by Gyorgy in 1944. He observed the production of liver damage in rats maintained on diets inadequate in protein and vitamins. When vitamins alone were added in sufficient quantities, the liver damage was not prevented; but when adequate protein was provided, liver damage did not occur, regardless of whether supplemental vitamins were used or not. If thiamin or biotin alone were added to diets inadequate in protein, there seemed to be an augmentation of fatty infiltration. This result might be attributed to the increased growth promoted by these vitamin supplements with resultant starvation of needed protein components. The inclusion of large amounts of nicotinamide in a diet inadequate in methionine, choline, or protein will also lead to increased damage to the liver because the nicotinamide is methylated before it is excreted in the urine, and this methylation process steals essential methyl groups from methionine or choline. It is a generally recognized concept that these methyl groups are needed for fat transport. Their absence contributes to fatty infiltration and further liver damage.

Considering this experimental work, we have reasoned along lines similar to those just presented by Dr. Volwiler where he has shown that supplements of lipotropic substances are of no value when the diet is adequate in protein. The immediate problem has been to determine whether supplements of vitamins to the cirrhotic regimen produces results superior to those brought about by good diet alone. The study of this problem includes several parts.

A specially trained dietitian has obtained a careful history of the dietary intake of these patients during their last six months before hospitalization. The first two slides show that we can arrive at a fair approximation of their nutritional status during this period. As might be expected, the caloric intake of all except one case had been considerably below normal levels and the amount of protein inadequate in most of them. It is noteworthy that in 5 cases the calories derived from alcohol ranges from 1000 to 3400 calories per day. This should increase the demands for vitamins above even normal levels. The summary of their vitamin intake during this period shows that all were below the National Research Council's recommended dietary allowances for thiamin, riboflavin, nicotinic acid, and vitamin C.

The next part of the study was a detailed physical examination with emphasis upon observation of signs and symptoms suggestive of vitamin deficiency. All the cases showed wasting of the extremities and ascites, i.e. evidence that they had been using their own tissues to maintain life. Each of the cases showed some signs suggestive of vitamin deficiency as outlined in the next slide. Five of the eight cases demonstrated tongue changes, and also five showed neurological signs which could be ascribed to thiamin lack.

The third part of the study is devoted to an attempt to secure chemical evidence of vitamin deficiency or sufficiency. The method used is to determine the excretion of these vitamins in fasting urine specimens according to methods devised by the Harvard Fatigue Laboratory. The next series of slides shows a tabulation of the individual intakes and excretions of each of the four vitamins—thiamin, riboflavin, nicotinamide, and vitamin C—and a comparison with the normal. In spite of lowered vitamin intake in nearly every case at the time of entry, the fasting urinary excretion is well within the normal limits in every case. The obvious conclusion is that these cases show no chemical evidence of vitamin deficiency, but our interpretation of these findings will be discussed later. It is interesting to observe that the fasting urinary excretion of thiamin is well above the normal range in some cases, particularly those which show the neurological changes attributed to thiamin deficiency. These results are contrary to a report by Robinson, Melnick, and Field in 1940, in which they show a low urinary output of thiamin in cirrhotics even after supplements of thiamin. The relatively high level of N-methyl-nicotinamide excretion is noteworthy in view of the statement previously made about nicotinamide stealing methyl groups from the lipotropic substances.

Another series of slides tabulating the vitamin intake and vitamin excretion in the urine at the time of discharge from the hospital shows an even higher urinary excretion of vitamins, corresponding in amount to the quantity ingested. In the first three cases, which received only an adequate diet and no vitamin supplements, we see that the urinary excretion levels are higher than at the time of entry, which suggests that they received adequate vitamins from their diet. The other five cases received supplements of vitamins and it can be seen that the urinary excretion is way above normal, indicating saturation with vitamins. In spite of this saturation the clinical findings changed very little so far as the manifestations of thiamin lack were concerned. The tongues improved in keeping with the general all-around recovery of the patients.

Vitamin load tests, in which there is measurement of the excess urinary excretions after intravenous administration of measured doses of vitamins, have also been employed in this study. As yet, we do not have normal ranges with which to compare the excretions, but the results in the liver cases are generally higher than in the other diseases which we have studied by this same method. In examining the results of this type of test, we find that the excess of N-methyl-nicotinamide excreted is particularly elevated, in some cases to as much as 50 times the normal range. The excreted excess was higher at admission, when the liver impairment was greater, than at the time of discharge, when liver function had improved. We believe that this finding is very significant, but as yet we do not know how to interpret it.

The final slide shows a summary of the overall result in the eight cases of cirrhosis thus studied. All eight received an adequate to superior diet. Of the three cases who were treated with diet alone, all three were greatly improved, so that they left the hospital free of ascites and edema, and were greatly improved in strength and nutrition. Five cases received a good diet plus vitamin supplements in doses of ten times the National Research Council's recommendation. Three of these cases recovered well, but the other two did not make much improvement.

To summarize—these eight cases are too small a series from which to draw any sweeping conclusions, but we think that our data gives cause for certain speculations. If I may return for a minute to the fasting urinary vitamin excretion levels observed at the time of entry, they were all within the normal range in spite of decreased intakes and of some clinical signs of deficiency. I suggested the obvious conclusion was that from these tests alone the patients would not be considered deficient. Clinically, however, these patients were deficient. It makes us wonder whether the high levels of urinary excretion are not due to inability of the damaged liver to utilize the vitamins presented to it. A second speculation, which will require more proof, is whether or not large supplements of vitamins may not actually do harm to the liver. The high excretion levels of N-methyl-nicotinamide might indicate this. Further evidence for this speculation may be found in the paper of Gillman and Gillman in 1945, in which they reported that massive doses of vitamins administered to infantile pellagrins with severe hepatic damage seemed to hasten the progress of the disease. Our final conclusion is that in this small series of cirrhotics, those who were treated with a diet adequate in protein and carbohydrate but without vitamin supplements did just as well or better clinically than the patients who received the same diet plus additional vitamins.

At the March 17 meeting of the Medical Staff, Dr. Honor B. Fell, Director of the Strangeways Laboratories, Cambridge, England, spoke on "Phagocytosis of tubercle bacilli in lung cultures".

Dr. Fell's talk was most interesting. She had made explants of embryonic lung tissue which grew very successfully and could be inoculated with cultures of tubercle bacilli, both virulent and avirulent.

Studies of these disclosed that the macrophages in the culture actively phagocytize tubercle bacilli up to the point at which they thus become completely engorged with them. Studies disclosed that the bacilli are not killed within the macrophage, and are perfectly viable if the macrophages be killed by drying. However, the growth of the bacilli is checked while within the macrophage so that, as Dr. Fell put it, a sort of symbiosis, between the macrophage and the tubercle bacilli, is established.

When macrophages are not sufficiently abundant there is invasion of the fibroblasts by tubercle bacilli, but so long as the macrophages are active, they seem to protect the fibroblasts against this. Until they are greatly engorged with bacilli, the macrophages seem to sustain no injury from the presence of bacilli. When moderately full they can undergo mitosis quite normally.

Dr. Fell ended her talk by showing a movie which portrayed all this process most beautifully. Macrophages were shown running around the field like fox terriers, actively phagocytizing bacilli. It was a remarkable picture and will long be remembered by all who saw it.

* * *

Here is the third and last instalment of the talk on "Anesthesia considerations in oral surgery", as given by Dr. Francis F. Foldes (*a. an.*) at the December meeting of the Dental Staff.

The anesthetist should not leave the patient until he is back in his room, in his bed. The patient should be left lying on his side, with a flat pillow under his head. The neck should be moderately extended. The foot of the bed should be elevated so that the eventual blood or secretions tend to flow out of the mouth and not down the larynx. If necessary, careful aspiration of the pharynx should be carried out by the attending nurse until consciousness is completely regained. The possible respiratory complications should be explained to the nurse in charge. She should be instructed to call the anesthetist or, if he is not available, the resident, should respiratory difficulties develop. Oxygen and equipment for endotracheal intubation should always be readily available; and, if there is a possibility of the development of laryngeal edema (after extensive infectious processes), a tracheotomy set should be kept at the bedside.

Postoperatively, the patient should be kept comfortable by the judicious combination of analgesics and sedatives. The advantages offered by such combinations are very seldom fully utilized, and far too often the only postoperative medication is a large dose of morphine. The combination of less potent analgesics (codeine, demerol, etc.) or a smaller dose of morphine with a moderate dose of barbiturate offers just as much or more relief to the patient without the depressive effect and nausea produced by large doses of morphine. Also, the danger of habituation on prolonged use is less by such combinations.

If the surgery was carried out in an infected area or there is danger of infection developing postoperatively, antibacterial agents (sulfonamides, penicillin, streptomycin) should be administered for at least two days after the patient becomes afebrile.

In summary, I should like to emphasize the following point: The responsibility of the modern dentist or oral surgeon does not begin and end with the faultless performance of the indicated operative procedure. He is responsible for the safety and welfare of the patient from the moment of the first consultation up to the time when the patient's treatment ends. It is true that in certain cases he can, and ought to, share this responsibility with consultants in the various branches of medicine. Nevertheless, the main responsibility will always be his, and he should coördinate the opinions of the consultants in the best interest of his patient. Even in the most innocent looking cases accidents that can be avoided can happen—and have happened in the past. There can be nothing more distressing than an accident in the course of an elective procedure. To avoid this, and to protect both the patient and himself, the oral surgeon should adhere to the routines outlined above.

I realize that the subject we have been discussing is a controversial one in many respects. Occasionally, the discussion of dental anesthesia becomes heated and, unfortunately, sometimes other than scientific considerations become involved. In this talk I tried to present the point of view of the safety of the patient, and necessarily this point of view has to be the main consideration of every conscientious dentist and oral surgeon.

♣ ♣ ♣

DERMATOLOGY DEPARTMENT

The February Staff meeting was given over entirely to a discussion of the proposed revision of the hospital formulary. Mr. John T. Murphy, Head of Pharmacy, addressed the meeting and went through the entire list of existing cutaneous remedies. There was considerable discussion of old prescriptions which could be deleted, and many suggestions were offered for improvement as well as the addition of new preparations. Dr. Lane has appointed a committee to consolidate the recommendations of our Department.

During the past month our Department has enjoyed the visits of several Dermatologists from various parts of the world, each spending a week or more observing our methods. Among them were Drs. Poul V. Marcusson, Professor, and Poul Möller, Assistant Professor, from the University Hospital, Copenhagen, Denmark; Dr. Clive F. Robinson of Sydney, Australia; and Dr. Jose Talentino, from Cebu, P.I.

Most of the members of our Staff attended the Atlantic Dermatology Conference, held in New York City on March 8.

The Board of Trustees, at their meetings on February 5 and 21, voted to appoint:

Dr. Edward C. Dyer as Assistant to the Children's Medical Service;

Dr. James C. Skinner as Assistant Resident in Psychiatry for one year, beginning July 1.

At their meetings on February 12 and 26, and March 5, the General Executive Committee voted:

To promote Dr. Gardner C. Quarton to the position of Resident on the Neurological Service for six months, beginning April 1.

To appoint:

Dr. Hannibal Hamlin as Graduate Assistant in Surgery and Neurosurgery;

Dr. Robert P. Howard as Research Fellow in Medicine;

Dr. Marcel Verzeano as Clinical and Research Fellow in Psychiatry and Anesthesia, as of February 1;

Dr. Jone J. Wu as a Fellow in Anesthesia for two years, beginning October 1.

The following Staff changes became effective as of February 21:

Dr. Erna G. Anderson was promoted from Assistant to Assistant Physician to the Children's Medical Service;

Dr. Otto E. Aufranc was promoted from the position of Assistant in Orthopedic Surgery to Assistant Orthopedic Surgeon;

Dr. William W. Beckman was promoted from the position of Assistant Physician to Associate Physician;

Dr. Charles B. Burbank was appointed Assistant in Surgery;

Dr. Edwin F. Cave was promoted from the position of Associate Visiting to Visiting Orthopedic Surgeon;

Dr. George Clymer was appointed to the Board of Consultation;

Dr. Richard W. Dwight is to be listed as on leave of absence with the Veterans Administration;

Dr. Richard S. Eustis was appointed to the Board of Consultation;

Dr. Henry H. Faxon is to be listed as on leave of absence with the Veterans Administration;

Dr. W. Philip Giddings was appointed Assistant in Surgery;

Dr. Irad B. Hardy was appointed Assistant in Surgery;

Dr. William McK. Jefferies was appointed Assistant in Medicine;

Dr. Robert J. Joplin was promoted from the position of Assistant in Orthopedic Surgery to Assistant Orthopedic Surgeon;

Dr. Alfred Kranes was promoted from the position of Assistant Physician to Associate Physician;

Dr. Carroll B. Larson was promoted from the position of Assistant in Orthopedic Surgery to Assistant Orthopedic Surgeon;

Dr. Charles A. McDonald was appointed to the Board of Consultation;

Dr. John B. McKittrick was appointed Assistant in Surgery;

Dr. Ira T. Nathanson was promoted from the position of Assistant Surgeon to Associate Visiting Surgeon;

Dr. Paul L. Norton was promoted from Assistant to Associate Visiting Orthopedic Surgeon;

Dr. George M. Noss was appointed Assistant Dental Surgeon;

Dr. Edward S. O'Keefe was appointed to the Board of Consultation;

Dr. Frederick K. Poulin was appointed Assistant Dental Surgeon;

Dr. Rulon W. Rawson was promoted from the position of Assistant Physician to Associate Physician;

Dr. Eugene E. Record was promoted from Graduate Assistant to Assistant in Orthopedic Surgery;

Dr. A. William Reggio was appointed to the Board of Consultation;

Dr. John A. Reidy was promoted from the position of Assistant in Orthopedic Surgery to Assistant Orthopedic Surgeon;

Dr. Gertrud C. Reversbach was promoted from Assistant to Assistant Physician to the Children's Medical Service;

Dr. Ralph A. Ross was promoted from Assistant Physician to Associate Physician to the Children's Medical Service;

Dr. Carter R. Rowe was promoted from Graduate Assistant to Assistant in Orthopedic Surgery;

Dr. Hermann B. F. Seyfarth was appointed Assistant Dental Surgeon;

Dr. Russell F. Sheldon was appointed to the Board of Consultation;

Dr. Lamar Soutter was promoted from the position of Assistant in Surgery to Assistant Surgeon;

Dr. William H. Sweet was promoted from the position of Assistant in Neurosurgery to Assistant Neurosurgeon;

Dr. Nathan B. Talbot was promoted from Assistant Physician to Associate Physician to the Children's Medical Service;

Dr. Jackson M. Thomas was promoted to Assistant Psychiatrist;

Dr. Raymond S. Titus was appointed to the Board of Consultation;

Dr. William J. Turtle was promoted from Assistant Physician to Associate Physician to the Children's Medical Service;

Dr. Richard Warren is to be listed as on leave of absence with the Veterans Administration;

Dr. Thomas A. Warthin is to be listed as on leave of absence with the Veterans Administration;

Dr. Paul D. White is to be classified as a full-time member of the Staff.

New addresses:—

Dr. Donald C. Balfour, Jr. (*EM* 1943), 410 Fifteenth Ave. SE., Rochester, Minn.

Dr. John J. Ballenger (*Oto-Lar.* 1943), 1414 Isabella St. #8, Evanston, Ill.

Dr. J. Lawrence Campbell (*r.p. An.* 1940), 750 Washington St., Denver 3, Col.

Dr. T. A. Devan, past Assistant Director, Hampton Bays, Long Island, N.Y.

Dr. Ben Eiseman (*ES* 1943), 6463 Cecil Ave., St. Louis 5, Mo.

Dr. Sidney W. Ellery (*ES* 1943), 923 Roswell Ave., Long Beach 4, Cal.

Dr. Don W. Fawcett (*WS* 1943), 93 Eliot Ave., West Newton 65, Mass.

Dr. Julian C. Gant (*a. M* 1935-46), Madison College, Madison College, Tenn.

Dr. Hannibal Hamlin (*r.s. NS* 1942), 4 George St., Providence 6, R.I.

Dr. C. Lawrence Holt, Jr. (*NS* 1938), 178 Bay State Road, Boston, Mass.

Dr. James S. Mansfield (*gr. asst. M* 1942-43), 12 Bay State Road, Boston 15, Mass.

Dr. Albert E. Rauh (*CM* 1936), Lyons, N.J.

Dr. Sam M. Talmadge (*WS* 1938), Southern Mutual Bldg., Athens, Ga.

Dr. Thomas A. Warthin (*a. M*), Cor. Cottage and Everett Sts., Natick, Mass.

Brief bits:—

Major Addison G. Brenizer, Jr., MC (*WS* 1942) is now at Tilton General Hospital (Main), Fort Dix, N.J. He says he cannot be discharged from the Army before next October.

Dr. Knox R. Freytag (*a.r. D*) completed his duties here at M.G.H. last January and has been called to military service. The only address we have for him, to date, is 800 Mandana Blvd., Oakland, Cal. Perhaps Dr. Freytag will send us more information about himself soon.

We always like to hear about hobbies which interest members of our Staff. Dr. Ward I. Gregg (*WS* 1935) and Mrs. Gregg contributed to the Flower Show in Boston this year with their sun-heated pit. Dr. Gregg gave us such amazing facts regarding his special kind of attached-to-the-house pit that we are wishing we could take shovel in fist and start digging this very minute.

Dr. Arthur C. Guyton (*WS* 1943) is continuing his convalescence at Warm Springs, Georgia.

Dr. F. George Johnson (*Dn.* 1943) has opened an office for private practice at 26 Washington St., Eastport, Maine.

Dr. Herbert C. Moffitt, Jr. (*EM* 1942) has been on inactive military duty since last summer. He is an Assistant Resident in Medicine at the University of California Hospital in San Francisco.

Major Frederic W. Rhinelander (*ES* 1937 & *Or.* 1938) has been promoted to this rank.

Dr. Stafford L. Warren (*WM* 1924) has been appointed Dean and Professor of Biophysics at the Medical School of the University of California in Los Angeles.

MASSACHUSETTS EYE & EAR INFIRMARY

At a meeting of the Directors of the Infirmary, held on February 12, Dr. Charles I. Johnson, Dr. Francis L. Weille, and Dr. Philip Mysel were appointed Surgeons in Oto-Laryngology.

Dr. Merrill J. King, who has taken over Dr. Theodore L. Terry's clinical work on retrolental fibroplasia, took part in the National Conference on the Blind Preschool Child, American Foundation for the Blind, Inc., in New York City, March 15. Dr. King spoke on "Retrolental fibroplasia as a cause of blindness". Also attending the conference were Mrs. Eunice W. Wilson, Director of Social Service, who presented a paper on "Parental attitudes", and Miss Ruth Butler, Medical Social Worker, whose subject was "Individual case work with parents".

The Foundation for Vision, at a meeting held on March 11, voted to give the Massachusetts Eye and Ear Infirmary $4000 in addition to their present allotment, to make a survey of the incidence of retrolental fibroplasia in New York City. This work will be carried out under the supervision of Dr. Edwin B. Dunphy and Dr. V. Everett Kinsey of the Infirmary, and with the counsel of Dr. Ethel Dunham of the Children's Bureau, Washington, D.C. The study will have as its object, a comparison between the incidence of retrolental fibroplasia in premature infants in the New York area and the Boston area. It is expected that any striking differences in the incidence may be related to variations in the method of handling premature infants, which, in turn, may provide a lead for future experimental research.

The Eye Institute, jointly sponsored by the Social Service Department of the Infirmary and the Division of the Blind, was held March 27 and 28 as part of a program for the prevention of blindness. Lectures were given by the following members of the Ophthalmological Staff: Dr. Henry A. Mosher, Dr. Karl Riemer, Dr. Mahlon T. Easton, Dr. Earl S. Seale, Dr. Garrett L. Sullivan, Dr. Benjamin Sachs, and Dr. Harry E. Braconier.

The Howe Laboratory acted as host on March 30 to a group of about twenty ophthalmologists from Johns Hopkins Hospital, Columbia University, and the University of Pennsylvania. The group, primarily interested in research, meets from time to time for informal discussion of work which is not yet ready for publication. Reports were presented by Dr. David G. Cogan, Dr. W. Morton Grant, Dr. Trygve Gundersen, Dr. V. Everett Kinsey, and Dr. Elek J. Ludvigh. The meeting was followed by a dinner.

Dr. Luzius Rüedi, Professor of Oto-Laryngology at the University of Berne, Switzerland, who is interested in acoustic deafness, has been visiting the Infirmary and the Harvard Medical School to observe the work done here by Dr. Moses H. Lurie in conjunction with the Acoustical Laboratory of the Medical School.

Dr. George Kelemen, Clinical Assistant in Oto-Laryngology, spoke on "Medical journey to Latin America" at a meeting of the Boston Medical History Club last month.

Dr. Daniel J. Reagan (*Oto-Lar.* 1944), now a Captain in the Medical Corps of the U.S. Army on terminal leave, expects to be separated shortly from the Service.

Dr. James Mac Sams started his residency in Oto-Laryngology on March 1, and Dr. Charles M. Leconte completes his service as resident in April.

Dr. Schall has received the following letter from Dr. John J. Ballenger (*Oto-Lar.* 1943).

> During my more than three years in the Army, particularly during the time I was overseas in the European Theatre, I have thoroughly enjoyed reading about my many friends whose names appeared in THE NEWS. Once you leave the hospital you soon enough lose track of your friends, and THE NEWS furnishes an admirable way of retaining at least some account of them.
>
> I'll give you a short history of my activities since I was discharged from the Army last spring. In August I entered upon a job with the research faculty of the Department of Oto-Laryngology, Northwestern University Medical School. Half my time is spent there and the other half in private practice. The problem I am trying to elucidate is the effect on cilia of various induced allergic states. I find the work highly enjoyable and hope to continue it indefinitely.
>
> My wife and I live in a Steel Craft prefabricated house on the campus of Northwestern. We have found it very comfortable except in the very cold and windy weather. When it rains, it sounds as if a few hundred cannibals were beating clubs on the roof, but one even gets used to that. Unless something better turns up, we'll be here another year and not feel as if we got a very bad break.
>
> I probably will be in Boston for a few days in April, and if I am I'll stop by the hospital to see you and my other friends. In the meantime, my best regards to all.

At last we have heard from Chiu-an Wang (*WS* 1944). All through this interesting letter to Dr. Faxon runs a note of nostalgia and a deep concern for the state of affairs in China.

> We have been on the run, so to speak, all these two and a half months. We left Boston on December 1, sailed on December 23, and arrived in Hongkong on January 9. But we did not really get home until the 15th of January. On the whole, the trip was a pleasant one. Being a poor sailor, I was very sick for more than seventy-two hours, as we ran into a storm north of Honolulu; but it soon became forgotten and I was well enough to help operate on a fracture of patella on the high sea.
>
> Since I had been away from home for more than six years, China to me has become a foreign country in many ways. My wife, who was born and spent much of her time overseas, naturally is not too familiar with the language. I thought I would remember the language, if not other things, but this was not so. Upon arrival the spoken language sounded funny to me, and I found I unconsciously inserted a few English expressions every now and then during a conversation. I noted the buildings smaller, streets narrower, people different from what they were before. And, above all, I found that this country, like all others that went through years of war, is suffering from terrific poverty, disease, and the shameful effects of inflation, dishonesty, and corruption.
>
> I am sure you know what all these mean. A nation will never perish with her physical changes. I recall the days when this city built its first roads for automobiles. It did not take long before all the narrow streets were converted into wide roads. A large portion of the city has been demolished during the war, bridges broken down, public utilities impaired. But all these will re-erect themselves, improve with time. As a matter of fact, in this part of the country we have been rather fortunate to have had intermittent periods of peace, which enables us to have dim lights in the nights and a little tap water in the tub after we retire every night.
>
> Inflation is what kills the people. When I first arrived, one US dollar equalled 6000 dollars Chinese currency, or NC, although the official rate was $3500 NC to $1 US. Since then, NC has become so much depreciated that it now is worth practically nothing—$1 US to $15,000 NC; and during the past few days of "China's Economic Crisis", one US dollar reached the value of $20,000 NC, or higher. Yet the cost of living is high here—about three times as high as it is in New York City. Stationery — sheets and envelopes — cost me $20,000 NC per 100; a morning paper, $1,500 NC; an ordinary haircut, $4,500 NC; a luncheon, $8,000 NC; a bus fare, $400 NC; a monthly rent for a two-room apartment, $300,000 to $400,000 NC; 100 pounds of rice, $200,000 NC. Of course, it would not be bad if you convert the price into US currency. But who can afford to buy in terms of US dollars, except probably only a few privileged ones? An average white collar worker has an income of not more than $200,000 to $300,000 NC per month; laborer, $50,000 NC; and a professor of surgery only $600,000 NC!
>
> As one can readily see, such a condition cannot last long, for man cannot stand idle without food. And food will not be available in the market if shopkeepers prefer rice, say, to worthless paper. Whenever there is a rumour, none will be interested in the paper money, but all want rice and foodstuff. As a consequence, all prices go up, and once they get higher they seldom come down again. There is no need for me to go into the effects of such an unstable economy. It is obvious that poverty and diseases, and sometimes dishonesty and corruption, are part of the whole picture of an unstable economy.
>
> But what causes such an unstable economy? The answer is that peace in China is not in sight. No peace means no security, and no security means selfishness. Many people of the privileged class are "buying up" everything in China for themselves and their children! When they begin to do "buying up", they need the money, and find out where and how one can get more than his share! There lies the deep-rooted cause of dishonesty and corruption. I am afraid that as long as China is at war, no forthcoming solution to this problem is available.
>
> We have not been able to visit other places since we returned. Canton is so far the most quiet place in the whole of China. Originally, I had intended to see a few more places before

No. 2 in a series of Staff photographs
Our four Assistant Directors:
Dr. Lichty, Dr. Thorndike, Dr. Haase, and Dr. Clay

beginning to work. After looking around the hospitals here in Canton, and knowing that the need is so great here, we have decided to remain here for a period of six months to a year. I have accepted a job in the Dr. Sun Yat-sen Memorial Medical School of Lingnan University as Instructor in Surgery, and also am acting as Chief of Surgery in Canton Hospital. The hospital—founded by Dr. Parker of Framingham, Massachusetts—has been a missionary institute for over one hundred years. During the war the Japs occupied the hospital, and did a good job of destruction before they surrendered. There is no autoclave, no instruments, no operating table, and no well-trained assistants, but there are lots of clinical materials and many youngsters of the school who are eager to learn—even the wrong things! I am getting things organized and changed slowly, sometimes very slowly to suit the nature of our race. But I hope my time thus spent will not be in vain. People with whom I work are all eager to see that some day out of this mess there will grow a place of learning and for the sick.

We have been very much homesick since we left the M.G.H. It was difficult for us to make such a departure, for we are now much too much distant from "home". We have been thinking a great deal of you all. We shall try our best to keep you posted on what happens here from time to time. It is our sincere desire that you will give us your guidance.

It will be some time before I can manage to write to each of my seniors and friends of the family. For the time being, I wish you could say "hello" to all of them for us.

Three and a half years of silence. Then this nice letter from Comdr. Wayland A. Morrison, MC (*WS* 1916)—proving that if you wait long enough consciences begin to stir. Commander Morrison's address is 1037 Pacific Mutual Building, Los Angeles 14, California.

I have received The News regularly—also a couple of "jogs" concerning a note.

I am still in the United States Naval Reserve on a retired basis, and at the present time am continuing in my position as Chief Surgeon of the Santa Fe Railroad, and Medical Director of the Union Oil Company. My private practice has suffered considerably from attempting to keep these two positions going, but after all—after thirty years of listening to patients' complaints—I am becoming reconciled to letting some of the younger men carry the load.

We see many Massachusetts General and Harvard men here at our hospital, as the nucleus of our staff comes from Boston. Dr. Lawrence Chaffin, Dr. A. J. Scholl, Dr. John Wilson, and several others were graduates of the Massachusetts General Hospital; and there are several Harvard Medical men who interned elsewhere.

We have found the reconversion more difficult than the actual war itself. We are now having many labor difficulties which we hope some day will be ironed out, but at the present time it looks almost hopeless

I was sorry to miss the Ether Centennial. Dr. Scholl tells me it was very interesting.

I hope you will continue to send The News. I have read every copy and it helps us to keep in touch with the Hospital, which will always have a very warm spot in my heart.

Another man out of the Army—Dr. Ernest E. Myers (*Or.* 1933). From Shriners Hospital, Lexington, Kentucky, he writes:

Since September I have been back in Lexington as Chief Surgeon for the Shriners Hospital, and also am having fun rebuilding a private practice.

I find other MGH alumni here—Dr. Woolfolk Barrow [*ES* 1937] and Dr. Thornton Scott [*r.p.* 1939]—and they enjoy The News as much as I do.

Dr. Terry E. Lilly, Jr. (*ES* 1943) sends this brief account of his present activities and the whereabouts of several other alumni of M.G.H. and H.M.S.

I was discharged from the Navy in July 1946. Since September I have been engaged in the course, "Basic sciences and their clinical application", conducted at the University of Minnesota, Center of Continuation Study, and I shall be here until the middle of June. However, I should like to have you continue with my home address, 5714 McGee Street, Kansas City, Missouri.

As you know, Gordon Scannell (*ES* 1941) is here on a fellowship, working under Dr. Boydon of the Anatomy Department. I have also turned up Bob Spencer (*EM* 1943), Don Balfour, Jr. (*EM* 1943), and Bill Watts, H.M.S. '42, on visits to the Mayo Clinic.

Lt. Col. Frank L. Bauer, MC (*P* 1941) sends his new address—War Department, Army Medical Research and Development Board, Office of the Surgeon General, Washington 25, D.C.—and adds:

I am still in the military service, assigned for duty with the Surgeon General's Office here in Washington. In this capacity I not infrequently encounter present and former members of the Massachusetts General Hospital.

Dr. Elbert L. Persons (*EM* 1929) was a "soon-to-be civilian" the last time we heard from him, back in late '45. A short note received the other day lets us know what he's doing now.

Back at Duke Hospital in September 1945, after 38 months with the Duke General Hospital unit and many pleasant contacts with MGH people during 2 years in England. Now working under Dr. Eugene Stead, Jr. I'm doing "teaching medicine", integrating Medicine, Preventive Medicine, and Student Health—with a little Fort Bragg on the side.

Dr. Edwin C. Albright (*WM* 1942) is engaged in research on radioactive isotopes. From 3901 Euclid Avenue, Madison 5, Wisconsin, he sends this account of his work.

With my wife and son, John, I have been in Madison for the past year, since my Army discharge. I am a Fellow in Medicine, associated in research in the Department of Medicine of the University of Wisconsin Medical School. Dr. Edgar S. Gordon (*P* 1935) and I have been interested in radioactive isotopes. Using radioactive iodine as a tracer, a problem on the metabolism of the amebicidal drug, chiniofon, has been completed. This problem arose out of wartime experiences with amebiasis. We plan to use other tracers in some studies involving amino acid metabolism in patients with liver disease. A year as a medical resident at the University Hospital, beginning in July, will complete my plans for the immediate future.

Please give my regards to my friends and acquaintances at the M.G.H.

We wish more of you, without being asked to, would write letters of this sort, so that the rest of us can know what your special interests and problems are, these days. If you enjoy reading about what the other fellow is doing, why not let him know about yourself? He's just as eager to hear about you as you are about him.

Dr. David W. Barrow (*ES* 1937) sends this interesting letter from 348 Central Bank Building, Lexington, Kentucky.

I have really little news of myself except the usual difficulties of getting back into civilian practice after Army service.

I have at long last completed a monograph on *Varicose veins*, which Hoeber plans to bring out in the spring. It was inspired and started at M.G.H. a long time ago, and Dr. Allen and Dr. Linton have helped keep a lot of things in it in proper perspective.

Thornton Scott [*r.p.* 1939] is back in Lexington, going great guns. Ernie Myers [*Or.* 1933] is busy, too, and is an ideal fellow to share offices with. I saw Bill Snyder [*WS* 1933] in Los Angeles just after Christmas and he was busy as could be with teaching, practice, and as Consultant in Surgery to the Veterans.

The M.G.H. is a great family to belong to, and The News is always appreciated. Thank you for it.

THE NEWS

No. 56 Boston, Mass. May 1947

NEUROSURGICAL SERVICE AFFAIRS

The last report on the Neurosurgical Service appeared in THE NEWS nearly two years ago. This was written by Dr. W. J. Mixter, who had returned to his former position as Chief of Service to tide us over the wartime emergency. Throughout this difficult period he, Dr. Jost Michelsen, and Dr. Samuel Lowis carried the burden of a very active service without the help of specially trained residents. Dr. Mixter, in addition to his hospital duties, acted as Consultant in Neurosurgery to the Surgeon General of the Army. Shortly before V-J Day Dr. William Sweet returned to us from England, where he had been serving as Chief of the Neurosurgical Service at the Queen Elizabeth Hospital in Birmingham. There he had succeeded another old MGH resident, Dr. Henry Heyl. Both of these men rendered outstanding service to the British Government. I was released from active duty in the U.S. Naval Reserve a year ago.

This first year since the end of the war we have been interested primarily in developing neurosurgery in its broadest aspects — not only the classical field of tumours of the brain and spinal cord, but also the relief of intractable pain, the treatment of intracranial aneurysms, and of conditions which can be influenced by intervention on the sympathetic nervous system. Dr. Mixter, Dr. C. T. Liu, our former resident, and I have studied postoperative results in 240 patients with epilepsy treated on the service during the past ten years. Dr. Mixter's interest in the field of herniation of the intervertebral disc has continued, with notable contributions by Dr. Michelsen in the syndrome of brachial neuralgia, which results from protrusion of a disc in the cervical region.

The establishment of the special committee and laboratories for research on the autonomic nervous system has given us the opportunity to rotate a proportion of the hypertensive patients through White 11, and also added facilities for investigating the control of circulation and surgical treatment of disordered visceral activity and pain from this source. In connection with this last subject, Dr. Edward Bland, from the cardiac laboratories, and I have recently reviewed the results of surgery in 75 patients with medically intractable angina pectoris. In this group, treated between 1927 and 1940, over 80 percent were relieved of their unbearable pain by alcohol injection or sympathetic ganglionectomy. We are now investigating the effect of surgical resection of the cardiac accelerator nerves in individuals with incapacitating bouts of paroxysmal tachycardia. Dr. Sweet has carried out a series of studies of intra-arterial pressure in the carotid vessels to gain data of use in the treatment of intracranial aneurysms.

In the teaching sphere, the Neurosurgical Service has embarked on postgraduate training for the first time. At present we have two Clinical Fellows in neurosurgery — one from South Africa and the other sent here by the Bureau of Medicine and Surgery of the Navy — to train as specialists in this field. In addition, a number of fourth-year medical students have been taking an elective month in neurosurgery, and all the third- and fourth-year students in surgery receive clinical instruction on White 11.

With this increase in teaching and research it has been singularly fortunate that we have been given special funds to further this work. The Neurosurgical Service proper has received large grants for the past and present year from a medical foundation in New York. Although this organization wishes to remain anonymous, it is nevertheless appropriate to acknowledge its assistance and express our thanks. The recent grant of $30,000 from the Life Insurance Medical Research Fund and an additional $2,000 from the United-Rexall Drug Company for investigation of hypertension and other diseases involving the autonomic nervous system will be shared with the general Surgical and Medical Services. This will enable the hospital to buy the equipment and finance the running of the new laboratories on the 12th floor of the White Building. With Dr. Kenneth Evelyn in charge, the laboratory is already working overtime carrying out pre- and postoperative tests which enable us to gain an accurate idea of the effects of sympathectomy and to re-evaluate the effect of operations on the sympathetic nervous system, many of which originated in this hospital.

James C. White, M.D.,
Chief of Service

* * *

Reports of our grand rounds are being published in a new medical journal entitled *The American practitioner*, put out by Lippincott.

* * *

As you probably know, the Centennial Meeting of the A.M.A. will be held in Atlantic City, June 9-14. A special exhibit on cardiovascular diseases is being organized under the supervision of Dr. Paul D. White and our Medical Art Department. Miss McLatchie, Head of the Medical Art Department, who is in charge of the arrangement and the setting up of the material, tells us that the color scheme for the exhibit will be in silver and blue.

Early in 1945 Dr. White was asked to put on a special cardiac exhibit for the A.M.A. meeting. Since all conventions were canceled during the war, it was not done then, but it is being arranged this year because of the importance of the Centennial Meeting.

Members of our Staff who are preparing exhibits are:

Dr. Paul D. White and Dr. Fred Alexander—*The range of the normal heart*
Dr. T. Duckett Jones and Dr. Edward F. Bland—*Rheumatic fever—rheumatic heart disease*
Dr. Mandel E. Cohen—*Neurocirculatory asthenia*
Dr. William C. Bridges, Dr. Dera Kinsey, Dr. John R. Graham, and Dr. Benjamin Castleman—*Hypertension and hypertensive cardiovascular disease and their treatment*
Dr. Conger Williams—*Electrocardiography*
Dr. Gordon S. Myers—*Cardiovascular roentgenology*
Dr. Robert R. Linton, Dr. Irad B. Hardy, Jr., Dr. Edward Hamlin, Jr., Dr. Richard H. Wallace, Dr. Harrison E. Kennard, Dr. Claude E. Welch, Dr. Fiorindo A. Simeone, Dr. Richard Warren, Dr. Richard H. Thompson, Dr George F. Emerson, Dr. Gordon A. Donaldson, Dr. Howard Ulfelder, and Dr. Kenneth A. Evelyn—*Peripheral vascular disease*
Dr. Paul D. White—*Historic books*
Dr. Howard B. Sprague—*American Heart Association*

Other parts of this special exhibit on cardiovascular disease to be presented at the same time and place are:

Congenital heart disease—noncyanotic group, Congenital heart disease—cyanotic group, Subacute bacterial endocarditis, Coronary heart disease, Rare heart diseases, Vascular surgery, The treatment of myocardial failure and coronary insufficiency, and Cardiovascular syphilis.

* * *

The formal opening and inspection of our newly equipped Dental Clinic for the care of stomatological and oral surgical diseases was held on Wednesday afternoon, April 9. After the many invited guests had viewed the newly decorated rooms, Dr. Kurt H. Thoma, Oral Surgeon and Chief of Dental Service, gave us the history of the clinic. During his speech a bas-relief of Dr. William T. G. Morton was unveiled. Dr. Faxon said a few words of appreciation of what the Dental Department is doing. Dr. James M. Dunning, Head of the Harvard School of Dental Medicine, spoke briefly. He emphasized the many years of close affiliation between Harvard and Massachusetts General. Following this part of the ceremony, tea and pretty — as well as delicious — cakes were served from a long table attractively decorated with lovely spring flowers.

Here is a transcription of Dr. Thoma's speech:

Last fall, the Massachusetts General Hospital celebrated the centenary of the first public demonstration of the use of ether for surgical anesthesia. This first demonstration was made in the operating room of the Bulfinch Building, now known as the Ether Dome. A dentist, William T. G. Morton, brought this great gift to the world. The use of ether spread rapidly to the far corners of the earth, and today ether is still the safest and best anesthetic agent, although many other methods of anesthesia have been developed since. The event was duly celebrated last October by the Massachusetts General Hospital, as well as by the American Dental Association. The latter had a bas-relief of Dr. Morton made by Mr. Arnold Geissbühler, a Boston artist, which was presented to the hospital, and the authorities of the hospital have allowed us to have this plaque placed here in our clinic.

I am asking Dr. Holland to unveil this monument to our confrere, of whom we are very proud— the first dentist to contribute to the advancement of medicine.

The first public ether demonstration took place on October 16, 1846, but it was not until 1868 that a dental service was added to the Out-Patient Department in connection with the Dental School of Harvard College. In 1872 the office of "Dentist" was established in the hospital—a title which was changed to "Dental Surgeon" later. The dental faculty of Harvard College continued to conduct a dental infirmary at the Massachusetts General Hospital—in fact, it seems that the Harvard Dental School was part of the Massachusetts General Hospital until 1883, when President Charles W. Eliot suggested to Dean Thomas H. Chandler of the Dental School that an independent clinic be opened. This clinic was established in the abandoned building of the Harvard Medical School, adjacent to the Out-Patient Department, but Dean Chandler expressed the hope that the Dental School might still be permitted to call itself the Dental Infirmary of the Massachusetts General Hospital. Later, certain dentists of the school were appointed to the hospital staff. In 1910, a Dental Surgeon and Assistant Dental Surgeon were appointed; in the staff list for 1911, a Dental Surgeon and six Assistant Dental Surgeons were named. The department grew, until today we have eight Dental Surgeons and twenty-five Assistant Dental Surgeons, besides an Oral Surgeon who is Chief of the department, and an Assistant Oral Surgeon. Furthermore, various specialists are available: a stomatologist, a maxillofacial prosthetist, a periodontist, and a visiting orthodontist. We have divided the department into an out-patient service and a house service, and each year two house officers are appointed for training, as required by the specialty board in oral surgery.

During the war, eleven of our staff served in the armed forces—three of them with the 6th General Hospital. The remainder of us carried on at home. Between 1943 and 1946, 19,061 patients were taken care of—among whom were 570 nurses of the hospital. The following operations were performed: 7,205 minor oral surgical operations in the Out-Patient Department; 495 patients with stomatologic diseases were treated; 181 patients with fractured jaws were seen; 281 cysts and tumors were excised; and 371 other major oral surgical procedures performed in the main part of the hospital.

The department has also carried on investigative work during these years. A new method of external fixation for mandibular fractures and a method for internal wiring fixation of condylar fractures were developed. Experiments were made with fibrin foam to obliterate cavities in bone resulting from excision of cysts and tumors, and teeth. When penicillin and streptomycin came along, their uses were adapted to the treatment of jaw infections, supplementing the intramuscular use with local instillations. Biannually, we publish a clinic number of the Massachusetts General Hospital and the Harvard School of Dental Medicine, in which cases and papers are reported which were presented at our monthly staff meetings.

When I took over the service, the physical equipment of the Out-Patient Dental Clinic was rather antiquated, and it was my hope to bring about a change—not only in the equipment but also in the arrangement of the rooms. The Morton Celebration seemed to present an opportunity. The Novocol Chemical Manufacturing Company, which makes local anesthetics—especially monocaine, which has been used here for several years—came to our aid. Through a research grant made by Dr. Mendel Nevin, the president, it was possible to rebuild and re-equip the clinic. I want to make use of this occasion to thank Dr. Nevin for his generosity.

We have started on a new research problem which I feel you will agree is of great importance. This problem involves a study of the psychological influences affecting the dental and oral surgical patient. The investigation will be carried out with assistance from the psychiatric and anesthesia departments. We hope this research will lead to the means of allaying the fear so frequently exhibited by the dental patient, and of giving assurance of mental relaxation to apprehensive individuals. Thus we are endeavoring to continue with investigations for the advancement in the relief of suffering, in which dentists have played such an important role. It is, therefore, particularly fitting that the bas-relief of Morton should be in close proximity, for the constant inspiration and stimulation of the staff.

Oral pathology, by Dr. Thoma, has just been published in Spanish by a Mexican firm. The translation was made at the request of the Committee on Cultural Cooperation, State Department, Washington, D. C.

A talk on "The psychology of pain in dentistry" was given at the regular monthly meeting of the Dental Staff on March 18, by Dr. Herbert Barry, Jr. There was a discussion of some of the mechanisms producing pain, and also reference to a project for study of some causes of pain in dentistry. Preliminary experiments have already been initiated by Dr. Barry and Dr. Daniel J. Holland, Jr., Assistant Resident on the Dental Service, to determine the amount of heat produced when cavities are drilled.

Here is a summary of Dr. Barry's talk:

The theoretical basis for this investigation is the fact that pain may result from sudden application of heat to sensitive tissues. While it is obvious that heat will be generated by friction of a rotating bur applied to the wall of a cavity, few systematic attempts appear to have been made to measure this or to control its effects.

The temperature at which heat becomes painful depends upon a number of factors. While adaptation, rate of application, and body temperature changes may cause wide variations, there is evidence that temperatures above 130 F. are usually distinctly painful. With the assistance of Dr. Kenneth A. Evelyn, Clinical Fellow in Medicine, we measured the heat generated in burs during 30 seconds of normal drilling on dry tooth specimens. The temperature changes were recorded on thermocouples calibrated to the temperature ranges recorded. Initial temperatures were 79-80 F. After thirty seconds of drilling, the tip or grinding surface of the drill varied between 97 and 148 F. This rise in temperature was least (18) with a very small round bur drilling out a decayed surface of dentine; it was greatest (68) with a large inverted cone, which was not quite sharp, drilling enamel.

It is evident that if these initial tests can be confirmed, the heat generated by drilling can be sufficient to cause pain, without regard to the pain produced by the traumatic cutting of the peripheral dentinal nerve fibrils. Dentists are quite familiar with the susceptibility of teeth to thermal changes; in fact, odontalgia is frequently precipitated by variations of mouth temperature.

In the management of pain, it may be helpful to consider that there are some ten different levels at which pain reactions may be susceptible to modification or control. These are: (1) Removal of pain producing stimuli, (2) Desensitization of tissues which include terminal nerve fibers, (3) Anesthetization of nerve fibers or trunks, (4) Section of posterior nerve roots (rhizotomy), (5) Interruption of spinothalamic tracts (chordotomy), (6) Depression of specific cerebral centers (analgesia), (7) Widespread depression of cortical activity (general anesthesia), (8) Selective cortical activation to reduce discomfort or anxiety (suggestion or distraction), (9) Modification of responses to pain: (a) Sedation, in which pain is not diminished but associated emotions of fear or tension are, (b) Frontal leucotomy, in which the reaction to pain is diminished by cutting the fibers connecting the thalamus and the frontal lobes, (10) Induction of amnesia for painful experiences (scopolamine—used mostly in labor).

Evidently, the method of choice for control of pain is to remove the cause. Since the adequate stimulus for pain is usually injury to some body tissue, operative procedures which necessarily imply trauma are likely to be painful. However, our preliminary experiments seem to indicate that in drilling, the temperature rise may be an important element in odontalgia. Should this observation be substantiated by further investigation, it would supply a rationale for the use of a stream of air or water to cool the bur during the process of drilling. Such cooling devices have been occasionally used but are not widely employed in dentistry.

On the next level, the experimental work of Schumacher concerning the effect of inflammation on the pain threshold may have a possible application in the field of dentistry. It has been shown that inflammation may reduce the pain threshold by as much as 24%. Measures to alleviate inflammation before drilling, when possible, might reduce discomfort to a considerable extent. At higher levels in the central nervous system, three analgesics have been used rather widely in medicine and surgery. These are aspirin, codeine, and nembutal. The latter sometimes has undesirable effects in psychiatric patients. If used preoperatively, they might reduce discomfort to an appreciable degree. Similarly, phenobarbital may be helpful in minimizing fear, tension, or anxiety which may be more distressing than the actual pain incidental to dental procedures.

Distraction and suggestion are known to have a marked effect on the disagreeable quality which so frequently accompanies painful experiences. When used skilfully, they may supplement other procedures, and in extreme cases they have sometimes produced apparent insensibility to pain.

At the April meeting of the Dental Staff, Dr. Moses H. Lurie, Surgeon in Oto-Laryngology at the Massachusetts Eye and Ear Infirmary, spoke on "Problems common to the oto-laryngologist and oral surgeon".

DEVELOPMENT of the VETERANS LANGUAGE CLINIC at the MASSACHUSETTS GENERAL HOSPITAL

One of the new problems posed by World War II is the care and rehabilitation of veterans who sustained head injury. These veterans suffer now from aphasia, and it is with that particular part of their problem that the Veterans Language Clinic at the Massachusetts General Hospital is primarily concerned. Never before has a large group of otherwise healthy young adults who are aphasic been presented to the medical profession for re-education. Therefore, it is extremely important that, first of all, methods of treatment for the improvement of this language disorder be worked out. Secondly, it is necessary to plan for the restoration of the patient to useful activity.

With these factors in mind, the Veterans Administration has launched a national program to cover this aspect of the care of disabled veterans. Two consultants, one in the West and one in the East, were appointed to formulate and carry out a satisfactory program. Centers for the care of aphasic veterans were established, one near Los Angeles and the other at the Cushing Veterans Administration Hospital in Framingham. Early in the development of this program and before consultants were appointed, the Boston Regional Office of the Veterans Administration approached the Massachusetts General Hospital and the Director of the Language Clinic to arrange for the care of some of the local aphasic veterans. Some early work was attempted, well over a year ago. As a result of this, the clinic program was established at the Massachusetts General Hospital. The Director of the Language Clinic was appointed Consultant in Aphasia for the Veterans Administration in the eastern part of the country.

This clinic serves as an out-patient clinic for ambulatory veterans in the metropolitan Boston area who can come in regularly for treatment for their speech disorders. The work of the clinic is closely coördinated with that of the aphasia clinic at the Cushing VA Hospital; but this report merely covers the work at the Massachusetts General Hospital, which is a contract clinic, supported by the Veterans Administration. In their development, both clinics should be considered as pilot clinics in which a type of organization and treatment program is being developed which can be applied in other parts of the country.

An adequate program for the care of aphasic patients includes very varied types of treatment. It is based upon intensive language therapy given by trained therapists, experienced in this field of language disorders. It is recognized that the greatest improvement is realized under a schedule of five treatment periods a week. Most of these periods of therapy are for individual instruction, although occasionally group periods of therapy can be added with benefit to the patient. This is the first part of the program worked out in the Veterans Language Clinic; and in order that it may be adequately covered, a supervisor of therapy, Miss Ellen K. Donohue, who has had wide experience in this field, is in charge. She is assisted by two trained therapists, Miss Edna Mauriello and Mrs. Natalie Fisher. Needless to say, this part of the program is very severely handicapped by a chronic problem at the hospital — namely, lack of space. It is very difficult for aphasic patients to adjust to a change of rooms for treatment periods. It is impossible for them to work in an atmosphere which presents interruptions and distractions, and at present these ideals of treatment cannot entirely be met because of generally crowded conditions in the hospital.

Many aphasic patients have various degrees of motor disorder, raging from a pretty complete hemiplegia to varying degrees of weakness and incoördination of one or several limbs. Consequently, these patients must have very active physiotherapy. To date, this has been obtained at the Regional Office of the Veterans Administration, but arrangements are being made so that Language Clinic patients may be cared for in the hospital Physiotherapy Department. Along with physiotherapy as an important form of treatment, comes occupational therapy which stimulates the use of hands and provides for the occupation of time for these patients. Again, arrangements are being made for this part of the treatment program to be carried on so far as is possible by the Occupational Therapy Department of the Massachusetts General Hospital. A program of diversional activities and craft training has been arranged for, using some of the space in the Elizabeth Peabody Settlement House, which is near the hospital. This is under the supervision of the Misses Dagmar Pierce and Rosamond Sabine. The Settlement House has been very generous in providing space for this work, as well as for social get-togethers for the men. In a large city of this sort, with patients coming from different parts of town, this is very important. At the Settlement House it is possible to have some music, some food, and to undertake the work already outlined as the purpose of the meeting.

This program has been devised and developed by Mrs. Malcolm Tobey, the social worker for the Veterans Language Clinic. Many will remember Mrs. Tobey as a social worker in various hospital clinics, and she is working closely with Miss Barbour in developing this aspect of the veterans' therapy. Mrs. Tobey's function is a complex one. She must act as a liaison between the Language Clinic, the Veterans Administration, and various community facilities. In these areas she has been very helpful, and she is doing much in developing that important part of the therapeutic program which reintroduces the veteran back into civilian life. One of the great problems for these men is how far they can go in obtaining employment and what types of employment are feasible for them. Many factors, of course, have to be borne in mind —such as partial paralysis, susceptibility to occasional convulsive seizures, and the fundamental language handicap, combined with their feelings of personal inadequacy. With the full coöperation of the Vocational Rehabilitation Department of the Veterans Administration, interesting opportunities are being worked out in this area.

All patients are referred to the Veterans Language Clinic by one of the many Veterans Administration divisions. The new patient is given a careful neurological work-up, and again the various hospital facilities — including the Electroencephalographic Laboratory—are of great help. In addition to the neurological evaluation, and as a part of it, the clinical psychologist makes a careful examination of mental abilities and language handicap. This psychologist is Miss Marjorie MacMullen, who is known to many members of the hospital family as the psychologist in the Cortical Function Laboratory, where she worked until her services were taken over by the Veterans Language Clinic. Through the activity of the social worker, the psychologist, and the neuropsychiatrist in charge of the clinic, it is possible to work out what types of therapy are required for a given patient. In some cases, the disorder is more profound than can be handled in a clinic for ambulatory patients. In such cases, this clinic acts in a steering capacity and makes referral of patients to the Cushing VA Hospital.

Veteran patients come for treatment on a regular schedule throughout the day. Since the clinic was opened in October, patient visits have increased from a limited number to 190 during March. Not all of these patients are aphasic veterans. Some stutterers have been referred as well, and it is anticipated that other language disorders will be referred to the clinic for treatment. This is a development that we are particularly glad to have, because it adds necessary variety in the types of cases being given therapy. Clinic figures show that there has been a very steady growth in the number of patients and patient visits, and it is recognized that more therapists must be trained —not only for this clinic, but in anticipation of expansion in other areas.

An ambitious program for the training of language therapists to work with these and other types of language disorders is being planned at the Massachusetts General Hospital as a part of the work of the Veterans Language Clinic. It is the intent of the Director of the Veterans Language Clinic to use this clinic increasingly as a teaching center for therapists who wish to enter this field with good clinical training. In the past, when small programs of this sort have been carried on in the hospital Language Clinic, we have had the very helpful coöperation of other hospital departments— such as the Eye Department, the Ear, Nose and Throat Department, the Neuropathology Department, and the Psychiatric Department. We are counting on these departments to help with lectures and otherwise, in furthering a good program of clinical teaching for language therapists.

Edwin M. Cole, M.D.,
Director, Veterans Language Clinic
Massachusetts General Hospital

The Board of Trustees, at their meetings during March and on April 4, voted:

- To authorize the Department of Physical Medicine to enter into an agreement with the Children's Hospital and Simmons College in order to offer a four-year course for the training of physical therapists, leading to a degree at Simmons College and certificates in physical therapy at both hospitals;
- To approve the request of Dr. John A. Breen that he be granted Baker Memorial and Phillips House privileges in recognition of his long service in the Dental Department;
- To accept with regret the resignation of Dr. Frederick C. Gevalt, Jr. from the position of Assistant in Medicine;
- To accept with regret the resignation of Dr. Henry F. Howe from the position of Assistant in Surgery;
- To promote Dr. John J. Rupp to Assistant Anesthetist, beginning April 5.

To appoint:

- Dr. Thomas F. Broderick, Jr. as Senior Resident on the Orthopedic Service for six months, beginning April 1;
- Dr. Cully A. Cobb, Jr. as Assistant Resident in Neurology for one year, beginning April 1, with the understanding that, if satisfactory, he may be appointed as Resident at the expiration of Dr. Quarton's appointment on October 1;
- Dr. William A. Dickson as Assistant Resident on the Children's Medical Service for one year, beginning April 1;
- Dr. Robert H. Fennell, Jr. as Assistant Resident in Pathology, beginning July 1;
- Dr. Lytt I. Gardner as Assistant Resident on the Children's Medical Service for one year, beginning April 1;
- Dr. Marion T. Jenkins as Assistant Resident in Anesthesia for two years, beginning August 15;
- Dr. Walter Pick as Resident on the Children's Medical Service for one year, beginning April 1;
- Dr. Richard Schatzki, whose resignation as full-time Radiologist became effective April 1, to the position of Assistant Radiologist so that he may assist one afternoon a week in the teaching of Residents;
- Dr. Henry J. Zukowski as Assistant Resident in Anesthesia for one year, beginning July 1.

At their meetings on March 12, 19 and 26, and April 2, the General Executive Committee voted:

- That the appointment of Dr. Walter S. Kerr, Jr., as Third Assistant Resident in Surgery be terminated as of March 31, in order that he may serve on the Urological Service;
- To promote Dr. Peter T. Brooks to the position of Second Assistant Resident in Surgery, beginning April 1;
- To promote Dr. William C. Quinby, Jr. to the position of First Assistant Resident in Surgery, beginning April 1.

To appoint:

- Mrs. Ruth Graham as Research Fellow, in recognition of her work in cytology;
- Dr. Robert S. Hormell as Graduate Assistant in Orthopedic Surgery for one year, beginning July 1;
- Dr. William H. Horwitz as Graduate Assistant in Pediatrics;
- Dr. Apostolos Kartsonis as Clinical Fellow in Surgery;
- Dr. Byrl J. Kennedy as Clinical Fellow in Medicine, with half-time work in the Staff Clinic as of March 1;
- Dr. John B. Stanbury as Graduate Assistant in Medicine;
- Dr. Frederick C. Y. Ts'ui as Clinical Fellow in Surgery;
- Dr. B. Lincoln Wales, Jr. as Graduate Assistant in Pediatrics;
- Dr. Howard J. Weinberger as Clinical Fellow in Medicine.

* * *

Several months ago we announced that a column devoted to McLean Hospital would soon be a regular feature of THE NEWS. Since McLean is the oldest unit in the Massachusetts General group, this special department has been much too long delayed. We are now glad to report that beginning with this issue we plan to publish McLean material every month. Much in the way of research and development of special techniques is constantly being carried on out at Waverly, and we hope to include each time not only facts of general interest, but an article from some member of one of the various departments at McLean — just as a department at the General is represented each month by a lead article.

We didn't give the Staff out there time enough to prepare such an article on professional activities for this number. But —to start off with — we thought you might like to hear two delightful and interesting true stories we picked up on a recent visit to McLean. The first has to do with a very famous orange tree out there in their greenhouse. Here is the story, as given in a *McLean Gazette* of 1942:

> The orange tree in the greenhouse is over eighty years old. The seed from which it grew was planted by Mrs. Mary E. Sawyer Tyler, who for thirty-five years was Matron of the McLean Asylum, as the Hospital was then known, in Somerville.
>
> Mrs. Tyler was very proud of her orange tree, as such trees were rare in this part of the country and since oranges were not very plentiful in those days, and when she and Mr. Tyler left the Hospital they took the tree to their new home. At that time it was in a large tub, but it soon outgrew their house and Mrs. Tyler gave it to the Hospital.
>
> The tree was set in the ground in the greenhouse at Somerville where it remained for many years. When the Hospital moved to Waverly the tree was moved to the new greenhouse and again planted in the ground where it has flourished and borne much fruit. For several years more than three hundred large juicy oranges were picked from the tree each year, between Thanksgiving and Christmas, but for the past ten years it has had quite a struggle for existence.
>
> Mary E. Sawyer was born March 22, 1806, in Sterling, Massachusetts, and died in Somerville in 1889. In 1835 she married Columbus Tyler, the Steward of McLean Asylum, and was appointed Matron of the institution at that time. When a child, Mrs. Tyler was the owner of the lamb which was the subject of the well known rhyme, "Mary had a little lamb".

To give the story a happy ending, you will be glad to know that the tree has taken a new lease on life and is again in robust health. To prove it, we were told that this past season five bushels (!) of delicious oranges were produced by Mary's tree, now over eighty-five years old.

The second story explains the presence of some cannon balls we saw out at McLean. Also from a *McLean Gazette* of 1942, we quote:

> From all accounts, the weather around Boston on April 19, 1775, grew quite warm in the course of the day. And more than warm to Major Pitcairn and his company of British regulars, in flight from Concord and bedevilled by Yankee rebels hidden behind trees and walls and buildings all along the route. It was with unspeakable relief that Pitcairn hailed a large detachment of troops and artillery. But, as we all know, a tough road lay ahead of the strengthened army. There were many miles yet to go, and in ever increasing numbers their foes were gathering along the line of retreat, to pour a galling fire into their ranks.
>
> Some accounts of the retreat (of the older schoolbook type) read as if the British put up little resistance, but beat it to Boston as fast as they could hustle. As a matter of fact, they were by no means wanting in courage or discipline, and must have done a good deal of shooting, handicapped though they were. They constantly sent flankers into the woods and fields to rout out the snipers; and there is evidence at hand, right here in Waverly, of the return fire with which they met the attack of the provincials.
>
> Some time ago, on the hill which slopes to Concord Avenue beyond the hospital buildings, three cannon balls were found, and are now kept as valued relics in Dr. Wood's office. Two are the size of small grapefruit, and the other that of a plum. These were undoubtedly from British guns, as the Americans had no artillery. Moreover, in many of the trees that have been cut down on the hospital grounds toward the avenue, deeply imbedded bullets have been found—further evidence of British efforts to get back at the pesky rebels hanging on their flanks.
>
> Thus Wellington Hill, as it was then known, received its baptism of Revolutionary fire, and today McLean Hospital is the possessor of three small cannon balls and of a small portion of American soil made historic by clash of arms in the War for Independence.

* * *

During the war we received several interesting letters from Lt. Col. Norman E. Freeman (*WS* 1935) and many reports from his friends regarding the fine work he was doing over in India. More recently a letter from Dr. Freeman, published in our December issue, told us of his interest in Vascular Surgery and said he was starting on some investigative work on the Physiology of Major Blood Vessels.

Since then we received this release from the Public Information Service of the University of California. With the release came a fine picture of Dr. Freeman receiving the Army Commendation Ribbon from Major General George P. Hayes, Commanding General of the Sixth Army. We regret that previous commitments prevent our including the picture in this number, but assure all of Dr. Freeman's friends that they will see it in a very early issue.

Here is a copy of the release:

> A new technique for surgical repair of damaged arteries, used in a record number of 18 successful arterial operations, has been developed by a young University of California Medical School vascular surgeon, Dr. Norman E. Freeman.
>
> Writing in the *Annals of surgery,* Dr. Freeman has reported that his success has been achieved simply by cutting away the damaged part of the artery and suturing healthy arterial tissue crosswise rather than longitudinally. Dr. Freeman performed the operations while he was a Lieutenant Colonel in the Army Medical Corps at DeWitt General Hospital, Auburn.
>
> All of the 18 patients were military personnel who had suffered damage to arteries as a result of battle wounds. In most of the cases a false opening was present between the artery and the vein, a condition which is known as an arterio-venous fistula.
>
> Among the operations reported was one on a patient who had a damaged abdominal aorta, a major trunk of the arterial system. Surgical restoration of this patient's artery was the second successful one ever reported. Ordinarily, damage to the abdominal aorta results in bleeding to death before surgery can be attempted.
>
> In his operations Dr. Freeman said it was necessary to cut the artery from the vein, since the vessels were connected by scar tissue. The wound in the vein was then closed, after which any damaged portion of the artery was cut out. Sometimes a whole section of the artery had to be excised and the two ends stretched to meet before being sewed together. Wherever possible the artery should not be severed, since it is better to leave part of the wall as a foundation for repair.
>
> Dr. Freeman explained that in patients who do not die shortly after wounds of arteries, there develop aneurysms—tumors—which are actually "blow-outs" of the arterial wall. These aneurysms and open wounds of the arteries impair the circulation; but the body attempts to make up for this by overdeveloping the circulation in other arteries of the affected region of the body.
>
> Few surgeons have ever attempted to repair these wounds, preferring to tie off the blood vessels and cut out the tumor or fistula, in the belief that impaired circulation and restricted activity of the patient was preferable to what was believed to be a good chance of death resulting from surgery.
>
> Some operations had been performed in which the artery was sewed up longitudinally. The surgeon pointed out that longitudinal suture usually resulted in a slight permanent constriction of the artery, with a consequent restriction of circulation, resulting in pain, particularly on walking. No such pain was reported by Dr. Freeman's patients, except in some cases with vigorous exercise. Furthermore, X-rays of the repaired sections showed that it was almost impossible to detect where the wound had been: the constriction present in longitudinal operations is readily apparent.
>
> The operative technique has only limited peacetime applications, though there are occasional accident cases in which patients wounded by gunshot, knives, or glass develop aneurysms or false connections between arteries and veins. In rare cases a congenital or false opening is present. By means of the developments worked out in war casualties, the treatment of civilians suffering from these conditions is now possible.
>
> In recognition of his development of this operative technique, Dr. Freeman was recently awarded the Army Commendation Ribbon.

♣ ♣ ♣

Dr. George S. Reynolds (*Thd. S* 1924) writes briefly from his office, 100 North St., Pittsfield, Mass.:

> Finished up my Army career by relieving Eddy Cave as Chief of Surgical Service at Camp Edwards General Hospital and having a Colonel's rank handed me on separation.

MASSACHUSETTS EYE & EAR INFIRMARY

Dr. Walter J. E. Carroll and Dr. John R. Frazee of the Oto-Laryngological Department have been promoted from Assistant Surgeon to Associate Surgeon, and Dr. Herman J. Sternstein, also Oto-Laryngology, from Clinical Assistant to Assistant Surgeon.

Dr. Francis J. West, a recent Infirmary graduate now practising in Boston, has been appointed Senior Clinical Assistant on Eye Service.

Following are the names of those appointed as Resident Staff in Ophthalmology: Dr. Frederic B. Breed, Dr. Thomas P. Cronin, Dr. Marshall W. Woodard, Dr. Warren D. Haley, Dr. Taylor R. Smith, and Dr. Samuel T. Adams, with Dr. William B. Brewster, Jr., Dr. Joseph M. Faust, and Dr. Donald R. Loeb as alternates in that order.

Dr. Edwin B. Dunphy spoke on April 11 to the Staff of the Joseph H. Pratt Diagnostic Hospital, New England Medical Center, on "Di-isopropyl fluorophosphate in the treatment of glaucoma".

Dr. LeRoy A. Schall gave an address on April 1 at the New York Eye and Ear Infirmary, before the Oto-Laryngological Residents of New York City. His subject was "Cancer of the nose and sinuses".

At the Annual Meeting of the American Otological Society, Inc., held April 21 in St. Louis, a paper on "Observations made in controlled experimental study of osteogenesis following fenestration of the vestibular labyrinth" was given by Dr. Schall and Dr. Dorothy Wolff. Dr. Philip E. Meltzer presented a paper on "Indications for revision".

Dr. William P. Beetham gave a series of lectures at the Gill Memorial Eye, Ear and Throat Hospital, Roanoke, Virginia, during the week of April 7. His subjects included: "Diabetic retinopathy", "The crystalline lens in diabetes", "Dry eyes", and "Management of some corneal diseases".

On March 30, a tea was held in honor of Mrs. Kitrena Akins who has been with the Infirmary for nineteen years. A large number of the personnel were present, and Dr. Faxon, after commending Mrs. Akins on her long and excellent record of faithful service, presented her with a gift. Mrs. Akins will be greatly missed by her many friends in the Infirmary.

Dr. R. Wenner Machamer (*Oto-Lar.* 1945), who has been visiting Boston for a few days and renewing acquaintances at the Infirmary, is opening an office in Cleveland, Ohio, where he is on the staff of the Lakeside Hospital and the Western Reserve University.

Dr. John J. Ayash (*Oto-Lar.* 1946) has accepted a position as Oto-Laryngologist at the MacCannel Clinic, Minot, North Dakota.

Dr. Frederic W. Ogden (*Oto-Lar.* 1942) is now practising in Fayetteville, Arkansas.

Among recent visitors to the Infirmary were Dr. John J. Ballenger (*Oto-Lar.* 1943) of Winnetka, Illinois, Dr. Gaston N. Duclos (*Oto-Lar.* 1943 & *Oph.* 1945) of Montreal, Canada, Dr. Morton Peterson and Dr. Harry Peterson of Cape Town, South Africa, and Dr. Luz Pang, a noted Oto-Laryngologist of Honolulu, Hawaii.

Received by Dr. Schall was a letter from Dr. M. R. Mobley, Jr., Florence, South Carolina, announcing the arrival of a daughter. Dr. Mobley concludes: "I will probably come to Boston within the next month. . . . I am looking forward with pleasure to seeing you at that time."

The following letter was received by Dr. Schall from Dr. David Y. Li of Chungking, China.

> I have been busy since I became the Public Health Commissioner of Chungking municipality more than one year ago. The responsibility is great, but the work is interesting. There are fourteen clinics, one dental clinic, one laboratory, and five hospitals under this Bureau. At present we are busy in getting ready the work for the prevention of cholera epidemic here.
>
> I should like to introduce to you Miss May Yang, the sister of Dr. Lily Yang of the Pediatric Department of our municipal hospital. Miss May Yang went to Boston last fall. She has been studying at Simmons College where Miss K. D. Hardwick is the Director. . . . Any assistance rendered to her will be much appreciated personally, as Miss Yang is far away from her home and for the first time she studies in a foreign college.

We knew Dr. Lester A. Brown (*Oto-Lar.* 1937) was out of the Army because we had received a home address from him—478 Peachtree St. NE., Atlanta, Georgia. This letter gives us a little more information about him.

> My uneventful life since last I wrote you has been more or less: released from the Army in April 1946; spent a little time in New York after that, a part of which time was with Dr. Phil Meltzer [*Aural* 1919] of Boston; following that I went back into practice and have done nothing else since except try to make a living and do a little teaching on the side at Emory University School of Medicine.
>
> At the present time I am in the throes of the terminal stages of building a new office and I am really not sure whether it is the process of trying to practise medicine in an extremely crowded office, whether it is the

A part of the newly equipped Dental Clinic
Members of the Staff, from left to right: Dr. Kurt H. Thoma, Dr. Ralph D. Thompson, Dr. George M. Noss, Dr. Daniel J. Holland, Jr., and Miss Lillian A. Peck

> tortures of having to build a new office, or whether it is old age which makes for such a bad disposition.
>
> I trust I shall get back to Boston one of these days before the place has changed so much I won't recognize it.

New addresses:—

- Dr. John R. McDaniel (*ES* 1940), 85 St. Dunstan's Road, Asheville, N. C.
- Dr. John F. Tannheimer (*r.p. P* 1944), Veterans Hospital, Newington, Conn.

Brief bits:—

- Dr. Lewis K Dahl (*r.p. WM* 1942) was promoted to the rank of Major before his release from military service.
- Dr. Frederic W. Ilfeld (*Or.* 1937) has established his office at 6367 Wilshire Blvd., Los Angeles, for the practice of orthopedics.
- Dr. Charles D. Roberts (*r.p.* 1938) was released from the Army in October 1945 and is busy practising internal medicine. His address is 109 East Palisade Ave., Englewood, N. J.

If our men who are now in military service could realize with what interest their letters are read by those who served earlier in the war (and by the rest of us, for that matter), they would write oftener and in broader detail.

This letter from Lt. John W. Bell, MC, USNR (*ES* 1946) is a "first" from him. It is headed *U.S.S. President Hayes,* P.A. 20, c/o Fleet Post Office, New York, N. Y., and reads:

> This state of long silence existed, I assure you, not from absence of desire for communication but rather from a stringent absence of anything interesting to report; for, since leaving M.G.H. a year ago, my medical activities have slowed to a walk, you might say.
>
> My first two months of Navy duty were spent at the Separation Center in Boston, examining separatees at the rate of 500-600 a day. In June I was detached from this station and sent to San Francisco to serve on the *U.S.S. President Hayes,* where I have been ever since. This ship is a dependent transport, part of the Navy's transport fleet. I know from correspondence that many of the MGH men and several of my colleagues at Medical School are on similar duty. Earle W. Wilkins (*WS* 1946), for instance, is on the *General Anderson,* P.A. 111, and I have talked with him several times when his ship has pulled into the dock astern of ours. Blair Thatcher [*ES* 1946] is also aboard a transport vessel, I believe.
>
> Concerning the *President Hayes*—we were on the Pearl Harbor-San Francisco run and made ten round trips since June 1946. The "General" ships are larger and have been making longer trips—including Guam, Midway, Philippines, Japan, etc.—picking up a few dependents at each stop. We carry an average of 120 women and children as cabin passengers and from 50 to 500 or so troop passengers—including sailors, marines, and soldiers—exclusive of our ship's company of 185.
>
> We have been fortunate (or unfortunate, as you may view it) in having little medical activity during this time. My usual sick call is 10 to 15 every morning. We have rarely had more than 2 or 3 bed patients in any month. Also, no emergency surgery to date—not even the always anticipated appendix. Just a little elective minor surgery now and then. I am one of two medical officers aboard; and, though it is theoretically a good idea, there is rarely enough to keep even one occupied.
>
> We have a sick bay of 24 beds, a nice little operating room, a dressing room, laboratory, combination sterilizing-scrub room, X-ray dark room, doctors' offices, an isolation ward, dental office, and several medical storerooms, plus a diet kitchen for the mothers and babies. Also, we regularly have two Navy nurses aboard to help with the infant problem. So—no one can complain of inadequate facilities.
>
> Since Christmas we have been in the Norfolk Navy Shipyard, undergoing reconversion into a better transport, as little has been done to the ship since its commissioning in 1941. In the Medical Department we are getting a new $35,000 air-conditioning system, a women's ward, and a few other improvements. We should be back in San Francisco about mid-May.
>
> I was fortunate enough to spend 30 days recently helping out on the Surgery Ward at the U.S. Naval Hospital at Portsmouth. This was interesting and refreshing and also gave the opportunity of washing the hands again.
>
> Like many, I am anxious for a period of shore duty which might offer more work of medical interest. Also, it may be assumed, I am even more anxious for release from Navy service and early resumption of residency training. However, it would appear that our group will not be released till April 1948.
>
> It is a great pleasure to keep up with M.G.H. via The News. Wish I might report more of real interest, similar to the recent letter from Dr. Jack Cannon.

How good to hear from Dr. Linn F. Cooper (*WM* 1928)! Back in January 1943 we reported him a Major at a Station Hospital in Florida. Nothing from him since, until this note the other day. We still wonder where he was during the interim. Perhaps he'll write and tell us. His note, from 2222 Que St. NW., Washington, D. C., says:

> After separation from the Service in January 1946, I spent my entire three months of terminal leave loafing, and then returned to Washington.
>
> Instead of practising during the past year, I have been teaching at Georgetown University Medical School. My plans for the coming year are still uncertain.

This letter, headed Coral Gables Clinic, 227 Aragon Avenue, Coral Gables, Florida, has come from Dr. (recently Capt.) Robert P. Keiser (*Or.* 1942).

> This will notify you of a change not only in address but in status. Having enjoyed 2½ years of orthoepdic surgery at O'Reilly General Hospital, I have been retired because of an eye disability (noncombatant), and am now enjoying even more, despite the disability, a civilian status in orthopedic surgery at the above address.
>
> The News has been a regular source of enjoyment to me while in the service, and I hope to continue receiving it.

Another news voice—that of Lt. Col. Joseph K. Surls, MC (*Or.* 1920 and *ES* 1922). He wrote, briefly:

> The 314th Station Hospital [to which Colonel Surls was first assigned] trained at Camp Rucker, Alabama, and went overseas in January 1944. It went into function at Truro, Cornwall, England. It was at the western extremity of a chain of Station Hospitals which were placed across southern England, near the coast, in preparation for the Normandy invasion. It became Transit Hospital No. 1 during the invasion.

Dr. Edward J. Ottenheimer (*ES* 1924) served with the Yale Unit during the war, as Assistant Chief of the Surgical Service, 39th General Hospital. A recent letter reports his return home.

> I was separated from the Service in October 1945, and have returned to Williamantic, Connecticut, where I have resumed my surgical practice—this time with an associate. Our offices are at the Windham Community Memorial Hospital.
>
> I want to thank you for sending me The News throughout the war. It was a source of great interest to follow the activities of so many MGH friends, in both the Pacific and European Theatres.

THE NEWS

MASSACHUSETTS GENERAL HOSPITAL 1811

No. 57 Boston, Mass. June 1947

McLEAN HOSPITAL AFFAIRS

The work of a psychiatric hospital today is indeed quite different from what it was even a decade ago. While psychotherapy and the various types of physiotherapy and occupational therapy still have their place, the present day treatment of the acute psychoses and, indeed, the treatment and management of many of the more chronic types of mental disorder has been revolutionized through various methods of altering the body physiology through the various types of insulin and electro-shock treatments and their combinations.

The use of psychosurgery was introduced into our clinical work in 1940. This operation—called the bilateral prefrontal lobotomy— is now finding a wider and more general application, especially in the more protracted or chronic types of mental disorder. While the foregoing types of treatment have been in the past considered as somewhat experimental, they have now been quite generally accepted, even though they are still applied on a somewhat empirical basis.

Because of the profound changes produced by these methods in the individual physiology of the patients receiving them and thus producing a reversal of the psychotic or emotional symptoms, these changes have offered an excellent example of psychosomatic relationships. The opportunity, therefore, for psychiatric and physiological and psychological research studies into the more precise nature and significance of these changes are ample and considerable. These opportunities have been utilized by Dr. Frederick Wyatt, Chief of our Psychology Department, as well as by others on our clinical and research staff. Electroencephalographic studies are being carried on by Dr. Paul Jossmann.

Our Clinical Psychiatric Staff have been unusually active in the study of treatment of large numbers of patients whose stay in the hospital is often only a few weeks and at most a few months. Dr. Mark Altschule, who has for the past two and a half years been working with us in a study of the physiological changes produced during convulsions, has already recorded and published many articles, with other clinical staff members, on these observations and changes. We are fortunate and pleased, and we know that our friends in the General Hospital will be glad to know, that Dr. Altschule has just been appointed Director of Internal Medicine and Clinical Research in Physiology at the McLean Hospital and he will continue with us on a full-time basis beginning June 1, 1947.

While the war cut into some of our research projects and took many of our psychiatric staff, including all of our residents, we are now glad to have a full quota of residents and a complete psychiatric staff, as far as physicians are concerned. We are still handicapped by a shortage of nurses, thus preventing us, even at this late date after the war, from opening up one of our largest buildings—the Proctor Home—where we can care for about forty male patients. There are cottages and other wards still closed, so that we have the capacity for fifty additional patients whose care and treatment is denied at this hospital because of the nursing shortage. This must sound familiar to everyone.

One of the great advances we did make during the war was the actual establishment and building of a Scientific Research Department for the study of Brain Chemistry. These laboratories were opened about a year ago and are under the direction of Dr. Jordi Folch-Pi, an outstanding biochemist, formerly attached to the staff of the Rockefeller Institute. Dr. Folch is assisted by Dr. Alfred Pope and a large staff of technicians. The work of this Institute will undoubtedly throw great light on our clinical problems and add materially to the fundamental knowledge of mental disorders.

Thus, we have today at the McLean Hospital a very active treatment and investigative center. At the same time, the hospital provides excellent care for a group of patients who, because of the particular nature of their mental and physical illness, require continuous treatment and care under institutional direction. With the development of our research and treatment facilities and through the application of more scientific knowledge which we hope to gain, it is quite possible this latter group of continuous or chronic patients may eventually be further diminished, since we have in recent years improved and cured many patients who were essentially continuous treatment patients and considered chronic.

Kenneth J. Tillotson, M.D.,
Psychiatrist-in-chief

Dr. John W. Perry is leaving the first of June, and in September goes to Zurich, Switzerland, on a Rockefeller Foundation fellowship.

Commencement exercises were held in the Samuel Eliot Memorial Chapel on May 7 for the nineteen members of the graduating class of the McLean Hospital School of Nursing. The ceremonies included the invocation by Rt. Rev. Robert P. Barry, an address by Rev. Michael J. Ahern, S.J., a report of the school by Miss Margaret C. Tibbetts, Director of the School of Nursing and Nursing Service, songs by the Glee Club, directed by Homer Whitford, and organ music by Helen Borngesser. Mr. Ralph Lowell, Chairman of the McLean Hospital Committee, presided, and Dr. Tillotson announced the names of the graduates.

An outstanding feature of the program was the presentation of the Wetherill Award to Mr. Frederick M. McConnell. This award is given to the student who has most consistently shown a spirit of thoughtfulness for others throughout his course of study or has most noticeably developed this characteristic while in the school. Dr. Wood made the presentation.

* * *

A letter to Dr. Churchill from Paris, France, dated 18 December 1946, notifies him that he has been made Associé Etranger of the Académie de Chirurgie. The letter was signed by Professor Jacques Leveuf, Secretary General.

A similar letter, from Bruxelles, Belgium, dated 26 January 1947 informs Dr. Churchill that he has been made Membre Associé Etranger of the Société Belge de Chirurgie. This letter was signed by Professor Paul De Moor, Secretary General.

* * *

The hospital has received, in memory of Mrs. James J. Storrow, a beautiful estate in the town of Lincoln, eighteen miles from Boston. It is planned eventually to use the main house for a Convalescent Home. In the meanwhile, it is available to nurses, dietitians, physical and occupational therapists, and other groups of female personnel for outings, picnics, suppers, etc. A limited number can be housed over night.

Anyone wishing to take advantage of this opportunity will please make application at Dr. Thorndike's office.

Men guests will be welcome, but may not stay over night.

* * *

LOST

One microscope slide box—a 100-slide box, numbered 70 on the outside—containing neuropathological sections. Please return to Dr. Stanley Cobb, or telephone any knowledge of its whereabouts to him at Extension 800.

While in Boston to give his five Lowell Institute lectures on diseases of the liver, Professor Harold P. Himsworth of London has been the scholar in our midst at the M.G.H.

Acceding to a request of Dr. Means, he made the ward round one morning on the East Medical Service and, on another morning, on the West Medical Service. The visiting physicians were asked to absent themselves on these occasions so that the house staff and students could have Professor Himsworth entirely to themselves. According to all accounts, the project was a great success. Discussion was uninhibited, and all present profited greatly by the experience. Professor Himsworth also very generously participated in many of our activities—grand rounds, thyroid clinics, G-I rounds, etc.

Harold Percival Himsworth, M.D., F.R.C.P., is Professor of Medicine in the University of London, and Director of the Medical Unit at the University College Hospital. He rose to fame in research first in the field of diabetes and the hormonology of insulin. During the war he became interested in the liver, because of coming in contact with cases of TNT poisoning in munitions plants. There followed a brilliant series of researches on the pathogenesis of liver lesions, the results of which were set forth in his recent lectures. On the side, he has made valuable clinical observations on the antithyroid drugs.

Professor Himsworth leaves us wiser and better for his visit. He has earned our affection and gratitude.

J. H. M.

On May 5, the Surgical Department was host to fifteen surgeons from the Ambrose Paré Surgical Club of France. The group made the trip to this country by air without mishap, although poor weather and difficulty with the landing gear introduced a few exciting moments. Prior to their arrival at M.G.H. they had expressed a preference for observation of surgical procedures and technique. The entire forenoon, therefore, was spent by them in the operating rooms of the White Building, where they observed induction of anesthesia and the surgical procedures of Drs. Allen, Churchill, Sweet, Barr, J. C. White, and Aufranc. Many of the group returned for another morning here. During their week's stay in Boston they visited also the Lahey Clinic and the Children's Hospital. They plan to include a number of American medical centers in their itinerary this year.

The group included Drs. Jacques Baranger, Le Mans; Tierny, Arras; Vialle, Tours; Boutron, Nugent le Rotrou; Luzuy, Blois; Bompart, Paris; Michel-Béchet, Avignon; André Béchet, Avranches; Mutricy, Alencon; Bureau, Nantes; Graffin, Romilly; Mazingarbe, Montargis; Grinda, Nice; Stérin, Arras; Dupertout, Le Mans.

Dr. James M. Faulkner (*EM* 1925) has been appointed Dean of Boston University School of Medicine, effective June 1, 1947.

Dr. James T. Heyl (*WM* 1939) has been appointed Medical Director of Phillips Exeter Academy. During the past year Dr. Heyl has been an assistant in the Department of Bacteriology and Immunology at Harvard Medical School, with a clinical affiliation at Peter Bent Brigham.

* * *

A conference of clergy and psychiatrists was held in Washington on March 17 and 18, under the auspices of the Institute of Pastoral Care and the M.G.H. Representing the Hospital and the Institute on the program were Erich Lindemann, M.D., and Rev. Rollin J. Fairbanks, both of whom spoke on "Clinical procedures of coöperation between the psychiatrist and the clergyman".

The Institute of Pastoral Care announces the election of two new Associate Directors—the Reverends James H. Burns and Henry H. Wiesbauer. Mr. Burns was also appointed an Associate Protestant Chaplain, after having completed a year as Clinical Fellow with the Institute. Mr. Wiesbauer is Director of the Pastoral Counseling Center, a non-denominational counseling service, sponsored jointly by the Institute and the Cathedral Church of St. Paul.

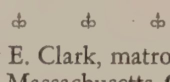
* * *

Miss Mary E. Clark, matron for twenty-one years at Massachusetts General Hospital, died in Plattsburg, New York, on April 13.

Many of our Staff, including Dr. Washburn, Dr. Faxon, and Dr. Means, remember Miss Clark very well. Dr. Faxon recalls how she used to carry a large bunch of keys dangling from a chain round her waist, very much as did those who, in similar positions in feudal times, were known as chatelaines.

Ill health brought to an end her long and faithful service at Massachusetts General. After her recovery she was induced to accept the position of housekeeper at the newly-opened Physicians Hospital in Plattsburg, where she stayed until failing health again forced her to resign. At the age of 75 she had devoted 40 years to hospital work.

Miss Clark was 85 years old at the time of her death.



The Board of Trustees, at their April 18 meeting, voted:

To accept with regret the resignation of Dr. Erna G. Anderson from the position of Assistant Physician to the Children's Medical Service;

That Drs. James M. Baty, Richard C. Eley, Henry E. Gallup, Robert N. Ganz, Gerald N. Hoeffel, Warren R. Sisson, Richard M. Smith, and Lendon Snedeker be appointed as a Consulting Staff in Pediatrics in order that they may be called in by the Obstetrical Staff for the care of the newborn;

To appoint Drs. Jarrel G. Burrow and Howard W. Woodbury as Dental Interns for the period of one year, beginning July 1.

At their meetings on April 16, 23 and 30, and on May 7, the General Executive Committee voted to promote:

Dr. Ernest Craige to the position of Resident in Medicine, effective as of October 15;

Dr. Royal Schaaf to the position of Resident in Medicine, effective as of January 1, 1948;

Dr. Donald P. Todd to the position of Resident in Anesthesia, effective May 1.

At the same meetings the General Executive Committee voted to appoint:

Dr. Sidney W. Cohen as Graduate Assistant to the Children's Medical Clinic;

William L. Money, Ph.D. as Research Fellow in Medicine;

Dr. Francis F. Rundle as Research Fellow in Surgery, beginning May 1;

Morris Soodak, Ph.D. as Research Fellow in Biochemistry, beginning March 1.

* * *

Excerpts from the April *Baker Memorial News Letter*:

PROMOTIONS: Miss Margaret Meenan is the new O.P.D. supervisor, succeeding Miss Campbell. Miss Evelyn King, now head nurse on Baker 8, will be the freshman admitting officer.

PENICILLIN: Does penicillin require a constant level of concentration in plasma to be effective, and how often must it be given to maintain its effectiveness? At first it was given every two hours, now three-hour intervals are more commonly used, and at least one Staff member thinks every four hours is effective. If he is correct, the longer interval offers an opportunity for saving nurses' time. The difference amounts to two boilings of the syringe and needle—six times per 24 hours instead of eight. Multiply that by the number of patients on penicillin and you have a substantial result. But if it impairs the efficacy of the remedy, we do not want it.

Another suggestion about penicillin has to do with the method. We have seen many patients in the hospital who were here only because they got the needle-medicine every two or three hours day and night. For oral use there were methods of buffering penicillin against gastric acid, but it took a lot of it, and at $5.00 per 100M units it ran into big money. The price is now down to a figure where oral dosage costs less than the i.m. solution did, and it may not be economical for a patient to hire a room in a hospital just because his doctor can turn him into a human pincushion more conveniently there than at home. But again we come back to the criterion of greatest weight: is it as efficacious? If anyone knows, we would like to have the benefit of his observations.

ELASTOPLAST has lately come into considerable favor for holding dressings on. It does a beautiful job, but it is moisture resistant and does not show staining. Eventually, drainage of the dressing establishes itself by creeping along under the adhesive. In case of abdominal dressing the leakage shows up under the patient as a spot on the sheet. It is necessary to turn the patient to detect it. Pupil nurses are taught to look at dressings frequently. If a spot shows, they outline it with ink so they can distinguish any increase in extent next time they look. A hole in the elastoplast could reveal spotting but might not permit estimation of its extent. Turning a postoperative patient every twenty to thirty minutes seems rather strenuous. Furthermore, by the time the ooze shows up underneath, the dressing may be thoroughly soaked. This looks like a real problem. Will the surgeons please take it from here?

BEDS OPENED: About one-third of the eighty beds closed in the General Hospital last fall have now been opened by the use of subsidiary nursing personnel. They are trained to work under the supervision of graduates, especially on the evening and night shifts. The basic idea is not new, but its application on its present scale is new to us and most helpful. These employees require training, as there are few, if any, trained candidates for the jobs. That is why the process of opening is only gradual.

EASTER GIFT: In 1945 their child had become anaemic. Upon seeking advice they were told that medical science could not give any hope of permanent improvement. What their feelings were as they stood by helplessly watching for the inevitable outcome only the parents of an invalid child can know. But with all their grief they had room in their hearts for pity, and they planned a glorious memorial. Their letter to the New England Eye Bank, dated in January 1946, says in part:

> Our little girl . . . , age 9, is at present under the care of Dr. . . . , and is suffering from a fairly advanced case of Bright's disease. We cannot now foresee even the approximate date of her death. However, we wish by this letter to record our desire to donate her eyes to you when the time comes at which she will have no further use for them. . . . It is highly probable, in fact, as nearly certain as anything can possibly be, that her death will take place in the Massachusetts General Hospital. . . . We shall assume that you will arrange the necessary operation at the proper time.

More than a year after the letter was written the time came, and their instructions were carried out—on Easter Sunday.

Charles L. Clay, M.D.,
Assistant Director

DERMATOLOGY DEPARTMENT

An extra Staff Meeting was held in April, to carry on further discussion of dermatologic formulas for the new revision of the MGH Formulary. Several interesting cases were shown at the last meeting; and Dr. Perley, Senior Resident, gave a statistical analysis of cases hospitalized on Ward G during 1946. The following is a summary of his data:

A total of 209 dermatologic cases were admitted for an average stay of 26 days. In order of frequency, the 10 most common conditions were contact dermatitis, stasis dermatitis, atopic dermatitis, infectious eczematoid dermatitis, psoriasis, seborrheic dermatitis, exfoliative dermatitis, erysipelas, herpes zoster, and pemphigus. The variety of cases included 42 diagnoses. Patients with pemphigus required the longest period of hospitalization, and those next in order were dermatitis gangrenosa, exfoliative dermatitis, mycosis fungoides, dermatitis herpetiformis, atopic dermatitis, erythema induratum, seborrheic dermatitis, psoriasis, and stasis dermatitis.

During the year, 140 cases of syphilis were also hospitalized on Ward G. The average period of hospitalization per case was 11½ days. These included 25 patients with primary syphilis, 30 with secondary syphilis, 24 with latent syphilis, and the remainder of assorted types.

Thus, the total number of admissions for Ward G in 1946, including all cases, was 349 patients, with an average stay of 20 days per patient. This gave 90.5% bed occupancy for the year for the available bed facilities on Ward G.

Dr. William E. Flood (*r.p. D* 1942) recently paid us a short visit. He is now engaged in a very active practice in Ft. Worth, Texas.

Mrs. Mary Jane Romero, for 30 years a technician in our department, is back home after a year's visit in Scotland. She is returning to M.G.H. as a member of the Blood Bank staff.

The weekly postgraduate conferences for residents and graduate students have continued throughout the year and will terminate this month.

In addition to the citations already mentioned in The News, the following have been received:—

[We are departing, in this instance, from our usual policy of publishing articles from or about MGH-ers, only. Because of Dr. Howard's long and close association with the hospital, we are including this citation received by his son. *Editor*]

Col. Charles P. Howard (son of Dr. Herbert B. Howard, Director at M.G.H., 1897—1908)—Legion of Merit . . . Colonel Charles P. Howard performed exceptionally meritorious services with Headquarters, United States Forces in Austria, from May 1945 to August 1946. As Deputy Regional Military Government Officer, then Acting Chief of the Plans and Operations Division and later as Deputy Chief of the Policy Branch, Executive Division, United States Allied Commission, Austria, he applied his broad practical experience in government planning and public administration to the problems of Austria with exceptionally keen insight, mature good judgment, and unfailing industry. His efforts were a notable contribution to the accomplishment of this Commission.

Colonel Howard was recommended for this decoration by General Mark W. Clark, Commander-in-Chief, U. S. Forces in Austria. It was presented through Major General McBride, Commanding General, First Service Command. [Colonel Howard had previously received the Bronze Star Medal for meritorious service against an enemy of the United States during the war.]

Col. Charles P. Sheldon, MC (*ES* 1931)—Legion of Merit . . . for exceptionally meritorious conduct in the performance of outstanding services in the Southwest Pacific Area, from 4 June 1942 to 25 January 1945, and from 7 March 1945 to 18 June 1945. As Medical Supply Officer, 105th General Hospital, in Australia, Colonel Sheldon served with outstanding merit in directing the unloading of 84 carloads of fragile equipment from the holds of several ships and in arranging for its safe and expeditious transshipment by rail and truck to Gatton, Queensland, 60 miles away, where the hospital was established. His marked administrative capacity was demonstrated to conspicuous advantage as he assumed the posts of hospital Adjutant and later, Executive, and most skilfully coordinated all interdepartmental functions and planned and developed many vital activities which did much to insure the success of the hospital and maintain the military efficiency of its personnel. Subsequently, as Chief of Hospitalization, Office of the Surgeon, Advance Section, later Intermediate Section, United States Army Services of Supply, his conspicuous professional knowledge, organizational ability, and exhaustive studies were readily reflected in the noteworthy manner in which all medical requirements of both a constructional and operational nature were met for the entire New Guinea Area. In commanding the 116th Station Hospital, his distinctive services achieved remarkable results, as twice the normal capacity of patients were efficiently treated at a time when bitter combat was occurring nearby. Finally, as Chief of the Hospitalization Section, Office of the Chief Surgeon, United States Army, Pacific, he completely and effectively reorganized, coordinated, and supervised the hospitalization program for the Southwest Pacific Area, providing for the rapid establishment of fixed hospitals with outstanding economic and logistic practicability. By his inspiring leadership, exceptional ability, and unremitting devotion to duty, Colonel Sheldon was in large measure responsible for the successful accomplishment of many complex and important medical activities in the Southwest Pacific Area. . . . Awarded by the Commander-in-Chief, United States Army Forces, Pacific.

[For decorations received by Col. David Bruce Dill (*res. fel. M* 1925-27) and Lt. Albert J. Stunkard (*EM* 1946), *see* letters from them which appear elsewhere in this issue. *Editor*]

New addresses:—

Dr. Richard B. Capps (*CM* 1931 & *EM* 1933), 1215 East 56th St., Chicago 37, Ill.
Dr. Richard S. Dodge (*r.s. Or.* 1946), c/o Dr. R. Nelson Hatt, Dillingham Bldg., Honolulu, T. H.
Dr. Joseph D. Enterline (*ES* 1943), Box 381, Millwood, Wash.
Dr. John R. McDaniel (*ES* 1940), 102 Tocoma Circle, Asheville, N. C.
Dr. Fred W. Ogden (*Oto-Lar.* 1942), Cravens Bldg., Fayetteville, Ark.
Dr. William Parson (*r.p.* 1942), Ochsner Clinic, New Orleans, La.
Dr. Ellsworth H. Trowbridge, Jr. (*r.p. N* 1940), 1406 West 50th St. Terrace, Kansas City 2, Mo.

Brief bit:—

Dr. Robert L. Mason (*WS* 1924) finished terminal leave last February, with the rank of Colonel. His address is 17 Allen Road, Wellesley Hills, Mass.

Dr. Hugh Montgomery (*EM* 1932) was promoted to Commander before his release from the Navy. A short note from him says:

> I returned from Guam in November 1945, started terminal leave November 29, and ended terminal leave on March 1. For the past several months I have been back in consulting practice in Internal Medicine, with office in the Hospital of the University of Pennsylvania.

Will any of us ever forget that letter from Dr. Montgomery which was published in the November 1945 News!

MASSACHUSETTS EYE & EAR INFIRMARY

Dr. John Nicolacopoulos, Professor of Ophthalmology at the University of Athens, Greece, was recently a visitor at the Infirmary. Dr. Nicolocopoulos spent the day observing operations and procedure with patients in the Eye Clinic.

Dr. Lyman G. Richards has been elected President of the American Laryngological, Rhinological and Otological Society, and Dr. John R. Richardson and Dr. Edgar M. Holmes have been made members of the Society.

Dr. Philip E. Meltzer has been appointed a Director, and Dr. Lawrence R. Boies an Associate of the American Board of Oto-Laryngology. Dr. Boies was a resident in Oto-Laryngology at the Infirmary in 1931.

Dr. LeRoy A. Schall has been invited to give a series of lectures in July and August before oto-laryngological societies in Rio de Janeiro, Buenos Aires, Santiago (in Chile), and Lima, Peru.

At the April meeting of the American Laryngological Association, Dr. Harris P. Mosher was elected to Honorary Fellowship and also received the Newcomb Award in recognition of his scientific achievements.

Dr. Frederick H. Verhoeff has been invited to give the Centennial Address at the Section of Ophthalmology, on the first day of the American Medical Association's Centennial Celebration at Atlantic City, June 11.

Others on the Centennial program from the Infirmary staff are: Dr. Garrett L. Sullivan, who will be one of the leaders of the discussion after a paper later in the afternoon of June 11; Dr. LeRoy A. Schall, who will give a paper with lantern-slide demonstrations on "Malignant growths of the sinuses" during the Section on Laryngology, Otology and Rhinology; and Dr. Philip E. Meltzer, who will open the discussion following Dr. Julius Lempert's talk on the fenestration operation.

The Neurological-Ophthalmological Conference for the presentation of interesting cases is held on the first Thursday of the month in the Ether Dome at M.G.H. from 9:30 to 11. All members of the staff are cordially urged to be present.

Dr. Isaac M. Taylor, one of our Medical Residents, has received a long and interesting letter from Lt. Albert J. Stunkard, MC, AUS (*EM* 1946), from Sugamo Prison, Tokyo, Japan, APO 181, c/o Postmaster, San Francisco. An excerpt from the letter reads:

> As to my doings, I worked for three months in Tokyo at the 361st Station Hospital which is the Neuropsychiatric Hospital in Japan. It was excellent work, under a competent psychologist, and I learned a great deal. About three months ago I got the chance to come out here, which I took, and I am glad I did. Many of my experiences, while not much compared with rounds in the Bulfinch, are probably good for the soul. I am "rodent control officer", consulting engineering expert on our biweekly suicide attempts in the prison, malingering expert, and popularizer of Buddhism among flagging spirits in the prison.

Enclosed with the letter was a copy of a weekly publication, *The Sugamo Jaily Mail*—one of the most attractive Army newspapers we have seen. Every article in the issue was good reading; but one, entitled "A thumbnail sketch of prison records" will give Lieutenant Stunkard's friends a mental picture of his present setup. We quote:

> A casual glance at the office of Prison Records at 0800 in the morning would disclose just another well functioning office. At 0830 the first of the interrogators and visitors arrive, and from then until 1600, the office is a beehive of activity.
>
> There are many interesting phases of work in the Prison Records Section, but I believe the most interesting jobs are on the Pass and Interrogation Desk. . . . The men who work there are picked for their ability to meet the public, and they have many problems. In the course of a day they come in contact with all nationalities. The Japanese nationalists, with their colorful kimonos and strange customs, and the legal minds of many nations—Russia, France, Great Britain, Netherlands, China, India, Japan, and America—can be seen daily as they come and go from their very important job of interrogating the war criminals. The colorful display of uniforms from the different nations reminds one of the national settlement in Shanghai before the war.

And then—best of all—the following:

> ### COMMENDATION
>
> Recently a commendation was received by one of our Officers here at Sugamo—our Medical Officer, Lieutenant Stunkard.
>
> Lieutenant Stunkard was praised for his devotion to duty in caring for patients, regardless of race or ideology. The commendation was endorsed by Colonel Crary and General Bethea, Chief Surgeon, GHQ.
>
> This commendation was initiated by a highly lauditory letter from one of the suspected war criminals now incarcerated at Sugamo. The letter cited many exemplary deeds enacted by Lieutenant Stunkard.
>
> The following is quoted from a letter of endorsement from General Bethea to Lieutenant Stunkard. "I wish to add my personal appreciation for the devotion to duty demonstrated by the medical officer concerned. Please convey to him my thanks and appreciation."
>
> The conduct of Lieutenant Stunkard is an excellent example of the devotion to duty which should be a part of every soldier's life. Both as a soldier and a medical man, he has shown those qualities which are necessary for a successful occupation and an efficient postwar army.
>
> A unanimous vote of praise is due Lieutenant Stunkard from the entire command. He reflects the high standard of efficiency so vital to the operation of Sugamo Prison.

Although Dr. David H. Clement is not an MGH graduate, he is known to many of our hospital family because of his work here while he was a third-year student at H.M.S. in 1934; and during the war a letter from Dr. Grantley W. Taylor listed him among the many MGH-ers in Naples. Dr. Clement writes, from 158 Whitney Avenue, New Haven 11, Connecticut:

> Since last October I have been engaged in the practice of pediatrics here in New Haven, and am teaching pediatrics at the Yale Medical School. I am also active in the hematologic problems of children.
>
> Before the war I practised pediatrics in Buffalo, and during the war I served in the 23rd General Hospital in the Army—a unit affiliated with the Buffalo General Hospital. Overseas I was fortunate enough to encounter MGH graduates in Africa, Italy, and France.
>
> During that period away from this country THE NEWS was received regularly and was especially appreciated by those of us overseas. Dr. Bill Beckman, I believe, was responsible for my being introduced to THE NEWS.

About a year ago we reported a new address for Dr. Ira Dixson (*WS* 1930). From the same address—Arneill Clinic, 100 Metropolitan Building, Denver 2, Colorado—has come this nice letter from Dr. Dixson.

> It must be an awful headache trying to get news out of such retiring and introverted alumni as myself. Your polite request has caught me in an unguarded and soft moment.
>
> My military service extended from November 1942 to January 1946. There was nothing exceptional about it. I had only two posts, which from my wife's point of view, at least, was just as well. After preliminary training at Miami Beach, I was Chief of Medicine at the Station Hospital at Peterson Field, Colorado Springs, from January 1943 to January 1945, and then learned how fortunate I had been after I was transferred to the Regional Station Hospital at Salina, Kansas, where I was Chief of Medicine from January 1945 to January 1946. I attended the School of Aviation Medicine at Randolph Field and got my Flight Surgeon's wings as sort of a side line to my main job. In September 1945, I received a Certificate of Commendation from the Commanding General of the Second Air Force. The Commanding General has, obviously, never caught up with my real self.
>
> The one distinctive thing about my military career was that thirteen months after I began terminal leave, I was promoted to Lieutenant Colonel, having worn a Major's leaves from 1942 to 1946. This made no impression on my children.
>
> After my two years in Colorado Springs, it suddenly dawned on me that there was some election about where we were to live. Since the war had upset the family moderately, I thought I would upset it still further by beginning a new postwar practice in Denver—first, because I liked Colorado, and second, because I wished to be in a larger community than Stockbridge, Massachusetts, so that I could better stick to my specialty of Internal Medicine. I was extremely fortunate in becoming associated with a group of six others, headed by Dr. James Arneill, Sr., the only other internist in the group. He is the greatly beloved Professor Emeritus of Medicine of the University of Colorado Medical School here in Denver, and he still plays winning golf at 78 (his age, not his score).
>
> After over a year of practice in my new venture, I find myself happy and enthusiastic about it. Elizabeth and I must be getting

old, for three of the children are old enough to be away from home. We just have Molly, now six, with us. We live at 668 Gilpin Street, and I hope any alumni of the Hospital will be kind enough to let me know when they come my way.

Now this ought to hold you for quite a while.

Dr. David Bruce Dill was a Research Fellow in Medicine at M.G.H. from 1925 to '27. In reply to our inquiry as to his military career and present activities, Dr. Dill has given us the information in this concise form, which could well be used as a pattern by all our alumni who served with the armed forces. Such a brief yet complete summary from each of you would make a very valuable addition to your war record—which record the office of The News has tried to make as complete as possible for every alumnus. Here is Dr. Dill's record:

Jan. 6, 1941—Accepted appointment as Major, Specialist Reserve.

Feb. 3, 1941—Assigned to active duty as Major AC, Aero Medical Laboratory, Wright Field, Dayton, Ohio.

Duties consisted of planning and directing physiological research on man in flight, including the evaluation of aviators' oxygen equipment, clothing, and special rations.

Commended by Commanding Officer for "the conscientious and efficient manner in which you performed the duties assigned you as the first Chief of the Physiological Branch, Aero Medical Laboratory, Engineering Division. Your unusual devotion to duty, your attention to details and perseverance and capacity for accomplishment of arduous tasks contributed in great measure to the prestige of this Laboratory. It is desired to particularly commend you for your investigations of high altitude physiology and the early organization of a sound research program in this Laboratory. Your recognition of the problems resulted in an accomplishment of which I am justifiably proud."

July 1, 1942—Promoted to Lieutenant Colonel, AC.

Apr. 8, 1943—Transferred to QMC.

Apr. 30, 1943—Assigned as Chief, Special Forces Section, Research and Development Branch, Office of the Quartermaster General.

Aug. 14, 1943—Assigned as Assistant for Product Analysis, Research and Development Branch, OQMG.

October—December 1943 — Observer for OQMG in North Africa and Italy. Military Observer on temporary duty with Air Transport Command, Central and Southwest Pacific Areas.

March—October 1945—In charge of QMC Technical Intelligence Mission to Germany.

June—October 1945—Chief Technical Intelligence Branch, Office of Theater Quartermaster, Frankfort, Germany.

Dec. 3, 1945—Began terminal leave.

Jan. 8, 1946—Promoted to Colonel, QMC.

Jan. 30, 1946—Awarded Legion of Merit, cited Headquarters, Army Service Forces for "significant contributions to the scientific progress of the United States Army. His achievements materially aided the war effort and will be of lasting peacetime benefit."

March 1946—Awarded Army Commendation Ribbon by the Quartermaster General, Major General T. B. Larkin—"Your service with the Quartermaster Corps has been exceptional . . . and I wish to commend you for your outstanding contribution."

May 1946—Awarded Army Commendation Ribbon by the Air Surgeon, Army Air Forces —"Colonel Dill's major accomplishment was his application of scientific methods currently used in the fields of respiration physiology, heat regulation and nutrition to the development of AAF personal equipment. As a result of his effort, initiative, and devotion to duty, this officer has contributed much to the Army Air Forces."

Dr. Dill adds that he left the Harvard University Fatigue Laboratory along in January, to become Civilian Scientific Director of the Medical Division, Army Chemical Center, Edgewood, Maryland—his new address.

Dr. Mark Exley (*r.s. U* 1938) served in the armed forces for the duration of the war. He was for a long time with U.S.P.H.S., attached to the Coast Guard, acting as Chief of a Urological Section, with stations to make up and down the Middle Atlantic coast. From 209 West York Street, Norfolk 10, Virginia, he writes:

I have been busy as a bee since being released from the Service. I was a Commander in the U. S. Coast Guard, attached to the U. S. Marine Hospital in Norfolk at the time of my release.

Went to Amarillo, Texas, with a group in Urology, but left after two and one-half months, as that part of the so-called "super colossal" state did not appeal to me. Have been practising Urology here in Norfolk for over a year.

The monthly copies of The News are certainly very interesting, and I hope they will continue to come.

A letter from Paris during the war, followed by his home address—2007 Wilshire Boulevard, Los Angeles 5—and now this note from Dr. Lewis Cozen (*Or.* 1938).

It is very interesting to watch the progress of our former colleagues and teachers through The News.

During the past year I have acquired a wife, an apartment, and an office. The change back to civilian life after a five-year stretch in the Army has been hectic but pleasant.

There are a number of orthopedists here from M.G.H.—Vernon Thompson, Francis McKeever, John Wilson, and Fred Ilfeld.

Dr. Joseph P. Holihan (*ES* 1943) has returned home. His present address is 30 Morton Street, Andover, Massachusetts. He writes:

I arrived back in midsummer, after eighteen months in the ETO. The last four were spent in very pleasant fashion in Paris, albeit I was a dermatologist at the time. The rest of my military career was a repetition of that of thousands of others, and merits no special comment.

At present I am thoroughly enjoying a prolonged vacation.

This "first' reached us via Dr. Means, to whom it was written. It is from Lt. Richard W. Greene, MC, AUS (*M* 1945). His address is 61st Station Hospital, APO 782, c/o Postmaster, New York, N. Y.

It has now been over a year since I talked with you when I was in Boston completing my National Boards. I wish again to express to you my gratitude for the fine medical training I received while interning at M.G.H. It is something which is appreciated more and more after one leaves there. Though the time was shortened slightly, due to the war, nevertheless I think we benefited from that because of the added responsibility we had. My nine months at the M.G.H. will certainly always be remembered as one of my most enjoyable, as well as one of my most intensive, experiences. I look back now with pleasure to the first three months when Bob Berg, my Resident on B-6, suffered with my inexperience, though he always continued to be understanding and encouraging. At the time, I was more scared than humored. Please give my best to my "visits", all of whom I enjoyed very much: Drs. Aub, Richardson, Jones, Fremont-Smith, and Pittman.

My medical residency at the University Hospital in Syracuse continued to be excellent. The quality of medicine was always Grade A. Needless to say, the training you and Dr. Rawson gave me on the thyroid, and Drs. White and Williams on the heart, afforded me an added advantage and was especially valuable for the two afternoons per week when I taught third year students. All my "attending" men there were American Board men, and two were exceptional—Dr. E. C. Reifenstein [*res. fel. M* 1940] and Dr. Charles Hitchcock. During my last four months there I again had contact with Harvard, as Dr. Westerfeld, who had been Assistant in Biochemistry at Harvard, came to Syracuse as Professor in Biochemistry and brought two assistants with him— one from Dr. Cohn's laboratory and one from the nutrition lab.

After leaving Syracuse in April, I was activated into the Army in May 1946. At this time the 9-9-9 plan had been abolished, so I had no opportunity for a full residency. My first assignment was to receive basic training at Fort Sam Houston in San Antonio. During the five weeks I was there I saw several MGH graduates, including Joe Gardella, Richmond Holder, Lytt Gardner, Jim Judd, and John Wilson. Besides these, there were many Harvard classmates of mine there.

After finishing my basic course, I was immediately assigned overseas and arrived in Italy, via a Victory ship, the first week in August. I was assigned at once to the 61st Station Hospital here in Leghorn—a 500-bed hospital—as Chief of the laboratory. I had 12 men under me and I was responsible for all the laboratory work, including bacteriology, serology, clinical pathology, and biochemistry. Besides, I was considered the pathologist, performing all autopsies and doing the microscopic tissue work. Although I was not qualified for this type of work, I did the best I could and learned considerable which will be of use in civilian medicine. I averaged about four autopsies per week. If proper instruction had been available it would have been even more worth while.

After three months in the laboratory, a trained pathologist arrived to take over the lab, and I was glad to get back into clinical medicine. In October I was assigned my present position—Dispensary Officer of the Headquarter's Dispensary in Leghorn. This dispensary is unique as far as Army dispensaries go, in that there is an opportunity to practise considerably more medicine than most dispensaries see. I service 4500 troops, and though there are the usual colds, boils, athlete's foot, and venereal disease, there is also a good scattering of medical diseases such as pneumonia, hepatitis, rheumatic fever, asthma and other allergies. Unfortunately, thyroids and diabetics are rare. Besides the troops, I also am "family doctor" for 700 dependents in the area, which gives me experience with older age groups, females, and children. The position can be summarized as giving good general practice.

My wife and child arrived in November and we are comfortably settled in an apartment adjacent to the dispensary. I have seen a good deal of Italy, including several trips to Pisa, Florence, and Siena. I spent a week in Udine and a week end in Venice and Lido, and have flown over Rome and Naples. In January we are going to take a trip to Switzerland.

The Italians are in a state of surprisingly good health, except for a steep rise in T.B. rate. However, the suffering described in the newspapers I have yet to see. One can easily learn enough Italian in a few weeks to be able to buy in their shops, which contain more consumer goods than in the U. S.

There are three Harvard boys at our hospital —James Stewart, who interned at M.G.H. last year; Ted Groff, who interned at P & S in New York City; and Bob Ray, who was orthopedic resident at Children's in Boston. All the other medical officers are a good group (18 in all), and all have had about the same amount of training as myself.

Because my position leaves considerable free time, I've been able to review a good deal of medicine and also I'm taking an extension course in differential equations from the Uni-

No. 3 in a series of Staff photographs
Dr. James H. Means—Chief of Medical Services
With Dr. Means is Professor Harold P. Himsworth of London

versity of Chicago—mathematics being one of my hobbies.

Although I've been well treated in the Army, I am looking forward with great anticipation to my day of discharge, which at present is in the spring of 1948. It may come sooner, depending on political developments. It will certainly seem good to be back in civilian medicine again.

This letter from Dr. Donald M. Glover (*WS* 1922) epitomizes his activities with the 4th General and lauds the fine work done by members of the 105th.

I was somewhat impressed by the effectiveness of your "ear to the ground department" which welcomed me back to civilian life about a day ahead of my release. Much appreciated, anyway.

For the record: I was CO of the 4th General from early 1945 until all the members of the affiliated group were sent back in October. I also worked in the Chief Surgeon's Office in Manila for four months, until I left there in December—almost 47 months after leaving the U.S. I then worked in the Office of the Surgeon General until I was released on 3 February 1946. Collected an unmerited Legion of Merit in Manila.

It was my good fortune to see a good deal of the members of the Harvard Unit (105th) while over there—especially Thorndike, Cave, Eppinger, Harrison, Branch, Marks, Rowe, and Campbell, all of whom performed distinguished service in that Theater. The 105th was certainly one of the outstanding hospitals over there, and many of its members distinguished themselves with other units and headquarters.

I am now back at the old stand, 10515 Carnegie Avenue, Cleveland, Ohio, trying to pick up loose ends and make a living again.

We hope this letter from Lt. Joseph A. Elliott, MC, AUS (*M* 1945) will prompt more of our younger alumni who have gone into military service to write us about their experiences since donning the khaki or blue.

After my two months at Carlisle in the 69th OTB, I was sent down to Moore General Hospital at Swannanoa, North Carolina, which was a mistake somewhere high up in the Army because it was only 120 miles from my home in Charlotte. However, they soon found out about this and rectified their mistake by sending me back to Pennsylvania. At Moore General I had six weeks in wards filled with patients with tropical diseases. Since most of them were well on the road to recovery, my duty was mostly administrative.

From Moore I went to Indiantown Gap, only 40 miles from Carlisle, so I was more or less familiar with the country. I spent six months there working in the separation center, attempting to do ear, nose, and throat work, for which my qualifications were doubtful. I got one short break in the monotony by being sent down to Walter Reed Hospital on temporary duty, only to end up doing physical exams on West Point applicants.

I managed to get shipped out of there just before they closed the doors, and moved a little closer to the bright lights. I arrived at Fort Meade, Maryland—yes, you have guessed correctly — separation center work. However, the duty was a little more interesting, since for the first six weeks I worked mornings at the separation center doing dermatology and VD and spent the afternoons at the Regional Hospital sitting in on the skin and VD clinics. Last August I came up to Murphy General.

I have almost given up the idea of going overseas. I won't cry over that, either. The outlook for the future seems to be more and more of the same. The latest report says that all ASTP graduates will serve a minimum of three years as commissioned officers. I am keeping my fingers crossed, hoping they will discover they have more medical officers than they need and reduce the length of service.

I have been enjoying The News very much, especially in being able to keep up with some of the boys who interned with me at the General.

The News is always particularly appreciative of letters from members of the hospital family who have been released from military duty and are back in private practice—especially letters from those of you who are in far away sections of the continent. For that reason, we were very glad to receive this one from Dr. Rodney F. Atsatt (*Or.* 1926), from 1734 State St., Santa Barbara, California.

My news is just like everyone else's, I imagine. Back at home, hard at work, glad to be home, glad to be at work.

My four years of Naval service was very satisfactory in many ways. In succession, I was Orthopedic Officer for S.O.Q. at San Diego; Medical Officer, Section Base, Santa Barbara; Senior Medical Officer, Midway Islands; and Chief of Orthopedic Surgery at USN Base Hospital #18 at Guam.

In the latter hospital we had a chance to work with fairly fresh compound fractures. It was here that the first definitive surgery was done. During the month of March 1945 (Iwo Jima), the Orthopedic Staff worked 16 hours a day for 31 consecutive days. Shiploads of patients would arrive every two or three days—900 at a time. Of these, 250 patients would be orthopedic. They had to be admitted, treated, and evacuated to make room for the next load. We were certainly busy. The casualties from Okinawa were not so bad, as there were many other hospitals open by that time and the cases were more evenly distributed.

Home certainly looked inviting on October 15, 1945. I was glad to have been out there for twenty months, but more glad to be home.

Mr. Wilbour C. Lown, who was in charge of our Photographic Laboratory from 1930 until he joined the Navy in 1943, sends this account of himself from U.S. Naval Medical School, National Naval Medical Center, Bethesda 14, Maryland.

Terminal leave was over October 5—exactly three years of active duty. Time added a half stripe and the usual ribbons.

On August 26 the Navy adopted me as a Civil Servant and medical motion picture production here will continue to be my work unless the Bureau of Medicine and Surgery changes its plans—a not improbable procedure.

Mrs. Lown and I enjoy Washington and its people but still maintain our headquarters on the Hill. This will mean at least one yearly trip to Boston and continued contact with those at the M.G.H. who mean so much to us.

THE NEWS

No. 58 Boston, Mass. July 1947

ORTHOPEDIC SERVICE AFFAIRS

Without question, the most notable event of 1946 for the Orthopedic Service at the Massachusetts General Hospital was the resignation of Dr. Smith-Petersen. After seventeen years as Chief of the Orthopedic Service at M.G.H. and Clinical Professor of Orthopedic Surgery at Harvard Medical School, Dr. Marius N. Smith-Petersen has resigned from this combined position which he has graced with skill and distinction. He stepped aside voluntarily while at the zenith of his powers and before the age of retirement had been reached. During his tenure of office the staff has increased in number, the house patients have been moved from the old Ward I to new and modern quarters in White 5, and a sizeable group of Orthopedic Residents (House Officers) have left the walls of M.G.H. to carry its methods and techniques to other communities.

Two major contributions which Dr. Smith-Petersen made to Orthopedic Surgery should be noted here. The treatment of intracapsular fractures of the hip by means of the three-flanged nail revolutionized the treatment of this entity. Untold suffering and permanent crippling have been prevented and many lives have been saved by the proper use of this simple but beautifully functional mechanical device. It is undoubtedly one of the greatest contributions to the amelioration of human suffering to come from Massachusetts General in the past quarter of a century. The second contribution—perhaps equally important — which Dr. Smith-Petersen has made to the advancement of surgery of the hip is the introduction of vitallium mold arthroplasty. The restoration of a useful degree of painless motion in a hip ankylosed because of disease or trauma can now be confidently anticipated in the majority of suitably selected cases.

After Dr. Smith-Petersen's retirement as Chief of the Service, he visited Norway last summer and performed 26 hip arthroplasties — teaching the technique of the operation to a few qualified surgeons of that country. Because of this and of other services which Dr. Smith-Petersen rendered to the Norwegians during the war, he was personally decorated by the King of Norway. Upon his return home, at a most felicitous dinner in his honor, a suitably inscribed silver tray —on which were mounted replicas of the three-flanged nail (non-cannulated) and the vitallium cup — was presented to Dr. Smith-Petersen by his Visiting Staff. With that memento went our best wishes for many happy busy years of professional life at M.G.H. where bearing the title of Emeritus Chief and Consultant, he will still be available to give us sound counsel.

During a period of several months following the resignation of Dr. Smith Petersen, the post of Acting Chief was ably filled by Dr. George W. Van Gorder Visiting Orthopedic Surgeon on our Staff.

As newly appointed Chief of the Orthopedic Service, the undersigned has found the duties and responsibilities—although requiring a good deal of time—to be most pleasant. For the care of our patients we have an able and loyal Visiting and House Staff. The work is being carried on with no more than the usual evolutionary changes which are inevitable in any active service. Wednesday morning Ward Rounds — an institution on the Orthopedic Service for many years—now begin at 8 A.M., at which time the House Staff and the visiting men on service spend an hour examining patients and discussing the problems of treatment. These rounds are primarily for the benefit of the House Staff and are, therefore, restricted to those directly connected with the care of the patients. At 9 o'clock the Grand Rounds are held in the Surgical Amphitheatre on White 3A. Visitors are welcome at these rounds and there is usually a large attendance. Interesting cases are presented and discussed in detail, opinions are freely aired, and the various methods of treatment are thoroughly explored. At 10 o'clock an End Result Clinic is held in the Surgical Amphitheatre. At this time patients who were operated upon two years earlier are called back for review. These End Result Clinics are of great importance, for they give the Staff a chance to see the final operative results and to assess the various methods of treatment. On the first Wednesday of each month special types of cases are called back in groups for examination, so that a number of patients having similar conditions are seen at the same time. The usual heavy schedule of undergraduate and postgraduate teaching goes on practically throughout the whole year.

Almost everyone on the Staff is involved in some experimental investigative problem. Drs. Klein, Reidy, and Joplin are presenting a paper before the Orthopedic Section of the A.M.A. on "The treatment of slipped femoral epiphyses". Drs. Larson and Aufranc are reviewing the results of cup arthroplasty in various types of hip disability. Under a grant from the National Foundation for Infantile Paralysis, a long-time study has been in progress for a number of years on "Unequal growth in the lower extremities due to infantile paralysis". Dr. Alan J. Stinchfield, who is acting as Research Fellow on this project, is assisting Dr. Reidy and myself in this study.

During the war years, the care of fractures at Massachusetts General fell almost completely into the hands of the Orthopedic Service. A reorganization of the fracture assignments has been accomplished, and it is now functioning efficiently and with renewed interest under the supervision of the newly appointed Chief, Dr. Edwin F. Cave. The general surgical service is again represented by a number of the younger general surgeons who are taking an active part in the care of fracture patients. Fracture Rounds are held, as usual, on Friday mornings at 8 o'clock in the Surgical Amphitheatre on White 3A. There is always a large attendance, and the discussions concerning treatment are frank and free.

The Fracture Course, which was so popular before the war, is to be given again this fall, beginning in September. This course will include not only the management of fractures but of other traumatic conditions, and should prove to be a most attractive and well attended course.

Joseph S. Barr, M.D.,
Chief of Service

* * *

Dr. Paul D. White and Dr. Aub were among a group of fourteen distinguished American physicians who received Czechoslovakia's highest honor—the Order of the White Lion— for their services to that country in 1946 as members of the Unitarian Service Committee Medical Teaching Mission. Ambassador Juraj Slavik, who made the formal presentation, has called the Unitarian Missions "the most important work for health and rehabilitation which is being done in the world at present." The medals were presented at a reception at the Czechoslovak embassy in Washington, on June 4.

Dr. White has also been awarded an honorary degree from Charles University in Prague, in recognition of his work as chairman of the Unitarian Service Committee's Medical Teaching Mission in Czechoslovakia last summer. Formal presentation of the degree will be made at the sesquicentennial celebration of the university in 1948.

Dr. Chester M. Jones has gone to Europe on a two-months' teaching tour.

The Unitarian Service Committee, under the auspices of the United Nations World Health Organization, has sent a Medical Teaching Mission to Austria and

Hungary for the months of July and August. This is a mission similar to the one which went to Czechoslovakia a year ago and included on its staff Dr. Aub and Dr. Paul D. White, who was Chairman of the mission. This year eight doctors from this country will be joined by two others from Switzerland, to form a team which will spend approximately one month in Vienna and other university cities in Austria, and a second month in Hungary, lecturing on various phases of modern medicine. Dr. Jones is the only lecturer on internal medicine in the group from this country.

The other American members of the team are: Dr. Maurice B. Visscher, Professor of Physiology at the University of Minnesota; Dr. McKeen Cattell, Professor of Pharmacology at Cornell University; Dr. John J. Bittner, Professor o Cancer Research at the University of Minnesota; Dr. Alexander Brunschwig Clinical Professor of Surgery at Cornell University; Dr. Joseph P. Evans, Associate Professor of Surgery (Neurological Surgery) at the University of Cincinnati; Dr. Stuart C. Cullen, Chairman of the Division of Anesthesiology at the University of Iowa; and Dr. S. Bernard Wortis, Professor of Psychiatry at New York University.

The group left New York by plane on June 26. They expect to be back in this country the first week in September.

* * *

Dr. Elliott C. Cutler (*WS* 1916), Chief of the surgical service at Peter Bent Brigham Hospital, was presented with the Henry Jacob Bigelow Medal—the highest award of the Boston Surgical Society—at the society's meeting on June 2.

On May 15, Secretary of War, Robert P. Patterson, added an Oak Leaf Cluster to the Distinguished Service Medal which had been awarded Brigadier General Elliott C. Cutler, Chief Surgical Consultant at Headquarters of the European Theatre of Operations in World War II.

The citation accompanying the cluster reads:

> Brigadier General Elliott C. Cutler distinguished himself by exceptionally meritorious service to his government in a duty of great responsibility, from October 1942 to May 1945. As Chief Surgical Consultant, Headquarters ETO, he was responsible for the development of adequate care of all wounded and injured in the Theatre, and to meet this great responsibility General Cutler developed and promulgated policies, instituted training programs, developed channels of free interchange of medical and surgical knowledge between medical officers of all allied nations, and, by constant inspection of all echelons, assured the highest standard of surgical care.
>
> General Cutler was a source of inspiration to the hundreds of surgeons at whose hands the American soldier received the finest care the world has ever seen.

The names of the 30 students enrolled here for the first session of the Summer School of the Institute of Pastoral Care, show 9 different denominations and 11 States, from Massachusetts to California. Canada is also represented.

THE RECORD ROOM

There is hardly a more important centre in the hospital than the Medical Record Room, with its vast store of material, carefully indexed and filed, and ready for those who wish to study deeply into cause and effect in the treatment of diseases and injuries — usual and unusual —all the way from a headache to a carcinoma or from a simple contusion to a compound comminuted fracture.

The clinical records of the Massachusetts General began when the hospital opened on September 3, 1821, and never has there been a break in the file during all these 126 years. Every patient who has ever entered here has a record—indexed, cataloged, and filed. In the beginning they were written in large folio volumes by the Visiting Physician and the Visiting Surgeon, and with ink made at the hospital. They are as legible today as when they were written. In 1822 they were placed in charge of the Apothecary. In 1841 a special Committee was appointed to see that they were "carefully preserved". During the period from 1839 to 1853 all records were indexed in three large leather-bound volumes by a physician especially appointed. The writing of the records themselves now became the duty of the House Physicians and Surgeons, and later — in 1851—of the House Pupils. In 1857 the head of the Library Committee became directly responsible for them, and it was decided that a Pupil must have all his records fully completed in order to receive his diploma at the end of his service. This requirement is still in effect.

The period toward the latter part of the 1800's saw records of less completeness and lacking in important data. It became increasingly evident that someone should be appointed to have complete charge of the precious documents and, at the end of 1897, the writer of these brief notes was appointed.

In 1896 the Pathological Laboratory was established under the able care of Dr. J. Homer Wright and became intimately associated with the Record Room. for here was the final word on a diagnosis, and reports from the Laboratory were immediately sent to be filed with their respective case histories. Out of this combination grew the famous Clinico Pathological Conferences of the late Dr. Richard C. Cabot which, as long as he lived, drew large groups of students.

During the next 28 years great changes took place in the records, and the bound volumes were replaced by the loose-leaf system. Then, later, came the unit system — filing under one cover all information concerning a given patient, no matter in what department he might have been treated, or might *be* treated in days to come.

In 1925 the management passed into the hands of Mrs. Genevieve C. Chase. recently retired. It is now in charge of Miss E. Louise Seymour, a Registered Record Librarian, as were the other two incumbents.

This department constantly increases in volume of work. It occupies a large space in the basement of the Out-Patient Building, and its present staff of 58 carries on the work of assembling, cataloging, filing, transcribing summaries, and servicing the reading rooms, central file, admissions, etc. for not only the General Hospital but Baker Memorial and Phillips House as well. The department is never closed—twenty-four hours round the clock. Three out of five of the night staff are college students.

The term "Record Librarian" was adopted about 1912, when a group of five women from the large hospitals of Boston began regular meetings for mutual helpfulness in the handling of hospital medical records. This movement spread until, in 1928, at the invitation of Dr. Malcolm E. McEachern of the American College of Surgeons, people thus employed all over the country attended a meeting of the College held in Boston. At the end of that meeting a group of ninety had formed a country-wide Association, under the presidency of the writer. This group now numbers over 1800 members and is known as the American Association of Medical Record Librarians. Its members may be found in every State in the Union, as well as in Mexico, Hawaii. and Porto Rico. The Canadian Association is an outgrowth of it.

Hospitals would now be lost without their Record Libraries, for medical research could not be carried on without them.

Grace W. Myers,
Honorary President,
American Association of
Medical Record Librarians

* * *

At the annual dinner-meeting of the MGH Dental Staff on May 13 at the Harvard Club, Dr. John A. Breen, recently retired Chief of the Friday Clinic, was honored with the presentation of a scroll, signed for the hospital Trustees by Mr. Francis C. Gray and by Dr. Faxon. Dr. Peter A. Dempsey, Dental Surgeon at M.G.H., presented Dr. Breen with a handsome writing set from the men on his service.

Examination of our "Who's Who" in the MGH Dental Service would reveal that John Breen began his clinical work in 1913 when the number of staff members was three or four. As the service grew, he became a natural guide and an admired teacher to the new staff men who were associated with him. During his years of service he has been a useful contributor to management and administrative policy of the clinic. We hope you will visit us often at the hospital, John and we wish you a little sunshine every day.

During the evening Dr. Thoma, Chief of the Dental Service, presented Dr. Faxon with $2000, which will be held bv the hospital for special use by the Dental Department. The fund was contributed by various members of the department and by Dr. Thoma's friends.

Dr. Oliver Cope, Assistant Professor of Surgery at Harvard Medical School and Visiting Surgeon at M.G.H., spoke interestingly on "The education of the clinical specialist". Much of his point of view could appropriately be considered in Dental Education.

F. C. D.

The International Council of Nurses held its Ninth Quadrennial Congress during the week of May 12 to 16, at Atlantic City. At this significant convention the Massachusetts General Hospital was represented by Miss Ruth Sleeper, Miss Katherine Hardeman, and Miss Norma Larson. During the Congress, Miss Sleeper, in behalf of the National League of Nursing Education, presented to the International Council an award for its outstanding leadership in the upbuilding of nursing to provide better nursing care of the sick throughout the world.

Miss Sleeper has very recently been appointed chairman of the Education Committee of the International Council of Nurses. This Committee will meet here in Boston very shortly, bringing to us as guests leading nursing educators from England, Greece, Belgium, and other nations.

The arrival of the members of this Committee will climax a series of more than thirty visits by nurses from all parts of the world. During May and June, the guests who observed the activities of the Nursing Service and School included sixteen nurses from England; two apiece from France, Australia, and Sweden; and one each from Poland, Denmark, Scotland, South Africa, India, Chile, and Norway. Miss Escobar, from Chile, and Miss Helmert, from Norway, are remaining here for a short time in order to do some work on the wards.

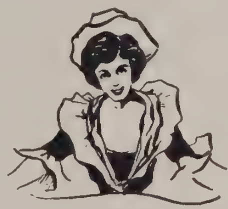
The Alumnae Association of the School of Nursing enjoyed an unusually fine program for its "MGH Homecoming", which took place on June 14 and 15. Featured were a luncheon on Saturday, the 14th, given by the Trustees of the Hospital; a discussion by Dr. Paul D. White of "Progress in knowledge and treatment of cardiovascular diseases"; a discussion and demonstration of "Nursing care of patients with pulmonary edema", by Miss Barbara Chapman, Head Nurse on Bulfinch 3; a dinner on Saturday at the Hotel Vendome, with Dr. Oliver Cope as speaker; and a Sunday afternoon tea held at Walcott House. Several hundred alumnae, from all classes of the school, returned for the homecoming.

Picnics at the Storrow estate in Lincoln, now owned by the hospital, are becoming a popular activity with both student and graduate nurses. Three groups of students, numbering between twenty-five and fifty, have held highly successful picnics out there during June, and more outings are planned for the summer. A sizable group from the Out-Patient Department also made the trip to Lincoln for a picnic supper on June 10.

* * *

There are 80 names at the present time registered in our file of foreign visiting physicians and surgeons who are studying our methods and techniques here at Massachusetts General. In addition to visitors from several States of the Union, 30 foreign countries are represented: Argentina, Austria, Belgium, Brazil, Chile, China, Cuba, Czechoslovakia, Denmark, Ecuador, England, France, Greece, Honduras, Iceland, India, Iran, Italy, Mexico, New Zealand, Nova Scotia, Paraguay, Peru, Portugal, South Africa, Spain, Sweden, Switzerland, Syria, and Venezuela.

The foreign group changes in personnel from time to time, but the above record is typical of the services M.G.H. is rendering to medical and surgical science, the world over.



The Vincent Club has contributed $36,000 to the Vincent Memorial Hospital during the past year—$23,000 of it from the annual Vincent Show.

Commendatory phrases of our own falter before such figures as those.

* * *

Until around the middle of July, a most interesting window display may be seen at the headquarters of the Massachusetts Blue Cross at 38 Chauncy Street. The subject of the exhibition is "Massachusetts General—New England's Pioneer Hospital". Three stages in our development are represented—1821, 1846, and 1947. Pictures of our buildings from the single Bulfinch to the present group, and examples of the evolution of surgical instruments from the earliest crude equipment to those of the present day are among the many items shown. Everything in the exhibition is on loan from M.G.H.

* * *

Faced with a huge deficit, due to rising costs and the volume of its charity work, Massachusetts General Hospital entered 1947 with the need for much new Occupational Therapy equipment and a woefully inadequate budget for the purpose. For some reason, O.T. at M.G.H. is almost entirely charity work. More than 5,000 treatments were given in O.T. in 1946. The average cost to the Hospital per treatment per patient was $1.70. The average receipt per patient treatment was 11¢ — a loss to the Hospital of $1.59 for every patient every time he was treated.

Like many other facets of medical work, O.T. not only must rebuild broken bodies, but also must arouse the interest of the patient in doing that which will accomplish the purpose. The enthusiasm of the patient is very important to the success of his treatment. Hence, the O.T. exercises must be stimulating. That is why such items as carpenters' tools, broken radios, leather for tooling, wood for carving, and sewing machines are much more important to Occupational Therapy than are the professional muscle building devices.

Learning of the problem, the Hospital's public relations counsel began to seek a solution. The Massachusetts Industrial Editors' Association was approached through its Vice-President. He was shown a list of the specific needs of O.T. and the reason for each. Could not the Industrial Editors help the Hospital get contributions of some of the equipment? Quantities of such material must exist in the companies employing the members of the Industrial Editors' Association. If they started searching in their own companies, could they not find items on that list, the condition of which would preclude them from being efficient in manufacturing, yet sufficiently workable for the use of O.T. patients? Would the Industrial Editors help?

The Vice-President of the Association discussed the matter with the President, and they decided to take on the MGH O.T. project. They sent a list of O.T needs to all of their members, together with covering letters. The letters were followed up by personal telephone calls, and here at M.G.H. the equipment began to arrive.

One company sent two electric sewing machines and offered to supply electricians to install them should the Hospital need such help; a cordage company sent a knot-tying book, a variety of its rope and cord products, and offered to establish a monthly prize for the O.T. patient submitting the newest and most novel use of rope; a Boston book store contributed handicraft books on such subjects as leathercraft, whittling, radio, etc.; a shoe machinery corporation sent leather for tooling; other companies sent colored pencils, paper, drawing materials, linoleum pieces, glue, and soldering irons; one large soap company contributed a variety of its products for sculpturing purposes; and other gifts included sheets of plastics, miscellaneous radio parts, greeting cards for use in making decorations, large wooden workbenches, hard rubber sheets, a football, and several different woods for carving and whittling. Many of the contributing companies wish to make similar gifts on a regular basis —particularly those whose offerings are expended with use.

"The patients are very much interested in the arrival of these gifts," said D Arthur L. Watkins, Chief of the Department of Physical Medicine at M.G.H "What especially pleases them is that these business men, whom none of them know, are taking such an interest in their plight. To me, the most gratifying result of this project is the case of the paraplegic patient who wasn't interested in anything we could offer him — until he discovered knot tying."

In her letter of thanks to the cordage company, Miss Ruth Steglich, Acting Supervisor of Occupational Therapy, wrote, "You will be interested to know that we have a paraplegic patient who has been hospitalized for well over a year and that up to this time we have been unable to interest him in anything. Upon receiving your *Book of knots* we gave it to him to look over, and he was fascinated with it — trying the different knots and most anxious to TEACH US! This is a real victory because this patient has been so depressed that his recovery has been severely impaired. If this should be the only patient we are able to help as a result of your contribution, you may still sit back and be very pleased. However, I am sure this experience will be repeated many times over."

And thus, again and as usual, does so-called hard hearted industry prove its warm heartedness in time of need.

The Board of Trustees, at their meetings on May 16 and 29, voted:

To accept the resignation of Dr. John J. Rupp from the position of Assistant Anesthetist, effective July 5;

To promote the following Surgical Interns to the position of Third Assistant Resident in Surgery as of July 1: Dr. Thomas H. Green, Jr., Dr. Falls B. Hershey, Dr. George S. Richardson, Dr. Clifford J. Straehley, Jr.

To appoint:

Dr. Albert J. Finck as Assistant Resident in Anesthesia for two years, beginning August 1;

Dr. Joseph P. Holihan as Assistant Resident in Anesthesia for two years, beginning October 1;

Dr. Werner Hugin as Extern in Anesthesia for one year, beginning May 1;

Dr. James J. McCort as Radiologist, effective on or about July 1.

At their meetings on May 14 and 28, and June 4, the General Executive Committee voted to appoint:

Dr. Fred Alexander as Research Fellow in Medicine, to work with Dr. Evelyn;

Dr. William F. Loomis as Research Fellow in Biochemistry, under Dr. Lipmann;

Dr. Charles G. Stetson as Graduate Assistant in Radiology, beginning July 1.

The Committee also voted to change the title of Dr. Charles S. Wise from that of Research Fellow to that of Clinical Fellow in Physical Medicine, as of January 1.

On July 1, 1947, the Standard Nomenclature of Diseases and Operations was installed, replacing the Massachusetts General Hospital system of cataloging diseases.

The basic method of classifying diseases under this system is twofold — topographic (or anatomic) and etiologic. Three or more digits are used for each element and they are separated by a hyphen, the topographical number being written first. The topographical classification is divided into eleven systems, each dealing with a major system of the body. The etiologic classification is divided into thirteen categories, each dealing with a related group of causes of disease.

All diagnoses may be found in the index and the proper code number located by referring to the page number as indicated in the index. Under no conditions are complete numbers in the Nomenclature to be changed and others substituted.

It is important that diagnoses be recorded on the front sheet of each case and that these conform with diagnoses listed in the Standard Nomenclature.

As we cannot establish or maintain a correct index of diseases without proper diagnoses, we are depending upon the cooperation of each physician to make this system a success.

Copies of the book *Standard nomenclature of diseases and standard nomenclature of operations* will be placed in each ward, each clinic, and at each dictation station.

A story is told (by whom we have forgotten) about a crude, pine table which was up for auction somewhere in England a few years ago. On the table was an ink-stain. The auctioneer, knowing full well the price he could ultimately get for the piece, started the bidding off with the suggestion of one thousand pounds. He told the assembled crowd — many of whom were collectors of the world's rarest treasures — that he was not selling a table, but an ink-stain — an ink-stain made by the great Shakespeare himself on that night when, no longer able to endure Ann's tirades of fury against his doubtless all too true failure to provide for his wife and children, he banged his pen down onto the table where he had been trying to write a sonnet, tore out of the cottage, and on to London — never to return to Ann. How much the table finally brought is not told, and whether the story is true or not does not matter. The reason for telling it now is to emphasize that it was the ink-spot, splashed upon it by a great man, which enhanced the value of the table.

In our Archives Room is a fine old double desk with hinged covers, which was a part of the hospital equipment in the early days of the Bulfinch and later during the life of the South Surgical Service from 1894 to 1912. On the under sides of the covers and on the desk itself beneath them are inscribed the names of nearly 200 House Officers who, over the years, sat at that desk to write up their histories and daily notes. The earliest signature is that of A. F. Sawyer, 1851.

While the desk itself is a sturdy one and of attractive design, it is those signatures — written by young men, many of whose names in later years stood for the highest achievement in their profession — it is those signatures which place this desk in the category of the priceless. With all due respect to the great Shakespeare, this desk of ours is beyond the reach of the highest bidder.

It has long been our desire to assemble the names of the inscribers in an alphabeted list, so that any one of them may be easily found. It has taken a great deal of time to decipher several of them and to check for accuracy in doubtful instances. We hope the list will be welcomed by those of our alumni who often come in to search for special names.

Here are the signatures, exactly as they were written:

F. D. Adams, 1863; F. H. Albee, 1903-04; J. B. Ayer, 1872.

F. G. Balch, Aug. 1, '92 to Feb. 1, '93; H. C. Baldwin, 1884-5; A. F. Barnes, '01; James Dellinger Barney, 1904-05; Edward F. W. Bartol, 1901; John W. Bartol, '91; Howard W. Beal, 1899; A. A. Beebe, '99; H. Binney, 1902; J. G. Blake, May 1860; H. T. Boutwell, 1869; G. W. W. Brewster, '93; F. M. Briggs, 1883-84; William A. Brooks, Jr., '91-92; A. N. Broughton, 1899; Dillon Brown, Feb. 1885; Francis L. Burnett, 1908; Charles S. Butler, '99; J. L. Butler, '04-05.

Hugh Cabot, 1899; Elton C. Cameron, 1926; Arthur L. Chute, Mar. 1, 1894 to Apr. 1, 1895; D. S. Clark, 1914-15; George Oliver Clark, 1903-04; J. Payson Clark, '86-87; Farrar Cobb, '92-'93; Ernest Amory Codman, '95; Wm. Cogswell, '95-'96; Algernon Coolidge, Jr., 1886; F. S. Coolidge, Feb. 1, '91-Aug. 1, '91; Harvard H. Crabtree, '13; A. R. Crandell, 1898; Arthur Hallam Crosbie, 1906-07; John W. Cummin, '97; Edw. F. Cushing, '87-88; Harvey W. Cushing, Apr. 1, 1895; Lawrence F. Cusick, 1905-06.

John Dane, 1893; A. Albert Davis, '93-94; Lincoln Davis, '99; Charles O. Day, Jr., 1909; Hasket Derby, 1857; George C. Dolliver, Aug. 1-Dec. 1, '95; W. A. Dunn, May 1874; W. M. Dunn, '11-12; Thomas Dwight, [1866].

Richard E. Edes, '95; Kendall Emerson, 1902; Waldo E[merson], Aug. 1873; O. H. Everett, 1876-77.

N. W. Faxon, 1906; Luther Mitchell Ferguson, 1914; J. M. T. Finney, Feb. 1,-June 15, '89; Arthur L. Fisk, June 15, '89-Feb. 1, '90; Elisha Flagg, 1902; Carleton P. Flint, '97-98; Burnside Foster, Aug. 1, 1886-Feb. 1, '87; G. H. Francis, 1886-7; [George E.] Francis, 1862.

Homer Gage, '87-88; F. E. Garland, '03; J. Garland, May 6, 1920; J. E. Garland, July 31, 1876; Harold G. Giddings, 1909; C. M. Godding, 1883; F. Goodridge, '03-04; A. H. Gould, 1901; James C. Graves, Jr., '05-'06; Robert J. Graves, 1903-4; J. O. Green, 1865; Robert B. Greenough, '96.

Herbert J. Hall, '96; Torr Wagner Harmer, 1908; H. F. Hartwell, 1899; Floyd F. Hatch, 1915-16; Carl Arthur Hedblom, 1913; William D. Hodges, 1880-81; J. Homans, '03; J. Homans, Jr., 1861; J. Homans, 2nd., 18[82]; H. Hooper, 1868; Samuel Howe, 1875; Joshua C. Hubbard, '96-97; James Lincoln Huntington, 1908.

S. W. Jackson, [1916].

B. B. Kent, Jr., May 1, 1868; Edw. Kidder, Nov. 1, '93-Mar. 1, '94; F. C. Kidner, 1905; G. M. Kimball, Aug. 1, 1884.

S. W. Langmaid, May 1, 1863; W. George Lee, 1904-05; J. M. Little, Jr., 1902; S. A. Lord, 1894; Howard A. Lothrop, '92.

T. J. Manahan, 1900; G. E. Mason, 1864; Wm. C. Mason, 1877-8; Carleton Ray Metcalf, 1906-07; Richard Henry Miller, 1911; W. J. Mixter, 1907; George H. Monks, 1880; O. F. Montgomery, 1915-16; James G. Mumford, '90.

F. S. Newell, '96; Harvey F. Newhall, 1905-06.

Carl Shepard Oakman, 1904; Walter B. Odiorne, '99-00.

George B. Packard, Jr., 1916; Charles F. Painter, '96; Frederick W. Pearl, '94-95; Edw. A. Pease, Feb. to Aug. '92; O. J. Pfeiffer, 1884; J. K. Phillips, June 20, 1885; Hardy Phippen, '88-89; W. G. Phippen, 1904-06; Charles A. Porter, '92-3; A. C. Potter, 1900; John W. Pratt, Feb. 1, 1886; Henry Dudley Prescott, 1903; Charles R. L. Putnam, [1895].

William Carter Quinby, 1902-3.

Hamilton Rice, 1904-05; D. N. Richards, '11-12; Edward Peirson Richardson, 1906-07; Edward H. Risley, 1907-8; Chandler Robbins, '05; S. Robinson, 1902.

Henry L. Sanford, 1900-1901; L. M. Sargent, Jr., 1855; H. Sargeun [?], 1851-1852; A. F. Sawyer, 1851; C. L. Scudder, '88-89; Ralph H. Seelye, '90-91; H. A. Shaw, Aug. 1, 1890-Feb. 1, 1891; R. F. Sheldon, '12; Channing C. Simmons, 1899-1900; H. W. Smith, '02-03; W. L. Smith, Aug. 1, '91-Feb. '92; Richard Sprague, Aug. 1, 1887-Feb. 1, '88; H. R. Stedman, 1873-4; Donald B. Steenberg, 1915; J. H. Stickney, May 5, 1858; A. K. Stone, Feb. 1, 1888-Aug. 1, 1888; James S. Stone, '94; Malcolm Storer, '89-90; William D. Swan, 1885-6.

G. G. Tarbell, 1864; Augustus Thorndike, Aug. 1, 1888-Feb. 1, 1889; H. S. Thorndike, May 1, 1866; Wm. Thorndike, May 1856; James Rockwell Torbert, 1902.

R. G. Wadsworth, 1901; Hobert E. Warren, '94; J. C. Warren, May '65; Frederic A. Washburn, Jr., '97; Thomas Waterman, Jr., May 1, 1867; Alfred A. Wheeler, '94; John B. Wheeler, 1878-9; G. S. Whiteside, 1898; W. A. Winn, 1875-76; F. B. Winslow, 1901; Charles B. Witherle, Aug. 1, 1880; Willard P. Woodbury, 1907-8.

John D. Yost, '98.

There are a few other old desks in the hospital which bear the signatures of House Officers who used them in days gone by. It is our intention to collect the names from them, also, as time permits. In the meantime, here is a problem for you. If you can solve it or throw any light upon it, we would appreciate it very much.

Inside one of the covers of this desk in the Archives Room is drawn a heart, bulging with love, and shot through the middle with an arrow from Eros's bow. It bears two sets of initials: J. R. and S. C. We hope it happened and that they lived happily ever afterward. But, who were they? Does anyone know?

Dr. George Gardner, formerly of the McLean staff and now Co-Director of the Judge Baker Guidance Center, has been appointed by Governor Bradford to a commission to study ways of preventing sex crimes.

On May 27 the Senior Class at McLean presented to the hospital a bronze plaque in memory of the three graduates who were lost in the war. Mr. Ralph Lowell, Chairman of the McLean Hospital Committee, accepted the gift in the name of the Trustees. The men honored are: John Moriarty, Herbert Small, and Walter Avery.

Alumni Day at McLean was May 12. There was a business meeting in the Chapel during the afternoon, an opportunity to visit the halls, supper in the Pierce Building, and a dance and party in the Men's Gymnasium in the evening.

MASSACHUSETTS EYE & EAR INFIRMARY

The appointment of Dr. Parker Heath as Ophthalmic Pathologist has been announced by the Board of Managers of the Infirmary. Dr. Heath will come to the Infirmary in July. He will also be in charge of postgraduate teaching in Ophthalmology at the Harvard Medical School. An outstanding Eye Pathologist, he has for a number of years been Professor of Ophthalmology and Chief of the Eye Staff at Wayne University, Detroit, Michigan. Publications by Dr. Heath include: Xanthomatosis or lipoid histiocytosis (report of ocular observations in two cases of Christian's syndrome: A correlation with other ocular syndromes), Archives of Oph. *5*: 29-52, 1931; Ocular lipid histiocytosis and allied storage phenomena, Arch. of Oph *10*: 342-364, Sept. 1933; Some physiologic and pharmacologic reactions of isolated iris muscles, Arch. of Oph. *21*: 35-44, 1939; The pharmacological behavior of the intraocular muscles. I. The problem of sensitization and methods for its study, Amer. Jour. of Oph. *23*: 11, Nov. 1940; The pharmacological behavior of the intraocular muscles. II. Sensitization phenomena in the dilator and sphincter iridis, Amer. Jour. of Oph. *23*: 12, Dec. 1940. The last two articles were written in coöperation with Dr. Erich Sachs.

Dr. Edwin B. Dunphy has returned from Philadelphia where he helped conduct the examinations for the American Board of Ophthalmology in June.

Among recent visitors to the Infirmary were Miss Cockayne, Matron of the Royal Free Hospital, London, England; Miss Jeanne Dieltjens, Antwerp, Belgium; and Miss Irene Hall, Matron, Newcastle Hospital, Newcastle, Australia.

Dr. Bernard Zonderman, who left his residency at the Infirmary in October 1946 to enter military service, has been appointed Clinical Assistant in Oto-Laryngology by the Board of Surgeons in Oto-Laryngology.

Dr. Adolph F. Reiter and Dr. Charles S. Lane, Jr. have been appointed Graduate Assistants in Oto-Laryngology. Dr. Roland Lavoie and Dr. Lane will take up their residencies in the fall.

Dr. Elizabeth DeBlois has been appointed by the Board of Managers to the position of Assistant Surgeon in Oto-Laryngology.

New addresses:—

Surgeon (R) Burnet M. Davis (*r.s.* 1942), 4 Woodcote Park Ave., Purley, Surrey, Eng.
Dr. Charles C. Derrick (*P* 1940 & *EM* 1942), 26 Temple St., Springfield, Mass.
Dr. Robert N. Ganz (*CM* 1925), 19 Bay State Road, Boston, Mass.
Dr. Volta R. Hall (*r.p. Psychi.* 1938), 372 Marlborough St., Boston, Mass.
Dr. John Homans, Jr. (*WM* 1942), Cushing Veterans Administration Hospital, Framingham, Mass.
Dr. Frederick C. Irving (*WS* 1911), 1180 Beacon St., Brookline 46, Mass.
Dr. James R. Lingley (*res. R* 1931), 27 Elm St., Worcester 8, Mass.
Dr. Michael J. O'Connor (*Oph.* 1946), 216 Valley National Bank Bldg., Tucson, Ariz.
Dr. Daniel V. Troppoli (*N* 1927), 63 Orchard Ave., Providence, R. I.
Dr. Gray H. Twombly (*WS* 1932), 620 Park Ave., New York, N. Y.

Dr. William S. McCune (*WS* 1937) writes, from 2025 Eye Street NW, Washington 6, D. C.:

THE NEWS has been arriving at regular intervals and has always been read from front to back, not only by myself but also by my wife and family.

My work at this time consists in teaching surgery at George Washington University School of Medicine, serving as Attending Surgeon at the Veteran's Hospital, as Consultant at the Walter Reed General Hospital, and trying to build up a faltering private practice of surgery.

We spent a very happy few days at the General last October, and hope to visit you again in Boston before long.

Four years ago we published a letter from (then) Major Clark Young, MC (*ES* 1923). Nothing from him since then until this letter.

At my separation examination, a year ago, they discovered a spondylolisthesis. X-ray proved it to be a severe one and referred me to Letterman General Hospital for treatment. Dr. (or, rather, Major) Fred Rhinelander [*ES* 1937 & *Or.* 1938] examined me and performed a spinal fusion. I was discharged from the Army with no physical disability several months ago, and have resumed my practice of medicine and surgery in Salt Lake City. My office is in the Medical Arts Building. I left the Army with the rank of Lieutenant Colonel.

Major Rhinelander is making a fine reputation for himself there in San Francisco. He did a magnificent job on me. I'd be proud to show anyone my incision scar.

Best regards. Always enjoy THE NEWS.

In reply to our inquiry regarding his Army status, this interesting letter has come from Lt. Col. Milton S. Thompson (*Or.* 1934), Chief of the Orthopedic Section, Brooke General Hospital, Brooke Army Medical Center, Fort Sam Houston, Texas.

It is true that I have accepted a commission in the Regular Army and that I have been here in San Antonio since April 1946.

The loss of the qualified civilian doctors is keenly felt in Army hospitals. The older qualified specialists (the Surgeon General is a Diplomate of the American Board of Orthopedic Surgeons) can no longer personally participate in the professional care of patients. The Resident Training Program, to permit the

Lt. Col. Norman E. Freeman, MC, AUS (*r.s. WS* 1935) receiving the Army Commendation Ribbon from Major General George P. Hays at the Presidio of San Francisco

younger officers whose training has been interrupted by the exigencies of war to qualify as specialists, is well under way. As is well known, the training is being given in military installations and in affiliated civilian institutions. Basic Science refresher courses are being given in many medical schools. At the present time I have five Regular Army Trainees, or Residents, all of whom, I believe, will be ready to take Part One of the Orthopedic Board examinations.

Every issue of The News tells of friends I want some day to see again.

We have heard from Dr. A. Allison Wills, Jr. (*a. Psychiat.* 1937). He writes:

Since my release from the Navy a year ago, I left the Boston area to become Assistant Medical Director of the Life, Accident, and Group Departments of the Travelers Insurance Company of Hartford, Connecticut.

The News is very much appreciated and keeps me well informed of the activities of many very good friends. I miss the many happy associations with the Massachusetts General Hospital.

I am enclosing a copy of an address I delivered recently at the Annual Meeting of the Bureau of Personal Accident and Health Underwriters at Stockbridge, Mass. You may find something of interest for The News in this paper.

Indeed, there is. Every word of it is Newsable. However, our limited space makes it impossible to transcribe the address in its entirety, and any form of condensation would destroy its value. The subject of the paper is "Medical underwriting the impared accident and health risk", and those who wish to read it may find it in the office of The News. One section, on the disabled veteran, should be of special interest to many of our Staff.

We are so eager to know what all our men are doing after they are released from military service and have resumed private practice. Letters giving such accounts are more than welcome and are always read with much interest by the writers' friends.

A letter of this sort has come from Dr. Harold H. Hamilton (*r.s. PH* 1933). It says:

Reconversion is complete. I reopened my office for the practice of surgery in January 1946. It had been closed since the previous April when Dr. Sherman J. Beers went into the Navy. I was very fortunate in finding an excellent medical replacement in Dr. Robert M. Putnam, who took offices with me. We have been able to practise our respective specialties quite compatibly here at 70 Court Street, Plymouth.

We have had our share of ex-GI's come to settle and practise in and about Plymouth during 1946. Most of these men are well qualified and have become members of the Staff of the Jordan Hospital. Staff meetings have been well attended and discussion is becoming increasingly interesting. Starting this month, we shall have a second staff meeting monthly, to be held as an evening "coffee" in the home of a staff member. This rises out of a mutual desire for more time for discussion of clinical subjects which are always crowded by executive and administrative matters at other meetings.

The News continues to come over my desk regularly and always lives up to its name.

Dr. Gilbert L. Adamson (*r.p. N* 1930) brings his record up to date in this letter from the Winnipeg Clinic, Winnipeg, Manitoba.

In the spring of 1943 I went to Ottawa as Consultant in Neuropsychiatry to Air Force Headquarters, and had the job of organizing neuropsychiatric services in the R.C.A.F. The summer of 1945 I spent in the United Kingdom and Belgium, during which time I had a very pleasant visit to the Medical Board of the 8th A.A.F. After my return I was fortunate enough to be able to visit the psychiatric treatment centre organized by Lt. Col. Roy Grinker in St. Petersburg, Florida. This was a valuable experience, as the R.C.A.F. was at that time developing similar treatment units, though on a much smaller scale.

I was demobilized — or "released", as we say—in December 1945, and have settled down to civilian practice again with only a minimum of disturbing emotional repercussion. Group practice has perhaps made my reconversion easier, but the responsibility of private practice and getting back to lecturing and giving undergraduate clinics put the idea of an orderly (temporary) retreat into my mind and I went away last summer for a couple of weeks of golf in Victoria. Since my golf is not as serious as it was when Dr. Gundersen used to beat me in Boston, the holiday had a rejuvenating effect.

To all of you who have responded so generously in the matter of subscriptions and additional contributions during the past year, The News is glad to report that for the first third of 1947 our deficit is only $17.41, as against a much larger figure for a similar period before the number of complimentary copies was so drastically reduced. We are hoping this $17 deficit can be worked off during the rest of the year.

The struggle to make both ends meet has not lacked its humorous moments. One new subscriber—Dr. Lester A. Brown (*Oto-Lar.* 1937) — responded with, "Whether you know it or not, you certainly are a good salesman and especially for The News." But the choicest response of all—so choice we cannot resist passing it on to you—came from Dr. Linn F. Cooper (*WM* 1928). For some reason or other Dr. Cooper had not replied to our note telling him that since he was no longer in military service a subscription would be necessary if he wished to continue to receive The News. He sent us a note, however, which we published in the May number. As is our custom whenever a person's name appears in The News, we mailed him a marked copy, together with a note saying that although he had not subscribed we were sending him a copy of that issue because of his letter. By return mail we received a 7-word note—nothing more, except the enclosure—just 7 words: "You break my heart. Here's a dollar."

THE NEWS

No. 59 Boston, Mass. August 1947

UROLOGICAL SERVICE AFFAIRS

Since the report of two years ago, a decided change has occurred in the organization of the Urological Service. At that time the service was composed of a Chief and Resident Staff. Now, in addition to these, there are four Associate Visiting Urologists, three Assistants in Urology, and two Graduate Assistants. A Research Fellow is expected this summer to work on special problems, such as urinary tract infections. The service has a liaison with the Surgical Service in Dr. Simeone, and with the Plastic Service in Dr. Bradford Cannon. Thus, all activities of the service are adequately covered — including teaching, and house and out-patient departments — and provision is made for progressive work.

During the past year there were 480 admissions to the Urological Service. A total of 468 operations were performed, with 6 deaths. This is an operative mortality of 1.3 percent. One hundred ninety-eight operations were for prostatic obstruction. There were 3 deaths among those patients — a mortality of 1.5 percent. The majority of the operations were performed by the Resident Staff.

Investigative work during the past year included the following: Studies on the control of urinary tract infections with recent sulfa compounds, stone dissolution by chemical means, the early diagnosis of cancer by stained smear preparations, the cure of early prostatic cancer by radical operation, and a study of blood hemolysis during transurethral resection of the prostate. Interest in the prevention of fatal pulmonary emboli following prostatectomy contined during the year. We are able to report that as a result of careful examination of our patients, a conservative policy of superficial femoral vein division, and a large measure of good fortune, we completed two years of prostatic surgery without a death from pulmonary embolism.

We look forward to another active and progressive year for the service.

Fletcher H. Colby, M.D.,
Chief of Service

* * *

Dr. Churchill and Dr. Walter W. Palmer (*EM* 1911) received honorary degrees at Princeton University this year.

The Doctor of Science award to Dr. Churchill carried the following citation:

> A brilliant surgeon, sympathetic teacher, and outstanding investigator. His work in the surgery of the chest and in the functions of the parathyroid gland, and his fundamental clarification of the problems of wound-healing in the war, established his place as one of the great figures of present-day surgery.

Dr. Palmer is now Professor of Medicine at Columbia College of Physicians and Surgeons. The citation accompanying his Doctor of Science degree reads:

> An outstanding man of medicine, whose early researches in the field of biochemistry contributed to the present-day application of the techniques of the fundamental sciences to the solution of the problems of clinical medicine. His capacity for leadership and for helpful human relationships has been especially effective in developing and inspiring his younger associates, and has played to make his medical clinic one of the great teaching and research organizations of the country.

Rt. Rev. Henry Knox Sherrill, Presiding Bishop of the Protestant Episcopal Church in the United States of America, who was a member of our Board of Trustees from 1928 to 1934 and Chairman of that Board from 1934 through 1946, received the honorary degree of Doctor of Divinity from Princeton this June. His citation reads:

> The accepted leader of the Protestant Episcopal Church, recently chosen in recognition of his enlightened and forceful services in its spiritual and temporal advancement. A fearless advocate of the Church's commitment to its world-wide obligations in the fields of unity and Christian helpfulness, he has by his breadth and his integrity already given the church a new vision of its mission and its opportunities in a changing world.

It was with deep regret that the Dermatology Department said good-bye to Dr. C. Guy Lane at the end of June. After many years of faithful service, Dr. Lane has retired from the hospital and will devote his entire time to catching up with his extensive private practice.

Dr. Lane came to the Dermatology Department of the Massachusetts General Hospital in September 1919, after dermatologic postgraduate training in New York. Prior to that time he had done some years of general practice and then served in the first World War. In 1928 Dr. Lane was appointed Dermatologist to the hospital and in February of 1936 became Chief of the Dermatologic Service. In 1943 he was asked to continue beyond the hospital retirement age because of war emergency. Many students, house officers, and residents will remember his teaching and sound advice throughout the years.

Outside of dermatologic circles, few realize how much Dr. Lane has contributed to the advancement of our specialty. He has given more than generously of his time to dermatological societies and to various committees of the American Medical Association. He was instrumental in the formation of the American Board of Dermatology and Syphilology and served for many years as its Secretary.

Dr. Lane organized our postgraduate dermatologic training program to make it acceptable to the American Board of Dermatology and Syphilology; with but few exceptions our candidates have qualified as diplomates of the Board. During the eleven years that Dr. Lane has been Chief of the service, 108 papers have been published from our department, of which Dr. Lane was himself the author or co-author of 27.

We are pleased to learn that Dr. Lane has been appointed Emeritus Professor of Dermatology at Harvard Medical School, and we hope he will take time from his practice to attend some of our staff meetings. Dr. Lane's administration of the departmental affairs and his helpful guidance to many of us as individuals will not soon be forgotten.

G. M. C.

Dr. Robert S. Schwab left for London, England, on July 10, by American Airlines Overseas, to attend the International Electroencephalographic meeting in London. Dr. Schwab represented the U.S.A. as a delegate, and read a paper. He also attended the International Physiological Association meeting at Oxford and read a paper there. His visit was of three weeks' duration.

Dr. Mary A. B. Brazier, who was also in England, read a paper at the International Electroencephalographic meeting.

Dr. and Mrs. William Sargant, who have been visiting Dr. and Mrs. Schwab in Boston, accompanied Dr. Schwab on their flight back to England. Dr. Sargant held a Rockefeller Foundation Fellowship in Dr. Stanley Cobb's department in 1938 and 1939.

DENTAL DEPARTMENT

The National Dental Meeting was held in Boston this year, August 4 through 8. The following lectures were given at Massachusetts General Hospital:

"Signs of general disease in dental and oral surgical patients", by David Weisberger, M.D., D.M.D., Assistant Professor in Dental Medicine at Harvard University, and Stomatologist and Assistant Oral Surgeon at Massachusetts General Hospital.

"Out-patient and operating room techniques", by the Staff of Massachusetts General Hospital Dental Clinic.

"Periodontal surgery", by Henry M. Goldman, D.M.D., Periodontist at Massachusetts General Hospital, Chief of Stomatology and Dental Research and Assistant Pathologist at Beth Israel Hospital, and Consultant to the Dental and Oral Pathology Registry, Army Institute of

Pathology, Washington, D.C.

"Treatment in oral surgery", by Daniel J. Holland, Jr., D.M.D., Assistant Resident at Massachusetts General Hospital.

"Maxillofacial prostheses", by Henry J. Carney, D.M.D., Maxillofacial Prosthetist at Massachusetts General Hospital, and Consultant in Maxillofacial Surgery at Cushing General Hospital.

"Odontogenic infections of the jaws and their treatment with the aid of antibiotics", by Kurt H. Thoma, D.M.D., Professor of Oral Surgery at Harvard University, and Oral Surgeon and Chief of the Dental Clinic at Massachusetts General Hospital.

Dr. Thoma was in Cuba for ten days during June, giving a postgraduate course in oral surgery at the Military Hospital in Havana.

* * *

Dr. Sven Forssman, in charge of the Industrial Hygiene Division of the National Institute of Health of Sweden, addressed the Medical Staff in the Ether Dome on June 6. Dr. Forssman has been in the United States on a Traveling Fellowship of the Rockefeller Foundation to observe industrial hygiene methods in this country. He came to Massachusetts General after six months' travel in this country and Canada.

His professional background is unusually complete for his present post, since he has a degree in biochemistry, has taught pharmacology, and has done active clinical work. The Division he represents utilizes state and university facilities in the study of the pathogenesis of clinical syndromes of occupational origin. There is considerable interest in the U.S.A. in developing similar programs. The University of Colorado and Yale University are at present engaged in promoting an affiliation between undergraduate medical teaching, hospital study, basic research work, and field activities of established state facilities for a better understanding of occupational medicine. Study of such a liaison is under way at the M.G.H.

Dr. Forssman's talk, after he explained his professional status, concerned the toxic effects of trichlorethylene and carbon monoxide. Workers in Dr. Forssman's department have been able to establish that the body metabolizes trichlorethylene into trichloracetic acid which is harmless. Therefore, the chief toxic effects to be feared are acute ones of narcosis from overwhelming exposure. Dr. Forssman pointed out that chronic effects are unlikely and, if truly related, must occur only in a rare individual who is unable to metabolize trichlorethylene into trichloracetic acid. Not all workers in the field of industrial hygiene are agreed on this point. The uses of trichlorethylene as a solvent, often as a substitute for more toxic materials in industry and as an anesthetic in England, were brought out in the discussion. Trichlorethylene has fallen into discard as a method of treatment for trigeminal neuralgia.

The problem of continuous exposure to carbon monoxide was very great in Sweden during the war, because wood-burning engines were used in the absence of gasoline as a fuel. Dr. Forssman explained the studies done by his department with visual acuity tests developed to rule out the subjective character of the usual complaints of headache, nausea, and dizziness following carbon monoxide exposure. Attacks of mild acute carbon monoxide poisoning, in Dr. Forssman's opinion, are a more likely occurrence than a predictable clinical picture of chronic carbon monoxide poisoning with irreversible organic changes in the central nervous system.

Dr. Forssman's trip in the United States was concluded at the A.M.A. convention in Atlantic City, where, as a distinguished visitor, he presented a paper comparing industrial hygiene methods in Sweden with those he has observed in the United States.

NEW APPOINTMENTS: On June 1 Miss Jessie Stewart became Assistant Director of the School of Nursing. A graduate of this School and of Boston University, Miss Stewart has served in many capacities both at the Eye and Ear Infirmary and in the General Hospital. Before taking over her new position, she was a teaching supervisor in the Baker Memorial. In her honor, an after-dinner coffee was held on June 18 in Walcott House by the student body of the School.

A new member of the staff is Miss Elinor Stanford, who came to us on June 16 as a surgical supervisor and instructor. Miss Stanford, a Springfield Hospital alumna and a graduate of Boston University, has most recently been Assistant Director at the Waltham Hospital.

Another addition to the Nursing School faculty is Miss Margaret Snyder from Hood College, Maryland, who is here for the summer only, as chemistry instructor for the student nurses taking the new five-year Radcliffe-MGH coördinated program.

OUTINGS: Two successful picnics have been held at the Storrow estate in Lincoln by the faculty-supervisory group of the School of Nursing. The first, held on June 19, marked the arrival of Miss Elinor Stanford and her introduction to the other members of the staff. On July 2, about twelve head nurses and assistant head nurses were the guests of the supervisors at another Lincoln outing, which featured swimming, outdoor cookery, and a baseball game.

* * *

The Board of Trustees, at their meetings on June 13 and 27, voted:

To accept the resignation of Dr. Francis F. Foldes from the position of Assistant Anesthetist with regret, effective July 1;

To accept the resignation of Dr. C. Guy Lane from the position of Chief of the Dermatological Service with appreciation of his service and especial appreciation of his remaining after he had expressed a wish to resign, in order that the arrangements for the further development of the Dermatological Service could be worked out.

To promote:

Dr. Allan L. Friedlich, Jr. to the position of Resident in Medicine, beginning January 1, 1948;

Dr. Henry D. Moorman, Jr. to the position of First Assistant Resident in Surgery;

Dr. George L. Nardi to the position of Second Assistant Resident in Surgery;

Dr. Thomas S. Risley to the position of Resident in Surgery;

Dr. Benson B. Roe to the position of First Assistant Resident in Surgery;

Dr. Robert J. Tracy to the position of First Assistant Resident in Surgery.

To appoint:

Dr. G. Colket Caner a member of the Social Service Advisory Committee;

Dr. G. Marshall Crawford as Acting Head of the Dermatological Service, beginning July 1, with the understanding that he will continue as Instructor at the Medical School;

Dr. Diane Croll as First Assistant Resident in Pathology, as of July 1;

Dr. Sheridan S. Evans as Third Assistant Resident in Surgery;

Dr. David Gamsu as First Assistant Resident in Neurosurgery for the period July 1 through December 31;

Dr. Joseph Hanelin as Radiologist, beginning September 1;

Dr. William F. Ketchum as Intern on the Children's Medical Service for one year, beginning July 1;

Dr. Cornelius Lansing as Intern on the Children's Medical Service for one year, beginning July 1;

Dr. Edgar B. Phillips, II as Intern on the Children's Medical Service for one year, beginning July 1;

Dr. Kenneth F. Sands as Assistant Resident on the Children's Medical Service for one year, beginning July 1;

Dr. Stanley T. Soholt as Assistant Resident in Orthopedic Surgery for one year, beginning January 1, 1948;

Dr. Jesse E. Thompson as Second Assistant Resident in Surgery;

Dr. William R. Waddell as Second Assistant Resident in Surgery;

Dr. Frank C. Wheelock, Jr. as Second Assistant Resident in Surgery.

At their meetings on June 11, 18 and 25, and July 2 and 9, the General Executive Committee voted:

To promote Dr. Harlan I. Firminger from First Assistant Resident to Senior Resident in Pathology, as of July 1.

To appoint:

Mr. Albert F. R. Andresen, Jr. as a Student Assistant, to work with Dr. William Chapman on his special studies;

Dr. H. Thomas Ballantine as Graduate Assistant in Neurosurgery;

Dr. Alice Doumic as Graduate Assistant in Psychiatry for six months;

Dr. Bartolome Fuster as Graduate Assistant in Neurology for three months, beginning July 1, to work with Dr. Schwab;

Mr. Robert E. Goodnow as Research Fellow in Anesthesia;

Dr. DeForest E. Hale as Graduate Assistant in Radiology, beginning January 1, 1948;

Dr. Louis R. Harnick as Graduate Assistant in Radiology, beginning January 1, 1948;

Dr. Hugh A. MacMillan as Clinical Fellow in Surgery, beginning July 1;

Dr. Paul B. Metcalf, Jr. as Graduate Assistant in Surgery, assigned to the Tumor Clinic;

Dr. Bertram Selverstone as Clinical and Research Fellow in Neurosurgery, effective as of January 1, 1948;

Dr. Edward L. Sleeper as Graduate Assistant in the Dental Clinic, beginning June 18;

Dr. Eugene L. Watkins as Clinical Fellow in Surgery, beginning July 1.

MASSACHUSETTS EYE & EAR INFIRMARY

The Boston Eye Bank, located in the Infirmary, is now being assisted by fourteen affiliated hospitals which have agreed to remove, free of charge, the eyes of those deceased patients who previously requested that their eyes be given to the Eye Bank. In each case, the spouse (if living) or next of kin is required to sign an official release form for the hospital immediately after the death of the eye donor.

The affiliated hospitals are as follows:

In Boston: Beth Israel Hospital, Boston City Hospital, Massachusetts Eye and Ear Infirmary, Massachusetts General Hospital, Massachusetts Memorial Hospitals, New England Deaconess Hospital, Peter Bent Brigham Hospital.

In other Massachusetts communities: Cambridge City Hospital, Lowell General Hospital, Malden Hospital, Newton-Wellesley Hospital, and Springfield Hospital.

The Maine Eye and Ear Infirmary and the Maine General Hospital, of Portland, are also affiliated.

Red Cross chapters in the communities where these hospitals are located stand ready to provide the facilities of their Motor Corps divisions for transportation of the eyes to the Eye Bank and to surgeons. Distant communities are served through the coöperation of Eastern Air Lines and Northeast Airlines.

It is hoped that before long all leading hospitals throughout New England will become affiliated with the Boston Eye Bank, except those in Connecticut that are most accessible to the National organization—the Eye-Bank for Sight Restoration, Inc., in New York City.

The Boston Eye Bank welcomes inquiries from physicians and prospective eye donors. These inquiries should be directed to the Eye Bank office at 243 Charles Street, where donation forms and explanatory literature are available. The telephone number is Capitol 0470, Extension 567.

Dr. Edwin B. Dunphy, Chief of Ophthalmology at the Infirmary, has been elected a member of the American Board of Ophthalmology.

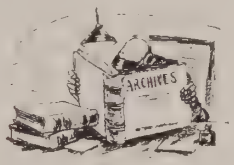
Dr. Dunphy gave two talks at the Summer Graduate Course in Ophthalmology at the University of Rochester, New York, on July 30—the first on "Di-isopropyl fluorophosphate", and the afternoon paper on "Headaches and ocular pain".

Instruction in the esophageal voice for patients who have had to have their larynges removed because of cancer, is now being given at the Infirmary on a full-time basis. Mrs. Mary Doehler, special instructor in the esophageal voice, is not only holding her regular classes Tuesday evening and Saturday morning, but she is also giving special lessons to individual patients each day on the second floor of the OPD. Instruction in the esophageal voice is an Infirmary rehabilitation project that is supported by a grant from the Massachusetts Division of the American Cancer Society.

Dr. G. de Campo, from the Philippine General Hospital, Manila, visited the Infirmary during the latter part of June and the first of July, observing the work of the different departments.

At their quarterly meeting, the Board of Managers of the Infirmary voted to raise the rates, as of July 1, to $8 per day for ward service, $10 for semi-private, and $12 for private accommodations.

Renovations at the Infirmary continue, with the cleaning of the utility rooms on the third and fourth floors and the treatment rooms on the second and third floors.



This picture of the industrious little man, which has headed our Archives column for these last two months and is to indicate Archives material in the future, was drawn for us by Dr. Ernest Craige, Resident in Medicine.

The larger original drawing is now out on the bulletin board near the foot of Treadwell stairs. Do stop by for a moment, to enjoy the almost audible expressions of absorption in the little man's puckered up brow and tightly gripping fingers. We suggest to you who are unable to see the original that you apply your magnifying glass to this smaller copy above. It will be worth your while.

An article in the *Boston Medical and Surgical Journal* of August 28, 1924 said, in part:

> We of the Western Hemisphere are too prone to forget the achievements of the past. In our worship of the Brand New we have scant time for a fitting veneration of that which has gone before and proven its worth and left its mute reminders. Not that we have no antiquarians among us; not but that many of us respect the accomplishments that laid the foundations for our own successes; but by and large we are too engrossed in the strivings of the present to pay more than a passing respect to the labors of those who have achieved success before us, and to the methods by which they achieved it.

Massachusetts General Hospital is not only proud of the achievements of its present-day staff and alumni but, to an equal degree, does it revere the memory of those of her sons who, through the years since 1821, contributed so much to the advancement of medical and surgical science.

Few hospitals in the world possess as valuable and interesting a collection of professional records, personal letters, and other memorabilia which belonged to or concerned members of their staffs as does Massachusetts General. Our Archives collection is in very truth a priceless one.

The names of many who are now House Officers will, in the future, be well known because of outstanding work they are going to do in their chosen fields; and material concerning them and their achievements will, in all probability, be added to our Archives collection, to enhance its value just that much more. We feel sure that on some still more distant day, a young House Officer here at Massachusetts General is going to exclaim, as a future Archivist shows him a manuscript he has asked to see, "Why, here's the signature of the great Dr. So And So, who was a member of the house staff at M.G.H. way back in 1947!"

Files on the various departments of the hospital also tell the story of steady advancement in techniques and equipment, since the admission of that first patient on September 3, 1821. On the long table in the Archives Room we are showing three items that concern our early Ambulance Service. One is the receipted bill for the first horse-drawn ambulance, bought from M. Curley, Carriage Manufacturer, 109-113 East 13th Street, New York, March 31, 1873. It reads:

To one new ambulance all complete as per agreement	600.00
To 4 new bobs, 4 extra boxes fitted to axles, and boxing bob hubs and plating 4 hub bands on bobs, etc.	100.00
	$700.00

This ambulance is now out at McLean Hospital.

Another item is a letter from Alfred P. Rockwell, Chairman of the Board of Fire Commissioners of Boston, written October 5, 1875, thanking the Trustees of M.G.H. for "the tender of the free use of an ambulance in the event of any accident to Members of the Fire Department received in the discharge of their duty".

The third paper gives a report of the Ambulance Service for the year 1883. From this we find that 195 trips were made during that year, and the total amount received by the hospital for Ambulance Service was $160. In contrast, a recent report on our Ambulance Service gives 1,460 trips a year and an income of $4,597.

Every now and then some old medical or surgical instrument of unusual interest is contributed to our Archives collection. Up to now, lack of space has prevented our reporting such gifts in The News, but we are hoping to be able to mention all future contributions, together with the names of the donors.

Dr. Siscoe brought in a most interesting little gadget the other day. It is a small ivory stethoscope, about 6 inches in height (or length), and shaped more or less like an hourglass. It had been given to Dr. Siscoe by Dr. Grace E. Cross of 581 Broadway, South Boston. It is now on display in the Archives Room.

Along with the stethoscope came this note of explanation from Dr. Cross:

> The principle of mediate auscultation was

discovered in 1816 by René Laënnec, a French physician who was on the staff of one of the large Paris hospitals. Previous to this time, auscultation had been confined to percussion and the application of the ear directly over the cavities of the body.

One day Dr. Laënnec was puzzling over a cardiac case in the hospital which it was impossible to diagnose accurately on account of the patient's obesity. Weary and disturbed, he betook himself out into one of the parks to seek rest and relaxation. While there, he noticed some children near by, playing with a tilt or teeter-board; but, instead of using it in the usual way, a child was knocking on one end of the board while a child at the other end had his ear pressed against the board and was shouting with delight at the amplified sounds which he heard.

This gave Laënnec an idea, and he hurried back to the hospital to put it into effect. The only article at hand with which he could make the test was a package of papers lying on the table. Taking some of these, he made them into a firm roll and, applying one end to the chest of the patient and the other to his ear, he was delighted with the magnified heart sounds which he was able to hear. In great exultation he called in some of his colleagues and made the demonstration for them. And thus the idea of the modern stethoscope was born.

The first instrument was a simple tube of wood. Later, this was modified into an instrument having a cup shape at one end, narrowed into a tube at the other. The principle was that sounds received into the cup became concentrated in the narrower tube and so were increased in volume.

The enclosed stethoscope is one of this type. I do not know how old it is. My father, Dr. William P. Cross, who was born in 1816, probably owned it for many years, as he entered practice in about 1846. It came down to me when I entered practice in 1886. There have been many modifications of the stethoscope, but in my own work in diagnosis I often found this original type to be of special use in listening to the sounds of the foetal heartbeat, and I also used it on other occasions as supplementary to the later types.

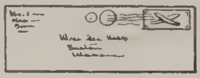
New addresses:—

- Dr. Joseph A. Elliott, Jr. (*M* 1945), Mayo Clinic, Rochester, Minn.
- Dr. George A. Filmer (*Oph.* 1939), 324 Metropolitan Bldg., Denver 2, Col.
- Mr. Wilbour C. Lown, 5906 Wyngate Drive, Bethesda 14, Md.
- Dr. Jack S. Parker (*WS* 1946), 99 Pinckney St., Boston, Mass.
- Dr. Homer D. Peabody, Jr. (*M* 1945), 3147 Front St., San Diego, Cal.
- Dr. John H. Peters (*WM* 1943), Childrens Hospital, DeSoto St., Pittsburgh, Pa.
- Dr. Earl C. Slaughter (*Oto-Lar.* 1940), 1105 Park Ave., Norfolk, Nebr.
- Dr. Frederick C. Y. Ts'ui (*clin. fel. S*), 112 Pinckney St., Boston 14, Mass.
- Dr. Derrick T. Vail (*Oph.* 1924), 700 North Michigan Ave., Chicago 11, Ill.

Brief bits:—

- Dr. Marlow B. Harrison (*EM* 1938) dropped in on us not long ago. Never have we seen anyone so pleased to be back. He said he had anticipated a delightful visit, but found when he reached M.G.H. it was just like returning to one's very own family in one's very own home. He had used the A.M.A. meeting as an excuse to get here before going back to San Francisco.
- Dr. Clyde H. Landers (*gr. asst. M 1941-42*) was released from the Army quite some time ago and has returned to his home—2271 North Holliston Ave., Altadena, Cal.
- Dr. John J. Rupp, who resigned his position of Assistant Anesthetist on July 5, is going to Tucson Medical Centre, Tucson, Arizona.
- We have been told that the following men, who ended service here on June 30, have entered military service. To date, we have the new addresses of only two of them—given below. As soon as we learn where the others are stationed we will publish that information in The News.

Lt. Armand L. Bengle, Jr., MC, USNR, U. S. Naval Hospital, Newport, R. I.
Ernest S. Crawford
Dr. John G. Freymann, U. S. Public Health Service, 1113 Medical Arts Bldg., Omaha, Nebr.
Laurence K. Groves
Arvil J. Hinshaw
Edward V. Johnston
Gale H. Keyes
George H. Lawrence
Joseph K. Maloy
Isaac V. Manly
George W. Mellinger



Dr. Edwin F. Alston (*P* 1944) is out of military service. This letter has arrived from him and Mrs. Alston (Ann Ogden, Medical Art, 1945), from 3712 Albatross Street, San Diego 3, California.

> Our chief and happy news is that we are now civilians again, as of May 28, 1947. At present I am waiting to take the California State Board Medical Examinations in July. Following this little party, we plan to loaf until about October 1. According to present plans, I will then embark upon an assistant residency in medicine at the University of California Hosptial in San Francisco.
>
> Please send our copies of The News, which we always read with greatest interest, to my permanent address, given above.

Only roundabout news concerning Major J. Maxwell Chamberlain (*NS* 1934 & *WS* 1937) came to us from Fort Lewis and Korea during the war. Our persistence in trying to get into direct communication with him has been richly rewarded by this delightful letter.

> The News found me again, and I wish to compliment you. It just occurred to me that both the Bureau of Missing Persons and the MGH wives are losing out on a good thing in you. In fact, at this moment there is a certain traffic policeman in Boston who would pay you a good fee for my address.
>
> However, you will be interested to know that my address has changed again. It is now 532 Park Avenue, New York, where, in addition to other things, I hope to prove that Hollywood is not always right. I shall endeavor to show that a Park Avenue doctor can be successful on MGH principles! If it can't be done, you and The News will probably catch up with me.
>
> I shall not speak of "present" (only beginning) activities, which may be of interest to my friends who read The News, because one day I shall meet them again, and with the aid of time and two very gentle cocktails what are now small indiscriminate weeds will have matured into plants as large as the "Trees in Brooklyn".

Dr. James E. Conley (*WS* 1941) rose to the rank of Lieutenant Commander before he was released from military duty. This letter from him tells us about his present interests and includes news of two other members of the MGH family.

> I enclose a little propaganda from Milwaukee which pertains to some of my activities during the past few months.
>
> As you know, I am practising surgery in Milwaukee, which seems to be the retiring place for University of Michigan and University of Wisconsin M.D.'s. However, there is one other left wing medico from Harvard and Massachusetts General in Milwaukee—Sandy Holbrook [CM 1933 & EM 1934], with whom you are familiar. Gerald Shortz, a recent Fellow in the Anesthesia Department, is our Anesthetist at Columbia Hospital, Milwaukee; and I have him to thank for the fine intratracheal anesthesia I have had for my sympathectomies. During my first year of private practice in general surgery, most of my work has been aligned with sympathetic nervous system surgery in peripheral vascular diseases and hypertension.
>
> Thanks for The News, which both my wife (former secretary to Dr. Ralph Adams) and I enjoy immensely.
>
> Best wishes for continued success and good news.

The enclosures are most interesting. One is a program of the Third Annual Columbia Hospital Therapeutic Conference held this past May, at which Dr. Conley spoke on "Surgical treatment for hypertension", and Dr. Shortz delivered an address on "Recent advances in anesthesiology". The other enclosure is a clipping from the *Wisconsin Medical Journal* which says that at a meeting of the Milwaukee Academy of Medicine Dr. Conley presented an abstract of the paper that won first prize in the Horace Manchester Brown Memorial Essay Contest—"Sympathectomy for hypertension".

This is a "first"—you see, they still continue to come, so it's not too late for you to escape that undesired distinction of being the "last first"—a letter from Dr. Alfred Hurwitz (*gr. asst. S* 1942) containing an account of his busy life.

> My terminal leave in the Army ended January 1946. In June 1946 I decided to accept the position of Chief of Surgery at the Veterans Hospital in Newington, Connecticut, which is closely affiliated with Yale Medical School. The surgical service consists of approximately 200 beds and is modeled after the pattern of a teaching civilian hospital. The red tape has been minimal and the emphasis has been placed correctly on the development of high professional standards. I have been appointed Assistant Clinical Professor of Surgery at Yale Medical School, and have published my first postwar paper in the *Connecticut State Medical Journal* of May 1947, entitled "The use of a glass button in the treatment of ascites".
>
> I have nothing but the highest praise for the present setup in the teaching VA Hospitals.

Dr. Frederic B. Mayo (*a.r.p.* 1944) is out of the Navy. He writes:

> I have just finished a one-year Fellowship in Medicine at Lahey Clinic and am now Resident in Medicine at the Salem Hospital. I plan to practise here in Salem eventually.

Mrs. Kind took her pen in hand and sent us this nice letter which brings the first direct information we have had regarding Col. Henry A. Kind, MC (*CM* 1935). This idea of pinch-hitting for busy husbands who just can't seem to find time for that letter to The News might well be adopted by other wives.

The letter is headed Box 264, Tilton General Hospital, Fort Dix, New Jersey —and reads:

> My husband has been very rushed of late, and knowing how these things can be put off I am taking the liberty of answering your note.
>
> Colonel Kind is still in the regular Army Medical Corps, where he has been since 1935. After he returned from Europe, where he commanded the 4th Auxiliary Surgical Group of the Third Army, he went to Devens for a refresher course, then came to Tilton Gen-

eral Hospital a year ago as Chief of Medical Service. In April he was sent to Tufts College for a short course in medicine, and from June 18 to July 30 he was at Harvard taking another course in medicine. It was a great pleasure for both of us to be in Boston again with our two daughters.

Colonel Kind has been very busy this past year, for the patient load on his service has run to over a thousand at most times. However, things seem to be easing up a bit now.

We both have enjoyed The News so much. I think the hospital deserves great credit for the service it has rendered its personnel.

The News continued to reach Dr. Ralph F. MacDonald (*ES* 1922) while, as Colonel, he was Division Artillery Executive Officer in New Guinea and Luzon. We lost track of him when he started home by way of Japan. This letter, therefore, is especially appreciated.

I left the Army in April 1946 and, after visiting in Chicago for a short time, I joined the Veterans Administration and am now located as Chief of Surgery at McGuire Veterans Hospital in Richmond, Virginia. It is very good to be out of the Army and back again in surgery, and the associations here are most pleasant.

It is always pleasing to hear from the M.G.H. or anyone connected with it.

Another MGH-er reports his release from military service. Dr. Joseph M. Stowell (*gr. asst.* 1944) writes from 1107½ Thirteenth Avenue, Altoona, Pennsylvania:

I went on inactive duty 24 June 1946, and in August went into the practice of surgery here in Altoona. My last three months on active duty were spent at the Portsmouth Naval Hospital, Virginia.

I am enjoying The News very much.

Some time ago Dr. Chester M. Jones passed on to us this very interesting letter from Dr. John W. Ewell (*WM* 1937). We have withheld it until now, awaiting sufficient space to publish it in its entirety. Dr. Ewell was in military service, as a Major, for over five years—three of which were spent overseas. This letter gives us a close-up of his work over there.

Our first location as a Station Hospital was near Oxford—blessings on that happy chance—where Henry Brewster [*WM* 1940] subsequently came to help us establish a narcosis section for dealing with combat exhaustion among fliers. After a few months Army genius for change reasserted itself and we removed to a staging area and thence to Marlborough—a charming provincial town in the midst of Wiltshire's beautiful agricultural and downland countryside, and on the Kennet, a stream famous for its fishing since Walton's time, which was a delight to the enthusiasts among us.

Again, there was great secrecy about our assignment, and only when D-day was upon us did we learn that we were to act as a Transit Hospital, receiving air evacuated casulties. After the initial excitement and confusion, things settled down to the quiet and routine of an Emergency Ward on the grand scale. Some days we did nothing at all except eat the hospital ration for the expected patients, and stand by. On other days we received the wounded in continuous procession—ambulances interspersed with busloads of ambulatories, running almost in convoy from the fields to our doors, hour after hour. Admissions generally began in the early afternoon when the first planes out in the morning—those glittering flagships of the commercial airlines turned workhorses of the war—were able to get back, and lasting until the last flight was in after dark—in those days of double summer time, long after midnight. The daily totals not seldom reached a thousand or more, and frequently exceeded five hundred. We did little enough for them: a rest between sheets—"Just like home, one under and one over!", as a weary G.I. exclaimed; a good dinner as soon as they arrived, daylight or dark; and on to a hospital train in the morning for the next stage of evacuation—the journey to a General Hospital. Even dressings were not numerous and major surgical undertakings were uncommon, for the reason that the forward work—really forward where the definitive treatment was carried out—was simply marvelous. These men—many of them boys without beards—came back smiling after the most appalling operations, sometimes in ingeniously elaborate orthopedic creations, their treatment well under way, and their records almost without exception painstakingly written up, often typewritten. One cannot say enough for what this means in battlefield accomplishment, and there cannot be any reason now why our figures should not be disclosed to bear this out handsomely. In the eleven months of operation our total admissions were not far from 75,000—about one in every ten of all the American casualties (although small numbers of all other nations, including Germans, were received)—and among this number there were less than a score of deaths—striking support for the published statements that if a soldier made the grade at all, his chance of getting home again was well-nigh perfect.

After the end of the war in Europe, in the midst of disintegration of units and the confusion of redeployment, I was enormously fortunate in going to the American University at Shrivenham. Although beset by all these troubles and always facing an uncertain future, the opinion of the 8,000 students who passed through it must have been nearly unanimous in considering it one of the best things ever undertaken by the Army. That it was regarded seriously in educational circles at home is attested by the presence on its faculty of department heads and leading figures from colleges and universities all over the country.

I could not possibly have been more enthusiastic about it, and was correspondingly pleased, in due time, to become Director of the Medical Division. There were between six and seven thousand people to look after, including eleven hundred POW's as a housekeeping detachment. Five dispensaries were maintained, and three quarters areas with a total of about fifty beds, one of which was a little model—a sort of doll's house hospital. For the work, when fully manned, there was a staff of eight doctors, four dentists, six nurses, and approximately seventy-five men. However, it was very inconstant—new faces every few days, forty changes in commissioned personnel, and more than one hundred percent turnover among the men.

Although it seemed a great pity that, after only two terms, the high tide of redeployment should carry away this creditable Army institution which had so much to offer, I was glad to have its closing bring my opportunity to go home and to face the measure of my little son.

If some excerpts from this letter might be of general interest suitable for The News, I would be glad if you would pass it on. I have enjoyed the touch of home brought with every issue of that friendly, chatty paper and I hope provision can be made for its continued life.

Dr. Russel L. Baker (*r.p. N* 1943) is out of the Army and in private practice at 603 Mayer Building, Portland 5, Oregon. In a recent letter he brings himself up to date.

As you know, I was in England with the Boston City Hospital Unit and 7th General Hospital. When that unit went through Redeployment, I was transferred to another General Hospital as Chief of Gastro-enterology and bound for Japan. That trip was terminated when the Japanese quit. I was then sent to the Regional Hospital at Fort Ord, California, in charge of infectious diseases. After a short time there, during which I became married to Elizabeth Corbett of Carmel, California, I was transferred to Walter Reed General Hospital. While there I did general medicine and chest diseases.

The opportunity for separation came in July 1946 and I took it. In order to obtain an office, I returned here at once and was unable to visit in Boston as planned. However, I expect to remedy that defect in the course of a few months.

My practice is confined to internal medicine and diagnosis. I spend my mornings with students at the University of Oregon Hospital.

I graduated from the Army as a Major.

Dr. Donald P. Murnaghan (*res. fel. & gr. asst. M* 1940-42) told us just enough, during the war, to make us want to know more about the kind of research that was being carried on by the Royal Canadian Air Force, with which Dr. Murnaghan served as a Flight Lieutenant. In reply to our recent inquiry on this subject, Dr. Murnaghan writes:

My experiences with the Royal Canadian Air Force during the war were not coloured with the excitement and gallantry of the medical men who were exposed to the immediate hazards of explosives and battle field privation. In February 1942, some thirty months after Canada had entered the war, the Air Force Medical Branch seemed to be the Service where my training could be best utilized. The Army was stagnant overseas and the Navy was relatively small; everyone in Canada, nevertheless, was well acclimatized to a wartime atmosphere—a strange feeling at first as one entered from the United States to enlist.

My Service career began by by-passing the Manning Depot marching; Aviation School was not then well organized, but taught the important facts of the applications of medicine to flying and the routine of administrative details—mostly abhorred by Medical Officers. The next post was on a Medical Selection Board for aircrew fitness in Regina, Saskatchewan. I soon learned the relative inadequacy of deciding who could or should be allowed in the air on the basis of medical tests alone. Careful screening on recruitment had eliminated the unhealthy; a period of three to six months' basic training occurred before aircrew training began, which often brought to light latent disease before candidates presented themselves to such a Board as I worked on. The routine of a physical and psychiatric assessment on healthy personnel soon became very familiar. Interest in the other events of the unit kept one occupied, fortunately. A research program on the effect of altitude and the training technique of chamber decompression, simulating altitude flights, was in progress at that unit. The analysis of results there was similar to those well known now from many stations. Motion sickness induced by swings of peculiar designs was being investigated below us; the effectiveness of some positions was betrayed by the odor. Electroencephalograms revealed an occasional case of petit mal or psychomotor epilepsy, and a routine electrocardiogram on all candidates, in the recumbent position, unearthed a rare case of atrior ventricular block corrected by posture. Cardiac consultations at the unit or reached by flying to neighbouring stations provided many interesting cases and a few exciting moments. Contact with the U.S. Army Base Hospital personnel in Edmonton during some of this period is remembered with warmth and pleasure. They practised good medicine, fair golf, and had good times off duty. In all this, we did our best to make their stay and ours enjoyable.

A survey of the electrocardiograms of pilots over the age of thirty-five years took me into the Yukon on a brief visit. There it was believed I was the first to bring "in" a portable instrument. The only difficulties encountered included "stickiness" of the oil of the camera motor, due to extreme cold while flying north

No. 4 in a series of Staff photographs
Dr. C. Guy Lane — Retiring Chief of the Dermatology Department

and which thawed out before a warm fire, and the voltage variation on the current supply which caused erratic speed of the synchronized time-marker motor.

After nearly two years of Medical Selection work, I moved on to the equivalent of a base hospital for six months. This was followed by substitution duty for six months as Medical Consultant on several units before being appointed Medical Consultant on a Regional Medical Board—one of six set up in 1943 across the continent, to which diagnostic or disposal problems were referred. In this capacity, with fairly complete hospital and investigative facilities, one had a very interesting year. During this time—1945—releases were proceeding; the Board also acted in a consulting capacity for assessment of a veteran's status at the time of release. This was an interesting and valuable experience, yet devoid of the proximate excitement, novelty, and kudos of overseas service—through no fault of one's own.

I am now in Toronto, pursuing clinical research in cardiovascular problems at the University and Toronto General Hospital. My location will be one which I trust will allow an occasional visit to Beantown.

The News is very welcome and most interesting.

We were very glad to receive this "first letter" from Dr. Irvin F. Hermann (*gr. asst. M* 1941-42), written from 5936 Walnut St., Philadelphia 39, Pa.

Since being released from service with the Army Air Forces in January, I have been well occupied in starting my office for the practice of Internal Medicine.

My activities in the Army were not especially exciting—nor adventuresome. I was assigned to stations in this country, and the one time when I had orders for transfer to Brazil, the orders were cancelled at the P.O.E.

I have lived here in Philadelphia most of my life, and will probably practise here the rest of it—with always a warm spot for M.G.H. and a desire to return at as frequent intervals as possible. I visited the Hospital last March and saw many old friends.

The News was always a welcome item in the mail and certainly served to keep me well informed about most of the people at M.G.H. I greatly appreciated receiving it.

We hadn't heard from Dr. Harvey E. Billig, Jr. (*Or.* 1935) in over a year. Therefore, this letter from the Billig Clinic in Los Angeles, where Dr. Billig is Medical Director, was most welcome.

I wound up my active duty in the Navy last April, and am busily engaged in putting into practical application, at the California Institute of Technology, the results of a great deal of research in physiology of habilitation. With the housing shortage what it is and with the problem of every GI who has been here on duty wanting to return with his wife, family, in-laws, cousins, etc., we have been hard put to it to find places for our patients to stay. Just now we have people from Brazil, Belgium, England, and India who would like to come, if we only knew where to put them.

Dr. Loring Swaim [*WS* 1912] was here for a time on other business and I enjoyed very much spending a good many hours with him. I wish my contact with the Boston I learned to love were not so long distant. However, I have followed each issue of The News immediately upon its arrival.

We were very glad to receive this outline from Dr. Lewis W. Hill (*WM* 1915) of his work during the war.

I went into the Army August 27, 1942 and was sent at once to the hospital at Camp Edwards. Stayed there until I was discharged March 1946. Was promoted to Colonel in January.

I don't suppose any doctor in the Army had an easier or more pleasant time than I did, and when I talk with those who went all over the world and suffered every conceivable hardship and inconvenience, I feel that I did mighty little. At Camp Edwards I had very comfortable quarters, excellent food, very interesting and congenial work, with very little of the military about it. Our Commanding Officer, although a regular Army man of long experience, believed that a hospital was a place to take care of sick people, and all military drill and other military regulations were entirely secondary to that. Our hospital, therefore, was run very much as any large civilian general hospital would be run, and it was run well. When the camp was large, with a population of 52,000 at one time, we were a station hospital. When the units trained at the camp had gone overseas and the camp population became very small, we acted for some time as an evacuation hospital and received large numbers of wounded from the debarkation point in Boston. Later we were made into a general hospital.

Having seen no adult patients since I was a House Officer on the West Medical Service in 1915, I learned a great deal at Camp Edwards that I didn't know before, which I suppose I will now promptly forget. Am back in private practice at the same old stand, and am in charge of the eczema and allergy clinic at the Children's Hospital.

This "first letter" from Dr. Donald R. Hayes (*ES* 1939) bears the heading 121 Chestnut St., Springfield 3, Mass.

I should have written a letter of thanks long ago but somehow never got around to it. I'm glad you folks were not so neglectful and that The News succeeded in "getting around" to me while I was in service. Every issue was received with great joy, and all work was suspended until The News was finished. It was a wonderful contact and was fully appreciated.

Many, many thanks and my apologies for waiting until I'm back in practice to tell you this.

We have received our second spanking from a Postmaster for failing to include zone numbers in addresses for The News. Since there is no way of our knowing your zone number unless you give it to us, will you please try to remember to include it on your subscription cards or any other communications you may send us?

THE NEWS

No. 60 Boston, Mass September 1947

OBSTETRICAL SERVICE AFFAIRS

The well-considered report of the Obstetrical Service rendered by Dr. Smith in March of 1946 leaves very little for the reviewer to add. A complete MGH unit which might do for the Obstetrical Service what the Vincent Memorial is about to do for the gynecological seems, under current conditions, to be beyond our reach. The difficulties of financing and of securing personnel for the M.G.H. in the present unsettled period are so well known to the staff and friends of the Hospital that acquisition of endowment for the physical requirements of a separate ward, private and teaching service is only one facet of the problem.

Accordingly, this report can only serve to discuss activities germane to the private practice of obstetrics in the Baker Memorial and the Phillips House. Demand for maternity beds in the Greater Boston community continues to be pressing, and it can be noted with satisfaction that invasion of the obstetrical floors by surgical patients, commented on last year, has been abated. Notwithstanding this, the birth rate remains high and the thirty beds at the Baker and the fifteen at Phillips House are seldom empty. While it is true that the costs to the patient of hospitalization have risen sharply—though not yet sufficiently to meet the amount necessary to keep the hospital out of the red — the growing popularity of the Blue Cross and other insurance plans enables many individuals to be cared for by private physicians who otherwise would accept ward maternity care. (Any person who chooses to doubt this is invited to review the reports of the Boston Lying-in Hospital for the past three years.) Whether an economic recession, if and when it comes, will reverse this trend is for the future to disclose, but this reviewer suspects that it will.

Shortages in nursing personnel, so well known at the M.G.H. as elsewhere, have not spared the Obstetrical Service. The writer is sufficiently conservative to believe that breast milk is the best food for newborn infants, and is convinced that coaching of the young mother and her child in the art of nursing is very important if breast feeding is to be a success. Under present conditions, with scanty supervision, thorough coaching is impracticable. He also deplores the necessity of decanting the mother from her bed a few days after delivery in order to send her home and make room for the next parturient patient. No mother of a first-born child, at least, can make the transition from the security of the hospital to the changed environment of her home without doubts and uncertainties assailing her. She does, of course, what she must, and she somehow survives; but the way of necessity seldom fulfills ideal requirements.

Despite the foregoing gloomy considerations, it is believed that an obstetric patient at the M.G.H. receives the best care possible in these times and circumstances. The nurses have given faithful and devoted service. The availability of consultation for all manner of complications of the pregnant and puerperal state is second to none. The Children's Medical Service has been invaluable in advice and assistance at all times. Problems which bother us today will, in time, be met and solved. The M.G.H. is meeting the challenge of the community in obstetrics quite as well as in medicine or in surgery.

Thomas R. Goethals, M.D.,
Obstetrician

* * *

The cross-word puzzle on the last page of this issue was made by Mrs. William Glenn, whose husband was a Resident Surgeon here at M.G.H. in 1946. Mrs. Glenn didn't just solve the thing—which, in our estimation, would have been a masterly stroke of work. Nothing so simple as that for Mrs. Glenn. She *compiled* it! We know of no adequate superlative to describe such a job as this.

Since the questions and answers are largely from medical and surgical terminology, and a few concern M.G.H. in particular, Mrs. Glenn decided to send the puzzle to THE NEWS. It would be fun to know how many of you can solve it. Maybe you'd be good enough to send us your completed puzzle if and when you get it done.

We wonder how far an expert cross-word puzzle fan, like Mr. F. P. Adams, would get with it. Perhaps we'll send it to him, just to see. As for us, we felt like the answer to "209 across" while we were simply preparing the thing for the printer!

You will find the questions on separate sheets, enclosed with this issue. The solution will be published next month.

Good luck.

* * *

Dr. T. Duckett Jones, Assistant Physician here at Massachusetts General, is a well-known authority on rheumatic fever. As Medical Director of the newly-formed Helen Hay Whitney Foundation in New York, Dr. Jones will head an investigation to try to find the cause of that leading childhood disease.

Dr. Jones has carried on rheumatic fever research for several years. Besides being a lecturer at Harvard Medical School, he is a member of the Board of Directors of the American Heart Association, Chairman of the Executive Committee of the American Council on Rheumatic Fever of that same Association, and a member of the Advisory Committee on services for crippled children, Federal Children's Bureau.

Dr. Joseph S. Barr, Chief of our Orthopedic Service, has been appointed a member of a newly-created civilian board of Consultants to the Navy Bureau of Medicine and Surgery. The board will coöperate with the Navy in the establishment and maintenance of its graduate medical training program.

Dr. Robert F. Loeb (*WM* 1920) has been named Bard Professor of Medicine and Executive Officer of the Department of Medicine at Columbia University's College of Physicians and Surgeons, and Director of the Medical Service at Presbyterian Hospital.

Dr. Loeb succeeds Dr. Walter W. Palmer (*EM* 1911), who has been Bard Professor of Medicine since 1921. Dr. Palmer will become Professor Emeritus of Medicine in Columbia University and a Consultant of the Presbyterian Hospital.

During the war Dr. Loeb was Consultant to the Office of Scientific Research and Development, and has served as Chairman of the Board of Review of the United States Atomic Energy Commission.

Dr. Frank W. Rounds, who recently ended his service as an Intern in our Dental Department, was elected President of the newly-organized New England Society of Oral Surgeons at the first of its semi-annual meetings in June.

Dr. Thoma was appointed Editor of the Society.

* * *

Mr. James Wall of Somerville has been an out-patient at Massachusetts General for several years. Every so often he needs to return to the Hospital for very special treatment for a serious chronic ailment.

Mr. Wall called upon us in the Archives Room the other day to make us a most generous offer. It developed during the conversation that he is a very skillful builder of made-to-scale models. He showed us a picture of a model stagecoach he had made, the original of which used to run between Boston and an outlying town. He said it took him many months to build his coach, and it has been exhibited several times in public places round Boston.

In appreciation of the excellent treatment he has received over the years at M.G.H., Mr. Wall has offered to construct, as a gift to the Hospital, a scale model of our first horse-drawn ambulance. We are taking him out to McLean to see that ambulance as soon as possible. He needs to study it carefully, including its inside equipment, rear door arrangement, and metal trimmings, in order that his finished model will be correct in every detail.

This, surely, will be a very valuable and much appreciated gift from Mr. Wall.

♣ ♣ ♣

CHEST SURVEY

It is well recognized that a number of chest diseases are usually first detected by roentgenological methods. That this is true has been substantiated by many health institutions, industries, and the Federal Government. The Department of Radiology of this Hospital has been considering this program for nearly six years, but has been delayed by lack of adequate equipment. Equipment is now available and, with the coöperation of the Department of Public Health of the Commonwealth of Massachusetts, we will start on a chest X-ray survey program.

It is hoped that in the near future the program will be functioning. At first, only the new patients in the Out-Patient Department will be surveyed. Later, all patients in the entire Hospital will be included and all employees will be checked.

What does this mean to the person who is examined in this manner? First of all, it must be recognized that this is a survey and must not be considered as a complete "X-ray" examination of the chest. It can give an idea of the presence of gross disease only, and it will reveal many conditions which will be the source of much worry and difficulty to the patient and physician. We hope to learn ways of determining the significant from the insignificant in this large amount of statistical material, but it will take time. To the patient who is found to have an abnormal survey film there is much less to worry about in this General Hospital than if the procedure were carried out primarily as a search for tuberculosis. In a general hospital, such as this, there will be many re-examinations which would not be included in a routine tuberculosis survey. Cardiac conditions, diaphragmatic lesions, mediastinal variations, pleural pathology—much of which may be of no significance—must be thoroughly studied in this Hospital. We estimate that we will have a retake (regular X-ray examination) of approximately 35% of those surveyed, as compared with the estimate of the Department of Public Health of 5%. This is true because the latter is primarily interested in tuberculosis. A general hospital must survey patients for all abnormalities in the chest, as well as for tuberculosis. In a wide outlook, the patient who needs to have a complete roentgenological examination should not be unduly worried, as this complete examination will be done in many cases where a serious condition is not present, but only as a safeguard for the patient.

Numerous benign conditions may be confused with serious conditions if only a single examination is studied, and i should be realized that many patients and attending physicians may be necessarily unhappy due to findings on the survey and the resultant follow-up study. Experience up to the present with a few such conditions should be of benefit to the large majority in the future.

Tentative plans would place the equipment in the room off the Emergency Ward, originally planned for X-ray purposes. Certain minor changes in construction are planned by Mr. Kinsman and his helpers. The out-patients will not enter the Emergency Ward, and consequently the already heavy traffic in this area should not be further congested. This location was decided upon because it is centrally located for the entire hospital and should decrease congestion, as well as facilitate the procedure.

The equipment has been on order for some time, and consists of a photoroentgen unit with a camera devised for 70 mm. film. The films will be checked once daily and will be read in the following categories: 1) Normal chest; 2) Unsatisfactory film; 3) Abnormal without clinical significance; 4) Abnormal with undetermined significance; 5) Tuberculosis suspect. The last two (4 and 5) will require the usual complete X-ray examination, and some will need to have extensive clinical and laboratory procedures. This will reduce routine chest examinations in the Department of Radiology, but the estimated retakes and usual examinations will keep the work at a higher level than now. Recent equipment changes should help in taking care of this load. Reports will become a part of the Hospital records, and the films will be stored in the X-ray Department according to the date of examination.

All in all, this project should be of great benefit to the patient and to the public at large.

Laurence L. Robbins, M.D.,
Radiologist-in-Chief

Twenty PEV's (Polio Emergency Volunteers) have recently completed their training here under the supervision of Mrs. Marie Andrews, MGH graduate and member of the school teaching staff. This training is part of a large-scale program, under the auspices of the National Foundation for Infantile Paralysis, intended to prepare a corps of volunteers for emergency service in times of polio outbreaks. By relieving nurses and physical therapists of mechanical routines and leaving them free to concentrate on their special skills, the PEV's will help to make possible the intensive care and treatment so vital to the recovery of the polio victim. The MGH volunteers, after eighteen hours of training, are ready to give simple assistance with routine nursing care and with hot pack, heat, Hubbard tank, and pool therapy.

Miss Ruth Sleeper, Director of the School of Nursing and the Nursing Service, as President of the National League of Nursing Education, will preside at the Annual Convention of the League, to be held in Seattle, Washington, during the week beginning September 5.

While the shortage of applicants for training still hampers many nursing schools, our school has accepted for its September class a capacity group of approximately ninety student nurses. They will be welcomed on September 3rd with an afternoon tea in Walcott House and, later, a social evening arranged by the school faculty. It is interesting to know that this class includes one Mexican, one Chinese, and one Japanese-Hawaiian student.

Dr. Thorndike has brought us this final statistical report on the 6th General Hospital, as regards its admissions and dispositions from 20 February 1943 through 31 July 1945:

ADMISSIONS

Disease	16073	(55.5%)
Injury	4983	(17.2%)
Battle casualties	7131	(24.6%)
POW's	779	(2.7%)
Total admissions	28966***	

DISPOSITIONS

Duty	11095	(38.3%)
Limited service	2802	(9.7%)
Trans. to other US Hospitals	3790	(13.1%)
Evac. to Zone of Interior	10452*	(36.1%)
POW's	763	(2.6%)
Died (includes 16 POW's)	64**	(0.2%)
Total dispositions	28966	

* All Z of I from Casablanca
** 22 (Casablanca) — 15 (Rome) — 27 (Bologna)

Largest daily admissions	404 (19 June 1943)
Largest daily dispositions	749 (4 Mar. 1944)
Largest evacuation	747 (4 Mar. 1944)

MASSACHUSETTS EYE AND EAR INFIRMARY

Dr. Edwin B. Goodall, a staff member at the Infirmary, died suddenly at his Boston office on August 6. Dr. Goodall, who was a prominent Massachusetts eye specialist and leading New England Ophthalmologist, was born in Jefferson, New Hampshire and received his M.D. from the University of Maryland in 1909. He was a House Officer at the Infirmary from 1916 to 1918. Besides being a President of the New England Ophthalmology Society, he was a member of the American Medical Association, the American Board and the American Academy of Ophthalmology, and the Massachusetts Medical Society.

Recently appointed as Graduate Assistants in Oto-laryngology are Dr. James J. Hogan, who is a graduate of the Royal College in Edinburgh, Scotland—his appointment beginning May 26, 1947; and Dr. Maurice R. Ruben, who spent two years in military service—his appointment beginning in August.

Several doctors from the Infirmary were invited by the Faculty of the Ophthalmological Study Council to teach postgraduate courses in Ophthalmology during the latter part of the month of July. Among those giving the courses, which were held at Westbrooke Junior College in Portland, Maine, were:

Dr. David G. Cogan, Dr. V. Everett Kinsey, Dr. Charles Dyson, and Dr. Arnold Forrest.

Also aiding in the teaching were Dr. Parker Heath, Dr. A. Ray Irvine, Dr. Trygve Gundersen, and Dr. Paul A. Chandler.

Recent visitors at the Infirmary included Dr. Romulo M. Etcheverry from Argentina, Dr. Luis Florez of Spain, and Dr. Elco Hinhinga, a native of Holland. These doctors made complete tours of the Hospital, noting the various activities of its departments.

Dr. Moses H. Lurie's family made an unusual contribution to the Infirmary this summer. Frederick, Dr. Lurie's son—age 16 and a student at the Cambridge School—volunteered to help in the Mosher Laboratory; and his daughter, Ruth, served every day from nine to four in the Nursery, supervising play under the direction of Miss Linda Hall and the Occupational Therapy Department.

We are very grateful for this contribution, during a summer when young people, particularly, prefer to be at the ocean.

The Board of Trustees, at their meeting on July 25, voted:

To promote from the position of Intern to that of Assistant Resident in Medicine for one year, beginning July 1:

Dr. James H. Donald
Dr. Frederick C. Goetz
Dr. William D. Sohier, Jr.

To promote from the position of Intern to that of Assistant Resident in Medicine for one year, beginning October 15:

Dr. John T. Finkenstaedt
Dr. Rita M. Kelley
Dr. Bernard G. Stall, III

To appoint:

Dr. Joel C. Goldthwait as Second Assistant Resident in Pathology for the period July 1, 1947 through June 30, 1948;

Dr. Henry J. Kowalski as Assistant Resident in Medicine for the period January 1 to Oct. 15, 1948;

Dr. John F. Tannheimer as Assistant Resident in Medicine for one year, beginning October 15.

At their meetings on July 16 and 30, the General Executive Committee voted to appoint:

Dr. S. R. Cooper as Research Fellow in Medicine, to assist Dr. Evelyn in special studies on blood flow;

Dr. Leslie Corsa, Jr. as Research Fellow in Surgery;

Dr. G. Marshall Crawford as a member of the Medical Executive Committee;

Dr. Howard S. English as Graduate Assistant in Neuropathology for six months, beginning July 1;

Dr. Theodore S. Golden as Graduate Assistant in Pediatrics.

The late Major Gist Blair, for many years the Historian General of the Military Order of the World Wars, contracted with Stanford University, a few years ago, for a special historical section in the Hoover War Library, to be designated as the M.O.W.W. Archives, in which historical records, books, etc. were to be placed for safe keeping and use by future students. Among the records are battle maps, battle orders, military diaries, original manuscripts, rare books. and personal briefs. The Archives are inspected periodically by national officers. and the Trustees of the Gist Blair Memorial Fund feel that no safer place exists for the protection of this material.

Dr. Washburn called our attention to a published request made by the Trustees of the Gist Blair Memorial Fund for contributions to this collection, and our Archives Department has sent three books to the Hoover War Library — *The history of U.S. Army Base Hospital No. 6 and its part in the American Expeditionary Forces,* 1917-1918, *A pictorial history of the 6th General Hospital,* and *The 105th General Hospital—Two years down under.*

The volumes were inscribed on the title pages by Colonel Washburn, Colonel Goethals, and Colonel Cave, respectively.

Massachusetts General Hospital is justly proud of this contribution to the Hoover Library collection.

Something that has been bothering us for a long time was brought to a head the other day. Dr. William H. Putney of Concord, New Hampshire, who served with Base Hospital No. 6 in World War I, came to the Archives Room and asked if he might see what we have in our files on MGH-ers in World War I. One thin folder and the book *History of Base Hospital No. 6* was all we could produce. Therefore, this appeal:

If any of our staff or alumni have, stored away at home in attics or chests or drawers, material bearing on the part that any individual or group from M.G.H. played in World War I, the Archives Department would appreciate it very much if you would be willing to deposit such papers, letters, pictures, etc. with us. Your contributions will be accessioned with your name as the donor, and carefully filed and indexed.

It seems as if there must be a wealth of interesting and valuable material concerning our men in World War I that should be assembled in one place—which place is, logically, the Massachusetts General Hospital Archives.

Every time we have gone into the Archives Room since we published that list of signatures which are in the old Surgical desk, we have been met with resentment on the part of the smaller desk in there. Sometimes its displeasure has taken the form of silent and haughty indignation; often we have found it sulking in there behind the door; but this week, when it deliberately thrust out its foot and tripped us up as we were on our way past it, we decided that after all fair is fair and it should be given the recognition it rightly deserves, even if it is a much younger member of the Desk family. So here goes.

This is a single lift-top desk, with a little cupboard which has a door at the left. We understand that this type was used by the junior men. Most of those whose signatures appear inside served on West Surgical, others were on the East Service, and one or two were Children's Medical men. The dates run from 1887 to 1940. Homer Gage was the first to sign, and J. B. McKittrick and George F. Emerson were the last.

Here is an alphabeted list of the eighty names it contains, just as they were written:

E. Alden ['02]; Seabury W. Allen, '97; Richard E. Alt, '33.

J. W. Bartol, '90; L. L. Bigelow, '08; W. B. Breed, '19; G. W. W. Brewster, '93; W. A. Brooks, Jr., '91; Robert K. Brown, '39; John Bryant, '10.

H. M. Chase, Jr. ['02]; Farrar Cobb, '93; Richard Collins, Jr., '33; Russsell T. Congdon, '09; W. P. Coues, '94; T. D. Cunningham, '20; E. F. Cushing, '87-88.

John Dane, '92; A. A. Davis, '93; W. H. Davis, '98; Gordon Donaldson, '38.

George F. Emerson, '40; A. B. Emmons, '04.

Homer Gage, '87; James Gallison, '10; R. Garland ['04].

J. B. Hartwell, '05; G. H. Hill, '95; Byam Hollings, '08; H. L. Houghton, '94; J. B. Howland, '96; C. W. Hoyt ['06].

Frederick C. Irving, '11.

H. A. Johnson ['01]; W. S. Johnson ['99]; D. F. Jones, '96.

H. E. Kennard, '34; Hughes Kennedy, '21; L. C. Kingman, '05.

W. A. Lecompte ['99]; Robert G. Loring ['96]; H. A. Lothrop, '91; Oliver A. Lothrop, '09.

H. W. Marshall ['08]; Andrew R. MacAusland, '11; J. B. McKittrick, '40; C. G. Mixter, '07; G. A. Moore, '11; J. G. Mumford, '89; F. T. Murphy ['01].

Clarence Nelson, '39; W. S. New, '17; J. L. Newell, '32; C. W. Norton ['02].

R. F. O'Neil, '95; C. E. Ordway ['06]; R. B. Osgood ['00].

J. C. Pegram, Jr., '96; H. Phippen, '89; G. B. Pierce ['00]; C. A. Porter, '92; J. J. Putnam, '20.

S. P. Sarris, '39; C. L. Scudder, '88; R. H. Seelye, '90; W. C. Seelye, '00; George M. Sheahan, '08; W. E. Sherman, '21; George G. Smith, '09; H. P. Stevens, '07; J. S. Stone, '94.

S. M. Talmadge ['38].

M. V. Veldee, '19; B. Vincent ['03].

Geo. S. Whiteside, '97; W. Whittemore, '09; Hugh Williams ['99].

Edward L. Young, Jr., '10; Ernest B. Young, '97.

Off at the side we find the name Hayward, with nothing further to identify it. We cannot be certain which of our men who bore that name wrote it; but it is reasonable to suppose it might have been George G., for his years of service here at the hospital were closer to those of the other signers than were any of our other Haywards. If it was he, that inscription is the earliest one in the desk, for Dr. George G. Hayward was elected a Surgical House Pupil in 1879 and ended service the following year.

Important events, concerning Massachusetts General Hospital, that occurred in the month of September during the first half of the nineteenth century:

Sept. 3, 1821 — One patient (the first in the history of M.G.H.) was admitted. Not a single other application was made for admission until September 20.

Sept. 7, 1828 — The Apothecary wa ordered to be styled the House Physician.

Interesting information regarding the early duties of the Apothecary is found on pages 146-148 of Dr. Washburn's *History of Massachusetts General Hospital.* We quote:

> The By-Laws of the Corporation adopted July 5, 1811, ten years before the General Hospital was opened, provided for an Apothecary and House Surgeon to be "elected from the class of students by the Trustees on the recommendation of the Physicians and Surgeons of the Hospital." The Apothecary was to be "ex officio Secretary of the Corporation and of the Board of Trustees and Librarian and Cabinet Keeper of the Hospital." [More about that Cabinet Keeper in a subsequent issue. *Editor*] They were to live in the Hospital, and their duties to doctors and patients are specified. These rules would appear to show that it was originally contemplated to have two House Officers: the Apothecary, to be the Medical man, and the House Surgeon. . . .
>
> In 1821, just before the first patient was admitted to the General Hospital, the Rules were revised. There was then no mention of a House Surgeon. The Apothecary's qualifications and duties were briefly: He must have completed one year as a Student in Medicine, be nominated by the Acting Physician and Surgeon, live at the Hospital, board at the table of the Superintendent — this maintenance to be his only compensation. He was to care for all drugs, surgical instruments, administer the medicines, and perform other duties as ordered by the Physician and Surgeon. He purchased drugs and assisted the Superintendent in his accounts. In 1822 the Rules further state that he was to visit the sick twice a day and in the absence of the Physician and Surgeon to care for emergencies. He was to keep the records. . . .
>
> In the minutes of the Trustees' meeting of September 7, 1828, appears the following: "Voted that the Officer heretofore called the 'Apothecary' at the Hospital, shall henceforth be styled the 'House Physician.'" The Rules adopted May 9, 1830, outline the job of the "House Apothecary", and definitely make him the Pharmacist, with other duties that do not include the care of the patients. It is no longer required that he shall have studied medicine.

Sept. 27, 1829 — John Williams, "a colored man", having been admitted into the Hospital, under permit of Dr. George W. Otis, Assistant Surgeon, it was voted that Dr. Otis be requested to state in writing to the Trustees the circumstances which, in his opinion, constituted this a case of emergency within the meaning of the Second Article of the Second Chapter of the Rules and Regulations. On October 9 Dr. Otis replied that he had never before seen a copy of the Rules and Regulations, and that he did *not* think the case was one of emergency within the meaning of those Rules.

It is interesting to find, in this connection, that in 1844, when the results of a drive for funds for enlarging the Hospital were announced, subscriptions varied in amounts from $20,000 to 25¢ and that it was a "poor black" who gave the twenty-five cents. His name was recorded with the others on the books of the donors.

New addresses:—

Dr. Alice M. Bandeian (*An.* 1943), 86 Dodge St., Beverly, Mass.

Dr. John Bandeian (*gr. asst. S*), 86 Dodge St., Beverly, Mass.

Dr. Frederick C. Gevalt, Jr. (*r.p.* 1943), Sharon Clinic, Sharon, Conn.

Dr. J. Wister Meigs (*r.p.* 1943), 575 Ridge Road, Hamden 14, Conn.

Dr. Charles P. Sheldon (*ES* 1931), 319 Longwood Ave., Boston, Mass.

Brief bits:—

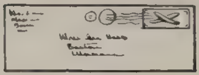
Dr. Robert H. Brown (*ES* 1945) announces the opening of his office for the practice of general medicine at 28 High St., Sharon, Mass.

Dr. William C. Burrage (*EM* 1941) has opened an office for the practice of internal medicine at 57 Deering St., Portland 4, Maine.

Dr. Harrison E. Kennard (*WS* 1934) has reopened his office at 374 Marlborough St., Boston, for the practice of general surgery.

Capt. Robert F. Legge, MC, USN (*Or.* 1935) is still Chief of Orthopedic Surgery at U.S.N.H., Great Lakes, Ill.

Dr. Henry C. Thacher (*CM* 1942) announces the opening of an office for the practice of pediatrics at 34 Court St., Auburn, Maine.



A most welcome letter has arrived from Dr. Clarke T. Case (*WS* 1943). From Apartment F, 447 West Cherry Drive, Columbus 8, Ohio, he writes:

> After much wandering around, I am finally settled down for a little while. When I left the fair portals of the old M.G.H. in June 1943, I went up to the Palmer Hospital in Boston, under Dr. Leland McKittrick. Then I spent two years in Civilian Public Service at a hospital in central New Jersey. This past year I spent on the surgical service of the Veterans Hospital in Topeka, Kansas. The first of July of this year I began an assistant residency in surgery at Ohio State University Hospital here in Columbus, under Dr. Robert Zollinger, formerly of the Peter Bent Brigham.
>
> It seems good to be back in a teaching hospital, and I have a great time comparing and contrasting life here with that at the M.G.H. I hope if any of my old MGH friends pass by this way they will be sure to drop in and see me.
>
> I enjoy each copy of THE NEWS as it arrives, for it keeps me abreast of much that is going on at the M.G.H. Keep up the good work.

Here is a "first" from Lt. Isaac V. Manly, MC, USNR (*ES* 1947). His present address is Box 11, U.S. Submarine Base, New London, Connecticut.

> I was commissioned on graduation from Medical School, March 23, 1946 and placed on active duty here on July 10, 1947. Joe Maloy [*ES* 1947] is here with me, and it looks like a pretty nice setup. We may even get to cut out a wen and burn off a wart now and then.
>
> Thanks for THE NEWS. Mighty glad to be receiving it.

Dr. James S. Mansfield (*gr. asst. M* 1942-43) spent three years in the Army. His overseas service included England and France. He was advanced to the rank of Lieutenant Colonel before his release from military duty, about a year ago. From 12 Bay State Road, Boston, he writes:

> I have been back in the practice of Internal Medicine since November 1946. I now manage to keep busy as part-time physician to the Harvard Law School, Attending Physician at Cushing Veterans Hospital, Out-Patient Physician to the Boston City Hospital, and my own practice. My special interests are in hypertension and nephritis, and in tuberculosis.
>
> It is good to be back as a civilian doctor, and to be in Boston again.

Dr. Robert W. Gentry (*ES* 1943) has a new address—718 5th St. SW., Rochester, Minnesota. This letter from him gives us up-to-the-minute information regarding himself and several other MGH-ers.

> My recent all too short return visit to the M.G.H. was a pleasure. It was an interesting experience to renew old memories, see my many friends, and observe the contributions to and various changes in surgical diagnosis and technique.
>
> During the past four years I have been at the Mayo Clinic — first, on a three-year Fellowship in Surgery, and then as an Assistant to the Surgical Staff. In June 1947 I received the degree of Master of Science in Surgery

from the University of Minnesota.

At present John R. Spencer (*EM* 1943) is busily engaged in clinical surgery, and Donald C. Balfour, Jr. (*EM* 1943) is carrying out some interesting research on the physiologic changes following gastric surgery.

We are looking forward to having Jim Kreisle (*WM* 1943) and Dick Riddell (*ES* 1943) with us this fall.

Another wife has substituted for her husband in the job of getting a letter off to The News. Mrs. Averill writes, regarding Lt. James H. Averill, MC, USNR (*M* 1947):

Following his internship, which ended July 10, my husband reported to the Naval Hospital, Newport, Rhode Island, as a Lieutenant (j.g.).

In your letter you wrote that if former staff members were entering military service, The News would again be sent to them. As a graduate of the Training School at M.G.H., I join my husband in his interest in what goes on at the General, and we would both greatly appreciate receiving The News wherever the Navy may take us.

A short note from Dr. William M. Huber (*r.p. D* 1937) says:

I was certified as a Diplomate of the American Board of Dermatology and Syphilology in April 1947. At present I am engaged in research in Histopathology and Mycology at Vanderbilt Clinic, Columbia-Presbyterian Medical Center, New York City.

Last December we published a long and interesting letter from Dr. Ronald C. Bishop (*M* 1945), written while he was serving as Captain in the Medical Corps with the 280th Station Hospital in Lesum, Germany. Now, from 1982 Troy Avenue, Brooklyn 3, New York, comes this note:

My News has been coming to me via Germany, and that is a long way around. My new address is as above.

I returned to the States March 28, 1947 and completed my terminal leave in May. At present I am working as an Intern at Kings County Hospital here in Brooklyn.

When we published a "first" from Dr. Homer D. Peabody, Jr. (*M* 1945) last December, we said we hoped it wouldn't be his last. It wasn't; and we appreciate very much this letter from him, from 3147 Front St., San Diego, California.

I have recently been released from the Army, having served the past year at Fort Totten Station Hospital, New York.

After a leisurely automobile trip from New York, I started work at the Rees-Stealy Clinic in San Diego and expect to be here for one year. Then more traveling—this time to the Mayo Clinic for a Fellowship in internal medicine.

I would be most happy to see any of the MGH group if they are near San Diego.

Have always enjoyed The News.

A request for information about his war work resulted in this letter from Dr. George B. Beaman (*a. Psychi.*).

For almost two years at Jefferson Barracks I had the opportunity to see nearly every misfit in the United States from Seattle to Key West and *vice versa*. During 1943 alone, I passed judgment on some ten thousand men. Through the summer and fall of 1944, I enjoyed sailing on Balboa Bay when I wasn't working with Cadets at Santa Ana. From Thanksgiving Day until after the Derby, I enjoyed the hospitality of Louisville—by all odds the most friendly town in the United States, in my experience. For diversion, I was the sole Psychiatrist for a time for fifteen hundred convalescent patients. As if tha wasn't bad enough, almost every agency in Louisville wanted to hear me talk. My talks to the Police Department were probably the most profitable—at least I did not get pinched, as usual. After the Derby I was shifted to Buckley Field. And so, Beaman continued to work like the dickens, going on into the fourth year.

Perhaps a few good things did come out of that mad military psychiatric whirl. The general public has learned a lot about emotional illness. At least they have learned that it is not confined to the idle rich or poo unfortunate women. Better acquaintance is the first step in allaying fears of the mysterious. The convalescent hospital treatment idea, although it came late, has, I believe, influenced medical, surgical, and psychiatric practice since the war. The willy-nilly education of all physicians in the Army in matters psychiatric has, by the expressed confessions of some of them at least, made better doctors of them. There are also encouraging signs among psychiatrists.

Another "first time-er" is Dr. Gardiner Pier (*WS* 1943). This letter gives us a rather gloomy picture of his war experiences.

I can assure you that my military career was distinguished only by its uselessness in contrast to that of most of my medical friends.

I went to Carlisle Barracks in April 1944, for the prescribed six weeks of medical indoctrination, where they told us that the vast majority would become Battalion Surgeons. I imagined, in my ignorance, that a Battalion Surgeon in the Parachute Infantry might find greater surgical responsibility, and besides, I liked the idea of working with volunteers So I requested parachute training and spent six more weeks of "surgery" in Finney General Hospital where I did considerable writing on charts. That was July 1944. After four weeks of the Parachute School, where I learned the meaning of the word "rugged", I was qualified.

I had hoped for an immediate overseas assignment, but out of six doctors in my class, I alone was ordered to remain to work in the School. I spent the summer and fall in the Advanced Training Division, taking sick call, training parachute medics, and covering tactical jumps. All this was valuable—especially the tactical jumps, which we medics would make from the lead plane, thus combining a training jump with practical training in first aid which we gave to the injured on the field. Since the jumps were by groups of five hundred or more, and the injury rate ran around 1-2%, we sometimes had half a dozen fractures, sprains, and bruises to care for, twice a week.

Shortly before I was scheduled to ship overseas I sprained a knee badly in a football game and spent the winter, until February, in the hospital. Thererafter, I was on temporary limited duty, and by some misfortune was ordered out to the Third Service Command, where I had three different dispensary jobs—each one more useless and miserable than the last.

Dr. Robert J. Joplin (*P* 1929 & *Or.* 1933) sent us this letter some time ago.

My activities overseas were meager compared with so many you have reported in The News—which paper I read with delight each month.

At Base Hospital 13, in Milne Bay, British New Guinea, I served from September '44 to May '45 as Chief of Orthopedic Surgery. In Hollandia, Dutch New Guinea, I was Chief of Surgery until I became Executive Officer. Fortunately, I was permitted to see Orthopedic patients in consultation and perform operations.

Our department was quite active at Base Hospital 13, where we had a high percentage of knee cases. Though no physical therapy or occupational therapy departments existed, as such, we utilized the hospital area which was formerly the site of a thriving, self-supporting mission where lovely fruit trees and flowers were abundant. Convalescent patients, who were ready for active exercise, were given butterfly nets and permitted to wander through the garden paths where beautiful specimens were always present during the middle of the day. As you doubtless know, the largest and most magnificent butterflies in the world are found in New Guinea. The incentive apparently was sufficient, for over half of these patients returned to active duty in less than three weeks. Maybe you wonder what they did with their daily catch. Of course, if the patient did not want them himself, the nurses had first choice and the doctors got the remainder. I used to pick out a few from time to time, mount them, and send them home to my two little daughters, who were thrilled by their brilliant colors. One day they took several trays of them to school. Their classmates enjoyed them so much they were shown elsewhere. Eventually, I'm told, they found their way to the Museum of Natural History.

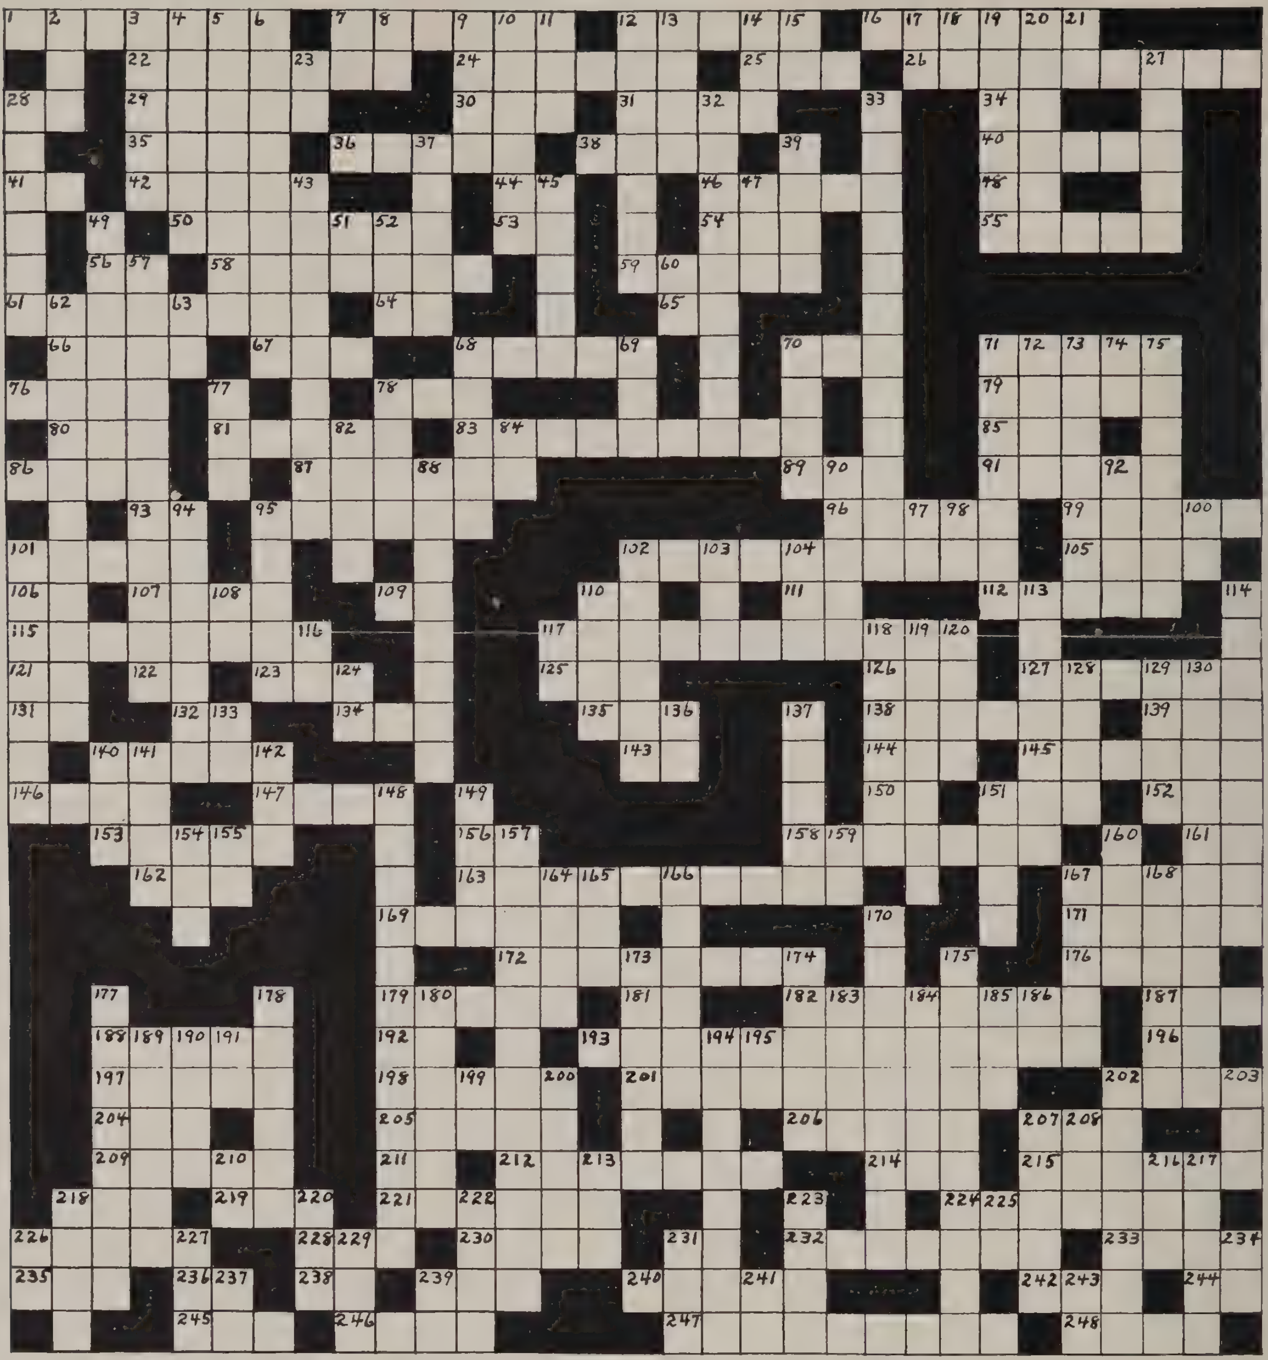
Although our hospital unit was never near enough to the fighting zone to get fresh casualties, we received shipments from forward areas from time to time, for open reductions, removal of foreign bodies, reapplication of plaster of paris casts, etc. Some of these patients were returned to duty while others were forwarded to the States. A large part of our Orthopedic work was more elective than emergency. It compared favorably with civilian practice, since most of our casualties resulted from motor (jeep and truck) accidents, crushing injuries from small boats operating near gangways and landing docks in rough weather and athletic (so-called authorized calisthenics) injuries.

An excellent pattern for those of you who have not reported your military assignments from time to time is suggested by this letter from Dr. Charles P. Sheldon (*ES* 1931).

We MGH graduates borrowed The News from others when our copies failed to arrive and we always, therefore, kept up to date with information concerning our friends at home and abroad. I will say that most of the issues did arrive, and usually very promptly.

To bring you up to date with some of my experiences, I am appending a résumé of my military activities since the spring of 1944.

1. Commanding Officer, 116th Station Hospital, December 1943 to November 1944. This hospital was located at Port Moresby, New Guinea.
2. Hospitalization Officer, Office of the Chief Surgeon, USASOS, SWPA, November 1944 to June 1945. I joined this headquarters at Hollandia in Dutch New Guinea. In January we were transferred to Leyte, P.I. and in March to Manila. My duties involved the allocation of medical units to bases in the theatre; intra-theatre movements of units; selection of hospital sites; establishment of construction standards; liaison with the Engineers on hospital construction; and the establishment, maintenance, and operation of all hospitals within the theatre. These duties demanded a fair amount of travel, so I became quite familiar with the Philippines. I shall never forget the privations of the Filipinos, the damage to their cities, and the fortitude with which they face a difficult future. Riding up Dewey Boulevard in Manila in early March, before the debris had been cleared, was a memorable occasion. For the first time I was able to grasp fully why we Americans were fighting the Germans and the Japs. It was to prevent San Francisco, Chicago, and Boston from looking like that.
3. Promoted to Colonel, June 6, 1944.
4. On June 16 I was released from the



MGH CROSS-WORD PUZZLE, BY MRS. WILLIAM W. L. GLENN

Chief Surgeon's Office by Gen. Guy B. Denit Theatre Surgeon, and returned to the Zone of the Interior on the Redeployment Point Basis. Sailing to San Francisco on the *Klipfontern* was a fitting finale to the tour of overseas duty, as the accommodations were excellent and the food, in characteristic Dutch style, was superb. We sailed back under the Golden Gate August 5, and two weeks later I was officially placed on Terminal Leave for Separation from the service as of November 16.

5. On September 8, I was pleasantly surprised to receive a citation. A true copy is enclosed.

For a long and interesting letter which brings us up to the beginning of this one, see your NEWS for March 1944.

We reported several months ago that Dr. Sheldon is back on the staff at M.G.H.

Another new voice—that of Lt. Col. Robert Lee Patterson, Jr., MC (*Or.* 1935). After more than three years of overseas service he sends this briefest possible statement. How much his friends would enjoy hearing a few details—through THE NEWS.

> I entered the Army in February 1942 as Chief of the Orthopedic Section of the 2nd General Hospital (Presbyterian Hospital Unit, New York City) and remained with this unit for 21 months in England and 12 months in France. During this period I was Regional and Hospital Center Consultant in Orthopedic Surgery.
>
> On arrival back in this country in July 1945, I was made Consultant in Orthopedics to the Fourth Service Command, where I remained till separation from the Army on October 23.
>
> My promotions were in 1942 and 1945. I also received the Legion of Merit in May 1945.
>
> Thank you for always sending THE NEWS and for the fun and interest it gave us. I hope I shall be in Boston soon and be able to visit the M.G.H. In the meantime, my permanent address is 148 East 65th St., New York, N. Y.

The first letter in a long time has come from Dr. Burdick G. Clarke (*EM* 1943). He writes:

> Please change my address to 943 Oak Street, Winnetka, Illinois.
>
> I regret that my own experiences in the Service afforded little interesting subject matter for letters, or that security regulations prevented writing about things of most interest when they occurred. I want to say, though, that during the twenty-six months I spent at sea with the Amphibious Forces I particularly enjoyed THE NEWS. I am sure I was not alone in finding both personal items and professional comment of the greatest interest, even though at times they caused considerable homesickness.
>
> I am in the Department of Physiology at Northwestern Medical School, working in the laboratory of Dr. A. C. Ivy.

Dr. Robert H. Detwiler (*CM* 1940) is back home in Arlington, Virginia. A recent letter says:

> THE NEWS has been coming with clock-like regularity and has been read with appreciation and interest.
>
> Soon after V-J Day, I returned to the States and have since been working hard and drinking gallons of milk. I have seen quite a few of the local MGH boys since they have returned to practice. Everyone here is having trouble finding adequate office space and help, but we hear it is the same all over.

THE NEWS

No. 61 Boston, Mass. October 1947

ANESTHESIA SERVICE AFFAIRS

To say that the Department of Anesthesia now has 46 full-time members or that it works on an annual budget of $185,000 ($59,000 of which comes from outside sources, largely for research), or to say that it is self-supporting (actually slightly more so, so that salaries have recently been raised) — to recount these facts gives one kind of information, perhaps not the most important kind, although it is the easiest to give.

Several attitudes of the department have remained unchanged from the beginning — for example, the aim to solve a given problem as simply as may be safe and satisfactory and at as low a cost to the patient as can be. For some curious reason anesthesia practices are almost always extremely controversial and the foregoing simple statement gives no hint of the opposition engendered by putting it into practice. For example, we believe that our insistence on safe, *simple* anesthesia procedures for thoracic surgery have done much to make it possible for many general surgeons to enter the thorax when the patient's disease indicates that is the best approach. By "safe, simple procedures" we include the demonstration that ether anesthesia given intratracheally is unquestionably the best all-around agent for surgery inside the thorax. We have shown by a good many thousand cases that most of the popularly recommended gadgets are unnecessary. A closed respiratory system with facilities for positive pressure anesthesia is essential. Ten years ago a considerable protest met our stand. Most of the major thoracic centers of the country now have adopted the simple principles used here.

Another example, our belief that nurse anesthetists continue to have their place in a charitable institution has caused and is causing criticism. For the time being — certainly as long as the surgeons here continue to achieve their pace-setting results — we shall probably continue to use, in part, nurse anesthetists, believing that the shift to an all-medical service would unreasonably raise the cost of medical care. With 20 physicians full-time in the department we do not minimize their importance. And when, in a little over a dozen years, the department has grown from no physician to 20, we believe the evolution is rapid enough.

In the turbulent postwar years, a great problem has been how to hold even partially trained young men. At times, it seems as though each of the 7,000 hospitals in the United States is making a determined effort to get at least one physician anesthetist. Desirable as this might be, there aren't enough available trained men. In about a year's time, 15 of the major medical schools of the country have asked us to provide heads of their departments. Well-trained anesthetists have at present a scarcity value probably unequalled in any other field of medicine. It is difficult to hold on to enough well-trained men to give the service we want to give. The expansion of our department since the war is an effort to do our share in overcoming this national shortage.

As with all other medical problems, these are world-wide and not merely national. We have acknowledged this responsibility in accepting and having in training men from three foreign universities: Oslo, Copenhagen, and Basle. Such men are accepted for training only on the guarantee that their national universities will give them teaching positions when they return to their homelands.

* * *

Of all the drugs listed in the pharmacopoeia, probably those making up the group of sedatives is most used and least studied, in man. To this end our research activities are concerned with investigation of these agents in human *volunteer* subjects. Such studies are better carried out in a hospital than elsewhere. The possibility for such studies is one of the great advantages and intangible resources, not to say responsibilities, of an institution like the Massachusetts General Hospital. Two chief lines of work are in progress: one deals with study of a new and promising family of narcotics, the amidones, racemic, levo and iso. The other line is concerned with study of the sleep process as it is influenced by sleep-producing drugs. Two human subjects at a time are studied for about thirty consecutive nights, during which they sleep in separate air-conditioned rooms. These are equipped so that electroencephalograms, records of their bodily movements, and their auditory thresholds (depth of sleep) can be obtained during sleep. A program of objective performance is administered just before, once during, immediately after the night's sleep, and once during the day, in an effort to relate their sleep characteristics with and without sedatives to their mental and motor efficiency. We hope to be able to say what constitutes a good hypnotic agent and finally to get new insight into the nature of the sleep process.

The Anesthesia Laboratory now has an endowment of a little more than $60,000. It is not planned to use the income from this for a considerable number of years, in the hope that eventually this can be built up into a sum that will make long-range planning possible in the activities of the Laboratory.

Henry K. Beecher, M.D.,
Anesthetist

* * *

Dr. Arthur W. Allen was made President of the American College of Surgeons at their meeting in New York on September 8.

Dr. Allen is Chairman of the National Committee for the United States of the International Society of Surgery. On September 13 he flew to London to deliver one of the Moynihan Lectures at the meeting of that Society. While there, he received an honorary membership in the Royal College of Surgeons.

* * *

Dr. and Mrs. Faxon were the first to report having finished the cross-word puzzle. Dr. Faxon says it was the first cross-word puzzle they had ever attempted; but, being the Faxons, they entered into the spirit of the contest—and won the race.

* * *

On September 5 an afternoon party was given the 16 Dietetic Interns who had finished their course here at M.G.H. Dr. Faxon presented the certificates to the graduates, after which refreshments consisting of sandwiches, cakes, and tea were served.

There are 17 students in the new 1947-48 class. Sixteen colleges in the United States, from Maine to Oregon, and one in Argentina are represented in the group.

* * *

Ether Day will be observed this year with a very simple and informal ceremony to be held in the Brick Corridor. Announcements of the time of the program will be given out as soon as plans are completed.

* * *

This is to correct an error that wormed its way into the September issue.

On page one we said that Dr. Frank W. Rounds, who has been elected President of the New England Society of Oral Surgeons, recently ended service as an Intern in our Dental Department. Of course, as you probably know, it was Dr. Rounds's son, Charles E. Rounds, who recently finished his internship here.

We *would* have to pick the front page for such a mistake as that!

Beginning with this issue, in addition to a leading article from the head of one of our services, we are going to publish each month a paper on the history and present activities of one of the hospital clinics. Many of our readers, doubtless, have nothing more than vague ideas as to how our several clinics came into being and how they have grown into the efficient departments they now are, and these write-ups should prove of great interest to us all.

THE NEWS is very pleased to be able to start off the series with this excellent article from Dr. Francis M. Rackemann.

THE ALLERGY CLINIC

DATES IN ITS HISTORY

The word "allergy" was suggested by Von Pirquet (1) in 1906. The response of patients with syphilis and tuberculosis to treatments with extracts of the causative organisms were to him "strange reactions". Large injections of foreign serum produced other "strange reactions", and in Greek that's "Allergy".

In 1910, Meltzer (2) recognized the similarity between the lungs of guinea pigs dead of anaphylaxis and the lungs of patients dead of asthma. After that, Walker (3), Cooke (4), and Goodale (5) demonstrated the extraordinary reactions which skin tests with extracts of foreign substances could produce in certain individuals, and this was "Allergy", also.

In 1916, Longcope (6) in a Harvey Lecture discussed the similarities and differences between anaphylaxis in animals and allergy in man.

It was Dr. Joseph L. Goodale who stimulated Dr. J. A. Turnbull to study patients in the Nose and Throat O.P.D. from this new point of view. Dr. Goodale's paper on horse asthma was published in 1915. Meantime, Dr. Rackemann had spent two years working on anaphylaxis with Dr. Longcope, in New York, and in 1918 he had published a clinical study of 150 cases of bronchial asthma (7). After the war, in July 1919, he took over the beginning of the present Allergy Clinic. The work was carried on in a small room next to the Nose and Throat teaching clinic, and this was good because many patients with hay fever were at hand and because the teaching clinic had rows of chairs and desks which were useful. Extracts for tests and treatment were made in the laboratory in the Bulfinch Building which Dr. Edsall had provided. Volunteer Clinic Secretaries were being recognized for their enthusiasm and their ability, and became extremely helpful. The services of Miss Isabelle Coolidge and Miss Dorothy Mandell were greatly appreciated. In a short time Dr. Donald S. King became interested and helped greatly with the routine for a year or two.

Meantime, Dr. Harold S. Tobey of the Nose and Throat Department was quick to grasp the clinical importance of allergy and for some years he worked closely with those in the "Anaphylaxis Clinic", as it was then called.

In 1921, a part-time paid technician, Miss Lillian B. Graham, came to work in the clinic and helped immensely with the routine. The technique of skin tests and of treatments improved rapidly. It was thought that the study of such a variable disease as asthma could be advanced best by the observation of many patients, in the hope that they could be divided into types or groups and, furthermore, that "key" cases might turn up more often. This policy has not been in vain.

In 1923, a full-time technician became necessary and Miss Margaret A. Scully began her long and faithful service at the hospital. When, in 1926, Miss Graham resigned, Miss Scully carried on in the clinic and laboratory with part-time assistants to help with the heavy routine.

In October 1926, a patient and friend of Dr. Rackemann made a substantial gift to the Medical School for the study of asthma, and now a full-time Fellowship could be offered. Dr. Walter S. Burrage, just graduated from the East Medical Service, accepted it, and he has been working on allergic diseases ever since.

In 1927 the O.P.D. Building was enlarged by a small addition to connect it with the Eye and Ear Infirmary. This gave several new rooms, and at last the Allergy Clinic could have a little elbow room. Since then, the large group of patients have been handled in a suite of small rooms on the top floor opposite the Children's Medical Clinic. The place seems small, particularly on hot days in summer, but the doctors do well in it. When the crowd is noisy enough, conversation becomes private. There are two examining rooms, and "out back" the laboratory is newly equipped with modern facilities for nose and throat treatment, thanks to the enterprise of Dr. Weille.

In 1928, Dr. Abraham Colmes dropped in one day to see what we were doing, and he came again, until finally he was made a Graduate Assistant in the O.P.D. For sixteen years Dr. Colmes worked faithfully, until ill health forced him to resign in the fall of 1944.

Children came to the clinic in increasing numbers and when Dr. Edward S. O'Keefe showed interest in them, all the children were assigned to his care and a sub-clinic for children's allergy was established. In this way a connection with the Children's Medical Clinic was made.

In 1929, Dr. Francis L. Weille, eager student of Nose and Throat diseases, was assigned by Dr. Mosher to come to the Allergy Clinic once a week and help with the examination and evaluation of those many patients who presented lesions of the nose and sinuses, as well as of the chest. He, also, has stayed with us through the years, and under his control we have learned to curb our enthusiasm about nasal operations and to recognize that lesions of the sinuses are part of the picture and not often a cause of the disease.

In 1932, Dr. Frank A. Simon came from Louisville, Kentucky, to work full time in the Allergy Clinic and Laboratory. He stayed two years with us and taught us much about the development of hypersensitiveness, the technique of producing local lesions in the form of what we recognize now as "contact dermatitis".

After him, in 1934, came Dr. Harold C. Wagner, who also stayed two years. Dr. Wagner was another enthusiastic worker and was clever with the technical details. It was Dr. Wagner who devised the method of inoculating kapok with various fungi so as to demonstrate that the asthma which we had found clinically to be caused by kapok pillows and mattresses was due to the contamination of the pillow stuffing with various fungi growing on the kapok fibres. Studies of the mechanism of hay fever and its treatment were begun by Dr. Wagner and are still going on.

Dr. Theron G. Randolph followed Dr. Wagner, and we learned about histamine — that accurate determinations of histamine in the blood were difficult and that the histamine problem was very complex. Indeed, there seemed to be real doubt about the role which histamine might play in allergic diseases.

In 1942 Dr. Adolph Hochwald had escaped from the terrible conditions in Germany and Austria. He had worked previously on the role of Vitamin C in immunity and now was most anxious to apply his knowledge to clinical material. For two years Dr. Hochwald worked with us in the laboratory and clinic and learned from us, as we learned from him. By modifications of the diet he succeeded in producing anaphylactic shock in the white rat.

Meantime, in 1935, Dr. J. Evarts Greene, who had just completed his medical service at the Boston City Hospital, came to work in Dr. Rackemann's office and also in the clinic. He, too, has been with us ever since and has become one of the main supports of the clinic.

At the time of Pearl Harbor, the Allergy Clinic was very much a going concern. From the beginning, sessions had been held four days every week throughout the year, and the numbers of patients ranged from 100 per session in summer to about 50 per session in winter. We came to treat up to 7% of all the patients in the O.P.D. This was possible because of the friendly interest and helpful coöperation of several outside doctors. Dr. Julian C. Gant of Boston, Dr. Raymond J. Savignac of Worcester, Dr. William B. Clapp of Grafton, Dr. Paul Withington of Milton, Dr. I. Jaffe of Boston, Dr. Leo Burgin who assisted Dr. O'Keefe with the children, and Dr. Eda Polcari of Cambridge have all worked faithfully, and all except Dr. Gant are still with us.

Meantime, Mrs. Alice Dalrymple came in 1937 to help with skin tests and injections in the clinic, and now she is in charge of these important matters. A third technician came from time to time, especially in the summer when work is heavy, and this year Miss Tyyne Lamsa, M.G.H., R. N., comes regularly. On October 1, 1945 Miss Margaret A. Scully resigned, and Miss Lena Neri took over in the laboratory.

SOLUTION OF MRS. GLENN'S CROSS-WORD PUZZLE, PUBLISHED IN THE SEPTEMBER ISSUE

are Dr. Albert K. T. Ho, who came to the Infirmary in June, and Dr. Charles Lane, who arrived here in September. Dr. Ho, a native of Honolulu, is a graduate of Jefferson School of Medicine. Dr. Lane, from Hattiesberg, Mississippi, is a graduate of Tulane University, School of Medicine.

On September 23, the Boards of Surgeons met for dinner and an informal meeting at the Infirmary. They reviewed future plans for the Infirmary.

Dr. Norman Jesberg has completed his residency in Oto-Laryngology and is now at the Los Angeles Eye and Ear Hospital.

Last month we said that the Archives Department would be very glad to receive any items of a personal nature bearing on World War I — pictures, letters, etc. — which MGH-ers who were in the previous war might be willing to deposit with us. We are still hoping such items will begin to arrive.

Since then, this communication from Dr. Washburn, who was Commanding Officer of Base Hospital No. 6 in World War I, starts us off with what we hope will be a series of articles on hitherto unpublished events concerning the MGH unit. We ourselves have already thought of a most amusing episode that occurred at Talence, and we are going after that story for the next issue. If you, too, know of any incidents concerning MGH-ers in World War I that readers of THE NEWS would enjoy hearing about, let's have them. It is still not too late to build up such a file for our Archives collection.

Here is Dr. Washburn's letter:

It is unfortunate that the hospital paper of the day was discontinued as a measure of economy during World War I. If we now had in our files such material as THE NEWS published in World War II it would be of much value. It is true that through the devoted efforts of Mrs. J. H. Means and the published *History of Base Hospital No. 6* we do have considerable material available. However, the Editor of THE NEWS thinks that the younger generation knows little of B. H. 6's accomplishments and she wants to get its members to recall some of their experiences for present publication. Hence this communication.

A useful accomplishment was to persuade General Gorgas, then Surgeon General of the Army, to use the civilian hospitals as bases for Army hospitals, in addition to medical schools which alone were first contemplated. The Directors of Johns Hopkins and Massachusetts General, with Colonel Jefferson R. Kean, M.C., visited the Surgeon General for this purpose and emerged from the conference with the request of General Gorgas that the Massachusetts General and Johns Hopkins Hospitals form units for Army service. This was authorized by the Trustees of Massachusetts General Hospital a full year before the United States was at war. The result was that Base Hospital No. 6, with plenty of time to select its officers, nurses, and other personnel and to gather its equipment under the Red Cross, had an organization of men and women accustomed to working together — a great improvement over the hastily gathered personnel of hospitals of the Spanish War.

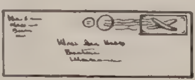
On July 9, 1917 the unit left Boston. It was a carefully chosen group of officers, nurses, and enlisted men, well equipped and reasonably well drilled, and organized for 500 beds. The journey overseas was via New York, Liverpool, Southampton, and Le Havre. It reached its final resting place at Talence, a suburb of Bordeaux, France.

It took over from the French a schoolhouse and a few ward buildings of 20 beds each, which had been used by the French as an Army hospital. The place was sadly in need of cleaning, the eradication of fleas and rats, and the construction of a sewer system. This was soon followed by the building of kitchen, dining rooms, store house, and many more wards, until finally a hospital originally planned for 500 beds housed 4,300 patients and a much increased number of officers, nurses, and enlisted men at the time of the Armistice. With its ice plant, kitchen equipment, central heating, toilet and sewer system, many wards and covered corridors, it became "the marker and pattern for other similar units that were stationed later in this region", as Col. Henry A. Shaw, Chief Surgeon, Base Section No. 2, says in his Introduction to the *History of Base Hospital No. 6*. General Leonard Wood, passing through Bordeaux, told the writer that it was the best hospital in the A. E. F.

In addition to producing this hospital unit, officers and nurses were sent from Base Hospital No. 6 as surgical transfers to operate at the front, and three of its officers went to England to produce hospitalization there.

B. H. 6 Laboratory was so efficient it became the Base Section No. 2 laboratory. The work done there was of a high character. Its work in control of epidemics was of the utmost importance. The hospital was blessed by the tireless and unselfish work of its beloved Chaplain.

The writer wishes to state that he has done this bragging at the request of the Editor of THE NEWS. All interested in detail are referred to the *History of Base Hospital No. 6*.



Dr. John F. Bresnahan (*r.p.* 1918) and Assistant Director at M.G.H. 1914-18, is still with the Veterans Administration, but has been transferred to their hospital

Meantime, a Social Service Department was organized about 1935, and Miss Natalie Jewett has given us the benefit of her long and sound experience in social problems. She visits our patients to look for cats, kapok, and other "house dusts", and she explains how the mother must feed her child. A small fund can provide rubber pillows, and can send an occasional severe asthmatic to the convalescent home.

The Clinic Secretaries are easy to overlook. Since the beginning, at least two young lady volunteers have appeared each morning to look for records and bring the patient and the record together. Without their help the work would be almost impossible. We are very grateful to them.

During the war, doctors at home did extra work — and then some. In the spring of 1944 Dr. John L. Jacobs came to learn about allergy and give us both moral support and real assistance. Dr. Henry S. Forbes likewise showed his interest and took hold hard. One wonders what might have happened if they had not appeared.

When Drs. Burrage, Greene, Clapp, Burgin, and Jaffe came back from Service we were as pleased as they.

In the summer of 1946 young men were once more available, and it is fortunate to have Dr. John G. Wiswell from Halifax and Montreal to work full time, and Dr. John W. Irwin to work both in the office and clinic. They are a good pair and should teach us still more about a very fascinating but very puzzling group of diseases.

A Conference on Myasthenia Gravis, with informal discussion, will be held at the Massachusetts General Hospital on October 2 - 4, 1947.

The opening session, on neuromuscular transmission, will take place on Thursday afternoon, October 2, beginning at 2 P.M. Drs. Acheson, Krayer, McEachern, Nachmansohn and others are expected to lead the discussion.

On Friday, October 3, a morning and afternoon session is planned, the morning being given over to the diagnosis and treatment of myasthenia gravis and the afternoon to the problem of the thymus, thymectomy and thyroid. Speakers will include Drs. Aeschlimann, Aranow, Eaton, Schwab in the morning and Castleman, Good, Cope, Clagett, Thorn, and Mr. Keynes in the afternoon.

On Saturday, October 4, a clinic by Dr. Henry R. Viets and Dr. Robert S. Schwab, and a discussion of future research is planned. The meeting will adjourn by 1 P.M.

All meetings will be at the Massachusetts General Hospital.

On Thursday evening, there will be an informal dinner for all attending the Conference, including lady guests. On Friday, a dinner, without ladies, is planned for Mr. Keynes.

All investigators working on the problem of neuromuscular transmission and clinicians and surgeons treating patients with myasthenia gravis are welcome.

Henry R. Viets, M.D.

The first monthly meeting for the season of the Medical Staff will be held in the Ether Dome at 5 P.M. on October 20. Dr. Suzman of South Africa will speak, and tea will be served, as usual, before the meeting.

We doubt if you really appreciate the seriousness of the situation which exists at Massachusetts General Hospital due to the sharp reduction in the number of volunteers, and we feel that if you are informed as to the critical condition here, you cannot but respond to this appeal.

It may be difficult for you to understand why the need for voluteers is just as great now as it was during the war, but such is the case. The fact that during the war nearly everybody was helping in some way or other in the general effort created a stimulus that no longer exists. The desire to help is no longer nurtured by the psychological effect produced by masses of voluteers the country over. Volunteering has now become the much less glamorous and unacclaimed job of simply standing by the hospital until it has worked its way through the aftermath of the war.

It is understandable that after months of continuous and faithful service to the hospital, many of our volunteers welcomed the opportunity to return to their full-time jobs of being good wives and mothers. But the hospital does still need you — badly.

Mrs. Courtney tells us that there are several vacancies every day in the Out-Patient Department alone that are uncovered, and both day and evening vacancies in Baker Memorial and the General Hospital that must be filled. Volunteers are needed for typing and many other activities. Red Cross Nurses' Aides are desperately needed, also, for work in Phillips House and elsewhere.

We not only appeal to you for a few hours of your time, but we ask that you try to persuade as many of your friends as you can to come in and talk with Mrs. Courtney or telephone her — Capitol 4300, Extension 257. After you have exhausted the names of all the probabilities among your acquaintances, try the improbables. They may surprise you with their responses.

To sum up — the situation has moved out of the category of the serious into that of the critical. We need you, and will be most grateful for any hours you or your friends are able to give us.

The Board of Trustees, at their meetings on August 22 and September 5, voted to appoint:

Dr. Gordon L. Block, Jr. as Assistant Resident on the Urological Service, beginning October 1;
Dr. Henry H. Brewster as Assistant in Psychiatry;
Dr. Bernard D. Briggs as Assistant Anesthetist, beginning September 1;
Dr. Lucie J. Jessner as Assistant Psychiatrist;
Dr. Reginald D. Kernan as Assistant Resident in Psychiatry for five months, beginning August 1;
Dr. Harry P. Makel as Assistant Resident in Anesthesia for two years, beginning October 14;
Dr. John L. McClung as Assistant Resident in Anesthesia for two years, beginning July 1, 1948;
Dr. Harley C. Shands as Assistant in Psychiatry;
Dr. Donald P. Todd as Assistant Anesthetist, beginning September 1.

At their meetings held on July 2, August 13 and 27, and September 3, the General Executive Committee voted:

To promote Dr. Raymond F. Kuhlmann to the position of Senior Resident on the Orthopedic Service for one year, beginning October 1.

To appoint:

Dr. Peter H. Knapp, former Assistant Resident, as Clinical Fellow in Psychiatry, as of August 1;
Col. Frank Y. Leaver (RA) as Graduate Assistant in Radiology for one year, beginning October 1;
Dr. Joseph Paravisini as Clinical Fellow in Surgery;
Dr. Mary E. Perry as Graduate Assistant to the Children's Medical Service;
Dr. Aram Roopenian as Graduate Assistant in Plastic Surgery, with the privilege of assisting Dr. V. H. Kazanjian in the care of his patients in the Baker Memorial;
Dr. Armando Torner as Clinical Fellow in Surgery.

In September, for the first time, an extended program of orientation for the incoming student group was introduced in the School of Nursing. Whereas, in the past, students have begun formal classes in midweek, immediately following their arrival, they now are thoroughly introduced to the school over a three-day period before classes begin on the following Monday. During these three days, tours of the hospital are conducted, special diagnostic tests administered, physical examinations completed, various speakers presented to promote full understanding of school and hospital, and a study forum conducted by the preclinical faculty as a guide to wise study planning and habits.

On the social side, the incoming class of ninety new student nurses was welcomed with the traditional tea, sponsored by the Ladies' Visiting Committee and held at Walcott House. On the evening of their first day, they were the guests of the faculty at a highly informal game party in the Rotunda — an opportunity for getting acquainted with both classmates and instructors. The third important social event for the incoming class was the Little Sister Party, given by the upper-class "big sisters" at the Peabody Playhouse on September 12. Games, contests, dancing, and music were all a part of the fun.

Four new Graduate Assistants are working with Miss Perkins in the Department of Nursing Arts: Misses Jean Barker, Catherine Yetman, Marguerite Donnelly, and Mary Conroy. Miss Donnelly and Miss Conroy have been loaned from head nursing for the semester only, in order to take care of the large entering class.

In the science department, three new instructors have joined the staff: Miss Marjorie Johnson, Instructor in Microbiology; Miss Marian Wilson, Chemistry Instructor; and Miss Estelle MacLean, Instructor in Microbiology for the coördinated program.

Three changes of position have been announced by the Nursing Department. Miss Eileen Wolseley, upon her return from a summer at Columbia, has begun work as surgical supervisor in the White Building. Miss Ruth Poules, formerly night supervisor, is now one of the Baker teaching supervisors. Mrs. Conroy, head nurse of EW throughout the war years, has resigned, and her place has been taken by Miss Krasnoger, formerly head nurse on White 6.

On the 5th of September, five members of the class of September 1944 were graduated—the first in their class and the only ones to complete the course without missing time. They were Misses Bayliss, Carlson, Gustafson, Keller, and Landers. All five are returning to M.G.H. as graduates.

A new regular affiliation offered by this hospital opened on September 29, when the first group of students arrived from the Henry Bishop Hospital in Pittsfield for work in Pediatrics. The Leominster Hospital will also send students for this affiliation.

An Open House marked the opening recently of the newly remodeled and redecorated reception rooms at the Thayer House. Students in that residence who formerly relied upon the facilities of Walcott House for entertaining male guests, now have at their disposal four reception rooms, including three "beau parlors" of varying size. A pleasant reception hall and more conveniently located reception desk complete the new addition.

* * *

The other day Dr. Sylvester B. Kelley made a unique contribution to our Archives collection. He brought in a sizable wooden sign which reads "Kelley's Comet". It is now in the Archives Room.

We felt it deserved special notice in The News, and so we secured from Dr. Kelley this explanation of the significance of the sign.

"'Kelley's Comet' was the unofficial designation of the United States Army hospital train 42-A1 which was operated by a small group of officers, nurses, and men from the 6th General Hospital in Italy between January 17 and May 1, 1945.

"The name was applied facetiously by the train crew because after we received an urgent appeal to assume the operation of the train at Leghorn, we did not move from the siding for a period of six weeks. In fact, our anticipation of a busy schedule shuttling patients from the front back to Rome and Naples never materialized, for during our whole assignment we did not carry patients for more than thirty-six hours.

"Among the personnel there are many happy recollections of the extracurricular activities at Leghorn and of the hospitality we so fortunately could extend to all who passed through Leghorn and who were willing to tolerate the noisy, dirty environment of our station."

A picture of the train, sign and all, is on page 65 of *The history of U. S. Army Base Hospital No. 6.*

* * *

New addresses:—

Dr. Henry H. Brewster (*WM* 1940), 45 Columbine Road, Milton 87, Mass.

Lt. Ernest S. Crawford, MC, USNR (*ES* 1947), U.S. Naval Hospital, Portsmouth, N. H.

Capt. William E. Eaton, MC, USN (*D* 1907), Bureau of Medicine and Surgery, Navy Department, Potomac Annex, Washington 25, D. C.

Dr. Howard A. Hoffman (*r.s. U* 1946), 60 Eighth St., New Bedford, Mass.

Dr. Edward T. Smith (*Or.* 1937), 4815 Fannin St., Houston, Tex.

Brief bits:—

Dr. Ralph Adams (*WS* 1935), formerly of Boston, announces the opening of his office for the practice of surgery of the thorax and neck, at 1010 Heyburn Bldg., Louisville, Ky.

Lt. Frederic M. Blodgett, MC, AUS (*CM* 1946) is now at Station Hospital, Keesler Field, Biloxi, Miss. He took the X-ray course at Fort Sam Houston and found it very interesting, but is much happier in the field of Children's Medicine. He is planning to return to M.G.H. when he finishes his military service.

Dr. Edward P. Richardson, Jr. (*EM* 1943) has gone to England for a year, to study as a Clinical Clerk in Neurology at the National Hospital for Nervous Diseases, Queen Square, London WC 1, England. He promised to write us a letter after he gets settled over there.

Dr. Richard C. Webster announces the removal of his office to 1101 Beacon St., Brookline, Mass., where he will practise Plastic and Reconstructive Surgery.

MASSACHUSETTS EYE & EAR INFIRMARY

At the invitation of the various Oto-Rhino-Laryngological Societies of South America and sponsored by the State Department, Dr. LeRoy A. Schall spent July and August in South America. The itinerary took him to Brazil, Uruguay, Argentina, Chile, and Peru, to give surgical demonstrations and perform operations in various cities. In Buenos Aires he conducted a two-weeks' postgraduate course in Oto-Laryngology.

The trip was made mostly by plane. After leaving New York, San Juan, Puerto Rico was the first stop. There he was the guest of Dr. and Mrs. Carlos Munos MacCormick, and two days were spent fishing off the Virgin Islands.

At Rio de Janeiro he found Dr. Guimaeres very happily situated as assistant to Professor Dr. Jose Kos and well on his way to becoming one of the leading oto-laryngologists of Rio de Janeiro. Here, too, were several former Eye and Ear Infirmary visitors — Major Salem of the Brazilian Air Force, who came to Boston for ten days and stayed ten months, Dr. DeLima, and Dr. Kos.

Dr. Schall spent two days at Sao Paulo, where he gave two lectures and performed several operations. He next visited Professor Alonzo's Clinic in Montevideo, where two lectures and one operation was the schedule.

After the two-weeks' course in Buenos Aires, he gave a lecture in Rosario and another in Santa Fe, then traveled by air and bus to Cordoba and Mendoza, where he stayed for three days in each city.

In Chile, seven days were allotted to Santiago and two for Valparaiso, with daily lectures and daily clinical demonstrations to keep up the strenuous pace. Finally, lectures and operations filled the five days spent in Peru.

The trip ended with a visit of two days with Dr. and Mrs. Julio Quevedo in Guatemala City.

Dr. A. Ray Irvine left the Infirmary in September for Baltimore, where he will spend some time at the Wilmer Institute of Johns Hopkins Hospital. After the first of October, he will be residing in Beverly Hills, California.

A recent visitor at the Infirmary was Dr. Jose Nobre Leitao of Lisbon, Portugal. He spent a few weeks here observing our work in the ear, nose and throat service. In October he will return to Portugal, where he is a member of the Portuguese Navy.

Two new residents in Oto-Laryngology

No. 5 in a series of Staff photographs
Dr. Henry K. Beecher, Anesthetist

in Wichita, Kansas, where he is Manager. With his subscription to The News came a "first". It is a brief note, and we eagerly await a longer letter from him. He writes:

Concerning data about myself, you may be sure that in the near future I will comply with your request.

Right now I am knee deep escorting Government Inspectors through the hospital and have a number of reports to make after just having had a visit from General Hawley. After that I want to get away for a few weeks' vacation in Colorado — not having had a vacation for the past six years.

Over two years ago, when Dr. Roger W. Morrison (*ES* 1943) was a Lieutenant in the Army, we published a letter from him in which he described his visit to the Pasteur Institute in Paris. This is the first word we have had from him since — and glad we are to hear from him.

The letter is headed 1640 West Adams Street, Chicago 12, Illinois. It says:

Your pleasant note made me aware that I was not helping the Editor in her labors by maintaining silence.

After the World Tour that the Army gave me, we settled not quite a year ago in Chicago. Here I have been at the University of Illinois, Department of Pathology, having some interesting experiences in that and allied fields. The Chief is Granville A. Bennett, whom many Harvard and MGH people know.

As for special problems I am interested in, I can admit to injecting a few things into rats and doing one or two operations on rabbits, but the results would better remain unpublished. We are interested in applying histochemical methods to the elucidation of some of those fascinating diseases — the lipoidoses. Come spring, we will move to Rochester, Minnesota, to be a Fellow at the Mayo Foundation. In the meantime, should anyone be in Chicago we will be glad to have him drop in.

Both Mrs. Morrison and I enjoy The News.

We wish we might have more letters like this one from Dr. Jesse T. Nicholson (*r.s. Or.* 1933). It says just what Dr. Nicholson might tell us about, should he drop in at our office for a visit. This sort of letter helps so much toward making your News the kind of "family" paper it wants to be.

After reading a succession of interesting notes in each number of The News, from MGH alumni continuing in the Service, it had not occurred to me that an abstract of my mundane civilian activities was in order. I just can't be subtle enough to portray my activities in a "Dr. Pepys Diary". If I just list them, my friends might think this is an obituary. I will, therefore, confine my remarks to my work at the Graduate School of Medicine of the University of Pennsylvania.

Last year I succeeded DeForest P. Willard as the Professor and Vice Dean in charge of Orthopaedic Surgery. This graduate school is probably the first of its kind in this country. It was established in 1918. The purpose was to give a year's basic course in a medical specialty for graduates of medicine. In the past the greatest criticism, probably, was of the emphasis placed upon such basic sciences as Anatomy, Pathology, Biochemistry, and Physiology. At present, with the specialization boards requiring such basic science work, they are no longer considered too theoretical.

There are fourteen specialties represented. My position, therefore, becomes somewhat complicated, in that in addition to coördinating clinical work to tie in with basic science work for the students in Orthopaedics, I must arrange at least basic lectures in orthopaedic problems as related to and for the different specialties.

There are so many more applicants for the Graduate School than can be adequately handled, that considerable discretion can be used in picking the students. The enrollment runs around 350. Of these, twelve are allotted for the orthopaedic department. The twelve are divided into three groups for their clinical work, and they rotate through the Alfred I. DuPont Institute, Philadelphia General Hospital, Philadelphia Children's Hospital, Graduate Hospital, Presbyterian Hospital, U. S. Naval Hospital in Philadelphia, Temple Hospital, Pennsylvania Hospital, and University of Pennsylvania Hospital — all of which leads to the construction of a schedule not unlike a railroad timetable. This is my pastime for the hot summer evenings at present.

Dr. John H. Peters (*WM* 1943) moved round so fast and so often during the war that his last very interesting and amusing letter became past history in between galley proof and page proof dates and therefore never appeared in The News. For that reason, we were very glad to hear from him again and learn what he is up to these days.

On 1 July of this year I came to Pittsburgh to accept a Research Fellowship in the newly-founded Department of Research Medicine at the University of Pittsburgh. Although located in Children's Hospital, the position is not by any means a purely pediatric one, and the plan is to study biochemical and metabolic disease in adults and children.

The housing situation in Pittsburgh is as bad as it is elsewhere, but there seems to be a good chance that we will be established here by the first of October. In the meanwhile I am again a temporary bachelor — the rest of the family having remained with my parents in New Haven. The old, old story!

My functions thus far have not been primarily medical. The task of equipping and organizing laboratories and offices reminds me very much of military life; but the end is in sight, and we should be a going concern before too long.

Any MGH-ers who are in Pittsburgh will find me at the Children's Hospital, 125 De Soto Street.

Kindest regards to all at MGH.

The News is five years old this month! Nearly old enough to go to school.

THE NEWS

MASSACHUSETTS GENERAL HOSPITAL 1811

No. 62 Boston, Mass. November 1947

CHILD PSYCHIATRY TRAINING AND RESEARCH UNIT

A liaison between the Children's Medical Service and the Department of Psychiatry has brought forth a cooperative unit of Child Psychiatry. This is not a new department and a new specialty. God forbid! But it has become increasingly obvious over the past ten years that the study of psychiatry in children needed special personnel and new techniques. Psychiatrists who were successful with adults often understood little or nothing of the problems of infants and children. They were often as floored by the behavior of adolescents as were parents, and the school teachers who sought their advice often knew more about children than they did. The pediatricians were somewhat better off. Many of them had accumulated wisdom in practice and had a way with them in handling children, but they had little insight into the reasons for success or failure.

This situation has been changing during the past few years. Some psychiatrists have seriously been studying children and some pediatricians have been studying psychiatry. The work has already produced practical and theoretical results. Of course, the ground work was laid twenty or thirty years ago by Binet, Freud, Piaget, Eichorn, and Healy. Child guidance started up as a workable contribution in many communities. In this community we think of Douglas Thom and Healy and Bronner as our pioneers. Recently the psychoanalysts have made important contributions. Observations of the child in action by such workers in the field as Anna Freud, Burlingham, Marian Putnam, Hilda Bruch, Jackson, Redl, and Erickson, have given evidence that many of Freud's postulates about emotional trauma of children were right.

Dr. Lucie Jessner, a former member of our psychiatric staff and of the McLean staff, has been in close touch with these developments. She has now rejoined the MGH staff to give us the help of her experience and skill as consultant in the Children's Medical Service, in the Psychiatric Service, and in the Out-Patient. She is to initiate investigations and teach students and graduates. In this work she is to be aided by Dr. Erich Lindemann, who has for years had a great interest in children, by Drs. Nathan Talbot and Gertrud C. Reyersbach of the Children's Medical Service, by four newly-appointed Clinical Fellows, and by the Chiefs of the Psychiatric and Children's Medical Services. The four Clinical Fellows are: Dr. Jane A. Allen, recently Assistant Physician in the Memorial Hospital in Worcester; Dr. Margaret Bullowa, from the Menninger Clinic in Topeka; Dr. Samuel Kaplan, who was last year at the Judge Baker Guidance Center; and Dr. Nicholas D. Rizzo, who has an M.S. and Ed.D. in psychology, an M.D., and recently had an internship at the Children's Hospital.

This new venture in coordination between departments is made possible by a grant from the Public Health Service under the Mental Health Act of 1947. There are two projects: one for training child psychiatrists and psychiatric social workers and teaching interns, medical students and nurses; and the other for research. Actually, these two projects are closely integrated, for good teaching is dependent upon an ever-increasing knowledge of the teachers. The specific problems to which the investigative efforts of this unit will be directed are:

1. A continuation of a study of the psychological factors affecting appetite and their effect on growth and development. This study has been pursued for some time by Dr. Talbot and Dr. Lindemann in the Adolescent Endocrine Clinic. Much valuable information has already been obtained and it is hoped that continued work will lead to more definite information.

2. A study of the menarche in normal girls, with special emphasis on the irregularities of ovulation and menstruation, and the psychological effect of menstruation, whether regular or irregular, on adolescent girls.

3. A study of the effect of hospitalization on infants and children. This is a large problem, and for the first year it will be limited to a study of the effects of tonsil and adenoid operations. Psychological reactions to the admission to the hospital for operation, to anesthesia, and to the operation itself will be observed.

4. A study of carefully selected patients, suffering emotional disturbances, with the purpose of detecting the etiological factors. The accumulation of data from such studies should provide information of value not only to an understanding of child psychiatry but also to adult psychiatry.

Because the Children's Medical Service's new pavilion was well on the way to completion before the child psychiatry unit was developed, the facilities for office space for the child psychiatry staff and observation of patients is somewhat limited. It is, therefore, hoped that some individual donor or foundation may be interested enough in this project to provide a grant for building a proper unit on the roof of the children's pavilion which is ideally adapted for such a structural addition. Until this is built, the teaching of groups of interns and medical students will be carried on very largely in the Herman Room of the Psychiatric Ward in the Bulfinch Building. Teaching will also be conducted in the Out-Patient Department and on the wards of the Children's Medical Service.

Stanley Cobb, M.D.,
Chief of Psychiatric Service
Allan M. Butler, M.D.,
Chief of Children's Medical Service

♣ ♣ ♣

Dr. Arthur W. Allen, Chief of our East Surgical Service and President of the American College of Surgeons, was made an Honorary Fellow of the Royal College of Surgeons in England last September, when honors were conferred upon seven American surgeons.

A lecture table and lectern, gifts of the American College of Surgeons, were presented to the Royal College by the American delegates, headed by Dr. Allen, who delivered the presentation address. We reported last month that Dr. Allen delivered one of the Moynihan Lectures, also.

Later, Dr. and Mrs. Allen were received at Marlboro House by Queen Mary.

♣ ♣ ♣

Two awards have been conferred upon Dr. Joseph S. Barr, Chief of our Orthopedic Department, during the past year. The first was a plaque presented to Dr. Barr and Dr. John A. Reidy by the American Academy of Orthopaedic Surgeons at their annual meeting in Chicago last January, for the scientific value of their exhibit on "The effect of roentgen irradiation on epiphyseal growth". The second award to Dr. Barr was a Certificate of Merit given him by the American Medical Association at their Centennial Meeting in Atlantic City last June, for correlation and presentation of facts on the same subject.

Here is an abstract of Dr. Barr's paper which was read at the Chicago meeting:

With the knowledge that roentgen irradiation of epiphyseal cartilages of long bones of rats would retard growth of the extremity, further studies were pursued on dogs.

Twelve puppies, approximately six weeks old each, received roentgen irradiation over the left wrist and right knee. The dogs were divided into three groups

(A, B, and C) of four each and received in Group A 800 r; Group B 1000 r; and in Group C 1200 r.

Metalic markers were inserted into diaphyses of radius and tibia to facilitate measurements.

The animals were sacrificed at intervals of six months, the longest being two years.

Clinical, roentgenological, and histological observations were carried out.

The epiphyseal cartilage was profoundly affected and retardation of growth occurred at the treated epiphysis apparently in proportion to the dosage. The untreated epiphysis of the treated bone was stimulated to greater growth, but insufficient to prevent shortening. The articular cartilage showed microscopic evidence of degenerative changes, but these were minor and did not interfere with function during the period of the experiment and were not apparent on gross examination. There was no evidence of abnormality in the adjacent bone, synovia, joint capsule, skin, or periarticular soft tissues.

[Slides of roentgenograms, microscopic sections, and statistical tables were presented.]

Dr. Barr read a paper on "Growth and inequality of leg length in poliomyelitis" at the Conference at Georgia Warm Springs Foundation in September. Here is a brief of his talk:

So-called normal growth is influenced by many hereditary and environmental factors which determine the size and shape of our limbs. It is extraordinary that symmetrical limbs of equal length are the rule and not the exception.

Unequal growth of the legs, resulting in shortening, may occur as the result of a number of causes:

(1) Growth retardation due to local interference at an epiphyseal plate. Osteomyelitis, tumor, and fractures are the most common examples of this class.

(2) Growth retardation due to interference from remote causes.
Impairment of limb function, as a whole, is an adequate cause for slowing of the rate of growth. Poliomyelitis, obstetrical and traumatic paralysis may retard normal growth.

(3) Growth stimulating factors may produce unilateral increase in leg length.
Vascular tumors (hemangiomas), fractures, and osteomyelitis of the shaft of a growing bone may cause overgrowth in length, apparently because of increased blood supply.

The exact incidence of leg shortening due to poliomyelitis is not known, but approximately one-third of the poliomyelitis cases treated at the Out-Patient Department of the Massachusetts General Hospital, whose onset was before the age of 16, developed marked inequality in leg length. The factors of importance in determining whether a patient with poliomyelitis will develop discrepancy in leg length include age at onset, sex, and the amount and distribution of muscular weakness of the legs. There will be no shortening if the involvement is symmetrical. The greatest shortening occurs in young patients with one normal and one severely paralyzed limb.

Inspection of growth curves of individual cases suggests that the growth retardation is not constant. The maximum retarding effect appears in some cases to occur late in the growing period. Premature cessation of growth associated with epiphyseal closure on the paralyzed side may explain late occurrence of severe discrepancies. Exact prediction of the amount of shortening to be expected in a given case is not yet possible. The possible causes of unequal growth in poliomyelitis include changes in circulation and disuse of the extremity.

Operative correction of adult discrepancy in length is possible by leg lengthening or leg shortening procedures. The latter appears to be preferable.

In the growing child epiphyseal arrest offers a method of equalization which in properly selected cases is very effective. Careful attention must be given to the proper age for intervention and to the operative technique.

Sympathectomy as a procedure to maintain equality in leg length is still subjudice, but it appears to be of value if done early enough.

Every growing child with poliomyelitis should be under the regular supervision of an orthopedic surgeon who is thoroughly familiar with the problem of unequal growth. Regular measurement of the leg length, clinically and by X-ray, will allow early detection of shortening. The surgeon, by suitable selection of operative methods and by promotion of normal function in the affected extremity, will be able to prevent much of the shortening which would otherwise occur. The cork or wooden high sole should become a much less familiar sight. Eventually the time may come when no child will need to face adult life with that handicap.

THE DIABETES CLINIC

The Diabetes Clinic was opened in January 1916. Dr. F. Gorham Brigham, who had spent several years studying diabetes with Dr. Elliott P. Joslin, was placed in charge. In a letter which he later wrote to Dr. Washburn, Dr. Brigham gave the credit for the growth and organization of the clinic to Mrs. Roger I. Lee and Mrs. Benjamin H. Ragle. Dr. Roy R. Wheeler joined the clinic in 1922 or 1923 and, upon Dr. Brigham's resignation, had charge of the clinic until 1934. At this time, Dr. James H. Townsend assumed the responsibility of the clinic and ran it until 1946, when he resigned to give more time to his duties as Chief of the Medical Service at the Mount Auburn Hospital in Cambridge. The present writer has been connected with the clinic since 1937, becoming its Chief when Dr. Townsend resigned. Many other physicians have given invaluable service to the clinic during its 31 years; among these may be specially mentioned Dr. Tuttle of Acton, Dr. Dwight L. Siscoe, Dr. Greene FitzHugh, Dr. David Hurwitz, and Dr. Harriet Hardy.

During the early years of the Diabetes Clinic, there was little coordination of the care of diabetics in the Out-Patient Department and in the House. The head of the out-patient clinic was occasionally called in consultation to see a difficult case in the House, but the management of the surgical diabetics was left, in the main, to the Medical Junior, a relatively inexperienced House Officer; and the care of the medical diabetics was entirely in the hands of the Medical Service. It was Dr. Townsend who realized the importance of a more coordinated and experienced plan of care for the diabetics. During the period that he was Chief of the Clinic, it was arranged that he or one of his assistants should have complete responsibility for the management of the diabetes of surgical patients, and should act in an advisory capacity to the Medical Service in the treatment of their diabetics. This resulted in a vastly improved handling of surgical problems and the "difficult cases", and particularly the management of diabetic acidosis and coma. Since the war, an Assistant Medical Resident has had charge of the surgical diabetics, under the supervision of the Clinic Chief.

Dr. Townsend made another important contribution when he added to the team the full-time services of a social worker and a secretary, who together bridge the gaps between hospital, home, and Out-Patient Department, and make possible a smooth continuity of diabetic care.

At the present time, the Diabetes Clinic is held on Tuesday and Friday afternoons. It is located on the third floor, right beside the Nutrition Clinic, using the same rooms that are occupied in the morning by the Allergy Clinic. Thirty to forty patients are seen on each clinic day, and it is estimated that nearly one thousand diabetic individuals are treated each year.

The patient, on arriving at the clinic, reports to the secretary and is weighed. A urine specimen is analyzed in a near-by laboratory. The patient is then interviewed by a nutritionist, who endeavors to discover and correct the discrepancies between the diet previously ordered and the actual daily intake. To the group of patients awaiting their turn in the Nutrition Clinic, one of the dietitians gives a little talk on diets, menus, recipes, and ways of marketing economically. Eventually the patient is called in to see the doctor, who, besides taking whatever steps are necessary to improve the patient's diabetic state, also examines the patient when other physical complaints are present, or refers the patient to some other clinic for diagnosis and treatment. A graduate nurse and two student nurses are on hand to take blood sugars, and to teach the patient the techniques of insulin administration, urine testing, and special foot care. The social worker and clinic secretary see that the patient gets the proper supplies and medicines, and arrange for return appointments or home nursing care when indicated. Thus the patient passes through the hands of five or six individuals on every clinic visit, obtaining advice and help from each one on the many problems that the patient with diabetes has to face.

This report on the Diabetes Clinic would be incomplete unless mention were made of our need for more physicians to carry the load. Over the years, the major part of the burden has always been carried by one, or at most two, physicians. Those who have devoted a lot of time to the clinic have reaped a reward in increased knowledge of diabetes which should be shared with many more members of the staff. We are especially anxious to find one or two who would like to plan a long-term study of diabetes. This disease is on the increase all over the world. Many problems relating to the nature of diabetes and its complications remain to be discovered. Our clinic affords an excellent opportunity for more doctors to learn what is already known about diabetes and its management, and to add to our knowledge of its intricacies in the years to come.

Reed Harwood, M.D.,
Chief, Diabetes Clinic

* * *

A plan for cytologic study of gastric fluid will be undertaken by the Vincent Memorial Laboratory. The program of study will include appraisal of a variety of methods of collection as well as preparation.

Any physician who wishes a gastric cytological opinion on a patient, is requested to notify the laboratory (Extension 745) before 5 P.M. The patient should then be allowed nothing by mouth after midnight.

To spare the patient unnecessary procedures, routine gastric analysis will be done by us, if requested, together with a cytologic study. Some selection of patients will be exercised, to permit concentration of attention on the most fruitful aspects of this work.

Howard Ulfelder, M.D.
Ruth Graham

Recent weeks have brought two welcome visitors to the School of Nursing Miss Elva Honey arrived from Montreal General Hospital on October 1 for a stay of approximately six weeks. Miss Honey is observing in a number of areas, largely connected with school administration and clinical instruction.

A year's stay is planned by Miss Armine Tuygil, a special graduate student from Turkey who reached here on September 22. Her particular fields of interest are surgical and operating room nursing.

The newly-created position of Assistant Supervisor in Pediatrics is now filled by Mrs. Robert Thatcher Crowley who, before her marriage on September 20, was Miss Patricia Bachelder.

Miss Marie Rearick, for some time Head Nurse on B7, has recently become Supervisor in charge of B7, White 5, and White 11. The new B7 Head Nurse is Miss Lorraine Bott.

The Nursing Department is looking forward to a first glimpse of Anne Cunningham Littler, daughter of Dr. and Mrs. William Littler. Six-months-old Anne will make her MGH debut on November 18 when her mother, Supervisor and Instructor in Pediatrics, shows a class the correct procedure for infant bathing. Anne, of course, will get the bath.

* * *

The monthly Dental Staff conferences were resumed on October 21. The speaker of the evening was Dr. Moses H. Lurie of the Eye and Ear Staff, who talked on "Problems common to the oto-laryngologist and the dentist".

On these monthly meetings, the Dental Staff assembles in the private dining room in the White Building for dinner at 6:30. The meeting is held at 7:30 in the lower OPD Amphitheatre. It is an open meeting for all MGH-ers.

DERMATOLOGY DEPARTMENT

The first Staff Meeting of the year, held on September 26, was given over entirely to discussion of plans and assignments.

The graduate teaching schedule began in October with the usual Thursday evening lectures and conferences.

Three full-time postgraduate students, Drs. R. W. Leeper, William K. Hall, and T. A. Turgeon, have started the course and will continue for the next year. Drs. J. L. Fromer and Basil Gray will continue for additional postgraduate work. Comdr. J. H. Cox has returned to active duty with the Navy, and Dr. J. L. Spencer will continue his graduate study of dermatology at the Boston City Hospital. Dr. Cox spent a year of graduate study in our department, and Dr. Spencer was with us for two years.

A dinner was given for Dr. C. Guy Lane at the Hotel Beaconsfield on Wednesday evening, October 15. Members of the Staff presented Dr. Lane with a gift, in appreciation of his many years of service to the department.

* * *

During the past summer the hospital was overrun by a record enrollment of theological students, clergy, and professional religious workers who were studying clinical pastoral care under the auspices of the Institute of Pastoral Care.

Besides the technical and clinical knowledge which was acquired by this enthusiastic group, certain intangible but nevertheless real gains were made in such areas as increased professional respect between representatives of medicine and religion, a greater compassion for suffering, a renewed consciousness of the importance of the individual, and a deeper reverence for life.

The most recent activity of the Institute is the publication of *The journal of pastoral care,* the first issue of which has been distributed. Two of the editors, Rev. Rollin J. Fairbanks and Rev. James H. Burns, are Protestant Chaplains at the hospital.

Ether Day was observed very quietly this year.

In the morning, Dr. Faxon presented service pins to those employees of the Hospital who have served here for 10 years or more. This custom was inaugurated in 1945, when 240 employees received service pins. The names below represent those who, in 1945, had not then been here for 10 years, and those who, in the meantime, have moved along into a higher bracket and this year exchanged the pins they already had for new ones bearing an additional star representing 10 more years of service. Those who received such pins this year were:

10-19 years employed:

General X-ray — Rosanna Bongiorno; Baker Nursing — Cecelia Naupin; Laundry — Susie Grace; Record Room — Gladys Reardon; Nursing Office — Alice Darling, Margaret Hennessey, Helen Hewit; General Housekeeping — Arakel Ananian, Vartan Andonian; Phillips House Housekeeping — Patricia LaPierre; Maintenance—Donald W. Carpenter, George Cribbins; Telephone — Florence McKinnon; Chemistry Laboratory — Josephine G. Eldridge; O.P.D. Secretaries — Agnes Hayes.

20-29 years employed:

Laundry — John E. Knight; General Housekeeping — Michael Presti; Maintenance — Edward E. Butters, Ignazzio Maggiotta, Albert Wait; Phillips House Housekeeping — Mildred Cartwright; O.P.D. Secretaries — Genevieve Ringrose.

40-49 years employed:

General X-ray — Madge McCallion.

An informal dessert luncheon of crackers and cheese, fancy cakes and cookies, and coffee—to which all of the Hospital family were invited—was served in the Brick Corridor.

A very interesting and carefully arranged exhibition of literature and pictures, describing the early history of chloroform and inhalers, was on display in the Brick Corridor, in recognition of the 100th anniversary of the use of chloroform as an anesthesia. The exhibition bore the caption: Chloroform Centenary, November 4, 1847—November 4, 1947.

In the afternoon, the motion picture of Morton's first public demonstration of ether for major surgery—which took place in our Ether Dome on October 16, 1846—was shown. This re-enactment of the original scene was filmed a few years ago, members of the hospital staff playing the roles of the various characters.

Feby 23.1827

MASSACHUSETTS EYE & EAR INFIRMARY

The Massachusetts Eye and Ear Infirmary is often confused with the Massachusetts General Hospital because of the close proximity and affiliation of the two institutions.

It is particularly important at this time for everyone, employees of both institutions as well as the public, to clearly understand that these are two separate corporations. Although the two cooperate in every possible way to reduce expenses and increase efficiency in the care of patients, each corporation has its own Trustees responsible for the operation of their hospital.

It should be understood, then, that the Massachusetts Eye and Ear Infirmary is a separate and independent voluntary hospital with its own staff, unpaid Board of Managers, and its independent funds. These funds come solely from fees from patients, the Infirmary's share in the Community Fund as a "Red Feather Service", and from gifts and bequests.

The Infirmary and the Massachusetts General Hospital medical staffs act as consultants for each other. Such departments as Personnel and Purchasing act for both hospitals. The Out-Patient Departments of the two hospitals are coadjacent in the same building with the same admitting department.

Dr. Faxon is the Director of both hospitals.

Mr. Francis S. Hill is the Assistant Director in charge of the Infirmary.

N. W. Faxon, M.D.,
Director
Massachusetts General Hospital
Massachusetts Eye and Ear Infirmary

Dr. LeRoy A. Schall, Dr. Werner Mueller, and Dr. Philip Meltzer were present at the examinations given by the American Board of Oto-Laryngology in Chicago previous to the meeting of the Academy. Dr. Edwin B. Dunphy and Drs. William P. Beetham and Parker Heath presided at the exams given in Ophthalmology.

The American Academy of Ophthalmology and Oto-Laryngology held its annual meeting in Chicago from October 12 to 17. Drs. Schall, Mosher, Mueller, and Mysel of the Oto-Laryngological staff and Drs. Dunphy, Casten, and Heath of the Ophthalmological staff were among the representatives from the Infimary.

Dr. Joseph P. McEneaney completed his residency in Oto-Laryngology on the first of October, and intends to open his office on Essex Street in Lawrence.

Dr. David P. Cordray, who graduated from his residency in Oto-Laryngology in 1940, visited the Infirmary in October. He will soon take up his practice in Boston.

Among recent visitors at the Infirmary were Dr. Hector R. Silver and Dr. Victor M. Noubleau, both from San Salvador.

Dr. G. L. Allen, a missionary from the tropics of Nigeria, West Africa, was accompanied by Dr. David G. Cogan, Director of the Howe Laboratory of Ophthalmology, in a tour of the Infirmary.

The Board of Trustees, at their meeting on September 19, voted:

To accept the resignation of Dr. Bernard Bandler from the position of Assistant Psychiatrist;
To accept the resignation of Dr. Frederic W. Rhinelander from the position of Assistant in Orthopedic Surgery;
To accept with regret the resignation of Dr. Horace K. Sowles from the position of Visiting Surgeon and to appoint him to the Board of Consultation.

To appoint:

Dr. Charles E. Hopkins as Assistant Resident on the Children's Medical Service, beginning January 1, 1948;
Dr. Charles U. Lowe as Assistant Resident on the Children's Medical Service, beginning October 1.

At their meetings held on September 10, 17 and 24, and October 1 and 8, the General Executive Committee voted to appoint:

Dr. Jane A. Allen as Clinical Fellow in Psychiatry;
Dr. Margaret Bullowa as Clinical Fellow in Psychiatry;
Dr. Donald L. Cray as Graduate Assistant in the Dental Clinic;
Dr. William A. Dickson as temporary Graduate Assistant to the Children's Medical Service;
Dr. Lloyd R. Evans as Clinical Fellow in Medicine, to work with Drs. White and Bland in the Rheumatic Fever Clinic;
Dr. Lewis Francis as Graduate Assistant in Anesthesia;
Dr. Charles E. Hopkins as Graduate Assistant to the Children's Medical Service for the period September 17 through December 31;
Dr. Alfred T. Joseph as Graduate Assistant. and to allow him to care for Dr. V. H. Kazanjian's patients in the Baker Memorial and Phillips House;
Dr. Samuel Kaplan as Clinical Fellow in Psychiatry;
Dr. John Lü as Research Fellow in Surgery;
Dr. Francis C. McDonald as temporary Graduate Assistant to the Children's Medical Service;
Dr. Fritz Miller of Innsbruck, Austria, as Research Fellow in Medicine for the coming year;
Dr. Herbert W. Park, III, as Clinical Fellow in Physical Medicine for one year, beginning October 1;
Dr. John E. Richardson as Clinical Fellow in Surgery;
Dr. Nicholas D. Rizzo as Clinical Fellow in Psychiatry;
Dr. Charles E. Rounds as Graduate Assistant in the Dental Clinic;
Dr. John R. Sinton as Clinical Fellow in Medicine;
Samuel Waldfogel, Ph.D., as Research Fellow in Psychology;
Dr. Armistead D. Williams as Clinical Fellow in Medicine.

This is to announce a series of exhibits to be hung in the Brick Corridor. These exhibits were especially made and hung for the American Medical Centennial Convention at Atlantic City last June.

We are presenting as the first part of this series the exhibits on Cardiovascular Diseases. Because these were special exhibits and partly financed by the American Medical Association they were not eligible for prizes. We will proudly present in the second series, however, two prize winning exhibits which were prepared by Dr. Joseph S. Barr and the Vincent Memorial Laboratory.

The titles of the exhibits and the dates on which they are to be presented are as follows:

November 10 — Electrocardiography—Dr. Conger Williams
November 17 — Cardiovascular roentgenology — Drs. Gordon S. Myers and Stanley M. Wyman
November 24 — The range of the normal heart—Dr. Fred Alexander
December 1 — The noncyanotic types of congenital heart disease—Drs. Robert E. Gross, Lewis Dexter, Merrill C. Sosman, and C. Sidney Burwell
December 8—Neurocirculatory asthenia —Dr. Mandel E. Cohen
December 15 — Hypertensive heart disease—Drs. Dera Kinsey, Reginald H. Smithwick, William C. Bridges, Lewis Dexter, and John Graham
December 22—Coronary heart disease—Drs. Herman L. Blumgart, Monroe J. Schlesinger, and P. M. Zoll
January 5 — Rare types of heart disease—Dr. David Littmann
January 12—Peripheral vascular disease —Drs. Robert R. Linton, Irad Hardy, Richard Hamlin, Richard H. Wallace, Harrison E. Kennard, Claude E. Welch, Fiorindo A. Simeone, Richard Warren, Richard Thompson, George Emerson, Gordon A. Donaldson, Howard Ulfelder, and Kenneth Evelyn

The titles and dates for the second series are:

January 19 — Gastro-intestinal mobility —Dr. William P. Chapman
Changes following autonomic surgery
Changes following drug administration
February 26—Prognosis of cervical cancer treated by radiation
Radiation changes in vaginal smears —Vincent Laboratory
Cytological diagnosis of cancer (Mass. Medical exhibit)—Vincent Laboratory
February 26—The effect of roentgen irradiation on epiphyseal growth- Drs. Joseph S. Barr, John A. Reidy, James R. Lingley, and Edward A. Gall.

The dates for the exhibits are subject to change.

* * *

In the September number of The News we started publishing a calendar, by months, of important events in the early history of M.G.H. We prepared a

Everyone has been conscious of the increased cost of living during and since the war. We know that salaries and wages have been increased. The following tables show in some measure how these economic changes have affected the hospital.

	SALARIES & WAGES	SUPPLIES	TOTAL	RECEIPTS
1939	$1,407,867	$1,047,011	$2,456,875	$1,904,258
1941	1,611,385	1,287,351	2,898,736	1,922,917
1946	2,636,222	1,737,996	4,374,218	3,162,222
INCREASE				
1939-46	1,228,355	688,985	1,917,343	1,257,964
	87%	65%	77%	66%

A glance at the above table shows that expenditures increased 77% while receipts increased only 66%. This is the reason for the large operating deficit of the past years.

That the hospital was conscious of the need of increased revenue is shown by the following changes in room charges:

	PHILLIPS HOUSE	BAKER MEMORIAL			GENERAL HOSP.	O.P.D.	
1939	$8.50 - $16.00	$4.50	5.50	6.50	$4.00	$.75 - .60	.50-.30
1/23/45	-		-		5.00	-	
7/1/45	9.00 - 16.00	5.25	6.25	7.25	5.00	-	
1/1/46	-		-		-	1.00	
2/23/46	11.00 - 18.00	7.00	8.00	9.00	-	-	
8/12/46	-		-		6.00	-	
1/1/47	13.00 - 21.00	9.00	10.00	11.00	8.00	1.50	

In spite of the fact that rates in some of the units were doubled, costs, which are still rising, threaten to produce another disturbingly large deficit this year. We must economize in every way that can be thought of and, likewise, we must increase our revenue by every justifiable means.

Some conception of why hospital costs have gone up and how helpless hospitals are to avoid this is shown by the following tables published by the Bureau of Labor Statistics:

Index 1926 equals 100

	1939	May 1947		
All commodities	76	146	an increase of	90%
Farm products	68	175	"	157%
Foods	68	159	"	133%
Textiles	67	138	"	106%
Cotton	63	193	"	206%
Fuel	73	177	"	142%
Drugs	77	173	"	125%

Looking at the table you will see that all commodities have increased 90% in costs, whereas the hospital has gone up on its supplies only 65%. Certainly, we can not be charged with extravagance in the use of supplies. Hospitals must have food cotton, fuel, and drugs. Foods, fuel, and drugs have practically doubled in price, while cotton has increased three-fold. The 1947 dollar will buy only half as much as the 1939 dollar. This is the economic problem that hospitals face.

N. W. Faxon, M.D.,
Director

---

column for the month of October and another for this November issue, but insufficient space prevented our including them. Being unwilling to forfeit the full value of these entries by cutting them down to fit space, we have decided to hold over the columns for both months until the next (or a very early) issue.

* * *

THE NEWS has always been very grateful to those of the Staff who have sent us unsolicited material for publication. Recently, more and more such articles have been sent us voluntarily, and we appreciate these evidences of interest in our little paper.

It is impossible for us to keep informed and up to date on all the many important activities that are going on in our various services, and THE NEWS wishes very much that all members of the Staff would at any time send us accounts of happenings in their departments. This would help in a big way towards keeping everybody in the hospital family informed about each other.

New addresses:—

Dr. Erna G. Anderson (*CM* 1943), 815 Greenleaf Ave., Glencoe, Ill.
Dr. Daniel W. Badal (*Psychi.* 1942), 3179 Oak Road, Cleveland Heights 18, Ohio.
Lt. John W. Bell, MC, USNR (*ES* 1946), U.S. Naval Hospital, Bremerton, Wash.
Dr. Frank B. Colloten (*a. in D* 1940-46), 73 Bay State Road, Boston, Mass.
Lt. John G. Freymann (*M* 1947), U.S. Public Health Service, U.S. Marine Hospital, Hampton Boulevard, Norfolk, Va.
Dr. Samuel B. Kirkwood (*WS* 1934), 1180 Beacon St., Brookline, Mass.
Comdr. Richard D. Nies, MC (*An.* 1941), U.S. Naval Hospital, Bethesda, Md.
Lt. George F. Odland, MC, USNR (*M* 1947), Boston Naval Shipyard, Chelsea, Mass.
Dr. Jack S. Parker (*WS* 1946), 4 Carver Road, Wellesley Hills, Mass.
Capt. Raymond V. Randall, MC, AUS (*WM* 1946), Box 46, Station Hospital No. 2, Fort Bragg, N. C.
Dr. Frederic W. Rhinelander (*ES* 1937 & *Or.* 1938), 650 Tenth Ave., San Francisco 18, Cal.
Dr. Richard V. Riddell (*ES* 1943), Mayo Clinic, Rochester, Minn.
Lt. Earle W. Wilkins, Jr., MC, USNR (*WS* 1946), Portsmouth Naval Hospital, Portsmouth, N. H.

* * *

Brief bits:—

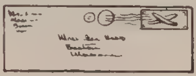
Dr. William C. Coles, who ended service here in Radiology on July 1, is at St. Joseph's Infirmary, Atlanta, Ga.

Dr. G. Marshall Crawford, Acting Chief of our Dermatology Department, has announced the removal of his office to 1180 Beacon St., Brookline, Mass.

Dr. J. Peter Kulka who ended service in our Pathology Department on June 30, is an Instructor in Anatomy at Harvard Medical School. His home address is 44 South Russell St., Boston, Mass.

Dr. James J. McCort (*r.p. R* 1944) returned from military service and took up his duties as Radiologist on September 28. We learned, during a conversation with him the other day, that he had been a Major for about a year before he was released from the Army

Dr. Harrison J. Shull of Vanderbilt University Hospital, Nashville, Tenn., is to join our staff in the Department of Medicine, working with Dr. Chester M. Jones in gastroenterology.



Before Miss Morse left for Czechoslovakia last winter, we asked her to send us something for THE NEWS from over there. A week or so ago our interest and impatience got the better of us, and we secured from the Unitarian Service Committee this account of conditions in Czechoslovakia, as found by Miss Morse, and an outline of her contribution to the rehabilitation program being carried on in that country.

The account was written by Katya Alpert Gilden of the Unitarian Service Committee, and reads:

Miss Lucy G. Morse, Chief of Occupational Therapy, on leave of absence from Massachusetts General Hospital, is now organizing therapy training in a hospital for amputees located in Kladruby u Vlasim, Czechoslovakia.

Miss Morse, together with Miss Dorothy E. Snavely, Physical Therapist, was sent by the Unitarian Service Committee on the request of the Czechoslovak Ministry of Health to demonstrate modern American therapy practice. In the face of many difficulties, they have been doing a real pioneering job — drawing up recommendations for adaptation of building facilities to function as a retraining center, selection of equipment and essential personnel, and classification of patients and treatment.

"It is diffcult to keep one's perspective and remain an OT," Miss Morse reports, "when one is consulted so much regarding the entire rehabilitation program. . . . I am beginning to get a little order out of the chaos of new impressions here.

No. 6 in a series of Staff photographs
Dr. Arthur W. Allen — Chief of East Surgical Service

The job before us is a big one and I know it can't be done in a year. The first job is to set up a demonstration center, and that is what we are concentrating on now. Involved with this is training and publicity among medical and technical persons to get the right patients, etc."

Besides participating in the initial planning of the project, which will be a beautiful and modern center when completed, the Unitarian team has begun the retraining of forty patients who have already arrived. Miss Morse vividly describes her problem in terms of patient and physician: "One patient has a fear of walking on a badly set old fracture. Yet he plays ping-pong without his crutches. The doctor looks upon him a little as a malingerer. Maybe he is, but again PT is doing a fine job with much encouragement, and I am trying to follow suit to give him the benefit of the doubt for a trial period at least. Our doctor listens, expresses himself in no uncertain terms on some things, and accepts our suggestions on others. He is so interested in my end of the work that he finds it hard to keep away. . . ."

The Czechoslovak press has been quick to recognize the value of the Kladruby project. The *Daily Review* of Prague, August 6, 1947, refers to the special attention which America and Great Britain have paid to the rehabilitation of their wounded, and observes: "The first rehabilitation center in Czechoslovakia has been set up in Kladruby near Vlasim. This center, situated in beautiful surroundings . . . is equipped with modern apparatus, swimming pools, workshops, etc., and the first patients to be treated there are war invalids. The Unitarian Service Committee (in cooperation with American Relief for Czechoslovakia) has sent two highly qualified therapeuticians who are to train medical personnel for this important work."

Here is a "first" from Dr. John C. Coolidge (*CM* 1945), with some good news for Dr. Coolidge's friends here in Boston. He writes, from 36 Edgewood Avenue, New Haven 11, Connecticut:

> The Alameda, California, address represented the last lap of my year in the Navy, which took me rapidly from the Chelsea Naval Hospital, to Okinawa, the *U.S.S. Cowpens* (a carrier), and to the Naval Air Station at Alameda—with much waiting, changes of orders, and many thousands of miles of travel in between. It was only at Alameda that any medical work was available, and this was being rapidly shut down, as the war was over and everybody was being discharged.
>
> I returned to civilian status in July of 1946 and since October of that year have been an Assistant Resident in the Department of Psychiatry of Yale Medical School, and will continue here until next summer when I am returning to the General to work under Dr. Lindemann in the Children's Psychiatric Unit which was recently established. I am looking forward to this tremendously and expect it will be a valuable and very enjoyable year. The work here is all with adults, and the prospect of working with children again is a stimulating thought. From the description of the new Children's Medical Building, which must be almost completed now, it sounds as if Wards 10 and 12 are really being surpassed by something exquisite — an improvement that was certainly badly needed.

Every person whose name was published in the lists of signatures from the old desks in the Archives Room received a copy of The News which contained his name — whether he was a subscriber or not. As a result, many asked to subscribe to our paper; and here is a note from Dr. Russell T. Congdon (*WS* 1909) in response to his copy of The News.

> I was very much pleased to receive the copy of The News and to discover the story of our old House Officers' desk. The names and memories mean a lot to me.
>
> My two sons, Russell and Gordon, are back from overseas service and are associated with me in practice here in Wenatchee, Washington.

It is good to receive this note from Dr. J. Wister Meigs (*r.p.* 1943). But we shall hold him to that promise of a longer letter later. He wrote from 575 Ridge Road, Hamden 14, Connecticut.

> I am gradually getting settled in New Haven, trying to get used to the Yale atmosphere. I'm hoping that some day I'll be able to write a newsy letter about all the things we've done at the Institute of Occupational Medicine and Hygiene. At the moment, it's mostly plans for the future.

This short note has come from Major Fathollah K. Mostofi, MC (*a.p.* 1943-46).

> I am on terminal leave which will end in October. Have accepted a Fellowship with the National Cancer Institute at Bethesda, Maryland, where I hope to learn something about cancer of the uterus.
>
> My address is Pathology Section, National Cancer Institute, Bethesda 14, Maryland.
>
> I like to keep getting The News.

THE NEWS

No 63 Boston, Mass. December 1947

PHYSICAL MEDICINE AFFAIRS

During the 22 months since our previous report, the Department of Physical Medicine has increased the scope of its activities and, I believe, improved the type of service rendered to the hospital patients. This has been possible chiefly because of the training of Fellows in Physical Medicine who have brought new techniques of examination from the laboratory to the clinic, thus making available more diagnostic studies and quantitative evaluation of neuromuscular and circulatory function. We have also been able to follow individual patients under treatment more closely with the additional physicians available for this work. Physical Medicine throughout the country has shown similar advances, as indicated by the establishment of a specialty board—the American Board of Physical Medicine being the sixteenth one approved. The first examinations were given in Minneapolis in September, the writer being on the original examining board.

The first of our Fellows, Charles S. Wise, will finish his three years in February 1948. He has been particularly interested in studies of the peripheral circulatory system and has developed, with considerable ingenuity, a workable clinical method of plethysmography of value in the study of hypertensive cases, as well as in a variety of diseases in which the peripheral circulation is affected. It is hoped that he will remain in the Department another year, to continue his studies and assist in the clinical work.

The second Fellow, Sedgwick Mead (*EM* 1940, *P* 1941, *a.r.p. N* 1942) will leave us in February 1948, after finishing a little over two years of his Fellowship training, to take the position of Assistant Professor of Physical Medicine, Washington University School of Medicine, and Chief of the Department of Physical Medicine, Barnes Hospital. Dr. Mead has been working on electrical methods of quantitating pain, and he hopes to continue and increase research activities in this direction, in addition to his clinical and teaching responsibilities at St. Louis.

Herbert Park, our third Baruch Fellow in Physical Medicine, started his clinical training this fall, after a year in physiology and biophysics. His research endeavors have been along the line of circulatory studies of the intestines. It is hoped that he will develop a method to use clinically during his last two years here.

Another Baruch Fellow, Donald L. Rose, spent several months with us working on the problem of painless electrical stimulation, and is now Professor of Physical Medicine at the University of Kansas Medical School.

One of the most interesting developments in Physical Medicine techniques is that attributed to Dr. Thomas L. DeLorme, formerly Research Fellow in Neurology and now holder of a Baruch Fellowship in Physical Medicine. He has developed for clinical use a method of developing muscle power through high-resistance, low-repetition exercises, which has been studied here during the past year in relation to treatment of patients with poliomyelitis. This promises to be one of the most important advances in physical therapeutic procedures in recent years. Further investigations as to the indications for use and to develop improvement in technique have been made possible through the gift of the Pope Foundation, establishing a progressive resistance exercise clinic in the Department of Physical Medicine. Other research activities include development and evaluation of a new muscle-testing device employing a manual force gauge for more accurate quantitation of muscle power. Combined researches with other departments are continuing on the subjects of infantile paralysis and fatigue.

As already noted in THE NEWS, Miss Lucy G. Morse of the Occupational Therapy Department has been in Czechoslovakia for nearly a year now, to help develop this type of medical service in that country through the agency of the Unitarian Service Committee. Miss Ruth Steglich, who has taken her place as Supervisor, has shown considerable initiative in developing more interest in the use of occupational therapy, particularly for increasing muscle strength and skill. A new prescription terminology has been developed and perhaps needs explanation. The term "Energic" is used to denote O.T. to improve muscle strength; "Kinetic" indicates methods to improve range of motion, coordination, or skill; "Apotrophic" means diversional; "Metric" means to evaluate, particularly skills—for example: in pre-vocational analysis, a service which we hope to enlarge further because of increased interest in medical rehabilitation.

Another innovation is the establishment of a training course for physical therapy technicians as a cooperative effort between Simmons College, Children's Hospital, Peter Bent Brigham Hospital, and the Massachusetts General. This new school takes the place of the course previously given under the Courses for Graduates at Harvard Medical School and Children's Hospital. The new course is under the co-medical directorship of William T.

(*Concluded on page* 2)

The Board of Trustees entertained a few members of the corporation and the staff of the hospital at a dinner on Tuesday evening, December 2.

At this time, Mr. Francis C. Gray, Chairman of the Board of Trustees, announced gifts to unrestricted capital not including bequests amounting to slightly under $300,000 since January 1, 1947. He stated that $700,000 must be raised in December in order to enable the Massachusetts General Hospital to meet fully its obligations to the needy sick in the New England community.

"During the past year," he continued, "with the authorization of the Greater Boston Community Fund, we have appealed to individuals and corporations for contributions to restore our unrestricted capital funds. During 1945 and 1946, deficits have arisen which make it imperative to raise $700,000 before January 1, 1948, to enable the hospital to meet fully its obligations to the needy sick in the New England community. *This goal must be reached!*"

The Fund Raising Committee of the Trustees, under the Chairmanship of Mr. Francis W. Hatch, decided to make an all out effort to reach this goal in December. Many people have told members of the staff, the corporation, and the trustees that they intended to make a contribution to the unrestricted capital of the hospital during 1947, and it is the intention of the trustees to do all they can to encourage these gifts in December.

Mr. Hatch said, in part—"One hundred years ago this hospital gave to the world the blessed discovery of ether for anesthesia. Within its laboratories, wards, and operating rooms today research projects are in progress which give Massachusetts General Hospital high rank among the five leading research hospitals in the country. A contribution to the Massachusetts General Hospital is indeed *an investment in the welfare of humanity.*"

Mr. Gray further pointed out that every member of the hospital family should consider himself a volunteer solicitor for this drive. The trustees and members of the corporation are making every effort to solicit individuals and business concerns in downtown Boston, and it is hoped that the staff will do all they can to help by asking their friends to reply to Mr. Gray's appeal. In the mails are 60,000 letters to individuals throughout greater Boston and New England. The trustees are confident that with the support and interest of those who know about the hospital, the goal will be reached before the first of the year.

Mr. Gray pointed out that Mr. Crockett's office, on the eighth floor of the Phillips House, is anxious to help any volunteer solicitors with names and addresses of prospects. Members of the staff who wish to give may do so through this office or the office of the Treasurer at 1 Federal Street.

Dr. Faxon, at the dinner, discussed briefly the problem of operating a hospital with inflationary costs and fixed income. He reminded everyone of the figures he presented in the November NEWS, which indicated that all commodities have increased 90% in *cost*, whereas the hospital has gone up on its supplies only 65%. The 1947 dollar buys only half as much as the 1939 dollar.

To meet this, Dr. Faxon pointed out that rates were increased substantially on January 1, 1947. Despite this and stringent economy measures, the task of making both ends meet presents a stern challenge which must be met by everyone connected with the hospital.

Checks have already been received from South America, Africa, Switzerland, and England. Gifts of any amount—no matter how small—will be most gratefully received. Should someone who wishes to help feel embarrassed at the small amount he would be able to give, we wish he would remember that contribution of 25¢ from a "poor black" during the drive for funds in 1844, which still stands stanchly recorded on the hospital's record of donors, along with amounts ranging up to $20,000.

(*Continued from page* 1)

Green, Chief of Orthopedic Surgery at Children's Hospital, and myself. Students who enroll as freshmen at Simmons will have three years at Simmons exclusively and then 18 months of physical therapy training, leading to a Bachelor of Science degree and a certificate in physical therapy. The final 18 months will also be open to graduate nurses, graduates in physical education, and others who have had sufficient training in the sciences in college courses. There are 10 girls enrolled in the first class, which started in September. They will receive lectures, laboratory demonstrations, and clinical practice in our Physical Therapy Department.

In looking to the future, we hope to see Physical Medicine expanding its services to the hospital to include more and more diagnostic and prognostic procedures, as well as treatment, and also more concern with care of the patient during convalescence, when physical methods of treatment are so important along the road to full medical rehabilitation.

Arthur L. Watkins, M.D.,
Chief of Physical Medicine

* * *

Among the speakers at the annual meeting of the National Committee for Mental Hygiene, held in New York November 12 and 13, were Dr. Erich Lindemann and Rev. Rollin J. Fairbanks—both of M.G.H.

Dedication exercises of The Vincent Memorial Hospital were held on Tuesday afternoon, November 25.

As the dedication of the original Vincent Hospital was made by the Reverend Phillips Brooks, then Rector of Trinity Church in Boston, so was the new Vincent Memorial Hospital dedicated by the present Rector of Trinity Church—the Reverend Theodore P. Ferris, D. D.

The speakers for the occasion were Mr. Henry C. Everett, Jr., President of the Board of Trustees, Vincent Memorial Hospital; Mr. Francis C. Gray, Chairman of the Board of Trustees, Massachusetts General Hospital; Dr. Nathaniel W. Faxon, Director of Vincent Memorial Hospital, Massachusetts General Hospital, and Massachusetts Eye and Ear Infirmary; and Dr. Joe V. Meigs, Chief of Staff, Vincent Memorial Hospital.

Tea was served, and the new building was open for inspection from four to six o'clock.

A full account of the ceremony and a description of the new building will appear in the next issue of THE NEWS.

Occupancy and Designation of Floors in the New Building

The first three floors of the new building will be designated as Vincent Memorial Hospital.

The offices of Drs. Meigs and Sturgis, and the Vincent Research Laboratory, will occupy the first floor, with the exception of a small portion set aside for the offices of Dr. Butler and his assistants on the Children's Medical Service.

The second floor, for ward patients, will be known as Vincent—2.

The third floor, for semi-private, similar to Baker Memorial patients, will be known as Vincent—3.

The fourth, fifth, and sixth floors will be known as the Burnham Memorial Wards for Children.

The fourth floor will be primarily for infants or young children and will be known as Burnham—4.

The fifth floor will be for older ward children and will be known as Burnham—5.

The sixth floor will be for semi-private children, similar to those now housed in the Baker Memorial, and will be known as Burnham—6.

For convenience, the Basement, which will house the Pharmacy and Children's Research Laboratory, will be called Vincent Basement.

* * *

The School of Medical Illustration is proud to announce that Dr. Robert M. Green, recently retired from Harvard Medical School, has been added to the staff as Instructor of Anatomy.

A meeting of the Research Council was held on Thursday afternoon, November 20. The subjects discussed and names of speakers are as follows:

"The use of radioautographs in the study of thyroid nodules", Dr. B. M. Dobyns.

"Coenzyme A, a pantothenic acid derivative—Its metabolic function", Drs. F. Lipmann, N. O. Kaplan, and G. D. Novelli.

"Studies on experimental dental caries", Dr. D. Weisberger.

* * *

A word of appreciation for seldom-mentioned members of the hospital family is in order.

Only those who have dealt with some other hospitals realize how very fast and efficient our Record Room staff is. As an intern, I at first thought of Miss Rose Martin as a species of gadfly, constantly urging me to complete summaries and sign records. Gradually I came to appreciate her unusual qualities of cooperation and devotion and her unfailing good humor. Her feats of memory are already legendary, but I would like to mention an example of this which happened the other day.

I decided to look up the recent progress of a patient whom I had seen in my first three months on the Skin Service, in 1938. I knew her maiden name but not her married name, and, of course, not her unit number or address. I could estimate the age fairly closely. The patient was last in the hospital four or five years ago. Miss Martin had never so much as seen the patient, and had only handled her record as she does thousands of others.

When I had finished giving all the details I could recall, Rose asked, "Didn't that patient live in Abington?"

Startled, I answered that that sounded like the town, but I wasn't sure.

Three minutes or so later the record was in my hands.

S. M.

By vote of the General Executive Committee, on October 15, 1947, the following grades of appointment will become effective as of February 20, 1948—that is, at the next Organization Meeting:

Clinical Assistant

A six months' or one year appointment by the General Executive Committee, for an individual working usually in the Out-Patient Department or special clinics, having authority to treat patients and write orders delegated to him by the Chief of the Service or Clinic with which he is associated.

Clinical Fellow

A six months' or one year appointment by the General Executive Committee for an individual who is closely enough associated with clinical work so that the authority to carry out treatment or write orders may from time to time be delegated to him by the staff member with whom he is associated.

Research Fellow

Limited to laboratory and examination of patients.

Clinical and Research Fellow

Reserved for those individuals who hold the title of Research Fellow from an outside institution. This extends the privilege of the Research Fellow to those enjoyed by the Clinical Fellow.

Graduate Student Assistant

Students of the Harvard Graduate School appointed by the General Executive Committee for varying terms of service. They would have no authority for the treatment of patients nor the writing of orders, but would have access to clinics and conferences.

There no longer will be the grade of "Graduate Assistant".

The Board of Trustees, at their meetings on October 17 and 31, voted to appoint:

Dr. James H. Currens as Assistant in Medicine;
Dr. William F. Havemeyer as Third Assistant Resident in Surgery, beginning November 1;
Dr. John Homans, Jr. as Assistant in Medicine;
Dr. David D. Rutstein as Consultant in Preventive Medicine;
Dr. W. Wilson Schier as Assistant in Medicine;
Dr. John B. Stanbury as Chief Resident in Medicine, beginning January 1, 1948;
Dr. Kurt H. Thoma to the Board of Consultation, as of February 20, 1948;
Dr. Edward P. Wallace as Assistant Resident on the Children's Medical Service, beginning November 1;
Dr. David Weisberger as Chief of the Dental Service, effective as of February 20, 1948.

At their meetings held on October 15, 22 and 29, and November 5, the General Executive Committee voted to appoint:

Dr. William B. Ayre as Clinical Fellow in Medicine, effective as of November 1; Dr. Ayre was also assigned to the Staff Clinic;
Dr. Thomas F. Broderick, Jr. as Graduate Assistant in Orthopedic Surgery for the term November 1, 1947 to November 1, 1948;
Dr. Thomas E. Gibson as Graduate Assistant in Dermatology;
Dr. Gilbert S. Gordan, Jr. as Research Fellow in Medicine;
Dr. William K. Hall as Graduate Assistant in Dermatology and Syphilology, beginning October 1;
Dr. David Honoré as Clinical and Research Fellow in Surgery;
Dr. Henry J. Koch, Jr. as Clinical and Research Fellow in Medicine;
Dr. Roy W. Leeper as Graduate Assistant in Dermatology;
Dr. John McL. Morris as Graduate Assistant, to work with Dr. Meigs;
Dr. Margaret Mullinger as Graduate Assistant to the Children's Medical Service for nine months, beginning October 1;
Dr. Peter H. Nash as Clinical Fellow in Medicine;
Dr. John C. Nicholson as Clinical Fellow in Surgery for a period of three months;
Dr. Dorren Nightingale as Clinical and Research Fellow in Surgery;
Dr. Olaf H. Pearson as Clinical and Research Fellow in Medicine;
Dr. Gardner C. Quarton as Graduate Assistant in Neurology for the period October 16 through December 31, and Clinical Fellow in Neurology for the period November 1, 1947 through June 30, 1948;
Dr. E. N. Rowlands as Clinical and Research Fellow in Medicine;
Dr. Pierre A. Turgeon as Graduate Assistant in Dermatology;
Dr. Lorande M. Woodruff as Graduate Assistant in Urology.

The General Executive Committee also voted:

That Dr. Frederic C. Bartter's title be changed from Research Fellow in Medicine to that of Clinical and Research Fellow in Medicine;
That Dr. Anne P. Forbes's title be changed from Clinical Fellow in Medicine to that of Clinical and Research Fellow in Medicine.

The School of Nursing was represented by Miss Sleeper at a meeting in Washington on November 11, to discuss the study of nursing schools now being made under the direction of the Carnegie Foundation. The study will deal with the control, organization, and financial support of schools of nursing.

Miss Marilyn Towle, a student nurse who recently completed her affiliation at Boston Lying-in Hospital, was awarded a prize at that hospital for doing the best bedside nursing and class work in her group.

Dr. Paul M. Howard, Chief of Men's Service at McLean Hospital, has sent us these items of information regarding his department:

The pleasant first floor of the Proctor Building at McLean Hospital—closed during the war—has recently been reopened for male patients, as a result of a real effort on the part of the nursing staff. Therefore, it has been possible to admit a young and interesting group of men.

The use of sub-shock insulin, now widespread in the Hospital, is partly concentrated here; and many otherwise more disturbed and anxious cases recover thereby more promptly and comfortably. Electric shock treatment, with the attendant physiological research, continues in one wing of the floor.

The patients take an active part in the routines of gymnastics, occupation, hydrotherapy, and entertainment; and are individually treated in psychotherapy.

In these days of closing hospital wards, it is notable to have one reopened.

* * *

In our hospital mail box one day not long ago, we found the following letter and lyrics. Instead of experiencing the usual feeling of annoyance at the omission of a signature, our interest and curiosity were whetted, and we decided to publish the material. We still do not know who is responsible, but here are the letter and lines *in toto*.

To the Editor of the MGH News:

With all the excitement about children and GYN patients moving into their new building, we who work with the Dermatology patients on Ward G become sadder and more and more upset. We hear all kinds of rumors about where we will be moved when the new building is opened, and *none* of the rumors are happy ones. We think we are the "forgotten" department. As for our patients, we try desperately to make up to them in our cheerfulness for the dismal surroundings in Ward G.

Because of the intensity of our feelings, one of us burst forth with the song which we are enclosing. The writer is shy. Therefore it is "anon."

I'M DREAMING OF A NEW WARD G

(Tune — I'm dreaming of a white Christmas)

I'm dreaming of a new Ward G
All clean and new and sparkling bright,
With a day room for our patients,
A conference room for doctors,
And a section for the nurses, too.

I'm dreaming of a clean Ward G
With clean linoleum like in White,
Cheery curtains at clean windows—clean walls,
And a kitchen quite new and sparkling bright.

I'm dreaming of a fine Ward G
Not isolated from the world.
With a special O.T. worker,
And books from Warren Library,
To keep our patients occupied.

I'm dreaming of a bright Ward G
Not in the present Children's Wing—
Nor with its present views—of bricks,
But somewhere where our patients will be cheered.

(Anon.)

New addresses:—

Dr. Robert W. Gentry (*ES* 1943), 415 South Madison Ave., Pasadena, Cal.
Dr. George C. Gibson (*WS* 1926), Robinson Memorial Hospital, Ravenna, Ohio.
Lt. Eileen Glynn, NC, USN (*MGH* 1936), W.O.Q., U.S.N.A.S., Patuxent River, Md.
Lt. Laurence K. Groves, MC, USNR (*WS* 1947), Dispensary, Naval Air Station, Quonset Point, R. I.
Lt. Arvil J. Hinshaw, MC, USNR (*ES* 1947), Naval Hospital, Newport, R. I.
Dr. Bernard M. Jacobson (*a.p.*), 422 Beacon St., Boston 16, Mass.
Dr. John R. McDaniel (*ES* 1940), 825 Charles St., St. Joseph 10, Mo.
Dr. Louis Nathan (*Or.* 1930), 171 Bay State Road, Boston, Mass.
Dr. Kurt H. Thoma (*oral s. and c. Dn.*), 1180 Beacon St., Brookline, Mass.

Brief bits:—

Dr. John Gardiner completed his work here as Clinical and Research Fellow in Anesthesia on October 27. He is now at Walter Reed General Hospital, Washington, D. C.

Dr. James E. Kreisle (*WM* 1943) left here on October 15 and has gone to take a Fellowship at the Mayo Clinic in Rochester, Minn.

Ever made the mistake of reversing an old and new address? We did—in the last issue of THE NEWS. With the two statements together on a card, we reported Dr. Harrison J. Shull as *coming* to M.G.H. instead of *leaving*. To set the record straight—Dr. Shull has been here at the General, working with Dr. Chester M. Jones in gastroenterology for the past year, and has now gone back to Nashville, Tenn., where he is a member of the Department of Medicine at Vanderbilt University.

MASSACHUSETTS EYE & EAR INFIRMARY

Dr. Frederick H. Verhoeff, Consulting Chief of Ophthalmology at the Infirmary and Professor Emeritus of Ophthalmic Research at Harvard Medical School, received the 1947 Leslie Dana Gold Medal for outstanding achievements in the prevention of blindness and conservation of vision. The award was made at a faculty luncheon of the American Academy of Ophthalmology and Oto-Laryngology in Chicago on October 16, where Dr. Verhoeff was the guest of honor.

As a result of his recent trip to Chile, Dr. LeRoy A. Schall has just received a diploma, naming him Honorary Member of the Faculty of Biology and Medical Sciences of the University of Chile. In a special session of the Faculty, they unanimously agreed to confer this honor upon Dr. Schall "in respect to his professional merits".

Other titles conferred upon Dr. Schall after his visit to South America are: Honorary Member of Sociedad Chilena de Oto-rino-laringologia, Corresponding Member Asociacion Medica Argentina, Corresponding Member Club Oto-rino-laringologia de Buenos Aires, Corresponding Member Sociedad de Oto-rino-laringologia de Valparaiso, Honorary Member Asociacion Medica de Puerto Rico and Honorary Member Asociacion Medica de Guatemala.

The Eastern Zone Conference of the American Hearing Society met in Boston from November 6 to 8. On Thursday evening, November 6, Dr. LeRoy A. Schall presided at the session. On the following evening, Dr. Julius Lempert of New York City spoke on the "Lempert fenestration operation for the improvement of hearing —Its present status".

On November 19, Mrs. Eunice Wilson, Director of our Social Service Department, gave a talk at the Institute for Health and Welfare Workers which was held in New York under the auspices of the National Society for the Prevention of Blindness. The title of her paper was "The function of a Social Service Department in an Eye Clinic and its relation to community social agencies".

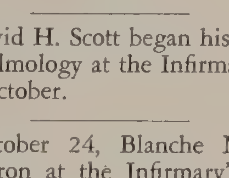
The Community Fund drive created considerable interest at the Infirmary. The drive was high lighted by a horse race, each horse representing a group of departments at the hospital. As each department brought in subscriptions, its horse advanced nearer the goal. The winning horse was Number 5, backed by Housekeeping, Laundry, Nurses' Quarters, and Operation of the Plant personnel. These departments were the first to bring in 100% subscriptions.

Mrs. Virginia Smith Boyce, Administrative Assistant of the National Society for the Prevention of Blindness, spent a day in November at the Infirmary, observing work being done in the Social Service Department here.

Dr. David H. Scott began his residency in Ophthalmology at the Infirmary on the first of October.

On October 24, Blanche M. Jones, night matron at the Infirmary's Nurses' Residence, died in the Massachusetts General Hospital after a short illness. Miss Jones came to the Infirmary in 1939 and made a place for herself at the Residence by her capable and loyal service.

Mrs. Ida Ryder, day matron at the Residence for several years, has recently resigned. Miss Tarbox gave a tea to introduce the two new matrons, Miss Grace B. Inman for day duty and Miss Alice M. Walsh at night.



The Archives Department has been preparing a revised list of the names of living alumni of M.G.H., grouped under the years in which they ended service here. As a result, we discovered that Dr. Arthur K. Stone (*WS* 1888) is the sole representative of the earliest year in the list. Thereupon, we wrote Dr. Stone, suggesting an interview at his home in Framingham Center, with the hope that we might procure both a picture of Dr. Stone and some interesting material for THE NEWS.

A few days ago a card arrived from Dr. Stone, headed Crescent City, Florida, which says:

> Your letter was waiting for me here at Crescent City on my arrival.
>
> I fear we cannot arrange a meeting, but I will try in the near future to jot down some things that I remember of the past.

Dr. Stone then mentions the names of those of the next group after him who are still living. It is our plan to try to get NEWS material from as many of our oldest alumni as possible—moving along, class by class. In addition to what has already been published on the subject, we know that these older men have much of interest they could tell us about, regarding M.G.H. in its earlier days.

In the meantime, we are most anxious to hear from Dr. Stone, and hope the waiting period will not be too long.

Recent gifts to the Archives Department:—

From Dr. Harris P. Mosher—Metal casts of the Ether Dome, and of Dr. Oliver Wendell Holmes—both made by Dr. Mosher.

From Dr. Faxon—7 framed pictures, subjects: Bradlee Ward (Ward E) and Operating Theatre, 1888—exterior; Bradlee Operating Theatre—interior; University of Rochester School of Medicine and Dentistry, Strong Memorial Hospital, and Rochester Municipal Hospital; old engravings of the Surgeon's Theatre in Old Bailey, St. George's Hospital, Lying-in Hospital for Married Women, and Bethlehem Hospital—all of England.

From Dr. Gerado M. Balboni — 4 framed pictures, subjects: Our ambulance with the white horse; Dr. Samuel Robinson, Surgeon at M.G.H. from 1906 to 1912, where he introduced artificial pneumothorax in 1909; Dr. Cleveland Floyd, who collaborated with Dr. Samuel Robinson in introducing artificial pneumothorax at M.G.H.; Dr. Richard C. Cabot—the photograph bearing this inscription: "A worker in the forefront of Medical Progress; the genie of Medical Social Service. Contributor with Mrs. H. G, Coburn and Mr. Charles D. Sias for the maintenance of a Tent Ward at M.G.H. in 1909-1910 for Dr. Samuel Robinson's work on Artificial Pneumothorax". Dr. Balboni has also given us a fine old engraving of Georgius Baglivi, who was born in Ragusa in 1668 and who believed an incision could be made into the lung, between the ribs, to cure lung ulcers.

From Dr. Tracy B. Mallory—A composite photograph of 12 Boston physicians, whose names are on the back—made probably between 1890 and 1900.

From Mr. Arthur A. Shurcliffe—A photograph (taken about the time of the Civil War) and a bronze bas-relief of Mr. Shurcliffe's father, Asahel M. Shurtleff, who was well known by many of the M.G.H. staff because of his designing of surgical instruments. Several of the instruments in our collection in the room behind the Ether Dome were of Mr. Shurtleff's design. The explanation of the difference in the spelling of the last name is that it has been changed back to the earlier form.

From Mary Newell Eaton—2 very interesting photographs of William T. G. Morton. The pictures were given by Dr. Morton to Mrs. Eaton's grandmother, who was Morton's cousin. Both pictures bear Morton's signature.

From Dr. Means—Several group pictures of various members of our staff, taken during 1944.

From Dr. Washburn—2 boxes of papers, letters, and pamphlets, including copies of addresses delivered by Dr. Washburn, and letters written and received by him during his years as Director at Massachusetts General. This is only a first small instalment from Dr. Washburn. There is much more, of great value, to come.

Important events, concerning Massachusetts General Hospital, that occurred in the month of October during the earlier part of the nineteenth century:

Oct. 22, 1820 — The Building Committee were ordered to take measures to erect the western wing of the Hospital in the ensuing spring. They reported that the centre and easterly wing were nearly finished, but that it was inexpedient to open the Hospital immediately for the reception of patients.

Oct. 7, 1823 — A Committee reported that they had leased the mummy for one year for exhibition in other cities. The mummy, from Thebes, was presented by Bryant P. Tilden and Robert B. Edes, in behalf of Jacob Van Lennep and Company of Smyrna — the Hospital paying two hundred dollars out of the proceeds of its exhibition to the Boston Dispensary. The total profits from the exhibition of the mummy were fifteen hundred dollars. The mummy is still in the Ether Dome.

The portrait of William Phillips, first President of the Corporation, painted by Gilbert Stuart, was finished. It was received on October 10. Stuart was sixty-seven years old at that time. The portrait now hangs in the Trustees' Room.

The west wing of the Hospital was now ready for patients.

Oct. 7, 1825 — It was voted that the Visiting Committees should make their visits unattended by the superintendents, apothecaries, or nurses, probably in order that patients might more freely state any causes of complaint.

Oct. 23, 1825 — An important vote was passed, placing a free bed for one year at the disposal of anyone who should pay one hundred dollars.

Oct. 13, 1837 — A communication from Dr. James Jackson, by which he resigned his position as one of the Physicians of the Hospital, was read before the Board of Trustees, and the following votes, submitted by Mr. Nathaniel I. Bowditch, were unanimously adopted:

> Voted that the Trustees have learned this determination of Dr. Jackson with the utmost regret. Connected as he has been with the institution from its first establishment, they are well aware how much he has always done to raise and maintain its reputation, and to extend its usefulness. Possessing the purest and most examplary private character, with talents and attainments which have placed him at the head of his profession, and with kind and affable manners which have won the affections of his patients and conciliated the esteem and goodwill of his associates, the Trustees cannot but regard his retirement from the Hospital as a most severe and serious loss. While they accept his resignation, therefore, they avail themselves of the opportunity publicly to acknowledge that he was among the most active and influential of the original founders of the Hospital; that, by an uniform course of disinterested professional and personal service, he has ever been one of its ablest officers and best friends; and that he is thus, in their opinion, entitled to the lasting gratitude of the institution and of the community. Voted, also, that, as a testimonial of the respect of the Trustees for Dr. Jackson, a free bed in the Hospital be placed at his disposal during life.

Dr. Jackson was Acting Physician from 1817 to 1837, Consulting Physician from 1838 to 1846, and a member of the Board of Consultation from 1846 to 1867.

Several interesting letters written by Dr. Jackson — including one which gives the reasons why it became necessary for him to resign from the Active Staff — are now on display in the Archives Room.

Oct. 11, 1839 — A Committee was instructed to study the question as to the expediency of rejecting syphilitic patients, or of charging them extra board. This Committee subsequently reported that such patients should be received only in urgent cases, and should always be charged double the usual rates of board. Dr. Washburn, on page 304 in his *History of Massachusetts General Hospital* says:

> This barbarous rule was in effect in nearly all general hospitals of the land well into the twentieth century. . . . In 1900 the Trustees changed their rules to permit the admission of syphilitic patients. To the credit of the Hospital, it was one of the first to take this enlightened position and to bring syphilis into the open for treatment in the hospital, instead of banishing it to the infirmaries attached to almshouses or allowing patients in the contagious stage to live at home and have out-patient treatment only.

On the same date in 1839 a Committee was appointed to consider the expediency of applying to the Surgeons for the records, or for leave to copy the same, who at a subsequent meeting reported in favor of such an application. The Physicians had always regarded their records as the property of the institution. Dr. Warren, Acting Surgeon, on the contrary, considered the surgical records as his own private memoranda. The appointment of this Committee, however, and their suggestions as to the importance of the institution's possessing either the originals of these records or copies of them, induced him very cheerfully to yield up any private claim.

Oct. 22, 1839 — Gamaliel Bradford, third Superintendent of the Hospital, died. Dr. Washburn's *History* says, on page 12:

> [His] father Gamaliel was one of the original Trustees of the Hospital. The father had commanded a privateer in the War of 1812, lost a leg in action, and wore a wooden one. These Bradfords were a distinguished line, of direct descent from Governor Bradford of Plymouth [as is our present Governor of Massachusetts]. Gamaliel, the doctor and Superintendent, was born in Boston, November 17, 1795, graduated at Harvard in 1814, studied medicine at the University of Edinburgh in 1819-1820. He practised medicine in Boston until 1827, then gave up practice and was in business from 1827 until 1833. From the latter year until his death on October 22, 1839, he was Superintendent of the Hospital. He was a considerable contributor to newspapers and magazines, and was actively interested in the anti-slavery cause and also in temperance. He was a member of the Massachusetts Society of the Cincinnati, and of the Massachusetts Historical Society.

Because there is no likeness of the father Gamaliel, a picture of the beautiful coffee urn, made by Paul Revere and presented to Captain Bradford in recognition of his exploits in the War of 1812, hangs with the pictures of the original Trustees in the Archives Room.

Oct. 16, 1846 — The first public demonstration, by William T. G. Morton, of the use of sulphuric ether in major surgery.

Books were ordered to be kept as a record for all out-patients.

Oct. 18, 1867 — Dr. J. Collins Warren, a member of our Staff from 1869 to 1927, informed the Board of Trustees of a legacy under the will of his father, Dr. J. Mason Warren, Visiting Surgeon from 1846 to 1867, to the Trustees, of $2,000. It was to be called the "Warren Prize Fund", in memory of his father, Dr. John C. Warren. The interest therefrom is to be awarded every three years for the best dissertation considered worthy of a premium, on some subject in physiology, surgery, or pathological anatomy.

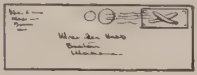
Oct. 21, 1870 — After the Board of Trustees had given full and deliberate consideration to the subject, with the help of a Committee and a knowledge of the views of Dr. Benjamin S. Shaw (Resident Physician, as the Directors were then called) and of the Medical and Surgical officers, it was voted to establish a separate ward for the treatment of patients with skin diseases, and to appoint Dr. James C. White, a Staff member from 1863 to 1914, as Physician to that department; it being understood that the measure was but an experiment, and the appointment but temporary. The "experiment" was regarded by the Trustees as open to some general objections and was discontinued at the end of 1871. Dr. White, the Trustees said, had made a most faithful trial of the experiment, and had devoted to it his skill and experience in his specialty. It was not until 1903 that Ward G, primarily for Dermatology, was opened.

Important events, concerning Massachusetts General Hospital, that occurred in the month of November:

Nov. 2, 1823 — Announcement was made of a bequest of $25,000 from John McLean, a Boston merchant. Eventually, nearly $120,000 was received from the McLean estate. In 1826, "The Asylum", as the Charlestown branch of M.G.H. was then called, was renamed "McLean Asylum" in honor of John McLean. His portrait, by Gilbert Stuart, now hangs in the hospital library at Waverly.

Nov. 3, 1839—The House Physician and Surgeon were directed to record all cases in volumes to be prepared for that purpose.

Nov. 7, 1841—Dr. John C. Warren donated $1,000 as a fund for the purchase of religious and moral books to be given to patients in the hospital and to those leaving the hospital. Our Warren Library for patients is the result of this early bequest.



Back in early 1946 we published a short note from Dr. William A. Reilly (*CM* 1928), announcing his release from military service. Since we had heard nothing further from Dr. Reilly, this interesting letter from him is very welcome.

> The University of Arkansas School of Medicine asked me to accept the professorship and head the new full-time Pediatric Department on August 1, 1947. All clinical departments in this Medical School were put on a full-time basis, beginning in July 1947.
>
> The opportunities here in Arkansas for medical service to students and the public at large are very great. There are about 110 pediatric beds, and another 50 beds for convalescences will be opened shortly. There is a very great variety of material here in all phases of Pediatrics. The students are very eager to learn and are very able. An unusual occurrence is the frequency of tetanus, anthrax, and poliomyelitis. Of course there is a great deal of congenital syphilis. The University has earmarked

Mr. Francis C. Gray — Chairman of our Board of Trustees

$1,600,000 for an expansion of the University Hospital, to include an additional 60 pediatric beds. Building plans are now in progress.

Even after a long residence in San Francisco and association with the University of California Medical School there, I find the environs of Little Rock, its people, and the University very pleasant and satisfactory.

Dr. Means has brought us another interesting letter from Capt. James M. Stewart, MC, AUS (*M* 1946). The letter was written in September, and is postmarked 61st Station Hospital, APO 782, c/o Postmaster, New York, N. Y. It reads:

After reading a recent issue of the M.G.H. News, I suddenly realized that almost a year has passed by since I last informed you as to my whereabouts. It was shortly after my arrival in Italy and assignment to the 61st Station Hospital in Leghorn that I last wrote, I believe. Since that time I have remained in Leghorn at the hospital, except for a very enjoyable three weeks' detached service in Naples at the old 300th General Hospital, during which time I took approximately two hundred ecg.'s in addition to exploring the beauties of Capri and Sorrento and the mysteries of Pompeii.

As the Italian phase of my Army life draws near its finish, with the Russian ratification of the Italian peace treaty, I realize how very fortunate I have been. Since January I have been working on the general medical ward at the hospital, and for the past six months have been in charge of it. We have had between 25 and 95 patients, averaging about 50 at any one time. This includes innumerable infectious hepatitis cases, many rheumatic and rheumatoid arthritics, and dermatological problems, but also two diabetic acidosis cases, four men with brucellosis (treated rather unsuccessfully with streptomycin), a few bleeding peptic ulcers, an interesting boy with secondary syphilis who had at the same time an acute nephritis with uremia (all of which responded nicely to penicillin therapy), and the only real case of thyroid disease I have seen over here—an officer who developed a lemon-sized nodule over night, with slight soreness and mild leukocytosis. This tumor gradually reduced in size to that of a ping-pong ball in about three weeks' time. He was non-toxic, and we postulated hemorrhage into an adenoma, although we, unfortunately, were forced to evacuate him to the States for exploration. With these cases to stimulate us and a fair medical library available, we have had a most enjoyable time of it.

To add to life's pleasure over here, my wife was able to come last March. We have a very luxurious nine-room apartment near the hospital, with kitchen and tile bath. Perhaps columnist Ruark, in his recent attacks on the "luxurious living" of General Lee and the officers in this theatre, could have been referring to our location!

While on a special service tour of Switzerland this summer, I spent several hours visiting the medical centre at Lausanne. The medical and surgical services had their own hospitals—very new and well equipped. An English speaking resident was very hospitable in showing me around the wards, and seemed proud (as well he might be) of his prize case—a six-month cure of tbc. meningitis with intrathecal streptomycin. The fact that I was a "foreign" visitor reminded me of the many South American and European medical men constantly visiting the M.G.H. I was very impressed by the apparent up-to-date medical practice at Lausanne.

This past month I was given a week's temporary duty to fly with two patients to Frankfurt, Germany, and thus to observe the German occupation. The thin, poorly clothed, sullen Germans, with their store windows empty, stood out in sharp contrast to the relatively well-fed Italians, with their stores well stocked. And the bombed ruins of Frankfurt, Wiesbaden, Stuttgart, and Munich which I saw, were very hard hit in comparison with Florence, Rome, Venice, and Milan—whose beauties were hardly touched. Here, again, I consider myself very lucky in having the chance to visit the wealth of ancient and renaissance art that is Italy.

Tomorrow is "R" day for Italy, and within ninety days all troops must be withdrawn. I was originally slated for Trieste forces, to remain in Italy, but "R" day has been so long postponed by the Russians that my Army "sentence" is almost ended. Therefore, I shall probably be returned to the Old Country by Christmas. My twenty-four months will be over next May, and I shall once more don civilian clothes. While it is impossible to lay definite plans these days, the Army has been fairly prompt in discharging medical officers after their period of service is over.

Please pass along my best wishes to all those at the M.G.H. who may remember me.

Dr. Richard C. Webster is sharing with us this little note from Mrs. Rodkey. We have been wondering how Capt. Grant V. Rodkey, MC, AUS (*WS* 1943) has been getting along since that spinal injury we reported to you several months ago; and we trust we are right in believing he has entirely recovered. His present address is Army Advisory Group, Medical Division, APO 909, c/o Postmaster, San Francisco. This note gives us a glimpse of what the Rodkeys are doing, over there in China.

Grant and I are enjoying life in Nanking very much—especially since summer is over! The heat was really bad here—supposedly the worst summer in 70 years, and ordinarily it's uncomfortable enough.

Grant is doing administrative work and some surgery. He is fortunate in that though we have only a small station hospital here, it serves a large community—both Army and civilian.

I taught last year, but am planning to be a lady of leisure this year—taking part in community activities, such as Scouts and Sunday School.

We're expecting to be back in Boston by next July. According to recent copies of the M.G.H. News, most of the crowd is already back. We're eager to join them.

This note from Mrs. William W. L. Glenn—she of cross-word puzzle fame. We publish it, because Mrs. Glenn refers to a question we knew would arise as you worked on the solution of her puzzle. Mrs. Glenn says, in part:

Any mistakes (and there is one, still) are my responsibility, because I know you corrected any and every one that was correctable. This one, which may have elicited a few comments, you couldn't have changed without changing all sorts of words and arrangement of squares. But I think it couldn't have confused very much, because a friend of ours did that part of the puzzle with no difficulty on that spot.

We love The News each month. Possibly better without a puzzle. It has been fun, however.

In spite of that "uterii", Mrs. Glenn, we all still think it's a grand piece of work!

THE NEWS

No. 64 Boston, Mass. January 1948

KURT H. THOMA, D.M.D.

As announced in the last issue of THE NEWS, Dr. Kurt H. Thoma was promoted to the Board of Consultation at a recent meeting of the Board of Trustees. This will become effective February 20, and Dr. Thoma will be retired as Oral Surgeon and Chief of the Dental Service. Because of this and the high regard in which Dr. Thoma is held, both at home and abroad, the leading article this month, which ordinarily would have told about dental affairs in general, is being devoted entirely to an outline of Dr. Thoma's work.

In the field of dental science, Dr. Thoma has achieved international fame. As a dental educator, his contributions have been myriad. And as a practitioner, his achievements in the specialty of oral surgery have been legion.

Born in Basel, Switzerland, in 1883, Dr. Thoma was educated in his native city and later in Prangin, on Lake Geneva. He studied engineering, and was graduated from the Institute of Technology of Burgdorf. Advised by friends to go to America, which suited his desire to see more of the world, he decided to study dentistry in the United States.

In 1911 he was graduated from Harvard Dental School, *cum laude,* after which he returned to Europe. There he became interested in the new concept of conduction anesthesia when procaine was destined to replace cocaine. He returned to the United States, and was instrumental in introducing the techniques of conduction anesthesia to the dental profession in this country.

In 1912 he was appointed Instructor in Dental Anatomy in Harvard Medical School, and at the same time Assistant in Prosthetic Dentistry at Harvard Dental School. His first textbook, *Oral anesthesia,* was published in 1914, followed by a second edition, revised and enlarged, in 1919.

A pioneer in the specialty of oral surgery, he was at once interested in the new discovery of the relationship of dental disease to focal infection, and was one of the first of the dental practitioners to employ roentgen diagnosis. This diagnostic aid opened a new vista of oral pathology, and his research work then developed along the lines of microscopic study of diseased dental tissues.

In 1915 Dr. Thoma was appointed Lecturer in Oral Histology and Pathology at Harvard, and published many papers on the microscopic study of oral lesions. *Oral abscesses,* a textbook dealing with the pathological study of infectious foci in the mouth and their relationship to systemic disease, was published in 1915.

At this time, when the professions of medicine and dentistry became more closely allied, he was appointed Oral Surgeon at the Robert B. Brigham Hospital, Consulting Oral Surgeon at the Boston Dispensary, and Visiting Dental Surgeon at the Long Island Hospital.

In 1917, following a short period of rapid development of the X-ray as an aid in diagnosis, the third Thoma tome appeared, entitled *Oral roentgenology.* This was a book, in atlas form, depicting and describing roentgen negatives of normal and diseased conditions in the mouth. An enlarged second edition of this book was published in 1922.

In 1919 Dr. Thoma was appointed Assistant Professor of Oral Pathology at Harvard. A vigorous work compulsion produced a long list of contributions to numerous medical and dental periodicals, plus chapters on oral disease for six medical and dental texts. One of the Century Company's Health Books, *Teeth, diet and health,* by Dr. Thoma, appeared in 1923.

Incidentally, during World War I, Dr. Thoma had become an American citizen.

In 1927 he was appointed Professor of Oral Pathology, and in 1934 the alumni of the Dental School endowed a chair, and his title was changed to the Charles A. Brackett Professor of Oral Pathology.

The following widely used texts are self-evident accomplishments of an unusual triad of investigator, clinician, and author: *Clinical pathology of the jaws,* 1934; *Oral diagnosis and treatment planning,* 1936; *Oral pathology,* 1941; *Traumatic surgery of the jaws,* 1942. His new 2-volume work, entitled *Oral surgery,* will be published in February. In part, it is a culmination of his clinical experiences in oral surgery during his tenure of service at M.G.H.

During the transition from the Harvard Dental School to the Harvard School of Dental Medicine in 1941, Dr. Thoma served on both the organizing and the executive committees. He was a strong proponent for revision in dental education and has constantly stressed the need for the training of clinical dental scientists. He was appointed Professor of Oral Surgery in 1941, and in 1943 was appointed Oral Surgeon and Chief of the Dental Department here at Massachusetts General Hospital.

Under the stimulation and direction of Dr. Thoma the oral surgical aspects of dentistry were made familiar to the hospital family. In previous issues of THE NEWS reports of the Dental Staff meetings, the extensive alterations of the clinic, and expanded dental service activities have been published. The biannual M.G.H. issues of the *Journal of orthodontics and oral surgery,* of which Dr. Thoma is the Editor in Chief, have reflected well-deserved credit to him and to the hospital.

Dr. Thoma will, as a member of the Board of Consultants at M.G.H., still be an active member of the hospital family. His vast experience with dental disease, his vigor, and his enthusiasm will always contribute a stimulating influence.

For the years ahead — our best wishes go to Dr. Thoma for good health and continued accomplishments.

VINCENT MEMORIAL HOSPITAL

It seemed like thousands, but maybe there were only hundreds present at the dedication of the new Vincent Memorial Hospital on November 25. Anyway, every inch of available space on the second floor of the building, where the ceremony took place, was filled.

Mr. Henry C. Everett, Jr., President of the Board of Trustees of the Vincent Memorial Hospital, spoke briefly of the history of the hospital and introduced the other speakers.

Mr. Francis C. Gray, Chairman of the Board of Trustees of Massachusetts General Hospital, welcomed the Vincent Hospital to the Massachusetts General group — stressing the fact, however, that the Vincent is a hospital within a hospital, having its own individuality and its own governing board. In saluting the Vincent Club for the fine work it has done, Mr. Gray concluded his remarks with, "To your Hospital, founded by a woman and supported by women, we bid you Godspeed."

Mr. Everett then paid high tribute to the helpfulness, understanding, and patience shown at all times by Dr. Faxon during the planning and construction of the Vincent, and introduced him as the next speaker. Dr. Faxon, who is Director of the Vincent Hospital (as well as of the General) pointed out the advantages to be gained by both institutions through cooperation with each other.

In introducing Dr. Joe V. Meigs, Chief of Staff of the Vincent Hospital, Mr.

Everett told of the years of faithful and unselfish devotion Dr. Meigs has given to the Vincent Hospital. He spoke of his distinguished leadership in the field of gynecology and research — a man whose name is known all over the world and to whom surgeons come from all parts of the country to watch his technique. Dr. Meigs, in speaking of the occasion which meant so very much to him, devoted the major part of his speech to thanking all those who in any way contributed to the fulfillment of his dream. He called the occasion a day of thanks and of hope. He expressed thanks to the Trustees of the Vincent and the General; to Dr. Faxon; to the Board of Managers and other officers of the Vincent Club; to Mr. Charles W. Brown, for his gift of rugs for the first floor; to Mr. Max Warren, for his gift of fifty radios — one for each room; to the various individuals and groups who have made money contributions; to Mrs. Graham "who took over while Dr. Sturgis was in the Service and who put this hospital on the map as far as the laboratory is concerned"; to the carpenters, architects, workmen — everybody who had helped in any way. In speaking of the Vincent Club he said, "To the Vincent Club, there is very little one can say except, 'Thank God there is a Vincent Club'. Imagine $600,000 given to the institution! Imagine their giving $35,000 and $45,000 a year in support of the hospital!"

Mr. Everett then introduced the last speaker — the Reverend Theodore P. Ferris, D.D., Rector of Trinity Church, who gave the dedication address. He spoke briefly on the two factors necessary to make a good hospital — scientific skill in the treatment of disease and compassion in the treatment of people. In closing Dr. Ferris dedicated the building with this prayer:

> To the glory of God we dedicate this hospital; to the truth of God we commit it; to the knowledge of His will and His way we pledge its allegiance. And to the service of humanity we offer its compassion and its skill. May those who share in its work share also its high ideals and may those who bear its burdens be sustained by Him who died that we might live. May the knowledge of its doctors and nurses grow and deepen every day; and may their skill increase and their compassion fail not. Bless this building, O God, and all who enter it, whether to suffer or to serve. Make it a temple of healing, like the shadow of a great rock in a weary land.

Following Dr. Ferris's dedication, there was an inspection of the building. To go into that would require an entire issue of THE NEWS. And even then, to do it justice, we would have to say "Come in and see for yourself."

Tea and sandwiches were served—the food being contributed by Mr. George Foster, caterer, who had asked the Vincent Club Committee if he might participate, in this way, in the occasion.

The picture of the attractive "Crinoline Girl", who has recently been standing at the head of Vincent Club matters in THE NEWS, was drawn by Miss Virginia Palfrey.

A check for $50,000, from the Damon Runyon Memorial Fund for Cancer Research, has been received by Massachusetts General. The gift was presented at a special meeting of the Trustees and Staff on December 10. Mr. Francis C. Gray, Chairman of our Board of Trustees, who accepted the check on behalf of the hospital, expressed gratitude for the gift and said it was imperative that the research already under way be continued at this great medical center.

* * *

Many of you will be glad to know that all periodical publications of the British Medical Association are now obtainable through Grune & Stratton, Medical Publishers, 381 Fourth Avenue, New York 16, N. Y., who have been appointed by the Association as sole agents for the United States, beginning with January 1948.

The journals are: *British medical journal,* published weekly; *Abstracts of world medicine,* published monthly; *Abstracts of world surgery, obstetrics and gynecology,* published monthly; and the following quarterly journals: *Annals of the rheumatic diseases; Archives of disease in childhood; British heart journal; British journal of industrial medicine; British journal of pharmacology and chemotherapy; British journal of social medicine; British journal of venereal diseases; Journal of clinical pathology; Journal of neurology, neurosurgery, and psychiatry;* and *Thorax.*

* * *

A meeting of the Massachusetts General Hospital Research Council was held on December 18. Drs. Fuller Albright, Frederic C. Bartter, and Anne P. Forbes spoke on "Studies with adrenocorticotropic hormone", and Drs. L. Raymond Morrison and Paul C. Zamecnik talked on "Production of experimental demyelination in brain slices".

◆

BORDEAUX BELLES

On Saturday, November the twenty-ninth, the "Bordeaux Belles" met at the home of Miss Alice O. Gorman, who was secretary to Dr. Richard Cabot, for dinner and a meeting. Twenty-five members were present — some coming from New Jersey, New York, Connecticut, Rhode Island, and Vermont.

Rosa Shayeb Dunaway, who has recently returned from a twelve-months' stay in Monrovia, Liberia, Africa, where her husband is Financial Advisor to the President, entertained the group with a graphic account of the life there.

This organization — the Bordeaux Belles — which is composed of the women who served overseas with Base Hospital No. 6 in World War I, was formed on the *Aurania,* en route to France in July 1917; and, although it remained inactive for several years, now holds dinner meetings twice a year, which are well attended and enjoyed.

TALENCE CLUB

Twenty-eight members of the Talence Club met at the Hotel Kenmore, on November 15, for the annual dinner and reunion of the Club. The meeting commemorated the thirtieth year of the organization, which was formed in 1917 by the enlisted personnel of U. S. Base Hospital No. 6 — a unit sponsored by Massachusetts General Hospital and located in Talence, Bordeaux, France.

Members present included Albert E. Barrow of Long Island, N. Y., William J. Brown of Charlotte, N. C., and Dr. Hugh Stalker of Detroit, Mich. Informal talks were given and questions answered by several members concerning conditions abroad, with which they are intimately acquainted through relief work or otherwise.

Clement J. Beaudet was appointed to study arrangements for a proposed reunion in Charlotte, N. C., the home of Unit "O", which became part of U. S. Base Hospital No. 6 during World War I.

Officers re-elected for the ensuing year were Albert E. Hunter, President, Clement J. Beaudet, Vice President, and Nathan E. Andrews, Collector.

DERMATOLOGY DEPARTMENT

Several unusual cases were presented at the November Staff Meeting, followed by a report on the recent meeting of the American College of Allergists, which was attended by Dr. Blank. A review of Dr. M. B. Sulzeberger's address on the treatment of skin diseases, at the fall Postgraduate Assembly of the Massachusetts Medical Society, was given by Dr. Wainger.

The American Academy of Dermatology and Syphilology met in Chicago early in December. Dr. C. Guy Lane, until recently Chief of our Service, addressed the Academy on "The present status of physical and radiation therapy —their value in the treatment of diseases of the skin, their limitation, and a discussion of how undesirable results may be avoided". Dr. G. Marshall Crawford, Acting Chief of our Service, also participated in the program — his topic being, "Practical applications of X-rays and other physical agents in the treatment of the more common dermatoses; the results to be expected in the treatment of tinea capitis with X-rays; and a discussion of safe X-ray dosage".

Jane E. Hinkley, night supervisor in the General Hospital, died at the Hospital on December eleventh. Miss Hinkley, a graduate of the Massachusetts College of Pharmacy and the Massachusetts General Hospital School of Nursing in the class of 1932, had been a night supervisor for eleven years, ten of which she was in charge.

Many students learned to give better

nursing care because of her teaching; many patients were made comfortable because of the care she herself took time to give. Her loyalty and her dependability were appreciated by Hospital Administration, Resident Staff, and Nursing Staff. The combination of understanding and fairness, sense of humor and sympathy, selflessness and interest in others which Miss Hinkley brought to her work and her personal relationships will be greatly missed.

The Ladies' Advisory Committee to the School of Nursing has recently appointed a group of subcommittees, designed to advise on the programs for various school functions. These committees, which will work with parallel committees and departments in the school, and the names of their chairmen, are as follows: Education Committee — Mrs. Brace; Guidance Committee — Miss Stedman; Building Committee — Mrs. Jordan; and Extracurricular Committee — Miss Bartol.

Two other committees of special interest have held their first meetings. The Personnel Relations Committee met with Miss Sleeper to discuss personnel policies and problems of the graduate staff. Within the nursing school, the Student-Faculty Relations Committee, planned during the fall by joint student-faculty action, has begun to meet. This committee, composed of seven students and seven faculty members, gives an opportunity for open and cooperative discussion of student and school problems.

With the present senior class in the School of Nursing, the date of graduation is being changed from midwinter to June. The last February graduation is scheduled for Thursday, February 4, for the class which entered the school in February 1945. Baccalaureate Service will be held at Trinity Church on February 1. All later classes will be graduated at June exercises.

Upon the resignation of Mrs. Lois Prussman Lawrence, Miss Claire O'Neil has become Clinic Supervisor of the O.P.D., where she was formerly head nurse of the Medical Clinic.

Miss Adele Corkum is serving temporarily as nursing supervisor in the new Vincent Hospital and the Burnham wards for children. Miss Shirley King is head nurse on the private floor, and Miss Mary Fitzgerald is in charge of the ward floor.

The Board of Trustees, at their meetings on October 3, and November 14 and 28, voted to appoint:

Dr. Robinson LeR. Bidwell, II, as First Assistant Resident on the Neurosurgical Service, beginning January 1;
Dr. Samuel C. Capps as First Assistant Resident in Pathology, beginning July 1;
Dr. Ralph Hawkins as Resident on the Neurosurgical Service for one year, beginning January 1;
Dr. Robert B. Higgins as Assistant Resident on the Urological Service, beginning July 1;
Dr. Archibald D. Leigh as Resident on the Psychiatric Service for the period January 1 through June 30;
Dr. Joseph Leighton as Second Assistant Resident in Pathology for one year, beginning January 1;
Dr. Winfield S. Morgan, III, as Second Assistant Resident in Pathology for one year, beginning July 1;
Dr. Wilhelmina Van Dyke as Assistant to the Children's Medical Service;
Dr. John T. Walke as Assistant Resident on the Children's Medical Service for the term January 1 through June 30.

The trustees also voted to appoint the following Interns for one year, beginning July 1:

Medical — Mary S. Blakely, William N. Christenson, Boy Frame, Anne F. Godley, John F. Hogan, Jr., Samuel McD. McCann, Mortimer L. Mendelsohn, Frank B. Norbury, Lloyd H. Smith, Jr., John D. Stoeckle, Mackenzie Walser, James B. Wyngaarden.

Surgical — Sigurd B. Gundersen, Jr., Daniel F. Milam, Jr., Talmage W. Nielsen, Paul S. Russell, Jr., Paul Talalay, Roger E. Wilcox.

At their meetings held on November 12, 19, and 26, the General Executive Committee voted:

To promote Dr. David Gamsu to the position of Resident on the Neurosurgical Service for the period of six months, beginning January 1.

To appoint:

Dr. Harold E. Elrick as Clinical Fellow in Medicine, to work with Dr. Fuller Albright, effective as of November 15, 1947;
Mr. Stanley Garn as Research Fellow in Medicine, to work with Dr. Paul D. White;
Dr. Menard M. Gertler as Clinical and Research Fellow in Medicine, as of October 1, 1947;
Dr. Herbert I. Harris as Graduate Assistant in Psychiatry;
Dr. Donald Harting as Graduate Assistant to the Children's Medical Service.

New addresses:—

Dr. Milton H. Clifford (*a.p.*), 501 Boylston St., Boston, Mass.
Dr. Richard W. Greene (*M* 1945), 4 Hawthorne Road, Binghamton, N. Y.
Dr. Gordon E. Jones (*ES* 1939), 320 Security Bldg., Olympia, Wash.
Dr. George R. Livermore, Jr. (*WS* 1943), 1418 — 3½ St. SE., Rochester, Minn.
Dr. Benedict F. Massell (*a. M*), House of the Good Samaritan, 25 Binney St., Boston 15, Mass.
Dr. Sedgwick Mead (*EM* 1940, *P* 1941, & *a.r.p. N* 1942), Apt. 204, 6924 Millbrook Ave., University City, Mo.
Dr. Karl Riemer (*Oph.* 1943), 403 Commonwealth Ave., Boston 15, Mass.
Dr. Francis Rouillard (*a. obst.*), 1180 Beacon St., Brookline, Mass.
Dr. Stewart P. Seigle (*EM* 1942), 1169 Main St., East Hartford, Conn.
Dr. Judson A. Smith (*obst.*), 1180 Beacon St., Brookline, Mass.
Dr. William C. Stewart (*WM* 1934), 1205 Quarrier St., Charleston, W. Va.

Brief bit:—

Dr. Charles S. Wise (*res. fel. Phys. Med.*) has been appointed Associate Professor and Director of Physical Medicine in the Department of Physical Medicine at George Washington University Hospital, Washington, D. C. His appointment becomes effective February 1.

MASSACHUSETTS EYE & EAR INFIRMARY

Dr. Edwin B. Dunphy, Chief of Eye Service, has been appointed Henry Willard Williams Clinical Professor in Ophthalmology, Harvard Medical School.

Dr. Charles H. McLaughlin completed his residency in Ophthalmology at the Infirmary on November 1. He is now practising medicine in both Everett and Boston.

Several interesting old surgical instruments have been given to the Infirmary's museum in the Hooper Room by Miss M. F. Stratton of Boston. The instruments were used by Miss Stratton's grandfather, Dr. Elijah Stratton of Northfield, Massachusetts. Dr. Stratton, who was born in 1811 and died in 1871, was a graduate of Dartmouth College in 1833.

Dr. Charles M. Leconte, a former resident in Oto-Laryngology at the Infirmary, has been appointed a specialist in Oto-Laryngology at the Hospital General in Port au Prince, Haiti. Besides his work at the hospital, Dr. Leconte is an instructor at the Medical School down there.

Dr. David G. Cogan, Director of the Howe Laboratory, spoke on December 11 at a meeting of the Buffalo Ophthalmological Club, held in that city. Dr. Cogan's subject was "Observations on the pathology of the cornea and conjunctiva, with especial reference to epibulbar tumors".

On December 1, Dr. Roland Lavoie began his residency here in Oto-Laryngology. Dr. Lavoie was graduated from the Laval Medical School in Quebec.

Dr. Constantino Rusodimos of Athens, Greece, has been at the Infirmary for the last three months observing in the Eye Clinic. Dr. Rusodimos is a graduate of the University of Athens Medical School, and served as Ophthalmologist in the Greek Army during the war. Many of his books and instruments were destroyed—first by bombing and later by Germans. After his release from the Greek Army, he was invited by the Panamanian Government to practise ophthalmology in Colon, Panama.

Dr. Rusodimos has published comprehensive monographs on retinal separations, choroidal detachments, and cysticercus of the human eye. He has treated numerous causes of trachoma and Egyptian ophthalmia, and has successfully operated on many dacryocystis cases.

Since his arrival in the United States, he has observed in eye clinics in Chicago, New York, and now at the Massachusetts Eye and Ear Infirmary.

Additional important events, concerning Massachusetts General Hospital, that occurred in the month of November during the earlier part of the nineteenth century:

Nov. 30, 1845 — The duties of the Treasurer, which had always been performed gratuitously, had become so very "onerous", it was voted to grant him a salary of $500 a year.

Nov. 21, 1847 — A committee recommended the appropriation of $250 for the formation of a Medical Library at the hospital.

In the Annual Report for 1847 mention is made of a bequest of $137,614.50 from John Redman, a Boston mechanic.

The report also says:

> With no less gratitude have the Trustees acknowledged another legacy of an especially interesting character received within this period. Miss Sarah Clough (for many years a valued and confidential domestic in the family of Joseph W. Revere, Esq., of this city) bequeathed to this institution the residue of her property, the little savings of her own personal labors. The amount which has been paid to the Treasurer, pursuant to this bequest, is $599.84. There never has been a donation, whatever its magnitude, more honorable either to the donor or to the institution.

Nov. 16, 1851 — A committee voted that a Chemist and Microscopist (one officer for both duties) be elected annually by the Trustees.

Nov. 19, 1854 — The Visiting Committee reported that it was expedient to establish a Pathological Museum at the hospital.

Nov. 22, 1857 — An application having been received from Sarah W. Salisbury, a graduate of the Female Medical College, to be admitted to the hospital for the purpose of obtaining practical knowledge in some of the branches of Medical Science, it was voted that the Secretary send Miss Salisbury a copy of the rules and regulations of the hospital and inform her that the Trustees deem any departure from the rules and regulations to be inexpedient. In 1858 Miss Salisbury renewed her application and was again refused.

It was not until 1867 that the first female students were admitted at M.G.H. Miss Sophia Blake and Miss Susan Dimmock asked permission to share the educational advantages of the hospital, and the following resolutions were adopted by the Board of Trustees:

> 1. That . . . the Rules and Regulations for the Hospital may be so interpreted as to include female as well as male students.
>
> 2. That the admission of female students be left to the discretion of the Visiting Physicians and Surgeons, individually.
>
> 3. That female students, whenever admitted, shall be placed in classes separate from male students, and shall attend the clinical practice of the female wards exclusively.

Important events, concerning Massachusetts General Hospital, that occurred in the month of December during the earlier part of the nineteenth century:

Dec. 18, 1816—The Board of Trustees decided to purchase part of Mr. Joy's land—the original site of McLean Hospital, in Somerville.

In the chapter on McLean Hospital in Dr. Washburn's *History of Massachusetts General Hospital,* we find the following, quoted from the story of McLean Hospital from 1811 to 1914 by Dr. George T. Tuttle, Medical Superintendent of McLean Hospital from 1903 to 1919, and published in the *American Journal of Psychiatry*:

> The circular letter, prepared in August 1810 by Drs. James Jackson and John C. Warren, was the first definite appeal to the public, and may be regarded as the beginning of the present Massachusetts General Hospital, of which McLean is a part. . . .

A footnote in Dr. Washburn's book refers us to the story of the Reverend John Bartlett's part in the founding of the hospital. A copy of the above letter and a picture of the Reverend Bartlett hang in our Archives Room.

> The war of 1812 delayed the plans for building the hospital, but in 1816 the Board of Trustees instituted a house-to-house canvass and received such liberal responses that within a week $93,969 was subscribed, $43,997.47 of which was contributed specifically for the asylum. There were 1047 original subscribers.
>
> Negotiations were at once opened for the purchase of a site suitable for an asylum for the insane, the need of which branch of the proposed hospital was considered to be more urgent than a general hospital. In December of 1816 the Joy, or Barrell, estate (known also as Poplar Grove and Cobble Hill) at Charlestown, was bought for $15,650.
>
> This estate contained approximately 18 1/3 acres. Here, on Cobble Hill, in 1775, General Putnam and Colonel Knox laid out a fort, which received the name of "Putnam's Impregnable Fortress". At the foot of the hill flowed a small stream, Miller's River, a tributary of the Charles, and for some years to come McLean Asylum did nearly all its transportation by water. Upon this hill, surrounded by trees and gardens, stood a colonial dwelling house built in 1792 by Joseph Barrell. Charles Bulfinch designed this mansion, which, enlarged and altered, was used as the administration house of the asylum for 77 years. . . .

Dec. 29, 1816—Charles Bulfinch, Esq., was employed to visit the hospitals of New York, Philadelphia, and Baltimore, after which he was to draw plans for M.G.H.

The meetings of the Board of Trustees began to be held at the Athenæum, having before been held at the houses of the officers.

Dec. 7, 1817—It was ordered that the hospital be "of stone, and *of that kind called granite*".

Dec. 23, 1821—A model of a machine, called a "gout-frame", invented by Mr. Joseph Trumbull for the purpose of moving helpless people to and from bed, was presented.

Dec. 14, 1828—A special meeting of the Trustees was held. The record of the meeting reads:

> The present meeting was in consequence of a fire which broke out in the eastern wing of the Hospital, just before the morning service, and which, though at first threatening the destruction of the building, was happily subdued, after causing some injury to the roof and upper apartments. . . . The damage sustained by the building is not so great as to interrupt the reception of patients as usual.

It appears that ten convalescent patients were discharged, and all those in the east wards removed to the other part of the house. The damage did not exceed six hundred dollars.

Dec. 20, 1846—A letter from Dr. William T. G. Morton, offering to the Hospital the right to use his discovery for the alleviation of pain in surgical operations was read before the Board of Trustees, and it was voted that Dr. Morton's offer be accepted. The Secretary was directed to return the thanks of the institution to Dr. Morton in behalf of the Board.

Dec. 3, 1854—A report from the Visiting Committee on a Pathological Cabinet was accepted. It recommended that $100 be appropriated for such a cabinet; that a Curator for it should be chosen annually by the Trustees; that it should be his duty to preserve morbid specimens and arrange them in the way best fitted to make them useful; and that he should make all the autopsies, excepting such as shall be made by the attending Physicians and Surgeons. . . . Upon the nomination of the same Committee, the Board elected Dr. Calvin Ellis as Curator of the Pathological Cabinet.

Important events, concerning Massachusetts General Hospital, that occurred in the month of January during the earlier part of the nineteenth century:

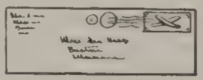
Jan. 9, 1814 — An address to the public, having been approved by the overseers of the poor, was adopted, and committees were appointed to solicit additional subscriptions for the "Asylum", which later became known as McLean Hospital — the first unit in the Massachusetts General group. The first appeal for funds had been made in 1810.

Jan. 5, 1817 — Subscriptions had increased to $93,969. Authority was given to purchase more of Mr. Joy's land in Somerville, the original site of McLean Hospital, not exceeding in all fifteen acres, or to cost over $15,000. On January 12, the Committee reported a purchase from Mr. Joy for $15,650; and the Board approved of their Committee's act, though they had somewhat exceeded their powers.

Jan. 19, 1817 — A salary of one hundred dollars was given to the Secretary of the Board.

Jan. 6, 1820 — Mr. William Hall presented his patent for sweeping chimneys, to be used in the Hospital.

Jan. 10, 1822 — Six free beds were established — three for medical, and three for surgical patients.



Even though there are rather long lapses between letters from Dr. Frank B. Cutts (*WM* 1934), he does manage to see that the thread of contact with MGH-ers, through The News, remains unbroken. (We wish we could say this about more of you.) This letter has just come from Dr. Cutts, with a new home address — 315 Olney Street, Providence 6, Rhode Island.

> I intended to answer your letter many months ago, but my performance is only now catching up with my intentions. At least I am replying in the same year.
>
> I haven't been up to Boston recently, and probably won't be able to manage a visit until early next year. Right now I'm on service at the Rhode Island Hospital, which occupies a good part of each morning. However, I shall certainly look in at your office whenever I'm at the M.G.H.
>
> I keep busy in the practice of medicine and have plenty to do at the Rhode Island Hospital, where I have received appointments this year as Visiting Physician on the Medical Service and as Director of the Heart Station. So long as I have a little time for my family and for non-medical reading I won't complain, however. I often wish I were one of those fortunate individuals who can rush through a book or an article and remember all the significant points, instead of having to plod along through whatever I read.
>
> My oldest boy, William, is now ten years old, and there are two junior editions— George, aged one, and Barbara, three weeks. There is a reasonable prospect of never a dull moment around this household from now on.

Miss Elizabeth Farrar, who a few months ago resigned from her position as Librarian in our Warren Library, has sent us this little note. Her many friends, who may not be in direct communication with her, will be glad to hear from her through The News. Miss Farrar writes:

> This is to inform you of my change of address to 1212 SW Curry Street, Portland 1, Oregon.
>
> My sister (who is an MGH graduate) and I read The News avidly. We both have many pleasant memories of the hospital.

This nice letter from Dr. James D. Schuler (*CM* 1939) reveals the fact that another alumnus is out of military service. Dr. Schuler writes, from 312 North Boyle Avenue, Los Angeles, California:

> Thank you for your letter. Of course, we all are interested in the activities and progress of each individual from the M.G.H. My latest contact was in reading the recent MGH issue regarding the Surgical Clinics of North America.
>
> Since leaving the Army, I have spent two profitable years of surgical residency at the Kern General Hospital. There, Dr. Earle J. Boehme of Boston was our guiding light and friend. Now I am in the midst of a 9-months' postgraduate course in Surgery at the College of Medical Evangelists. This is just like Medicine all over, but every subject is extremely practical this time — especially anatomy.

This, from Dr. Schuler, was in response to a letter of inquiry we sent him. We wish more of you could find the time and inclination to respond, in this way, to our letters.

Everyone knows about the kind of work Dr. James G. Miller (*EM* 1943) did in the O.S.S. during the war. We refer you to the August 1946 issue of The News for an account of the program, as given to us by Dr. Miller one day when he came in for a visit.

This letter, recently received, tells us of a new position Dr. Miller has accepted.

> It occurred to me that you might perhaps be interested in a change of position which I am going to make shortly.
>
> Since March of 1946 I have been Chief of the Clinical Psychology Section of the Neuropsychiatry Division of the Veterans Administration in Washington, D. C., in charge of a new program of training in Clinical Psychology in the VA.
>
> I am leaving this job on the first of January to go to the University of Chicago, where I shall be Professor of Psychiatry and Psychology, and Chairman of the Department of Psychology. I expect to be able, there, to return to clinical and research work, after a good many months of almost wholly administrative activities.
>
> I hope to be able to visit you soon.

This is the first word we have had directly from Dr. William M. Shedden (*ES* 1920) since he became Chief Surgeon at the Veterans Administration Hospital in Lake City, Florida. His letter indicates a very busy life, and yet— we are glad to say — he managed to find time to remember The News. The letter reads:

> I am heading up a Surgical Service in this hospital, which has from 350 to 400 beds. I have a Surgical Service running a little over 160 beds. I have assigned to me an Assistant Chief of Surgery, an ear, nose and throat specialist, a urologist, an orthopedist, and six junior surgeons. With that setup we have been able to do some fairly major surgical procedures, which vary from decortication of the lung to subtotal resections of the colon and stomach. I have had one resection of the lower end of the esophagus.
>
> I am very content with my shift from private practice to the Veterans Administration. Dr. Hawley has done a good job in locating personnel for the Veterans Hospitals, and our group here is quite satisfactory. We are told here there will be a moderately extensive remodeling program for our hospital, starting in January.
>
> We have a house now in Lake City and there is almost always a guest room available for MGH staff members who come this way. If they can let me know ahead of time, I would appreciate it; if not, we will arrange to put them up, anyway.
>
> The thing that has surprised me the most about this part of North Florida is the change of seasons. We have had everything that goes with winter except snow. We have a definite fall season, with the turning of leaves. Spring is much earlier, starting in late February.

We are very grateful for this most interesting letter from Dr. William Beecher Scoville (*r. NS* 1938). Incidentally, it includes a change of address to 56 Garden Street, Hartford, Connecticut. He says:

> I am appreciative of your written request for news, and shall be happy to bring my rather unexciting career up to date for The News.
>
> Both my war and postwar experience lack any spice or drama. I served in neurosurgical centers within the United States throughout the war, and now I am hard at work with my partner, Ben Whitcomb, practising neurosurgery in Hartford. We are extremely happy, satisfyingly busy, and are in hopes of building up a small group, concentrating on only the central nervous system. Dr. James Fox, neurologist from Yale, joins us in January, and we are on the lookout for two psychiatrists — one to stress the psychosomatic side and the other, organic disabilities, including shock therapy. Perhaps you can help us from Dr. Cobb's entourage.
>
> I am impressed with the change in neurosurgery in the past ten years. Brain tumors now are a rare although exciting luxury in the usual neurosurgical practice, with an ever increasing number of cases of lumbar, cervical ruptured discs, peripheral vascular and hypertensive sympathectomies, and lobotomies replacing the gap. Lobotomies have once again linked us closely with psychiatrists, and we welcome them back to the organic fold. The State has pioneered in a group research study of the results of lobotomies, at present surveying some 350 cases completed by five different hospital centers — including Yale University, free State hospitals, Institute of Living, and two general hospitals. By such group studies it is hoped that the operation will be refined to one of differential sections of proper association tracts.
>
> Upon the opening of the new Hartford Hospital building, which is designed by the same architect as your White Building, a group, low income, diagnostic and therapeutic clinic will be instituted. This again is based on comparable charges made by your Baker Clinic, and we are in hopes of its resulting in economy of personnel and, more especially, cost to the patient.
>
> I hold happy memories of my training with Drs. Albright, Cobb, Mixter, and White. My very best wishes to the MGH staff.

In our November number we published parts of a letter Miss Morse had written from Czechoslovakia to the Unitarian Service Committee. Now we have another letter from her, written to Dr. Faxon, in which she gives us a clear picture of the conditions under which she has set up and developed her program over there. Miss Morse writes:

> I have just finished reading the M.G.H. Annual Report and, as usual, have found it one of the most interesting things I read each year. It was good for me to see that others have their troubles with the shortage of nurses. That is the key problem for us here. When we arrived there was only one doctor, no social workers, no O.T. assistants, two blind P.T. assistants, and no trained nurses. Actually, there were only two good Physical Education instructors here in the line of personnel. This was the start of Physical Medicine in Czechoslovakia.
>
> Perhaps I have been a bit hasty because they still call it rehabilitation, but we have great hopes, and so much has come our way in the usual slow motion of government agencies that we are moderately pleased. That adjective represents my mood of the moment. It has run from good to bad, as you can guess, and our present lack of nurses and lack of the right kind of patients make my mood about middling now.
>
> We are getting quite spoiled, as we are treated like hospital administrators one minute and like doctors the next. It is hard to keep one's place, especially when one sees certain things not being done that should be done. However, in spite of the serious labor shortages here, we have come out with a fairly high standard of personnel—which has surprised us a bit, in view of the greeting we had that this could not be done. We have an assistant M.D., a social worker, a graduate nurse in each of our departments which we hope to use to carry on the work, and in my department an ex-priest and a mechanic. I am all for this last person!
>
> The equipment sent over with us has given us a good start. Our rooms are not adjacent, as at M.G.H., but the O.T. space is quite wonderful. I have been trying to start the process of buying for the department over here and have run into something of what a Czech must go through to buy almost anything. I have been to ten offices alone, just on the subject of textile threads, getting this and that permission. Finally, when I got down to the level of the factory, I was told I could not have samples, as with the permission came the material. They didn't have any material to show me.

No. 7 in a series of Staff photographs
Dr. Kurt H. Thoma — Oral Surgeon and Chief of Dental Service

There seems to be quite a bit of interest among doctors. One clinic (orthopedic) is sending us one doctor each month in rotation. We have had many visitors, and when they speak English we learn something of their plans to develop Physical Medicine in general hospitals. We sometimes wish we were nearer these institutions, as out here in the country we are fairly inaccessible to the teaching centers. Consultation consists of sending the patient in to the doctor, rather than his coming out here—a system that is not always too good for the patient. There is talk of reversing the plan and we hope it will go through. Our cases have been war injured amputees with rather poor prostheses. More recently, we have had a few "sub-acute" patients. The excitement for us all when the first American upper extremity prosthesis arrived was grand. I assure you the patient has me wiggling my shoulders trying to open doors with him. They all think the equipment will do more than it will, so we have a bit of a problem there, too.

There are many things we will not be able to do in our stay here, and one of the major ones at present seems to be the training. We are hoping some arrangements may be made to carry this on later, so that our efforts will last. I sometimes think I am being trained far more than I could ever train a Czech. There are so many things to be studied in developing a new profession in a country other than one's own.

I am not living the life of the country, in that by living in an institution we have more rations than in a private home. We have more food than those in the city and try to take eggs in whenever we go, as they are on one egg per person a week. Cheese and meat rations have been cut recently and the potato crop, the main diet here, was only 40% of what it should have been. I have heard from a friend in Jugoslavia that it is even worse there. They haven't had meat for six months. Textiles are very scarce there, and a spool of thread costs $8.00. Here in Czecho, I wore a purple suit in Prague and was definitely stared at! It was much too gay and marked me as an American rather embarrassingly. They are well dressed, but the gay colors are for export only.

The Czechs save everything. They don't even throw away nails. When we uncrated our equipment, every nail was saved, as was the wood.

I am thoroughly over my fears of pronouncing the vowel-less words here. The people at this hospital are quite wonderful in the way they talk slowly for our benefit; and it beats all how one word will do, most of the time. There has always been a French speaking patient here, which has been lucky for me, except that I am just weak enough to come out with a good mélange of Czech, French, and English many a time.

The doctors we have met who knew Dr. White and Dr. Aub have been wonderful to us. And I wish I had time to tell about the fine cooperation I have had from nursing groups here. I have had much help from one or two social workers, too.

I often think of everyone at M.G.H., especially those who meet each Tuesday at Administrative Conference and those in Physical Medicine. I read THE NEWS with as great interest as everyone else, and feel in close touch with you all as a result.

My greetings to everyone.

⁂

WANTED — A WHITE HORSE

No, we're not trying to be funny. We're downright serious. We *are* searching for a white horse. Here's the story:

You may remember our telling you that Mr. James Wall, who has been coming to M.G.H. for treatment for several years, is building, as a gift to the Hospital, a model of our first ambulance. It is being done to scale, and will be an exact replica of the original ambulance —correct in every detail, both inside and out. The model, which Mr. Wall has already spent several months in building, will be a very valuable addition to our Archives collection. When finished, it will be enclosed within a glass case, and will be on permanent display at the Hospital.

But we have reached the problem of the horse — and a veritable problem it is! After two shopping trips for such an animal, we have become discouraged of the prospects of ever finding what we need. Hence this appeal to you.

Mr. Wall needs a horse 8 inches high, 8 inches long (body, not including neck and head), and with shoulders about 2½ inches wide. We would prefer a horse covered with hide — that is, not just a wooden animal, destitute of skin or coat. However, we may find, finally, that an uncoated horse will be most acceptable. Also, we may find that a "horse of another color", provided he is the right size, may also be very acceptable, for a good coat of white paint could do much to either wood or hide to meet the color stipulation. We prefer a horse not mounted on a platform, although it might be possible to remove the platform, provided the hoofs would not be damaged by the operation.

Now — has anyone such an animal, perhaps packed away up in the attic or elsewhere, among the treasured toys of other days? And would such a person be willing to relinquish the animal and allow him to serve in this very worth while cause? If so, your Archivist would be most grateful if you would get in touch with her. MGH-ers have never yet failed to respond to an appeal from one of the "family", provided the request is a reasonable one and one that it is possible to fulfill. We trust that even in such a matter as a white horse, someone will produce him. And the East Medical Pup, we are sure, will be delighted to have another critter-of-kind with him for company in the Archives Room — especially during the long, dark, silent nights.

THE NEWS

No. 65 Boston, Mass. February 1948

THE EYE CLINIC

The forerunner of the present Eye Clinic began in 1824 when Dr. Edward Reynolds and Dr. John Jeffries founded a free clinic for the treatment of the eye in a small room in the Scollay Building in what is now Scollay Square.

In 1827 it was formally incorporated as the Massachusetts Charitable Eye and Ear Infirmary (changed to Massachusetts Eye and Ear Infirmary in 1924). It is thus the second oldest eye clinic in the country, the New York Eye and Ear Infirmary having been founded in 1820.

After several changes of location, a permanent home was built in 1899 at the corner of Charles and Fruit Streets. The present Eye Clinic of the Out-Patient Department was opened in 1928 when the Massachusetts Eye and Ear Infirmary merged its Out-Patient Department with that of the Massachusetts General Hospital. Prior to this date the Massachusetts General Hospital had no eye clinic, patients being referred to the neighbor institution. With the construction of the new O.P.D. building on Fruit Street on land owned by the two institutions, plans were made to house the Infirmary's out-patient facilities, thereby releasing space in the Infirmary building for other purposes. This combined Out-Patient Department, operating under one admitting office, resulted in more efficient medical service to out-patients and more effective consultation service between the staffs of the two hospitals. Examples of this are seen in the monthly conference between the Eye and the Nerve Clinics, and the policy of referring all suspected cases of ocular malignancy to the Tumor Clinic for opinion and advice.

The first Chief of the combined Eye Clinic was Dr. George S. Derby, who served until his death in 1932. Dr. J. Herbert Waite succeded him, and resigned in 1940. Since then the job has been filled by the writer, except during a leave of absence from 1943 to 1945 when Dr. Paul A. Chandler was in charge.

The Eye Clinic is organized into six services, one for each working day in the week. Each service has its own Chief, and visiting staff of seven or eight ophthalmologists, who serve on that particular day throughout the year. Patients requiring hospitalization are admitted to the Eye and Ear Infirmary.

Subdivisions of the Eye Clinic are: the Refraction Department under Dr. Albert E. Sloane, the Perimetry Department under Dr. Garrett L. Sullivan, the Orthoptic Department under Miss Kathleen Foreman, and the Aniseikonia Department under Dr. Mahlon T. Easton.

The Eye Clinic can claim to be the busiest of all the out-patient clinics as far as patient traffic is concerned. In 1947 its out-patient visits totaled 44,553, or approximately 20% of the whole O.P.D. Refractions were done on 9,593 patients, 758 minor operations were performed in the O.P.D. operating room, and 1,440 visual field examinations were made.

The Orthoptic Department has developed into an extremely active division of the Eye Clinic. Its function is to measure the muscle deviations in disturbances of ocular motility, and to give orthoptic exercises in certain cases. All strabismus patients must have an "orthoptic work-up" in this department before any surgery is performed. In 1947 over 2,800 visits were made, and over 200 patients were given exercises.

The large amount of clinical material makes the Eye Clinic a fertile field for clinical instruction to residents and medical students. Both Harvard and Tufts Medical Schools have rooms assigned for the instruction of their third year men. The Harvard students spend all mornings and two afternoons for a period of two weeks in the study of ophthalmological disorders, and their relation to general medicine. In addition to this, the Harvard postgraduate students in ophthalmology come to the Eye Clinic during part of their course.

Student nurses from the M.G.H., and other institutions affiliated with the Massachusetts Eye and Ear Infirmary, pass through the Eye Clinic for part of their training.

To the late Dr. George Derby goes the credit for realizing the importance of medical social service to ophthalmology. He was probably the first ophthalmologist in the country to set up a well organized follow-up system for diseases of the eye. This has proved extremely valuable in cases of glaucoma, where it is most necessary that the patients come to the clinic regularly for check-up and use their drops faithfully in the home. There are now over 1,500 patients on the glaucoma follow-up list. Four medical social workers are assigned to the Eye Clinic under the direction of Mrs. Eunice Wilson, Director of the Social Service Department of the Infirmary.

Aside from its service to patients suffering from ocular disease and its teaching responsibilities, the Eye Clinic has proved itself an important center for clinical investigation. It was here that Dr. Frederick H. Verhoeff, former Director of the Howe Laboratory, made many of his observations that have contributed so much to ophthalmology. His successor, Dr. David G. Cogan, has utilized the wealth of clinic material for many of his interesting and worth-while contributions. The well-known work of Dr. Trygve Gundersen on herpes simplex and herpes zoster began here, as did the original observations of Dr. William P. Beetham on surgical occlusion of the tear ducts in the treatment of keratitis sicca.

The great need of the Eye Clinic at the moment is extra space and extra nursing service, since the number of out-patient visits has been increasing over the past two years, and will presumably show a further rise in the future.

Edwin B. Dunphy, M.D.,
Chief of Ophthalmology

◆ ◆ ◆

On January 11, Dr. Ferdinand Haase, Jr. replaced Dr. Charles L. Clay as Assistant Director in charge of Baker Memorial. Dr. Clay replaced Dr. Joseph S. Lichty as Assistant Director in the General Hospital Office. Dr. Lichty has replaced Dr. Haase and is in charge of the Out-Patient Department.

◆ ◆ ◆

A meeting of the Massachusetts General Hospital Research Council was held on January 20. Dr. Fiorindo A. Simeone and Miss H. Vavoudes spoke on "The effect of lumbodorsal sympathectomy upon the response to insulin in man". Drs. Chester M. Jones and Perry J. Culver spoke on "Factors affecting the Vitamin A absorption test, and their interpretation".

◆ ◆ ◆

HISTORY OF THE FRACTURE CLINIC

The Fracture Clinic of the Massachusetts General Hospital is 30 years old. The idea of such a Clinic for the segregation and treatment of fractures was proposed by Dr. Charles L. Scudder in 1917. Dr. Scudder was the first Chief of the Clinic, and assigned with him were Drs. Henry C. Marble, George A. Leland, Torr W. Harmer, and Richard H. Miller from the East and West Surgical Services.

After the first World War, great impetus was given to the treatment of fractures throughout the country, and in 1919 the Fracture Clinic of the Massachusetts General Hospital really began to function as a separate unit of the Surgical Services. Postgradute teaching of fracture treatments was begun by Dr. Scudder, who was assisted by the above named general surgeons and Dr. Robert B. Osgood, Dr. Zabdiel B. Adams, and Dr. Philip D. Wilson, who had been assigned as consultants from the Orthopedic Service. A course was given one day a week for a period of six weeks in the autumn of 1919. At this time it became the custom to rotate fracture admission between East and West Surgical and Orthopedic Services, and all fractures were admitted to Ward A (for males) and Ward E (for females). The very ill patients were cared for on Ward F.

In 1920, Dr. Scudder retired from active hospital service and was succeeded by Dr. Daniel F. Jones as Chief and Dr. Osgood as Associate Chief. When Dr. Osgood became Buckminster Brown Professor of Orthopedic Surgery at Harvard, he was made Chief of the Children's Hospital Orthopedic Service and was followed at Massachusetts General by Dr. Nathaniel Allison, who came from Washington University in St. Louis to head the Orthopedic Department.

During the period of service of Dr. Jones and Dr. Allison, the Fracture Clinic reached its full stride in providing the best care for patients and as a teaching service. Although the end result studies of fractures were begun largely at the instigation of Dr. Osgood, the fruits of these studies began to bring results not until the late 1920's, so that in 1928 sufficient knowledge of the treatment of fractures had accumulated to allow us to give the first Postgraduate Course in the Management of Fractures. This Course, given under the auspices of the Harvard Medical School, has become famous throughout the country, and surgeons from every state and many foreign countries have availed themselves of this instruction, which has been given 12 times and has been attended by a total of 1,072 men from 48 states and 9 foreign countries.

When Dr. Allison left the Massachusetts General Hospital to become Professor of Orthopedic Surgery at the University of Chicago, Dr. Wilson was made Associate Chief and served with Dr. Jones until the latter retired in 1929. Dr. Marble succeeded Dr. Jones as Chief, and in 1934 Dr. George W. Van Gorder became Associate Chief, to succeed Dr. Wilson who became Chief of the Ruptured and Crippled Hospital in New York City; Dr. Van Gorder and Dr. Marble served until 1940, when they were succeeded by Dr. Arthur W. Allen as Chief and Dr. Marius N. Smith-Petersen as Associate Chief. These men, with a staff markedly reduced in size, carried on during the war years and until January of 1947, when the present Chief was appointed.

In 1943, Dr. Allen, Dr. Smith-Petersen, and their staff contributed greatly to the teaching of Army officers by giving 4 courses of 6 weeks each in the treatment of fractures. Each course was attended by 35 or 40 officers.

The Fracture Clinic has been unique in several ways, for, in addition to the End Result Studies and Postgraduate Teaching, the members of the Clinic in 1937 published a textbook, *The management of fractures and dislocations,* under the editorship of Dr. Philip D. Wilson—each member of the Clinic contributing one or more chapters.

The Clinic has borne its own expenses since 1928, deriving its funds from postgraduate teaching, sufficient to cover the cost of lantern slides and other material necessary for teaching, and to pay the salary of the full-time secretary, Miss M. E. Maloney, without whose loyal and efficient service the Clinic could not have carried on through these many years.

Whereas, before the last war the personnel of the Visiting Staff was made up of 16 general surgeons and 11 orthopedic surgeons, it is now composed of 13 orthopedic surgeons, 5 general surgeons, the Chief of the Plastic Clinic, and the Chief of the Dental Clinic—all regularly assigned; but because of the broadened scope of the Postgraduate Course, much help has been enlisted from other members of the hospital Services, so that the treatment of the effects of trauma can be presented in the most complete manner. The Course now includes predominately the treatment of fractures, but also deals with soft tissue injuries, surgical shock, bone metabolism, burns, hand surgery, vascular injuries, chest injuries, trauma to the central nervous system, bone tumors, and the use and misuse of X-rays in the management of fractures, physiotherapy, and rehabilitation.

The Out-Patient Fracture Clinic meets at 10 on Wednesday and Friday mornings; the yearly End Result Clinic at 1 P.M. Wednesdays; and the high spot of the week is the Friday morning visit, from 8 to 10, when all fractures treated during the previous week are reviewed, as are the yearly End Results—all of which provide the usual lively discussion and argument which have been so characteristic of the Fracture Clinic for so many years.

Edwin F. Cave, M.D.,
Chief, Fracture Clinic

DORIS KNIGHTS

Lieutenant Colonel Doris Knights, Chief Nurse of the 6th General Hospital, died suddenly at her home in Bedford, Massachusetts, on January second. Miss Knights, a graduate of the School of Nursing in 1931, had served for brief periods as night supervisor and executive assistant in the General Hospital, relief supervisor in the Phillips House, and executive assistant in the Baker Memorial.

Interested primarily in the care of the patient, Miss Knights's experience had been for the most part in private nursing. That this was done largely at night, because patients needed so much care at that time, bespeaks the selflessness evident in all her personal relationships. Her hobby was people. It would be necessary to know the wide and varied range of her friends to appreciate the many facets to her character. Her interests were multiple and her zest for living was contagious.

The judgment, the high ideals of workmanship, the managerial ability shown in her work, and her deep desire to be of service to the Country made her stand out among the alumnae as one capable of carrying with honor the great responsibility of Chief Nurse of the 6th General Hospital.

That she assumed her duties as First Lieutenant and was promoted to Lieutenant Colonel before the unit was deactivated speaks for her efficiency. That she has left an indelible stamp upon the nurses who worked with her speaks for her character.

The tensions, the boredom, the weary days of Army life, she understood. The joys, the disappointments of the work, she shared. And because it was her way of life, her honors she divided with all.

* * *

Dr. Arthur C. Guyton (*WS* 1943) of Oxford, Mississippi, was seen in September 1947, when he visited the Warm Springs Foundation in Warm Springs, Georgia. He became ill with poliomyelitis while serving as an Assistant Resident in the spring of 1946 and, after a period of care in the Massachusetts General Hospital, was transferred to Warm Springs. There he made an excellent recovery and returned to his home.

While in Warm Springs, he began to investigate the possibility of improving the wheel chair, and at home devised a means of propelling the chair by a self-contained motor controlled by an electronic device attached to the arm. The apparatus was built at his home and he demonstrated its efficiency before a large clinic at Warm Springs. In addition, Guyton has been working on other mechanical improvements to aid the poliomyelitis patient. His work on the physiology of botulinus toxin, done while he was in the Navy, was published in the *Archives of Neurology and Psychiatry* for May 1947.

Guyton is now able to walk with the aid of leg braces and crutches, in addition to getting around in his wheel chair. The photograph of him, on the last page of this issue, was taken September 17, 1947, at Warm Springs. Watching the demonstration are Dr. William T. Green who has charge of the Poliomyelitis Unit at the Children's Hospital in Boston, Dr. Henry R. Viets, and Dr. A. B. Baker, Professor of Neuropsychiatry at the University of Minnesota. The picture was furnished through the courtesy of the National Foundation for Infantile Paralysis.

H. R. V.

This letter from Dr. Guyton supplements the above article.

It was a pleasure to see Drs. Viets, Barr, Green, and Ober at the Warm Springs Symposium on Polio in September. My purpose in attending the meeting was to demonstrate the electrically guided wheel chair and a walking brace, both of which were dreamed up during my many months of inactivity.

I get around fairly well with a brace on the right leg and by using crutches. The left upper arm is still extremely weak, but the left hand and the right arm are very useful. With a small amount of manual aid I find I can do almost anything I had done previous to polio.

For the past few months I have been extremely busy with two part-time jobs as Associate Professor of Pharmacology at the University of Mississippi Medical School and as Acting Associate Professor of Physiology at the University of Tennessee Medical School.

I have been extremely grateful to the staff of the Massachusetts General for all the kindness accorded me since I contracted polio. An example of this kindness was a long trip that Dr. Marble made, simply to pay me a visit of a few hours when I was at Warm Springs.

Though I am quite happy in my work here in the South I am also looking forward to some time in the future when I can return to the General for a visit.

OFFICIAL NOTICES

Projects involving the testing of certain drugs by members of the Staff of the Massachusetts General Hospital should be first submitted to the General Executive Committee which will then refer them to the Pharmacy Committee or the General Research Committee, according to the type of project.

The appropriate committee will then examine the situation and report back to the General Executive Committee for final action.

The Pharmacy Committee recommends that in the future when a clinical trial of a drug is undertaken in this hospital it should be done in a manner which will accurately describe absorption, distribution, degradation, and excretion of the drug, together with the blood or tissue levels that are associated with the therapeutic or toxic effects. In the past, the manner of clinical testing was concerned only with the effectiveness of drugs, without establishing criteria which would define their effectiveness with a desirable degree of accuracy.

At the meeting of the General Executive Committee, held December 24, 1947, it was voted that except in neurosurgery, nupercaine shall not be used as an anesthetic.

The use of nupercaine in ointments shall be the responsibility of the physician prescribing it, after full consideration of the toxic effects of this drug has been given.

N. W. Faxon, M.D.,
Director

The Board of Trustees, at their meetings on December 12 and 26, voted:

To accept with regret the resignation of Dr. Elbert S. Godfrey from the position of Assistant Dental Surgeon;

To accept with regret the resignation of Dr. James A. Halsted from the position of Assistant Physician;

To transfer Dr. Janet W. McArthur from the position of Assistant in Medicine to that of Research Fellow and Clinical Assistant to the Children's Medical Service.

To appoint:

Dr. Chester C. d'Autremont as Assistant Resident on the Neurological Service for a period of six months, to begin January 1;

Dr. Werner Hügin as Assistant Resident in Anesthesia, beginning December 1, 1947;

Dr. James A. Martin as Assistant Resident in Radiology, to begin July 1;

Dr. John C. Nemiah as Assistant Resident in Psychiatry, to begin July 1;

Dr. William L. Palazzo as Radiologist, beginning January 1;

Dr. Carl M. Pearson as First Assistant Resident in Pathology for the period January 1 to July 1;

Dr. Gardner C. Quarton as Assistant Resident in Psychiatry for one year, beginning July 1.

At their meetings during December, the General Executive Committee voted:

To accept with regret the resignation of Dr. Sedgwick Mead from the position of Research Fellow in Physical Medicine;

To promote Dr. Diane Croll to the position of Resident in Pathology for the period January 1 to July 1;

To promote Dr. James Skinner to the position of Resident on the Psychiatric Service, as of January 1.

To appoint:

Dr. Alejandro P. Arellano as Clinical Fellow in Neurology, assigned to the Electroencephalographic Laboratory for a period of six months;

Dr. T. Berry Brazelton as Temporary Graduate Assistant to the Children's Medical Service, for work with the Harvard Veterans Clinic, as of November 1, 1947;

Dr. Herman Fredenhagen of Basle, Switzerland, as Clinical and Research Fellow in Orthopedic Surgery for six weeks, beginning January 1;

Dr. Lytt I. Gardner as Clinical Fellow to the Children's Medical Service, effective as of January 1;

Dr. Charles Martin as Clinical Fellow in Psychiatry, assigned to the Electroencephalographic Laboratory for a period of six months;

Dr. Maurice Pierre as Clinical Fellow in Surgery;

Dr. Andrés A. Santas as Clinical Fellow in Surgery for a period of six months;

Dr. Laszlo Tauber as Clinical and Research Fellow in Neurosurgery for three months, beginning January 1;

Dr. LeMoyne White as Clinical and Research Fellow in Psychiatry, beginning January 1.

Miss Eleanora Keene, instructor in Anatomy and Physiology in the School of Nursing, has recently resigned to accept an instructorship at Bates College. An after-dinner coffee in her honor was given at Walcott House on January 12.

During the first week in January, members of the nursing service handled a monumental task in accomplishing the transfer of all the patients now occupying the new Burnham-Vincent Building.

Mrs. Helen Cunningham Littler has resigned as supervisor and instructor in Pediatrics. Her place will be filled by Miss Helen Cabot Latham who, since her graduation in 1931 from the MGH School of Nursing, has obtained a great deal of experience in various phases of child care. She comes to us from a position as Probation Officer for the Juvenile Court, Allegheny County, Pennsylvania.

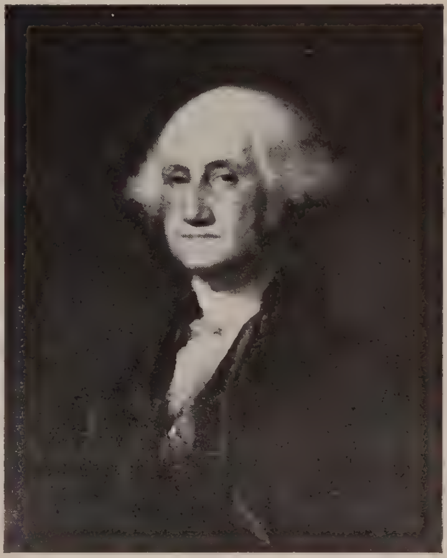
The former Miss Mary Conroy (since her marriage on January 17, Mrs. Philip Cargill) is the new head nurse on White 12. For the first semester of the school year she served as Graduate Assistant in the Nursing Arts Department.

The large class of students who entered the School of Nursing last September have completed the preclinical period and are now assigned to the wards for full-time service.

On Tuesday, February 3, the School welcomed another class, almost twice as large as that of a year ago. The traditional tea for new students and their parents was held in Walcott House on the first afternoon. In the evening, the very informal party, with which the faculty entertained the newcomers last September, was repeated with great success.

FEBRUARY STORY

Some time ago, a grandson of W. T. G. Morton died at Vevey, Switzerland. According to good information, he owned several of his grandfather's things—in particular, so it was said, a secretary-desk, a bust, and a portrait. Here, it seemed likely, was the original painting from which the little engraving in the Ether Dome, of Morton at the age of 24, had been made. (We have tried for years to find that original portrait.) Communication with the executor of the grandson's estate was quickly established; the desk and the bust could not be found, but there was a fine oil portrait of Morton. The executor thought this could be purchased; but the situation was complicated. The grandson's possessions had been left to an Austrian Baroness who now lived in Venice. Not at all daunted by these obstacles, all sorts of communications flew back and forth across the Atlantic, as well as from Vevey to Venice. Finally, it was established that the Baroness was not unwilling to consider American dollars in exchange for the portrait. The deal was almost set. As a last precaution, we suggested that it might be well if the executor of the grandson's estate would send us a small photograph of the portrait he was about to exchange for our American dollars. He quickly and graciously sent us a copy of his portrait of W. T. G. Morton. Here it is.



H.K.B.

During the process of compiling an author and subject index for our Archives collection, we often come upon items that are both interesting and amusing. One such is this: In 1836 Horace Dupee, Jr. received the sum of $50 for one year's salary as House Surgeon. A letter from Gamaliel Bradford, Superintendent of the hospital at that time, certifies that Dr. Dupee had satisfactorily performed his duties for the year and was therefore entitled to receive the above salary. Bear in mind that during the early years of the hospital there were only two House Officers — the Apothecary (whose title was changed to House Physician in 1828) and a House Surgeon; and, as you can imagine, their duties were both heavy and varied.

MASSACHUSETTS EYE & EAR INFIRMARY

The externship for the doctors on the Eye Staff has been abolished. Residents now spend 27 months in the House, instead of the usual 24. Three months of this period will be spent working in the Eye Pathology Laboratory, under the direction of Dr. Parker Heath. Another change in the Eye Service is the reduction in the number of Residents from eleven to nine.

Dr. LeRoy A. Schall and Dr. Philip E. Meltzer were among the guest speakers for the Research Study Club in Los Angeles. Nine lectures were given, from January 23 through 31.

Dr. Edwin B. Dunphy and Dr. Trygve Gundersen have been attending the bimonthly meetings of the Committee of Ophthalmology, the National Research Council, which are held in Washington. Both Dr. Dunphy and Dr. Gundersen are members of this Committee.

Dr. Merrill J. King has been appointed Surgeon in Ophthalmology, replacing Dr. Fred S. Thorne. Dr. Carl C. Johnson and Dr. A. William Collinson have been named Assistant Surgeons in Ophthalmology.

Dr. Gordon H. Bobbett has completed his residency in Oto-Laryngology and is now associated with Dr. Mobley in Florence, South Carolina.

Word has been received from Dr. Jalal Handi that he is now back in Baghdad. He writes that he is most appreciative of having had the opportunity to study at the Infirmary, and he is looking forward to his return here within a year.

Dr. Ernst Barany, from the University of Eppsola in Sweden, has come to spend six months in the Howe Laboratory. He plans to study the physiology of intraocular fluid formation—the particular rate of flow of aqueous fluid from the eye.

A course on the anatomy, physiology, and common diseases of the eye is being given to the medical social work students by the Staff of the Infirmary. These students come from Boston College and Boston University Schools of Social Work. Drs. Francis J. West, Harry E. Braconier, and Abraham Pollen will give the lectures during the months of January, February, and March.

Mrs. Winifred Hathaway, Associate Director of the National Society for the Prevention of Blindness, spoke to the scholarship students from this Society on January 15. Her topic was "The anatomy of the eye".

Thirty postgraduate students from Harvard are at the Infirmary receiving clinical instruction. They will remain here during January and February.

The Women's Service at McLean Hospital has been deepening its insight into the problems which confront women, by going through the experience of having a baby. So far as is known, this is the first delivery at McLean Hospital and it has been a truly enlightening one to nurses and doctors. It creates very unexpected problems—such as who washes the diapers; when and how are babies fed; what sort of records does one keep on a newborn baby in a mental hospital; what is its legal status; how long must it stay with us or how soon must we give it up; how to protect it from over-curious patients and visitors, to say nothing of doctors and nurses; what if it cries; to bathe it or not to bathe it. The attempt to anticipate the equipment needed to take care of a baby was a failure, even though imaginative. After doing a major job of scrounging about the hospital community and collecting equipment from personnel who had had babies, it was realized that we had a fairly complete and entirely unused set of equipment in the nurses' training school. So, this was finally requisitioned and is serving very well. Whereas, it was originally planned that the baby should leave this hospital at the earliest possible moment, now everything is against it. The nurses, the patient, the doctors, and the family all want it to stay here. How long can this go on?

The most surprising development was the emergence of the fact that several of the staff here behaved suspiciously like expectant fathers. It is fortunate that there is more than one of these. In anticipation of this event, we were disheartened at the thought of trying to find help to take care of the extra work. This problem has resolved itself quite differently than expected. The problem now is to find anyone who is willing to do any other work. One doctor remarks that he has never before seen so many women having one baby.

Foot by foot, layer by layer, we are becoming encapsulated by snow over all of our grounds, and this is piled into drifts and pushed by the snow plow to heights of seven and eight feet at all strategic points about the grounds. One maid said when she saw it begin to snow again, "Where are they going to put it!" This has been a very real problem, since the snow plows were not able to push it above a height of two feet, and in order to get it out of the road it must be piled seven feet high. So, a bulldozer has been employed to push the snow back from the road to make room for more snow.

This ill wind has, of course, blown good to some of us. We are able to have more sleigh rides with the cutter and to wear the rust off the runners of our pung. These rides have been enjoyed by many patients.

The administration seems to believe that cars can evaporate at the time of such snowstorms, yet it insists all employees come to work. This has given rise to metaphysical arguments as to whether two objects can occupy the same space at the same time—snow and car—particularly in reference to snow plow. This has especially taxed the philosophical powers of one of our doctors who is accustomed to sunnier climes.

J. Butler Tompkins, M.D.,
Chief of Women's Service

Recent gifts to the Archives Department: —

From Harvard University Archives—2 metal plates used for engraving students' tickets for admission to classes at M.G.H. One is a copy of the Bowers engraving of the Bulfinch Building, and the other is for the form to be filled in with the students' names. These tickets were used as early as 1821.

From Dr. Washburn—3 notebooks containing Dr. Washburn's personal diary, kept while he was overseas in World War I.

CLASS OF 1888

In a recent issue, we said we were going to try to get NEWS material from as many of our older alumni as possible —moving along class by class.

In response to our request, a delightful letter has arrived from Dr. Arthur K. Stone (*WS* 1888)—our oldest living alumnus. In it are accounts of incidents he remembers concerning M.G.H. in its earlier days. These "jottings" from Dr. Stone make very interesting reading. Here they are:

> During my internship the only lights in the open wards were the pewter whale oil lamps. The wards were dark from three to four o'clock during the winter months.
>
> My junior, Dr. Augustus Thorndike (*WS* 1889), suffered a severe burn on his foot while making an emergency dressing at night. The patient was hurt and he moved, and the lamp, with open flame, overturned upon a roll of cotton which blazed up. Dr. Thorndike knocked it to the floor and stamped out the burning cotton, with disastrous results to his foot.
>
> Externs were sent to Waverley for three months of their term—going each afternoon and returning in the A.M. I found myself very popular during the last month of my period out there. You see, a very pretty nurse had been banished to Waverley by Miss Maxwell just before her graduation, and the men from the house would invite themselves to come to dinner with me to keep me company. "It must be pretty slow out there," they'd say!

Ether was given with an open sea sponge or a folded towel. On my first Saturday as Extern I etherized thirteen unfortunates. Operating sponges were kept in seven crocks, each labeled with the day of the week for which it was to be used. Thus, each sponge soaked for six days in a carbolic acid solution, was then wrung out at the sink, and used on the patient. When they were returned to the sink, Jim Mains washed them out and they were reused that day, if necessary. At the end of the day's operations, they were washed by the Extern and returned to the crock. Dr. John W. Elliott, Visiting Surgeon from 1894 to 1907, introduced folded gauze sponges for intra-abdominal operations only.

Having had a course in bacteriology, I was germ minded and had an apron of heavy butcher's linen made to cover the whole front of my person—even fitting over the shoulders. On my first day as Intern, I appeared in the amphitheatre wearing the white apron and was greeted with much laughter by everyone, including the Surgeon. However, before my term was over, we were all measured for white coats. These we wore until they *had to be changed.* At that time, Dr. Charles B. Porter, Visiting Surgeon, wore a black Prince Albert coat, buttoned to the top, and a towel filling in the space above the lapels. The front of the coat was stiff by the end of his service because of the blood that had spirted upon it. Dr. Warren had a new blue coat made that year which buttoned up to the neck, completely covering him up.

Dr. Porter was not sure of his ability to tie a "Tate's Staffordshire knot", and when it was necessary to use one he would have Dr. Sam Mixter called from the O.P.D. He would come in, wash his hands at the sink, tie the knot, and go back to the men's room. I learned to tie the knot and we were able to dispense with OPD assistance.

Dr. Maurice H. Richardson did his and the first stomach operation in the hospital during my term of service. The ban on abdominal operations had been lifted after the resignation of Henry J. Bigelow in 1886.

The house staff had their meals in the dining room. Breakfast and lunch were served as nearly on time as we were able to get there, which was pretty irregular. Maggy scolded us, but saw to it that her boys were well fed. Dinner was quite formal. Miss Sturtevant sat at the head of the table, with Miss Maxwell and Miss Klein on either side, and endeavored to maintain formality, often without success. [In identifying Miss Sturtevant, we found on page 443 of Dr. Washburn's *History of Massachusetts General Hospital* the following: "In the early days of the Hospital the wife of the Superintendent acted as Matron. Later the Matron was usually a woman selected from among the Head Nurses. Miss Georgia L. Sturtevant, who resigned this position in 1894, was in charge of the nursing from 1868."] Everyone was expected not to talk shop. This was difficult to maintain, as the hospital was our whole life. We were all experts at shooting our small ivory napkin rings, making a cheerful sound on the drinking glass across the table or shooting halfway across and rebounding to the sender. The food was very good and there was plenty of it.

On occasions I used to persuade the night superintendent to take charge of Ward B, and would take a nurse from there, and pull her through the window to the kitchen, where she would make griddlecakes for me and the other house officers. Some years later I met her as the wife of a well-known Boston business man.

Miss Maxwell could not understand why the house officers always asked for the services of a certain nurse when they needed a "Special". She was very stupid in all class work (hardly allowed to graduate), was very stout, and most unattractive. But she could handle patients superbly. Later, she was much sought after.

Soon after Dr. Howard became Superintendent, Maggy resigned and returned to Ireland. She said she could not understand "them Tewksbury ways". [Dr. Howard, after graduating from Harvard Medical School, was Assistant Physician at the State Infirmary at Tewksbury for a short time and later became its First Assistant Physician and Superintendent.] She did not consider her boys were well treated and well fed under the new rules.

Ned Cushing was my contemporary on the East Side. Ned was nervous, and snored and groaned in his sleep. We seniors occupied the same rooms as the juniors, and I would gather on a chair by my bed all the shoes that had been put out for cleaning. In the morning they would all be on Ned's bed. Ned and I always got on well together. [!] At his instigation a Children's Hospital was built in Cleveland, Ohio. After his death Mrs. Cushing sent me a picture of Ned leaning over a crib in which were a black baby and a white one. You might like the picture when I have no further use for it.

Photographs of unusual cases were first taken during my term of service.

I never saw a violent case of D.T.'s, which used to be common before my time. There were a few cases of mild hallucinations, however.

Near the Charles Street fence (then open ground) grew mushrooms. If we could get out there ahead of Drs. Richardson and Mixter, we would gather them and have a party. A bottle of rum from the Somerset Club provided the drinkables.

An editorial that appeared in the October issue of the *Harvard Medical Alumni Bulletin,* although written in a disheartened vein, served to alleviate a similar distress we have been suffering since most of our alumni were released from military service. Our reaction to the article bears proof that one's own headache seems less severe when one knows that another is suffering the same kind of migraine. The knowledge that it is not a unique pain detracts from its severity, in a measure. Here is what this is all about.

While the war was on, letters from our men in the various services, all over the world, poured in at the office of THE NEWS. True enough, what you could write then made much more exciting reading, in a way, than what you might write today. We say "in a way" with emphasis, because while everybody, in those days, was almost desperately anxious to know about the welfare and safety of everybody else, and was very eager to read about the types of work being done that only a catastrophe like war could make possible and necessary, yet peacetime conditions are the normal settings for steady day-by-day work and research, and what can be more interesting to read about than what one's fellow alumnus is doing, now that he has returned to the routine of private practice?

Since the war, THE NEWS has sent out scores of personal letters — not form letters — to our alumni, asking for information about the kind of work they are doing, any research they may be carrying on, or anything else they feel their friends might be interested to hear about. The responses have been few and far between, and an unsolicited letter is such a rarity as to have become almost a collector's item.

Here is what the Editor of the *Harvard Medical Alumni Bulletin* said, in part, regarding a similar situation over there:

> . . . Occasionally a letter and during the war a few articles on military experience were received, but essentially nothing else. In the last few years there have been no articles submitted that have not emanated from very close to the School itself. Of course, it is fitting and proper that the bulk of interest should center around the School, but it is an *Alumni Bulletin* and as such is open to all alumni. Bostonians and doubtless graduates in San Antonio and Cleveland will be as interested in ideas and events transpiring in Seattle and Savannah as they are in purely Bostonian news items.

And then the Editor goes on to say, regarding an appeal for opinions on a very important subject — which appeal he had made in the previous issue of the quarterly:

> In the three months that have passed not a word has been received on the matter. Printable material, applause and criticism are all equally valuable to an Editor; it is disinterest that is disheartening.

All of the above could have been written concerning THE NEWS. Everybody is busy. We know that. But we do so wish the section of THE NEWS devoted to letters could be restored to something approximating its wartime volume. That is your part of the paper, and we wish it might be the lengthiest section. Do you know, if every alumnus who receives THE NEWS should write just one letter a year — only one — there would be in the neighborhood of one hundred letters for each issue! So let them come. We prefer to stagger under the weight of overproduction, rather than scrimp along on a cut-to-the-bone ration.

New address: —

Capt. John P. Wood, MC, USN (*gr. asst. R* 1938-39), U. S. Naval Hospital, Great Lakes, Ill.

Brief bits: —

Dr. Joseph S. Barr (*Or.* 1929), Chief of our Orthopedic Service, has been appointed Surgeon-in-Chief of the New England Peabody Home for Crippled Children.

Dr. William C. Burrage (*EM* 1941) reports the arrival of a son—Thomas Greene Burrage—on December 1.

Dr. Terry E. Lilly, Jr. (*ES* 1943) and Mrs. Lilly sent us a Christmas card which showed them and their young son, Terry III, in their home at 32 Kilsyth Road, Brookline 46, Mass. Dr. Lilly has been Assistant Resident at the Massachusetts Memorial Hospitals since last July.

Dr. Walter Pick (*CM* 1947) has opened an office for the practice of Pediatrics at 42 Fox St., Fitchburg, Mass. Mrs. Pick presented him with a fine Christmas present on December 25—a son, Kenneth Allan—their second baby.

Mr. Todd Tomihiro, who has been working for four years with Mr. Murphy in our Pharmacy, has been appointed Chief Pharmacist at the San Jose Hospital, 14th and East Santa Clara Sts., San Jose 14, Cal.

It was over a year ago that we published the last letter from Lt. Col. Kathleen H. Atto, ANC (*MGH* 1922). It is good to hear from her again. Her address is still 97th General Hospital, APO 757, c/o Postmaster, New York, N. Y. She writes:

> Before many months I expect to be back in the good old U.S.A., but will not give you a change of address until I get settled once more.
>
> I was very interested in the account of Miss Morse's work in Czechoslovakia which appeared in THE NEWS. We have corresponded occasionally since she came over and have hoped

Dr. William T. Green, Dr. Henry R. Viets, and Dr. A. B. Baker question Dr. Arthur C. Guyton (*WS* 1943) on his invention of the electric wheel chair.

we might at some time get together for a visit. On December 1, I returned from a four-day visit to Prague—very disappointed, because during that time I had not succeeded in getting in touch with her. I had written her three weeks before my going. I sent a wire saying where I expected to stay, and another after I arrived in Prague, telling where I was. I was unable to reach her by telephone, as I had only a mailing address, nor could I find a satisfactory way to get to Kladruby u Vlasim.

Conditions as I found them in Prague reminded me somewhat of my visit to Russia in 1939. Miss Morse writes that she expects to start home in January, which is earlier than planned, I believe.

Capt. Richmond Holder [*M* 1945], Lt. Leonille Dufault [*MGH* 1936], and I are trying to uphold the banner for M.G.H. here at the 97th General.

Dr. Tracy J. Putnam, East Surgical 1923 and later Assistant Visiting Surgeon for Neurosurgery at M.G.H., has sent an announcement for The News. His address is 416 North Bedford Drive, Beverly Hills, California. His letter reads:

I have resigned my position as Director of Services of Neurology and Neurological Surgery at the Presbyterian Hospital, New York (which has absorbed the Neurological Institute, where I accepted these titles). I have opened an office for the private practice of Neurological Surgery at the above address in Beverly Hills, and have accepted the position of Attending Neurosurgeon and Chief of the Department of Neurosurgery, Cedars of Lebanon Hospital, Los Angeles.

I still retain my position as Attending Neurologist and Neurological Surgeon at the Presbyterian Hospital and my title of Professor of Neurology and Neurological Surgery at the College of Physicians and Surgeons, Columbia University, New York. I continue to lecture and conduct the teaching there.

Dr. John W. Smillie (*ES* 1944) is now Senior Assistant Surgeon in the Division of Public Health in Minneapolis. We have received a very nice letter from him, in which he expresses appreciation of The News. What he says about an epidemic down in Alabama will interest all of you.

I am at present assigned to the City Health Department here in Minneapolis, and am also working with Gaylord W. Anderson (*H.M.S.* 1926), Mayo Professor and Director of Minnesota's School of Public Health. In March of 1947 I was promoted to Senior Assistant Surgeon.

The following problem, encountered last fall and winter, may be of interest. We were asked to investigate an outbreak of acute watery diarrhea occurring in and near Birmingham, Alabama. A complete epidemiological report has been accepted for publication by Public Health Reports. The frequency and severity of symptoms corresponded closely to what Reimann calls "epidemic diarrhea, nausea and vomiting". We studied 47 contiguous families in a small village. The incidence was 40%. The patients were prostrated with their illness, but there were no deaths or complications. The disease was pretty evenly distributed through all age groups, and between the sexes. No pathogenic bacteria or parasites could be found. The usual causes and sources of acute diarrhea were looked into pretty closely, but none could be found. A theoretical incubation period for 40 cases, who had had previous known contact with a case, was three days. A co-worker, Miss Beatrice F. Howitt (who first isolated the virus of western equine encephalitis) was unable to find a virus, but we didn't work with human volunteers.

The most logical theory to explain the epidemiological evidence is a contagious disease of virus etiology, analogous to the common cold.

Most epidemiologists manage to acquire the disease they're studying, and I was no exception. Fortunately, it occurred after we'd studied the outbreak for some time. It was a relief to think, "Thank goodness it's not bacillary or amoebic dysentery."

I was pleased to hear that Dr. Allen was honored with the presidency of the American College of Surgeons.

A second child, Frances Drury, was born to Ellen and me January 15, 1947, and is doing well. Wilson G., II, now three years old, is fine.

Such a refreshing letter as this from Dr. A. William Reggio (*WS* 1914) makes us wish we had had, and could have, more of them. However, let's make the most of this one.

Gracious me, October 14 to December 23! And along comes The News with an article from Dr. Watkins on Physical Medicine and suddenly a light goes on and I am reminded of your appeal and my complete silence so far.

We can say that, as Chief of Physical Medicine and Rehabilitation in the Hospital Division of the U.S. Public Health Service, things have progressed encouragingly during the past two years.

When we started this job, the twenty-four Marine Hospitals were not physical medicine minded, and we were handed an empty platter to fill, without any handicaps of precedent or policy to bother. Policy had to be established and the idea had to be "sold", just as in many other hospitals whose staffs were (and many still are) blissfully ignorant about what physical medicine has to offer as an adjunct after the acute phase of treatment is over and the intense interest of the physician has commenced to wane.

However, the idea that the physician's obligation to the patient is not over until that patient is back on the job is dawning more and more on many who previously had, perhaps, not really appreciated this.

The job has been and still is most interesting and, if nothing else, has provided the opportunity for seeing a lot of this country of ours, as well as that of our neighbor Canada. The Marine Hospitals, being spotted all over the place, have given the airplane lines the opportunity of flying us to many somewhat widely separated places, such as Seattle, San Francisco, San Pedro and Los Angeles to Savannah, New Orleans, Carville (Louisiana), Galveston, Springfield (Missouri), Fort Stanton (New Mexico), Fort Worth, Lexington, St. Louis and way stations like Chicago, Cleveland, Detroit, and New York, Vancouver and Victoria, B. C. to Tucson, Arizona, with some foreign (?) travel in Texas—well, anyhow, we've also been to Brighton, and finally have always managed to get back to headquarters at Washington, somehow, in spite of some mighty lumpy air rides. But mostly it's been nice flying weather.

We have availed ourselves quite frequently of the privilege of consulting "Li'l Arthur", the MGH Heap Big Physical Medicine Man who each time has come across full speed to help us. He's a nice guy, and may his muscle tone never experience the woes of deconditioning.

Best wishes to all for 1948.

THE NEWS

No. 66 Boston, Mass. March 1948

We all are interested in the successful operation of the Massachusetts General Hospital. Successful operation requires a satisfactory financial condition. This means that income must equal expense.

Our income is made up of payments from patients, interest on endowment, investments, direct gifts to the hospital for current expense, and the grant from the Community Fund.

Because of the large amount of free service given in the wards of the General Hospital and in the Out-Patient Department, there is usually an annual deficit which has to be paid from unrestricted gifts. For 1947 this deficit was $243,943.

Salaries and wages	$3,084,163
Supplies	1,927,926
	$5,012,093
Hospital income	3,928,429
Operating deficit	$1,083,664
Research grants Special funds Treasurer's expense Extraordinary expense Extramural expense	333,860
	$1,417,524
From Treasurer	1,173,581
Net deficit	$ 243,943

Insofar as possible, all expenses chargeable to Research have been placed in a separate account and paid from funds donated to the hospital for this specific purpose. The hospital receives an overhead reimbursement.

Research account for 1947	
Salaries and wages	$130,655
Supplies	115,726
	$246,381

For 1948 it has been necessary to adjust salaries and wages to meet the increased cost of living which is affecting everybody. These increases are extremely modest but still total over $400,000 and represent all that the hospital can afford. Increased cost of supplies must, likewise, be anticipated. We must control this through economy of use.

To meet this increased operating cost, more income will be needed. Part of this can be met by increasing rates in the hospital units. Consequently, Phillips House room rates were increased $4 per room on January 1, 1948, Baker Memorial room rates $2 per room on January 12, 1948, and General Hospital ward rates $2 per day on January 12, 1948. The Out-Patient admission rate was increased 50¢ on January 1, 1948.

The budget for 1948 is as follows:

Salaries and wages	$3,475,000
Supplies and equipment	1,962,000
Total	$5,437,000

Just what deficit will result cannot be foretold. We hope to keep it lower than in 1947.

It is clear that the hospital must somehow achieve a balanced budget. The annual recurrence of an operating deficit must be overcome. All must practise every possible economy of operation. We can and must economize on heat, turn out lights when not needed, stop wasting water, save on supplies of all kinds, and eliminate food waste. Patients must receive all necessary medicines, dressings and proper care; but here, too, economies can be practised by the staff and nurses. If every one of the 2,000 employees makes a determined effort to economize, many thousands of dollars can be saved.

Our salary and wage scale is modest but not unreasonably low. It truly represents the maximum that the hospital can afford this year.

The Trustees and the Director wish to express their appreciation for the conscientious services of all during the past year and their expectation that the same spirit of service will animate everyone during the coming year.

N. W. Faxon, M. D.,
Director

* * *

During the war, as everyone in any way connected with M.G.H. knows, a group of more than 100 gentlemen volunteered their services to the hospital; and each evening, after donning khaki work clothes, they started off, equipped with brooms, mops, scrubbing brushes, pails, *et al,* on their various jobs about the buildings. It has never been possible to express what their help meant to the hospital at that time.

When the war ended and those who could take over the cleaning jobs in the hospital returned home, about 40 of these volunteer men found that with the laying aside of their scrubbing uniforms they could not lay aside their interest in M.G.H. They decided, then and there, to start a fund among themselves for some future use; and on a February afternoon, at a very nice coffee party given by the Ladies' Visiting Committee in honor of these men, members of the hospital family were told about their latest contribution to the hospital—toys of all kinds for the playroom in the newly-opened Burnham Memorial Hospital for Children. Mrs. David B. Arnold, Chairman of the Ladies' Visiting Committee, and Mr. Francis C. Gray, Chairman of our Board of Trustees, thanked the representatives of the men volunteers who were present on behalf of the hospital; and Dr. Allan M. Butler, Chief of the Children's Medical Service, gave us an outline of the activities of the various departments in the Burnham Hospital and invited us to go over for a personally conducted tour of inspection.

After viewing the wards, the incubators, the laboratories, and so on — all newly furnished with the best equipment possible — we ended up in the playroom, where the toys given by the men volunteers were on display. There is just about everything in that room a small child's heart could desire for indoor play — toys large and small, and all so colorful and attractive. One of the guests expressed a feeling that was common to all of us, we feel sure. She said, "Oh, if we could only have a colored picture of this room!"

Again — Massachusetts General Hospital expresses its gratitude to these volunteer gentlemen for their fine contribution to the hospital and for their continued interest in its welfare.

The Board of Trustees, at their meetings on January 9 and 23, voted:

To accept the resignation of Dr. Harrison E. Kennard from the position of Assistant in Surgery;

To accept with regret the resignation of Dr. Benedict F. Massell from the position of Assistant in Medicine;

To grant a Dalton Scholarship of $500 to Dr. Henry J. Koch, Jr.;

To make the following promotions in the Surgical Resident Staff:

Drs. Sheridan S. Evans, John R. Newstedt, Thomas Rutter, and William D. Shorey from 3rd to 2nd Assistant Resident, as of January 1; Drs. William V. McDermott and Dexter N. Richards from 2nd to 1st Assistant Resident, as of January 1; Drs. Francis T. Gephart and John L. Wilson from 1st Assistant to Resident, as of January 1; and Drs. Peter T. Brooks, John B. Millet, and Leonard D. Rosenman from 2nd to 1st Assistant Resident, as of March 1.

To appoint:

Dr. Theodore P. Barss as Assistant Resident in Anesthesia, to begin September 1;

Dr. Ronald C. Bishop as Assistant Resident in Medicine, beginning October 1;

Dr. Howard S. English as Assistant Resident in Neuropathology for the period January 1 to July 1;

Dr. Hugh A. MacMillan as Assistant Resident in Pathology for the year beginning July 1;

Dr. LeMoyne White as Assistant in Psychiatry.

To appoint the following to the Children's Medical Service:

Dr. John D. Crawford as Chief Resident, beginning July 1;

Drs. Frederic M. Blodgett, Charles D. Cook, and Arnold P. Nicosia as Assistant Residents, beginning July 1;

Drs. Harrie R. Chamberlin, Carol Dickson, and Fred H. Howard as Interns, beginning July 1.

At their meetings on January 14, 21, and 28, the General Executive Committee voted:

To promote the following from Intern to Assistant Resident in Medicine:

Drs. Warren Bennett, as of October 1; Hugh Chaplin, Jr., as of October 1; Lincoln D. Clark, as of July 1; Anthony T. Licciardello, as of July 1; John W. Littlefield, as of October 1; Myron G. Sandifer, Jr., as of July 1; and Morton N. Swartz, as of October 1.

To appoint:

Dr. Gustav W. Erickson as Clinical Fellow to the Children's Medical Service;

Dr. John G. Flynn as Clinical Assistant to the Children's Medical Service;

Dr. Guy B. Maynard, Jr. as Clinical Assistant in Surgery, assigned to Gynecology;

Dr. Maurice M. Osborne, Jr. as Clinical and Research Fellow to the Children's Medical Service for one year, effective as of July 1;

Dr. Walter Pick as Clinical Assistant to the Children's Medical Service, effective as of January 12;

Dr. Thomas S. Risley as Clinical Assistant in Surgery, with the privilege of caring for Dr. McKittrick's patients in the Baker Memorial and Phillips House;

Dr. Abdul M. Saleh as Clinical Fellow in Surgery;

Dr. Charles B. Walker as Research Fellow in Anesthesia;

Dr. Lloyd C. Wilson as Clinical Fellow in Dermatology.

The General Executive Committee also voted:

That Dr. William McK. Jefferies's title be changed from Assistant in Medicine to that of Clinical and Research Fellow in Medicine, at his own request.

* * *

ARTHUR MOSES GREENWOOD

Dr. Arthur Moses Greenwood died in Laconia, New Hampshire, on December 14, 1947. He is survived by his wife and two stepsons.

He was born in Ashburnham, Massachusetts, on March 30, 1876, and had his early education at Cushing Academy in that town. Following graduation from this school he attended Brown University, receiving his A.B. in 1898. His medical education was received at the Harvard Medical School, from which he was graduated in 1902. A surgical internship at the Massachusetts General Hospital, 1902-1904, was followed by an appointment as Assistant Director from 1904 to 1906. From 1906 to 1914 he did general practice in Marblehead. During the first World War he served in the Medical Corps of the Army, at one time in command of an Army hospital in France. He was discharged in 1919 with the rank of Lieutenant Colonel.

Dr. Greenwood's dermatological training began at the Vanderbilt Clinic in New York in 1920 and was continued at the Massachusetts General Hospital, where he was appointed to the dermatological staff in 1921. Here he served until 1937, when he retired and was placed on the Board of Consultation, where he remained until his death. He was appointed to the teaching staff in the Dermatological Department at the Harvard Medical School in 1925 and served until 1936. He was also Consultant in Dermatology at the New England Deaconess Hospital, the New England Baptist Hospital, Huntington Memorial Hospital, Pondville State Hospital, and other hospitals for many years.

He had been a member of the Massachusetts Medical Society and the American Medical Association since he began the practice of medicine. He was elected to the American Dermatological Association in 1928 and he was certified by the American Board of Dermatology and Syphilology in 1933. He was a member of the American Academy of Dermatology and Syphilology, and the Society for Investigative Dermatology. He had been a member of this Society since 1922 and was its president from 1929 to 1931.

Dr. Greenwood's death is a great loss to the dermatological profession. He had contributed much time and effort to the Dermatological Service at the Massachusetts General Hospital. He was an excellent teacher and a wise and discerning consultant in his special field over many years. He accumulated a wide knowledge of skin disease in its many manifestations. His particular interests were in the fields of skin malignancy and mycology, and his knowledge of the skin manifestations appearing in diabetics was probably unequalled in the country. He was one of the first dermatologists in this part of the country to do special work in medical mycology, particularly the cultural characteristics of various dermatophytes obtained from cutaneous lesions.

A careful observer from his training under Dr. James C. White and Dr. Frederick S. Burns, he was quick to perceive the salient features of dermatological lesions and to correlate these features with the general picture of the patient's condition. While quiet and unassuming, his carefully considered opinions, based on his keen analysis of the individual case, carried much weight with the patient and with the referring physician.

He made many real friends among his patients and counseled them wisely from his broad background of general medical and special training. Gifted with abundant common sense and with a real ability to detect the practical aspects in a given case, he was a consultant in every interpretation of the word. His opinions were never obtrusive and his differences of opinion were often uttered in the form of questions which went straight to the heart of the particular case which was under discussion.

He loved the farm which was his home, and he held a great interest in the marvelous collection of antiques and rare books with which it was filled.

His loss is irreparable to his patients, to his medical confreres, and to all those with whom he worked and was associated for so many years.

C. G. L.

MISS ANNABELLA McCRAE

For thirty-nine years Miss Annabella McCrae was a part of the Massachusetts General Hospital. While her place was Instructor of Nursing Practice in the School of Nursing, her domain included the whole hospital, which she loved. Her influence reached beyond its gates to nurses and doctors, near and far.

Her associates knew more of her search for truth, her kindnesses, her personal interests than did her students, for Miss McCrae remains an austere and formidable mentor to many. Her personal wishes appeared subordinated always to her great dream — that nursing should focus on the patient and that it must be good as long as an MGH student or graduate gave nursing care. That there are many of her 1953 students who still hear her words and see the accusing finger down the years may be interpreted variously. For some she had to be a conscience; for others, a teacher. The indelibility of the impression is one of the traces of her immortality.

She knew what it meant to be disheartened. She knew that beyond her presence, the willful, the careless, the ignorant had not been transmuted enough to go on alone. She insisted on a pattern of nursing that was soundly built and superior enough to withstand much of the diminishing calibre that resulted from the impact of the inexperienced worker confronted with an artist's task. That one day our work might have its artistic elements, she believed. She had courage. In one sense, she walked alone.

Yet she sought the guidance of doctors and other instructors, and contributed to their knowledge and understandings. She did not gather her students as a shepherd; she tried to provide them with the means to be free.

George Herbert Palmer says, "A true teacher is always meditating his work, disciplining himself for his profession, probing the problems of his glorious art, and seeing illustration of them everywhere." There are many graduates of this School of Nursing who knew such a teacher. Their obligation is clear. May they, too, have courage.

S. P.

* * *

The announcement of the meeting of the Massachusetts General Hospital Research Council on February 17 gave the following program:

Dr. Henry K. Beecher's group—"Study of sedatives in the Anesthesia Laboratory".

"An appraisal of amidone and its isomers as analgesics", Dr. Jane E. Denton.

"The influence of pentobarbital on psychomotor performance and on the temperature", Dr. Marcel Verzeano.

"Problems of the measurement of sleep", Dr. Oliver H. Straus.

DERMATOLOGY DEPARTMENT

A course in histopathology of the skin, consisting of 14 lectures, will be given at the Massachusetts General Hospital on Wednesday evenings from 7 to 9 o'clock, beginning March 3 and continuing through June 2.

For several years our department has been running a postgraduate course in skin diseases, and many phases of this course have evoked unusual interest from dermatologists in New England. There have been many requests to attend our weekly postgraduate sessions, but it has been felt that since the lectures were designed for graduate students and the resident training program, we should limit the attendance. This course in histopathology is in response to the demand for that particular instruction.

Numerous histologic slides will be shown by projection. Manuals of instruction and sets of slides will be available for additional study.

The number of students will be limited to 12, in order to insure personal instruction.

Detailed information may be obtained from the Department of Dermatology, Massachusetts General Hospital.

The January Staff Meeting was concerned mainly with reports by various members regarding lectures and courses given at the Academy of Dermatology and Syphilology in Chicago last December.

Two new phases of instruction have been instituted in our department since the first of the year, each consisting of an interdepartmental cooperative effort. Dr. Herbert Barry, Jr. has been assigned from the Psychiatric Service to work in the Dermatology Department. Dr. Barry will not only assist in the psychiatric approach to dermatologic problems, but will give active instruction to our resident staff. This work has already been started and promises to be a distinct step forward.

The Allergy Service has made arrangements to permit some of our house staff to spend time in their clinic, studying allergic problems concerned with skin diseases; and we will have members of the Allergy Service in our clinic from time to time as observers and to help select cases requiring allergic study.

New plans for the School of Nursing

At the graduating exercises of the Class of February 1948, Miss Ruth Sleeper, Director of the School of Nursing, announced in her report to the class plans for the educational program which will go into effect in the fall of this year. An excerpt from Miss Sleeper's report, describing the new program, follows.

> Tonight, I should like to tell you of the plans we have made for your successors in the School. Much has been written and said of late about reducing the length of the three-year basic program in nursing. Much has been said about the overtrained nurse. Little or no experimentation has been done to determine how the nursing curriculum has been affected by the changing medical practices, the new trends in public health programs, the differences in general education, the increasing immaturity of the student nurse. No one has determined what the results would be if nurses were graduated with a knowledge of nursing, but unskilled in the practice of nursing. It has long been an established fact that the student in the School of Nursing repeated many activities long after the point of learning had been reached. Some of this repetition was effective, in that skill was developed; some had no value in the preparation of the nurse. It is also an established fact that nursing, just as truly as other fields of medical science today, requires a carefully planned and progressive educational program. A review of our curriculum indicated areas which needed strengthening. Consideration of the ward practice content indicated the feasibility of dividing the 3 years into 2 periods. The first period of 28 months is to be a period of education, during which the instruction of the student is the primary objective. Practice during this period is planned to the point of safe learning, but not of skill. The second period of 8 months is to be a period of practical internship, during which the student should develop the skill requisite to a graduate nurse. Because the student will give full time to nursing care, she will receive a stipend during the period of internship.
>
> When this program becomes fully effective it will be a more costly one for the Hospital. It will require more instructors, the preclinical period will be extended to 6 months, and the students in the educational period as a whole will make less contribution to nursing service, due to shortened hours of ward experience. It will be more costly, too, for the student, for tuition will be increased. It is the belief, however, of those who have participated in the planning that students will find more satisfaction in such a program which allows time to study and time to learn to give good nursing care. Applicants will be enrolled in the new program in September 1948.

In January, the Ladies' Visiting Committee of the Hospital gave a tea for all staff and head nurses in the General Hospital. Mrs. Chester M. Jones headed the committee for the tea, which was held in Walcott House.

A number of important changes in personnel have taken place this month in the Nursing Department:

Miss Marjorie Irene Weed came to us early in February as a surgical supervisor. A graduate of the University of Minnesota School of Nursing in 1942, Miss Weed has had experience as instructor of practical nursing at that school. During 1946 and 1947, she was Public Health Nursing Consultant at the Institute of Inter-American Affairs, Rio de Janeiro, Brazil.

The new instructor of anatomy and physiology, replacing Miss Eleanora Keene, is Miss Helen Curran. Miss Curran, a graduate of MGH School of Nursing and Simmons College in 1938, has been studying for her master's degree at Boston University since leaving the military service.

Miss Julia Boghosian has left her position as supervisor of the General Hospital Operating Room in order to enroll at Boston College. Miss Rae Simmons, MGH 1940, who has served in the operating room as assistant supervisor, has taken over Miss Boghosian's work. In Miss Simmons's place a new assistant supervisor has been appointed. She is Miss Abigail Norris, who graduated from this school in 1934 and who has recently been supervisor of the operating room at the Lynn Hospital.

* * *

Dr. James K. Stoddard (*EM* 1917) sailed from New York on January 20, aboard the *M. S. Batory,* bound for Poland, where he will serve as Chief of the Medical Service at the Kosciuszko Hospital in Piekary. The hospital was opened formally on Washington's Birthday, under the joint auspices of the Unitarian Service Committee and the national social insurance institution of Poland.

Dr. Stoddard served as a lieutenant in the U. S. Army Medical Corps in England and France during the first World War, and as major in Africa and Italy during World War II. He expects to remain in Poland for a year.

The Unitarian Service Committee has sent us an interesting memorandum on the Kosciuszko Hospital. Because of the services several of our staff have contributed toward the Unitarian Service Committee's program in Europe, we feel that this memorandum will be of general interest. It reads, in part:

> Kosciuszko Hospital, an outpost of American medicine and a great pioneering project in international medical science, is named in honor of the Polish General Tadeusz Kosciuszko, who rendered such distinguished service to George Washington during the American Revolution that the American Congress, in 1783, conferred upon him the privileges of American citizenship and the rank of Brigadier General. . . .
>
> Piekary is a small community in the heart of the great industrial district of Upper Silesia, where tuberculosis, occupational diseases, and industrial accidents are common. The first and only American hospital in Poland will serve the population of this region as an outstanding example of American generosity.
>
> Kosciuszko Hospital will be staffed by Polish and American personnel. They will work side by side on the wards, in the out-patient department, in the laboratories and operating rooms, and will get to know and appreciate one another in the course of their joint humanitarian effort.
>
> Serious cases have had to be transported from this area as far as 110 miles to the big hospitals of the city of Krakow. From now on, these patients will find most up-to-date care and treatment in the new American hospital within a few miles of their homes.
>
> The Kosciuszko Hospital project, however, is of more than local significance. It is designed to become a permanent outpost of American Medicine in Poland. It will become a center where American methods and techniques will be practised, where American administrative procedure will be demonstrated, and will be the one place in Poland where Polish physicians and surgeons will come to learn American routine. One of the finest achievements of American civilization—American medical care — will have found its home in Poland. . . .
>
> There will be four surgical services, of 60 beds each. Three of these will be for traumatic surgery, under Polish doctors. . . . The fourth surgical service will be headed by an American surgeon (yet to be appointed), and will engage in general surgery.
>
> Dr. James K. Stoddard of Manhasset, Long Island (formerly of Cashiers, North Carolina), will be Chief of a 40-bed medical service.

MASSACHUSETTS EYE & EAR INFIRMARY

Governor Robert F. Bradford and Senator Leverett Saltonstall, both of whom were formerly on the Board of Managers of the Infirmary, have now become members of the Corporation. Other new members of the Corporation, elected at the Annual Meeting in February, are: Mrs. Isabel S. Farley, Rev. Robert G. Metters, Mr. William S. Ballard, Dr. Walter B. Lancaster, Dr. Harris P. Mosher, Dr. Frederick H. Verhoeff, and Dr. D. Harold Walker.

Because of the resignation of Mr. James C. Howe, who has been Secretary of the Board of Managers for the past thirty years, Mr. Edmund V. Keville was elected to fill that office. Mr. Howe will continue as a member of the Board, on which he has served since 1914.

A meeting of the New England Ophthalmological Society was held at the Infirmary on February 18. Many members of our Eye Staff were present at the meeting.

Dr. Morris Sherman will begin his residency in Oto-Laryngology at the Infirmary on the first of March. Dr. Sherman, who is a graduate of the University of Alabama, interned at the Touro Infirmary in New Orleans.

Recent visitors at the Infirmary included Dr. Cryoisetiere, an Ophthalmologist from Saint Justin's Hospital in Montreal. He spent about one month visiting in our Eye Clinic.

Dr. P. Satamowsky, a visitor from Buenos Aires, observed the activities of the Infirmary—particularly the operating rooms.

Dr. Edwin B. Dunphy and Dr. Trygve Gundersen gave talks on February 12 and 13 before the National Society for Research in Ophthalmology, in Washington, D. C.

Dr. Paul A. Chandler read a paper recently before the Toronto Academy of Ophthalmology, in Toronto. He also delivered lectures on glaucoma —a refresher course given under the auspices of the University of Toronto.

Dr. Trygve Gundersen was the guest speaker late in January, when he addressed a meeting of the Southwestern Texas Medical Society, in San Antonio.

"Principles of corneal disease" was the topic chosen by Dr. David G. Cogan when he gave a series of talks in Mexico. Dr. Cogan spoke to the Sociedad Mexicana de Oftalmologia, in Mexico City.

This short note has come from Dr. Fred W. Ogden (*Oto-Lar.* 1942).

I am now practising at the Cravens Building, Fayetteville, Arkansas. Have recently been appointed Associate Professor O.R.L. at the University of Arkansas Medical School in Little Rock, where I teach one day a week. Thanks for The News.

Recent gifts to the Archives Department:—

From Dr. Leland S. McKittrick — a picture showing Dr. Arthur T. Cabot operating in 1905, with Drs. Walter G. Phippen (*SS* 1906), Charles A. Porter (Assistant Visiting Surgeon at that time), Chandler Robbins (*SS* 1905), William W. Walcott (*SS* 1906), and F. Clinton Kidner (*SS* 1905) looking on.

From Miss Robertson, Assistant to the Director of the Massachusetts Eye and Ear Infirmary — a scrapbook containing newspaper articles, pictures, etc. on World War I. (We wish more World War I material would be donated.)

Class of 1889

This letter from Dr. Edward M. Greene, one of the three living graduates of 1889, becomes a most valuable addition to our permanent Archives collection. Dr. Greene prefaces his "Recollections of Edward M. Greene, M.D., East Medical Intern at the Massachusetts General Hospital" with these remarks concerning himself:

In 1887 I completed the requirements of the three-year medical course for the degree of M.D., but at my request the diploma was issued as of 1888 in order to comply with the early custom of the M.G.H. when students were accepted before completion of the medical course and were called "house pupils" or "house pups" for short. Later, interns were required to defer acquiring a degree of M.D. for a year, as they might consider themselves equal to their superiors and be unduly set up.

I succeeded Dr. Henry B. Jacobs, who had to leave three months before the end of his term on account of illness, so I was promoted from extern and had three months more than the usual service in 1888-89.

Now, at the age of 87, I am in excellent condition.

And then Dr. Greene gives us his "Recollections", which are interesting in their entirety and very amusing in spots. We all thank Dr. Greene for this first-hand account of goings-on at M.G.H. sixty or so years ago.

My most interesting experiences were during the course of transition from preantisepsis to the adoption of antisepsis and asepsis.

In early 1888 the Senior Surgeon, preparing for an operation, was presented with his old, discarded Prince Albert by the trembling hands of the old custodian, Jim Mains, who had sponged off blood and pus from the previous day's operation and had hung it in the closet. Dr. Porter turned up the ends of the sleeves, washed his hands casually, and began to operate.

At one time, no opening of the abdomen was permitted, on account of the great mortality from such attempts. Surgeons derived half their income from medical cases, as surgical patients were too few for the support of specialists. My contemporary, Dr. Charles L. Scudder, on starting his practice, was the first surgeon in Boston to refuse to accept medical patients.

Through Pasteur came reports that germs in the air caused infections. The first attempt at the M.G.H. to guard against infection was to operate under a cloud of vapor, impregnated with carbolic acid. Before many months this had to be abandoned, as so much carbolic acid was absorbed as to turn the surgeon's urine dark and cause symptoms of poisoning. The sponges then used were kept in carbolic solution; and, later, gauze sponges were soaked in mercuric chloride solution, as were bandages around the site later to be operated upon. The solutions were strong enough to irritate the hands of the surgeons until some time later when rubber gloves came into use and bandages and swabs were sterilized by heat. This permitted a great and sudden expansion of the field of surgery and obstetrics.

My class of 1887 in Harvard Medical School was the first to be instructed in bacteriology, when only the tubercle bacillus and the gonococcus were known, and the bacillus of diphtheria soon after. In 1888 Dr. William Osler came to the Massachusetts General on a visit from McGill University and brought the early knowledge of the malarial plasmodium, which he discussed with Drs. Shattuck and Fitz. As Dr. Fitz's intern, Osler directed me how to prepare and stain a specimen of blood from a malarial patient in the hospital, which I did in the primitive laboratory under the steps of the Bulfinch Building. This slide was the first ever made in the M.G.H. and perhaps in the United States.

Dr. Fitz at this time was making a careful research into the cause of the disease known as "inflammation of the bowels"—very prevalent and often fatal among patients of the M.G.H. He traced it to perforation of the appendix, gave it the name "appendicitis", and insisted that these patients be turned over for operation to Dr. Maurice Richardson and other surgeons. At this time European and British surgeons denied the existence of such a disease.

It was my good fortune to have begun the study of medicine at Harvard and the M.G.H. at about the beginning of the era of radical and rapid discoveries which, during my 53 years of the practice of medicine in Boston, changed the doctor's work from an art to a science.

I remember many amusing incidents but I will relate only two of them. The first was in the beginning of practice of a brilliant young intern who later became a leading surgeon. He had learned the art of cutting and stitching to perfection. His first patient was an obese middle-aged woman who had seated herself on a pot with a crack in it. The pot broke and cut a wound the whole length of the perineum. We interns watched his fine operation, which healed in a few days. Soon after, her irate husband sent her back with the complaint that the operation had made his sexual rights impossible of fulfillment. The young surgeon then removed several stitches from the anterior end of the wound.

The second incident—A visiting senior in the East Medical service had an elderly female patient of aristocratic lineage, now impoverished, who had a swollen, painful ankle. Drs. Richardson and Whittier, in consultation to decide whether the disease was medical or surgical, asked her many questions. Then they went to the center of the large square ward where there was a stand on which were a bowl and pitcher of water, used by the staff after such examinations. They washed and wiped for rather a long time, then asked the patient if she could tell them any more. She coldly remarked that she would have been pleased if they had washed their hands as well before the examination as they did afterwards. They took this call-down meekly, while interns and nurses snickered, remembering how the higher-ups sometimes called them down.

Strangers do not realize the type of the older aristocrats of Boston who are often very witty in repartee. Standing on a corner of Beacon Street waiting for a bus one day, I saw an elderly lady who evidently had arthritis. As the bus stopped she pulled herself slowly up the high steps. A smart aleck near the door remarked, "What she needs is more yeast to make her rise." The lady paused before him and said, "Young man, if you had more yeast you would be better bred."

A student or intern learns much by his insight into the occasional mistakes, as well as the excellencies, of distinguished men with whom he has been closely associated, and this is a part of a young man's education. For instance, a renowned professor of pathology, whose mind acted quickly and surely, asked a question of a student in class. The student was diffident and characteristically deliberate in forming his opinions. In this instance, the professor was impatient and caustically criticised the student before the class. The student burst out with this remark: "Professor, I did not come to the Harvard Medical School to take a course in repartee." He then sat down, and never again responded when asked to recite in that professor's class. Later, the student succeeded the professor in becoming the extraordinarily capable pathologist of the City Hospital and the Medical School, and father of the present very learned pathologist of the M.G.H. I feel sure that, later, the over-critical professor felt great regret at the continued coldness between himself and his former pupil.

Now, the old professor really had a very warm heart, which was not generally known. For when I left the M.G.H. to start practice, without owning a penny, he took a great interest in me and sent me to a wealthy patient of his, with the request that he loan me whatever amount I needed, with very little interest and no fixed date of payment. This was not the only kindness he showed me.

Another instance of a warm heart in a reputedly cold person is that of President Eliot of Harvard. My wife's brother, of the class of '81, son of a very poor clergyman, had the highest scholastic standing of anyone in that and the preceding ten years. He died of typhoid soon after graduation and I came into possession of his papers. There were several letters from President Eliot which had contained checks for one hundred dollars of his own money, in addition to scholarship funds, accompanied by words of appreciation for his high scholarship.

A corner of the hospital grounds next to the Eye and Ear Infirmary at times produced many mushrooms, of which Drs. Maurice Richardson and Arthur T. Cabot were very fond. So were the interns, who had the advantage of harvesting them before the later arrival of the surgeons, who were surprised over the irregularity of the growth of the fungi. We kept ours until late night hours, when mushroom stews were enjoyed in the company of favorite night nurses, who provided milk from the hospital supplies. The regulations regarding fraternization of interns and nurses became much more strict after the good old days.

I saw an item in THE NEWS a year or so ago, criticising some of the earlier records of patients as being careless and incomplete. No doubt some of those were my records of 1888. This is the explanation: I had an abscess in the palm of my right hand, caused by an infection received while assisting Dr. Fitz in an autopsy. This had to be incised and the hand heavily bandaged, which prevented the holding of a pen. As there were so few interns at that time, no one could be provided to take my place, and records during that period were left incomplete, but not through carelessness.

Additional important events, concerning Massachusetts General Hospital, that occurred in the month of January during the earlier part of the nineteenth century:

January 1823 — At the Annual Meeting, the Trustees reported that the interior of the west wing of the Hospital was finished and ready for occupation; and that the colonnade in front would be raised in the ensuing season. This, of course, refers to the Bulfinch Building.

Jan. 7, 1825 — Committees were appointed to procure portraits of Mr. Thomas Oliver, donor of $22,438.70, and Mr. Abraham Touro, who had contributed $10,300 to the Hospital. These portraits now hang in the hospital.

The portrait of John McLean was brought in at this meeting. Bowditch, in his *History of Massachusetts General,* says, "It is one of the happiest works of Stuart. The record says of this painting, 'The resemblance is striking, and the expression characteristic'."

Jan. 9, 1827 — Erysipelatous inflammation having appeared at the Hospital, the expediency of removing all the patients was discussed. Four Trustees were appointed a Committee on the subject. On January 14, the Committee reported that they had decided, after conference with the Physician and Surgeon, to make a temporary removal of all patients from the Hospital, as far as was practicable, with a view to a "thorough purification by fumigation or otherwise"; and that the Reverend Dr. James Freeman had very liberally and readily offered his dwelling-house on Vine Street, near the Hospital, for the accommodation of the patients. On January 21, twelve patients were reported as removed to Dr. Freeman's house, and twenty-one discharged. On January 28, the Hospital was reported to be entirely clear of patients, and "cleansing, fumigation, and alteration of fireplaces, etc. in progress". On February 4, the patients from Dr. Freeman's house were received back into the Hospital, and on March 25, Dr. Edward H. Robbins, a Trustee, was appointed a Committee to return to Dr. Freeman the key to his house, with thanks.

Dr. Washburn, in his *History of Massachusetts General,* devotes an entire chapter to "Drains, ventilation, and the erysipelatous inflammation and hospital gangrene". If you have not already done so, we feel sure you would be most interested in Dr. Washburn's account of the "practical difficulties of drainage into a tidewater estuary, the inconvenient and disagreeable process of filling the Hospital's marsh land, and the construction of North Charles Street". He quotes from Dr. John C. Warren's letter, written from London in 1837, as to the then believed cause of erysipelas, and his description of the new "blacksmith bed". He tells us about the many ideas at M.G.H. regarding the cause of the erysipelas outbreaks (which continued up to about 1862) and the various measures taken to combat the disease. You may be surprised to learn that the problem seemed so hopeless of solution that as late as 1875 the Board of Consultation who investigated the drains, recommended the removal, at some future time, of the Hospital to a new site. Dr. Washburn concludes the chapter with these words: "Little do we think as we look upon the Hospital's fine buildings — the Phillips House, the Baker Memorial, the Out-Patient Building, and the George Robert White Memorial Building, now rising highest of them all — of the days when the river covered their sites, or the less agreeable days of the filling of the marshes. . . ."

Jan. 23, 1839 — At this Annual Meeting of the Corporation, the vote was passed by which all persons who have served, or should thereafter serve, as Trustees, should be considered members of the Corporation.

Jan. 19, 1853 — The Trustees received a letter from Dr. John C. Warren, requesting that his name be not included among the candidates at their next election. The preamble and vote which was thereupon passed by the Trustees is as follows:

> More than forty years ago Dr. Warren, and his associate, Dr. James Jackson, by an admirable circular letter, first called the attention of the public to the necessity of a Hospital. Becoming thus one of our original founders, he was appointed our first Surgeon, and has been annually re-elected to that office ever since.
>
> His name has become illustrious in the annals of American Surgery, and reflects honor on the Institution which is so deeply indebted to him for its establishment and success. Finding here those opportunities of professional practice by which his own skill and experience were from year to year increased, he has, in return, devoted to the gratuitous performance of his official duties among us much time and thought during a long life. By pecuniary donations and otherwise, he has manifested a continued interest in the welfare of the Hospital. And now that, having completed his labors, he is about to retire from this honorable and responsible situation, the Trustees would assure him of their best wishes for his future health and happiness. And they would congratulate the Institution and himself on the circumstance that he leaves behind him in our service, and, as we hope, for many years to come, a son whose high professional skill and attainments are universally recognized as worthy of his parentage.
>
> *Voted,* That Dr. Warren be requested to sit for his bust or portrait, to be preserved at the Hospital, and that Messrs. Lowell and Dexter be a committee to communicate to him this wish of the Trustees.

Jan. 19, 1859 — Authority was given to the Chairman of the Board to execute an indenture in behalf of the Corporation with the City of Boston, providing for the filling up of the flats lying between the Hospital grounds and the Harbor Commissioners' line.

New addresses:—

Lt. John G. Freymann, USPHS (*M* 1947), APO 751 (American Consulate), c/o Postmaster, New York, N. Y.
Dr. Joseph Garland (*CM* 1919 & *EM* 1921), 8 Fenway, Boston 15, Mass.
Dr. Earl A. Glicklich (*a. D*), 422 Beacon St., Boston, Mass.
Dr. John Homans, Jr. (*WM* 1942), 101 Bay State Road, Boston, Mass.
Dr. Robert J. Joplin (*P* 1929 & *Or.* 1933), 1180 Beacon St., Brookline, Mass.
Dr. Roger W. Morrison (*ES* 1943), 1432 Durand Court, Rochester, Minn.
Dr. Duncan E. Reid (*a. obst.*), 221 Longwood Ave., Boston, Mass.
Dr. Henry B. Ruley (*NS* 1939 & *WS* 1941), Medical Arts Bldg., Oak Ridge, Tenn.
Dr. Jacob H. Swartz (*d.*), 422 Beacon St., Boston, Mass.

Brief bits:—

Since Dr. Emerson Drake (*a.r.s.* 1945) did not use his military title of Lieutenant when he sent his new address — 296 Walpole St., Norwood, Mass. — we infer he is out of the Navy.

No. 8 in a series of Staff photographs
Dr. Stanley Cobb — Chief of the Psychiatric Service

Dr. Robert S. Hormell (*Or.* 1942), similarly, discarded the "Capt." before his name when he sent his new address — 1180 Beacon St., Brookline, Mass. Our last report on him placed him in the Pacific Theatre. That was nearly three years ago. Oh, these silent ones!

A letter from Capt. James M. Judd, MC, AUS (*ES* 1944) to the X-ray Department shows his promotion to this rank.

Dr. Foster L. Matchett (*Or.* 1934) was also in the Pacific Area at the time of our last report from him, in July of 1945. His renewal to The News gives 1044 Olive St., Denver 7, Col., as his new address.

Dr. Wade Volwiler (*M* 1944) is on a year's leave of absence. He is out at the Mayo Clinic in Rochester, Minn.

A letter from Miss Olive L. Dingle has been passed on to us. Miss Dingle, who is Dr. Smithwick's technician, went to South Africa on vacation, but is performing tests while there on some of Dr. Smithwick's postoperative cases. Her letter is from Johannesburg, and she writes:

> Dr. S. P. Jacobson [*gr. asst.* 1938] invited me to dinner at his home not long ago. I had a marvelous time, met interesting people, enjoyed a wonderful dinner (including wine), and felt right at home. It was a privilege to spend an evening in such charming company.
>
> I've talked with Dr. P. J. Kloppers [*gr. asst.* 1944] who is now on holiday. Hope to see him later. He is married and has a son two months old.
>
> Africa is out of this world. I'm writing this in a lovely garden, surrounded by sunshine, flowers, and birds. I breakfast in bed every morning — have just finished morning tea. It's impossible to give a real idea of the wonder of it all.
>
> Please give my best to any of my friends—doctors, telephone operators, information, nurses, etc. There are no post cards that I can find, and paper and postage are so expensive I can't write everyone.
>
> Wonderful trip, wonderful company, wonderful land.

Mr. Wilbour C. Lown, who was Head of our Photographic Laboratory before he joined the Navy in 1943, is now a Major in the Army. He sends this explanation of the transfer.

> The change of address to Signal Corps Photographic Center, 35 — 11 Thirty-fifth Avenue, Long Island City 1, New York, may be startling. The reason is simple. The Navy's medical film program is inactive, the Army's active — ergo the change from Naval Reserve to Army Reserve, to active duty. The uniform is different, the serial number longer —otherwise little difference.
>
> Housing is a problem here, so for the present Mrs. Lown will stay in Bethesda and the home address remains the same.
>
> The News is a pleasure. Every year away from the M.G.H. increases its importance to me.

It is good to hear again from Dr. Joseph M. Stowell (*gr. asst.* 1944). He writes, from 1107 Thirteenth Avenue, Altoona, Pennsylvania:

> Since being placed on inactive duty from the Navy, 24 June 1946, I have been in private practice in general surgery in Altoona. I am on the surgical staffs of the Altoona Hospital and the Nason Hospital, and Consultant in General Surgery in the Cresson Tuberculosis Sanitarium, Cresson, Pennsylvania. Practice has been gradually increasing, and I feel that I am back on my feet again.
>
> The News is a great institution, especially for one who is so far away from the General. It is always interesting to read about the doings of old friends. If it were not for The News, I would lose track of many of them.

The News is very glad to publish this letter from Dr. John H. Peters (*WM* 1943) and stands ready to cooperate in any way to further his suggested plan. Dr. Peters's address is Highland Road, R.D. No. 9, Pittsburgh 16, Pennsylvania.

> I have a problem on my hands, and it recently occurred to me that you might be able to help solve it. Having spent a year in Germany in 1932-33 and having friends and relatives in England, I find there is a considerable list of people known to me who are at the moment in need of food and other help. Unfortunately, there are more of them than I can begin to send parcels to myself.
>
> It seems possible to me that there may be readers of The News who are sending CARE parcels abroad and who would prefer to send them to definite people, instead of contributing to CARE's program without knowing where the food and clothing would be going.
>
> I should be more than glad to send addresses of people I know over there who are in need, together with information about them, to anyone interested. It would relieve my mind about some of the deserving persons I am unable to help myself. As a matter of fact, if there are other MGH alumni or staff members in a position similar to mine, you might start a name exchange on a small scale.
>
> Best wishes to The News and to all at M.G.H.

* * *

FOUND — A WHITE HORSE

We have the white horse for the model of the first ambulance which Mr. Wall is making for us — a horse found in such a way as to stretch all bounds of the credible. Here is how it happened —believe it or not!

Within a day or two after Dr. Earle M. Chapman read our appeal in The News — within so short a time it seems as if the Fates must have contrived the whole thing — he was passing by the Technology Ambulance Service in Cambridge and happened to see Mr. Frank Galvin throwing into a trash pile a white horse of exactly our required dimensions. Dr. Chapman sprang into action at once, asked if he might have the animal, and brought him to our News office.

Dobbin shows signs of pretty hard driving, in the region of the legs, but we are hoping Mr. Wall's clever fingers can perform a successful plastic surgery operation. We are waiting now for the patient to come out of the ether and to get a report on his post-op condition. Let us all hope for the best; for the noble horse seems to be out of fashion in toy shops, these days of mechanical gadgets, and we were beginning to feel discouraged about the prospects of ever finding one of the required size.

THE NEWS

No. 67 Boston, Mass. April 1948

THE CARDIAC CLINICS AND LABORATORY

There has grown up slowly through the years here in the Massachusetts General Hospital a group of physicians interested particularly in cardiovascular disease. The result has been a considerable accomplishment in pioneering in this field. Labelled by a number of the staff members thirty years ago as a narrow and narrowing undertaking, as was more or less the custom of the day with regard to almost all specialization, it has grown to wide and extensive proportions in close association with allied medical and surgical fields. It remains, however, as it should, an integral part of the department of internal medicine, and its staff members carry on routine duties for a relatively short time each year in the general medical wards and out-patient clinics in addition to their much greater participation in the study and care of cardiovascular patients. We believe that the most useful specialist both in the care of patients and in the advancement of our clinical knowledge should have such opportunities as have been the program of our group.

Details of the history of heart disease at the Massachusetts General Hospital can be read in the Ether Day address given by the present writer at the ninetieth celebration in 1936 and published in the *New England Journal of Medicine* (Volume 215, page 1261). A few of the high points may, however, be presented here, with a statement of progress during the last twelve years and of plans and hopes for the future.

The cardiac clinics in the Out-Patient Department were begun just before the first World War, the adult clinic by Dr. Joseph H. Pratt and the children's by Dr. Richard S. Eustis. The cardiac laboratory was installed in the fall of 1914 in the basement of Ward G, the old skin ward, now replaced by the new Vincent and Children's Building. The first electrocardiograph brought from Cambridge, England, in the fall of 1914 was replaced in 1931 by a second instrument built especially for us by the Sanborn Company of Cambridge, Massachusetts, and this in turn has just been superseded by another new very up-to-date electrocardiograph by the same company, whose president, Mr. Jenks, and staff, generously built it for us at a charge far below its cost. During 1947 we passed the 100,000 mark in number of electrocardiograms taken, and this milestone was appropriately celebrated by a dinner in town with several former cardiac fellows and their wives coming from considerable distances to attend. It was a pleasure at that time for the medical staff members to express their indebtedness to four ladies who have been vital to our work during the years: Mrs. Catharine Vickery who has been clinic secretary, the Misses Agnes and Helen Donovan who have been office secretaries, and Miss Louise Wheeler who has directed the laboratory.

As the years have gone by our staff has steadily grown and our activities have expanded. A vertical fluoroscope for orthodiagraphy was installed in 1929 and now the new technique of electrokymography is being applied to determine its practicability.

One of the interesting and important new developments has been the evolution of phonocardiography. This has included in a very satisfactory way, in contrast to our experiences of ten or twenty years ago, the recording of heart sounds and murmurs on graphic records together with the electrocardiogram or on phonographic records for auditory reproduction or for transmission by suitable wiring to the individual seats of the Ether Dome, so that the members of the audience can listen to the patient who is being demonstrated down front. It was only last fall that the new wiring was put into the Ether Dome, some twenty or more years after failure of a similar attempt made by Dr. Richard Cabot in the Lower Out-Patient Amphitheatre. This time, however, the improvement of instruments and technics has given us a very useful new aid in teaching. It may be of interest for members of the staff to come to our routine Friday morning exercises from 9:30 to 11 to listen in. There still remains, however, the perfecting of adequate reproduction of heart sounds and murmurs by loud speaker.

Our experience in electrocardiography is being amplified by especial attention to the new advances in the use of precordial and unipolar limb leads.

An adolescent rheumatic fever clinic was added some years ago in the Out-Patient Department, and contacts have been established with the Hypertensive and Peripheral Vascular Clinics.

Many correlative studies have been made with still other groups, for example, with the thoracic surgeons in cases of chronic constrictive pericarditis and congenital defects, in particular patency of the ductus arteriosus and coarctation of the aorta, with the neuropsychiatric group in the study of neurocirculatory asthenia, with the neurosurgeons in sympathetic nerve resection for hypertension and angina pectoris, with the Harvard University Department of Anthropology (in particular, Stanley Garn) in the study of coronary heart disease, and with the House of the Good Samaritan in the study and follow-up of children with rheumatic heart disease. In connection with our children with rheumatic heart disease mention should be made of the very significant pioneer work of the Ladies' Committee for the Home Care of Children with Heart Disease established thirty-odd years ago by Mrs. Fritz Talbot, and of Miss Edith Terry and Miss Lorena Love who have helped thousands of children and their families through dark days of illness and have thereby set a pattern for similar work throughout the world. One of the present national authorities and leaders in rheumatic fever studies, Dr. T. Duckett Jones, was associated with our group for a good many years.

The problem of the serious complication of pulmonary embolism in cardiac patients resulted in a fruitful study of the recognition and treatment of leg vein thrombosis. The study of drug therapy, in particular that of digitalis and quinidine, has in the past absorbed the attention of the group quite frequently, and during the last few years diet has become a weapon of major importance, especially a quantitatively low sodium intake for the treatment and prevention of congestive heart failure. At present we have established a rice diet team for trial of dietotherapy in hypertension. And increasing attention is being directed to the effect of the various electrolytes on the heart and circulation and on the electrocardiogram.

The senior members of the cardiac group who are now veterans of a good many years standing are, besides the writer, Drs. Sprague, Bland, Palmer, and McGinn. In more recent years, Drs. Williams, Currens, Cohen, Wheeler, Clark, Alexander, and Paul have joined us. Dr. Gordon Myers is the present cardiac fellow and will continue with us, to develop cardiac catheterization for which we have organized a team and are about to build a new X-ray Research Laboratory on White 2. This laboratory has been donated by a friend and benefactor of research, Mrs. Theodore Brown, and will be used under the wing of the X-ray Department for their researches of all kinds.

Support of our clinical investigations came slowly at first, although it was a patient of Dr. William H. Smith, Mr. Skinner, who in 1913 gave the money which brought the first electrocardiograph to the hospital in 1914. Mr. Steedman in 1929 and 1930 made a generous contribution to the Cardiac Research Fund, but it has been only in the last few years that friends, mostly patients, and a few special funds have made it possible for us to look ahead with confidence to the support of our future studies.

One of the most important activities of our cardiac group has been in its constant affiliation with national, regional, and community heart associations and enterprises, both during and between the wars. This culminated on February 14th of this year, Valentine's Day, in our vigorous support of National Heart Week which has laid the foundation for the practical application of what we already know about hearts and for the enlistment of lay interest and support for the most important studies that still lie ahead.

Heart disease is the cause in this country of more deaths than the next five causes added together, and more than half of these deaths occur in persons under 70. And yet, as we all so clearly recognize now, heart disease is not a single disease like poliomyelitis. It is made up of many different kinds of involvement of the heart due to many different causes. Hence its complexity has added greatly to the need of more adequate study. As a matter of fact, the most important contribution ever made, in the opinion of the present writer, in the slow evolution of our knowledge of the heart and its diseases came from this hospital in 1914 when Richard Cabot wrote a paper, published in the *Journal of the American Medical Association*, entitled "The four common types of heart disease; an analysis of six hundred cases". In this paper he emphasized the vastly greater importance of diagnosing heart disease according to its cause than according to structural defects, such as had been the custom prior to that date. Our group of doctors in the Cardiac Clinics and Laboratory have gone on in the development of Cabot's thesis and, as a matter of fact, inaugurated back in 1921* the current practical plan of cardiovascular diagnoses based on the three-fold foundation of etiology, structural change, and functional state. It is, of course, very important to recognize the structural abnormalities and to determine the functional state of the circulation, which has of late years attracted much attention, but it is far more important, both for the sake of the patient and for the campaign against heart disease, to diagnose and study the fundamental causes of heart disease which include particularly rheumatic fever, high blood pressure, and coronary atherosclerosis, aside from many other less common or important causes. This emphasis on etiology with study of the causes has been the major contribution from our Clinics and Laboratory.

Except for accidents, the most common cause of death in the second decade of life in the U.S.A. is rheumatic heart disease. Although thyrotoxic and diphtheritic heart diseases have been practically wiped out during the last generation, cardiovascular syphilis reduced strikingly to a very small percentage in our more civilized communities, bacterial endocarditis made curable or preventable in 75 percent of the cases, chronic constrictive pericarditis relieved in 50 percent by surgery, and certain congenital defects like patency of the ductus arteriosus and coarctation of the aorta surgically eradicated, and although heart failure is now much better understood and far more satisfactorily controlled, the major task still lies ahead of us. This task consists of the solution of the problems of rheumatic fever, hypertension, and serious presenile coronary atherosclerosis which together cause 90 percent of all heart disease. These problems are at present unsolved, and yet with concentrated efforts the world over, most of us believe that the answers should be discovered within the next generation. Naturally, our group is eager to share in the work on these three kinds of heart disease.

Teaching, both graduate and undergraduate, has been in progress in the Cardiac Clinics and Laboratory ever since they were established and many courses, both long and short, have been given during the last thirty years. Naturally, the graduate teaching is the more important, as in any special field, and hence there has been established during the past two years, since the end of World War II, a special course lasting one year, under the auspices of the Graduate Department of the Harvard Medical School, limited to 12 men and women, and designed for suitably trained young internists who are especially interested in cardiovascular disease and who may or may not enter the field as a specialty. This course is now well under way and has had an enrollment of physicians from various foreign countries as well as from various parts of the United States and Canada. One of the sessions, which any physician on the hospital staff or visitor is likely to find of especial interest and value is the Cardiac Grand Rounds held in the Ether Dome every Friday morning from 9:30 to 11.

A short summary course for members of the American College of Physicians is given for ten days or two weeks each fall, and a special course in electrocardiography in the spring by Dr. Conger Williams.

Finally, despite the various activities based on the Cardiac Clinics and Laboratory mentioned above, the chief function of these clinics and laboratory is to study and to treat the patients themselves as a part of the hospital whole, whether on the open wards, in the Baker Memorial, or in the Phillips House. They thus happily remain an integral part of the Massachusetts General Hospital whose directors, trustees, and staff have for so long and so generously given us their wholehearted support.

Paul D. White, M.D.,
Chief, Cardiac Clinics and Laboratory

Dr. Paul D. White sailed from New York on the *Queen Mary* on March 20. From England he will go to Paris and then on to Prague where he is to represent Harvard University and receive an honorary degree at the six hundredth anniversary of Charles University. From there Dr. White will join the American Medical Teaching Mission in Greece and Italy. This Mission is one of three now being sponsored by the Unitarian Service Committee. Dr. White expects to return home at the end of June.

Dr. Chester M. Jones will also be a member of the group in Greece and Italy.

The hospital has suffered a serious loss.

Volumes 3, 5, and 7 of the records of the Medical Service autopsies, for the years 1876-1890, have disappeared from the shelves in the Treadwell vault. A notice of this loss has been posted for some time on our Post Office bulletin board, but so far no hint of the whereabouts of these volumes has resulted.

We still have faith enough in human nature to hope and believe that these priceless books will be returned just as soon as this notice goes out. If anyone knows of the present location of the books or can give Miss Seymour, our Record Librarian, any help toward tracking them down, please get in touch with her immediately. Her telephone extension here at the hospital is 270.

As a final inducement in our endeavor to repair this deplorable damage to our hospital records, we have decided to add, even though reluctantly — Please return the books. No questions will be asked, nor will the situation be made awkward for you.

DEPARTMENT OF RADIOLOGY

In facing and accepting readjustments which are to be expected following a war, the Department of Radiology has been no exception. Since the previous report, many changes from the old order are apparent.

During the past two years, shifts in the radiologic staff have occurred. Dr. Hampton, after much deliberation, decided to embark on private practice in Washington, D.C. Dr. Lingley and Dr. Schatzki returned to the Department and spent some time with us before going elsewhere — Dr. Lingley to private practice in Worcester and Dr. Schatzki accepting the position of Radiologist at the Mount Auburn Hospital in Cambridge. To compensate for these, Dr. Joseph Hanelin, Dr. James J. McCort, and Dr. William L. Palazzo have become active members of the staff. Dr. Hanelin came to us from the University Hospital at Ann Arbor; Dr. McCort had his residency at this hospital before entering the armed forces; and Dr. Palazzo had been a Graduate Assistant in the Department

*White, P. D. and Myers, M. M. "The classification of cardiac diagnosis", *Jour. A.M.A.*, 1921, LXXVII: 1414.

following training at Bellevue Hospital in New York.

Dr. Holmes, who left us in 1945, is enjoying his retirement in Belfast, Maine. He spends a few hours each week at the local hospital, thus giving himself the pleasure of keeping in touch with his lifelong interest and giving the hospital the benefit of his sagacity and experience. At the annual meeting of the Radiologic Society of North America, held in Boston in December 1947, Dr. Holmes's "boys" gave a dinner in his honor. Fifty of the eighty-four men he had trained were present. This large attendance — men gathered from all parts of the country— indicates the high esteem in which the "teacher" is held by all those who have had the privilege of studying under him. Dr. Holmes's talk, made in his usual concise and thoughtful manner, gave all who heard it a feeling of satisfaction and enthusiasm for the field of work they had chosen. He pointed out that philosophizing was something allowed a person in his position; his points were illustrated by pertinent stories from his own experience. A paper he, as the representative of Radiology, read before the American Medical Association last June also shows the marks of a great man. One has but to hear Dr. Holmes "philosophize" to understand the admiration, respect, and affection all his "boys" feel for him.

The prime function of the Department of Radiology has continued to be the care of the patient. During 1946 and 1947, more patients were examined than during any two-year period in the past; over 100,000 patients received either diagnostic or therapeutic aid. Recently, through State and Federal aid, a chest survey has been in effect. This is available to any patient entering the hospital. The benefit to the patient and to the hospital is yet to be determined, although the long-range value to the public at large should be clear. Another program of similar type is under consideration. This is a survey study of the stomach in asymptomatic patients beyond the age of forty, in an attempt to detect early cancer. This problem does not adapt itself as readily as the chest survey because of technical difficulties.

Teaching continues to be a most important phase of the work in this, as in other departments of the hospital. The students are both postgraduates and undergraduates — the former coming from widespread sections of this country, as well as from abroad; the latter having the opportunity of taking assigned or elective courses.

The research that has been under way is largely in the field of evaluation of previous technics and results — of taking stock, one might say. Such review of past work inevitably results in improved diagnostic and therapeutic approaches to various conditions. Investigations of this type will be continued.

We are awaiting installation of therapy equipment in the 2 million volt range. It is hoped that with the use of this new equipment further cures and more satisfactory palliation may be achieved. The policy of the Department at the present time is to thoroughly investigate the therapeutic range from one to perhaps 10 million volts. It is our belief that therapy will be found to be most effective in this range, although we have not closed our eyes to the possibility of investigating the betatron in the future. This program is under the direction of Dr. Milford D. Schulz.

A study of congenital heart lesions is under way, with Dr. Stanley M. Wyman cooperating with Dr. Paul D. White's group. This investigation should provide information which may be of considerable benefit to this group of patients.

Other fundamental research involves a study of blood changes in persons exposed to roentgen rays, in order to forestall or to detect early abnormalities indicating danger of the development of leukemia in such individuals. In order to accomplish this it is necessary that changes in the blood should be accurately correlated with the known amount of radiation received by the bone marrow. The value of this study lies not only in the field of X-ray, but in the wider field of all penetrating radiations.

It is hoped that the Department may maintain its present high standards and improve wherever possible in the future.

Laurence L. Robbins, M.D.,
Chief of Radiology Service

* * *

At the monthly meeting of the Medical Staff on March 8, Mr. Stanley Garn of the Department of Anthropology at Harvard spoke on "The relation of anthropology to the medical sciences". Mr. Garn has been working with Dr. Paul D. White's group.

Tea was served, as usual, in the Medical Staff Room before the meeting.

* * *

A copy of *Orvosok Lapja,* a Hungarian medical journal, has come to our hands. Its leading article, "Experiences of an American journey", is by Dr. Andrew Hedri, Professor of Surgery at the University of Budapest, who visited M.G.H. in October of 1947. Here is a translation of a portion of the article:

> At the Massachusetts General Hospital I saw the Department of Surgery of the Harvard Medical School, under the direction of Churchill, the foremost surgeon of Boston. I had the opportunity to watch several operations executed by him and was especially impressed by a lobectomy and a pneumonectomy. I was told that he is considered the first thoracal surgeon of America. On the second day of my stay in Boston, Churchill asked me to give a lecture to his staff. This was done and he introduced me. Several surgeons of Boston took part in the discussion.
>
> Looking back to our American journey, I must say that perhaps it is Boston which remains foremost in my memory.The reason may be the atmosphere of medical history which one experiences around Harvard. Churchill told me about the centennial celebration, as it was in Boston where the first [public demonstration of] ether narcosis [for major surgery] was given on October 16, 1846. He took me to the amphitheatre where that first operation under ether anesthesia was executed. . . . It was here that I had the strongest impression about the progress of surgery in the last century.
>
> I left Boston with aching heart and was very sorry I was unable to spend more time there.

Accompanying the article are illustrations showing our Bulfinch Building in 1821, M.G.H. as it is today, the glass inhaler with sponge inside which Morton used for that first operation here in the Ether Dome, and a picture of a modern narcosis apparatus.

* * *

Massachusetts General Hospital has added two more "firsts" to its long and impressive list.

On January 9, the American Red Cross Arts and Skills Service began a regular schedule of work here in hand crafts — the first time this has been done in any civilian hospital in the country. Heretofore, such service has been available to military hospitals, only. Under the supervision of five members of the above branch of the Red Cross, patients on the Research Ward in the Bulfinch are making such articles as stuffed felt animals; furry bedroom slippers; stenciled handkerchiefs, aprons, napkins, towels, etc.; plastic belts; huck bags; and leather picture frames and pocketbooks. A very attractive exhibition of things made by these patients appeared in the Brick Corridor not long ago.

The last "first" occurred on the afternoon of March 11 when, in the Warren Library, a group of ambulatory patients enjoyed a program given by the Entertainment and Instruction Service of the Red Cross. On July 15 the Red Cross absorbed the old organization known as the American Theatre Wing and, under the new name, has been putting on shows in veterans' hospitals since that time. The program arranged for M.G.H. was the first to be given by this service in any civilian hospital in the country.

To start off with, the patients listened to Paul Edward's playing of one of his own piano compositions entitled "Prelude", after which they absorbedly watched four of America's outstanding cartoonists sketch, in colored chalks, several of their best-known characters. These cartoonists were: Ed Payne, creator of "Billy, the boy artist" and "Professor O. Howe Wise", comic strips begun by Mr. Payne in the *Boston Globe* in 1899; Charles Donelan, a past member of the *Boston Herald* staff and now a well-known illustrator for various magazines; Al Capp, whose "Li'l Abner" is a top favorite among readers of the comics; and, last but not least, Boston's own Frank Dahl, whose cartoons in the *Boston Herald* are enjoyed each morning by all readers of that newspaper and whose book-form collections have brought smiles to the faces of thousands the country over and beyond. The casual chatter emitted by these artists while they produced their sketches was most amusing.

The last number on the program was a game which suggested, in a way, the old parlor game of musical chairs. Each cartoonist stood before a blank sheet of paper. While Mr. Edward played the piano, each man started to sketch. When the piano stopped abruptly, the men swapped places, and so it went until each had contributed a part of each sketch. The results were amazing, to say the least.

It was a rare opportunity for the patients of M.G.H. to watch these men perform within such close range.

The Board of Trustees, at their meetings on February 20 and March 5, voted:

To continue Dr. Arthur W. Allen temporarily as Chief of the East Surgical Service, pending the recommendation of the General Executive Committee on the organization of the Surgical Service.

To appoint:

Dr. Glenn E. Behringer as Third Assistant Resident in Surgery, beginning February 15;
Dr. Lester J. Bienvenu as Junior Resident in Dermatology, beginning July 1;
Dr. James O. Elam as Assistant Resident in Anesthesia for a period of two years, beginning January 1, 1949;
Dr. Robert M. Green as Consultant in Anatomy;
Dr. Roy W. Leeper as First Assistant Resident in Dermatology, beginning July 1;
Dr. William R. Richardson as Third Assistant Resident in Surgery, beginning March 1;
Dr. Blair van H. Thatcher as Third Assistant Resident in Surgery, beginning March 1;
Dr. Earle W. Wilkins, Jr. as Third Assistant Resident in Surgery, beginning March 15;
Dr. Henry J. Zukowski as Assistant Anesthetist for six months, beginning July 1.

At their meetings on February 11 and 18, and March 3 and 10, the General Executive Committee voted to promote:

Dr. George L. Nardi to the position of First Assistant Resident in Surgery, as of March 1;
Dr. Jesse E. Thompson to the position of First Assistant Resident in Surgery, as of March 1.

To appoint:

Dr. Alfred Campo as Graduate Student Assistant in Surgery;
Dr. Charles D. Cook as Clinical Fellow on the Children's Medical Service for the period ending July 1, when he will become Assistant Resident on that Service;
Dr. Charles G. DeMuylder as Graduate Student Assistant in Surgery;
Dr. John M. Erskine as Clinical Fellow in Surgery, beginning March 8;
Dr. Vilem Kilian as Research Fellow in Surgery, effective as of March 1;
Dr. James R. Lyman as Clinical Assistant in Medicine, assigned to the Allergy Clinic;
Dr. Charles G. Mixter, Jr. as Clinical Assistant in Surgery;
Dr. Alfonso Ocampo as Graduate Student Assistant in Surgery;
Dr. Thomas L. Shipman as Clinical Assistant in Medicine;
Dr. William A. Tillmann as Clinical Fellow in Psychiatry for one year, beginning July 1.

New addresses:—

Dr. Richard W. Greene (*M* 1945), 92 Marion St., Brookline, Mass.
Dr. Lorand V. Johnson (*Oph.* 1937), 10515 Carnegie Ave., Cleveland, Ohio.
Dr. Herbert C. Moffitt, Jr. (*EM* 1942), 2116 Baker St., San Francisco 15, Cal.
Dr. P. N. Papas (*a. in U* 1937-47), 199 St. Paul St., Brookline, Mass.
Dr. Harley C. Shands (*a, in Psychi.*), 32 Agassiz St., Cambridge, Mass.
Dr. Clarke Staples (*gr. asst. S* 1942), 543 Highland Ave., Malden, Mass.

MASSACHUSETTS EYE & EAR INFIRMARY

The Massachusetts Eye and Ear Infirmary for the past 120 years has been taking care of the eyesight and hearing of thousands of men, women, and children from all over New England. This month, for the first time in its history, the Infirmary is asking for community help in raising $500,000 to modernize its operating suites and to build an additional floor on the present building that will not only add beds but also make a more efficient hospital unit.

The Emergency Building Fund Committee consists of: Frederic Winthrop, Chairman, Henry Porter, Edmund V. Keville; Ladies' Visiting Committee: Mrs. Sullivan A. Sargent, Mrs. Leslie Soule; Doctors' Committees: Alumni—Dr. Robert L. Goodale; Ophthalmology Staff—Dr. Edwin B. Dunphy; Oto-Laryngology Staff—Dr. LeRoy A. Schall; Special Gifts—William A. Parker; Trusts and Foundations — Edmund Keville; Business and Corporations—Henry Porter.

At a meeting of the Infirmary's Board of Surgeons in Ophthalmology, it was voted to reinstate the appointment known as "Graduate Assistant in the Out-Patient Department", these volunteer appointments to be made on an annual basis. Following the vote, Dr. D. Robert Alpert and Dr. Irving L. Pavlo were appointed Graduate Assistants in the Eye Out-Patient Department.

Dr. James A. Moore (*Oto-Lar.* 1940) has been appointed Professor of the Department of Oto-Laryngology at Columbia University. Dr. Moore had previously held the position of Associate Professor while taking the course at the Lempert Institute.

Dr. Maurice Sherman, who recently completed the course for Graduates in Oto-Laryngology at the Harvard Medical School, began his residency in Oto-Laryngology the beginning of March.

Two surgeons from London, England — Mr. W. A. Mill from Saint Thomas' Hospital and Mr. F. C. W. Capps of Saint Bartholomew's Hospital—recently spent some time here observing techniques in our operating rooms and clinics.

Miss Ruth Sleeper, Director of the School of Nursing and Nursing Service, spent the week of March 1st in Chicago, participating in an institute on nursing education conducted by the American Hospital Association and the National League of Nursing Education.

A new program especially for staff nurses has been announced by Miss Edna S. Lepper, Assistant Director in charge of Nursing Service. While its primary purpose is to orient the nurse who is new to the hospital, a number of the meetings will concern matters of general interest and will be attended by all staff nurses. Topics that will be covered in the program include: hospital and school history, hospital organization, the counseling programs for students and graduates, the ward teaching program, research at the hospital, the nurse's role in research, the nurse-patient relationship, and psychiatric nursing.

The Medical Clinic at McLean is a small but busy unit that serves the personnel of the hospital much as the general practitioner supplies the needs of his community. Indeed, the problems presented have a similar diversity and range, from the present influx of early spring colds to more serious medical problems. During the course of the past year, some 650 patients have been seen during clinic hours; of these 91 required hospitalization for observation and treatment.

The facilities provided include a well-equipped consultation and examining room, staffed by a physician and two nurses. An observation ward provides five to seven hospital beds in private or semi-private rooms for the care of bed cases. The services of our laboratory technician are available for the routine examination of specimens, hematology, serology, and some blood chemistry. For the more specialized laboratory tests, advantage is taken of the services of the Massachusetts General Hospital laboratories. X-ray examinations, EKG, and basal metabolism tests are done here. Incidentally, we have just recently installed new X-ray equipment, including a fluoroscopy unit. Our pharmacy dispenses all medications. The physiotherapy departments are accessible when hydrotherapy, diathermy, massage, etc. are indicated.

A close liaison exists with the Staff Clinic at the Massachusetts General Hospital. Surgical problems, most often accident cases, are given emergency treatment here, then transferred through the Staff Clinic to surgery, so that the patient may have the advantage of the skill of trained surgeons. Hand injuries involving nerve or tendon lesions, dislocations and fractures, have been handled in this way. Referrals are frequently made through the Staff Clinic to the various specialty divisions of the O.P.D.

whenever consultation or special treatment is indicated.

As I have said, we see in the main the typical problems that present themselves in the office of the general practitioner: seasonal variations in small epidemics of upper respiratory disease and gastro-intestinal disturbances, allergies, skin disease, industrial accidents. Then there are the long-term management and follow-up cases of cardiovascular disease, diabetes, anemias. Interesting diagnostic problems not infrequently present themselves. In these, as in all medical emergencies, we are fortunate in having our medical consultant constantly available.

Another function of the clinic lies in the field of preventive medicine. Admission and annual physical examinations and laboratory work-ups are given to the incoming nursing classes and to all new employees. Inoculations against communicable diseases are given. There is the usual amount of paper work in maintaining the health record files and in filling out industrial accident and compensation reports.

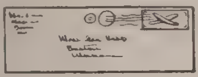
Monotonous? No. The clinic provides the same "human interest" that the doctor of the old school was privileged to enjoy. The chef comes for "some medicine for his lumbago" and stays to discuss the politics of the kitchen; an affiliate returns for her "check-up" and has interesting comments upon her experiences here; a secretary fortunate enough to spend a winter vacation at the Olympic Games stops by for a chat and a smallpox inoculation.

So far, however, the Psychiatric Service is one step ahead. . . . . . We have not had a baby!

Marie Lorenz, M.D.,
Clinic Physician

A recent gift to the Archives Department:—

From Mrs. Samuel Mixter—Dr. Oliver Wendell Holmes's engraved calling card, with his name and the date April 3d, 1894, written by him on the reverse side; also, a stamped envelope addressed to himself by Dr. Holmes.



Dr. Logan H. Roots (*WS* 1933) is back in China, on the staff at the Church General Hospital, Wuchang 1, Hupeh. Dr. Daland has passed on to us this interesting letter he received from Dr. and Mrs. Roots. The letter was written by Mrs. Roots, and gives us a first-hand account of life as it is lived today in China.

Ten years ago the terrible war that caused so much misery and confusion came to China. And ten years have passed since we have lived as a family in Wuchang, where Logan and I began our combined career. The war sent us wandering, too, as you know, and separated us for over two years. Now, back in the old city on the Yangtze, we are starting over, alongside the Chinese people who have really suffered.

We sailed from San Francisco on March 7, on the former Army transport *Marine Adder*, and arrived in Hongkong on March 26. Out of Boston's midwinter into California's early spring, a hot day in Honolulu, and then pleasantly warm weather in Hongkong and Canton — both cities of the tropics. By mid-April, we felt we had already had two months of spring. Then we had two more, and liked it.

We came dormitory style on the ship, with table service, which was better than the previous travelers on the *Lynx* had had. But we, too, felt crowded and had to hunt for a quiet corner and a way to keep clean. One reads of the American liners now under construction, soon to replace these limping transports, and hopes rise again for the next time of transit.

We found old friends in Hongkong and, having to wait two weeks for train service, we enjoyed the sights and the people and had a lovely Easter there. Finally, we found a way to go to Canton by coastal steamer. It was a pleasant, eight-hour trip, with delightful scenery. In Canton, we had to wait three days, so we took advantage of the time and visited both the great Hackett Medical School and the Lingnan University, of which we had heard so much. Living in the New Asia Hotel was a strange experience, for it is a mixture of old and new China, and is hardly satisfying on either side. The train trip from Canton to Wuchang was a treat in scenic beauty. Our car was divided into compartments, which gave us considerable privacy. And we were supplied with pots of hot tea and little cups, and basins of hot water for washing. No water faucets nor dressing rooms, but our real needs were supplied. Our needs and our wants require a clear dividing line these days. We ate plain Chinese food at crude tables by open windows, with soldiers for companions.

Our train arrived after midnight, and good friends were waiting for us at the East Gate Station. Both Chinese and foreign — they had waited a long time, for the train was late. We were so grateful to them, for with children and baggage to manage in the small hours of the morning (we were three families together), outside a Chinese city — well, one just is glad for friendly help. It was still and starlight, and my ricksha coolie talked to me part of the way. He told me how the war had spoiled the city, and how poor the people were now. At last we drew up in front of the big front gate of the hospital. We were at home! I walked through the compound as in a dream to the house prepared for us. When we had left, in 1937, our daughters were two and three years old. Now they were eleven and thirteen, and we were bringing our seven-year-old son here for the first time. Our hearts were indeed warmed by the great kindness of our American nurse and other hospital friends who had helped to clean the house and arrange it with the first necessities. Furniture and utensils were all gone, but they had brought in beds, a dining table and chairs, and several odd pieces of furniture from the hospital to tide us over. And our dear friend and cook, Chang Chia-tsai, who had been with us through the war years in the far west, had come back to us and had done many things with little to do with. The windows and floors were clean, and enough supplies in the kitchen so we could have breakfast the next morning. Hot water was ready for our baths. And our good amah, who then lived across the river in Hankow, had come over and had made up our beds just the way we liked them. She also rejoined our home, to our great joy. We have been greatly blessed in these two servants. They are loyal, Christian friends, capable, quick, and intelligent, always ready to tide us over the rough places and to help us understand their customs and people. When we were all together again, they said contentedly, "Now we are one family." We are quite sure that it is right relationships with the people with whom we live that make life worth living, especially those we know best.

It was about three weeks before our first freight came, but there was much to be done with the trunks we already had. Everything had to be unpacked, sorted, and repacked, for we had to wait for chests of drawers and other storage facilities. Warm weather had come and we needed summer clothing. The children's teachers had given them a few schoolbooks to finish the term; so, as soon as we were in working order, we started a morning session of school, sitting round the dining room table. It was not easy to pick up the threads of many subjects for three different grades and try to teach them under this new environment. Besides, there were many interruptions. We were newcomers and must be welcomed and called on, which of course we appreciated.

Logan was much needed in the hospital. The main building was badly looted, its roofs leaked, and it could not yet be used. It had not been bombed, but it had been occupied by Japanese troops and was completely stripped. However, through the church's rehabilitation funds, new beds and supplies had been sent to us. These were being partly used in a smaller hospital building, formerly a nurses' home, which had been cleverly transformed by Miss Reiley and her Chinese assistants. There is a small operating room, a delivery room, men's and women's wards, and offices — an 80-bed hospital. When the main building can be used, there could be a 200-bed institution again. When we arrived, there was only one full-time Chinese doctor, with 30-odd beds, loyally holding things together, and outside doctors coming in for clinic hours. Logan has been working through these six months, trying to find an adequate staff. This is a tedious and difficult task. During the war, our Chinese superintendent went into private practice and he finds it too good a thing to leave. Younger men are looking for places with coast city hospitals or government hospitals, where there is a larger salary and better equipment. But we feel sure that if our standards are high and equipment good, we shall eventually find just the right men for the mission hospitals, even with less material attraction.

The nursing problem is a large one, too. During the war, the nursing school was broken up, and there are many difficulties about restarting one. We are getting along with about a dozen faithful, older graduates and midwives, and a small group of very young nurses' aides. But this is only a transition period and gives us something more to work for. Meanwhile, under the care of our small staff, lovely, black-haired babies are being born, successful operations done, broken bones repaired, and medicines old and new administered. Eye diseases and cataracts are treated. Our out-patient department has been recovered from its temporary occupants, who were very reluctant to depart, is now repaired, and is in heavy, day-long use. Rejuvenating the main building is now started in earnest.

The summer months were very pleasant, in some ways, but they went slowly for me. June was a relatively cool, wet month. At the time of the Dragon Boat Festival in late June, it was decided that I should take the family, with our cook and amah, to the old family cottage in Kuling. During the great heat of July and August, foreign children just exist if they are not taken to the hills. It seems that the sun came extra close to several countries last summer, including the U.S.A. The last two weeks in July and three weeks of August were intense, with no break day or night. I was very thankful that our children were so well and active and happy there in the mountains. But Logan and several others of our workers stayed in the valley through the whole summer. It was very hard, for prickly heat tormented and sleep was not good. Then, to top it off, Logan had an accident just at the beginning of the August heat spell. He slipped and fell hard, break-

Dr. Edward D. Churchill — Chief of West Surgical Service

ing six ribs and puncturing his left lung. The pain was so severe he could not lie down for a week, and sleep and appetite were poor. I was distressed, but could do nothing to help except write letters. He gradually grew better, and the first of September he suddenly arrived in Kuling, having flown from Hankow to Kiukiang that same afternoon. We had five wonderful days together.

I studied Chinese for two months in Kuling, for I had forgotten so much during the years in America. Now it goes much better, but this blooming language will always be full of thorns for me! It helps to keep me humble, I suppose, but I like to imagine how much more useful I might be if I could really indulge in free speech. I'll keep on trying.

Kuling, after ten years away, seemed much the same with its glorious hills, trees, brooks, and waterfalls. The houses are mostly in bad condition, and many completely in ruins. Our cottage, passed on to us by Logan's parents, needed many repairs and some furniture, but the roof was still on. Hundreds of refugees, as well as the Japanese, are said to have lived there. Paint is badly needed. But an old friend, who lives in Kuling all the time, put men to work last spring and made the house livable. We had all we needed for health and comfort, and we are grateful.

On September 6, we closed up the cottage and started for Wuchang. It was a bright, warm day, and all of us but small Logan and the amah walked the six miles down the mountain trail. We fortunately found passage on a good boat for Hankow and arrived the next morning. The weather turned very cool in the night and remained so for several days. That was a special blessing, for we had twenty-two boxes of freight to unpack, sort, and place. That was our second shipment which had started from Boston in January and reached us in July. It had been sitting in Shanghai since March. Others have had to wait longer than that for freight, so we are not complaining. The children helped in many ways, and it was really a family lark, finding things we had been needing. The servants were specially glad for the new kitchen utensils and a few modern conveniences. In America we accept casually the hundreds of things that make work easier, but here we learn to appreciate every small item. However, it gave me a great surprise when I handed the servants a good broom, thinking they would be glad not to have to stoop to the three-foot kind which they buy here. The amah prefers the short one, and says the tall one is too slow! She is happy with a good American washboard and galvanized tin tub and lightweight pails, however. I doubt if she would like an electric washer. Well, we have scrubbed and painted and varnished, made and hung curtains, and generally made the house look and feel like home. We have a guest room ready for use — a real boon out here.

The schoolroom is our pride and joy. It is a small, pleasant, downstairs room with good lighting. We brought out three used school desks for the children, and I bought mine here. Our little Estey organ is an asset for school music. The new books are most attractive. We are using the Winnetka Extension course and all of us are finding it very interesting and satisfactory. We opened school on September 29 with four pupils — our three and Peggy Van Sant. She is a lovely little girl whose parents teach in the Central China University and at St. Hilda's Middle School. Peggy is eight years old and in third grade, so she fits perfectly with Logan. They enjoy each other, and it will be good for them both. Loretta is in first year junior high and Eleanor in second. Not many pupils, but a full course. We have school all morning and for about an hour in the afternoon. Two of the University teachers have arranged to give the children music lessons, and they are all studying Chinese. Little time left for mischief for either pupils or teachers!

You have heard of the galloping inflation in China. When we came in the spring, it was $12,000 to one American dollar. Now it is about five times that. You can imagine how you would feel paying $1,000 for one egg. That part of our breakfast costs $6,000. But you will be relieved as soon as you do a little arithmetic, just as we are. It is very hard on the people, and so confusing. Martial law goes on and off, but there seems no real danger here. We still say there is a great future for this wonderful country.

Dr. Terry E. Lilly, Jr. (*ES* 1943), who has been Assistant Resident at the Massachusetts Memorial Hospitals since last July, sends this future new address. He writes:

Please continue making my pleasant monthly visits to the General possible by renewing my subscription to The News.

After July 1, my address will be Memorial Hospital, Center for Treatment of Cancer and Allied Diseases, New York, N. Y.

Dr. James Keeley (*NS* 1937) brings his record up to date and gives us much information in few words. He writes, from Mayo Clinic, Rochester, Minnesota:

I hasten to comply with your impassioned appeal for news.

Continuing my Fellowship in Surgery on the Mayo Foundation. Now in my last six months in Rochester as first assistant to C. W. Mayo who is a grand person and an excellent surgeon.

Married in June 1946 to Mary Hart Cooke of Poughkeepsie and Vassar College. Son James born 9 January 1948. Mother and baby doing very well.

Part I, America Board of Surgery is behind me and I am hoping to complete the examinations in another year. Will receive M.S. in surgery from University of Minnesota this June.

After a summer vacation, expect to practise surgery in Poughkeepsie, New York. Home address: 103 South Hamilton Street.

Although I have been separated from the Army, I have just been notified I have been awarded a Bronze Star.

Dr. Edwin C. Albright (*WM* 1942) is one of those who have thoughtfully kept us informed of their whereabouts, and we appreciate it. This note from him arrived recently, from 3901 Euclid Avenue, Madison 5, Wisconsin.

Please renew my subscription to The News and accept this latest progress note.

I expect to finish a residency in medicine and commence an instructorship in the Department of Medicine, University of Wisconsin Medical School, in July of this year.

Our family was increased by the arrival of a second son, David Robins, on August 6, 1947.

Thank you for The News — the most enjoyable contact with the M.G.H. and its alumni.

THE NEWS

No. 68 Boston, Mass. May 1948

MASSACHUSETTS EYE & EAR INFIRMARY EAR, NOSE AND THROAT CLINIC

The story of the Ear, Nose and Throat Clinic of the Massachusetts Eye and Ear Infirmary is that of the development of Otology and of Laryngology as specialties.

From general medicine and surgery, diseases of the eye were the first to emerge as a specialty, followed by diseases of the ear, and later by those of the nose and throat. Stimulated by their study abroad, and modeled after similar and older institutions in Vienna and London, Drs. Edward Reynolds and John Jeffries, early in 1824, started a clinic in a small room in the Scollay Building, situated in what is now the center of Scollay Square. The clinic was an instant success, and its history has been one of a constant search for larger and better facilities.

The original "Boston Eye Infirmary" was incorporated in 1827 as "The Massachusetts Charitable Eye and Ear Infirmary", thus making it the second oldest institution of its kind in America. In 1924, the name was changed to "The Massachusetts Eye and Ear Infirmary"; the present building, built in 1899, is its sixth home.

Here, in close proximity to the Massachusetts General Hospital, it is natural that the two independent institutions, with their own board of lay managers and their separate finances, should work in close harmony and cooperation in the care of their patients. The members of the staff of the one institution are, by courtesy, staff members of the other institution. The Ear Clinic of the Infirmary takes care of the ear patients of the General Hospital.

Laryngology received its first recognition as a specialty in 1866, when Dr. H. K. Oliver, one of the Visiting Physicians of the Massachusetts General Hospital, received an appointment at the Harvard Medical School as a lecturer in "Consultation, Percussion and Laryngology". He was succeeded in 1872 by Dr. F. I. Knight as Lecturer in Laryngology, and a special Laryngological Clinic was established in the Amphitheatre Building. This was the first clinic of its kind in New England.

In 1922, the Laryngological Department of the Massachusetts General Hospital was granted the use of beds in the Infirmary and became a Department of the Infirmary. Since 1925, the surgeons of the Aural and Laryngological Departments united into one group as Oto-Laryngologists. On January 1, 1928, the Laryngological Out-Patient Department of the Massachusetts General Hospital was taken over by the Infirmary. At the same time, the Out-Patient Department of the Infirmary and the Massachusetts General Hospital were housed together in the new Out-Patient Building, erected on Fruit Street on land owned by the two institutions.

The final unification of the two clinics —Otology and Laryngology—was accomplished in 1947, when a remodeling of the space occupied by the Nose and Throat Clinic provided improved quarters for the combined clinics.

The Ear, Nose and Throat Clinic now consists of eight rooms, with a central sterilizing room and a central dark room. Each room has running water, X-ray view box, compressed air and suction, and equipment for a thorough examination of the patient.

The patients are seen by appointment and the physician is no longer the unknown factor. His name now appears on his booth, resulting in improved physician-patient relationship.

That the Ear, Nose and Throat Clinic is busy is shown by:

No. of new patients (1947)	3,711
No. of visits (1947)	28,392
Total of visits	32,103

In addition to the care of patients, the clinic is active in both under- and post-graduate teaching. Since 1899, all teaching in Oto-Laryngology of the Harvard Medical School has been done at the Infirmary. Classrooms for the teaching of undergraduates are a part of the Out-Patient Clinic, where patients may be utilized for instruction of the future doctors.

In 1940, a special clinic for the deaf was organized as part of the Out-Patient Department. This clinic is partly for research into the causes of deafness and partly for rehabilitation of the deaf. Here, too, are held special classes in lip reading, speech correction, hearing aid fitting, and hearing aid instruction.

For the past year, the Out-Patient Ear, Nose and Throat Clinic has provided a classroom for the rehabilitation of the laryngectomized patient by the development of speech without a larynx.

LeRoy A. Schall, M.D.,
Chief, Oto-Laryngological Department

* * *

Dr. Fritz Lipmann, our Research Chemist, has been given the Mead Johnson and Company award for Research on the Vitamin B Complex. This was done on recommendation of the American Institute of Nutrition at Atlantic City, on March 16. A cash prize of $1,000 was included.

Dr. W. Franklin Wood, Director of McLean Hospital, has been appointed President of the Massachusetts Hospital Association.

Dr. Albert G. Englebach, past Assistant Director at M.G.H. and now Director of Mount Auburn Hospital in Cambridge, Massachusetts, has been appointed President of the New England Hospital Assembly.

* * *

During the months of April and May, the Medical Art Department and the Photographic Laboratory is presenting a serial pictorial story of the activities of their respective departments. The purpose of the exhibit is to assist the members of the hospital by giving information on the techniques in Medical and Photographic Art, together with cost of engraving and types of paper used in reproduction. Other departments have, from time to time, used the lighted exhibition boxes for their exhibits. We hope those who have not yet availed themselves of this opportunity will do so.

It was with an ulterior motive in mind that we planned this recent exhibit. The existing exhibition boxes have been found inadequate for the mass of material, suitable for exhibition purposes, this hospital possesses. The four boxes we now have were donated by the Ladies' Visiting Committee and Dr. Arthur W. Allen. We would welcome donations to place additional exhibition boxes in the Brick Corridor, as that is an ideal place for exhibits. Spring will bring a number of conventions to M.G.H., with interesting material which will never be seen unless we have more adequate facilities for displays.

Donations may be sent to the Medical Art Department.

* * *

On April 5, our outgoing local telephone calls began to be handled differently by our telephone operators. In case you may not know about the new procedure, here is a paragraph from a notice sent recently round the hospital:

"The new procedure will be to dial the operator, identify yourself, and then give the name of the exchange you wish to call: i.e., 'Hancock'. The operator will then connect you with an outside dial tone and you will dial the number yourself. Dial only two letters and five numbers, such as 'HA 6-5493'."

Notices explaining in greater detail the change in telephone procedure are posted on bulletin boards outside our hospital post office, at the foot of Treadwell stairs, and elsewhere.

THE HYPERTENSION CLINIC

In 1928 and the years following, the Hypertension Clinic appeared gradually and unofficially in the medical Out-Patient Department, in response to a special interest. This was an effort to assay the effectiveness of various drugs and diets in essential hypertension. To do this it was necessary to have a number of patients, in whom the previous course of the blood pressure was recorded, followed for a long time. During the early thirties such a group was being followed by studies of the symptoms, the course of the disease, the organic changes, and the effectiveness of therapeutic procedures. Soon, patients were being referred for evaluation and follow-up from other clinics in the hospital. Various members of the staff were associated with this work. Two were Dr. Ashton Graybiel, now Director of a research laboratory in aviation medicine for the Navy, and Dr. Edward G. Thorp, now Chief of the Medical Service of the Malden Hospital. Also, we had an occasional foreign colleague from the cardiac laboratory—one of whom was Dr. Alberto C. Taquini of Buenos Aires, a member of the International Council of Cardiology.

Eventually, the group of patients was sufficiently large to require a special day and a clinic secretary. The latter position was first held by Edith M. Palmer, a graduate of the MGH School of Nursing in 1928. The group was well organized by 1934-1935 when Goldblatt's work renewed interest in the renal factor of hypertension and when the possibilities of surgical relief of hypertension were being explored. An investigation of the renal etiology of hypertension was undertaken by Drs. Richard Chute and Neil L. Crone. Soon, Dr. Dera Kinsey, now at the Massachusetts Memorial Hospitals, and Dr. Watson F. Rogers, a Graduate Assistant at the hospital, joined the clinic. Miss Olive L. Dingle, later famous for "dingelizing" or doing posture and cold tests, now at the Massachusetts Memorial, was then engaged in statistical studies. Dr. Reginald H. Smithwick, now Professor of Surgery at Boston University, was the surgical colleague. Various surgical procedures for relief of hypertension were employed by him before the dorsolumbar splanchnicectomy technique was devised. A major concern was the selection of patients for surgery and evaluation of the results, but at the same time a large number of patients were followed, different ones treated by diet, by drugs, and by psychotherapy.

During the war, residents in cardiology and graduate students from that department, together with Dr. Kinsey and Dr. Dorothea G. Loofbourow, carried on the work which became largely a follow-up of the surgically treated patients. Since the war, the medical treatment of hypertension by drugs, by various diets, and by psychotherapy is again being stressed, along with our continued interest in the surgical treatment. The clinic, together with the group in the hypertension research laboratory and the cardiac laboratory and the hospital's committee on research diseases of the autonomic nervous system, is attacking hypertension—one of medicine's major unsolved problems—on many sectors, bringing to bear the knowledge, experience, and techniques from many of the hospitals' clinics and laboratories.

Mrs. J. W. M. Bunker has recently resigned as secretary, after managing the paper work during the war. Mrs. George Whitney and Mrs. Augustus H. Vogel are now in charge. Dr. Loofbourow and Dr. James H. Currens are making a special study of the rice diet. Dr. John T. Quinby is a regular member of the clinic. Dr. Fred Alexander and Dr. Stewart Cooper from the hypertension research laboratory, Dr. Oglesby Paul and Dr. E. A. Stewart Reid from the cardiac laboratory are interested in the surgical follow-ups, the teaching and dietary problems respectively. Dr. Henry H. W. Miles and Dr. Jacob E. Finesinger are working on psychiatric aspects. Most important of all in the clinic, from the beginning, have been the many good and loyal friends who are our patients. Each year there are some we see no more. But happily there are many who continue with us and remain well, which teaches us that high blood pressure often may be compatible with many years of useful life. It is our endeavor to find the means of steadily increasing this portion of our clinic.

Robert S. Palmer, M.D.,
Chief, Hypertension Clinic

* * *

An Anemia Clinic has been established in the Out-Patient Department, as another section of the Medical Clinic. It is designed to handle cases of blood dyscrasias other than lymphoma and leukemia. Dr. Bernard M. Jacobson is heading up this clinic.

The Anemia Clinic is held every Friday afternoon between 1 and 4 P.M. Appointments may be made by calling the Massachusetts General Hospital, Extension 235.

* * *

The Printing Department has recently installed machinery for a new process of duplicating. It is best used in place of the mimeograph and hectograph and usually produces copy which gives a better appearance, at the same or lower cost. The service of the shop also includes the preparation of the master from the material submitted.

The service is available not only for hospital business, but for other activities associated with the work of the hospital. Mr. F. E. Selleck, the Head Printer, Extension 898, will be glad to show samples of the work and discuss arrangements for having it done.

J. S. L.

* * *

The announcement of the meeting of the Massachusetts General Hospital Research Council on April 8 gave the following program:

"Electrical stimulation of the orbital surface of the frontal lobe and frontal lobotomy in man: their effect on blood pressure and respiration", Drs. William P. Chapman, Robert B. Livingston, and Kenneth Livingston.

"Clinical and laboratory studies on beryllium toxicology", Drs. Robert S. Grier, Peter H. Nash, and David G. Freiman.

* * *

Because so few, comparatively, could see Barbara Wilensky's recent gift to the hospital of a money bouquet, we had a photograph made for The News. The corsage was arranged within a cellophane box, attractively tied with ribbon.

Barbara has been a patient in Phillips House for over a year. Not long ago, Dr. Bauer received this note from her, along with the bouquet:

> On my thirteenth birthday I received one hundred eleven dollars and two cents as gifts. I would like to give it to you to use in your arthritic fund.

The hospital is deeply appreciative of this generous contribution from one of its youngest benefactors.

Barbara Wilensky's gift to M.G.H.

ROSINA VANCE

Many readers would wish to be informed of the death of Miss Rosina Vance. She made a host of friends here as Chief Dietitian from 1926 to 1929 and in 1930 to 1932 when she returned at the time the Baker Memorial was opened, to organize and direct that dietary unit.

Miss Vance had trained in dietetics at the Presbyterian Hospital in New York and later returned to the staff there. She was on the staff at Mt. Sinai in New York, after working in Puerto Rico. She came to Massachusetts General from the Peter Bent Brigham Hospital, and left us to go to the New England Deaconess Hospital. For the last two and a half years she had been at the Baptist Hospital in Winston-Salem, North Carolina—her home.

M. D. F.

The resignation in March of Miss Shirley Wells (B.S., Iowa State College; M.S., University of Iowa), who for the last fifteen years has been the dietitian in charge of the Research Ward 4, is one which we accept only with great regret.

To the work of this ward, which in effect is a scientific laboratory, she has brought great skill and devotion. The dietitian in this enterprise is of primary importance because experimental diets must be made up with mathematical exactness. There was never any doubt in the performance of balance studies that what entered the body of the patient being studied had been measured with scientific accuracy. That was Miss Wells's contribution to many years of important research by such investigators as Albright, Aub, Bauer, Butler, Jones, Lerman, Rawson, and others. She, also, by her endless kindliness and good nature, raised the morale of the ward and made the lives of its patients happier.

Beyond Ward 4, too, Miss Floyd assures us, Miss Wells's counsel was sought on all sorts of problems in the whole Dietary Department. Her scientific knowledge was much respected.

Her services to the M.G.H. have been of great value and significance. We shall miss her, both for her work and for herself. In whatever lies ahead for her, either in her home state of Iowa or elsewhere, we wish her every success and happiness.

J. H. M.

The Board of Trustees, at their meetings on March 19 and 26, and April 2, voted:

That, in the future, the General Surgical Services shall be headed by one Chief and that Dr. Edward D. Churchill be appointed to this position;

To accept the resignation of Dr. Arthur W. Allen as Chief of the East Surgical Service with great regret and to ask the Secretary to express to him the gratitude and appreciation of the Board for his devoted services to the Hospital;

To accept with regret the resignation of Dr. Rulon W. Rawson from the position of Associate Physician, to be effective July 1;

To promote Dr. Edgar B. Phillips, II, to the position of Assistant Resident on the Children's Medical Service for one year, beginning October 1;

To grant leave of absence to Dr. Oliver Cope from March 12 to July 1, so that he may go to Switzerland on invitation of the Swiss universities to lecture on surgical subjects.

To appoint:

Robley Evans, Ph.D. and John G. Trump, D.Sc. of Massachusetts Institute of Technology as Consultants in Physics;

Dr. Loren G. MacKinney as Assistant Resident on the Children's Medical Service, from April 1 to August 31;

Dr. Thomas J. Quinn, Jr. as Assistant Resident in Anesthesia for two years, beginning August 1.

At their meetings on March 24 and 31, and April 7, the General Executive Committee voted to appoint:

Dr. John R. Brooks as Clinical and Research Fellow in Surgery;

Dr. Ernest Craige as Clinical and Research Fellow in Medicine for the period July 1, 1949 to July 1, 1950;

Dr. Thomas L. DeLorme, Jr. as Clinical and Research Fellow in Physical Medicine;

Dr. Chester W. Fairlie, Jr. as Clinical Fellow in Medicine, effective as of January 1, 1948;

Dr. Joseph E. Giansiracusa as Research Fellow in Medicine;

Dr. John W. Hurst as Research Fellow in Medicine for the period July 1, 1948 to July 1, 1949;

Dr. Addison L. Messer as Clinical Fellow in Medicine for the period July 1, 1948 to July 1, 1949;

Dr. Vincent P. Perlo as Clinical Fellow in Neurology for one year, beginning July 1;

Dr. Royal S. Schaaf as Clinical Fellow in Medicine for the period January 1, 1949 to January 1, 1950;

Dr. Carlyle F. Stout as Clinical Fellow in Medicine;

Dr. Consuelo A. Taguiri as Clinical Fellow in Psychiatry.

Interest in nursing as a career is showing a definite increase. During the month of April, the School of Nursing has sponsored a number of activities to meet this interest. On April 2, 3, and 10, groups of high school students were guests of the School for programs which gave them further information about nursing and offered an opportunity to tour the hospital under the direction of student guides. Recently, too, Miss Jessie Stewart, Assistant Director of the School, has filled a number of speaking engagements at high schools where good-sized groups registered an interest in nursing.

Several graduate nurses from other countries are currently with us, to study modern methods of nursing and nursing education. They are Miss Tuygill, from Turkey; Miss Velasquez and Miss Manipon, both from the Philippine Republic; and Miss Price, from England.

Plans are now under way for a special celebration, on June 11, 12, and 13, of the seventy-fifth anniversary of the School of Nursing.

The new program for staff nurses, mentioned in last month's NEWS, has been augmented by the establishment of orientation tours for new graduates from other schools, designed to acquaint them with all the activities and facilities of this hospital.

Miss Elizabeth Grogan is the new Assistant Supervisor in Pediatrics. Before coming here, she had recently completed the clinical course in pediatrics at Boston University.

New addresses:—

Dr. H. Thomas Ballantine, Jr. (*WS* 1939), 15 Common St., Dedham, Mass.

Dr. Robert A. Broome, Jr. (*M* 1944), Box 3122, Duke Hospital, Durham, N.C.

Dr. Charles B. Fowler (*Or.* 1929), 10 Cooper St., Santa Cruz, Cal.

Dr. Henry S. Fuller (*WM* 1943), Bowman Gray School of Medicine, Winston-Salem 7, N.C.

Dr. John P. Gens (*r.s. U* 1943), West Road, New Canaan, Conn.

Dr. Leonard T. Kurland (*gr. asst.* 1947), Harvard School of Public Health, Boston 15, Mass.

Dr. Edita Sternova Sporer (*An.* 1942), 125 East 19th St., Brooklyn, N. Y.

Dr. Edward L. Young, 1180 Beacon St., Brookline 46, Mass.

MASSACHUSETTS GENERAL HOSPITAL BLOOD BANK

In the past two years the Blood Bank has made every effort to enlarge its yearly financial contribution to the General Fund because of the hospital's indebtedness. The largest single item of expenditure in 1947 was $47,600 for professional donors. Reduction of the size of this sum would be of material benefit. We do not feel that the complete elimination of the purchase of blood is wise, because it is extremely useful to be able to buy blood to cover a group in which we are low or to buy universal donor blood to have on hand for emergencies. However, if many of the people who now pay for blood could send in voluntary donors in an excess of our need our expenditures could be materially reduced. To effect this reduction, late in 1946 we took on a secretary who would make contacts with relatives and friends of patients to bring them in to donate blood. As a result of her efforts, in the General Hospital the excess of bloods donated for patients over those withdrawn rose from 2% in 1946 to 10% in 1947. This meant that although we paid $150 more for professional donors in 1947 than in 1946, because of an increased use of blood in 1947, the percentage of bloods used that were purchased fell from 25.3% to 22.2% — an encouraging fall. Thanks to the efforts of Miss Dunn and her assistants, in the Phillips House the number of donors rose from 22% of bloods used in 1946 to 27% in 1947. In the Baker, despite all our efforts, it fell from 57% to 53%.

In October 1947 the laboratory fee for the setting up, cross-matching, etc. of each blood (which is separate from the $25 blood replacement fee that we charge a patient for a blood and in turn pay each professional donor) was raised to a level that is consistent with what is charged by other hospitals. At the same time, to ease the financial burden on the patient, we adopted a policy of allowing cancellation of this fee if an extra donor were supplied. A brochure describing the system of charges and replacements is now given each patient on arrival. However, these measures are not enough. We need the efforts of each member of the visiting staff to help increase donations. When the bank was opened and throughout the war, the visiting staff made this effort by interviewing the patient or his family. Now, we will assume the burden of getting in the donors if the visiting staff or their residents will tell the floor secretary or nurse in charge, preferably well in advance, how many bloods you feel the patient will need, so they can tell us and we will consult the patient's family. Any effort the visiting staff can make in speaking to the family will be a great help, but we appreciate the difficulties of doing this in many instances, and any effort made will have to be a sustained one in order to be effective.

Any suggestions the staff may have will be greatly appreciated.

Lamar Soutter, M.D.,
Blood Bank Director

MASSACHUSETTS EYE & EAR INFIRMARY

The Emergency Building Fund Campaign is well under way. The opening money-raising event was a silver tea, given by the personnel of the Infirmary on the first day of April. In charge of the tea were: Miss Annie M. Robertson, R.N.; Miss Dorothy M. Tarbox, R.N.; Miss Walborg L. Peterson, R.N.; Miss Henrietta I. Olsen, R.N.; Miss Mary J. MacKay, R.N.; Miss Linda Hall, Mrs. Alberta Caton, and Mrs. Alice Sidley.

Later in April, an informal dance was held at the nurses' residence, the proceeds of which went toward building the new floor for the Infirmary. Mrs. Vera DeRosa, R.N. was in charge of the dance, assisted by Miss Henrietta Olsen, R.N.

Among those who gave lectures for the postgraduate course at Gill Memorial Eye, Ear, Nose and Throat Hospital in Roanoke, Virginia, were Dr. Edwin B. Dunphy, Dr. Trygve Gundersen, and Dr. John H. Tucci. The course is given annually in the spring.

Dr. LeRoy A. Schall has recently returned from a meeting of the "Triological" which was held in Atlantic City. He also attended the meetings of the American Broncho-Esophagological Association, and later participated in the 69th annual meeting of the American Laryngological Association at Hot Springs, Virginia.

Dr. Frederic Breed has begun his residency in Ophthalmology at the Infirmary. Dr. Breed, a graduate of Amherst College and Harvard Medical School, interned at the Chelsea Naval Hospital.

Dr. Richard Goldcamp completed his residency in Oto-Laryngology on the first of April. He has returned to Youngstown, Ohio, where he will begin his practice.

The Infirmary has recently welcomed many visitors who came to observe its clinics, operating rooms, and general procedures. Among these guests were: Dr. Alexander V. Popanicoleau from Athens, Greece; Dr. Carlos Sylvestre, Professor of Surgery at the University of Rosario, Argentina; Dr. Wu Kung Li, Lanchon, China; Dr. Anthony Dobrzanoski, Professor and Director of the Oto-Laryngologic Clinic, University of Warsaw, Poland; and Dr. Ernesto H. Bernaseoni, Professor of Pathology at the University of Rosario, Argentina.

We reported in the April issue that Mr. Stanley M. Garn (Department of Anthropology at Harvard, Research Fellow in Medicine at M.G.H., and Research Fellow in Anthropology at Forsyth Dental Infirmary) spoke on "The relation of anthropology to the medical sciences" at the March meeting of the Medical Staff. Because Mr. Garn's subject is one that has not been included in any previous articles in THE NEWS, we were particularly eager to procure a transcription of his address. Thanks to Mr. Garn's cooperation, we are now able to give you a brief of his interesting talk.

The anthropologist, like the doctor, sees man at his worst—both physically and socially. The anthropologist and the physician have learned that man's behavior cannot be predicted by any simple rules. This knowledge and this experience gives to the physician and the anthropologist what has been called the "jaundiced view of life".

An Englishman has defined the divisions of anthropology. "Some study bones, some study stones, and some live with nasty savages." The first kind of anthropology—the study of bones, the people who cover them, and their variations —is the kind I purvey. If you object, at times, to the polysyllabic Greek words which are part and parcel of physical anthropology, do not blame us. Physical anthropology was founded by anatomists like Broca, Topinard, Sergi and others—when they weren't teaching medical students. They left to us the descriptive technique, measurement, and the study of human variations. We have taken this legacy, and banked it. From time to time, with your aid, we add new techniques and new methods.

While physical anthropology was for a long time the study of human morphology, we found that comparative anatomy and anthropometry did not solve all of our problems of racial migration and human differentiation. Eventually, some of our knottiest problems were solved for us by techniques drawn directly from clinical medicine.

For example, we have long wondered about the peopling of the Americas. While our more orthodox members have assumed that early man came across the Aleutian chain during the last phase of the Wisconsin glaciation or during early post-glacial warm spells, some of the more radical ethnologists have suggested connections between Polynesia and Peru, and Indo-China and Mexico. Some had even suggested a regular sailing schedule between Tonga, Easter Island, and Panama! Now, the archaeological evidence did not show any connection between the comely Polynesians and the impossible Incas, yet such negative proof was not enough. Finally, there came the blood groups, and the techniques of Landsteiner, Levine, and Weiner turned the trick. We found that the B factor was missing in aboriginal North America, while it was common in Polynesia and in Asia. Furthermore, the distribution of the subgroups of A were equally unusual. Under these circumstances we can say that the American Indian must have come over before the B substance was widely spread in hither Asia, while the Polynesian peoples must represent a more recent stream of migration from the general Malayan region. Luckily, these blood groups (they are more properly tissue groups) are found not only in living creatures, but the factors can be detected in the skeleton as well. Candella has blood-grouped mummies, Aleut crania, and other antiquated remains. William Laughlin of the Department of Anthropology at Harvard, has just reported on a fossilized find from Mexico—a find that may represent the earliest post-glacial population of North America. Laughlin obtained definite evidence of a group factor in the ground-up bone.

Serology, which we have borrowed from medicine within the last decade, may solve other problems. We have a number of fossil finds that are in doubt—in Piltdown man we are not even sure that the jaw and skull go together. Blood grouping may be able to tell us what went with which.

A surprising number of mutations in or about the blood are of interest to both anthropology and medicine. In some parts of Africa the mutation to the sickling-trait has become widespread. Some of the peoples who have the gene for sickling came to North America, to Cuba, and to Brazil. Today we can determine where some of the Negroid peoples in the New World originated by determining the frequency of sickle-cell anemia in various areas.

In the Mediterranean region there is an analogous mutation which is in part responsible for Mediterranean anemia. So far, this gene appears to be common in Italy and Greece, and the condition appears in people who originated in these countries. Now, the distribution of this condition suggests that it is not a recent mutation, but may have been present in the Neolithic invaders of the southern Mediterranean region. If this is true, other areas of Europe should show some Mediterranean anemia, for the Neolithic Mediterranean stock is well spread throughout Europe. Eventually, our knowledge of human migration may help to predict where newly discovered diseases will be found most frequently.

But the majority of the characteristics which anthropologists study are more obvious (though not more important) than blood and its contents. We have been interested in human races for decades. We would like to know how, in the course of 800,000 years, human differentiation has occurred. When we study human evolution in the light of general mammalian evolution we assume that diet, climate, and individual differences in physiology must play a part. In other mammals we know that some breeds are prolific, and some breeds are less prolific. We know that some dogs are keen of scent, and others cannot detect Limburger cheese at ten inches. We know that some varieties of mice can grow and live happily on "deficiency" diets unable to maintain normal nitrogen balance in the usual breed of rodents. Such differences in man would be of extraordinary interest to us, from the viewpoint of evolution and differentiation, and such differences would also be of paramount interest to the medical sciences.

One of the first things to consider in natural selection is diet, for this is a greater variable than all others. Some people eat fish, and nothing but fish. Others live on insects and small animals. Still others consume 2,000 cc. of fresh blood daily, and others live on milk, yogurt, or kumiss. By choosing the proper people or tribe, you can conduct any dietary study you wish, and at low cost. It is not necessary to put 100 volunteers on a meatless diet, for in Indo-China, China, and the Philippines there are millions of rice eaters. On the other hand, if you believe that some of the cereals low in tryptophan are a contributory factor in dental caries, then you should examine the Indians of the Southwest and some of the natives of Peru. This matter of human differentiation, disease, and diet is still untouched. But the people are there, relatively untouched, except by anthropologists.

There also appear to be endogenous factors linking the individual to disease. These are the so-called idiopathic or constitutional factors. Now, I dislike these words. "Constitutional" is not a good adjective. It is a weasel-word. But the idea that there are endogenous interpersonal differences in metabolism that predispose an individual to one disease and partially immunize him to another is an important one. Why should only one of many children exposed show the paralytic symptoms of polio?

Some of these "constitutional" factors are sex-influenced, and probably hormone-mediated. In many people tuberculosis is more common in the male. Hamilton, at Long Island Medical College, has compiled a long list of diseases that are male specialties. Except for endocrine disorders and a few others, Hamilton finds that men out-sick women every time. But there are other individual differences that are not explainable on the basis of sex, though they do seem to have some relation to body build or habitus. Whenever we find that such a relation is valid, we have to find out the mechanism of the relation Some associations between dysfunction and build must be on the simplest level. Obviously, skinny people don't break their legs playing professional football. Other associations are probably on a mechanical level—such as shortness of breath in the fat individual. But still other associations are probably directly linked to organic differences in the organism. For instance, we do know that certain types of individuals mature early. Such individuals usually have short legs (because the growth period is attenuated) and they usually develop greater amounts of covering tissues. These early-maturing organisms exhibit other differences in growth rate, and probably in disease susceptibility. These differences appear to be genetic in nature rather than endocrine, for there is no evidence that early-maturers exceed late-maturers in their hormonal output. The difference in form or build appears to be due to the greater responsiveness of their tissues.

If we are to compare individuals, we need standards of comparison—whether the study is anthropological or medical. In growth studies on children we can use obvious stages—tooth eruption, size, the menarche. But in the adult we have the gross morphology of the individual —the result of exogenous and endogenous factors. In such work, habitus or body build is a static guide to individual dynamics. We have to use measures of body build that are comparatively precise and standardized. We know that such measures should not be affected by nutrition. A measure of build is not very good if ten frappes and a hamburger can change the rating or the index. Therefore, we are now using some methods of evaluation designed to rate the less changeable parts of the individual—the skeletal system and its form—methods of evaluation which are identical with or resemble the "somatotype" system. However, there are other studies which stress the transient factors of body build. In such studies weight, specific gravity, and the height-weight index may be of more value. In all work of this kind we assume that the gross form of the individual is the result of his potential development, and the accidental and exogenous factors to which he has been exposed. Neither can be neglected.

But there is more to the individual than his form and size. Man is a social animal, strikingly modified in his actions by society and its patterns, both overt and covert. These relationships between man and society are under investigation by the social anthropologists. By living with peoples far removed from our cultural tradition, they have found that many of the characteristics which we call "human nature" are merely the products of the society. Such studies are of increasing importance to medicine, now that the effect of emotion on the body is being studied everywhere. So far, we have found that some of the assumptions of the pedantic psychologists are either over-stated, or true only for our own kind of society. Many Americans like to believe that our times and our "complex" civilization result in stresses, strains, and subsequent organic disorders. But we frequently forget that people who live in Borneo rather than in Boston are also subject to environmental stresses. I do not know whether our custom of chasing a street car, or the older custom of being chased by a tiger is more "damaging" to the nervous system. But I do believe it is necessary to find out whether ulcers, colitis, and hypertension are uniquely American disorders. In primitive cultures people do not live long enough to die of cardiac disorders.

Yet we do know that civilization, in some mysterious way, is responsible for the widespread appearance of malocclusion and dental caries. Fossil men and primitive men rarely had even minor degrees of malocclusion, and among peoples who do not eat refined grains dental caries is rare. As soon as savage but happy natives take on our way of life, they become subject to our dental disorders. The evil may be in the diet itself or it may be due to alterations of the growth pattern produced by the diet. Here, too, we can study the problem best by observing transitional peoples who are shifting to the packaged denutrified foods of modern civilization. In this work the physician can join the anthropologist who is already there, observing.

This summer Peabody Museum is sending an expedition to the Aleutians to study a group of people who have been in one area and on one diet for millenia, and who are now shifting to new foods and new modes of life. Since this study involves dental and medical problems, we have included an orthodontist and a cardiologist in our group. The orthodontist is Dr. Coenraad Moorrees of Forsyth Dental Infirmary, and the cardiologist is Dr. Fred Alexander of this hospital. The Aleuts differ from us in many ways. They are extremely short, they have a slow pulse, and they normally live on a very high protein diet. Dr. Alexander will be able to find out what cardiac disorders accompany this combination of food, physique, and life.

I mentioned before that many of our customs, which we think are "natural" and "normal", are merely the result of our cultural tradition. In America and in Europe babies are reared in a horizontal plane—on a bed, in a crib, or in the new baby box. For months our young children get a wonderful view of the ceiling and of the walls. Then, for another period of years, they roam about the floor or play-pen, getting a "worm's eye view" of the world. But the aboriginal natives of this continent prefer the vertical plane for their children. Indian papooses are carried in cabooses. Indian infants have the chance to view the world from on high and in the normal position. Many people think that the Indian method is superior, and that it results in earlier coordination and in more rapid orientation. I do not know whether the vertical method is better. However, we took over tobacco from the Indians and may yet take over their system of pediatrics.

In writing this account I have had to skip many topics of importance. The study of the resemblances between man and the anthropoids provides the anthropologist with evidence on evolution; the doctor has in the anthropoid an almost-human experimental animal. Continued research on primatology will be of benefit to us both. I have not been able to touch on the primitive pharmacopeia—many of our important drugs were once in the kit bag of the medicine man. I have not been able to discuss osteology, trichology, and medico-legal problems. All that I have not said reminds me of the judge who had to endure a very long speech by the defense attorney. After it was all over the judge looked up and declared, "I thank my learned brother for all that he has left unsaid."

Recent gifts to the Archives Department:—

From Dr. J. Dellinger Barney—an observation cystoscope, bought in 1905, and a catheterizing cystoscope, bought in Berlin in 1906, both used by Dr. Barney when he started practice; a framed picture of the 1916 G.U. Staff at M.G.H., including Drs. Hugh Cabot, Edward L. Young, Jr., E. Granville Crabtree, Harvard H. Crabtree, Richard F. O'Neil, J. Dellinger Barney, and George Gilbert Smith.

From the Annabella McCrae estate—a framed photographic copy of one of our daguerreotypes, showing an early operation under ether.

From Mrs. Monroe A. McIver—a gold lined, heavily embossed silver box, purchased in Canton, China. An inscription in Latin, inside the box, indicates it was a gift in 1839 to Dr. Amos Holbrook of Milton, Massachusetts, a member of our staff in 1822 and 1823, from an unidentifiable friend and admirer. Dr. Holbrook bequeathed the box, upon his death in 1842, to Dr. James Jackson, our first Physician, who, in turn, gave it to Dr. John Homans.

From Dr. James H. Means—a letter written by Dr. Means, while he was serving in the armed forces in Europe during World War I, to The Right Reverend Edmund S. Rousmaniere, Dean of St. Paul's Cathedral, Boston, Mass.

From Mrs. Ellen Morton—papers concerning William T. G. Morton, and a second album of photographs which belonged to the Morton family.

From Mr. William Wood Smith—an electro-magnetic stimulator.

From Dr. Washburn—2 coins, disinterred during excavations for the Moseley Building—a one cent piece, United States, 1826, and a one penny token, Province of Nova Scotia, 1832.

Important events, concerning Massachusetts General Hospital, that occurred in the month of February during the earlier part of the nineteenth century:

Feb. 25, 1811—A charter for the hospital was obtained from the Legislature. Francis Blake, in his "Extracts" from Bowditch's *History of Massachusetts General Hospital,* says:

> The charter incorporates James Bowdoin and fifty-five others of the most distinguished inhabitants of the various towns of the Commonwealth, by the name of the Massachusetts General Hospital. The Governor, Lieutenant-Governor, President of the Senate, Speaker of the House, and the Chaplains of both Houses, are constituted a board of Visitors. The institution is placed under the care of twelve Trustees, of whom four are chosen by the board of Visitors. A grant was made of the Province House Estate, so called, with authority to sell the same and use the proceeds at pleasure, provided that within five years an additional sum of one hundred thousand dollars should be obtained by private subscriptions and donations. A further term of five years was allowed by an Act of June 14, 1813.
>
> By a resolve passed February 13, 1816, authority was finally granted for sale of the Province House, on the sole condition of giving bond to pay the proceeds of sale into the State Treasury, unless, within one year from such sale, said additional sum of one hundred thousand dollars should be obtained. On April 1, 1817, the Hospital leased this estate to David Greenough, Esq., for ninety-nine years, at an annual rent of two thousand dollars. . . .

The Province House came back to the hospital in 1916. For a description of the House and its environs, accounts of its various owners and occupants, from 1679 when it was built, up to 1864 when it was destroyed by fire, we enthusiastically recommend to you a chapter in Dr. Washburn's *History of Massachusetts General Hospital,* beginning on page 558. His story of the diversified role the House played—as Headquarters of a Provincial Governor, hiding place for the famous pirate Captain Kidd (who was found and arrested there), the part it played during the Revolution, and afterwards as a tavern and a hall of negro minstrelsy—all of this makes as exciting reading as the most ardent devotees of "thrillers" could desire. Here, too, is the story of the copper Indian which once topped the cupola of the House, and which now is in the custody of the Massachusetts Historical Society. Read, also in this same chapter, an excerpt from Hawthorne's detailed description of the House, as given in his *Twice-told tales.*

No. 10 in a series of Staff photographs
Dr. Edward B. Benedict—Endoscopist

This is the first real letter we have had from Dr. L. Alexander Vance (*P* 1937 & *r.p. R* 1939). From 16 Atlantic Street, Lynn, Massachusetts, he writes:

Indeed, it has been a long time since I checked in with The News. However, it has not been a situation of my own choosing, since the past few years have been pretty strenuous.

I was released by the Navy to inactive duty in February of 1946 and began at once to find a spot in which I could practise. The City of Lynn seemed to present a good opening for a Roentgenologist. So, after much dickering I procured a house in which to open an office. There were many anxious days of waiting to see if the occupants would move out according to our agreement, and I think I was the most surprised one when they turned the house over to me on the specified date.

After remodeling and procuring some X-ray equipment, we began to function on September 1, 1946. It has been a real satisfaction to see the practice grow. In December I took in an associate—Dr. Ray Dillon, a graduate from the Boston City Hospital. We are doing the X-ray work in several hospitals and find the days are short in which to get everything done.

I hope I can drop in soon to see the many wonderful people at the M.G.H.

Just the sort of letter we like to receive — the sit-down-and-chat-for-a-while kind — has come from Lt. Armand L. Bengle, MC, USNR (*ES* 1947), whose present address is NAS Box #8, Navy #961, c/o Fleet Post Office, San Francisco, California.

Lieutenant Bengle says:

Two much-welcomed copies of The News have been forwarded to me here from home. It goes without saying that I have enjoyed The News very much in the past, but my present location has heightened that enjoyment and appreciation manyfold, since it now remains my primary source of information about, and contact with, the M.G.H. It must so remain until that much-longed-for day when I shall be back there.

Upon being called to active duty last July 10, I reported to the U.S. Naval Hospital, Newport, Rhode Island, along with several other MGH-ers. I was assigned to the surgical service, my primary duty being that of anesthetist. In spite of the fact that I was doing the work I love best and was sufficiently close to Boston to be able to return to the M.G.H. several times during the ensuing months, I was happy when my overseas orders arrived.

I was detached November 7, and after a few weeks at home left for San Francisco. I had never been west of New York State before.

On December 9 I boarded the Navy transport *U.S.S. Gen. H. W. Butner*, bound for the Philippines. We had stop-over in Guam; Yokosuka, Japan; Tsingtau and Shanghai, China; Subic Bay, Luzon, Philippine Islands; and finally my destination, Manila. I am at the Naval Air Station on Langley Point, a finger of land projecting into Manila Bay near the once famous Naval Base of Cavite. It is about 35 miles across the bay to the city of Manila by crashboat.

There are four doctors here, including myself; and though we are not doing a "land office business", still we have plenty to do. I have charge of all surgery and surgical specialties, including anesthesia. I also run daily sick call, which has a vague resemblance to OPD work but is also an instructive course in the detection of malingerers. So far, tropical lethargy has not laid its grip on me, and I have done, in the month I have been here, a few hernias, an appendectomy, and numerous minor surgical procedures, including some plastic work. I am still in the process of lining up equipment for some of the simpler diagnostic procedures in G.U., etc. And in sick call, I have had the opportunity to study many diseases infrequently seen in New England. As you can see, therefore, this is not a case of dispensing "pink pills for pale pilots", and I count this year or so out here as a definite part of my professional development. Nonetheless, I'll be happy when it is over.

So far, I have found plenty to do in the off-duty hours — trips to Manila and the surrounding countryside for sightseeing and exploration; deep sea fishing; occasional plane flights (such as the air-sea rescue flight I recently took to a merchant ship off Samar); swimming; the maintenance of an extensive correspondence; frequent movies; and much reading, both serious and light.

Thanks again for seeing to it that I have continued to receive The News. I am eagerly awaiting information in it concerning the now-dispersed MGH-ers who entered the Navy with me.

Too little after too long has come from Lt. Laurence K. Groves, MC, USNR (*WS* 1947), but here it is. He writes, from Navy Recruiting Station, Columbus 15, Ohio:

I have just had a change of duty to the above address. The duty is just as bad as the address sounds.

The following has arrived from Dr. Arie C. van Ravenswaay (*P* 1934) of the C. H. van Ravenswaay Clinic, 329 Main Street, Boonville, Missouri:

Since my separation from military service in November 1945, I have been at home gradually reconstructing a practice. We still enjoy essentially a free form of medical practice in rural Missouri, with very few services being provided by the state or charitable institutions. Our problems, however, have been very similar to those of everyone else, with great difficulty in obtaining nursing and technical assistants, and an additional problem resulting from the reluctance of well-trained young men to come to small communities.

I greatly enjoy reading The News, which forms such a pleasantly readable contact with an institution which means so much to us all.

* * *

It is understandable to all friends of this hospital that your editor might very well be prejudiced in favor of M.G.H. She frankly admits she is—for there are plenty of reasons to be—but she would never, knowingly, allow her enthusiasm to carry her beyond the border of fact and into the field of overstatement. However, in spite of checking twice with each of three people—making six checkings in all—she finds that an overstatement did appear in the April issue of The News and she hastens to make a correction and to apologize to those whose rights she erroneously usurped.

On page 3 of the April issue, we reported two Red Cross activities here at M.G.H. as being the first in any civilian hospital "in the country". We learned later that we should have said "in any private hospital in Boston".

Massachusetts General Hospital has plenty of legitimate grounds for claims to "firsts"—both past and present—without reaching for any to which we are not entitled.

THE NEWS

No. 69 Boston, Mass. June 1948

PATHOLOGY AND BACTERIOLOGY DEPARTMENT

The Laboratory of Pathology and Bacteriology shares with the hospital as a whole three major functions: diagnosis, education, and research. In contrast to the clinical services, it has no direct responsibility for treatment of patients but, through the post mortem service, has a unique and indispensable function in checking the medical efficiency of the hospital as a whole. To maintain a proper balance between these four functions would be difficult under ideal conditions. It has been impossible under war and postwar conditions. There have been two major problems—the first economic, the second spatial. With the cost of living rising more rapidly than salaries could be increased, it has been possible to hold only a skeleton group of experienced personnel. Replacements have been difficult to find, and after brief experience they have often moved on to greener pastures. Consequently, we have been constantly short-handed and the comparative inexperience of a large proportion of the technical and secretarial personnel has lowered our operating efficiency.

Of equal importance has been the overcrowding of the laboratory. The last inch of possible expansion in the Allen Street building was obtained in 1935 by the removal of the hospital garage which formerly occupied much of our ground floor. Since that time, despite the fact that the hospital has not increased its bed capacity and has even closed many beds in the last two years, the routine work of the laboratory has increased progressively with every year, to a level now over one hundred percent above 1935. During the same period, the staff has increased by fifty percent but the addition of research personnel, graduate students, attached residents from the clinical services and so forth has raised our population from twenty to approximately forty. The proverbial shoe horn could scarcely squeeze a single additional worker into the building. Under such conditions it is difficult to keep even a modest research program going. For the regular staff it means long hours of overtime work, and research assistants cannot be taken on because there is no place to put them.

Naturally, the laboratory staff has the keenest interest in the proposed new laboratory building. Some relief is in prospect for the coming year. Plans have been drawn and funds secured to remodel portions of the fourth, fifth, and sixth floors of the domestic building—half of the new space to be assigned to diagnostic bacteriology. The space freed in the Allen Street building will give pathology at least the temporary relief of a decompression.

Graduate education is assuming a role of constantly increasing importance throughout the hospital, and this reflects upon the work of the laboratory. Interesting specimens must be preserved for display at a long series of clinics and representatives of the laboratory assigned whenever possible to demonstrate them. Fear of the "Boards" drives clinical residents to the laboratory to review their pathologic histology, and slide collections must be maintained for their use.

In spite of difficulties, research has been maintained. The majority are collaborative efforts in clinico-pathologic correlation. Dr. Castleman completed his survey of the renal biopsies in hypertensive patients and, with Dr. Norris, reviewed the thymus material from myasthenia gravis. Dr. Sniffen has nearly completed a long project upon testicular biopsies done in close collaboration with the clinical endocrinologists — particularly Drs. Howard and Talbot. He has also been studying the cholesterol pneumonitis cases which have so frequently been confused clinically with carcinoma. Drs. Kulka and Pearson have investigated a peculiar form of vacuolar nephrosis, originally described in bacillary dysentery. They have found it in ulcerative colitis and in certain cases of carcinoma in the intestinal tract. Dr. Firminger, with Dr. Woodruff of the genito-urinary service, studied the incidence of hemoglobinemia and hemoglobinuric nephrosis following transurethral resections. Dr. Mallory has collaborated with Drs. Jones and Volwiler in correlation of liver biopsies with medical treatment of hepatic disease—particularly fatty cirrhosis. In bacteriology, Dr. Dienes has continued his studies of the L organisms which are beginning to attract attention of bacteriologists all over the world.

Tracy B. Mallory, M.D.,
Chief of Department

* * *

The Surgical Staff of the Massachusetts General Hospital gave a dinner on May 10 at the Brookline Country Club, for Dr. Arthur W. Allen, in appreciation of what he has done for the hospital and as a token of the great esteem in which he is held. Sixty-nine members of the Surgical Staff were present. The Chiefs of the various surgical and specialty services were also there, as were two of the senior members of the Board of Consultation—Dr. Lincoln Davis and Dr. Beth Vincent.

Dr. Allen was presented with a silver coffee service—a large Sheffield tray, and a large and very beautiful solid silver coffee urn, with sugar and creamer.

The dinner was delightful, and every speaker called attention to Dr. Allen's tremendous contributions to the hospital. He responded most graciously and thoughtfully.

This dinner was one of the most impressive gatherings held by the Surgical Staff in a great many years.

J. V. M.

* * *

At a meeting of the Board of Trustees, held on April 30, 1948, it was voted:

To reorganize the General Executive Committee as follows:

I. MEMBERSHIP

Director	ex officio
Medical Chief	"
Surgical Chief	"
Psychiatrist	"
Pathologist-in-Chief	"
Roentgenologist-in-Chief	"
McLean Chief—liaison	"
Two Members at Large 1 Physician 1 Surgeon	elected

II. ELECTION

Two elected members to be chosen annually as follows:

The General Executive Committee to act as a nominating committee.

Four staff members to be nominated from the Medical Division to be voted upon to fill the position of Physician Member at Large.

Four staff members to be nominated from the Surgical Division to be voted upon to fill the position of Surgeon Member at Large.

Ballots to be mailed to staff members as follows:

Chiefs of Service, Physicians, Associate Physicians, Assistant Physicians or the equivalent of these ranks in Dermatology, Neurology, Psychiatry, Pediatrics, Surgery, Anesthesia, Neurosurgery, Orthopedics, Pathology, Urology, Gynecology, and Radiology. In Obstetrics, to the Obstetrician only; and in Dentistry, to the Chief only.

III. SUBSTITUTES:

will be eliminated, and instead alternates will be appointed by the General Executive Committee whenever one of its regular members expects to be absent for a protracted period.

IV. JURISDICTION:

In the filling of vacancies in the position of Chief of Service the procedure will be: Upon request of the General Executive Committee, the Trustees should appoint an *ad hoc* committee. The report of this committee should be made to the General Executive Committee, which would then pass it on to the Trustees with its comments and recommendations. The *ad hoc* committee may consider and recommend on matters of policy, as well as on individual appointments.

May 7, 1948.

As a result of the ballots submitted by the staff, Dr. Wyman Richardson and Dr. Leland S. McKittrick were chosen as the Medical and Surgical Representatives at Large.

The Board of Trustees at their meetings on April 16 and 30, voted to appoint:

Dr. Franklin DeBusk as Assistant Resident on the Children's Medical Service for one year, beginning October 1, 1949;

Dr. Brown McI. Dobyns as Assistant in Surgery, with the privilege of seeing a limited number of private patients on White-4;

Dr. Chester N. Frazier as Chief of the Dermatological Service, to become effective on or about July 1;

Dr. Edwin B. Goodall, Jr. as Assistant Resident in Neurology, for the period April 1 through June 30;

Dr. Dorr F. Hallenback, Jr. as Assistant Resident in Psychiatry for one year, beginning January 1, 1949;

Dr. William Stark as Assistant Resident in Neuropathology for one year, beginning July 1;

Dr. William H. Timberlake as Assistant Resident in Neurology for six months, beginning July 1, and as Resident, beginning January 1, 1949.

At their meetings on April 14, 21 and 28, and May 5, the General Executive Committee voted:

To promote Dr. George H. Carter to the position of Resident in Psychiatry, beginning July 1;

That Dr. Chester C. d'Autremont's appointment on the Neurological Service be changed to that of Resident rather than Assistant Resident, effective as of April 21;

That Dr. John W. Hurst's appointment be changed to that of Clinical and Research Fellow in Medicine, effective as of January 1, 1948.

To appoint:

Dr. Cully A. Cobb as Clinical Assistant in Neurology for the period April 21 to June 30;

Dr. Joseph J. Delfino as Graduate Student Assistant in Surgery;

Dr. Carter L. Marshall as Clinical Fellow in Dermatology for one year, beginning April 1;

Dr. Edward A. Mason as Clinical Fellow in Psychiatry for the period beginning May 1, 1948 and ending June 30, 1949;

Dr. Owen G. Miller as Clinical and Research Fellow in Dermatology, beginning July 1.

* * *

At the April meeting of the Medical Staff, our Consultant in Preventive Medicine, Dr. David D. Rutstein, talked on "Preventive medicine, with particular relationship to cardiovascular diseases".

Tea was served, as usual, in the Medical Staff Room before the meeting.

INTRAVENOUS PYELOGRAPHY

Revision of Bulletin No. 10,
issued November 12, 1942

Intravenous injection of diodrast or similar drugs for intravenous pyelograms or other examinations may cause reactions of the immediate or somewhat delayed anaphylactic type. In serious liver or kidney disease a delayed reaction may occur. Either type of reaction may be sufficiently severe to cause death. Fortunately, fatalities are rare, but to guard against a serious consequence the following recommendations are made.

Preventive measures:

Before ordering an intravenous pyelogram the referring physician shall ascertain and note in the record the following:

A. 1. Whether the patient is allergic to or has a history of hay fever, asthma, eczema, or hives;

2. Whether diodrast or similar substance has been given before and whether it or any other drug has caused a reaction or discomfort.

If affirmative answers have been given to these questions, the possibility of substituting a retrograde pyelogram should be considered. If an intravenous pyelogram is still believed necessary, note on the X-ray requisition the information obtained from the above questions and request the examination only after thorough discussion with the radiologist.

B. An intravenous sensitivity test may be done on the ward by the referring physician within twenty-four hours of the scheduled examination and the result recorded on the X-ray requisition. The intravenous test should consist of 1.0 cc. of diodrast diluted with 9.0 cc. of saline injected intravenously and the patient shall be observed for one hour, for signs of shock, flushing, urticaria, or other allergic manifestations. Should any of these be demonstrated, the intravenous pyelogram should not be done.

C. The N.P.N. and the urine specific gravity must be noted on the requisition. The examination will not be done if the specific gravity is less than 1.015 or the N.P.N. is over 40, unless it is agreed by the attending physician and the radiologist that the necessity of the examination is greater than the risk.

Precautions for the X-ray Department (in addition to previous tests):

Before injecting diodrast or similar substance, have on hand ready for immediate use:

1. Ampules of adrenalin chloride 1-1000.
   Sterile hypodermic syringe and needle.
2. Flask of 5% glucose in saline, with appropriate apparatus for intravenous infusion.
3. Never do an intravenous pyelogram when alone.
4. Inject 1.0 cc. of dye and stop. Watch the patient for two minutes for signs of shock, flushing, urticaria, and other symptoms of allergy. If any of these are noted, consult the physician in charge; if not, continue the injection slowly over a period of five minutes.

Finally, any reaction following intravenous injection of any drug should be carefully *noted* in the record for future warning.

N. W. Faxon, M.D.,
Director

SOAPSUDS ENEMAS

Revision of Bulletin No. 11,
issued February 29, 1906

Intrarectal injection of soapsuds or similar drugs for intrarectal therapeutic or diagnostic enemas may cause reactions of the immediate or somewhat delayed (retention) type. In moribund patients the results are liable to be particularly disastrous. Fortunately, fatalities are rare, but to guard against serious consequence the following recommendations are made.

Preventive measures:

Before ordering a soapsuds enema the referring physician shall ascertain and note in the record the following:

A. 1. Whether the patient is allergic to soap or soapsuds or has a history of hay fever, asthma, eczema, or hives;

2. Whether soapsuds or similar substance has been given before and whether it or any other soap has caused reaction or discomfort.

If affirmative answers have been given to these questions, the possibility of substituting a cathartic should be considered. (However, before this is done the referring physician should consult Bulletin #32 issued in November 1884 re: Precautions with catharsis in the *ille patiente.*) If an enema is still believed necessary, note on the medication sheet the information obtained and request the procedure only after thorough discussion with TSO.

B. An intrarectal sensitivity test may be done on the ward by the referring physician within 10 days of the scheduled rectal injection. The intrarectal test shall consist of 1 cc. of MGH Cuticura solution diluted with 100 cc. of triply distilled 1/2 normal saline. This is injected slowly (See Bulletin #12, November 1935 re: Rate of injections) and the patient shall be observed for 2 hours or until absorbed or rejected. This is preferably to be done by a senior member of the resident staff.

C. The fecal specific gravity, stool urobilinogen, and serum spinach level should be ascertained before the rectal injection is carried out and noted in the record.

D. If no reaction is noted from the test solution of 1 cc. of Cuticura, then any soap in any quantity may be safely used, the patient having demonstrated an exceedingly high resistance to noxious agents.

E. If any of the above procedures result in keeping patients in the Emergency Ward an extra day, the assistant resident in charge of the Service shall call the Assistant Director on call between the hours of 11 P.M. and 4 A.M. and request a 3d night—permission for which will be granted if documentation of evidence in the particular case is deserving. A reduction of 10% will be made in patients' fees for any extra time required.

Reamed D. Duff,
Chairman — Reaction Committee

"A little nonsense, now and then,
Is relished by the wisest men."

THE HAND CLINIC

Injuries to the hand are common and are seen almost daily in the Emergency Ward. Infections of the hand are serious, often leaving in their wake a useless and crippled member. It was to cope with these two problems that in the early 1920's a special assignment on mangled hands was made. It was then found that these injuries and infections were spread throughout the entire hospital — that is, in the several departments of the Out-Patient Department, Emergency Ward, and many surgical wards. In an effort to correlate and to more or less standardize treatment of these cases, the Hand Clinic was established in the Out-Patient Department. This clinic met once a week to see all such cases that could be brought together, examined, diagnosed, and treatment prescribed and their progress reviewed.

In the early years, Drs. A. William Reggio and Franklin G. Balch were regular attendants at the clinic, and somewhat later Dr. Edward Hamlin was given an official assignment. He has been with it ever since and is now in charge of it.

It became our policy, insofar as possible, to have all patients, who had injuries or infections of the hand and had been treated either in the Emergency Ward or in the wards of the hospital, reviewed in the Hand Clinic after they had been discharged. Also, as the years went by, more cases were referred to the Hand Clinic, to be seen and studied for consultation. These cases included old mangled hands that were referred for reconstruction, burns of the hand for resurfacing of skin, old injuries for plastic operations to give more function, nerve and tendon injuries for review and follow-up, circulatory difficulties, and congenital malformations. Sooner or later, all of these cases in the Out-Patient Department were funneled through the Hand Clinic on their way into the hospital. From the beginning, it was the policy of the clinic to have the Junior Surgical Resident on duty present these cases and participate in the discussion. Later, the fourth year medical student attended the clinic and assisted in preparing the cases and presenting them. After the organization of the Physiotherapy Department, Dr. Arthur L. Watkins took an active part in the clinic and assisted by bringing to us cases that had received physiotherapy or occupational therapy. He then presented them for review, discussion, and disposal.

During the late war, there came a tremendous awakening to, and interest in, injuries to the hand and upper extremities. Vast numbers of nerve, bone, tendon and muscle, and skin injuries filled the war hospitals and created added interest in this important problem. Since the war, Dr. Hamlin has been in charge of the Hand Clinic, which meets regularly Wednesdays at 1 P.M. The cases are reviewed as formerly, and we have now added to the clinic Dr. James C. White from the Neurosurgical Department, Drs. Joseph S. Barr and Robert J. Joplin from the Orthopedic Department, and Drs. Bradford Cannon and Richard C. Webster from the Plastic Department. Surgery of the hand is a composite of every type of surgery except bowel surgery. It requires knowledge of plastic, bone, joint, tendon, and peripheral nerve surgery, and circulatory disease.

Insofar as the common hand case is concerned, acute injury to the hand is the most common injury with which we have to deal. It is necessary to indoctrinate every Assistant Resident who may be on duty in the Emergency Ward, in order that he may properly and completely examine each case and be equipped to prescribe and to render or direct the best surgical treatment. This is by far, I believe, the most important function of the clinic, for it represents quite the greatest number of patients we have. We all agree that the proper handling of the acute emergency, in the proper way, will greatly shorten the disability and will greatly diminish the residual disability which the patient has. With all these doctors interested and working on this problem, we hope to continue to improve the general standard of treatment.

Henry C. Marble, M.D.,
Consultant to the Hand Clinic

* * *

Dr. Francis D. Moore, West Surgical 1940 and one of our Assistant Surgeons, has been named as Surgeon-in-Chief of the Peter Bent Brigham Hospital. He has also been appointed Moseley Professor of Surgery at Harvard Medical School.

Since the current issue of the *Harvard Medical Alumni Bulletin,* which most of our readers probably see, carries an article regarding Dr. Moore's professional career, we refer you to that publication instead of repeating the information here.

* * *

The first of July next, Dr. Rulon W. Rawson will leave our staff in order to take up a job offered him by Cornell University and the Memorial Hospital in New York.

His career of seven years at the Massachusetts General Hospital has been distinguished chiefly by a series of brilliant investigations on the thyroid. Also, he has contributed enthusiastically and effectively to the education of medical students and house officers. Furthermore, we are grateful to him for his devoted labor, together with Dr. Bauer and Mr. Crockett, in raising the new research fund of the hospital.

He arrived in our midst in the autumn of 1941, the holder of a Research Fellowship of the American College of Physicians, with a burning desire to get to work at once on one or more of the several problems of thyroid physiology which had been shaping up in his mind for some years. He was in possession of new techniques with which to attack these problems, some of which, notably the use of mean acinar thyroid cell height as a bio-assay of thyrotropin, he had devised himself.

He started in two small rooms in the attic of the Bulfinch, making observations on the effect of cultures of thyroid tissue on the physiologic activity of thyrotropin. From that time until the present the growth and development of the thyroid research laboratory, under his leadership, both as to number of workers and interest of projects, has steadily progressed.

Since 1943 when Dr. Saul Hertz left for Naval duty, Rawson has also managed the affairs of the Thyroid Clinic, which has attracted to its two weekly formal sessions an ever increasing number of scientific visitors from all over the globe.

It is not possible here to give even an outline of the contributions which have emerged from the clinic and laboratory during the seven years of his incumbency. An impressive array of papers has come forth describing studies on thyrotropin, thyroid hormone, their interrelations, antithyroid drugs, and finally tumors of the thyroid which, during the last few years, have been a very major item in the whole program of research.

Among the talents which enabled Rawson to make this fine record of achievement are a lively scientific imagination, accuracy, full understanding of the need for controls, prodigious memory for facts, complete honesty—both intellectual and moral, and a generous attitude toward colleagues.

Dr. Rawson obtained his college training at the University of Utah; got his M.D. at Northwestern University in 1937, and interned after that at Passavent Hospital, Chicago. Prior to coming to the M.G.H. in 1941 he had spent three years with Aub at the Huntington Memorial Hospital, Boston. At present he holds the titles of Assistant Professor of Medicine at Harvard and Associate Physician to the Massachusetts General Hospital. In New York he will become Associate Professor of Medicine at Cornell and Senior Attending Physician at the Memorial Hospital in charge of general medicine, and a member of the Sloan-Kettering Institute in charge of clinical investigation. Although his work will be primarily in cancer, a very broad interpretation of the field of endeavor which this term implies has been promised him.

We have no doubt that his career in New York will fully maintain the high standards he has set here. We hope to continue to collaborate with him in research.

We wish him every success and satisfaction in his new undertaking. His going is a great loss to us, but we are proud to send out a scientist of his stature to head an important undertaking elsewhere.

J. H. M.

* * *

The Class of 1948 of the School of Nursing will be graduated on Friday, June 11, in exercises to be held on the Bulfinch Lawn. Mr. Francis C. Gray, Chairman of the Board of Trustees of the Massachusetts General Hospital, will preside. The two principal speakers will be Miss Nellie X. Hawkinson, Professor of Nursing Education at the University of Chicago, whose subject will be "Society's challenge to nursing", and Dr. Nathaniel W. Faxon, speaking on "The contribution of the School of Nursing to the development of the Massachusetts General Hospital".

The graduation exercises will be part of a three-day program in celebration of the seventy-fifth anniversary of the School of Nursing. On the evening of June 11, there will be a special anniversary meeting, with Mrs. W. K. Jordan, Chairman of the Ladies' Advisory Committee of the School of Nursing, presiding. The speakers of the evening and their topics will be as follows: Mr. Bancroft Beatley, President of Simmons College, "Trends in vocational education for women"; Dr. Henry K. Beecher, Professor of Anesthesiology, Harvard Medical School, and Chief of the Department of Anesthesia, Massachusetts General Hospital, "Concerning opposition to progress"; and Miss Ruth Sleeper, Director of the School of Nursing and the Nursing Service, "The two inseparables—nursing education and nursing service".

A meeting for guidance workers in Massachusetts high schools was sponsored by the School of Nursing on May 12. The program included tours of the hospital, conducted by student guides; a nursing demonstration, presented by Miss Sylvia Perkins and her assistants; a talk by Miss Ruth Sleeper; and an informal tea.

A visitor for the summer in the Nursing Department will be Miss Marion Barret of McGill University, who is coming to do field work in teaching and administration.

Mrs. Sophie McDonough, night supervisor in the General Hospital since early in 1945, is greatly missed since her recent resignation.

A new Graduate Assistant in the Nursing Arts Department of the School of Nursing is Miss Julia Graves. Miss Graves was graduated from this School of Nursing in 1945 and has since seen service with the Army Nurse Corps.

One of the prime objectives in psychiatric nursing is aimed toward the normal rather than the abnormal. To initiate a spirit of friendly participation in everyday, stimulating activities to a community group in a psychiatric hospital has been a constant challenge to our personnel and serves as a basis to promote good mental attitudes. Although one thinks of the medical and nursing staff as the promoters, we have found that all the other departments within the hospital quietly and efficiently contribute their share.

Perhaps our recent Minstrel Show will demonstrate such an activity. A group of student nurses conceived the original idea. The faculty of the school hardly dares to guess that it came from a particular group. A Simmons affiliate, a McLean Senior, and a Children's Hospital affiliate were among those who approached us. A few days later we found that the father of a Cooley Dickinson Hospital affiliate, who has had experience in conducting such shows, had offered his services as a director.

A Massachusetts General Hospital affiliate divulged that she could help with a tap dance routine. The McLean Senior students financed the project, and so the first meeting for try-outs was scheduled, inviting talent from all groups within the hospital community. One of the McLean men graduates was Interlocutor; the cast was a mixture of student nurses, graduate nurses, ward helpers, and a recreationist — all participating together—and what fun they all had. The talent found was amazing, to say the least.

As the rehearsals progressed, one of our carpenters cheerfully built a set of elevated tiers for the stage; the electrician helped to adjust the spotlights; the gardeners supplied flowers and plants; the occupational therapists printed the tickets and helped with the costumes; the dietary department planned refreshments for the cast after the last performance; and the administrative medical staff gave permission to include all employees for the first performance and the patients for the second performance.

When the selected dates late in April arrived, the enthusiasm of all was delightful to observe. Patients and employees filled the hall both nights. The chorus, the endmen, and the features brought laughter and enjoyment for the total hospital community.

The value of such a demonstration described is difficult to express. The important thing which stands out in our minds is that the spirit of friendly participation has been beneficial to all—patients and hospital personnel alike.

Margaret C. Tibbetts, R.N.,
Director, School of Nursing and Nursing Service

MASSACHUSETTS EYE & EAR INFIRMARY

It may be of interest to NEWS readers to hear one man's impressions of Mexican ophthalmology—observations made as the result of a two-weeks' stay in that nation's Capital. In Mexico City there are about seventy practising ophthalmologists, including the eminent Professor Manuel Márquez, a political exile from Madrid. The one desire of all the young ophthalmologists is to spend a year in the United States, and during the war many had residencies in this country, especially in New York and Chicago.

Most ophthalmologists in Mexico spend their mornings in one or more of the many small clinics, and practise in their own offices between one and three and between five and eight o'clock, with a siesta between three and five. During these office hours, fifteen to thirty private patients may be seen. Fees are of the order of $5 per visit.

The clinics in Mexico City consisted of numerous small units, either adjuncts to the several general hospitals or separate charitable organizations, each with its own staff and teaching connections. The quality of practice and surgery in these clinics seemed high and the ophthalmologic equipment was good, but the physical quarters were in many cases very poor. In one instance, for example, a chicken coop opened up into the same patio as did the patients' rooms.

The lack of any basic research would appear due, in part at least, to the fact that there is no central eye hospital large enough to support a research division. The talent and enthusiasm are there, nevertheless, and in at least one other field a research laboratory has been set up—the like of which I have never seen in the United States. Moreover, the absence of any income tax and the accumulation of considerable wealth by the few (as appears to be the present case in Mexico) open the way for potential new endowments.

The one disease which "belongs" to Mexico (and Guatemala) is onchocerciasis, and the Mexicans take righteous pride in their studies on it. They showed me two patients with onchocerciasis—one with a severe uveitis and the other with superficial punctate keratitis. Neither showed the microfilaria in the anterior chamber at that time, but scrapings of the skin placed on a slide showed an abundance of the squirming filaria looking like giant spirochetes. The initial lesion in this patient was on the buttocks, and specimens of this lesion which had been excised showed the gestating parasite full of developing microfilaria. Thence the microfilaria travel throughout the body and into the eye by way of the subcutaneous tissue. They are never found in the blood stream nor lymphatics.

The Mexican ophthalmologists are cordial to the extreme and anxious to establish rapport with their northern colleagues. They are already planning open house on a large scale for the Pan American Congress of Ophthalmology in 1952. I predict that this will be the ultimate in hospitality, and will provide a great sum total of pleasure and profit for those who attend.

David G. Cogan, M.D.,
Director, Howe Laboratory

Dr. Morris Sherman, who has been on Oto-Laryngology laboratory service for the past three months, has begun his House Service in Oto-Laryngology. Dr. Sherman is a graduate of Louisiana State University Medical School.

Dr. Gustav C. Bahn completed his residency in Ophthalmology at the Infirmary on the first of May. He has returned to New Orleans where he has already begun his practice.

Dr. Everett C. Moulton, who also finished his Ophthalmological residency in May, is beginning his practice at Fort Smith, Arkansas.

Dr. Manuel Stillerman, who received a Fellowship from the American Board of Ophthalmology, has completed his observations at the Infirmary. At present, he is observing the work in Ophthalmology being done at the Johns Hopkins Hospital in Baltimore.

Recent visitors at the Infirmary include Dr. Ovelando Grigoyew from Santa Fé, Argentina, Dr. David Sevlener, Rosario, Argentina Republic, and Dr. De Smedt from Belgium. These doctors spent some time here observing in our clinics and operating rooms.

New addresses:—

Dr. Franklin G. Balch, Jr. (*ES* 1925), 1180 Beacon St., Brookline 46, Mass.
Dr. J. Dellinger Barney (*ES* 1905), 412 Beacon St., Boston, Mass.
Dr. Joao Cruz Guimaraes (*Oto-Lar.* 1946), Rua David Campista, Botafogo 6 F, Rio de Janeiro, Brazil.
Dr. James A. Halsted (*WM* 1932), Faulkner Hospital, Jamaica Plain, Boston 30, Mass.
Dr. Alfred T. Joseph (*Dn.* 1941), 475 Commonwealth Ave., Boston 15, Mass.
Dr. Charles G. Mixter, Jr. (*WS* 1940), 319 Longwood Ave., Boston, Mass.
Dr. James M. Stewart (*M* 1946), 6 Calumet St., Rochester 10, N. Y.

From Atlantic City, Dr. Edward B. Benedict sent us this account of his recent trip up to that point. Although the Benedicts are now back at the hospital, the letter is just as interesting and amusing now as when it was written.

I am sure hardly anyone at the M.G.H. knows we have been away at all, but the fact is that Pat (Dr. Patricia H. Benedict) and I have been gone about three weeks and have covered about 3500 miles by automobile. I am marking time this morning while she is attending the meeting of the "Young Turks".

We headed first for Kansas City, passing *en route* acres of flat fertile country under spring cultivation. In Kansas City we saw some of the large stockyards, and were entertained by friends who served us some of the thick juicy beefsteaks for which the city is famous. It amused and interested us very much to see the *Naval* Air Base in Olathe, Kansas, about 1500 miles away from any salt water!

From Kansas City we drove to Jefferson City, Missouri, to visit some farming friends. In spite of the fact that the weather was beautiful and the temperature 85-95, with apple blossoms and lilacs in every direction, the subject of conversation got around to cold feet. Since there are some nights when my feet are none too warm, I listened attentively. Our old farmer host said he had the same trouble and was like the radio comedian who had left his lower extremities hanging out exposed over the end of the bed. When asked why he didn't put them under the covers, he said he didn't want those — — cold things in bed with him! (Peripheral Circulatory Clinic please note.) Some of these delightful old people bear their ailments with fortitude and good humor. We asked one old lady about her general health and her reply was, "My rheumatism hangs on just lovely."

Believe it or not, the trip was undertaken primarily for medical reasons. In St. Louis, under the auspices of the Missouri Chapter of the American Cancer Society, I spoke at the Annual Convention of the Homer G. Phillips Hospital Interns Alumni Association. This is a hospital for colored people, and all the interns are negroes. About 200 negro doctors were present at the Symposium on Malignancies of the Stomach, presided over by Dr. Remus Robinson, with Dr. Robert Elman as Moderator. Dr. Anton Carlson of Chicago talked on Physiology, Dr. Ira Lockwood of Kansas City on Radiology, E. B. B. on Endoscopy, and Dr. Lauren Ackerman of Columbia, Mo. on Pathology. The Medical and Surgical Aspects were discussed by Dr. Joseph Kirsner of Chicago and Dr. Irvin Abell of Louisville, respectively. At the Annual Dinner, Dr. Evarts Graham of St. Louis introduced Dr. Carlson as the speaker of the evening.

In Louisville, we called on Ralph [*WS* 1935] and Helen Adams in their lovely old suburban home, with beautiful gardens and grounds, near the city. Unfortunately, their twin boys and baby boy had all gone to bed.

On the way to Nashville we made a side trip to the Blue Grass country around Lexington, where we visited Warren Wright's beautiful Calumet Farm and were told with positive assurance that "Citation" would win the Kentucky Derby and that "Coaltown" would place second. They did! Unfortunately, we had been too conservative to bet.

In Nashville, we stayed at the Shulls' (Dr. and Mrs. Harrison Shulls') delightful home out of town. Besides driving us all around the beautiful countryside, "Hack" prevailed upon us to stay over so that I could lecture on Endoscopy to the third and fourth year classes at Vanderbilt University Medical School.

Except for cold rainy driving all the way going west from New York to Springfield, Illinois, we had hot sunny weather throughout the Middle West and South until we got back to Lexington, Virginia. Here it turned cold and rainy, so we visited the University of Virginia in Charlottesville, and Monticello the home of Thomas Jefferson, in the rain, and were unable to take the famous Skyline Drive through the Shenandoah National Park. Washington was beautiful, as usual. Unfortunately, "Hamp" (Dr. Aubrey O. Hampton, *r.p. R* 1927 & *former Chief R*) was visiting in Texas.

Atlantic City is cool and today is rainy. At the meeting of the American Gastroenterological Association, I presented a paper (co-author Dr. Richard H. Sweet) on "Benign stricture of the esophagus, with special reference to hiatus hernia, esophageal ulcer, and duodenal ulcer". I also demonstrated at that meeting and at the meeting of the American Gastroscopic Society the new operating gastroscope with special channel for aspirating secretions and biopsy forceps. A great deal of interest was shown. A young New York surgeon approached me after the meeting regarding a career in Endoscopy. Of course I told him it is a fascinating field for a man with adequate general background who is willing to continue to correlate his work with medicine, surgery, radiology, pathology, etc.

At the Annual Dinner of the American Gastroenterological Association, the Julius Friedenwald Medal was presented to Dr. Franklin W. White [*EM* 1896] of Boston. In accepting the medal Dr. White said he thought they had picked the wrong man, and that their eulogies were as incorrect as the following limerick:

"There was a young fellow named White
Who could travel much faster than light;
He went out one day
In a relative way
And came back the previous night."

At the Annual Luncheon of the American Gastroscopic Society, the guest of honor was Dr. George B. Eusterman of Rochester, Minnesota, who spoke on "Gastric diagnosis in retrospect".

At a small dinner, attended by Dr. and Mrs. Walter L. Palmer of Chicago, Dr. Herman Moersch of Rochester, Minnesota, Dr. Dwight L. Wilbur of San Francisco, Pat and me, Dr. Wilbur told a story which illustrates the thriftiness of some people other than "Proper Bostonians". It seems that a salesman came to the door to sell a bicycle but the family said they could not afford it, at which point the small son pulled out a good sized roll of bills and change and offered to pay the salesman. His father and mother were aghast and asked him where he got the money. He replied that on a recent trip he had taken with his father "Daddy was very careless about his money, and left some lying on the table after every meal!"

In conclusion, Atlantic City seems to have just the right touch of welcome for the distinguished Association of American Physicians. In the windows of shops and restaurants the following sign, all on one card, is prominently displayed:

WELCOME
UNITED STATES BREWERS
Association
American Physicians

The News always appreciates a letter such as this, from Dr. Dwight M. Fowler (*ES* 1946).

Not so long ago I returned to the U.S. from Korea, where I served with the 6th Infantry Division as Division Medical Inspector. There are innumerable stories—some good, more of them bad—that might be told about this very oriental, very muddled, and very dirty land. Some of the following are illustrative.

As Medical Inspector my work was primarily preventive medicine, with emphasis mainly upon insect control and secondarily on rodent control and general health of natives and GI's. Just about any disease that is water-borne, insect-borne, or rodent-borne is endemic in Korea and ready to explode with little coaxing. Native cooperation in improving sanitation deserves nothing but demerit, and it was only through the efforts of occupation troops that the general health of GI's and Koreans remained excellent throughout the twelve months of 1947. One small outbreak of typhus appeared early in the year, and less than two dozen cases of cholera were diagnosed during the latter part of the summer. Sporadic reports of dysentery, typhoid, smallpox, and diphtheria—most of them unconfirmed by laboratory methods—appeared from time to time. All of these were among the natives. Compared with the previous year, when some 12,000 natives died of cholera alone, there is much reason to be proud, for without large-scale immunizations, chlorination of city water supply systems, and attempts (with mediocre success) to educate the natives, there is good reason to believe that such outbreaks might be annual.

No. 11 in a series of Staff photographs
Dr. Joe V. Meigs—Chief of Gynecological Service

Thanks to DDT, mosquito and fly populations were excellently controlled in camp areas some distance from a native village. I have nothing but the highest praises for DDT. Properly used, it never failed to control common insect pests. Even when a camp was surrounded by native dwellings the same was true, though at the expense of considerable effort, for each native dwelling—inside and out—each little body of water, each pigsty, within a half-mile radius of the confines of the camp had to be sprayed or dusted with DDT. In Fusan (population 600,000), for example, where U.S. troops were rather scattered throughout the city, every building received at least one dousing of residual DDT spray. The results were very gratifying when measured in terms of insects present and insect-borne diseases. For example, the rate of new malaria in GI's during the period 1 April—1 November 1947 was 1.3/1000/annum, 20 or 30 times lower than during the previous year when sanitary teams were less fully organized. Rice paddies, omnipresent in the agricultural section of Korea (Southern, US-occupied), were perfect breeding places for many species of mosquitoes and some flies. DDT dust was applied to many of these, with deleterious effects to the insect larvae and no effects upon the crops. Even though stagnant water was as common there as grass and trees in Boston, I think there were smaller numbers of mosquitoes and flies in the controlled areas of Korea than in Boston. The natives were rather indifferent to insects. They didn't seem to mind them when present, nor miss them when absent. And this indifference was well illustrated by such examples as the following: it was felt by some that, given small sprayers (flit guns) and residual spray to use, individual natives might spray their own dwellings and maybe the dwellings of others near by. But, alas, the sprayers were soon found on the shelves of the thieves' (black) market, and the DDT and diesel oil had disappeared (allegedly into auto gas tanks).

Enough for insects. I'd like to mention rodent control, and again point out that native cooperation was disappointing. First, the Korean is unwilling to keep food beyond the rodent reach. I have watched rats in a native house gnawing at food about to be eaten. The family, temporarily interrupted by my visit, would ordinarily have shoved the animal out of the way, or held the food beyond his reach. They were disturbed not by the fact that the rat was dirty, apparently, but rather that it was devouring their food. But even this latter fact seemed to excite only a modicum of indignation, for food is more plentiful now since the U.S. has begun to ship it over to Korea; hence there is less demand for frugality. It was hoped that by supplying the natives with ordinary steel-spring rat traps an effort might be made by them to rid their dwellings of the pests. The springs were found a few days later in the black market; the wooden bases had already been burned for kindling. Finally, it was impossible to poison the animals, due again to lack of cooperation. Poisoning is carried out by using "rat bombs"—small boluses of sodium fluoracetate mixed with meal or fish. These are thrown at random throughout a heavily infested area. The rats often eat them and die. But since there is no way of controlling beggar children (not necessarily orphans—many voluntarily familyless because they can live more "elegantly" in the streets than at home) who would devour the bombs, they cannot be used. The rodent control program was not successful. It was hoped that appropriations might be raised so that bounties could be offered the native for each rat tail he brought to military government. This may be attempted another year.

I should like to conclude this section by saying that any success we have had in improving sanitation and living conditions has been in spite of, and not because of, the natives.

Statistics are totally unreliable in Korea. However, the following trends are interesting. The average age of the native at death is about 40 years. Infant mortality is very high—estimated by some doctors at 30-40 percent. One of the commonest causes of infant death is falling from the mother's back while she leans over to prepare the family meal or to select a dried and salted devilfish in the market place. Many a life has been lost either from fatal burns in a cauldron of fat or a fractured calvarium ere the infant has reached 6 months. Infant diarrheas are important, along with infectious diseases and malnutrition. The relative importance of these and other factors is unknown. Older people die of infections caused by trauma, enteric and pulmonary diseases—probably in that order. The native doctors have been much impressed with the sulfa drugs and penicillin, and these now occupy an important place in the black market.

Surgery is still performed bare-handed and in street clothes, with anesthesia varying from ether to a shock state. The hospitals—once thriving under Jap rule—are now pitiful to see. No windows and no central heat in wintertime, for example. The only heat is supplied by the patient's family who assemble in the room with their little charcoal stoves. The family, also, is responsible for most of the postoperative care. But many patients do well—*vis medicatrix naturae!*

Pregnancy is commoner than non-pregnancy. It takes only a few minutes to arrive tentatively at that conclusion on first entering Korea. Yet it remains valid following more prolonged observation. At the time of delivery the mother does not consider a hospital: she goes to her home. Generally, a doctor is not consulted—most frequently a midwife attends. Not uncommonly, there is no one to assist. Episiotomies are made from within by the oncoming infant. The continuity of the perineal floor is not restored by sutures but rather by caustic soda. Many perinea are horribly misshapen following over-eager applications of lye. Not infrequently cervical stenosis may result in death of the mother during a subsequent delivery—at least, that is what I have been told.

One last story and then this must cease. Malaria, endemic in all of Korea, especially in the southern zone, is often acquired early in childhood. At a tender age the enlarged spleen of "chronic" malaria may be found. To the Korean doctor the spleen resembles a turtle when palpated through the abdominal wall. Hence, the native designation for malaria is "turtle". To treat the disease, a lock of hair is cut from the head and mixed with an oil or grease. This is placed over the "turtle" and ignited. "Cures" should be accredited to fear of another treatment rather than to actual symptomatic relief. It is not uncommon to find natives with small abdominal scars overlying the spleen; they have been "ridden" of malaria at some time in the past, probably.

This is a tardy letter. However, it was not because I didn't think about the M.G.H. that I failed to write sooner. The News, which reached me during the overseas tour, was mighty welcome, and I thank you for it.

I expect to start a residency in Neurosurgery at Cushing General Hospital in June.

Best wishes to all.

DENTAL SERVICE AFFAIRS

One of the aims in the development of the Dental Service is to strengthen the cooperation and teamwork with all of the other active services in the hospital. The ideal has not been reached, but progress has been made. An important factor contributing toward this achievement has been the increase in the use of consultants from other services in the care of our patients. Closer supervision by the house staff and senior visiting men has also been of importance in the handling of complicated cases.

Most of our work necessarily comes within the scope of surgery. This includes the treatment of infections in and about the oral cavity, fractures, and benign neoplasms. Many of the minor procedures are carried out in the Clinic. The house cases are admitted from the Clinic and from the Emergency Ward.

The number of patients admitted to the Clinic has fallen off in the past year. It is difficult to attribute a definite reason for this. In order to maintain the house service on a higher plane it is hoped that some changes can be made in the appointments of our visiting men so that their talents may be utilized more efficiently in the care of our patients, as well as in the training of our two house officers. In a small service such as we have, a limited point of view becomes a threat in the training of house officers. We hope to correct this by utilizing for house service some of our well-trained visiting staff whose activities for some time have been limited to the Clinic, only. Our Clinic, I am certain, can boast of the fact that all patients are treated by men who have had years of experience and have given unselfishly of their time.

Probably the most important new activity in the Clinic and in the house has been concerned with the teaching of students in the third and fourth years of the Harvard School of Dental Medicine. These students are assigned on regular schedules to the Clinic, where history taking and examinations are carried out. If we were to examine the types of cases seen by our students during the past three months, one could not help but realize the importance of the Massachusetts General Hospital in the new educational plan now in effect at the Harvard School of Dental Medicine.

David Weisberger, M.D., D.M.D.,
Chief of Dental Service

The American Association of Plastic Surgeons recently held its annual meeting in Boston. The meeting was sponsored jointly by the M.G.H. and the Children's Hospital. Members, wives, and guests were cordially welcomed at a buffet supper at the home of Dr. and Mrs. V. H. Kazanjian, Monday evening, May 31.

On the following morning there were case presentations by Drs. Donald W. MacCollum, Thomas H. Lanman (*ES* 1918), and other members of the Staff at the Children's Hospital, followed by a luncheon at the Medical School. The afternoon session was devoted to the presentation of papers by members of the Society. An evening at the Pops was enjoyed by all.

The next two days, the meeting continued at the M.G.H. with a presentation of patients by Drs. Kazanjian, Ernest M. Daland, and Bradford Cannon on Wednesday morning and Thursday afternoon, and a series of papers by members of the Society on Thursday morning.

At the Annual Banquet on Wednesday evening, at the Harvard Club, speakers included Professor T. P. Kilner, Nuffield Professor of Plastic Surgery at Oxford, and our own Dr. Arthur W. Allen.

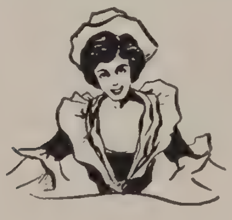
The 75th Anniversary of the School of Nursing, held June 11-13, was the occasion for an outstanding program. Included among its events were addresses by Miss Nellie X. Hawkinson, Professor of Nursing Education at the University of Chicago; Mr. Bancroft Beatley, President of Simmons College; and, from M.G.H., Dr. Henry K. Beecher, Chief of the Department of Anesthesia; Dr. Alfred O. Ludwig, Associate Psychiatrist; Miss Marie E. Rearick, Supervisor of Psychiatric Nursing; Dr. Nathaniel W. Faxon, Director; and Miss Ruth Sleeper, Director of the School of Nursing and Nursing Service.

The meaning of this anniversary celebration was well expressed in two complementary addresses by Miss Sleeper and Dr. Faxon, each of whom traced the growth in size and significance of the School of Nursing since its inception in 1873 as the Boston Training School for Nurses. Dr. Faxon, speaking at the graduation exercises of the Class of 1948 of the School of Nursing, discussed the contribution of the School to the development of the Massachusetts General Hospital. Stressing the role of woman as man's "helpmeet" in hospitals as elsewhere, he spoke of the resistance encountered when the plan for a training school was first discussed, and went on to enumerate the benefits to the hospital that have accrued from that original plan. Most important, he said, has been the social-economic contribution—the provision of student nurses and graduate nurses to meet the expanding needs of the hospital in the period of "mushroom growth" from 1873 to the present time. He mentioned, also, the maintenance of high standards of patient care, the aid in integration of the hospital activities and planning of facilities, and the interest and help in research projects which have been contributions of the School. Dr. Faxon expressed admiration for the School faculty, that over the years has enabled nursing in M.G.H. to keep step in the rapid advance in nurses' responsibilities. "There is now much more to nursing than making a bed or soothing the fevered brow," he said. Financially, too, according to Dr. Faxon, the School has made its contribution, since in 1930 alone the saving to the hospital through services of student nurses amounted to $137,000. It was interesting to learn, however, that this sum has been cut down year by year through increased expenditures to develop and better the School, until it is possible to prophesy that value of service and School expense will soon balance. Dr. Faxon concluded his address with a fine tribute to the group of women who started and guided the School during its formative years, and to those who "as superintendents and teachers bore the heat and burden of the day by day operations."

Addressing a large group of homecoming alumnae at the Anniversary Meeting on June 11, Miss Sleeper spoke on "The two inseparables—nursing service and nursing education". Retracing in her turn the history of the School, she showed very graphically the "mushroom growth" referred to by Dr. Faxon and the evolution of the Nursing School curriculum and policies under the influence of that growth. Pointing out that in 1873 "the curriculum was in essence the care of the sick" and quoting a recommendation of that year that "two more pupils should be engaged in readiness to open another ward", Miss Sleeper referred to the limited character of early nursing procedures, then traced the rapid additions of lectures, outside affiliations, and so many new procedures as to demand an additional year's training. She paid tribute to Miss Annabella McCrae for her outstanding contribution to the expanding curriculum.

Today "the impact of medical science on nursing service" is presenting new and important problems to the nursing educator, Miss Sleeper said. She pointed out the vast increase in time expended on certain nursing techniques—for example, on hypodermic and intramuscular injections which, in this hospital in 1948, require time every day equivalent to the full service of 41.8 nurses. "What curriculum," she asked, "can develop in the immature student the ability to see beyond the techniques, to be sensitive to the patients' needs?" Similarly, early ambulation, psychosomatic medicine, the downward trend in the age of student nurses, all make their challenge to the Nursing School in which service to the patient remains the basis of curriculum growth. "The nurse of 1948," said Miss Sleeper, "must be prepared for work in a field which has unlimited possibilities for new developments."

The pattern for the progress ahead was perhaps set up by Dr. Beecher in an address on the same evening. Citing the opposition to the establishment of the School of Nursing as one of his examples of "Opposition to progress", Dr. Beecher described the part of youth in scientific discovery and medical progress as contrasted to the conservative influence of the "relatively elderly powers". "Three-quarters of a century ago," he said, " . . . this abundance of robust youth . . . put the Training School for Nurses on its feet." He then quoted from the hospital Annual Report for 1876 which prophesied of the student nurses that "with right notions of their duties, they will eventually prove a blessing to the sick of all classes in the community."



The results of the Vincent Show were recently announced at the Annual Meeting of the Club. Their contribution to the Vincent Memorial Hospital of the handsome sum of $38,000 is $2,000 more than that of last year, proving—all mathematicians and grammarians to the contrary—that what seemed like *supreme* effort last year could be increased to *more supreme* effort this year. The thanks of everyone connected with M.G.H. go to the Vincent Club—not only for its splendid donation, but for the hours and hours of time and thought so freely given by its members.

It may interest our readers to know that plans for the 1949 Show are already under way, with the dates March 28 through April 2 set for the event.

* * *

Interns and Residents have been very lax, in the past, in the matter of renewing their Limited Registration Certificates which permit them to practise at M.G.H. This omission has aroused much criticism of the hospital from the Massachusetts State Board of Medicine.

It is the duty of all Interns and Residents to see that their Certificates are promptly renewed. They are hereby instructed to notify Mrs. Flynn when their expiration dates are drawing near, and she will handle the matter of renewals.

W. T. S. Thorndike, M.D.,
Assistant Director

MYASTHENIA GRAVIS CLINIC

The syndrome of myasthenia gravis was first suggested by Thomas Willis in 1672, but the disease was not clearly delineated until the reports of Erb in 1878, Goldflam in 1893, and Jolly in 1895. The first patient to enter the wards of the Massachusetts General Hospital with this disease was admitted in 1905. In the following thirty years, up through 1934, thirty-one patients received this diagnosis in the wards and possibly a few more in the Out-Patient Department. The disease was thus rare, only one patient a year, on the average, being seen in a moderately large general hospital. Seven of the thirty-one are known to have died either within a few weeks in the hospital or within a year at home. The disease was rapidly fatal, probably even more so than our ratio of 7 in 31 would indicate since our follow-up records were not complete. The average age of death in this early series was slightly over 35 years. During this period, moreover, treatment was nearly unavailing. After 1930, ephedrine sulfate was used as a form of treatment with moderate success.

Interest in the disease was greatly stimulated by the report of Dr. Mary Walker of London in the *Lancet* for June 2, 1934. She had used parenteral physostigmine with remarkable effects; the muscular weakness in her patients disappeared within fifteen to twenty minutes after injection. The distressing side effects of physostigmine were soon controlled by atropine, the latter drug not interfering with the good effects of physostigmine on the skeletal musculature. Shortly after June 1934, prostigmine, a synthetic analogue of physostigmine, was used with the same general effect; most of the symptoms, even in a severe myasthenic, disappeared rapidly.

On March 28, 1935, prostigmine, now called neostigmine, was first used at the Massachusetts General Hospital on a patient who had been under observation with a diagnosis of myasthenia gravis since 1933. The injection was made in the Ether Dome at my request by Dr. Robert S. Schwab, then Resident in Neurology. The effects were dramatic and led us to investigate the effects of prostigmine in diseases other than myasthenia gravis. By the end of 1935, five patients with myasthenia gravis and seven patients with other conditions such as muscular dystrophy, amyotrophic lateral sclerosis, progressive bulbar palsy, and the progressive ophthalmoplegia of von Graefe had been examined. The response in all cases of myasthenia gravis was rapid and in most cases complete, while in other diseases the effects of the drug were minimal. The "Prostigmine Test" was thoroughly proved by ergographic and electromyographic studies, as well as by fluoroscopic examination in cases of dysphagia, after ingestion of barium. A diagnostic schema was developed to record the results, and the data was published in the *New England Journal of Medicine,* December 26, 1935, the first report of the diagnostic value of prostigmine in myasthenia gravis.

Our interest in this condition grew rather slowly and, in 1936, Dr. Roger S. Mitchell and I were able to report on a group of eighteen patients tested twenty-seven times. By September of the next year, 1937, twenty-three patients had been seen, largely in the Out-Patient Department. In 1939, the subject was thoroughly reviewed by Drs. Viets and Schwab, the number of cases being seventy. The Myasthenia Clinic was formed at this time in the Out-Patient Department and has continued ever since. The total number of patients seen with myasthenia gravis through June 1, 1948, is 245 and many more have been reported to us by correspondence. About twenty-five papers have been published from the Clinic in the twelve years.

The Clinic is held in the Out-Patient Department once a week except during the month of August. About sixty patients are constantly seen and, in addition, twenty to thirty are observed each year in the private or public wards of the hospital. The principal work of the Clinic has been in demonstrating the efficacy of prostigmine in the care of patients and as a center for studies—such as race, progress of the disease, the evaluation of thymectomy as a form of treatment, and the use of drugs other than prostigmine.

The Clinic has been fortunate in having a group of patients who have been willing to remain constantly under care. There is, for instance, in the Clinic today the patient who was first injected in 1935, and many of our patients have been under our personal observation for periods of five to ten years. From them, we have learned something of the progress of this disease and the value of treatment when carefully adjusted to the individual patient. Practically every patient under our observation is on a special schedule of prostigmine and supplemental drug designed for that patient alone. The schedules, moreover, may change from month to month and constant supervision is needed.

The trend, however, is for the Clinic to become smaller rather than larger, and this is based on three factors: 1) The disease is more fully recognized now than it was ten or twelve years ago and physicians have become adept in both diagnosis and in caring for patients with myasthenia gravis. 2) Treatment with prostigmine has enabled many patients to remain comparatively well. Deaths in our Clinic over a period of twelve years are about 25 percent, but as the age of onset of the disease is from infancy to patients over seventy, a considerable portion of deaths is due to advancing years. The mortality from myasthenia gravis itself is probably under 10 percent at the present time and perhaps as low as 5 percent. 3) A further stimulation came when thymectomy was first used by Blalock at the Johns Hopkins Hospital in 1941 as a form of treatment in patients with myasthenia gravis, but without tumors of the thymus as disclosed by roentgenoscopic examination. The operation was first carried out here by Dr. Churchill in December of the same year. Subsequent operations were done by Dr. Oliver Cope and Dr. Richard H. Sweet. Through the month of June 1948, twenty-nine patients from the Clinic have been subjected to thymectomy, twenty-six of them at the Massachusetts General Hospital. Of this group, twenty-one are living and eight have died.

The Clinic, run jointly by Dr. Schwab and me, has been carried on with the assistance of various Residents in Neurology. The secretary in recent years is Miss Margaret M. Bateman, and an office is maintained on Bulfinch IV. A number of exhibits have been given before various medical associations, particularly at the annual meetings of the American Medical Association and the American Neurological Association.

As a result of a twelve-year study of this disease at the Massachusetts General Hospital, Dr. Schwab and I have reached the following conclusions:

1. Patients with myasthenia gravis, with a few exceptions, can now be maintained on various amounts of prostigmine bromide taken by mouth. Occasionally, the oral medication must be supplemented by injections subcutaneously and on rare occasions the drug is given intravenously. Intravenous treatment has been a considerable factor in reducing the operative mortality, the drug being given by the continuous drip method during the operative and post-operative period.

2. Although a large number of cases have been seen at the Massachusetts General Hospital in the last twelve years, this does not mean that the disease is more common than formerly considered. The "Diagnostic Test", first devised at this hospital in 1935, has been of great value in disclosing cases that otherwise would have been missed. The Clinic, moreover, draws patients from a wide area, including those from outside the United States.

3. Myasthenia gravis tends to progress by spontaneous remissions and relapses. Theoretically, one ought to be able to give enough prostigmine either by mouth or by subcutaneous or by intravenous injection to maintain the patient properly at all times. Very sick patients, however, require a large dose of prostigmine. In exceptional cases doses as high as forty 15 mg. tablets, or the equivalent in soluble prostigmine, are not infrequently required.

4. If a patient is maintained during a period of relapse, a spontaneous remission is almost certain to occur. When this becomes evident, patients quickly reduce the amount of prostigmine necessary for maintenance. A resistance to the effects of the drug is not ordinarily developed and most patients, requiring thirty or more tablets a day during a relapse, are frequently maintained on two or three tablets or even less during a remission. Some patients are free from all symptoms and require no medication for months or even years.

5. The adjustment of the schedule to the patient is the most important part of the treatment. Each patient requires a separate schedule. Thus, constant observation is necessary, and in the Clinic patients are seen at intervals of from two weeks to six months, depending on the severity of their illness.

6. The disease is best considered as a deficiency disease, with prostigmine making up the deficit. Other drugs are of relatively little value.

7. Most patients in our thymectomy series feel that the operation results in a more constant maintenance of good health, without fluctuations, and in some cases the amount of prostigmine necessary for sound adjustment is radically reduced. The death rate of thymectomy on our hands is eight out of twenty-nine cases, most of the deaths having occurred before 1945. Only one death has occurred in the last eleven cases operated on.

8. The disease may have its onset at any period of life from infancy to old age, but the majority of the patients have their first symptom between twenty and thirty. The decade between sixty and seventy, however, comprises the second largest group.

9. Patients with myasthenia gravis, when well maintained on prostigmine, may have a "normal" pregnancy. Delivery is not affected and the children in our series were not abnormal. Some patients experience a partial or even a complete remission of symptoms during the last two trimesters of pregnancy. Symptoms again appear after delivery.

10. Prostigmine, in general, makes other types of muscular fatigue worse. Its use in degenerative diseases of the nervous system, such as progressive muscular atrophy, is contraindicated.

11. Finally, about half of the patients under our observation are well adjusted on medication, most of them carrying on their usual occupations; another 40 percent of the patients under observation lead a somewhat restricted life.

Henry R. Viets, M.D.

* * *

The announcement of the May meeting of the Massachusetts General Hospital Research Council gave the following program:

"Clinical and laboratory studies on beryllium toxicology", Drs. Robert S. Grier, Peter H. Nash, and David G. Freiman.

"Studies of intracranial tumors, employing radioactive isotopes. The concentration of P32 by cerebral tumors", Drs. Bertram Selverstone and Arthur K. Solomon.

MASSACHUSETTS EYE & EAR INFIRMARY

The Junior League of Boston has pledged year-round service to the Boston Eye Bank, to assist with the program for furnishing eye tissue to the surgeons for the corneal transplant operation.

The Junior League voted unanimously to sponsor the project, to make certain that the Eye Bank is given 24-hour service. The Red Cross is very active in its support of the program and transports eye material from 9 to 5 on weekdays. The League will now furnish transportation at all other times. Its members are also conducting a campaign to raise funds to finance the service and to enroll volunteers who will donate their eyes to be given after death to the Eye Bank.

Dr. Garrett L. Sullivan, Assistant Surgeon in Ophthalmology at the Infirmary, has been appointed by the Executive Committee as General Director of the Eye Bank.

Dr. LeRoy A. Schall, Chief of Ear, Nose and Throat Service, was awarded a Doctor of Science honorary degree from Jefferson Medical College on June 4. Dr. Schall received his M.D. there in 1917.

Dr. Paul A. Chandler, Surgeon in Ophthalmology, was given an honorary Doctor of Science degree, on May 31, from Hastings College, Hastings, Nebraska. Dr. Chandler graduated from this college in 1920, before coming to Harvard Medical School.

At the same commencement exercises, Dr. Chandler's brother, Rev. Russell C. Chandler, was given an honorary Doctor of Divinity degree.

Dr. Edwin B. Dunphy, Chief of Ophthalmology, will sail on June 24 for England, where he will attend several ophthalmological meetings—among them the Oxford Congress.

Dr. Parker Heath, Director of Pathology Laboratory, was elected in June as Vice-President of the American Ophthalmological Society.

Dr. David G. Cogan, Associate Surgeon in Ophthalmology and Director of the Howe Laboratory, is to be in Germany during July and August, under the auspices of the Unitarian Service Committee, which has previously sent similar missions to Czechoslovakia, Italy, Greece, and Poland. The present mission, which is the first to have an ophthalmologist, is to make a lecture tour of the university centers in Germany. Dr. Cogan's lectures will be on the clinical physiology and pathology of the cornea and on the neurology of the extraocular muscles.

An exhibit of a new type of movable implant, which is a modification of several existing varieties, was presented at the Chicago Session by Dr. William B. Stone, Jr., Resident in Ophthalmology. The exhibit depicts the results of a large series of implantations done at the time of enucleation, and also a series done on sockets where the previous result has been unsatisfactory. The results of a series of plastic repairs on contracted sockets, utilizing the implant, and the advantages and disadvantages of the procedure were shown. The surgical technique necessary and results of animal studies on tissue growth into and around these implants over varying periods were diagrammed in detail. The exhibit made it clear that no extrusions have occurred over a year's period, and the motility on an over-all basis is 84% of that of the normal eye.

The Board of Trustees, at their meetings on May 14 and 28, and June 11, voted:

To accept the resignation of Dr. Francis D. Moore with regret and to appoint him to the Board of Consultation, effective July 1.

To appoint:

Dr. Jarrel G. Burrow as Assistant Resident on the Dental Service for one year, beginning July 1;
Dr. Jonathan Cohen as Assistant Resident on the Orthopedic Service, beginning July 1, 1949;
Dr. Lewis Francis as Assistant Resident in Anesthesia, beginning July 15;
Dr. Nicholas M. Greene as Assistant Resident in Anesthesia, beginning August 15, 1949;
Dr. Grant V. Rodkey as Second Assistant Resident in Surgery, beginning June 14;
Dr. Robert S. Shaw as Third Assistant Resident in Surgery, beginning May 25;
Dr. Allan J. Stinchfield as Assistant Resident on the Orthopedic Service, beginning January 1, 1949;
Dr. Paul Sweet as Dental Intern for one year, beginning July 1;
Dr. Jerome Waldman as Assistant Resident on the Orthopedic Service, beginning January 1, 1949;
Dr. John C. Wilson, Jr. as Assistant Resident on the Orthopedic Service, beginning October 1, 1949.

At their meetings on May 12, 19 and 26, and June 9, the General Executive Committee voted:

To promote:

Dr. Roy V. Buttles from Second Assistant Resident to First Assistant Resident in Pathology, beginning July 1;
Dr. Robert H. Fennell, Jr. from First Assistant Resident to Senior Resident in Pathology for one year, beginning July 1.

To extend the appointments of:

Dr. Howard P. Haswell as Assistant Resident in Anesthesia for a second year;
Dr. Charles K. Wainger as Clinical and Research Fellow in Dermatology, through December 31.

To appoint:

Dr. Perfecta C. Bautista as Graduate Student Assistant in Neurology for the months of May, June, and July;
Dr. John W. Bell as Clinical Fellow in Surgery;
Dr. Samuel Bluhm as Clinical Fellow in Radiology;
Dr. Reinaldo F. Brignone as Research Fellow in Surgery;
Dr. John D. Crawford as Research Fellow to the Children's Medical Service, as of January 1, this appointment to continue through June 30;
Dr. Thomas F. Dwyer as Clinical Fellow in Psychiatry for the period June 1 through November 30;
Dr. William A. Elliston as Research Fellow in Orthopedic Surgery for the period January 1, 1948 to June 30, 1949;
Dr. Davitt A. Felder as Clinical and Research Fellow in Surgery, as of July 1;
Dr. Theodore S. Golden as Clinical Assistant in Pediatrics, beginning March 1;
Dr. Edwin B. Goodall, Jr. as Clinical Fellow in Neurology for six months, beginning July 1;
Dr. Ralph H. Luikart, II, as Clinical Assistant in Dermatology for nine months, beginning July 1;
Dr. Roland H. McFarlane as Research Fellow in Medicine, to work with the Hypertension Committee for one year, beginning July 1;
Dr. Frederic B. Mayo as Clinical Assistant in Medicine;
Dr. Abraham I. Perley as Clinical Assistant in Dermatology for six months, beginning July 1;
Wilson R. Slaunwhite, Jr., Ph.D., as Research Fellow in Medicine;
Dr. Arthur A. Thibodeau as Research Fellow in Orthopedic Surgery for the period January 1, 1948 to June 30, 1949;
Dr. Harold A. Vinson as Clinical Fellow in Radiology;
Dr. William S. Worthy as Clinical Assistant in Surgery, assigned to Gynecology.

* * *

DERMATOLOGY DEPARTMENT

Dr. Chester N. Frazier, our new Chief of Service, comes to us from the University of Texas, where he has been Head of the Department of Dermatology. Dr. Frazier has been named Edward Wigglesworth Professor of Dermatology at Harvard, where he will develop the newly-established research program on diseases of the skin. The program will make use of recent advances in physiology and biochemistry in a search for new knowledge of skin diseases.

With the aid of an increased budget we shall be able to operate on a more satisfactory basis, with a full-time Chief. Several laboratory projects are in prospect. We are all looking forward to the advent of this reorganization.

We have been waiting for over a year for a copy of the Chinese citation conferred upon Dr. Merrill Moore (*gr. asst. N* 1933-34) by Generalissimo Chiang Kai Chek. In reply to another more recent request for the text of the award, we received a letter from Dr. Moore, together with a copy of a Commendation, signed by Major General John P. Lucas, USA, Deputy Commander at Nanking Headquarters, a letter from Colonel George E. Armstrong, MC, Chief of Personnel, Office of the Surgeon General, Washington, D. C., and a picture of Dr. Moore receiving the Chinese decoration. The picture is on the bulletin board near the foot of Treadwell stairs.

Dr. Moore's letter reads, in part:

I apologize for waiting so long before sending you a copy of my Chinese award, but I did not receive it until lately. It is in Chinese and I haven't been able to get a good translation yet, but in the meantime I am sending you copies of the material on which the award was made. The Chinese citation is practically the same as the one I am enclosing, dated 26 July 1946. The title of the Chinese decoration is Yen Hui—"Cloud and Banner". Thank you very much for your kind interest.

I follow THE NEWS carefully and always find it informative and often inspiring.

The text of the 26 July 1946 Commendation, signed by Major General Lucas, is as follows:

1. I desire to commend you for the superior and outstanding manner in which you have performed the duties of Surgeon, this Command.

a. As Surgeon of this Command you have been responsible for the organization and operation of all medical service in the Nanking Area.

b. You have assisted materially in the selection of sites for all sanitary installations of this Command.

c. Under your direction the City of Nanking and environs have been sprayed with DDT from the air. This is the first time a world capital has been air-sprayed for disease control.

d. You have supervised the air evacuation of numerous emergency medical and surgical cases.

e. You organized for Supreme Headquarters, Chinese Army, the first public health conference to take place in China after the occupation of the enemy.

f. At the request of U.S. Army authorities you planned and executed the sanitation of a Japanese Prisoner of War Camp in the Nanking Area. You corrected dangerous conditions that, had they not been corrected, would have favored the spread of cholera, typhus, and other communicable diseases down the Yangtze Valley.

g. The fact that the disease rate of the Nanking Headquarters Command has been so low (between 1% and 2% for the first six months of this year) and the fact that the general health and sanitation standards are so high reflects great credit on the indefatigable efforts of you and the United States Army.

2. By direction of the Secretary of War you are authorized to wear the Army Commendation Ribbon.

Excerpts from Colonel Armstrong's letter:

During the period from approximately 1 March 1946 to 31 August 1946, Lieutenant Colonel Moore . . . was assigned to duty with the Nanking Headquarters Command, Nanking, China. During the bulk of this period he was the Station Surgeon and as such carried the duties and responsibilities of any Station Surgeon. In addition to this, he acted as the Medical Advisor to the Medical Section of the Chinese Army Ground Forces Headquarters located in that city.

On 1 May 1946, General George C. Marshall returned to China from the United States and took up his abode in Nanking. From that date until 31 August 1946, Lieutenant Colonel Moore acted as the personal physician to General Marshall, his family, and his personal staff—this with the verbal authority of the Surgeon of the China Theater and the Acting Theater Commander. In addition to acting as personal physician, Lieutenant Colonel Moore was also responsible for the sanitation of the General's mess and quarters.

A paragraph in which Colonel Armstrong pays high tribute to Dr. Moore's work in China is omitted at Dr. Moore's request.

* * *

Miss Frances M. Hernan, Chief of our Accounting Department, spent the month of June attending the National Retail Credit Men's Conference in Banff, Alberta, Canada, and vacationing at Lake Louise.

Dr. Gerardo M. Balboni has established, with friends and patients, an Italian Memorial Fund for Cancer of the Throat at the Massachusetts Eye and Ear Infirmary. This Fund is now over $13,000. The purpose of the Fund is to establish a free bed.

Recent gifts to the Archives Department:—

From Dr. J. Dellinger Barney—one of the blue Bulfinch plates.

From Mrs. Richard A. Shaw, 2 Spencer Avenue, Orono, Maine—2 framed pictures of operations, taken about 60 years ago.

We have published letters from Dr. Arthur K. Stone, the only living member of the MGH Class of 1888, and Dr. Edward M. Greene of the Class of 1889. There are no living members of the Class of 1890. We have written to the 1891 alumni, asking them to send us any "recollections of early days at M.G.H." they think might interest our readers. We hope to receive letters from them soon, for we prefer not to pass along to the next younger class until those of 1891 have been heard from.

Mr. Leonard K. Eaton, who is working at Harvard for his Ph.D. in American Civilization, spent some time in our Archives Department recently, gathering material for his term project paper in his Fine Arts course with Dr. Kenneth J. Conant. The result is an excellent nineteen-page article, titled "The Massachusetts General Hospital: Genesis and character". Mr. Eaton has presented us with a bound copy of his work—a very valuable addition to our collection on the Bulfinch Building.

We wish everyone who is at all interested in the history of M.G.H. would plan to come to the Archives Room and read this treatise. Due to his background in the history of civilization, Mr. Eaton has brought out many points hitherto generally overlooked—for instance, to mention only one, his feeling that the rapid growth of such industries in this area as the manufacturing of cotton goods, and the development of Boston as a shipping center, contributed quite as much toward convincing the citizens of Massachusetts that a general hospital was badly needed in this vicinity as did the arguments emanating from the medical and surgical fields. Occupational diseases and accidents were on the increase, and the need of an institution for their care alone would have been strongly felt, even had the physicians said nothing.

Mr. Eaton's treatment of Bulfinch, the architect, is a scholarly one; and many little-known facts concerning the awarding of the building contract, which are brought out in this paper, are most interesting.

We have good reason to believe we shall hear more on the subject of the development of hospitals when Mr. Eaton has finished his final thesis. In the meantime, we guarantee you a most rewarding and exciting half-hour or so when you come in to read his project paper.

Important events, concerning Massachusetts General Hospital, that occurred in the month of July during the earlier part of the nineteenth century:

July 5, 1811 — The bylaws of the hospital were adopted.

July 4, 1818 — The cornerstone of the Bulfinch Building was laid. Bowditch, in his *History of Massachusetts General Hospital,* devotes several pages to the proceedings, including the speech delivered on the occasion.

July 8, 1828 — The Secretary was directed henceforth to audit the accounts of both branches of the institution—McLean and the Bulfinch, with a salary increase of one hundred dollars a year for the additional work.

July 5, 1836 — A committee was appointed to hire or purchase a pianoforte for the Asylum, with appropriate music. Another committee was chosen to purchase a billiard table for the Asylum, should they consider it expedient. They did. Both the piano and the billiard table were purchased.

July 15, 1840 — The officer called House Apothecary at the Asylum was ordered to be known as the Assistant Physician. The broad and exacting duties of the Apothecary in the early days of the hospital are listed in a letter from Drs. James Jackson and John C. Warren (the first Physician and first Surgeon, respectively), written in 1829 to the Trustees, in which they request the appointment of a second Apothecary—one to serve on the Medical Service and one on the Surgical. This letter is now on display in the Archives Room, and is well worth reading.

July 15, 1842 — The Superintendent, as the Director was called in those days, was advised to prohibit the use of tobacco by the patients within the house.

July 20, 1865 — It was voted "that the Physicians and Surgeons to out-patients be authorized to charge such fees for their first visits as they may think proper, whenever they are satisfied of the ability of patients to pay the same."

July 15, 1870 — The attention of the officers of the hospital was called to the rules relating to autopsies, and it was voted that a "Post Mortem Register" be kept to meet the requirements of those rules—each entry in which shall be examined and signed by the Visiting Committee, and the book laid before the Trustees at their regular meetings.

Important events, concerning Massachusetts General Hospital, that occurred in the month of August during the earlier part of the nineteenth century:

Aug. 20, 1810 — A circular letter was issued by Drs. James Jackson and John C. Warren inviting subscriptions "for a hospital for the reception of lunatics and other sick persons". The letter closes as follows:

> Hospitals and infirmaries are found in all the Christian cities of the Old World; and our large cities in the Middle States have institutions of this sort, which do great honour to the liberality and benevolence of their founders. We flatter ourselves that in this respect, as in all others, Boston may ere long assert her claim to equal praise."

As you may remember, a circular letter from the Reverend John Bartlett, Chaplain of the Boston Alms House on Leverett Street, preceded the above letter by several months. At Mr. Bartlett's request, a number of distinguished Boston gentlemen met in Vila's Hall on the evening of March 8, 1810, and on the following day Mr. Bartlett's letter was sent out. A framed copy of the letter hangs in our Archives Room. Drs. Jackson and Warren were two of the seven signatories to the letter.

The Trustees' Report for 1936 has this to say regarding Mr. Bartlett's early activities in the interest of the insane and sick poor of Massachusetts, and particularly of Boston:

> . . . The Reverend John Bartlett . . . was deeply impressed with the hardships suffered by the insane and the sick poor, from lack of hospital accommodations. He made a study of the steps taken in England, New York, and Philadelphia, to remedy such situations and as a result wrote to about twenty-five "wealthy and respectable men" of Boston urging them to meet to consider the development of his plans. . . . It was the first effective step taken toward the foundation of the Massachusetts General Hospital.

Aug. 21, 1821 — Notice was sent to Drs. James Jackson and John C. Warren that the hospital would be ready for patients on September 1. One patient was admitted on September 3, and it was not until September 20 that another application for admission was made.

Aug. 3, 1828 — The Board of Trustees declined, "though with sincere regret", loaning our Gilbert Stuart portraits for an exhibition of Stuart's pictures. Mr. Stuart had died in July 1828.

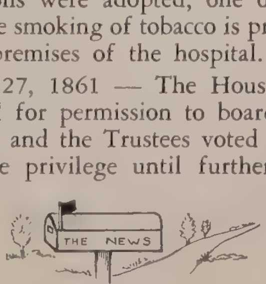
Aug. 21, 1842 — The Treasurer was authorized to pay for the marble bust of Dr. James Jackson. Bowditch, in his *History of Massachusetts General Hospital,* says of the bust:

> As a work of art, it is truly admirable. It is the most speaking likeness that can be conceived. It will transmit to coming times the calm and benignant countenance of the first Physician of the Hospital.

The bust is now in Treadwell Library.

Aug. 18, 1844 — Five new rules and regulations were adopted, one of which was: The smoking of tobacco is prohibited in the premises of the hospital.

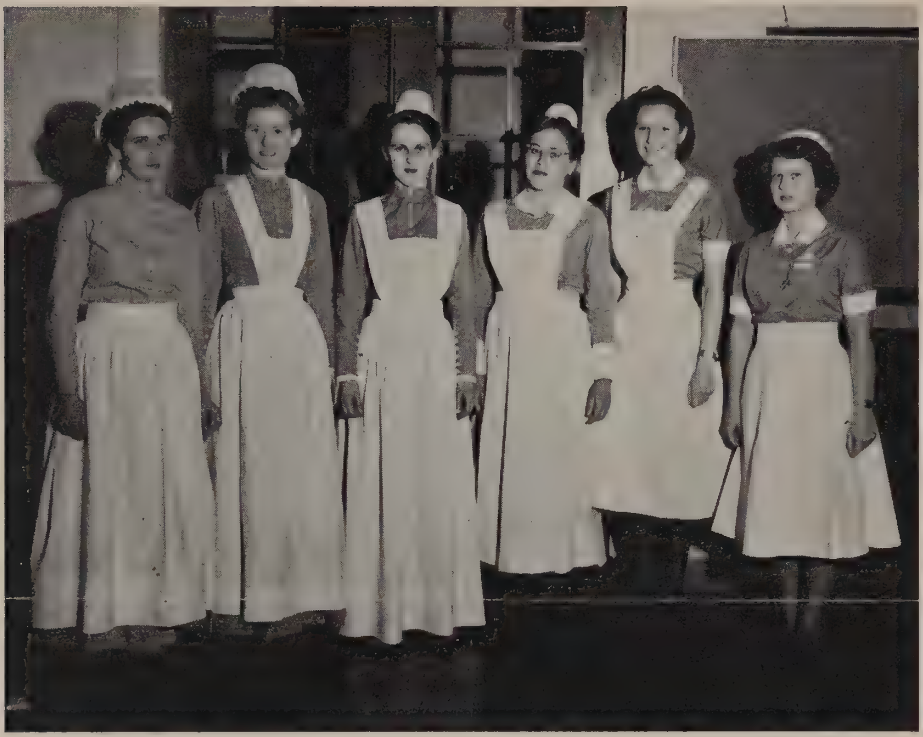
Aug. 27, 1861 — The House Pupils appealed for permission to board in the hospital, and the Trustees voted to grant them the privilege until further notice.



New addresses:—

Dr. Oscar W. Hills (*M* 1943), 403 7th St. NW., Rochester, Minn.

Dr. Ivar Lund (*An.* 1947), Ulleval sykehus, avd. III, Oslo, Norway.



Past, present, and future uniforms of MGH student nurses, as modeled at the Anniversary Meeting, June 11

What are probably the last letters from Miss Morse to be written from Czechoslovakia are most interesting ones. She says, in part:

My time here is coming to an end and I am writing to ask that all future copies of The News be sent to my Cambridge address —19 Craigie Street. Like everyone else, I have thoroughly enjoyed receiving the paper over here. It has brought a little touch of familiar home and I have felt closer to M.G.H. than I would have had it not come. . . .

My last jobs before returning home are with children here in Bratislava and helping to lay the foundation for future training in the professions of Physical Medicine. It has been interesting to see the efforts to unify all educational systems. . . . All hospital workers are to have as their basic training a nurses' training course for the first three years, beginning at the age of fifteen. In the fourth year, age 18-19, the student specializes either by carrying on her nursing training or by studying physical therapy, dietetics, etc. I have been a witness to the first efforts ever made in this country to have a course for physical therapy that is longer than three months. What they are planning seems good, and in general the whole plan of training of hospital workers seems good. Curiously, the first four items on every page of instructions (except those for the fifth year) are in Czech, Russian, and English. Can you imagine all hospital workers in the U. S. speaking these three languages? I am glad English is one of them.

Everyone in Prague seems to be working under great tension and speed. Here in Bratislava things are more relaxed and more normal. I have not been here very long, so it could be that this is a superficial view. Those with whom I am working are giving me the grandest kind of support.

Many thanks for sending The News, and best wishes to you all. I shall be returning in the summer if present plans stay the same.

Excerpts from a few of Miss Morse's letters to her family read:

The main reason for coming to Prague this time was to see Dr. and Mrs. Paul D. White. They are, as usual, quite wonderful people, and we had lunch and such a nice visit with them. Dr. White's time is cram jammed and he is doing a lot more good with people he sees than he realizes. The mental lift he is giving, by just coming, is fine. Dr. White is certainly on the inside as to the health of these people. The Whites are to meet Dr. Alice Masaryk, who, they say, is "standing up" very well.

The new Ministry of Health is a madhouse. Everyone is working days, nights, and Sundays. Reorganizing was much needed, and I like the new man very much. Certainly, his questions to me were to the point.

Two people have come from Bratislava to ask about my going there, and two T. B. men want me for a brief week. I am being asked for catalogs and circulars as never before. I am working to get something on paper for a course in P.T. and O.T. They want both, and don't know about either. I think I have given the girls here at Kladruby all I can, and the way they are taking over at the last minute is encouraging.

In Bratislava I am to do in one month what I did in three months in Kladruby. Nurses are being brought in from all over Slovakia for me. I am to divide my time between the School for Crippled Children and the Orthopedic Clinic of Dr. Cervenansky. He and his wife have both just returned from the United States and are eager about the work.

Last week end I wrote from the Polish border and the T.B. Sanitorium. Plans are well advanced there. Now I am writing from the Hungarian border. The people here are like a breath of fresh air. I have never had such a warm welcome. I strongly suspect they are giving me special food, as I have had milk and butter each day and two boiled eggs one day.

There are six nurses for eighty patients, but the buildings are now repaired and there are two rooms for P.T. and two for O.T. The equipment will do for a start, and I am glad I brought tools with me. Only one doctor speaks English, and the class numbers fifty and is growing. I don't know what I can do in four weeks, but I can try. They have asked for my lecture material, and imagine my delight when all three doctors volunteered to give lectures in the course.

I have almost no interpreting, but it may be that an interpreter will materialize. The Slovak language is different from the Czech, and my Czech is weak enough. I have got to manage to give the course and work with patients at the same time—two places at once. But the interest is grand and everyone is trying to help.

To some, I am the first American they have ever seen and therefore am a curiosity. The little Hungarian maid touches my clothes and doesn't miss a trick. My tooth powder intrigues her! I see peasant costumes and even white wool men's suits.

We were delighted to receive this nice letter from Dr. Philip D. Wilson, Jr. (*ES* 1945), written from 321 East 42nd Street, New York City.

After leaving the M.G.H. at the end of March 1946, I almost immediately received orders to active military duty. After a very brief sojourn at Scott Field, Belleville, Illinois, I was transferred to Brooke General Hospital, Fort Sam Houston, Texas, where I spent the rest of my two years of service.

I was very fortunate in that I spent my entire time on the Orthopedic Service under Lt. Col. Milton S. Thompson (*Or.* 1934). As you can imagine, my service was much more interesting and profitable from the professional standpoint than that of most.

I was separated from the Army on 16 March 1948 and beat it home to New York, where I started on orthopedic residency at the Hospital for Special Surgery on 1 April 1948. I am enjoying it very much.

At the first opportunity I hope to visit the M.G.H. and catch up with everybody. How are the burn dressings going these days?

Thanks for keeping me up on everything through The News.

Dr. Stafford L. Warren (*WM* 1924), Dean of the School of Medicine, University of California, Los Angeles 24, sends these few words:

In the birth of a medical school, deaning is no cinch, although very interesting.

John S. Lawrence (*WM* 1925) is with us as Professor of Medicine and has become a Californiac of the fulminating type.

We were disturbed by something Dr. Burton M. Shinners (*NS* 1938) wrote us recently. He said:

There are alumni out in the "field" who are particularly shy in sending in reports when they read about the great triumphs from the local Massachusetts group. However, sometime when there is something worth while to send in, I will do this.

We wish to take issue with any of our alumni who may be harboring similar thoughts as their reasons for not writing us.

In the first place, the reason itself is a highly debatable one. Against what measuring stick may we safely and correctly evaluate a "triumph" or a "worth while" achievement in this many-faceted profession of doctoring? There just isn't any such gauge.

In the second place, your friends and acquaintances are quite as eager to know how you are and how things are going with you, as a *person,* as they are to hear about your professional careers. They wouldn't be your friends, if this were not true.

Finally, while The News is largely concerned with professional matters, being an MGH publication, it is also—and hopes to continue to be—a "family" paper; and members of a family are interested, primarily, in *how* its members are and not *what* they are. That The News may always carry its "family" columns depends upon you and your letters. Don't let it down.

THE NEWS

MASSACHUSETTS GENERAL HOSPITAL 1811

No. 71 Boston, Mass. September 1948

MEDICAL SERVICE AFFAIRS

The postwar house staff organization for the Medical Services of 12 interns, 8 assistant residents, 3 residents, and 1 chief resident mentioned in our article in THE NEWS of April 1946 is working well. Under the able leadership of mature and experienced chief residents, it is a well-greased and smooth-running affair. Its successful launching is due in large measure to the devoted work of Drs. C. H. Burnett, L. K. Dahl, and J. B. Stanbury. The residents have given of themselves enthusiastically to the cause of teaching, developing new exercises, and guiding the medical students and interns, with more skill than ever before. They have given much attention also to the improvement of Grand Rounds. With the advent of the Harvard course for veterans, it became necessary to move Grand Rounds from the Ether Dome to the OPD Amphitheatre. The graduate course has now stopped but the Amphitheatre remains full, so we cannot return to the Dome. This is flattering, but we like the Dome better. At Dr. Dahl's initiative, the publication of Medical Grand Rounds has been started in Lippincott's new journal, *The American Practitioner*. According to the publisher, this seems to have had a good reception.

The organization of the visiting staff mentioned in the previous report has also been put into operation successfully. The underlying principle is that for a position on our staff a physician must do not less than an adequate minimum job of work. We are living up to this principle with gradually increasing effectiveness. During 1947 no less than 21 physicians had two months or more of ward visiting. Of these, 15 were members of the entirely volunteer staff. It is interesting to compare this with the situation in the year 1910, when only 5 visiting physicians had any medical ward responsibilities whatever. At that time also there were no medical students at all with responsible ward duties, and no residents. Yet the number of beds remains approximately the same. From the educational point of view, at least, we are making far greater use of them now than in 1910. Moreover, although the full-time staff has come into being since then, the private practitioners of today have far better ward opportunities than had their predecessors.

Luncheons of the ward visiting physicians have been held about every two months. These are informal occasions, providing opportunity for free discussion of medical service problems. They accomplish much in the way of exchange and of integrating effort and ideas.

In the Medical O.P.D., Dr. E. M. Chapman has worked untiringly to raise standards, and is able to report various improvements. The appointment system has been relaxed for patients needing prompt help. They are seen the day of entry. This seems to have pleased the visiting physicians by making their case work more interesting. Graduate instruction in special clinics has been offered our own staff members, so that they can learn what is new and worth while in clinics devoted to special subjects.

Improvements have been made through the joint efforts of Drs. Chapman and Beckman in the teaching of fourth year students in the O.P.D. That these are appreciated was made clear by a recent student critique of teaching sponsored by Alpha Omega Alpha.

In bedside instruction progress has also been made. The fourth year ward clerk has evolved through the years into an indispensable member of the ward practice team at the M.G.H. Great emphasis is placed on his personal responsibility in the care of the patient. An effort is made to train him in right attitudes as well as to impart knowledge. During recent years much attention has been given to social and economic factors in disease—what illness means to the patient—and a very effective seminar type of approach has been developed by Dr. Beckman and Miss Dorothy Kellogg of the Social Service Department. Also, the medico-social conferences which are held weekly by each ward independently, which are attended by the whole ward team, visiting physician, residents, interns, clerks, head nurse, and social workers, have made for more effective solution of the patient's entire problem. This year the introduction of the preventive point of view by Harvard's new Professor of Preventive Medicine, Dr. David D. Rutstein, is wholesomely broadening.

One of the functions of a teaching hospital like the M.G.H. is to train gifted young men and women and send them forth to exert their skills in fields of ever increasing opportunity. We are, in brief, a germinative centre. Going out in this fashion to carry our gospel, during recent months, are Dr. R. W. Rawson, who goes, as noted earlier in THE NEWS, to Cornell and the Memorial Hospital in New York; Dr. W. W. Beckman, who goes to New York University as Assistant Dean; Dr. Oglesby Paul, who will teach Cardiology at the University of Illinois Medical School, and also carry on a private practice; and Dr. L. K. Dahl, who has gone to the Rockefeller Institute to work under Dr. D. D. Van Slyke.

Our missionaries of medicine—Drs. White, Aub, and Jones—have also been busy spreading our gospel in foreign parts. Two summers ago White and Aub went to Czechoslovakia, one summer ago Aub and Jones went to Austria, and this summer White and Jones have been in Greece—all under the auspices of the Unitarian Service Committee. Who knows but what these gestures of friendship, expressed through the medium of professional teaching, may one day tip the scales in favor of peace.

To speak of research in any way at all adequate would require a separate and lengthy report. Moreover, research has become an all hospital enterprize rather than a service affair. Its growth in recent years has been phenomenal and its approach increasingly fundamental. From the medical staff, Bauer has done a fine job of leadership in his capacity as Chairman of the Research Committee. Bauer, Rawson, Cope, and Crockett rendered superb service in raising the research fund.

From the point of view of the Chief of Service, it is very gratifying that the cost of operating Ward Four is now being met from the research fund. This ward, during its twenty-nine years of existence, has been highly productive of new medical knowledge. It is essentially a medical research laboratory, albeit its patients get top quality medical care, and is in consequence costly to run.

The Medical Service, as do other services, looks forward to the opportunity of expanding in the new Science Building when we get it. The Bulfinch is of finite size, and with every investigator in it continually wanting more space, the pressure gets fairly high at times. It is a grand old building, and we have never been envious of the White. In the Bulfinch even the elderly can comfortably walk to the top. Its patients can be put out on the lovely greensward when the weather is clement, and their condition permits. It reeks with tradition and has a priceless atmosphere. Once there was a trustee who wanted to tear it down, but fortunately the will of the other eleven prevailed against him. When our laboratories go into the Science Building we expect to make room for the dermatological ward in the Bulfinch. Then we shall have all the medical services but pediatrics—that is to say, internal medicine, psychiatry, and dermatology—under one roof. This sort of juxtaposition enhances the effectiveness of teaching, research, and the care of the patient. Moreover, it will be a great pleasure to welcome the new Professor of Dermatology and Chief of that service, Dr. Chester N.

Frazier, into our medical milieu. His arrival, we feel sure, marks the beginning of a new era.

J. H. Means, M.D.,
Chief of Medical Services

* * *

On Monday, August 9, the first patient was admitted to Storrow House, our new convalescent hospital in Lincoln.

Storrow House was the gift of Mr. James J. Storrow. It is a large, fireproof house which can accommodate about 50 patients. It is situated on top of a hill and surrounded by sixteen acres of grounds. The view on all sides is magnificent. The grounds are heavily wooded and include a tennis court and a picnic area with stone fireplaces and running water.

Patients of all financial circumstances will be accepted at Storrow House—not only from our own hospital, but from other hospitals and from private physicians.

All bookings may be made through the General Hospital Admitting Office—Capitol 7-4300, Extensions 414, 415, 416.

INFANTILE PARALYSIS CLINIC

To fulfill properly its purpose as a *general* hospital, the Massachusetts General Hospital has a number of *special* clinics, and among these is the Infantile Paralysis (Poliomyelitis) Clinic. Located on the ground floor of the Out-Patient Department Building, it receives poliomyelitis patients—infants, children, and adults. Infantile paralysis is not a particularly apt term, for the patients are by no means all infants nor are they always paralyzed.

The Clinic was first opened for the care of poliomyelitis patients in 1916 and has been in constant operation since that time. It was probably the first clinic in New England devoted exclusively to the care of poliomyelitis patients without restriction as to age. The severe poliomyelitis epidemic of 1916 was the immediate cause of the opening of a special clinic. All hospital facilities were severely taxed by the influx of 138 new patients, mostly children, with severe paralysis. Dr. Harry C. Low was put in charge of the Clinic and continued his services in that capacity until 1929. Dr. Low had a genuine interest in the patients, eliciting their trust and confidence.

From 1929 until 1941, I had the privilege and responsibility of directing the Clinic's activities. Since then, Dr. John A. Reidy has been in charge. This long-term service is a necessity in a Poliomyelitis Clinic. Mature judgment, a conservative attitude, intimate knowledge of the patients and of their individual problems are necessary prerequisites to good treatment. The yearly census of new patients varies markedly, depending on whether the disease has been of epidemic proportions or not. Over the past decade, there has been an average of about 500 patients under treatment at all times.

Adequate care of these patients is a cooperative enterprise involving the Orthopedic Service, the Department of Physical Medicine, Social Service, and the Orthopedic Workshop. Dr. Reidy and his assistants see and examine each patient, outline treatment, check apparatus, refer suitable cases to the house for surgery, etc. Poliomyelitis is a subtractive disease, taking away in a completely unpredictable fashion a varying amount of the victim's muscle power.

The doctor must help the patient to strengthen weakened muscles, prevent or correct deformity, and restore function to the locomotor system. For many years, physiotherapists worked in the Clinic under the direct supervision of the surgeon in charge. They did complete muscle examinations and gave "treatments" consisting of baking, massage, and exercises. They taught patients how to exercise muscles, how to stand and walk with braces and crutches. They showed the patient what to do and how to do it.

Now the patients are referred from the Clinic to the Department of Physical Medicine where, under the skilled guidance of Dr. Arthur L. Watkins and Miss Nesbitt, the patient gets his "P.T.". Under-water exercise and the newer graded resistive exercises devised by Dr. Thomas L. DeLorme, Jr. are utilized in helping the patient in his effort to strengthen weakened muscles.

There are social, psychological, and economic problems which the poliomyelitis patient must face and solve. The social worker is an indispensable part of the Clinic organization, and sooner or later becomes intimately acquainted with almost every one of our patients. Miss Ethel Chase, who gave devoted service to the Clinic from the day it opened until her retirement on January 31, 1942, blazed a pioneer trail in showing what social service had to offer in the rehabilitation of the crippled. Mrs. Hazel Fritz continues this invaluable service to the patients, translating the doctor's suggestions into productive action.

With modern methods of treatment, fewer poliomyelitis patients need braces and splints, but they are in many cases still necessary and useful aids. Mr. Karl Buschenfeldt, in charge of the Orthopedic Workshop, supervises the highly skilled art of measuring, making, and fitting needed apparatus to our patients.

For a number of years, the National Foundation for Infantile Paralysis has supported a Massachusetts General Hospital research project on the cause and treatment of unequal leg length in poliomyelitis. New information on a complex problem has been obtained through this study. The detailed records available on a large number of poliomyelitis patients observed for many years is a mine of valuable information on the natural history of the disease and on the effect of various forms of operative treatment.

So long as infantile paralysis remains unconquered, clinics such as this one will be needed to care for those crippled by the disease and to further, by teaching and research, better methods of treatment.

Joseph S. Barr, M.D.,
Chief of Orthopedic Service

OFFICIAL NOTICE

Regulations for obtaining clinic records for research

The Record Committee wishes to call to the attention of all the members of the Staff the following set of rules covering the withdrawal of clinical records from the files for use in research and investigation. This new set of regulations was approved by the General Executive Committee on July 21. It is intended to liberalize the hospital's former regulations which had not been adhered to or enforced for several years.

1. Any member of the Staff may request up to thirty (30) clinical records for his use in investigation. Requests for records for use in investigation must be made through the Reading Room and should not be mixed with requests for records for patient visits.

2. Records will be kept available in the Reading Room for a period of two weeks. At the end of this time they will be returned to file unless request for renewal is made.

3. Doctors with offices in the hospital may remove records to these offices *after* proper notification is given to the Reading Room clerk. Doctors' offices must be locked when unattended, but records must be kept accessible and visible in the offices at all times, e.g. they must not be kept in drawers or cabinets, locked or unlocked.

4. The hospital's rule that no medical record may leave the premises still continues.

5. Records taken from the Reading Room must be returned to the Reading Room before the end of two weeks. If longer time is required, a list of those records to be retained must be submitted to the Reading Room before the expiration of the two-week period. If at any time a record removed for research is requested by the Record Room, it is the responsibility of the doctor to have it delivered to the Record Room.

6. To obtain records for investigation it will be the responsibility of the doctor to submit a properly completed "Outcard" to the Reading Room for each record desired. These cards are available in the Reading Room.

7. Since there is a schedule in the file room for pulling records, twenty-four (24) hours' advance notice is requested.

8. Exception to the above regulations will be made only by the Record Librarian.

One of the most frustrating experiences in the routine of the hospital is the failure to locate a medical record when the patient reports to a clinic. Patients often wait hours and end up by being seen on a "Second Sheet". Doctors are annoyed at being unable to know the previous medical history. At the same time, Record Room personnel must be pulled off regular jobs and assigned to little teams and sent out on special searches.

A recent spot check done in one week showed that three missing records required 22½ man hours of special searching. Of these records, one was finally located in a doctor's stack in the Reading Room, having been signed out to a clinic, another was found in an office other than the one to which it had been signed out, and the third was misfiled by the Record Room. More searching is required to locate records signed out to one location and removed to another location without notification to the Record Room than is required to locate a misfiled record. The Record Room has special techniques which usually turn up the misfiled record.

It is felt that these regulations, particularly that part which requires periodic accountability for records, will prevent the loss of a record going unnoticed for a long period of time. Recently the Record Room received a unit record mailed from the office of a doctor in Virginia, a former member of the Staff who had left in 1937. He had just been cleaning out his desk drawer! Fortunately, this patient had not returned to the hospital during the interim.

Joseph S. Lichty, M.D.,
Secretary of Record Committee

A MEDICAL MISSION TO EUROPE IN THE SPRING OF 1948

I have been asked to prepare a brief account of my recent visit to Europe for the M.G.H. News. Part of the time spent abroad was in company with Dr. Chester Jones and he has joined me in that part of my account which concerns our medical mission to Greece and Italy.

Altogether, I believe it is fair to say that my visit to Europe this past spring, from March 20 to June 22, proved to be one of the most interesting and worthwhile experiences of my life. Having been invited, as the result of my participation in the medical mission of the Unitarian Service Committee to Czechoslovakia in 1946, to attend the 600th anniversary of Charles University in Prague, prior to the beginning of the work of the new Unitarian Service medical mission to Greece and Italy, my wife and I sailed from New York on March 20. We spent a few days in England arranging for further transportation and visiting several friends in London and near by, especially the Parkinsons and the Lewises, whose daughters had been with us for part of the time during the second World War.

We then went on to Paris by the Golden Arrow and there were in somewhat of a dilemma because of advice that it might be unwise to go on to Czechoslovakia because of the political difficulties. The Communist coup had occurred—as a matter of fact, a month earlier—and there was beginning to be increasing evidence of restrictions in the country. However, we found on inquiry that the French professors of the Sorbonne, including the noted surgeon, Réné Leriche, had decided to attend the celebrations despite the withdrawal of the British universities and most of the American universities from participation. On the train from Paris to Prague we found four fellow Americans whose institutions did permit them to represent them. These institutions were Boston University, the University of Colorado, the State University of Washington, and the Moravian Institute of Bethlehem, Pennsylvania. They had elected, as we had also, to accompany the French professors. As a matter of fact, the chief address at the celebration in Prague, which followed the speech by President Benes, was given by a Frenchman, the Rector of the Sorbonne. An address of less prominence had been given the day before by one of the Soviet delegates. The five days that we spent in Prague were full of interest and we enjoyed reunions with many friends made two years before. One pleasant occasion was luncheon with our own Miss Lucy Morse. I am sure this visit to Prague was well worth while.

From Prague, Mrs. White returned to America via Paris and London while I went on by plane to Rome on April 9 and thence to Athens on the 10th, four or five days ahead of the ten other physicians of the medical mission, who flew from New York to Athens and who included professors of preclinical and clinical fields in medicine and surgery from seven different universities on this side of the water—Columbia, New York, Pennsylvania, Chicago, McGill, Yale, and Harvard. The fields represented were physiology, pharmacology, bacteriology, internal medicine, pediatrics, general surgery, neurological surgery, anesthesia, otolaryngology, and dentistry.

Our function, like that of the successful missions sent to Czechoslovakia in the summer of 1946 and to Austria in the summer of 1947, was to confer in detail with the members of the medical faculties in the universities in Greece and Italy. In order to do that, we visited the various departments of the medical schools, the hospitals connected therewith, and other hospitals, too—for example, military hospitals in Athens and Salonica. We conducted a course of lectures in the university and hospital amphitheatres which were attended by the medical faculties, more advanced medical students, and practising physicians, and we saw a certain number of patients, especially if they illustrated the fields in which we were individually interested. In some of these exercises the doctors of the native universities took part—for example, in panel discussions—and we also staged several clinico-pathological conferences, copied after our own here at the M.G.H., but which were quite novel to the people in that part of the world.

We spent nearly six weeks in Greece, most of which time we were at work in Athens, but for two weeks we visited Northern Greece. Our time there was devoted mostly to Salonica, where we carried on an active program for eleven days at the University, but for two days we visited three monasteries on Mt. Athos where we investigated the conditions of health among the monks, four of whom we took back to Salonica with us for treatment. Several of us made a trip to Corinth where we visited the hospital and the excavations of the American school. Two of the group also flew to Crete and spoke to the medical society there; one went to the Island of Thasos to investigate the dental conditions.

Everywhere there was great cordiality in the welcomes we received and enthusiasm in attendance at our lectures and conferences. We saw much of interest medically and on occasion found advanced work going on, particularly in certain surgical techniques. The specialty of anesthesia, however, was a novelty and we were, we think, helpful in presenting some of the newer advances that had been going on over here during the period of the last ten years when these countries had been more or less isolated by the war. The health conditions were improving, even during the weeks we were there. There was very little serious malnutrition in the larger centers, but tuberculosis was a very important problem, being ten to twenty times as common as we know it here. Tuberculous meningitis was a common diagnosis in the hospitals, especially in the children's wards. Diphtheria, also, was fairly common and echinococcus disease was rampant. On the other hand, malaria had been greatly controlled, to a twentieth of its incidence of a few years ago, due to regular fortnightly spraying of all parts of Greece with DDT by a special fleet of airplanes. Also, there was very little tetanus and exanthematic typhus. The usual diseases of the heart, lungs, and gastro-intestinal tract were much as we encounter them here, except for the high incidence of gastric ulcer during and since the war.

Interesting incidents during our stay in Greece included visits to the American excavations at the Agora in Athens and at the ruins in Corinth, to the excellent American schools near Salonica, namely Anatolia College and the American Farm School, the celebration of Easter, which was marred by the assassination of the Minister of Justice, receptions by the university faculties, and audiences with the King and Queen. The American Mission for Aid to Greece (AMAG) was constantly helpful to us; incidentally, it has done a splendid job for Greece and for humanity.

We flew from Athens to Rome on the night of May 19 to 20 and spent two and a half to three weeks in Italy visiting, in a manner similar to our program in Greece, the medical faculties of Rome, Bologna, Milan, Florence, and Turin, and also paid a brief visit to Naples and Capri, and to Sermione on Lake Garda. Throughout Italy we were received with great cordiality and were helped by Professor Morey, Cultural Attaché of the American Embassy. We enjoyed meeting in Rome the famous Bastianelli brothers, physician and surgeon, both well over eighty but very alert and active, and we also had a very pleasant audience with the Pope who showed considerable interest in the work of our mission. Our last official exercises were lectures in Florence on June 5, after which the mission broke up, most of the individual members returning to this country via Geneva, Paris, and London. Several of us gave lectures in these cities *en route* home. I was privileged during my visit to Prague to address again the Czechoslovakian Medical Society, with the same doctors in the audience whom I remembered addressing in 1946.

Paul D. White, M.D.

* * *

Dr. Stanley Cobb was elected President of the American Neurological Association at their Annual Meeting in Atlantic City, June 16.

Dr. Jacob E. Finesinger was appointed Chairman of the Committee on Research of the American Psychiatric Association at their recent Annual Meeting held in Washington, D. C.

Dr. Robert S. Schwab was elected Secretary of the American Electroencephalographic Society at their convention in Atlantic City last June. Dr. Mary A. B. Brazier was elected Treasurer.

William Woods Beckman (*EM* 1937), until recently Associate Physician to the hospital and Associate in Medicine at the Harvard Medical School, submitted his resignation to become effective this past July 31, in order to go to New York University as Assistant Dean of its Medical School.

Dr. Beckman, Pennsylvania born, received his B.S. degree from the University of Florida in 1931 and his M.D. from Harvard in 1935. After his internship here he continued on the house staff as Resident in 1938-39 and Chief Resident, 1939-40. Following this he spent two years, 1940-42, as Assistant at the Rockefeller Institute, working in Biochemistry with Dr. Donald D. Van Slyke.

Upon completion of this work in New York he returned to the M.G.H. and has been with us until his resignation, among other things as a member of Dr. Walter Bauer's group for the study of arthritis. Beginning in 1945 he took on an additional job at the Harvard Medical School, that of Vice-Chairman of the Committee on Admissions.

Although Dr. Beckman has acquired a scholarly knowledge of biochemistry and has made contributions in that field, of late years a rapidly growing interest has been in the teaching of medicine, and in particular, of its social components. He has a profound interest in, and understanding of, people—patients, students, interns, and a great desire to be helpful in solving their problems. At the hospital, in partnership with Miss Dorothy E. Kellogg of the Social Service Department, he developed, and improved, the fourth year medico-social conference started originally by Dr. Means and Miss Cannon, and carried on later by Dr. Monks and Miss Cannon. With Miss Kellogg, also, he inaugurated, in 1943, the weekly ward medico-social conferences which have proved so useful that they have become an established item in the ward care of patients. At the Medical School his critical judgment of persons has been an important asset in the selection of students.

In innumerable subtle and informal ways he has been useful in keeping the wheels of the medical services running smoothly, both in house and Out-Patient Department.

In 1946-47 Dr. Beckman served as a member of a Joint Committee of the Association of American Medical Colleges and the American Association of Medical Social Workers which had the duty of investigating the teaching of social and environmental factors in medicine in various medical schools. He gave a great deal of devoted labor to this project, visited several medical schools, and he and Miss Harriett M. Bartlett, Associate Professor of Social Economy at Simmons College, drew up a truly monumental report. Another important undertaking to which Beckman gave himself unstintingly was the planning, under the chairmanship of Elliott Dunlap Smith, Provost of Carnegie Institute of Technology, of the Inter-Professions Conference on Education for Professional Responsibility. This very unusual and stimulating meeting finally took place in the Poconos last April. Both these enterprises were quite after his own heart.

We are glad that Dr. Beckman has gone where his unusual talents can be even more widely utilized. For the job of Assistant Dean he is a natural. He will know intimately all the students in the school, and never be too busy to give them any guidance they may require of him. He will take great interest in the school's curriculum, and always be looking for ways to improve the quality of teaching. New York University Medical School is "going places" and Beckman will have abundant opportunity to apply his talents —talents, it may be said, which are rare among teachers of medicine.

We shall greatly miss both him and his services, but we wish him every success in his larger undertaking.

J. H. M.

Thirty-eight graduate nurses from M.G.H. took part in a summer program in cooperation with the Visiting Nurse Association of Boston. During July and August, each nurse spent a full day observing public health nursing activities in various city districts.

A recent and important advance in the nursing area has been the inauguration of the Referral Plan for Continuity of Nursing Care, which has been operating successfully on White 7 since May 3 and will be gradually extended to other wards. Formulated by Miss Norma Larson, Public Health Instructor of the School of Nursing, the plan provides for effective cooperation between the hospital and community agencies in providing for the patient upon discharge from the hospital.

Miss Frances Grady, Medical Supervisor, was one of six hospital supervisors to attend a workshop on supervision held at Simmons College and sponsored by the State Department of Public Health.

The fall class in the School of Nursing is again a capacity group of approximately ninety new students, who started their course on August 31. This is the first class to follow the new educational plan and the first to appear immediately in full uniform, including the newly-designed "student cap".

The second group of young women to enroll in the Radcliffe-M.G.H. coordinated program spent their first summer here at the hospital.

At the Cost Analysis Institute, held at Simmons College during the week of June 14, the School of Nursing was represented by Miss Jessie Stewart, Assistant Director.

A recent visitor from abroad was Miss Elisa Bungaard, Director of Nurses at the Central Hospital and School, Hillerod, Denmark, who spent June and July in observation and study of nursing practices and organization in this hospital.

Miss Anna Viden, Supervisor of Residences and Lay Personnel, has returned from a six-week stay in Sweden. Miss Viden made the trip entirely by air.

Miss Elizabeth Welch, MGH 1922, is in charge of nursing at Storrow House, our convalescent home in Lincoln.

A new member of the School of Nursing faculty is Miss Miriam Dolloff, instructor in Anatomy and Physiology. Following her graduation from Bates College in 1945, she has been doing research in hematology at the Pratt Diagnostic Hospital.

Miss Joan Allen, Head Nurse of Bulfinch 3, attended summer school at Simmons College.

Brief bits:—

A note from Kathleen H. Atto (*MGH* 1922) asks that her address be changed to Veterans Administration, Northampton, Mass. She says she was separated from military service last April and is now Chief of the Nursing Service at the above Veterans' Hospital.

Dr. Perfecta C. Bautista (*gr. stud. asst. N* 1948) has returned home. Her address is 4 Bautista St., Malabon, Rizal, Philippine Islands. She says it will be a great pleasure to her to keep in touch with M.G.H. through THE NEWS while she is in her native country.

Dr. Mayo H. Soley (*EM* 1935) has a new address—1036 Woodlawn, Iowa City, Iowa. He became associated with the State University of Iowa College of Medicine, in Iowa City, on July 1. Perhaps Dr. Soley will write and tell us just what his appointment is at the University.

MASSACHUSETTS EYE & EAR INFIRMARY

THE NEW RETINA SERVICE

A new department at the Eye and Ear Infirmary is the Retina Service. Its purpose is to work out improved methods for the operation to repair separated retina.

On the Retina Service, four surgeons from the Infirmary's Ophthalmological Staff serve for 6 months in rotation with the senior house doctor as assistant and with Dr. Charles L. Schepens, Research Fellow, Howe Laboratory of Ophthalmology, as the only permanent member of the team. The panel now consists of Dr. Paul A. Chandler, Surgeon in Ophthalmology; Dr. Harry E. Braconier, Senior Clinical Assistant in Ophthalmology; Dr. Sumner D. Liebman, Senior Clinical Assistant in Ophthalmology; and Dr. Albert E. Sloane, Assistant Surgeon in Ophthalmology.

After diagnosis, the patient is brought into the hospital for three or four days' observation. During this period, the doctors on the Retina Service have an opportunity for careful examination and consultation before the actual operation.

A diagram is made of the exact location of every hole to be repaired, while the patient is lying in the position he will be in on the operating table. This diagram is then used at the time of operation. The Retina Service feels that failure of the operation, where such failures have occurred, are in large part due to late diagnosis and insufficient examination—insufficient exact knowledge of how many holes the operation must repair.

Since early symptoms are not typical, prompt aid in diagnosis of the separation is given by a special ophthalmoscope designed about three years ago by Dr. Schepens. This ophthalmoscope is of great assistance in locating the first small hole or holes. There is also a special electrode designed by Dr. Schepens, that has a light to illuminate the hole while applying the low intensity electric current with which the scar tissue is produced.

Every member of the Retina Service is engaged in extensive library research. They are collecting all the writings that have appeared throughout the world on the subject, and for those they cannot buy or otherwise acquire, they hope to have photostatic copies. Abstracts will be made of all the books and articles which will be particularly helpful with material in foreign languages. In the not too distant future, it is hoped that this library will possess a great deal of information that will be invaluable in the future study of the Retina Service.

The Howe Laboratory announces the following changes in personnel: Dr. Ernst Barnay, who has been working with Dr. Kinsey on intra-ocular fluid formation for the last six months and who was sent to the Laboratory under the auspices of the Swedish Medical Research Council, has returned to Sweden to assume the position of Professor of Physiology at the University of Upsala; Dr. Pierre Danis, who has been working with Dr. Cogan on experimental production of band keratopathy and allied problems under the auspices of the Belgian-American Educational Foundation, Inc., is shortly to return to Belgium to be an assistant in the Department of Ophthalmology at the University of Brussels; Dr. Charles Dyson, who has been studying the mode of action of iontophoreses through the cornea under the auspices of the National Research Council of Canada, has returned to London, Ontario, where he will be in the Department of Ophthalmology at the University of Western Ontario Medical School. New appointments in the Laboratory are Dr. Robert Trotter and Dr. Thomas Duane.

Recent visitors at the Infirmary included Dr. Douglas G. Carruthers, from Sydney, Australia; Dr. Louis W. S. Chang, Central Hospital, Nanking, China; and Dr. Griswell, from Chattanooga, Tennessee. These three doctors spent some time here observing in our clinics and operating rooms.

Dr. Gustav C. Bahn, who completed his residency in Ophthalmology at the Infirmary on the first of May, left for St. Anthony's, Newfoundland, where he will be the Ophthalmological Surgeon connected with the Grenfell Mission. He will remain there until September, when this year's mission will be completed.

The meetings and conferences for the years 1948-1949 were announced as follows: Weekly Clinical Conferences held in the Harvard Teaching Room, Eye Clinic at 8:30 A.M. on Wednesdays through September; Thursdays during October; Fridays through November, etc. The Eye-Nerve Conferences will be held on the first Thursday of each month at 9:30 A.M. in the Ether Dome, M.G.H. The Eye-Pathology Conferences will be held on the last scheduled date in each month.

The Weekly Clinical Conferences for the Oto-Laryngological Service are to be held every Wednesday from September through June, except holidays, in the Mosher Laboratory at 11:30 A.M.

Our Social Service Department recently played host to several visitors from various parts of the country who were especially interested in the work with pre-school children. Mrs. A. I. Tullis, from Victoria, B.C., Canada, visited our clinics and showed particular interest in our pre-school deaf program carried on by the Winthrop Foundation. Mr. Roy Calhoun, from Little Rock, Arkansas, was also interested in the pre-school deaf program. Miss Margaret Doyle of the Presbyterian Hospital in Chicago visited our clinics and was especially interested in glaucoma and the Retrolental Fibroplasia Project. Miss Miriam Norris, from the University of Chicago, came to see our clinics and to inquire about work being done on Retrolental Fibroplasia.

Renovations at the Infirmary, expected to be completed about the middle of September, are: the rebuilding of the Admitting Office, to give the badly needed additional space; two suites being made in the Nurses' Residence; and a remodeling of space on the second floor in O.P.D., opposite the Nose and Throat Clinic for the Winthrop Foundation.

Drs. Lawrence Holt and Warren LaPierre finished their residency in Ophthalmology at the Infirmary the first of August. Dr. Holt will open his practice in Winston-Salem, North Carolina, and Dr. LaPierre will open his practice in Norwichtown, Connecticut.

Dr. Henry G. Carroll, Ophthalmic 1911, died August 11.

Miss Mary Coonahan, who was Superintendent of Nurses from 1897 to 1923 when she resigned, died July 6.

Dr. William Stone, Jr.'s prize-winning exhibit on the Movable Eye Implant has been requested by the Kentucky Medical Association for display at their Annual Meeting to be held the latter part of September. This exhibit recently won the Bronze Medal for Original Investigation at the Annual Session of the American Medical Association in Chicago in June. Dr. Stone, who has a few more months to serve as resident in Ophthalmology, will display his exhibit in the Brick Corridor of M.G.H. in October.

The Board of Trustees, at their meetings on June 25 and July 23, voted:

To accept the resignation of Dr. William W. Beckman from the position of Associate Physician with regret;

To accept the resignation of Dr. William L. Palazzo from the position of Associate Radiologist;

To promote Dr. William S. Clark to the position of Assistant in Medicine;

To promote Dr. Perry J. Culver to the position of Assistant in Medicine.

To appoint:

Dr. William S. Edwards as Third Assistant Resident in Surgery, beginning June 14;

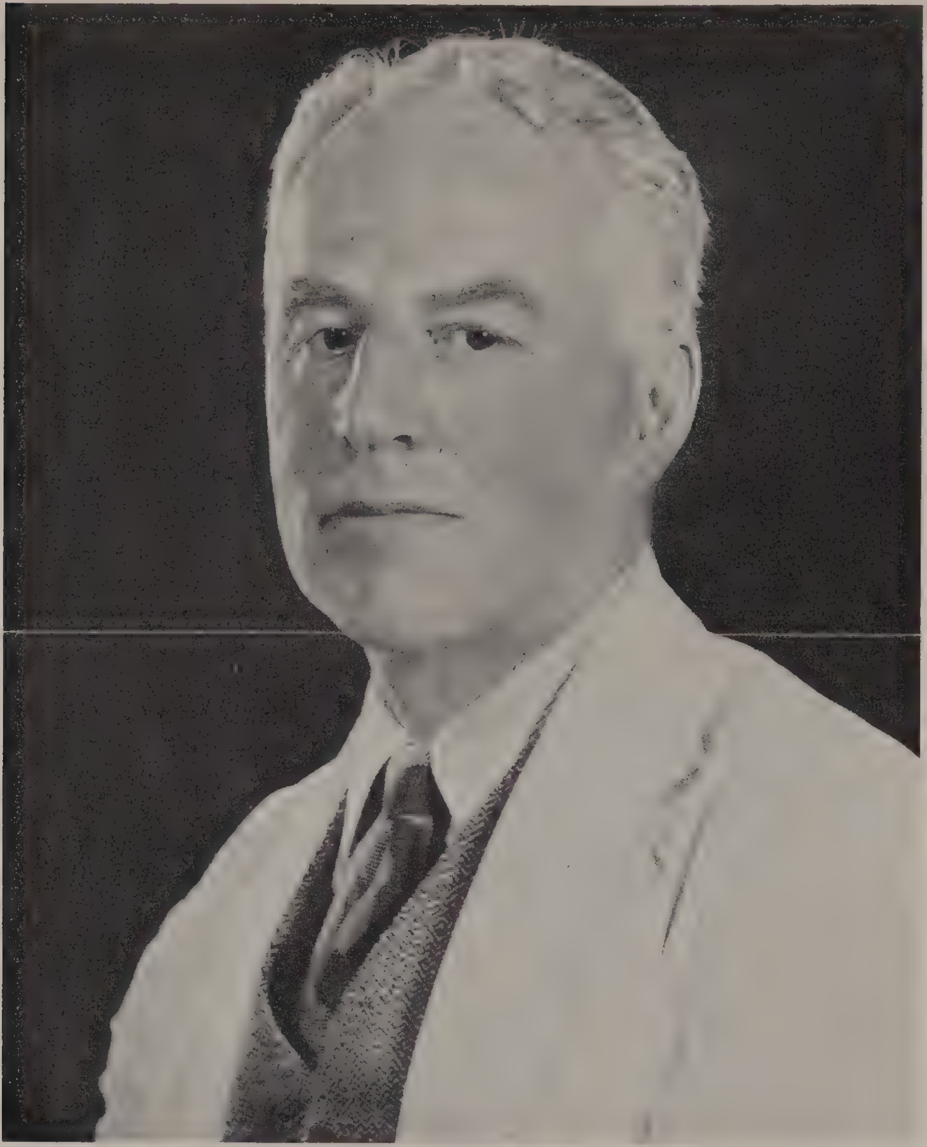
Dr. Arthur S. Keats as Assistant Resident in Anesthesia, beginning August 1;

Dr. Cornelius Lansing as Out-Patient Resident on the Children's Medical Service, beginning July 1.

At their meetings on June 16 and 23, and July 21, the General Executive Committee voted to appoint:

Dr. Thomas B. Brazelton as Clinical Fellow in Psychiatry, to work with the Child Psychiatry Group;

Dr. Robert H. Browning as Clinical Fellow in Medicine for a period of six months;



No. 12 in a series of Staff photographs
Dr. Allan M. Butler—Chief of Children's Medical Service

- Dr. John C. Coolidge as Clinical Fellow in Psychiatry, to work with the Child Psychiatry Group;
- Dr. Renata G. DeBenedetti as Clinical Fellow in Psychiatry, to work with the Child Psychiatry Group on a volunteer basis, full time, beginning September 1;
- Dr. Sol M. Dorinson as Clinical and Research Fellow in Physical Medicine for one year, beginning July 1;
- Dr. Jerome Gross as Clinical and Research Fellow in Medicine;
- Dr. James F. Hopkirk as Clinical and Research Fellow in Surgery, beginning July 1;
- Dr. William N. Jones as Clinical Assistant in Orthopedic Surgery for one year, beginning July 1;
- Dr. Archibald D. Leigh as Clinical Fellow in Psychiatry for the term July 1 through December 31;
- Dr. William Locke as Clinical and Research Fellow on the Children's Medical Service for one year, beginning August 1;
- Dr. Farake Maloof as Clinical Fellow in Medicine for six months, beginning July 1;
- Dr. Edmundo R. Natera as Research Fellow in Pathology;
- Dr. Thomas F. Paine, Jr. as Research Fellow in Biochemistry;
- Dr. Charles G. Rand as Clinical and Research Fellow on the Children's Medical Service, beginning July 1, to work with Drs. Nathan B. Talbot and Allan M. Butler;
- Dr. Maurice P. G. St. Aubin as Research Fellow in Medicine, assigned to the Staff Clinic, beginning July 1;
- Dr. Paul R. Schloerb as Research Fellow in Surgery, beginning July 12;
- Dr. Edward L. Sleeper as Clinical Assistant on the Dental Service, beginning July 1;
- Dr. George Smart as Clinical and Research Fellow on the Children's Medical Service for one year, beginning August 1;
- Dr. Veronica B. Tisza as Clinical Fellow in Psychiatry, to work with the Child Psychiatry Group on a volunteer basis, part time, beginning October 1;
- Dr. Robert J. Whipple as Clinical Fellow in Medicine;
- Dr. Masao Yatsuhashi as Clinical Fellow in Surgery, beginning July 1.

The General Executive Committee also voted that Dr. William S. Worthy's appointment be changed from Clinical Assistant in Surgery assigned to Gynecology to Clinical Assistant in Gynecology.

Dr. William G. Kuhn, Jr., whose appointment as Assistant Resident on the Orthopedic Service was to begin October 1, reported for duty as of July 1.

Dr. Sydney F. McPherson, whose appointment as Assistant Resident on the Orthopedic Service was to begin January 1, 1949, will report for duty October 1, 1948.

New addresses:—

Dr. Edwin F. Alston (*P* 1944), 274 Parnassus Ave., San Francisco 22, Cal.
Dr. Harry A. Bliss (*M* 1945), Presbyterian Hospital, 622 West 168th St., New York 32, N. Y.
Dr. Gaston N. Duclos (*Oto-Lar.* 1943 & *Oph.* 1945), 707 Medical Arts Bldg., 1538 Sherbrooke St. West, Montreal 25, Canada.
Dr. Theodore H. Hanser (*EM* 1924), 3701 Grandel Square, St. Louis 8, Mo.
Dr. James K. Keeley (*NS* 1937), 103 South Hamilton St., Poughkeepsie, N. Y.
Dr. Harry M. Lowd, Jr. (*CM* 1941), 359 Essex St., Salem, Mass.
Dr. John B. McKittrick (*An.* 1938 & *WS* 1939), 1180 Beacon St., Brookline 46, Mass.
Dr. Leland S. McKittrick (*WS* 1919), 1180 Beacon St., Brookline 46, Mass.
Dr. Sedgwick Mead (*EM* 1940, *P* 1941, & *a.r.p. N* 1942), 690 North Forest Ave., Webster Groves 19, Mo.
Lt. George W. Mellinger, MC, AUS (*M* 1947), P.O. Box 524, Indianapolis 6, Ind.
Dr. Bruce R. Merrill (*r.p. Psychi.* 1941), 655 Sutter St., San Francisco 2, Cal.
Dr. Olof H. Pearson (*WM* 1941), 36 Garrettson Road, White Plains, N. Y.
Dr. Thomas S. Risley (*ES* 1942), 1180 Beacon St., Brookline 46, Mass.

We were delighted to receive this letter from Dr. James Lincoln Huntington (*SS* 1908). Dr. Huntington classifies himself as "an old-timer", and goes on to say:

> Recently I spent three weeks in the dear old hospital while Eddy Cave and Charles Short steered me back from crippling arthritis to active duty. God bless them! Faxon, Thorndike, Allen, Irving, Pemberton, Pier, Giddings, Jr., Fletcher Colby, and others made my stay very enjoyable and a continued round of reunions.
>
> Now I have returned to the practice of Obstetrics and Gynecology in Northampton, with my very able assistant, James E. Cavanagh, now licensed by the American Board.
>
> I cordially invite all MGH graduates, if and when they are ever in this area, to visit with me.

Dr. Homer D. Peabody, Jr. (*M* 1945) is one of those who see to it that their friends are informed of their whereabouts through The News. This note from him arrived recently.

> I have just started a Fellowship in Medicine here at the Mayo Clinic. The early few weeks have been enjoyable.
>
> Renewal of old friendships has been particularly good fun. Wade and Kathy Volwiler, Joe and Audrey Elliott, and Dick Riddell are here.
>
> My past year has been spent at the Rees-Stealy Clinic in San Diego, California. We hope to settle in the delightful climes of Southern California, and with that thought in mind will be better prepared to face the "rather extreme" winter which I am told has been blessed on this good state of Minnesota.

Letters from several other MGH-ers have mentioned Capt. John C. Seed, MC, AUS (*EM* 1946) over the past two years, but never a word from the man himself until this letter, recently received. He writes:

> First of all, let me say I greatly enjoy reading The News.
>
> After leaving the M.G.H. in 1946, I went to the Army Field Service School in Texas for two months and from there to my present address—Medical Division, Army Chemical Center, Maryland. I have been doing research in the pharmacology section ever since and have greatly enjoyed it.
>
> I am staying in the Army a year beyond the required time for ASTP graduates and will continue with my studies of the effects of some poisons on kidney function. In June of 1949 I hope to get out of the Army and get one more year of clinical training before returning to research work.

MASSACHUSETTS GENERAL HOSPITAL 1811

No. 72 Boston, Mass. October 1948

A REORIENTATION OF DERMATOLOGY

Specialized areas of medicine tend to become isolated. In the seclusion of their peculiar interests and involved with the formulas of the past, they lose touch with the vigorous movements in science which carry medicine forward. To survive as significant participants in the field of medicine, these special interests must occasionally be rescued from themselves and redirected toward fresh objectives. Old concepts need to be re-examined, and old practices forsaken if they no longer bear critical examination. In the end the substantial residue must be preserved, for it is the stuff on which progress is built. On this basis and in a new light, old problems must be reappraised and with new tools their solution undertaken.

The modern era of dermatology began with Robert Willan, pupil of Matthew Baillie, first to write in English on anatomical pathology. In turn, Willan was the teacher of Thomas Addison. He flourished at a time when the systematic classification of lesions—and the naming of them—were uppermost in men's minds. His contribution to dermatology was not unlike that of Thomas Sydenham to medicine in general.

Willan was an astute observer and what he saw had deeper meaning to him than the organ which he examined. He viewed the human body as a whole and he was not unaware of the manifold forces in the environment which affected the health of the patient.

About half a century later this remarkable man was followed by another, Ferdinand Hebra, who left an even deeper impression on dermatology than did his early predecessor. Not only did he bring to the study of cutaneous disease the concepts and techniques of Virchow in cellular pathology, but he also possessed a robust and philosophical attitude toward the meaning of the lesions he described. These he saw in their relation to the general processes of disease as he understood them.

Perhaps the reorientation of dermatology might better begin with this man. One could do worse than read again what he wrote on diseases of the skin, and strive to catch something of his inquisitive genius and of the objectivity and logic of his clinical method. In his words there is a freshness of insight and a quality of critical evaluation which might be helpful for us today.

Not a little of what he wrote still finds attenuated repetition at the hands of lesser men, often with a loss of the original meaning. The problems which he stated and the questions which he asked, however pertinent they still remain, have largely faded from our memories. Yet we continue to cultivate with tenacious zeal—and with the same old tools—the area of histopathology which made him great. Seldom do we question that which we do, as if the repetition of old observations would lead us beyond the horizon of his knowledge.

Many hold the opinion that dermatology has been caught in the cul-de-sac of convention. By its interest in nomenclature and description it has largely avoided the functional and dynamic in disease. In its concern with variations in form it has frequently failed to recognize the continuity and unity of the pathological processes with which it deals, and the relation of cutaneous reaction to that in other organs of the body. To some it would seem that the skin has attained biological autonomy.

The dilemma is a serious one. For this the dermatologist alone is not responsible. If, by his shortcomings, he has maneuvered himself into an untenable position, medicine in general has often extended him an unsteady hand. For some reason the integumentary system with its diseases has been viewed in a different light than, for example, the cardiovascular system with its diseases. Yet each is integral and vital to the whole. The essence of disease is common to both.

Perhaps it has been the spacial position of the skin with its apparently static function, together with the accessibility of its ailments, which has lessened our respect for it. The direct method of its examination has robbed its diseases of the pleasure of the hunt, and our confused familiarity with its lesions has discouraged our understanding of these phenomena. Disease of the skin is too apparent. Yet it may be that functions unsuspected lie buried in it, and that chemical mechanisms, as subtle as those of vesication, await discovery.

The skin is but one of the many facets of the body from which health and disease are reflected. An understanding in their broadest implications of the phenomena of disease which it displays seems a worthy achievement, and one in which all those who profess medicine might well consider within the province of their responsibility. However much medicine may have to offer dermatology in the reorientation of its position, it may also be true that dermatology likewise holds in its experience a contribution which could in time enrich the whole of medicine. If this be a fair assumption, then ways must be found for achieving this end.

Essential to the reorientation of dermatology is the method of its teaching. As the subject is customarily presented to the undergraduate student, few survive the experience with any significant knowledge of cutaneous disease. The patient is considered too often from the skin alone and little attempt is made to show the relation of the lesion to the disease and the patient as a whole. The student is confused by many patterns of eruptions and by their labels, as also by an excess of therapeutic empiricism collected from the ages past. Little interest is taken in relating the anatomy of disease to the basic pathological processes common to all tissues so that the student may build upon his already accumulated knowledge. Dermatology in the end remains something apart from medicine. The memory of its anatomical patterns soon fades.

The patient with a dermatological lesion requires no other techniques for examination than are common to medicine, but he does require these techniques. The student should, from his first contact with the subject, be permitted to study comprehensively the patient, and not be confused by a multitude of unfamiliar lesions described by strange names to designate entities which probably do not exist. The picture gallery technique is no longer good enough. He can describe in simple terms what he sees, and with the facts of observation reach a fairly satisfactory conclusion as to the essential disease of the patient. The fundamental pathological processes are not many, and the causes of the more common are not too obscure. If the undergraduate student can be made to understand the great group of inflammatory lesions and their causes, if known, he will possess a practical approach to dermatology and be prepared to evaluate the lesions of the skin and to think more deeply of them than is usually the case. He can be shown that dermatology contains more than the trivia of medicine.

For the undergraduate student—and anyone interested in the subject, for that matter—the formulary for the treatment of these diseases needs to be critically examined. Much can be deleted. Empiricism and habits of the past may have some virtue, but dermatology is overburdened by their needless accumulation. Useful drugs with demonstrable therapeutic effects are few. The student should not be misled by unessentials.

Trained to think of diseases of the skin in a rational way and to approach the patient as a unified whole, the physician can be made to feel as comfortable in their presence as he does when disease involves other organs of the body. Dermatology can be made medicine.

For the graduate student, no other formula for knowledge is required. Let him study the patient too. Set standards of didactic teaching usually on the level of a secondary school miss the point. To insist that he become expert only in the expertness of the past leaves little room for imagination and for the application of fresh knowledge to the subject. The dermatologist should become a good physician with better than common knowledge of the integumentary system. Dermatology should not be an escape from medicine.

If such attitudes of mind and clinical techniques are developed, the handling of the patient becomes immediately apparent. The dermatological service becomes no different from any other medical service. There can be no two standards for the study and treatment of the patient. Good medicine on one service is good medicine on the other service. Anything less is unsatisfactory. These are not unattainable objectives. They have been achieved even to a point where the physician with a special interest in dermatology has met the requirements for a professorship of medicine.

For leaders in the field of cutaneous disease there is urgent need for young men trained adequately in medicine and in one or the other of the basic medical sciences. With the tools of the science of his choice he is then prepared to undertake the solution of the many problems related to the skin, both in health and disease. Research in dermatology has too often been of a superficial order. Basic problems in the structure and function of normal skin are many. These are chiefly biochemical. Upon their solution will rest an understanding of the mechanisms involved in the skin's diseases. The bulging volumes on modern dermatology may yet be seen to shrink in size.

Chester N. Frazier, M.D.,
Chief of Dermatological Service

STORROW HOUSE

In order to clarify to members of our Staff the purpose of Storrow House, the method of admission to it, and the responsibility of the care of patients after their admission, the following explanation is offered:

Storrow House is intended to fulfill what we believe to be a real need in the community. It can accommodate convalescent patients and can provide care for simpler chronic cases. It can be used as a rest home for people who are not really ill.

Of course there are certain limitations, namely, that the patients must be ambulatory, need only the simplest of surgical dressings or medical treatment, and be able to take general care of themselves.

Dr. Perry Culver has been appointed to act as Physician for Storrow House. The Staff of the Massachusetts General Hospital may care for their patients themselves or through Dr. Culver. Other physicians should arrange with Dr. Culver for care of their patients.

Charges range from $5.00 to $7.00 per day.

Members of the Staff of the Massachusetts General Hospital or other physicians of Boston and vicinity may arrange for admission through the General Hospital Admitting Office, CApitol 7-4300, Extension 414.

* * *

At a meeting of the Council of the Royal College of Surgeons of England, held on July 29, Dr. Kurt H. Thoma, formerly Oral Surgeon and Chief of the Dental Department, and now a member of our Board of Consultation, was elected a Fellow in Dental Surgery of the Royal College. It will be necessary at some future date for Dr. Thoma to be admitted officially to the Fellowship, and he plans to make a trip to London to accept this new honor.

* * *

The 31st Annual Meeting of the American Dietetic Association will be held in Boston October 19-22. A large registration is expected—probably as many as 3,000 will attend—and M.G.H. will play host to many visitors from the Association during the time of the meeting. Interesting literature on the subject and a program of events are on the foot-of-Treadwell-stairs bulletin board.

ANEMIA CLINIC

In April of this year the Anemia Clinic, the newest among the specialized clinics in this hospital, with Dr. Means and Dr. Earle M. Chapman as godfathers, began its career. At its birth it was helped on its feet by Dr. Joseph S. Lichty, then in charge of the Out-Patient Department, and was given moral support by Dr. Francis T. Hunter and by Dr. Wyman Richardson, both of whom have been interested for many years in the disorders of hematopoiesis. The clinic meets in the Male Medical Clinic of the Out-Patient Department on Fridays at 1, and goes through to 4 o'clock. The clerical help is being efficiently contributed by Mrs. Margaret Kolpack, and the nursing assistance by the nurses assigned to the Out-Patient Department, under the able direction of Miss Thelma Cogswell.

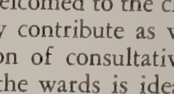
The clinic had its inception in the desirability of studying the increasing number of patients suffering from anemias and leukopenias of obscure origin, presenting problems in diagnosis and therapy. During the two-year period after the end of the war, both formal and informal consultative services were rendered to patients scattered in various clinics of the Out-Patient Department, but by last spring it was considered opportune to try to concentrate such patients in a special clinic. This evolution follows the trend of the study of many other diseases in this hospital—a practice that has resulted in greater benefit to the patient and in the extension of our understanding of morbid processes. Many years ago the Tumor Clinic took over the follow-up of patients with polycythemia, leukemia, and lymphoma—that is, the patients with "too much blood"—and these patients remain under the care of that clinic. To the Anemia Clinic we invite the patients with "too little blood", be it a deficiency of the red blood cells or of the white blood cells or of the platelets, or of all three.

The aims of the clinic include, in the first place, the care of the patient. For the patient in the general medical clinic with a mild and simple iron-deficiency anemia, or with an anemia secondary to chronic infection or to chronic renal disease, nothing will be gained by transfer to the Anemia Clinic, but such patients will be welcome when sent for consultative opinion. To the patient with a profound disorder of the hematopoietic system, the clinic may well extend considerable benefit through more intensive use of modern diagnostic and therapeutic tools. In the second place, the material available for study should present a challenge to the workers in the clinic. At present we are gathering information on such topics as improvements in the examination of the bone marrow and the diagnostic significance of such examinations. Anemias due to a deficiency of factors in liver, other than the pernicious anemia principle, are under investigation. Patients with untreated pernicious anemia are especially welcome for their help in the assay of the therapeutic potency of purified fractions of liver extract.

Finally, the Anemia Clinic intends to utilize its teaching facilities to the greatest advantage to the hospital staff. House officers, staff physicians, and graduate physicians are welcomed to the clinic, for they will certainly contribute as well as learn. The extension of consultative services to patients on the wards is ideally followed by the house officer or resident physician studying the patient later in the Anemia Clinic. For the house staff, this continuity of care of the patient is of utmost value.

Like a new baby, until it grows up the Anemia Clinic cannot recount its achievements, but it looks forward to a busy and useful future.

Bernard M. Jacobson, M.D.,
Chief, Anemia Clinic



The Board of Trustees, at their meeting on August 20, voted to appoint:

Dr. Willam James as Assistant Resident on the Neurosurgical Service;

Dr. Stephen W. Royce, Jr. as Assistant Resident on the Children's Medical Service for two months, beginning August 1.

At their meetings on August 18 and September 8, the General Executive Committee voted to appoint:

Dr. Sadegh Amini as Clinical Fellow in Dermatology, effective as of July 1;

Dr. Gaston E. Blom as Clinical Fellow in Psychiatry, to work with the Child Psychiatry Group;

Dr. Howard S. English as Clinical Fellow in Neurology, as of July 1, for a period of six months;

Dr. Nelson Hastings as Clinical and Research Fellow in Surgery for the term July 26 through August 31;
Dr. Mahlon B. Hoagland as Research Fellow in Medicine, as of August 1;
Dr. Logan O. Jones as Clinical Fellow in Medicine for the year beginning July 1;
Dr. Victor Perlow as Graduate Student Assistant in Surgery;
Dr. Isaac Silove as Clinical and Research Fellow in Medicine, assigned to the Allergy Clinic, for six months beginning August 1;
Dr. Edwin A. Smith as Clinical Fellow in Dermatology;
Dr. Richard W. Steenburg as Clinical Fellow in Surgery;
Dr. Concepcion Uribe as Clinical and Research Fellow in the Children's Medical Service for one year, effective as of August 1.

◆

Eldredge House, the new residence for graduate nurses, was opened with a formal "Open House" on Thursday, September 9. This beautiful home at 44 Chestnut Street, bequeathed to the hospital by the late Mrs. Cressida P. Eldredge, now houses eighteen graduate nurses. Some of its outstanding features are two unusually attractive living rooms, a spacious community kitchen with individual cupboards for each nurse, a large laundry, and a garden with garden furniture.

Among the many visitors at the opening were members of the hospital Staff and their wives. Special guests were Mr. and Mrs. Frederick Whiteside. Mrs. Whiteside is a niece of Mrs. Eldredge, donor of the house.

The committee who arranged the evening was made up of nurses now living at Eldredge House: Miss Alice Fraser, Mrs. Jean Nortridge Lynn, Mrs. Carlene Bryan, Miss Anne Richards, and Miss Mary Murphy.

Much interest has been aroused by the ninety new preclinical students in the School of Nursing, who appeared in full uniform, including a new small cap, immediately after their arrival. This change in uniform regulations coincides with the introduction of a new educational program, which was announced in an earlier edition of THE NEWS. All future classes will have a preclinical period of six months rather than four, and a somewhat more concentrated program of classroom instruction which, at the end of twenty-eight months, will finish formal class work and leave the students free to serve an internship of eight months' supervised practice on the wards. The uniform changes which accompany the new program mean that the student begins her preclinical period in full uniform, including the small "student" cap. The uniform then remains the same until the start of the internship, when the student is capped with the regular school cap and finishes her three years in the uniform now being worn by all students in the clinical area.

Several new faculty members are now with the Science of Nursing Departments of the School. Mrs. Mildred Hine, a graduate of the University of Illinois and former research assistant at Massachusetts Institute of Technology, is the new instructor in Chemistry for preclinical students. New graduate assistants to Miss Perkins in the Nursing Arts Department include Mrs. Pomona Mitchell, a Simmons graduate and formerly instructor in Nursing Arts at the Boston City Hospital; Mrs. Jane Frame, who since graduation from Yale University School of Nursing has been with the New Haven Hospital; Mrs. Marjorie Meyer, whose college is Russell Sage and who has recently been instructing at Simmons College; and Miss Natalie Petzold, a graduate of, and former assistant at, Simmons.

An important visitor to the School of Nursing during September was Miss Wu Chin-Yu, Educational Director of the National Central School of Nursing in Nanking, China. Miss Wu, studying under the auspices of the Bureau for American Aid to China, spent a two-week observation period with us.

Another visitor from abroad is Miss Gerda Hog Peterson, a Danish nurse who is doing staff work on Bulfinch 1. Miss Peterson received her training in Copenhagen.

Miss Mildred Blank of the Out-Patient Tumor Clinic is the author of an article entitled "Nursing care in Hodgkin's disease", which appeared in the September *American Journal of Nursing.*

Miss Phyllis Cox is the new head nurse of Bulfinch 6, replacing Miss Elizabeth West.

The Class of 1949 of the School of Nursing sponsored a successful two-day Senior Bazaar on September 22 and 23.

MASSACHUSETTS GENERAL HOSPITAL 1811. McLEAN HOSPITAL

STUDIES ON THE PHYSIOLOGY OF ELECTRIC SHOCK THERAPY AT McLEAN HOSPITAL

The nature of the abnormal physiological processes which occur when normal thought is replaced by psychotic thinking has been a matter of conjecture since the first psychotic individual was recognized some thousands of years ago. Only a negligible amount of physiological data bearing on this problem has been secured. While it is true that the large amount of psychological writing that has appeared has contributed material which is important, and useful in the evaluation and handling of clinical problems, it is generally agreed that this body of data explains the manifestations of psychosis and not its *origin.* Many workers in the field feel that the physiological approach to the problem of psychosis is an important one and accordingly a program of chemical and physiological research has been organized at the McLean Hospital; this program is based upon the almost ludicrously trite assumption that, since thought is a product of the activity of brain cells, the break-down of orderly, realistic thinking which characterizes psychosis must be a consequence of a change in brain tissue. The fact that extensive study of autopsy material by means of the relatively crude routine methods which are used have not demonstrated any such change is not evidence against the assumption. Part of the program here at the McLean Hospital consists in the study, by means of the most refined methods known, of the brain tissue in health and disease. Another approach in use here is based on physiological observations made upon patients; this study utilizes the fact that some psychotic patients become completely normal mentally after two or three weeks of electric shock therapy. By observing and interpreting the physical changes caused by electric shock therapy it may be possible to secure data explaining the mechanism of recovery from psychosis, and therefore, ultimately, the mechanism of the development of psychosis. Essentially, then, this part of the program at the McLean Hospital is a study of the physiological effects of electric shock therapy in the treatment of mental disease.

Many explanations for the beneficial therapeutic response to shock therapy have been advanced; all have little or no data to support them. Most explanations invoke damage to brain tissue during the electrically induced seizure. Here at the McLean, however, the hypothesis which is held is that electroconvulsive therapy is *reparative,* and if scattered damage to brain tissue occurs it is only incidental and a side reaction. This hypothesis was suggested by the fact that in patients with psychoses due to syphilis of the brain, multiple sclerosis and, occasionally, arteriosclerosis of the brain, electric shock may be markedly beneficial. It is difficult to understand how these processes, due to destruction of brain tissue, could be helped by further scattered damage caused by electric shock; it is more reasonable to assume, at least temporarily, that electric shock causes repair of damaged brain tissue in some way. The problem, therefore, resolved itself into a study of possible mechanisms whereby electric shock might give rise to repair; the direction of study was suggested by the well-known fact that there is an excellent (but not absolute) correlation between the presence or absence of gain in body weight and the presence or absence of therapeutic benefit after shock therapy. Accordingly, observations on metabolic changes which might cause gain in weight during shock therapy have been made. From the outset it was apparent that the gain in body weight which occurs is due at least partly to retention of water, for the gain in weight is often rapid, i.e. as much as fourteen pounds in three days. Observations on the volume of the extracellular fluid in the body show that all of the gain in weight is due to retention of water at first, but that as shock therapy continues, the gain in body weight exceeds the increase in extracellular water. Additional studies have shown that an increase in body sodium also occurs. These findings suggest the action of steroid hormones, possibly of the type of desoxycorticosterone.

It was also found that untreated patients with depressions exhibit retardation of water diuresis. This phenomenon has been repeatedly discovered and forgotten during the past twenty years. Its mechanism is unknown, but it may possibly be a state of depletion of extracellular water. At any rate, the water diuresis test, if carried out on patients before and after a course of shock therapy, reveals acceleration of water diuresis when the patients improve. This, too, is consistent with the action of certain steroid hormones. In order to test the action of steroid hormones known to cause only salt and water retention, patients with depressions were given desoxycorticosterone or progesterone in large amounts. Gains in weight were secured, but no improvement in mental symptoms occurred. It was concluded, therefore, that changes in salt and water metabolism due to the action of steroid hormones occur in patients receiving electroshock therapy, but that these effects are side reactions and not necessary for clinical improvement. Other effects of the action of steroid hormones are known, however. These include catabolic effects, giving rise to changes in metabolism sometimes referred to as diabetogenic; and anabolic effects, resulting in retention of nitrogen in the body.

The steroid hormones which cause changes in metabolism other than salt and water retention can be detected in a number of ways. These types of steroid hormones derived from the adrenal glands cause lysis of blood lymphocytes and eosinophils, and give rise to increases in uric acid excretion in the urine; in addition, these hormones can be detected in the urine as such. Studies using these phenomena as tests are incomplete, but thus far it has been shown that the blood lymphocytes decrease by half and the eosinophils by approximately eighty percent in most patients given shock therapy. A few studies on urinary 17 ketosteroid concentration show increased excretion of these hormones after electrically induced convulsions. It appears, therefore, that steroid hormones which are probably derived from the adrenal and which cause metabolic changes in addition to retention of salt and water are liberated in large amounts after electrically induced convulsions.

In order to test the concept that the favorable response to shock therapy is the consequence of the increased production of steroid hormones whose effects are anabolic, large doses of testosterone have been given to depressed patients. It has been possible to demonstrate in patients with depressions who relapse after responding favorably to shock therapy that, at least in some instances, the effects of testosterone and of shock therapy are interchangeable. This phenomenon is another that has been discovered and ignored several times in recent years.

The result of all these studies, made during the past eighteen months, has been a hypothesis to the effect that electric shock therapy, presumably by stimulating the adrenal cortex (probably via the anterior lobe of the pituitary gland), causes the release of steroid hormones whose actions are anabolic and whose effects include reparative processes in brain tissue. Crucial experiments, involving the use of pituitary and other hormones in patients with mental disease, are now in progress.

Mark D. Altschule, M.D.,
Director of Internal Medicine
and Research in Clinical Physiology

Do you know about the small band of faithful workers in the Women's Occupational Therapy Department at McLean Hospital? This group of from three to six patients works daily under the direction of a single patient to produce about 1,000 Operating Room dressings a week for the Massachusetts General Hospital. A similar number is made for McLean Hospital use in the same period. It has been said that this assistance in the making of dressings is a definite help during the nursing shortage.

The American Red Cross and the British War Relief made several awards—both group and individual—for the quality and quantity of work done by these patients during World War II. In addition to dressings, many knitted articles and garments have been made in great numbers. One can readily appreciate the therapeutic value to our patients of being needed and being able to produce work of such a reputedly high order. During the past twelve months 66,849 dressings have been completed by these patients.

At a Medical Staff Meeting on June 16, Dr. Kenneth A. Evelyn (*clin. fel. M* 1947) gave a preliminary report on the research project which has been carried out in the Hypertension Laboratory on White 12 during the past year. The object of this investigation was to review the results of the surgical treatment of hypertension at M.G.H. during the past fifteen years. This study was one of the projects initiated by the Hypertension Research Committee which was formed in the summer of 1946 to take charge of research on hypertension after Dr. Reginald H. Smithwick left M.G.H. to become Professor of Surgery at Boston University.

Dr. Evelyn, who is now with the Institute of Biophysics at McGill University, Montreal, came down to give this report. Therefore, those who could not hear him on June 16 will be very grateful to him for sending us this summary of his talk.

Sympathectomy was first used in the treatment of hypertension about 20 years ago, and, as a result of Dr. Smithwick's pioneer work, the M.G.H. has always occupied a prominent place in the development and improvement of this operation. Unfortunately, the evaluation of the effectiveness of this form of treatment has always been a very difficult task on account of the highly variable course of the disease in different patients. For example, some hypertensive patients may live for twenty or thirty years with little or no treatment, while others, for reasons which are not yet understood, may pursue a rapid downhill course and die within a very short time after the onset of the first symptom. The only safe method of allowing for this variability is to base all assessments of therapeutic efficiency on careful observation of large numbers of patients over periods of several years. Such long-term studies have been carried out in the Hypertension Clinic of M.G.H. under the direction of Dr. Robert S. Palmer, who has published several articles based upon his findings at the end of gradually increasing follow-up periods. One of the disappointing features of Dr. Palmer's results is the fact that the percentage of patients whose blood pressure has been reduced has fallen steadily as the length of the follow-up period has increased. For example, in 1940 about 70 percent of the patients showed normal or near-normal blood pressures, while in 1941 this figure had fallen to 50 percent, in 1943 to 38 percent, and in 1946 to 25 percent. Since it seemed quite likely that this percentage might fall even lower with the further passage of time, the Hypertension Committee felt that a complete review of all aspects of the problem should be made, in the hope that such a study might bring to light some of the factors responsible for the disappointing results which had been obtained. Accordingly, in July 1947, the staff of the Hypertension Laboratory undertook a review of the records of all public patients from the State of Massachusetts who had been sympathectomized for hypertension on the wards of M.G.H. since the operation was first performed in 1935.

The investigation involved not only a detailed statistical analysis of all the records, but also a personal follow-up examination of all surviving patients who could be traced. Although the project will not be finished for another six months, it was decided that a preliminary report might be made at this time because the analysis of the records and the examination of the patients have recently been completed, and all that remains to be done is the final statistical analysis of the data. However, on the basis of those results which have already been computed, it is possible for me to give the following over-all picture of the progress of the investigation.

The number of patients sympathectomized on the ward services of M.G.H. up to June 1947 was 292, of whom 105 were males and 187 were females. During this period 73 of the patients have died, leaving 219 survivors, of whom all but two were traced through the efforts of Miss Mary Butler, the Secretary of the Hypertension Laboratory. Of the 217 patients who were located, only one refused to cooperate; but four patients who were too sick to come to M.G.H. and three who had moved away from the New England area were studied by questionnaire with the cooperation of local physicians. The remaining 209 patients were given appointments at the Hypertension Laboratory where the various examinations and laboratory tests were carried out, only one patient being studied per day. The medical part of the study was done by Drs. Evelyn, Fred Alexander, Stewart Cooper, and William Chapman, with Dr. David G. Cogan acting as Ophthalmological Consultant. The Social Service angle was covered by Mrs. Jean Barkin Waldstein, the statistical analyses by Miss Phyllis Hoffman and Miss Jean Emery, and the special laboratory tests by Miss Grace Lockwood and Miss Margaret O'Grady. Miss Butler's skillful public relations work has already been mentioned. Generous financial assistance was provided by a grant from the Life Insurance Medical Research Fund.

As an introduction to his report, Dr. Evelyn showed several slides which illustrated the gradual evolution of the operative procedures employed at M.G.H.

In explanation of the slides Dr. Evelyn said:

From 1935 to 1938 the supra-diathragmatic operation was performed exclusively—the average extent of the sympathectomy being from the 10th to the 12th dorsal ganglion. In 1939 the introduction of Dr. Smithwick's combined supra- and infra-diaphragmatic operation made it possible to extend the operation from D 8 or D 9 to L 1 or L 2. Finally, beginning in June 1946, the surgical members of the Hypertension Committee introduced some additional modifications of the operative technique, in the hope that the results of the operation might be improved by performing an even more extensive ganglionectomy, which in some cases went as high as D 3 and as low as L 3. Since the number of patients in 1935-1938 supra-diaphragmatic series was only 35, and the patients operated upon by the more radical procedures have been studied for too short a time to draw any reliable conclusions, most of the charts and tables shown refer to the 223 patients who were operated upon between 1939 and 1945 by the regular Smithwick lumbo-dorsal procedure.

Dr. Evelyn showed several examples of the standardized blood pressure charts which were drawn for each patient in order to record all the blood pressure readings which were made during the pre-and post-operative periods. He said:

The charts showed typical examples of the wide range of variation of the blood pressure of any one patient on successive visits to the clinic, and served as an excellent illustration of the difficulty of deciding whether the operation had or had not produced a significant reduction of blood pressure. In order to provide a statistical basis for this important decision, I tried to estimate the average variability of the blood pressure levels of un-sympathectomized controls by analyzing the records of patients from the Hypertension Clinic who, though considered suitable candidates for the operation, had decided to continue on medical treatment. With this base line as a guide, an effort was made to divide the sympathectomized patients into three categories on the basis of the apparent effect of the operation on the blood pressure. The first category included those patients whose post-operative blood pressure was definitely within normal limits. The second group consisted of those whose blood pressure, while still elevated, was significantly below the average pre-operative level. The third category included those whose blood pressure was not significantly reduced.

The charts show several examples of the tendency of the blood pressure of certain patients to return to the pre-operative level as the period of post-operative follow-up increased. Such patients often have normal blood pressures during the first few months and then gradually pass into the second category and eventually into the third after two, three, or four years. I wish to point out that these charts were merely independent confirmation of the observations which had previously been made by Dr. Palmer, using somewhat less elaborate statistical methods.

Since Dr. Palmer's last observations were based upon an average follow-up period of 3½ years, the only significant new information from my figures was the analysis of the blood pressure data of 83 patients who have now been followed, five or more years after lumbo-dorsal sympathectomy by the Smithwick technique. Unfortunately, the blood pressure data on many of these patients are far from adequate since all too frequently the operation was performed before a satisfactory base line had been established, and in many cases the post-operative follow-up was also inadequate. However, on the basis of the best possible assessment which could be made in each case, the results of the 5-year follow-up of this small group of patients are approximately as follows:

Blood pressure normal	8%
Blood pressure significantly reduced	12%
Blood pressure not significantly reduced	50%
Patient dead	30%

In conclusion, I wish to emphasize the fact that reduction of blood pressure is only one of the many criteria which must be used in evaluating the effectiveness of sympathectomy in the treatment of hypertension. In the course of this investigation equally careful analyses have been made of other criteria, such as reduction in mortality, amelioration of symptoms, restoration of physical capacity, changes in appearance of the ocular fundus, reduction of the size of the heart, improvement in the shape of the electrocardiogram, and so on.

Eventually, data on all these phases of the study will be analyzed, but at the time of this preliminary report the only figures which were ready for presentation were those dealing with the effect of the operation on blood pressure. Even on this limited basis, however, it seems fair to conclude that there is still considerable room for improvement in the methods used for the selection of patients for sympathectomy, and perhaps also for further refinement of the operative procedure itself. Unfortunately, the short-term follow-up data now available on the patients sympathectomized by the more radical procedures in the last 18 months do not appear to be better than those obtained with the more limited procedures. Nevertheless, as long as even this small percentage of patients appears to have been definitely benefited by the operation, it seems entirely justifiable to continue to explore the therapeutic possibilities of surgery of the autonomic nervous system in the treatment of hypertensive disease.

Ideas for new approaches to the solution of the problem are urgently needed, and it is to be hoped that analysis of the data collected in this study will provide a clue to the cause of our present high percentage of failures and offer constructive suggestions for future work in this very important field.

New addresses:—

Mr. Reginald Gray (Secretary, Board of Trustees), 15 State St., Boston 9, Mass.

Dr. Harrison E. Kennard (*WS* 1934), 1180 Beacon St., Brookline 46, Mass.

Dr. William K. Livingston (*WS* 1922), Department of Surgery, University of Oregon Medical School, Portland 1, Oreg.

Dr. A. William Reggio (*WS* 1914), 2301 Connecticut Ave. NW., Washington 8, D.C.

Lt. George S. Richardson, MC, AUS (*WS* 1947), Medical Division, Army Chemical Center, Md.

Dr. Otto D. Sahler (*r.p. R* 1942), Mary Imogene Bassett Hospital, Cooperstown, N.Y.

Dr. Chiu-an Wang (*WS* 1944), Hackett Medical Center, Canton 20, China.

Brief bits:—

Dr. Addison G. Brenizer, Jr. (*WS* 1942) was discharged from the Army on June 1. His present address is 1425 Elizabeth Ave., Charlotte 4, N. C.

It was good to see the Drs. Glendy—Margaret M. (*CM* 1932) and R. Earle (*r.p.* 1934)—again. They stopped in for a visit during their vacation on Cape Cod with their three children—Robin, David, and Lisa.

After January 1, Dr. James E. Kreisle (*WM* 1943) will have a new address—811 West 31st St., Austin, Texas. He will have finished his Fellowship at the Mayo Clinic in Rochester, Minn.

Major Wilbour C. Lown, past Head of our Photographic Laboratory, "reported in" on September 1. He has promised to send us something about the interesting work he is doing, for publication in The News.

Dr. Alfred Yankauer (*CM* 1941) is District Health Officer, Kips Bay—Yorkville District, New York City Health Department, and Assistant Professor of Public Health and Preventive Medicine at Cornell University Medical College. His new address is 301 East 10th St., New York 9, N. Y.

MASSACHUSETTS EYE & EAR INFIRMARY

The X-ray Department, under the direction of Dr. A. S. MacMillan, has recently installed new equipment and modernized its quarters. One new X-ray machine, that can be used for all types of diagnosis and treatment for eye, ear, nose, and throat patients, has replaced several pieces of equipment, each one needed for a different purpose. The new machine is being used for fluoroscopy and for superficial therapy, especially in intra-oral treatment for deaf children.

The Mosher Laboratory this month re-established its work of doing the pathology for the Infirmary's ear, nose, and throat service, with Dr. Werner Mueller, Assistant Surgeon in Oto-Laryngology, in charge. Pathology reports for such cases have previously been done by the Pathology Laboratory at the Massachusetts General Hospital, and the two laboratories will continue to work closely together. The new arrangement will give more facilities for teaching the Infirmary residents, as Dr. Mueller, who also teaches the basic science course at the Harvard Medical School, will give special attention to this phase of the work.

Dr. Edwin B. Dunphy, Chief of Ophthalmology, and Dr. LeRoy A. Schall, Chief of Oto-Laryngology, are attending the annual meeting of the American Academy of Ophthalmology and Oto-Laryngology, being held in Chicago October 10 to 15. Dr. Dunphy, who is on the American Board of Examiners of Ophthalmology, will also take part in conducting the examinations in Ophthalmology, being held at this time in Chicago.

Dr. J. H. Tom Rambo finished his residency in Oto-Laryngology on September 30, and is planning to go to New York to the Endaural Hospital for further training.

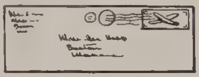
Visitors to the Social Service Department recently were Dr. Anna S. Elonen, Assistant Professor of Psychology, and Miss Ruth Mohn, both from the Division of Psychiatry, University of Chicago Clinics. They came here to discuss developments in the program for retrolental fibroplasia children, being interested in studying the scientific research as well as the social program carried on for this special group of patients.

Dr. Sushila Nayer, Pediatrician from India, visited the Infirmary in September to observe treatment of children with eye

Entrance to Storrow House — our new convalescent hospital in Lincoln

conditions. Her interest was in both the medical and social aspects of handling blind children.

Dr. Warren Haley of Winchester, Massachusetts, did relief work in the Infirmary laboratories during the summer, before starting his residency in Ophthalmology here on October 1.



A "first", and a good one, has come from Lt. Frederick C. Goetz, MC, AUS (*M* 1947). From McCornack General Hospital, Pasadena, California, he writes:

> After no more than two months away from Boston I find myself very hungry for news of the M.G.H., where I am sure dramatic changes must already have taken place. Therefore I hasten to give you my address so that I may receive The News without undue delay.
>
> There were seven of us from M.G.H. at Fort Sam Houston, where we spent a very pleasant—almost idyllic—month attending the Medical Field Service School. The School did not take up much of our time and there were many pleasant reunions with former classmates. Gale Keyes and his wife are practically native Texans after a year at Randolph Field. As old settlers, they were exceedingly hospitable.
>
> To my surprise, I was somewhat reluctant to leave Texas. Of course, it meant—perhaps—the final breaking-up of a very congenial group of friends. We have been widely scattered, but only one of us was sent out of the country. That was Dave Sohier, who is now caring for a group of 300 psychotic patients in the jungles of Panama (Box O, Ancon, Canal Zone). Jim Donald is at Camp Carson, Colorado; Tom Green at Fort Ord, California; Cliff Straehley at Madigan General Hospital, Fort Lewis, Washington. Only George Richardson and Jim Skinner returned to the East—George to Edgewood Arsenal, Maryland, and Jim to Murphy General. No doubt Jim has been back at the hospital on numerous occasions.
>
> I consider myself extremely fortunate to be here at McCornack in Pasadena—a very lovely spot, indeed. But it's still the Army!

This fine letter from Dr. Arthur A. Holbrook (*CM* 1933 & *EM* 1934) could well serve as a pattern for those of you who are about to write that long-delayed letter to The News. Dr. Holbrook's many friends will enjoy reading this interesting account of his present activities.

> Professionally, I am an Internist. Occasionally, when I say that in reply to some layman's question, he shows amazement and wants to know in what hospital. Perhaps "Internalist" would be a better term. I share an office suite with Einar Daniels who is a University of Wisconsin man. We did not know each other well until we drove to Fort Sheridan in the spring of '42 for our induction physical examinations and found we were to be in the same General Hospital. Later, in the Southwest Pacific, we decided to get together if we ever got home, and we did. Our practices are entirely independent and parallel. The joy of the association is in having a kindred spirit right handy to talk things over with and a willing friend to leave patients with during times off for vacations or meetings.
>
> I am a staff member of Columbia and St. Luke's Hospitals, and am on the Associate Staff of Milwaukee Hospital. At Columbia I am chairman of the Committee for Scientific Advancement and Education. Our purpose is to maintain and make available a fund for staff members who are interested in pursuing clinical problems and do not wish to subject their private patients to extra laboratory expenses. The fund pays for the research, and the doctor is obliged to file a report of his work. The current literature contains evidences of studies accomplished in this manner. The fund also helps the interns to attend meetings, supports exhibits, and so forth.
>
> The medical societies I am most active in are the Milwaukee Society of Internal Medicine, the Milwaukee Academy of Medicine, and the Central Society for Clinical Research. I have been the physician to the Milwaukee Country Day School for the past ten years—a most enjoyable job, what with watching about 250 boys grow year after year. During the football seasons I am really put to it as an orthopedic first aid man! Since the war I have not been teaching at the Marquette University School of Medicine; I simply take my turn in the hospital teaching programs.
>
> Our home is in Shorewood, the first suburb north of Milwaukee, and is situated near Lake Michigan. Morris, aged 4½, has just been promoted to Senior Kindergarten at Country Day. May, my wife, is a hard working gardener when out from under the usual domestic and civic responsibilities. She has been very much interested in the Planned Parenthood Federation. Being from Alabama, she is not keen about cold weather or hurling herself down snowy slopes on skis. I still am, however, so we alternate winter vacations between Sun Valley and the South. We are both fond of tennis and fly fishing. Every summer we get in a couple of weeks of the latter on the Brule River in northern Wisconsin. My daughter Holly is now 13 years old.
>
> I am planning to drive with May to Boston in October for our first visit there since April 1941.

A nice note has come from Dr. Marlow B. Harrison (*EM* 1938), whose office address is 2000 Van Ness Avenue, San Francisco, 9. He promises to write at greater length soon, but in the meantime what he says here brings the familiar greeting which might well be titled, "Once an MGH-er, always an MGH-er".

> I would not under any circumstances be without my copy of The News. Being a loyal Massachusetts General Hospital man, but at the same time three thousand miles away, The News certainly acts as my liaison with the hospital. I truly look forward to receiving my copy each month.
>
> At some time in the near future, I shall write you further as to my activities here in San Francisco and the pleasure I have had in meeting other Massachusetts General Hospital men here.

We may look forward to a letter from Dr. Russell T. Congdon (*WS* 1909) soon, if he lives up to what he says in a note recently received. Dr. Congdon's two sons, Russell and Gordon, are associated with him in practice out in Wenatchee, Washington, and from there he wrote:

> I was pleased to receive your letter suggesting that I write something for The News. I shall be very happy to do this. We are starting on our vacation, which we spend at Lake Chelan, and I will take care of it during that time. I shall be tempted to say a little in regard to some of our unusual cases, and perhaps a little more about our hobbies.

It is good to hear again from Col. Richard Collins, Jr. (*ES* 1933). From 3812 South 9th St., Arlington, Virginia, he writes:

> First, I am unable to report that I am practising medicine, nor have I practised medicine since my entry into active military duty in December 1940. Like other doctors who have turned soldier, I have been most fortunate in a series of interesting assignments.
>
> For the past two years I have been here in Washington, assigned to the General Staff, US Army. Other than to state that my work is most interesting, I can only add that I had hoped to escape from chairborne work more often. However, if one has to work in Washington, the Pentagon is the spot to be in during these hot and muggy days.
>
> Mrs. Collins, Deborah, and I live in a little house in Arlington that permits us to raise our own vegetables, mow our own grass, and play a bit of badminton when the weather is not too oppressive. Until our next change of station, our latchstring is always out to any of our friends of MGH days. I believe that so far only Dutch Ludwig has succeeded in penetrating the jungles beyond the Potomac.
>
> The Washington scene these days provides many a major and minor laugh, as well as all the suspense and drama of a "penny dreadful". Keeping up with what goes on is practically a day round job, and certainly leaves no time for idleness or introspection. I find that the habits of careful observation and logical analysis, so thoroughly impressed upon me during my days within the hospital's walls, now serve as the firm basis for diagnosis in another field. The patient may be larger and somewhat impersonal, but the urgencies are no less pressing for accurate diagnosis, sound prognosis, and the best practicable treatment. The life of a nation, not of an individual, is at stake.
>
> Again, any of you who venture this far from the realms of Bulfinch and beans, please drop in and try a bit of "cawn pone".

THE NEWS

No. 73 Boston, Mass. November 1948

ENDOSCOPIC AFFAIRS

In last year's report in THE NEWS I sketched briefly the evolution of endoscopy at the Massachusetts General Hospital. This year's report will outline the recent developments.

Improvements in instruments have taken place during the past year, directed toward better diagnosis and less discomfort for the patient. With regard to better diagnosis in gastroscopy, a new flexible operating gastroscope has been developed[1] which contains a channel through which secretions may be aspirated and a biopsy obtained. This has brought us a long way from the day when Mr. Iacabucci presented himself for diagnosis. He appeared one day in April 1933 with digestive complaints which led us to pass the first flexible gastroscope ever used in this country. At that time, observation was all that could be accomplished and therefore the difficult diagnosis of lymphoma, which was finally established in Mr. Iacabucci, could not be made by gastroscopy. Now, however, after fifteen years the diagnosis of lymphoma of the stomach can be positively established by means of the operating gastroscope.

Another step forward has been directed toward the comfort of the patient. This has been accomplished by the development of the Broyles' bronchoscope which has an expanded proximal end permitting its easy introduction into the trachea without the aid of the cumbersome laryngoscope. Bronchoscopic diagnosis has also made a step forward in the application of the Papanicolau technique to the study of secretions aspirated at the time of bronchoscopy. Such studies have enabled a positive diagnosis to be made of cancer of the lung in lesions inaccessible to direct bronchoscopic inspection and biopsy.

Endoscopy as a specialty in a large hospital is now established. Whereas it was formerly thought that endoscopy might eventually revert to various allied specialties—as for example bronchoscopy to the thoracic surgeon, and gastroscopy to the gastro-enterologist—it is now felt that the position of Endoscopist will be a continuing one.

Unfortunately, due to lack of time, medical students and House Staff get very little training in endoscopy. In their period of instruction they should be made aware of the importance of endoscopic procedures as an aid to diagnosis and treatment and should be thoroughly acquainted with the indications for each endoscopy. Although it is true that the technique of instrumentation may be learned in a relatively short time by those with manual dexterity, it should be emphasized that the correct interpretation of endoscopic findings is far more important than the mere passage of instruments. Such interpretation requires a longer period of training than can usually be devoted to the subject. Practical work in the clinic is now given in bronchoscopy, esophagoscopy, gastroscopy, and peritoneoscopy for a period of three months to students who enroll in the Harvard Medical School Courses for Graduates. Special instruction in bronchoscopy and esophagoscopy is given to residents in laryngology, and in bronchoscopic aspiration of secretions to residents in anesthesiology. It was a pleasure to welcome Dr. William F. Havemeyer on November first for a period of six months as Clinical Fellow in Surgery assigned to Endoscopy.

Endoscopy continues to be conducted in close association with Thoracic Rounds and Gastro-Intestinal Rounds and in consultation with the physicians and surgeons in charge of the individual patient. Assistance in bronchoscopy and esophagoscopy is now being given by Dr. Davenport and Dr. Scannell. Since Dr. Halsted has resigned, Dr. Warren has become interested in gastroscopy. Dr. Wallace continues his interest in peritoneoscopy.

Edward B. Benedict, M.D.,
Endoscopist

The Marion Lee Lawrence Room, for the use of the Ladies' Visiting Committee and all other volunteers at Massachusetts General Hospital, was dedicated on October 7 as a living memorial to Mrs. Lawrence's services as a former Chairman of the Ladies' Visiting Committee.

The dedicatory ceremony took place in the Rotunda of the Moseley Building. Among the speakers and many invited guests were members of Mrs. Lawrence's family from New York, Pennsylvania, and Boston. A light lunch was served, after which the room was opened for inspection.

The Marion Lee Lawrence Room has been attractively and comfortably decorated by the Ladies' Visiting Committee. Mrs. Lawrence's favorite shade of blue has been incorporated into the color scheme; and on the desk in the room is a framed photograph of Mrs. Lawrence, below which are these words:

> Mrs. James Lawrence became a member of the Ladies' Visiting Committee in 1924 and at the time of her death in 1935 she was serving her second term as its chairman. Her contribution to the Hospital was outstanding in its constructive interest in developing to a high level the relationship of the Ladies' Visiting Committee to the patient, and of Volunteers to professionals. The Marion Lee Lawrence Room is given in her memory so that those qualities may be perpetuated as an inspiration to the Volunteers of today.

* * *

Following the passage by Congress of the National Heart Act last June, setting up the National Heart Institute and the National Advisory Heart Council under the U.S. Public Health Service, Dr. Paul D. White has been appointed Chief Advisor for the National Heart Institute and Executive Director of the National Advisory Heart Council.

The Council consists of sixteen members, including six lay members, representing different parts of the country and particularly interested in public health, and ten physicians, four of whom are ex-officio (the Surgeon General of the U.S. Public Health Service and cardiovascular representatives from the Army, Navy, and Veterans Administration, respectively), and six other physicians, namely Drs. C. A. Elvehjem, Tinsley Harrison, T. Duckett Jones, Irvine H. Page, B. O. Raulston, and Paul D. White.

The headquarters of the National Heart Institute is at the National Institutes of Health, Bethesda, Md., and Dr. C. J. Van Slyke, experienced administrative officer of the U.S. Public Health Service, is the Director.

Dr. White will spend part time in this new post, assisting Dr. Van Slyke and the National Heart Institute, Surgeon General Scheele, and the National Advisory Heart Council. He will move his private office to 264 Beacon Street, where he will also set up an adjoining office for the National Heart Institute. He plans to continue an affiliation with the M.G.H., particularly in teaching, research, and attendance at certain exercises. He will also continue to follow his private patients.

The National Heart Institute, as set up by the National Heart Act, has, as its chief function, the support and initiation of cardiovascular research, both intramural in the U.S. Public Health Service itself and extramural in universities, hospitals, and other research institutions in this country, and with associations abroad when indicated. For its intramural research in the future it will make use of a large number of beds which will be established in the new research hospital under construction at the National Institutes of Health in Bethesda, Md. Another section of that hospital will be devoted to research in cancer, and other sections to other fields. Another function of the

National Heart Institute is that of the support of cardiovascular teaching and training, and still another is the bestowal of grants for construction for facilities for cardiovascular research. It is also hoped to carry on, as in the past but to a higher degree, the support of cardiovascular research projects and cardiovascular fellowships.

We are glad to announce the publication of *The thyroid and its diseases—from the Thyroid Clinic of the M.G.H.*—new 2nd edition—by J. H. Means, M.D., with chapters on "Pathology" and on "Tumors of the thyroid" by R. W. Rawson, M.D., and on "Surgery of the thyroid" by Oliver Cope, M.D. J. B. Lippincott Company are the publishers.

* * *

Dr. Arthur C. Guyton (*WS* 1943), whose picture appeared in The News last February, had an interesting article on polio, describing his own symptoms, in the *Journal of the Tennessee State Medical Association,* 41:251-258, July 1948. This article deals with the relation of symptoms to the pathological physiology in polio.

Ether Day was observed very quietly this year. Carrying on the custom that was inaugurated in 1945, Dr. Faxon, after a few words of greeting, presented service pins to those employees of the Hospital who have served here for 10 years or more. Those who received such pins this year were:

10-19 years employed:

Accounting Office—Phrae Hernan; Housekeeping—James Tormey; Animal Farm—Raymond Irwin, Sarkis Pilibosian; Maintenance—Joseph Fiumara, Philip Holden, Roderick MacDonald; Dietary—Louis Giagrande; Baker Nursing (non-nurse)—E. Florence Greenough; Record Room—Helen McCoy; General X-ray—Catherine Joyce, Kate Spencer; Out-Patient Housekeeping—Mary E. Benoit; Dietitian—Elma Seibert; Nurses—General—Eileen Wolseley, Baker—Anna M. Crotty, Phillips House—M. Louise Watson.

20-29 years employed:

Accounting Office—Norma Maguire; Maintenance—John V. Monahan, Lindsey Oakley; Record Room—Eleanor Harrington, Rose Martin; General X-ray—Oliver Merrill; Phillips House Information—Mary DeRosa.

* * *

New addresses:—

Dr. Walter B. Crandell (*r.s.* 1941), Veteran's Hospital, White River Junction, Vt.
Asst. Surgeon John G. Freymann, USPHS (*M* 1947), American Consulate General, Jerusalem, Palestine.
Dr. Oglesby Paul (*WM* 1943), 609 Cumnor Road, Kenilworth, Ill.
Dr. Adney K. Sutphin (*WM* 1943), 934 Hamilton St., Richmond, Va.

OFFICIAL NOTICE

Rules to be followed by the Resident Staff, Nurses, Medical Students, and Student Nurses for Hypodermic, intramuscular and intravenous medication, immunization, and for withdrawing blood or fluids for examination

1. Procedure for care of hypodermic needle and syringe:

a. Needle with wire in place is boiled for 2 minutes in a spoon over an alcohol lamp. Amount of water is small but is sufficient to cover the needle.

b. Syringe is kept in the covered enamel container which is lined with a sterile sponge. Each day the container is cleaned, boiled for 10 minutes, and filled with fresh 70% isopropanol.

c. The forceps used to handle the needle after sterilization and to remove the syringe from the sterile enamel container are kept in a glass of zephiran chloride solution 1-1000.

2. Intravenous and intramuscular medication:

An *individual* needle and syringe, sterilized by autoclaving or by boiling for 10 minutes, shall be used for each patient.

3. Immunizations:

When a number of individuals are to be given intramuscular or subcutaneous inoculations, a single glass syringe—sterilized by autoclaving or by boiling for 10 minutes—may be used, *provided* that an individual heat-sterilized needle is used for each person. *However,* if blood appears in the syringe it must be discarded and a freshly sterilized one used on the next individual.

4. Withdrawal of blood for serological, bacterial, and chemical analyses:

a. Individual needles, sterilized by autoclaving or by boiling for 10 minutes, shall be used for each patient.

b. After heat sterilization, needles may be sharpened and kept sterile in 70% alcohol.

c. Unsterilized syringes may be used *only* if absolutely dry and clean inside and out, and *only* if negative pressure is maintained by the plunger at all times.

d. In taking blood cultures needles, syringes, etc. must be sterilized by autoclaving or by boiling for 10 minutes.

e. After expelling the blood sample into the container, immediately withdraw the plunger at least half way. This prevents sticking. As soon as possible thoroughly cleanse the syringe and needle with running *cold* tap water and re-sterilize.

5. Capillary puncture for cell counts, smears, etc.:

The needle or blade may be kept sterile by *constant* immersion in 90% alcohol, *provided* that all blood is carefully wiped off the needle before returning it to the alcohol. Bottles must be of such shape (squat) that the *needle* tip reaches nearly to the bottom. Alcohol must be changed daily, or so as to maintain a clear liquid.

6. Contagious or infectious cases:

All needles, blades, and syringes used on *highly contagious or infectious cases* must be immediately sterilized by autoclaving or by boiling for 10 minutes.

N. W. Faxon, M.D.,
Director

All of Dr. Paul Scott Hansen's many friends were saddened by the news of his death which occurred on September 26. Dr. Hansen succumbed to an attack of polio, after an illness of only three days. He was a member of the East Medical 1939 group.

* * *

Dr. Beecher has returned from Europe, where he gave four lectures on the invitation of the Medical Faculty of the University of Copenhagen.

We hope to be able to give a further report on Dr. Beecher's trip in the near future.

* * *

GASTRO-INTESTINAL CLINIC

The present Gastro-Intestinal Clinic was organized in October 1923. Prior to that time, a certain number of patients with interesting gastro-intestinal problems had been followed in the Out-Patient Department by Dr. Henry F. Hewes, one of the few men on the staff who was keenly interested and thoroughly experienced in digestive tract disorders. Dr. Hewes carried on his work alone, however, and there was no organized clinic or correlation between the Out-Patient and the House. From the time of its organization in 1923, the clinic has functioned as a joint project of the medical and surgical services. It has been predominately a medical clinic, but from the very beginning it was obvious that it could succeed only if complete and satisfactory cooperation existed between the two services. Until 1930, Dr. Monroe McIver represented the surgical interest in the clinic, and I the medical. With the departure of Dr. McIver in 1930, when he left the hospital to go to Cooperstown, New York, two of the staff surgeons became actively interested in the clinic—Dr. Leland S. McKittrick and Dr. Edward L. Young. They continued until the recent war, with the addition of several other members of the team. Dr. Milton H. Clifford and Dr. Thomas V. Urmy were added as representatives of the medical staff, and in 1935 Dr. Edward B. Benedict joined the group for his particular interest in gastroscopy and in esophageal disease.

During the first ten years of the clinic, the above group saw many of the interesting gastro-intestinal problems that were presented to the Out-Patient or were sent to the clinic after discharge from the hospital wards. These included the usual cases of ulcer and ulcerative colitis, and, in addition, many complicated types of hepatic disease. In 1934, it was recognized that there was a very real place for a psychiatrist, and at this time Dr. Jackson M. Thomas, then at McLean Hospital, joined the group and made a fine contribution to the work of the clinic by helping us to understand and control many of the behavior and emotional problems that are encountered in the presence of chronic disease. During the same period, it had become apparent that work of the clinic, as regards successful follow-up of difficult cases, could be made more effective by utilization of the facilities of the Social Service Department and of the North End Diet Kitchen. Thus, in 1935, it was possible to present a well-balanced team consisting of a group of physicians and surgeons, an endoscopist, a psychiatrist, a specially assigned social service worker, and a dietitian. Such a complete team existed only as a rarity in any of the other hospitals in the country and served as an example of the excellent correlation that can be obtained between various hospital services to the benefit of both the patients and the doctors.

In 1936, Dr. Kenneth J. Tillotson replaced Dr. Thomas for a period of several years, and subsequently was followed by Dr. Erich Lindemann, who has made a very real contribution to our understanding and treatment of patients suffering from chronic idiopathic ulcerative colitis. In conjuction with the group, careful psychiatric studies have been carried out by him on a large number of patients, with the result that much more effective therapy has been made possible. In addition, it is fair to say that in dealing with this particular group of patients Dr. Lindemann has developed a rather special psychiatric technique which has attracted attention in many quarters.

Because of the fundamental importance of a social service worker in helping the patient carry out more effectively the therapeutic measures that were indicated, Miss Dorothy Kellogg was assigned to the clinic in 1940 as its regular social worker and has continued her activity and interest in this field ever since. Her broad experience and her ability to handle individual problems has been of outstanding help, and because of her direct connection with the social problems in the medical wards of the hospital, continuity in treatment and in follow-up has been maintained at a much better level than would otherwise have been possible.

The pressure of the war years made it impossible to carry the clinic at full strength, due to the absence for military service of many of the men on the staff. Accordingly, a group of patients was chosen who seemed to demand the most careful attention, and these individuals were followed carefully by Dr. McKittrick, Dr. Lindemann, Miss Kellogg, and me. The Gastro-Intestinal Clinic was thus maintained as a going concern, although its work was very much abbreviated during this particular period. With the return of men from Service, the clinic again resumed its full quota of work, but active supervision of the surgical cases was taken over by Dr. Francis D. Moore and Dr. Marshall K. Bartlett—Dr. McKittrick and Dr. Young being forced to give up their active participation with the group. The work of Dr. Moore was outstanding, particularly because of his contribution to the surgical follow-up of patients with ulcerative colitis and his careful studies on patients with duodenal ulcer treated by vagotomy. His special interest in these two fields provided a very stimulating addition to the clinic activities, and his careful follow-up of these two groups of patients marked a real step forward in the surgical treatment of these patients. In 1945, Dr. James A. Halsted took over the active medical direction of the clinic and continued until a year ago, to be followed on his retirement from the staff by Dr. Myles P. Baker. At present the clinic is again an active one, with the following personnel: Drs. Myles P. Baker, Daniel S. Ellis, Perry J. Culver, Gustav G. Kaufmann, and Chester W. Fairlie, in the medical group; Marshall K. Bartlett, Richard Warren, and Fiorindo A. Simeone, in the surgical group; Edward B. Benedict as endoscopist; Erich Lindemann as psychiatrist; Miss Dorothy Kellogg as social service worker; Mrs. Helen Bishop as dietitian. In addition, medical and surgical residents and some fellows occasionally join the group as observers or as helpers for short periods of time.

The purpose of the clinic being the care of gastro-intestinal disease, the policy has been and will continue to be the frequent shifting of responsibility for different patients from one or another group when necessity or policy suggests that more effective therapy can be obtained by such a shift. Its value, as in all special clinics, lies in the availability of a group of trained individuals in various fields of medicine and surgery from the point of view of diagnosis, treatment, and follow-up. Two years ago, still closer correlation of effort in the field of digestive disease was obtained by the institution of Gastro-Intestinal House Rounds, which have been held regularly in the Ether Dome every Wednesday morning. At these rounds, which are attended by physicians, surgeons, and roentgenologists, interesting or complex problems in this field of disease are presented for open discussion. From time to time, psychiatric participation is added in order to present a more complete consideration of individual situations. Visiting physicians are frequently to be found in the Gastro-Intestinal Clinic, and during the last two years, fourth year students from the Medical School have been assigned there for one month during a special course in gastro-enterology. Gastro-Intestinal Rounds in the Ether Dome have drawn a large number of visitors.

Chester M. Jones, M.D.,
Chief, Gastro-Intestinal Clinic

MASSACHUSETTS EYE & EAR INFIRMARY

RETROLENTAL FIBROPLASIA

The large increase in this country in the frequency of the ocular condition known as retrolental fibroplasia has posed new medical and social problems, the solution of which has been the objective of a study made at the Massachusetts Eye and Ear Infirmary and the Harvard Medical School. Progress with both the medical and social problems has been made.

The increased number of cases of retrolental fibroplasia being referred to the Infirmary from Massachusetts and neighboring States has made it necessary to limit the number of patients being cared for to those from this State. Despite this limitation, there were approximately 130 children with retrolental fibroplasia who received periodic ophthalmological examinations. These children were seen repeatedly so that the progress of the condition could be observed and so that secondary ocular complications could be prevented.

At present, there does not appear to be any form of surgery which offers great hope of improving the vision; surgery being tried elsewhere has met with little success. From observations made thus far, a small proportion of the children may expect a slight improvement in vision. A somewhat larger number may retain the amount of vision they have, and approximately half may expect secondary changes to occur in the eyes. Glaucoma, hemorrhages, post-synechiae, and separation of the entire retina account for most of these changes. A few of the children had to have their blind eyes removed because of pain.

The extent to which symptoms of mental retardation are associated with retrolental fibroplasia has been in controversy. The impression obtained at clinical examination of our group is that a major number of the children show a mentality comparable to that of children with normal vision.

The chief effort of the social service group during the past two years has been to provide service to parents of children having retrolental fibroplasia, with the main object of providing as normal a childhood as possible for these children, and preparing them for becoming useful citizens. Since 1946, the efforts of the social worker to this group of patients have been primarily service rather than study.

The children with retrolental fibroplasia are demonstrating that their future is far from hopeless. The number of school placements shown by the statistics is evidence of their normal development. In addition, there is evidence that some are performing on a superior level, as compared with other both blind and seeing children.

Continued encouragement to parents to develop the child to his maximum capacity has resulted in increased initiative by the parents to individualize the needs and abilities of their particular child in terms of his total adjustment and education. Early treatment of parental attitudes toward the blind child results in better parent-child relationships, demonstrated by fewer requests for placement and a desire to keep the child in the family group. The majority of the children respond well and progress satisfactorily if their parents can accept the handicap without undue emotions, and are given adequate and concrete training information during the children's early years.

The primary objective of the investigative program has been to prevent additional cases of retrolental fibroplasia. This can be attained, presumably, only after the cause of the condition has been determined. In broad terms, the precipitating factor must be either genetic or environmental. In the former instance, it would be expected that multiple cases of retrolental fibroplasia would appear in the same family, and that ocular pathology would be present at birth. If, on the other hand, it were caused by an environmental factor, it might not appear until several months after birth. The conviction that environment is a more important etiologic factor than heredity is supported by the observation that in only one instance did two members of the same family have retrolental fibroplasia, and that this condition developed only several months after birth. Therefore, the search for the cause of retrolental fibroplasia must be directed toward some environmental factor, as opposed to a genetic one.

The most hopeful lead we have is that the condition arises more frequently in one part of the country than in another, and that the condition is apparently not hereditary but appears to be related to some factor in the environment of either the mother or infant. Thus far, investigations have failed to yield positive results in reproducing this condition in animals, although some significance may be attached to the discovery that vitamin A, in relatively small concentrations, appears to produce toxic signs in embryonic tissues.

V. Everett Kinsey, Ph.D.,
Assistant Professor in Ophthalmic Research, Howe Laboratory

A Harvard Postgraduate Course in Ophthalmology was started on September 27, under the direction of Dr. Parker Heath, Director of the Ophthalmological Pathology Laboratory. The teaching staff is made up, for the most part, of doctors from the Infirmary. The 30 men taking this course are chosen from a selected group.

Dr. David G. Cogan, Associate Surgeon in Ophthalmology and Director of the Howe Laboratory, gave the opening address at the Heidelberg Congress of the German Ophthalmological Society—the first meeting of its kind since 1940. Approximately 250 ophthalmologists attended. Because of the housing shortage, the patients were evacuated from the hospital, and many of the visiting ophthalmologists moved in.

Dr. Cogan has returned after spending two months in Germany, under the auspices of the Unitarian Service Committee. He was one of a group of 17 physicians and scientists who visited various university centers in that country for the purpose of re-establishing academic contact between Germany and the rest of the world.

Dr. Cogan reports that the German ophthalmology centers continue to be incredibly isolated—having no foreign literature and no outside contacts since 1938. Although many of the clinics have been damaged—in some places completely destroyed—the chief need of the clinics now is an interchange of information and possibly of personnel. Surprising as it may seem, the problem now is more one of morale than of material.

On September 10, Dr. Cogan gave the third Proctor Lecture in San Francisco. His subject was "Clinical physiology of the cornea".

Dr. John Hartford of Wichita, Kansas, and Dr. Chen Vesi of Shanghai, China, were visitors at the Infirmary during the latter part of September. They spent several days here observing in our clinics and operating rooms, and showed particular interest in the Eye Bank.

Dr. Calvin Faunce (*Aural* 1907), Consulting Surgeon in Oto-Laryngology and a member of the Infirmary Staff for many years, died on September 22, after a brief illness.

Dr. Marion R. Mobely, Jr. of Florence, South Carolina, who had taken a leave of absence before finishing his residency here, died on September 12.

The Board of Trustees, at their meetings on September 17 and October 1, voted:

That the resignation of Dr. Paul D. White, effective January 1, 1949, be accepted with great regret and recognition of his great contribution to the Hospital, and that he be appointed to the Board of Consultation;
To promote Dr. Paul C. M. Zamecnik to the position of Assistant Physician;
To appoint Dr. Warren R. Sisson to the Board of Consultation;
That the official name of the new laboratory building should be "The Massachusetts General Hospital Research Building".

At their meetings during September and on October 6, the General Executive Committee voted to appoint:

Dr. Jorge R. Arroyo as Clinical Fellow in Surgery;
Dr. Louis Bakay as Research Fellow in Neurosurgery for one year, beginning September 1;
Dr. Shiao-Mai Huang as Graduate Student Assistant in Surgery;
Dr. Charles G. Hutter as Clinical Assistant in Orthopedic Surgery for the period September 1 through December 31;
Dr. John B. Kinmonth as Clinical and Research Fellow in Surgery for one year;
Major Frank A. Mantz as Research Fellow in Pathology for one year, beginning June 1, 1949;
Dr. Henry Musnick as Clinical Fellow in Psychiatry;
Dr. Richard G. Nilges as Clinical and Research Fellow in Neurosurgery for the period October 1 through December 31;
Dr. Peter J. A. Pare as Clinical Fellow in Medicine;
Dr. Jesse F. Scott as Research Fellow in Medicine, to work with Dr. Aub;
Dr. Harold W. Trott as Clinical Fellow in Dermatology, as of September 1;
Dr. Hans Waine as Research Fellow in Medicine for one year, beginning August 1;
Dr. Leda Zannos as Clinical Fellow in the Children's Medical Service for the period November 1, 1948 through June 30, 1949.

The General Executive Committee also voted to renew the appointment of Dr. Joseph E. Warren as Clinical Fellow in Medicine for the year October 1, 1948 to October 1, 1949.

A TRIP TO EUROPE IN THE SPRING OF 1948

Having wheedled a leave of absence for myself out of the M.G.H. and the Harvard Medical School, Mrs. Cope and I left Boston on 10 March 1948 for a 3½ months' trip in Europe. We sailed for England from New York on the *Queen Elizabeth* two days later. The immediate excuse for the trip was an invitation to me from the Swiss-American Center for Medical Exchange and Information to visit the medical schools of Switzerland. Before sailing, I was briefed in New York about how to behave. The original invitation had included the understanding that I did not have to lecture but just hold informal conferences and attend ward rounds; it was said that the Swiss were fed up with Americans who wanted to give formal lectures to large audiences. The day before I left Boston, however, word arrived that I had already been scheduled to give one formal lecture, in Geneva early in April. I therefore went off loaded with several pounds of lantern slides and a French dictionary. In mid-ocean we received a wireless message from Geneva inviting us to dinner on 2 April. This should have warned us that we were in for a whirl; but how were we to know that the fact that Mrs. Cope was born a DeNormandie, a descendant of Calvin's intimate friend and executor, should make her of such historical interest to Geneva?

Before going to Switzerland we spent a week in London seeing a number of old friends, principally Professor and Mrs. Harold Himsworth and their two boys, John and Richard, who spent 4½ years with us in this country during World War II. While Mrs. Cope was taken on a tour of London by the boys, Professor Himsworth rushed me around the University College Hospital Medical School. The day after arrival was spent at the hospital making medical rounds in the morning and surgical rounds in the afternoon. At lunch there was a distinguished gathering of medical scientists and clinicians, including Dr. Max Rosenheim, well known to the M.G.H. since his visit here with Dr. Albright in 1939. On Saturday morning I attended Professor Himsworth's circus. Patients with extraordinarily complex disturbances of electrolyte metabolism were presented. Two patients suspected of having hyperparathyroidism and two with Cushing's disease were also served up. One day I skipped off to Birmingham to visit Leonard Colebrook and the Medical Research Council's Burn Unit under his guidance at the Birmingham Accident Hospital—a first-rate show of extensive burns with the least infection I have ever seen. Their operating room technique, eliminating bacterial contamination by filtering the air, is the best thing of its kind I have ever seen and should be introduced here.

On our way to Switzerland, four days were spent in Paris where I frantically tried to brush up on my French. The nearer we got to 8 April, the date of my first lecture in Geneva, the more nervous I became. It had been suggested that I talk on hyperparathyroidism, and in spite of the fact that the words of this disease in English have become a part of me, I found their equivalents totally lacking in my French vocabulary. Fortunately, the first three days after our arrival in Geneva on 29 March were given us as "days of grace" and I spent them with a patient young Swiss secretary polishing into idiomatic French my amateurish draft of a paper. The audience included no less a person than the President of the Swiss Republic. When ad libbing while showing lantern slides, the friendly front row prompted me whenever I couldn't find a word. I, scared and uneasy, have often had to struggle through the initial part of a speech in English with a dry mouth and tongue, but it had never entered my head how crippling such dryness would be to my French.

The lecture apparently went off all right, as afterwards I was asked if I would agree to having it published. Cautious Swiss, they had not asked this before the lecture.

Two weeks were spent in Geneva. The last ten days were hectic ones. A formal program had been arranged by the Dean of the Medical Faculty. Each weekday morning was spent at a clinic or laboratory, with a luncheon following. In the afternoon came a visit to another department, and each evening there was a formal dinner given for Mrs. Cope and me at the home of a member of the faculty. These dinners did not start until eight o'clock and lasted usually until the early morning. At most of the dinners the host gave a speech of welcome. At that given by Professor Martin, Monsieur Picot, the President of Switzerland, a lawyer and long a guiding influence in the University of Geneva, spoke of the role Swiss law played in the structure of the American Constitution. In my replies, I hope my French was able to convey to the Swiss hosts how close we feel to them because of the number of interests we share. The final dinner was given by the entire medical faculty and their wives. The Dean, a medical scholar, spoke of points of medical history of interest to both countries.

In Geneva, as elsewhere in Switzerland, it was gratifying to see the intellectual vigor that penetrated through the grace, charm, and courtesy of the French Swiss. In each of the departments visited, preclinical and clinical, there was a vigorous research program going on. Of the surgical specialties, the work of the departments of gynecology and ophthalmology were outstanding. Even though Geneva is in French Switzerland, the University and Medical School clinics are patterned after the German model. Students are not seen in the operating room; there is no clinical clerking as we know it. Swiss medicine is built upon a firm base of pathologic anatomy.

In Lausanne, Basle, and Zurich we spent but one week each. The shorter time prevented our seeing the universities in as much detail. Everywhere we found the same strong intellectual drive and interest in international social forces. In Basle we also saw something of the remarkable minds directing the scientific research of the big Swiss chemical industry, Ciba. At each university I gave a lecture —on the pathologic physiology of burns in Lausanne and on hyperthyroidism in Basle. Both of these lectures were also in French. The practice gained in daily conversation enabled me to strut forth and give an increasing proportion of each lecture without notes or written manuscript.

At Zurich I again spoke on hyperparathyroidism. Here it was suggested that I speak in English—not, I was told, because word had been sent ahead that my French was so poor, but because the German Swiss wanted practice in English, recognizing that the decline of the German universities meant that they must keep a closer contact with the American and British.

On 2 May Mrs. Cope and I parted—she to go to Paris for a week and then to England, while I went to Occupied Germany for four weeks. My mission in Germany turned out to be a dual one. It had been originally planned that I go as one of a group as a consultant in surgery for the Surgeon General, to visit the American Army Hospitals. Shortly before I arrived in Germany a request had been cabled from Washington that I extend my stay in Germany, to join the British in making a survey of what should be done to rehabilitate German medical research. Because of the importance of this latter assignment and my inability to extend my stay, my itinerary was rearranged for me by the Theater Surgeon, General Noyes, so that I could do both jobs at once.

After two days in Heidelberg, one visiting the American Army Station Hospital and the other one the Kaiser Wilhelm Laboratories and the German University, I was flown to Berlin, where I spent five days conferring with American officials of the Office of Military Government, as well as seeing a few key Germans in medical education and making a detailed visit to the Army medical installations. Berlin amazed me; I had not been there since 1933. The physical destruction of the city, although terrific, was nothing compared with the jitters of the population—both American and German—engendered by the incomprehensible Russians. I kept wishing I was a psychiatrist, able to describe this exhibition of mass anxiety.

On my way to Göttingen to confer with the British research control officers, I left Berlin by Army motor car across the Russian Zone. At Helmstedt, the town of exit into the British Zone, the Russian sergeant threatened to send me back to Berlin because of a discrepancy in the Russian translation of my military orders. This was the one uncomfortable moment of my entire trip, but the American sergeant who was driving me calmly handled the Russians. After two days in Göttingen I went to Frankfurt for two days, Munich for five, and Vienna for three. In Frankfurt I found Peter Sifneos, one of our former students, in charge of the psychiatric service and doing an excellent job.

Munich was a Harvard-MGH old home week. There were eight Harvard Medical graduates on the staff of the General Hospital there. The Brigham led the M.G.H. 3 to 1—Baxter being the only man from our team, but he was clearly holding his own. He had made contacts with German medicine and had encouraged others to join with him in informal graduate studies in the university clinics. I was pleased to see how those who had passed through the M.G.H. during one phase or another of their medical education had taken the lead in ferreting out what was to be learned from German medicine. We all managed to get in two Harvard reunion dinners, one with wives and one without.

At Vienna I poked my nose into the courses being given by the Austrian medical faculty to American medical Army officers. I saw everything from good to bad.

Thence I went to Stuttgart, Wiesbaden, Giessen, and Marburg all in five days, and then back to Heidelberg for final conferences and to write my report to the Surgeon General.

On the last day of May I flew back to England on a commercial plane, no longer a VIP. What a come-down this would have been but for the warm hospitality of the British. My first days in England were spent in worrying about my conclusions regarding German medical research. My conclusions differed with those of my British counterpart making the survey for the British Zone. German medicine seems to be in a forlorn state, with clinical research as we know it virtually nonexistent. Few, if any, competent clinical or laboratory investigators exist under the age of 55. Youth is everywhere, but it is untrained and thoroughly demoralized. What is needed is reorientation and reeducation.

Armed with the knowledge that several competent Americans in Germany agreed

No. 13 in a series of Staff photographs
Dr. Chester N. Frazier—our new Chief of the Dermatology Department

with my conclusions—indeed, did much to formulate them—I talked with Sir Henry Dale, Chairman of the British Government Committee on Science for Germany. Expressing agreement with my opinion that the problem was one of education, he requested that my report be distributed to his committee for discussion. The gist of the recommendation was that the only solution to the problem of German medical research was to bring vigorous young students and recent graduates out of Germany into England and America for a year or longer, there to absorb and take home a fresh point of view. No amount of talking by American or British scientists to Germans in Germany will gain any converts. German pride has been hurt by military defeat, and Americans and British are viewed as conquerors from lands of lesser enlightenment.

The extraordinary things about Germany are too numerous to relate: the psychiatric state engendered by anxiety in both the German and American populations, the lopsided sex distribution of the German population in the Western Zone (between the ages of 25 and 40 there are almost three times as many women as men), the dearth of political and moral responsibility.

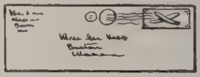
A full three weeks were spent in England, visiting hospitals and laboratories and loafing. My headquarters were very definitely at the Massachusetts General Hospital's sister institution, University College Hospital; at every turn of the way Professor Himsworth reminded me of something seen or heard here at the M.G.H. a year ago when he paid us a three months' visit. Professor Pilcher, Director of the Surgical Unit, took every measure to make me feel at home. I was invited to give the Holme Lecture on "Fluid balance in burns". Professor Pilcher and the medical service allowed me to do a parathyroid exploration. Every nicety was attended to—the head sister of the operating room saw to it that my operating shirt was laid out and marked "Mr. O. Cope". I did air injections on one patient with Cushing's disease and supervised those of another. I refused the doubtful honor of operating on these two patients!

Everywhere I met not merely courtesy but friendship because I, an American and a representative of the M.G.H., was interested in what they were doing. Everywhere I encountered genuine interest, also, in what was going on in this country.

Oliver Cope, M.D.

A new plan for exchange of experience between the hospital and the Visiting Nurse Association went into effect recently. Miss Mary Louise Rozak, head nurse of White 5 AC, left on October 18 for temporary service with the VNA. In return, Mrs. Matilda Jones, a public health nurse, came to the hospital on September 27. She will remain until January and will work in all the major divisions of the hospital.

Miss Frances Dillard has been appointed temporary head nurse of White 5 AC during the absence of Miss Rozak.



Another conscience has been stirred into action. Result—this most welcome letter from Dr. Robert F. Watson (*WM* 1936).

> I am sorry I have been so delinquent on bringing you up to date on my moves since the war. As you know, I was on active duty in the Navy during the war and served as a member of the U. S. Navy Medical Research Unit stationed at the Rockefeller Institute for Medical Research. On July 1, 1946 I was released from active duty and left the Rockefeller Institute to accept my present position of Associate Professor of Medicine at Cornell University Medical College and Associate Attending Physician, New York Hospital. It has been very pleasant to return to Cornell and the New York Hospital where I served as Resident Physician before going to the Rockefeller Institute to work in 1939. Needless to say, I am enjoying my work here immensely.
>
> Like everyone else, I have enjoyed receiving The News and learning what my friends from the Massachusetts General are doing. The News is a fine thing. Please keep me on your list. My address is New York Hospital, 525 East 68th Street, New York 21, N. Y.

This is a first letter from Dr. Hughes Kennedy, Jr. (*CM* 1921)—and glad we are to hear from him.

> I am practising pediatrics in Birmingham; Associate Professor of Pediatrics at the Medical College of Alabama; Pediatrician for the Polio Foundation in Jefferson County; Attending Pediatrician to the Children's Hospital, Jefferson-Hillman Hospital, Salvation Army Home and Hospital; Crippled Children's Clinic.
>
> I have a son, Hughes Kennedy, III, who graduated from Harvard Medical School in June 1947. After a year in pediatrics at Bellevue Hospital, he now has a Fellowship in Pathology at Boston Children's Hospital.
>
> I always enjoy reading The News, and am interested in hearing about the "doings" of my former friends whom I rarely get to see now.

A note containing a promise of more to come has arrived from Dr. Hugh A. MacMillan, Jr. (*WS* 1947). His letter is headed Arneill Clinic, 1765 Sherman St., Denver 5, Colorado, and he writes:

> Just a brief note to inform you of my change of address. I have recently moved to Denver, and I promise to contribute a more lengthy news item concerning myself and some of the MGH alumni in this area at a later date.
>
> It is always a great pleasure to keep up with the news of the Hospital family through your interesting publication.

THE NEWS

No. 74 Boston, Mass. December 1948

THE VINCENT MEMORIAL HOSPITAL

The Vincent Memorial Hospital opened on January 1, 1948. From the very start it was obvious that the Gynecologic Service in the Massachusetts General Hospital was a success. The enthusiasm of the House Resident and Visiting Staff is very real and very helpful. There are no Gynecologic Residents as such, but one of the first Assistant Surgical Residents, after four months of service as an Assistant Gynecologic Resident, becomes the Resident. Thus, our Residents have eight months of service on the Gynecologic Service. We have an Assistant Resident for the ward service, one for the private ward, and one House Officer on the ward floor. This method of teaching gynecology and gynecologic surgery to the Surgical Residents seems to be working out very well at the present time.

The Massachusetts General Hospital has allowed the Gynecologic Service to open a Gynecologic Out-Patient Clinic. This clinic is manned by a daily visit of one of the Visiting Staff and by the Residents and House Officer. For the first time, systematic instruction is given to our Surgical Staff with the office type of gynecology. We believe that this method of using the Surgical Residents as Gynecologic Residents is a step forward, for it gives us a much better type of Resident—one with a satisfactory surgical training—than the type we might obtain by giving competitive examinations for Gynecologic Residents from other schools and hospitals. Inquiries are always coming to us as to how our method works and how successful we think it is.

We continue to have our Rounds on Thursdays from 4 to 6 P.M. Every patient on the ward service is visited and each one's problems explained. Following a presentation of pathologic material, each discharged patient's record is gone over and commented upon. Thus all of us, visitors included, are kept up to date on the problems of the patients and the problems of our Service.

The ward service has been especially full and overflowing, and the need for opening our full capacity of beds is a very great one. Our operating rooms on the surgical floor have not been built as yet. These will be of the type used by the Urologic Service—two, back to back—so that both rooms will be available for observation and teaching. Within a very short time work should start on the building of these essential rooms, for it is not well to continue the plan of taking the private patients to the Baker Operating Room. The distance is too great. The new Gynecologic Operating Rooms will be used for both ward and private patients.

The Vincent Memorial Laboratory has been a very great success and its fame has been spread over the whole country. This has been mainly due to the work of Mrs. Ruth M. Graham. She has become one of the country's experts in cytologic diagnosis. She has branched out from the diagnosis of gynecologic tumors to the diagnosis of any lesion where exfoliated cells can be obtained—such as from the lung, bronchus, bladder, kidney, and stomach. Undoubtedly she will make further progress along the diagnostic line. Her ability to evaluate radiation reaction from normal and malignant cells will eventually prove to be of the greatest importance in deciding whether radiation treatment has been satisfactory or not in determining prognosis; and last, it will eventually give us a measuring stick to determine whether or not a patient should be subjected to radical surgery or to radiation treatment. Radiation resistance is a very definite state and its recognition is of real importance to the gynecologist.

With the greatest regret we announce that Mrs. Graham is leaving our Laboratory. Dr. John Graham, her husband, is Assistant Professor of Surgery at the University of Oregon, and Mrs. Graham will join him there in January 1949. All of us wish her the greatest success. We feel sure that, just as the Vincent Laboratory has been a success due to her investigation in and technique of cytology, their laboratory in Oregon will also draw great numbers of visitors and students. A report of work of the first importance will soon be published, and it is our opinion that it will be of real significance in the treatment of cancer by radiation and in the defense of persons against atomic energy.

The cytologic diagnosis has been taken over by Dr. Mallory's Department of Pathology and we hope that this move, which is certainly in the right direction, will be satisfactory to all of us who are interested in cytologic diagnosis.

Laboratory work on hormone research is continuing under Dr. Somers H. Sturgis. Dr. Joseph Rogers and Dr. Edgaard De Muylder are working on various problems presented by endocrine states in women. This work has not advanced beyond the preliminary stage, but it looks as if interesting and important data will be found. Also, Dr. Sturgis has a one-hour pregnancy test that appears to be satisfactory and which has been used with real success on the wards, especially in the diagnosis for ectopic pregnancy.

It is our hope that further investigation into radiation reaction will be undertaken in the very near future. This is such an obvious problem of importance to radiologists and surgeons that any advance in its study will be very welcome.

A large amount of clinical research into cancer of the cervix has been done, and Dr. John McL. Morris is nearly ready to publish figures on 2,000 patients from Pondville and the Massachusetts General Hospital who have been treated for carcinoma of the cervix. This report will be incorporated into the United Nations Report, along with those from the other large clinics of the world.

It is evident to us that the Vincent Memorial Hospital and its laboratory are filling a void in the Massachusetts General Hospital, and that its future should be great.

Joe V. Meigs, M.D.,
Chief of Service

On October 21, Dr. Charles L. Clay, one of our Assistant Directors, was among those who received citations from the American Legion Blood Donor Committee, Department of Massachusetts.

This committee finds people who will donate blood for veterans and their dependents who cannot find donors for themselves. The blood is supplied to the Veterans Administration Hospitals in Massachusetts, to most of the Boston Hospitals, and to some outside of Boston.

Dr. Clay was cited at this time for his services as Medical Advisor to the committee, but especially in appreciation of the plan of operation he worked out for the committee when it was first formed in late 1945.

For the first ten months of 1948, the committee furnished 130 pints of blood to Massachusetts General Hospital alone.

For the last several Sunday afternoons, in the Chapel, from 3:30 to 5, Mr. Henri Porteous, organist and lover of music (who, incidentally, has been working at the M.G.H.), has been giving concerts from his extensive collection of recordings made by organists and choirs of cathedrals and churches of Europe, Australia, and the United States.

MASSACHUSETTS EYE & EAR INFIRMARY

The address at the Annual Dinner Meeting of the Massachusetts Eye and Ear Alumni, held on November 17 at the Harvard Club, was given by Dr. Paul D. White, Chief of the Cardiac Clinic and Laboratory at the Massachusetts General Hospital. Dr. White, who was in Europe last spring with the American Medical Teaching Mission, spoke on conditions in Europe as he observed them.

The dinner was the closing event of the annual two-day meetings of the Infirmary's Alumni Association and the New England societies of Ophthalmology and Oto-Laryngology. The meetings opened on the morning of November 16 with the Ophthalmological Sections' surgical clinic in the eye operating room.

Dr. Derrick T. Vail (*Oph.* 1924) presided for the afternoon session, which opened with a presentation of cases. Thereafter, papers were delivered on "Unusual mycotic infection of conjunctiva and tear sac", by Dr. Hugh C. Donahue, Assistant Surgeon in Ophthalmology; "Dynamics of corneal vascularization", by Dr. David G. Cogan, Director of the Howe Laboratory; and "The evaluation of optic atrophy", by Dr. Alfred Kant, Resident in Ophthalmology.

Dr. John E. Rice of the New England Ophthalmological Society presided at their evening session, which opened with a business meeting. A "Demonstration of Massachusetts vision test" was given by Dr. Albert E. Sloane, Assistant Surgeon in Ophthalmology, in charge of the Vision Room at the Infirmary. The meetings came to an end for the day at 9 P.M., when Dr. Vail, who is President of the Alumni Association, gave a paper on "The hypermature cataract".

On November 17, the morning session for the Ophthalmological Section was again devoted to operations performed by the Infirmary Eye Staff. A luncheon followed for Alumni and Staff members, given by the Eye and Ear Infirmary.

Dr. Edwin B. Dunphy, Chief of Ophthalmology, presided at the afternoon session. Papers were as follows: "Measurement of ocular tension under ether", by Gustav C. Bahn, M.D. (*Oph.* 1948); "Simplified ptosis surgery", a motion picture by Brendan D. Leahey, M.D., Assistant Surgeon in Ophthalmology; "Differential diagnosis of certain intra-ocular lesions", by Parker Heath, M.D., Director of the Eye Pathology Laboratory at the Infirmary; "The treatment of retinoblastoma by diathermy", by Virgil G. Casten, M.D., Surgeon in Ophthalmology; "A study of the incidence of retrolental fibroplasia in several localities and a theory of the causative agent", by V. Everett Kinsey, Ph.D. and Leona Xacharis, Ph.D., both doing research work in the Howe Laboratory; and "Recent clinical laboratory tests for toxoplasmosis", by Lorand V. Johnson, M.D. (*Oph.* 1937).

The annual dinner was preceded by the alumni business meeting.

The Oto-Laryngological Section of the Alumni Meeting, which opened on November 17, was presided over by Dr. LeRoy A. Schall, Chief of Oto-Laryngology. The program consisted of work in the surgical clinic and the ear and throat operating room, followed by moving pictures in the Mosher Laboratory and a presentation of cases by the Staff.

The Oto-Laryngological Section joined the Ophthalmological Section for the luncheon given by the Infirmary.

The New England Oto-Laryngological Society held their meetings in the afternoon, with Dr. Moses H. Lurie, Surgeon in Oto-Laryngology, presiding. Papers were as follows: "Oral and pharyngeal monoliasis—a report of 10 cases", by Vincent J. Kelley, M.D., Associate Surgeon; "Foreign body in the lung complicated by laryngo-tracheal bronchitis and bilateral pneumothorax, with presentation of a case", by William F. Donoghue, M.D. (*Oto-Lar.* 1942); "Chemotherapy versus myringotomy in the treatment of acute suppurative otitis media", by Maurice G. Evans, M.D., Surgeon; "Report of the Winthrop Foundation for Clinical Otosclerosis", by Donald K. Lewis, M.D., Associate Surgeon for the Winthrop Foundation, and a discussion by Philip E. Meltzer, M.D., Surgeon; and "The improvement of hearing in the microtic ear", by Edgar M. Holmes, M.D., Associate Surgeon for Plastic Operations.

A business meeting preceded the guest speaker, Dr. Richard H. Sweet, Thoracic Surgeon at the Massachusetts General Hospital, who lectured on "Recent advances in the treatment of carcinoma of the esophagus". The meeting closed with the Annual Dinner.

Dr. Norman Jesberg (*Oto-Lar.* 1947) returned for a visit to the Infirmary recently. Dr. Jesberg is practising with his father at the Eye and Ear Hospital in Los Angeles.

Dr. Herbert Levitt, a graduate of Toronto University in Canada and an associate of Dr. Walter B. Lancaster, is now working with Dr. Charles Louis Schepens on the new Retina Service. Dr. Levitt plans to be here for several months.

Dr. Mayo Poppen graduated from his residency on November 1 and has his office at 6356½ Van Nuys Boulevard, Van Nuys, California.

Mr. Frederic C. Merriam, who graduated from Cornell University and is now Teaching Fellow at Boston University, is working with Dr. V. Everett Kinsey. He spends most of his time at the Infirmary doing research on a fellowship from the Department of Ophthalmology of the New York Eye Bank.

The Board of Trustees, at their meetings on October 15 and 29, voted:

To accept the resignation of Dr. Kenneth J. Tillotson as Psychiatrist-in-Chief of McLean Hospital and Psychiatrist at M.G.H., as of October 11;

To promote Dr. G. Marshall Crawford to Dermatologist.

To appoint:

Dr. Elizabeth A. Gregory as Assistant to the Children's Medical Service;

Dr. Louis H. Hempelmann, Jr. as Consultant in Biophysics;

Dr. Alice C. Nauen as Assistant to the Children's Medical Service;

Dr. Richard G. Nilges as Assistant Resident on the Neurosurgical Service from January 1, 1949 to June 30, 1949;

Dr. Robert B. Sweet as Assistant Resident in Anesthesia for two years, beginning January 1, 1949;

Dr. Austin L. Vickery, Jr. as Assistant Pathologist, beginning January 1, 1949.

At their meetings on October 13, 20 and 27, and November 3, the General Executive Committee voted to promote:

Dr. Frederic M. Blodgett to the position of Chief Resident on the Children's Medical Service for the period July 1, 1949 through June 30, 1950;

Dr. John T. Finkenstaedt to the position of Resident on the Medical Service, as of January 1, 1949;

Dr. Fred H. Howard to the position of Assistant Resident on the Children's Medical Service for one year, beginning July 1, 1949;

Dr. Rita M. Kelley to the position of Resident on the Medical Service, as of October 15;

Dr. Cornelius Lansing to the position of Assistant Resident on the Children's Medical Service for one year, beginning July 1, 1949;

Dr. Bernard G. Stall, III, to the position of Resident on the Medical Service, as of January 1, 1949;

The following interns on the Medical Service to the position of Assistant Resident for the terms indicated: July 1, 1949 to June 30, 1950—Drs. Lloyd H. Smith, Jr., Mackenzie Walser, and James B. Wyngaarden; October 1, 1949 to September 30, 1950—Drs. William N. Christenson, Boy Frame, Anne F. Godley, Samuel McD. McCann, and John D. Stoeckle.

The General Executive Committee voted to appoint:

Dr. Arlington Bensel as Clinical Fellow in Dermatology;

Dr. William H. Bergstrom as Graduate Student Assistant on the Children's Medical Service for eight months;

Dr. Thomas E. Caulfield as Clinical Fellow in Psychiatry, as of October 1;

Dr. Edmunds G. Dimond as Clinical Fellow in Medicine, assigned to Cardiology;

Dr. William R. Dorsey as Graduate Student Assistant on the Children's Medical Service;

Dr. Walter R. Eberlein as Graduate Student Assistant on the Children's Medical Service for eight months;

Dr. William J. Emerson as Research Fellow in Medicine;

Dr. Paul Fourman as Research Fellow in Medicine, to work with Dr. Fuller Albright;

Dr. Hubert L. Harris as Clinical Fellow in Dermatology;

Dr. William F. Havemeyer as Clinical Fellow in Surgery for six months, beginning November 1;

Dr. David Littmann as Clinical Fellow in Medicine, to work with Drs. White and Bland;

Dr. James G. MacLean as Clinical Fellow in Dermatology;

Dr. John B. Millett as Clinical Fellow in Surgery for the months of November and December;

Dr. James A. O'Shea as Clinical Fellow, assigned to the Children's Medical Service;

Dr. Nathan G. Parke, III, as Research Fellow, assigned to the Children's Medical Service for work in the Harvard-Pediatric Unit;

Dr. William P. J. Peete as Clinical Fellow in Surgery for six months, beginning November 1;

Dr. Joseph Rogers as Clinical and Research Fellow in Surgery, assigned to Gynecology;

Dr. Robert B. Simons as Clinical Fellow in Dermatology;

Dr. Bernard G. Stall, III, as Clinical Fellow in Medicine for the period October 15 through December 31;

Dr. Harry Statland as Clinical Fellow in Medicine;

Dr. Henry D. Stebbins as Clinical Fellow in Medicine;

Dr. Cone J. Thompson, Jr. as Clinical Fellow in Dermatology and Syphilology;

Dr. Rudolph Toch as Clinical Fellow, assigned to the Harvard-Pediatric Unit;

Dr. Max L. Wool as Clinical Fellow in Psychiatry, beginning January 1, 1949.

The General Executive Committee also voted that Dr. Hans Waine's title be changed from Research Fellow to Clinical and Research Fellow in Medicine.

* * *

The telephone number of the Massachusetts General Hospital has been changed to LAfayette 3-8200. The new number for the Phillips House is LAfayette 3-8240, and for the Massachusetts Eye and Ear Infirmary the new listing is LAfayette 3-8230.

* * *

If you are not familiar with Dr. Faxon's unique and ready wit, here is an example of what you have missed out on.

One morning not long ago, a member of our hospital family was approaching the front door of the White Building. In the circle in front of the hospital was a car with both its front hood and rear end up. Two of our "men in white" were excitedly tinkering with the engine and then dashing frantically to the rear and back again. In spite of their repeated efforts, the car just stood there, silently sulking.

As our observer was watching the performance, Dr. Faxon came along. With pseudo-seriousness the observer asked, "In the light of your broad experience, Dr. Faxon, how would you diagnose this case?"

Dr. Faxon studied the situation for a moment, then turned to the questioner and said, sagely, "I would give it the old-fashioned diagnosis of—stoppage."

* * *

Massachusetts General Hospital was well represented on the program of the Annual Convention of the Massachusetts State Nurses' Association, held during the week of November 1. Miss Ruth Sleeper, Director of the School of Nursing and Nursing Service, took part in a panel discussion of "Nursing in the second half of the twentieth century". Mr. John Murphy, Chief Pharmacist, participated in another panel on "Planning maximum patient care by improving interprofessional relationships". At another meeting Miss Helen Latham, pediatrics supervisor, and members of her staff presented a program illustrating the practical application of the principles of supervision. Miss Sara MacAulay, head nurse of Bulfinch 4, read a paper on the nursing management of patients receiving radioactive medicine.

Miss Cora Bigelow, formerly head nurse on White 7, and Miss Sara Bickford, from Children's Hospital, are the two new supervisors of the training program for aides, replacing Mrs. Porter and Mrs. Gransky. Miss Bigelow's work on White 7 is being taken over by Miss Jean Arsenault, who for some time has been an assistant night supervisor, while Mrs. Sophie McDonough has returned to resume her former position and replace Miss Arsenault.

Miss Jean Williams is taking Miss Mary Kewer's place as head nurse of Bulfinch 1; Miss Teressa Stockwell is the new head nurse of Bulfinch 5, following the resignation of Miss Elizabeth Andersen.

SCHOOL OF MEDICAL ILLUSTRATION

The year 1948 marks another step forward in the progress of the Medical Art Department. A new policy—that of Medical Illustration Internship—has been inaugurated for the first time in any hospital in the United States. The Medical Art Department, which has grown from one lone artist at a desk in the corner of a corridor in the Bulfinch Building in 1931, has become the proud sponsor of a thriving school for Medical Illustration. Few people realize that the hospital now houses one of the best schools for medical illustration in the country.

The new policy of internship places a third year student in each of the following departments: surgery, medicine, pathology, photography, and out-patient and Eye and Ear. Instead of one artist for the whole hospital, each department now has an artist to cover its needs. Medical Illustration has become such a necessary service that each of these artists finds his time fully occupied in meeting the demands of his department.

The first two years of school prepare the student for the detailed, accurate, and delicate art of anatomical illustration. He studies thoroughly the anatomy, the embryology, histology, and physiology of each organ of the body, the complex nervous system, the lymphatic system, and the vascular system. He records minutely in the various art techniques—pen and ink, Brodel half-tone, water color, half-tone wash, airbrush — that which he has learned. The student, now in his third year, is ready to assist the doctor in reproducing for teaching purposes, and illustrating for articles, books, and exhibits such material as the doctor finds of interest. New operating room techniques, pathological specimens, etc. are brought to the attention of the medical world through the painstaking work of the medical artist.

The School began very modestly in 1941 with a class of four students, and the original course was a two-year one. Then, as now, the student began by drawing a skeleton. A skeleton for our own department was not on the budget that first year, so borrowed skeletons were used. Dr. Churchill lent the skeleton from his Surgical Department, but since it had to be borrowed each time it was needed, it was not an unusual sight to see a small medical illustration student carrying a huge skeleton through the corridors. Finally, one day when the Surgical Service exploded upon finding their skeleton missing, Miss McLatchie scurried round and managed, on a small budget, to acquire a small arthritic skeleton which was promptly christened "Peaches". The students were fortunate that year to be allowed to attend the anatomy lectures of Dr. Robert Green at Harvard. Each week the Medical Illustration students sat meekly in the lecture hall of the Harvard Medical School, beside the lordly Harvard Medical students, while Dr. Green opened their eyes to a brand new world.

Medical Art was still in its infancy in this country. The following year found one new student enrolled at M.G.H.—the sole member of the class of 1942. Most people looked askance when Medical Illustration was mentioned—as many people still do. In spite of this, the School progressed and its curriculum broadened. Dissection was attempted with the purchase of a pig embryo and the students felt very professional, indeed. During this year photography was added. The course in photography was and still is elemental, in spite of which a few medical artists are today holding positions as photographers. Since photographs and lantern slides of all techniques are made, it was necessary to know the rudiments of photography from the point of view of reproduction, as well as something of photography itself.

Harvard Medical Anatomy, not being taught from the illustrative point of view and being accelerated by the war, was a very rapid course, and the students found they could not draw and perfect their technique and also learn anatomy at the pace set by the class. Therefore, 1942 found the students with their own Professor of Anatomy. A member of the MGH staff and teacher in Pathology consented to add the School to his responsibilities.

The year 1943 was a big one. The first class to graduate held its exercises and welcomed friends in the tiny studio on White 3-A. Friends were numerous and the studio bulged with visitors. The hospital family turned out *en masse* to wish its new members success. For a while things went along steadily and uneventfully, but suddenly an increase in interest in Medical Illustration brought talented youngsters to the Head of the department with portfolios full of excellent drawings and a desire to apply their art to medicine. Before she realized what she had done, Miss McLatchie had accepted six students for a class and nowhere to house them except in the small studio on White 3-A. Many anxious moments ensued, with many interviews with members of the Administrative Staff who canvassed the hospital for available space. Finally, at practically the last moment, a room in the Moseley basement was found. A clean-up campaign was begun, drawing tables, chairs, lamps, and all the paraphernalia of a schoolroom were collected, and the Class of 1946 was installed in a now definitely established and progressive School of Medical Illustration.

This year brought the now annual trip to an engraving and printing plant. Mr. Robert Frisch of Wright Engraving Company has given generously of his time to conduct the students on a three-hour lecture tour through the plant. This enables the student to find out what happens to his work, as well as to become sufficiently informed to advise the doctor whose illustrations are to be published. Airbrush, formerly a medium used wholly in commercial art, was also added to the curriculum.

Miss McLatchie, having realized for some time how difficult it was for the student to apply his training without preliminary introduction, changed the two-year course to a three-year one, adding the internship. The Photographic and Medical Art Committee cooperated and heads of services were generous in finding space for this new addition to their staffs. The change in the course brought a more detailed study of anatomy. Embryology, histology, and physiology were enlarged upon. A microscope and slides added to the enjoyment of the students' work. The staff doctor, finding his curriculum too heavy, resigned and Dr. Robert Green, now retired from Harvard Medical School and interested in teaching anatomy from an illustrative point of view, consented to teach the now fairly large class.

This year of 1948 finds the Internship in operation. We feel we have reached a milestone in our short life and have written this summary of the growth of our School in order that the hospital family may know a little more about the men and women from this department who go quietly about their business. They may be identified by the Medical Illustration band on their sleeves.

Edna Larson,
Secretary, Medical Arts Department

MASSACHUSETTS GENERAL HOSPITAL 1811 McLEAN HOSPITAL

The beautiful East Window, above the altar in the Samuel Eliot Memorial Chapel at McLean Hospital, was dedicated on November 28. The dedicatory ceremony included organ music by Mr. Homer Whitford, Director of Music at McLean; the invocation by Rev. Cuthbert Fowler; a presentation speech by Dr. W. Franklin Wood, Director of McLean Hospital; the acceptance address by Mr. Ralph Lowell, Chairman of the Trustees of McLean; a description of the window by Mr. Orin E. Skinner, President of the Charles J. Connick Associates, who designed and made the window; and the benediction by the Right Reverend Monsignor Robert F. Barry.

The window was made possible by donations from many individuals, over a long period of time. It is the realization of one of Dr. Wood's dreams of a memorial to the people who have faithfully served the hospital in various capacities through the years.

The window is designed as a significant symbol, in color and light, of the healing power of Christ and its dissemination throughout the world. It is based on a simple geometric pattern of ruby and blue, supporting growing vine forms of a decorative grape motif, suggesting the Bible text: "I am the vine, ye are the branches". This vine outlines and defines medallion shapes, enriched with related figure and subject.

The dominant theme of the entire composition represents Christ the Healer in the upper tier of panels. He is enthroned, and bears the symbol of healing, the Cross Potent. His right hand is raised in a gesture of blessing.

At His right is the Greek physician, Hippocrates, father of medicine, with the staff and serpent, ancient symbol of healing. At His left, Saint Luke, traditionally known as the beloved physician, holds the pen and book of the evangelist. Saint Luke's evangelical symbol, the winged ox, enriches the outer panel, balanced by the Greek temple and the mortar and pestle near Hippocrates.

The central medallion of the tier below represents the Healing of the Leper, recorded by Saint Matthew in his eighth chapter, and also told by Saint Mark and Saint Luke. All three evangelists are suggested above the medallion by their symbols—the winged man of Saint Matthew, the lion of Saint Mark, and the ox of Saint Luke. The left companion medallion is devoted to the Healing of the Blind Man (St. John 9:1) and the right, the Healing of the Dumb Demoniac (St. Matthew 9:32). The outer panels bear symbols of the nurses' lamp and the physicians' caduceus.

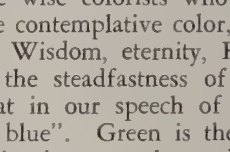
The central figure of the lower tier is that of Florence Nightingale—The Lady with the Lamp—who bears the symbol of refreshing water. Smaller medallions, from left to right, are devoted to William Harvey, English physician and discoverer of the circulation of the blood; Louis Pasteur, suggesting inoculation against hydrophobia; Dorothea Lynde Dix who, through her heroic zeal, greatly improved the conditions of the insane; and Madame Curie with her precious radium.

The tracery is enriched with symbols of the Beatitudes—the way of true Christian life which Our Lord taught in the Sermon on the Mount. "Blessed are the poor in spirit", the dove; "Blessed are they that mourn", the inverted torch; "Blessed are the meek", the lamb; "Blessed are they who hunger and thirst after righteousness", the scales; "Blessed are the merciful", the broken sword; "Blessed are the pure in heart", the lily; "Blessed are the peacemakers", the olive branch; and "Blessed are they which are persecuted", the heavenly crown.

While the entire window is rich and colorful in design, it includes an abundance of lovely silver and gold, to give it a radiant quality avoiding any suggestion of the somber or heavy.

From the Middle Ages we have inherited a symbolism of color that is still recognized in our workaday world. The red cross of devotion and sacrifice now carries its message round a striken world to remind us that in the twelfth century pure red was the color of Divine Love, of passionate devotion, of self-sacrifice, courage, and martyrdom. Blue immediately glows before us as the graciously supporting color of red, so we acquiesce with those wise colorists who said that blue is the contemplative color, the color of Divine Wisdom, eternity, Heaven itself, and the steadfastness of enduring loyalty that in our speech of today we call "true blue". Green is the color of hope, springtime, youth, and victory; and gold, which we characterize in the expression "good as gold", the medieval masters said symbolizes spiritual treasures, worthy achievement, and the good life. Violet, a combination of red and blue, symbolizes justice, mystery, pain, and penitence. Violet forms in some ancient windows a beautiful background for shimmering silvery white, which is the symbol of faith, of the light of truth, of peace and serenity—a radiant and significant symbol that is most beautifully expressed in the words: "But if we walk in the light, as He is in the light, we have fellowship one with another." (I John 1:7)

Isobel Collins,
Librarian, McLean Hospital



Lumbar puncture has become such an accepted diagnostic procedure that it may be hard for the present generation to realize what a controversial measure it was at one time.

Through the kindness of Dr. Frederick E. Garland, a graduate of the South Surgical Service in 1903 and for many years a member of the active staff, now on the Board of Consultation, the Archives has received the lumbar puncture needle used by Dr. A. H. Wentworth while he was an Out-Patient Physician to the Children's

Hospital in making the first lumbar puncture in Boston. Here is Dr. Wentworth's account of that event, from a paper read before the clinical section of the Suffolk District Medical Society on April 15, 1896 and at the annual meeting of the American Pediatric Society in May 1896:

> I performed the operation of lumbar puncture for the first time in August 1895 on a doubtful case of tubercular meningitis. A brief report of this case was published in the *Boston Medical and Surgical Journal* of December 12, 1895. After allowing five or six cubic centimetres of fluid to escape, the needle was withdrawn. Immediately following this the patient showed alarming symptoms. Her pulse rose to 250 beats in the minute (counted with a stethoscope). She clutched at her hair, tossed herself about the bed and uttered sharp cries. Her color was not good and her extremities became cool. Subcutaneous injections of ether and brandy were given, and heaters were applied; after one-half to three-quarters of an hour, the symptoms had passed away. During the attack I felt considerable uneasiness because I was not prepared for such a result and did not know but that it would terminate fatally. I now believe that the symptoms were due to headache, caused by the removal of fluid and that her life was not endangered. This patient did not have meningitis and left the hospital shortly afterward, perfectly well.
>
> At the time I tried to explain the symptoms by assuming that the sudden alteration in intracranial pressure had caused them. The diagnostic value of puncture of the subarachnoid space is so evident that I considered myself justified in incurring some risk in order to settle the question of its danger. If it proved to be harmless then one need not wait until a patient became moribund before resorting to it. I have performed the operation forty-five times and have never seen any ill effects, so that I feel assured it is a harmless procedure.

Following Dr. Wentworth's report of this procedure he was subjected to a good deal of criticism for doing what seemed to people then an extremely dangerous procedure and which finally resulted in his resigning from the Hospital and from the Medical School. He then moved to Falmouth, Massachusetts and practised there for many years. He died there on July 30, 1947.

N. W. F.

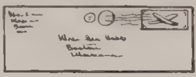
A little over a year ago we told you that Mr. James Wall of Somerville, who has been an out-patient at Massachusetts General Hospital for several years, had offered to make and present to the hospital an exact true-to-scale model of our first horse-drawn ambulance. Perhaps you remember that "Wanted—a white horse" notice which appeared in The News last January, followed soon after by the account of Dr. Earle M. Chapman's miraculously finding a horse of the exact dimensions required within a day or so after our want ad appeared. We have been following the development of the model ever since, eagerly awaiting the day when it would be finished and we could see it.

Well, that day has at last arrived. Mr. Wall brought in the finished model a few days ago, and until you see it you can have no idea of what a superb job it is. The hours of meticulous work Mr. Wall has put in on his labor of love add up to many months of time, from the day when he was driven out to McLean Hospital to photograph the original ambulance from all angles, both inside and out, and to measure carefully every item of equipment, in order that his model would be perfect in every detail. And it is. When you see our photograph of the original ambulance, shown beside the model, and compare the two, you will marvel at the faithfulness of Mr. Wall's reproduction.

A glass case is being constructed for the model, to protect it for all time against dust and harmful handling. It will be placed on exhibition for a while in the main entrance, near the front desk in the White Building. After that, its permanent home will be in the Archives Room. Don't fail to see it.

We are sure everyone in any way connected with M.G.H. will experience a feeling of sincere appreciation when he sees Mr. Wall's fine gift to the hospital. It is, indeed, a treasured addition to our Archives collection.

A photograph of the model appears on the last page in this issue. The picture was taken by Mr. Withee, of our Photographic Laboratory.



New addresses:—

Drs. Margaret M. (*CM* 1932) and R. Earle (r.p. 1934) Glendy, 116 Mountain Ave. SE., Roanoke, Va.

Dr. Raymond V. Randall (*M* 1946), c/o Mayo Clinic, Rochester, Minn.

Brief bits:—

Dr. Emerson H. Drake (*a.r.p.* 1937) has announced the opening of his office for the practice of general and thoracic surgery, at 29 Deering St., Portland 3, Maine.

Dr. David W. Williams (*WS* 1943) has opened an office for the practice of urology, at 4 Chestnut St., Springfield 3, Mass.

Back in April 1945 we published a letter from Dr. Arthur M. Walker (*EM* 1925), written while he was in Burma. Those of you who have not heard directly from him since then will appreciate this very interesting letter.

> In the background of my mind is the recollection of writing you once previously, probably from a hospital in Assam in 1944, so there is a gap of some four years to be accounted for—years that are marked by unusualness rather than by importance.
>
> In the fall of 1944, I proved the truth of an old adage by joining a Chinese infantry regiment as medical liaison officer, and in the ensuing months marched through Burma with them from Myitkyina to a place called Kyaukse which lies between Lashio and Mandalay—a matter of some 500 miles (it seemed longer). Returning to this country in June of 1945 and getting out of the Army in the following September, I rejoined the Committee on Medical Research, O.S.R.D., with whom I had worked for a time in the early days of the war. I spent some months chiefly writing historical stuff of which the medical chapters in Baxter's Pulitzer Prize book, *Scientists against time*, constituted the biggest job.
>
> In March of 1946, I resigned my Associate Professorship of Pharmacology at the University of Pennsylvania and joined the Washington office of the Veterans Administration, with whom I have been since that time. My chief occupation has been assisting in the direction of a rather large scale study into the effects of streptomycin upon tuberculosis which is being conducted by some 40 of our hospitals. It is an interesting example of the potentialities for cooperative investigation which an organization of our size permits, and has, we think, been productive of considerable useful information.
>
> The eldest of my four children, all of whose lives were disarranged although not terminated by the war, is aiming at veterinary school, the second at medical school, and the third at domestic felicity.
>
> It is unnecessary to say that I think, if not often, then certainly with affection, of the M.G.H. I would welcome a chance to lunch across the street at the Cosmos Club with any of the survivors of my generation who stray into Washington.

To the Editor:

Oct. 12, 1948

The leading article in the October News, written by the new Chief of the Dermatological Department, must leave the reader with the impression that with the exception of two pioneers, Willan of England and Hebra of Austria, dermatologists had shut themselves up in a tight box and shunned contact with the rest of the medical world.

Such a statement seems unjust to a serious body of men striving to increase knowledge the world over. Allow me to justify this opinion by citing a few contrary instances within my own ken.

As far back as the winter of 1893-1894 in Paris Alfred Fournier, the great syphilologist (syphilologists and dermatologists are the same men) was teaching at the famous St. Louis Skin Hospital that general paralysis of the insane and locomotor ataxia were but late symptoms of syphilis. Somewhat later, Albert Neisser, the brilliant head of the splendid skin hospital in Breslau and the discoverer of the gonococcus, was a co-worker with Wassermann in the development of the test which originally bore the names of both investigators. Subsequently, Neisser outfitted with his own money an expedition to the Dutch East Indies, and led it, to study syphilis by experimentation by means of the native apes.

In our own country there was founded in 1937 the Society of Investigative Dermatology, with its own journal devoted entirely to modern aetiological and pathological studies, and in recent years this journal and the *American Archives of Dermatology and Syphilology* in almost every edition contain one or more articles on biological chemistry and other general scientific studies in relation to diseases of the skin.

Dermatologists were among the first to take up investigations of allergy in relation to infantile eczema, urticaria and allied conditions. This same group of men years ago were the originators of the theory that heat, chronic irritation and trauma were among the causes of cancer—the habit of certain East Indians to carry burning charcoal in a stove under their outer garments, the chewing of betel nuts by Asiatics, the smoking of short-stemmed pipes as examples.

In my own case, my resignation from the twin dermatological offices at the M.G.H. and the Harvard Medical School occurred in 1926, but for some years previously my students were told the future of dermatological progress lay in the field of general medicine and that our so-called speciality was apparently doomed.

Similarly, in the conduct of the skin ward it was routine practice to call for consultations with the internists in cases of diverse dermatoses, especially the usually fatal ones such as pemphigus, mycosis fungoides, and in the end to seek what autopsies would reveal.

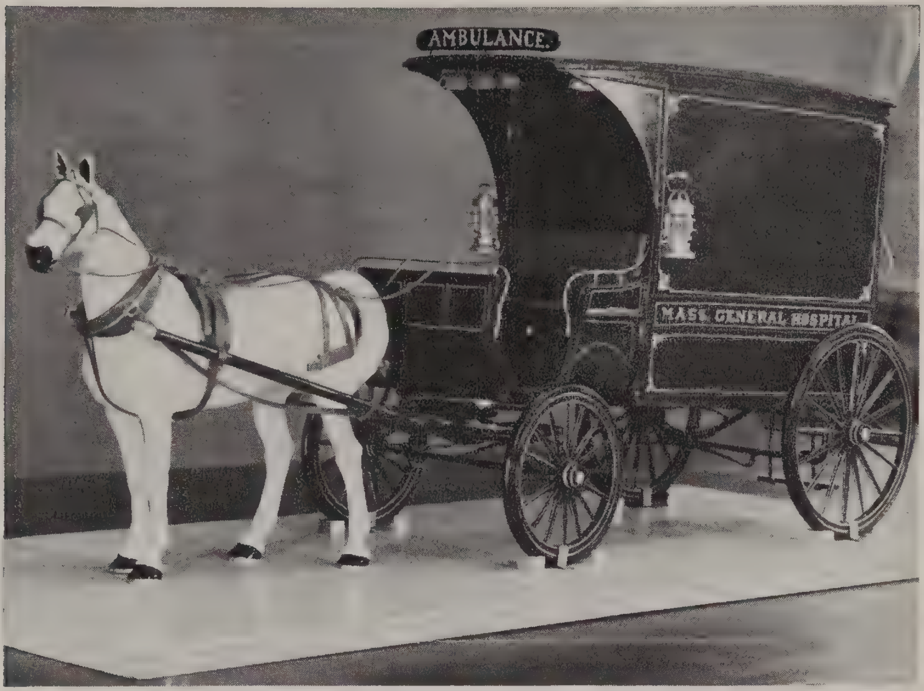
Charles J. White, M.D.,
Honorary Physician and past Chief of the Dermatology Department

---

To the Editor:

Oct. 11, 1948

From my relative isolation at 8 Fenway I still sally forth on occasion to visit you all at M.G.H., less often than when I allowed the disorders of the living patient to interrupt my sleep. I keep in touch through The News, however, and am moved at last to write and express my appreciation of it because of "A reorientation of dermatology" by Dr. Frazier in the current issue.



The model of our first horse-drawn ambulance, made to scale by Mr. James Wall

This is what we, dealing daily with semantics in the somber chambers of the Boston Medical Library, would call "hot". Congratulations to Dr. Frazier for having thought it up and written it, to The News for having published it, and to the M.G.H. for having captured Dr. Frazier.

Joseph Garland, M.D.,
Physician to the Children's Medical Service and Editor, New England Journal of Medicine

Dr. Alfred Yankauer (*CM* 1941) brings his record up to date in this letter recently received.

It is a long time since I've written to The News although I've enjoyed reading each issue from the first one received—in North Africa, I think.

My path since discharge from the Army late in 1945 differs a little from that of most MGHers. I decided to enter public health work as a career, and, after a fellowship at Cornell, I took an M.P.H. degree at Columbia. At present I am working for the New York City Department of Health, being District Health Officer of the Kips Bay—Yorkville Health District. I also teach at the Cornell Medical School as Assistant professor of Public Health and Preventive Medicine, under Dr. Wilson G. Smillie. Somewhere along the way I completed my Pediatric Boards and I do a little clinical work once a week to keep a hand in. But most of my responsibilities are administrative and educational, and I find them exceedingly interesting.

The application of medical knowledge on a mass scale, the stimulation of community contacts, and the developing field of social medicine present a challenge and opportunities which are really thrilling. I sometimes wish that salaries were a little higher and state agencies not quite so slow-moving, but one can't have everything, and certainly the future looks very bright.

We thank Dr. Means for sharing with us this most interesting letter he received from Dr. Robert L. Berg (*M* 1944). The letter is headed Statens Bakteriologiska Laboratorium, Stockholm 1, Sweden, and says in part:

We have just talked with the Skanses after their arrival in Stockholm this afternoon. I know you will miss Bengt in the clinic, but we are mighty pleased to have them here.

As you and Mrs. Means predicted, we have found Stockholm a very beautiful city. I suppose it is due to such an abundance of water everywhere and the bedrock granite jutting out in great masses, but above everything else it is due to the orderliness of the Baltic. I had not known that it had no tide and that it was so little salty. I suppose it wouldn't dare disarrange the great neatness of habit and appearance which is such an inalienable Swedish attribute, and it surely does present a clean and handsome waterfront. The comparison with the docks of New York and Boston is particularly striking, for here there is no sign of trash or filth as a ship unloads.

The islands are quite countrified, and we were fortunate to get a small but very new apartment on one of the smaller and outer islands which is covered with pine trees. The apartment has a balcony with a magnificent view of Lake Mälar. The new Swedish housing is remarkable. There are no slums. Almost everyone lives in an apartment, most of which are less than fifteen years old. There is good central heating, large windows, and many balconies. The newer suburbs look like California, with white or light green or yellow stucco and the traditional red tile roofs.

The people are very good to foreigners—especially Americans. They consider themselves quite Americanized, and technically they certainly are. In social relationships, however, they are Old World. They are staid and formal—much like Boston in many ways—and are firmly democratic. Everyone seeks the mean: it is impossible to tell apart professional and laboring men on the street, everyone rides a bicycle (even in silk top-hat), and the whole shooting-match carry brief cases—even children—usually containing lunch, knitting, and a newspaper, but who is to know the difference. Even salaries are approaching a middle value, e.g. the assistants at the laboratory have salaries of 13,000 crowns a year, and the director receives only 18,000.

Everybody makes a great to-do about entertaining. One arrives precisely (within two minutes) of the time set for dinner. The host greets the guests at the door, saying, "You are very welcome in our home." Dinner is served at once, beginning with open-faced sandwiches and aquavit which is supposed to be tossed down in one gulp. This part of the meal may be simple or elaborate. The guests are all seated for it, having come to the table in pairs at the hostess's direction—even in small and otherwise informal parties. The guest of honor is at the left of the hostess, and everyone looks sharply to see who that will be, for he must make a speech at the end of the meal. After the sandwiches comes the regular dinner, often with beer, more usually with wine. With the first toast the host again welcomes everybody to the home. Thereafter, everyone must toast everyone else (if you forget your wife she can demand a pair of silk stockings) except the hostess, as she must not be forced into an alcoholic state too early in the evening. The toaster catches the eye of the lucky woman, lifts the glass to mid-necktie, bows slightly, sips the wine, bows again, and looks deeply into her eyes. The dessert usually is some incredibly complex ice cream concoction with spun sugar, fruit, and whipped cream. As the hostess is toying with the last bit of dessert and the white wine is still on hand, the guest of honor must eulogize the hosts, the fine meal, etc. Otherwise, no one ever mentions the quality of the food, the table appointments, or the delight of the visit. Coffee is then served in the other room, along with brandy or liqueur. Meanwhile, everyone has shaken the hostess's hand on leaving the table. Later comes fruit and highballs—usually gin in a grapefruit fizz or brandy in mineral water. Finally, before leaving (never before 10:30— often after midnight) there may be warm broth with crackers and more coffee. If there are several affairs of this sort in one week, it is clear why Swedes do not begin work before 9:30 in general.

You would be much impressed by the interest in modern art that is apparent everywhere. One rarely finds a home — even of a humble sort—without one or more good pictures of recent vintage. The young artists find a ready market, though not a highly recompensable one, and the city usually has more than half a dozen shows at the same time. These pictures are everywhere. At St. Erik's Hospital, the wards and corridors are all tastefully adorned.

Our interest in church architecture has been our chief outlet in the way of art—my wife's interest being of many years' duration, but mine mostly in search of round towers or other architectural features resembling those of the Newport tower. So far the scholastic achievements have been nil, but we have spent several Sundays making the rounds of old churches to the north of Stockholm, and some of them are quite ancient and well-preserved. Just the other day I learned that there is one of the oldest here in Stockholm (Solna kyrka) within a few hundred yards of my route to and from the laboratory. It is round and of stone, so I must stop and investigate.

The practice of medicine is on a very high average level. The specialists are probably less extensively heeled than in the States, but the general practitioner here is better trained. The system of including substantially an internship in the 6th year of medical school means that students are rotated through a wide field of training. I was interested in arrangements at St. Erik's, which is Berglund's hospital. The medical service revolves around the professor with great reverence. He is a valuable man in Swedish medicine, and his service is by far the most sought after by young men on the way up. I was introduced to him in front of the assembled staff, along with an English friend (HMS classmate). He asked us both if we had worked with you, and asked many questions about life in Boston and at the M.G.H.

The run of patients seemed much like those in Boston—many rheumatics and thyrotoxics, the latter being treated with thio without surgery. The education of the younger men is by contact, and it is very rare to find anyone who is interested in teaching as such.

My own work proceeds under ideal circumstances, but very slowly. It is helpful, but personally discouraging, to see the numerous disciplines that most medical people have mastered. Professor Gard is a fine person to work with and seems to know everything I have occasion to ask him about.

We have been most fortunate in the Swedes we have been in contact with, and I think the rest of the year should be enjoyable.

THE NEWS

No. 75 Boston, Mass. January 1949

NEUROSURGICAL SERVICE AFFAIRS

After the primary duty of care of the sick, the functions of the neurosurgical service in a teaching hospital should consist in the development of better methods of diagnosis and treatment and in teaching these. The first is necessarily restricted by the limited number of beds, whereas the two latter goals have no such limitation. By maximum use of the 14 neurosurgical beds on White 11, which are often exceeded, and the private beds in Phillips House and the Baker Memorial, the number of operations per year has gradually increased from 470 in 1938 to 701 in the past twelve months. It is of interest to comment on the purposes for which these beds have been utilized, as they reflect the current interests of the staff. While the number of brain and spinal cord tumours has remained relatively fixed, operations for the relief of intractable pain have shown a particularly sharp increase. Conditions in which severe pain is the outstanding complaint and which so often lead to total incapacity, narcotic addiction, and breakdown of morale consist of the various neuralgias, painful amputation stumps and nerve injuries, and certain varieties of visceral pain for which there is no direct method of treatment. Cases of advanced malignant disease also make up an increasingly large proportion, thanks to the increasing interest of the Tumour Clinic. Relief of unbearable pain alone is of inestimable value to these sufferers, even if they are afflicted with an incurable disease. Dr. William H. Sweet, Dr. William P. Chapman, and I are utilizing this experience to study pathways of pain conduction and the effectiveness of various methods of sensory denervation which have never been critically evaluated. In this connection we are making observations by direct stimulation of visceral nerves and central nervous system pathways in the course of operations performed under local anesthesia. These studies will be utilized for a new monograph on the physiology of human pain conduction and its relief by surgical intervention.

A number of the most distressing forms of pain, such as follow herpes zoster and cerebral vascular accidents, certain types of facial neuralgia, and rare painful phantoms of amputated limbs may not respond to surgical interruption of sensory pathways. Although all the known pain-conducting fibres to the sensitive area have been interrupted, the neuralgia may continue unchanged. These unfortunate individuals have been so severely tortured that in the past many have terminated their suffering by suicide. For these, frontal lobotomy has offered a way out, but at the expense of certain higher cerebral functions. It is now known that a less extensive division of fibres from the frontal lobes of the brain than is necessary for the relief of psychoses will often suffice to relieve patients of introspection and concern about their distressing pain. Perfection of an operation which will relieve suffering, with minimal impairment of personality and mental acuity, is therefore an investigation of particular importance. Much progress has been made toward the solution of this problem in the past year.

An outstanding contribution to the location and effective removal of brain tumours has been made by Drs. Bertram Selverstone and William Sweet since the last report in these columns. They have established that the radioactive isotope of phosphorus, P^{32}, is concentrated in 5 to 112 times greater amounts in neoplastic cerebral cells than in normal white matter of the brain. This isotope is chemically indistinguishable from ordinary phosphorus and, combined as sodium phosphate, can be injected intravenously with perfect safety. It is then picked up selectively by the brain tumour and discharges beta emanation, which penetrates only a few millimeters of brain tissue. Selverstone and Sweet, working with Drs. A. Solomon and C. Robinson in the biophysical laboratory at Harvard Medical School, have developed a needle-shaped Geiger counter which is so small that it can be used as an exploratory probe to find deeply situated tumours of the brain. This instrument, in an electrical circuit connected with a scaler, gives audible signals. Sufficient P^{32} is picked up by normal brain to give rise to about 1 tick per second. The moment tumour tissue is entered there is a great burst of discharge. Probing with this instrument permits the exact localization and determination both of depth and size of a deeply hidden tumour. As a result, all unnecessary injury to normal brain can be avoided and the surgeon can cut down with certainty through the least vital convolutions to expose and remove tumours which were heretofore so difficult and dangerous to find. Moreover, the instrument can also tell when the entire area invaded by tumour has been removed. Many other aspects concerning growth and metabolism of tumour cells can be investigated by this method. As a result, it has been possible to obtain generous funds from the American Cancer Society and to put Dr. Selverstone on a Senior Fellowship of the National Research Council immediately after the completion of his neurosurgical residency a year ago.

Drs. Sweet and Selverstone have also been carrying out fundamental investigations on the rates of formation, flow, diffusion, and absorption of the various constituents of cerebrospinal fluid in man. Radioactive isotopes have again been used here, since these substances, although behaving in precisely the same fashion as their normal non-radioactive counterparts, can be assayed in minute samples. As a consequence, serial determinations can be made without disturbing the normal cerebrospinal fluid dynamics. The results already obtained indicate that the rate of flow from the cerebral ventricles to the cisterna magna is so slow that the rate of formation can be determined only by direct sampling from the ventricles where the fluid is formed. This means that the basic studies of the normal conditions can only be carried out in man, since the tiny slits which comprise the ventricles in animals are too small to permit sampling.

As regards teaching, Dr. David Gamsu has just returned to South Africa to start specialization in neurosurgery at Johannesburg after two years as Clinical Fellow and Resident on the service. Commander William James has replaced Commander Richard Garrity on a special training assignment from the Bureau of Medicine and Surgery of the U. S. Navy. Dr. Louis Bakay has come to us from Budapest to work as Research Fellow in the investigations involving radioactive substances. Impressed by the fact that far more neurosurgeons are being trained in various hospitals than the country at large can assimilate, we are working toward longer and more complete training of a smaller house staff. Only by graduating men with more highly developed technical skill and knowledge is there a certainty of assuring them a fair chance of ultimate success in what appears to be becoming an overcrowded and highly competitive field.

James C. White, M.D.,
Chief of Service

Massachusetts General Hospital is making an appeal for funds to build and equip a new Research Building. The cost will be $2,750,000. Two large donations have already been received—$700,000 from the National Cancer Institute and $100,000 from a charitable trust. In order that construction may be started in 1949, the Trustees are appealing to friends of the hospital and to the public for the necessary balance of $1,950,000.

In case you have not received a copy of the illustrated booklet entitled "Building for tomorrow's better health—The new Research Building of the Massachusetts General Hospital", sent out by the Board of Trustees, we have selected these few paragraphs from it, so that you may have an understanding of the need for this building and the part it will play in the advancement of medical science.

137 YEARS OF MEDICAL ADVANCEMENT—In 1811 philanthropic citizens of Boston and neighboring towns founded the Massachusetts General Hospital, a voluntary charitable institution, to care for the indigent sick and to provide clinical instruction to the students of the Massachusetts Medical College, destined to evolve into the Harvard Medical School.

To establish proper standards for the care of the sick and to maintain leadership in medical education, members of the hospital staff from earliest times have made contributions to the progress of medicine through research and investigation.

These three basic functions of the hospital—care of the sick, teaching, and research—are inseparable in a presentation of the present activities and future responsibilities of the Massachusetts General Hospital in the field of medical science.

Within the memory span of a single generation, the hospital patient population has undergone a tremendous change. Typhoid fever, pneumonia, and other such diseases, which tested the skill of doctors thirty years ago, no longer fill the wards. Advances in Preventive Medicine and Immunology have made possible the elimination of many infectious diseases.

THE GREAT PROBLEM OF TODAY—The hospital of the present and future must study the problem of the metabolic diseases of aging, with the hope of finding solutions.

Today the hospital wards are crowded with patients afflicted with heart disease, arthritis, and cancer. Technological advances have come out of the war in fields far removed from medicine, such as nuclear physics, which may be applied to these diseases. But their possibilities are still unexplored.

One of the great challenges of today is to discover the chemical changes that occur in the human cells during the process of aging. This is fundamental to an understanding of these diseases.

This hospital is peculiarly well situated to pioneer in these vital human studies. The proximity to Harvard University and the Massachusetts Institute of Technology provides an unequalled opportunity for the development of new channels of approach to some of the new scientific possibilities in medical advancement.

The incidence of chronic diseases, which are the principal causes of people being in hospitals today, increases sharply with advancing age. . . .

M. G. H. ACCEPTS A RESPONSIBILITY—Doctors responsible for the direction of medical service and the formulation of methods and techniques must have expert scientific advice at their elbows. Discoveries emerging from the natural sciences must be assayed and tested for translation into use at the bedside. The hospital houses the bedside.

The community hospitals in any one state that would be able to take on this broad responsibility can be numbered on the fingers of one hand. Every hospital needs an excellent routine service laboratory. Only one out of many needs facilities for research and education that impose upon the hospital the responsibility of being a center of medical science, not only for the community, but for the nation at large. We consider this our job, because we are already doing it and have done it for years.

NEED FOR RESEARCH IS URGENT—The horizon of research has been extended to such a degree that no single institution can possibly encompass more than a fraction of the problems, even were its financial resources unlimited. At a time when the demand for better understanding of heart disease, cancer, arthritis, and other degenerative diseases is growing more urgent, the possibilities of meeting that demand are being multiplied by advances in the fields of medicine, biochemistry, nuclear physics, electronics, and other allied sciences. Massachusetts General Hospital will go as far as its finances permit to explore, from the medical viewpoint, all these fields.

A CHALLENGE AND A RESPONSIBILITY—The limiting factor in the development of the research program at the Massachusetts General Hospital is the shortage of adequate laboratory space and facilities. In general, it may be noted that investigation is shifting from an experimental study of the laboratory animal toward a more intensive analysis of biologic phenomena in the human being. Therefore, medical research is fast becoming a responsibility and a challenge to the hospital which now must have laboratories in close proximity to the patient.

To meet this challenge, the Massachusetts General Hospital proposes to build the new Research Building at a cost of $2,750,000 in close proximity to the medical and surgical wards and adjacent to the private pavilions of the hospital.

TRUSTEES NOW KNOW REQUIREMENTS—During 1947 the Committee on Research assisted the Trustees in building up the fluid research funds at the hospital to provide for the support of research on a fundamental level. The availability of these new research funds and the greatly improved status of the hospital budget in 1948 have made it possible now for the Trustees to decide what new laboratories are needed to enable the hospital to carry out its future responsibility in research and in teaching.

WHY BASIC RESEARCH COMES FIRST—Why have we given first priority to a Research Building when there are so many other jobs to be done and so many that we want to do? The position of science in medicine is established beyond question. There is no reason to believe that this position will not be maintained indefinitely. We want to consolidate our gains and developments and to make certain that they are established as a fundamental part of our medical and surgical structure for the next half century.

Once we are firmly anchored in what has proved sound and essential through the test of experience, then we shall be ready to undertake experimentation and pilot studies in the socio-economic aspects of medicine, the extension of medical services to the community, the maintenance of health, and the other pathways that are opening ahead. Some may be determined by society and not by us, but we are ready to play our role wherever the future may lead. Already thinking and planning for these undertakings are underway.

It is our belief, however, that a firm and unshakable anchor in science is the first and necessary step.

MASSACHUSETTS GENERAL HOSPITAL HAS BECOME A WORLD INSTITUTION FOR MEDICAL CONSULTATION AND RESEARCH—The role of the Massachusetts General Hospital in the care of the sick has changed today from that of a local agency, caring for the ills and injuries of a geographically circumscribed section of the population, to that of an international consultation and research center.

A map, indicating the countries from which doctors have come to the Massachusetts General Hospital for study, or to which doctors have gone from the Massachusetts General to put into practice advance techniques developed through research at the hospital, shows a close network of lines fanning out from M.G.H. to all parts of the world—convincing proof that no matter how far from M.G.H. your home may be, you and your family and your friends are benefited by the results of research carried on here.

Contributions are deductible from Income Tax returns in the manner and extent provided by law. Please make your check payable to the Massachusetts General Hospital and mail to the Treasurer, Massachusetts General Hospital, 1 Federal Street, Boston 10, Massachusetts.

Large gifts are required, but no gift is too small.

* * *

As always, M.G.H. went over the top on its Red Feather drive. Our quota this year was $12,000. A total of $12,236.71 was contributed.

* * *

MEDICAL CLINIC

The Medical Clinic continues to be the key clinic in the Out-Patient Department. The new patient entering the Out-Patient Department is admitted to our clinic first, unless his physician's letter of referral is so specific or his complaints so clear cut that the admitting nurses can direct admission elsewhere. A[illegible] new patients in our clinic have detailed histories and physical examinations done before they are either treated or referred to one or more special clinics. The time taken by visiting physician, house officer, or student to examine carefully each new patient has resulted in the gradual building of hospital character. New patients come to the Massachusetts General Out-Patient usually because they have been so advised by their friends who have been to the hospital, or by their doctor. The service has become largely diagnostic and consultative in nature. Too often we fail to discover what doctor referred the patient, or see to it that a brief summary is sent back to the doctor seeking our combined consultative services. However, since December 1, 1948 letters of referral are being answered by letters dictated by a member of the medical service.

The Medical Clinic encompasses the rare, the exotic, and the commonplace of diseases in all systems. It is the place where men of experience expose their gifts to students, where the inexperienced gain strength, and where the specialists, either avowed or by the limiting circumstances of his practice, rounds out his medical character. We are fortunate in having 56 visiting physicians who bring to the clinic a wide range of talent. Some are expert in handling difficult personalities; some at recognizing bizarre patterns of disease; others shine by the written word and come to earth on those patients referred from the Eye Clinic labelled "Please check in Medical". Many of these men have developed great interests in specific diseases or in the diseases of one system, so that in addition to their time spent helping the general Medical Clinic they also attend a special clinic. However, the Medical Clinic is the number one clinic and must be fully maintained to prevent the admitted limitations of specialties in total patient care. The average daily team consists of 6 visiting physicians, 1 fourth year teacher who holds a Harvard Medical

School appointment, 2 interns, 2 assistant residents, and one desk resident. The desk resident is a valuable person in selecting teaching cases, interviewing those obviously quite ill to expedite their care, and sorting out those who arrive without appointment.

The greatest praise of the whole staff came quite simply from a new secretary who said, "You know, I am amazed how kind and careful your doctors are with these people—only two or three complain that they are too busy or the cases are too trivial."

Triviality is of the essence of life, but it bores and frustrates most physicians. There is no reason to surround the trivial case with the toga of the Medical Clinic, and for this reason the Out-Patient Committee has supported a plan proposed by our Out-Patient Director, Dr. Joseph S. Lichty. In brief, a Dispensary will be set up early in 1949, located on the ground floor opposite the Orthopedic Clinic. Here, the trivial matters will be referred by the admitting nurses for hasty handling by a resident staff (1 medical and 1 surgical) supported, we hope, by some visiting physicians. Here, those with the sliver, the sluggish bowel, or the slug in the ear will be solaced. To protect the Dispensary, we warn that patients may not be referred there by other clinics but may gain admission only on the presumption of a single trivial matter. If symptoms continue or complete study is indicated, the patient will be referred to the appropriate clinic. This Dispensary is in the nature of an experiment in patient care and is also justified in the belief that the increasing number of persons admitted to the Medical Clinic may be reduced. In 1948 there were about 100 new male patients and 120 new female patients seen each month in the Medical Clinic.

One hears that there is no poverty in these United States. Third party responsibility, either insurance or government, pays for more and more medical services. However, it is no news that the visiting physicians continue to give away their time and experience to those who come into the Out-Patient. In order to be on the hospital staff and enjoy the possible privileges of the Baker Memorial and Phillips House for private patients, the exchange value was placed at about 100 hours of Out-Patient service per year. This service was formerly allotted twice weekly for 6 months in the year, but in November the staff assembled and agreed to change this arrangement. Thus, the attendance schedule for 1949 has been made so that each physician attends one morning a week throughout the year, except when exhausted or on vacation. Certain advantages to both patient and physician are believed to be derived from this arrangement—first, that the patient knows exactly on which day the doctor who understands his case will be there; and secondly, the doctor will gain valuable medical skill by his ability to follow the same patients for many years. Too little is known of the natural history of disease and here is a wonderful opportunity to observe it.

Certain physicians advance to conduct daily Ward Rounds for a period of 2 months (100 hour service) and so their visiting time in the Out-Patient is lessened. The patient who enters the Out-Patient and is referred into the hospital may quite easily be followed by the same physician through his entire illness. However, the continuity of patient care in the Out-Patient means that the period of hospitalization in any case is but a relatively short interval in his or her career in health or illth.

In closing, we report a rumor that the Medical School may shift the third year students to the wards and the fourth year men to the Out-Patient. We welcome this idea, as it should provide a stepping stone of reality in patient care. We hope that Harvard will provide more space if this plan is adopted. Third year students usually sweat it out in pairs, but fourth year men should see patients alone—but where?

Earle M. Chapman, M.D.,
Chief of Medical Clinic

* * *

M.G.H. donned its usual festive attire for Christmas week. Gay decorations in whitewash and color appeared on windows and door-glass as if by magic, and artificial Christmas trees and other greenery added to the general holiday cheer.

A large and very beautiful Biblical scene depicting the first Christmas—planned, contributed, and executed by members of the Ladies' Visiting Committee, the Medical Arts and Occupational Therapy Departments, and the Chaplains—furnished the motif for the setting in the Brick Corridor. Articles made by patients in the Children's Cardiac Clinic were on display in the exhibition frames.

The hospital's attractive greeting card, made as usual in the Occupational Therapy Department, gave the program of daily events which included general carol singing in the Chapel for all who wished to join in, and about the hospital by the Junior League Carolers, the Nurses' Glee Club, the Glee Club of Hospital Employees, the Girl Scout Carol Group, and the Hospital Family Carolers.

The party for adults, held in the Moseley Rotunda, started off with words of greeting from Dr. Faxon, followed by Georgia Mae, "the girl with the white guitar", singing by the Nurses' Glee Club and the Surgical Doctors' Quartet, and numbers by a flute and piano duet from the Medical house service.

The children had their party on Burnham 6; and the traditional and very impressive Nurses' Candlelight Service was held in the Moseley Rotunda on Wednesday evening, December 22.

Mrs. Cushing gave daily programs on the organ in the Chapel, and there was recorded music in the Moseley Rotunda at intervals during the week. But perhaps the most deeply appreciated feature of all was the carol singing through the various wards and corridors of the hospital for those bedridden patients who had to have their "Christmas" brought to them

The Board of Trustees, at their meetings on November 12 and 26, voted:

To accept with regret the resignation of Dr. W. T. S. Thorndike from the position of Assistant Director, effective December 31, 1948;
To accept with regret the resignations of Mrs. Rufus L. Sewall and Mrs. Francis T. Hunter as members of the Ladies' Advisory Committee to the School of Nursing;
To reinstate Dr. Thomas A. Warthin as Assistant in Medicine;
To promote Dr. John B. Stanbury from the position of Chief Medical Resident to Assistant in Medicine, as of January 1;
To change Dr. David D. Rutstein's title from Consultant in Preventive Medicine to Associate Physician.

To appoint:

Dr. Lytle D. Atherton as Assistant Resident on the Urological Service, beginning July 1;
Dr. Ruth E. S. Buckley as Assistant Resident in Neurology beginning January 1, and as Resident beginning July 1;
Dr. Agnes S. Burt as Intern in Pathology;
Dr. Lincoln D. Clark as Assistant Resident on the Psychiatric Service for one year, beginning July 1;
Dr. Leslie Corsa, Jr. as Intern on the Children's Medical Service for one year, beginning July 1;
Dr. Charles H. DuToit as Chief Resident on the Medical Service, beginning January 1;
Dr. Gerald A. Kerrigan as Intern on the Children's Medical Service for one year, beginning July 1;
Dr. Constantin J. Papadatos as Intern on the Children's Medical Service from November 1, 1948 to June 30, 1949.

To appoint the following Medical and Surgical Interns for the term beginning July 1:

Medical—Thomas B. Barnett, Clyde O. Brindley, Lee McF. Cecil, Sam L. Clark, Jr., Nathaniel J. Ehrenkranz, William F. Fritz, Craig S. Lichtenwalner, William R. Owen, Lot B. Page, Walter T. St. Goar, Guillermo C. Sanchez, Laurens P. White.

Surgical—Richard A. Currie, Adolf L. Gundersen, John H. Kennedy, Herbert B. Locksley, John D. Pitts, Robb H. Rutledge.

At their meetings on December 1 and 8, the General Executive Committee voted:

To promote to the position of Resident on the Medical Service for the terms indicated:

Dr. Hugh Chaplin, Jr., beginning January 1, 1950;
Dr. John W. Littlefield, beginning January 1, 1950;
Dr. Morton N. Swartz, beginning October 1, 1949.

To appoint:

Dr. Edgard DeMuylder as Clinical and Research Fellow in Surgery, effective December 1, 1948;
Dr. Gerald Lavner as Clinical Fellow in Radiology, serving part time, for a period of three months, beginning January 1;
Dr. Robert B. Loftfield as Research Fellow in Medicine, to work with Dr. Joseph C. Aub.

* * *

Word has reached us that Miss Shirley Wells, who resigned last March from her position as dietitian in charge of Research Ward 4, is convalescing from a recent illness at the Sanatorium, Oakdale, Iowa.

MASSACHUSETTS EYE & EAR INFIRMARY

Dr. LeRoy A. Schall, Chief of Oto-Laryngology, gave a lecture on "Cancer of the larynx, tumors of the nose, and nasal accessories of sinus" at the University of Virginia Hospital in Charlottesville, late in November.

Dr. Schall then went down to the South Texas Postgraduate Medical Assembly in Houston, where he gave a series of lectures—"Cancer of the nose", "Cancer of the larynx", "Cancer of the nasopharynx", and "Histopathology of sinusitis and frontal sinusitis".

Dr. Albert E. Sloane, Director of the Department of Refraction, is to give a course in Refraction entitled "Gill Graduate Course in Ophthalmology" at Roanoke, Virginia, in April 1949.

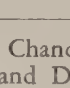
This past summer Dr. Sloane took a postgraduate course in Ophthalmology on "Management of common problems in clinical refraction" at Rochester Medical School, Rochester, N. Y.

Dr. Sloane read a paper at the meeting of the American Academy of Ophthalmologists and Oto-Laryngologists several months ago, entitled "Diplopia in bilateral aphakia and management of the early presbyopia".

Dr. Taylor Smith of Beverly Hills, California, and Dr. Samuel Adams, from Westmount, Province of Quebec, came to the Infirmary as residents the first of January, after a course at Harvard Medical School for Graduates.

Dr. Paul A. Chandler, Surgeon in Ophthalmology, and Dr. David G. Cogan, Director of the Howe Laboratory of Ophthalmology, are going to Los Angeles to give a series of lectures at the Mid-Winter Course of the Research Study Club in January.

Dr. Levon Garron and Dr. Ichiro Ikamura are both doing research work in the Pathology Laboratory under Dr. Parker Heath, as Fellows in Pathology.



The School of Nursing is proud of the fact that an MGH student, Miss Locklynn Eve, was recently the winner of the Boston Lying-in "Book", a prize awarded to a student in each term for all-around excellence in obstetrical nursing.

On December 3, the Alumnae of the School of Nursing held a very successful Bazaar in Walcott House living room. The proceeds from this event were contributed to the Sally Johnson Scholarship Fund for Graduate Nurses.

On the same date, the first year students in the School sponsored an entertainment and Fashion Show in the Moseley Rotunda.

December again brought several traditional social events. On the 16th came the popular Christmas Party for lay personnel, sponsored by the Nursing Department, with plenty of hospital talent in evidence. The Christmas Formal Dance took place in the Moseley Rotunda on December 17, with music by Mr. Dahl's orchestra. Finally, on December 22, the annual Candlelight Service was presented by the Glee Club of the School of Nursing.

Recent gifts to the Archives Department:—

From Dr. Edward D. Churchill—a packet of papers and letters belonging to Dr. Algernon Coolidge, Sr. (*S* 1864). The collection also contains a notebook kept by Dr. Coolidge while he was studying in Europe in 1871, and illustrated with his own penciled sketches.

From Dr. Laurence F. Cusick—a photograph of Dr. Ephraim McDowell, the first physician to perform an ovariotomy. There is an inscription on the back of the picture by Oliver Wendell Holmes, M.D., to whom the picture first belonged.

From Mrs. Henry S. Forbes—pieces of sickroom equipment used in the homes of Mrs. Forbes's and Dr. Stanley Cobb's mother and grandmother, including a stoneware Maw's inhaler for hot water, infusions, etc., manufactured in England; and a thermos glass in a metal-lined, red-cloth-covered case.

From Miss Minnie S. Hollingsworth—a framed picture showing the first operation performed in Ward E, in 1889, with Dr. J. Collins Warren as Surgeon; a framed letter from Dr. Warren, describing the above operation and identifying the members of the group.

From Mrs. Chandler Hovey—a framed engraving of the Bulfinch Building, dated 1853, published in *F. Gleason's Pictorial,* Boston, Mass.

From Mrs. Richard A. Shaw—9 pictures, showing interior and exterior views of various wards, the Resident Physician's House, the Lodge, and an MGH ambulance with a dark-colored horse.

From Dr. Frederic A. Washburn—a box containing copies of articles and speeches written and delivered by Dr. Washburn, including several original longhand copies.

When Dr. Viets came to the Archives Room to see the model of our first horse-drawn ambulance, his interest in the subject carried him on to the examination of the Annual Report for 1872, to see what possible reference there might be to the proposed new equipment. His search revealed the announcement in the Trustees' Report for that year, under date of October 11, that an ambulance would "soon be provided, for the safer and easier conveyance of the sick or wounded." Excerpts from the report of the committee to whom the subject had been referred follow.

That original report from the committee, signed by Charles H. Dalton and Edmund Dwight of the Board of Trustees, is in our Archives file and furnishes most interesting reading. Here it is in its entirety:

Boston, Dec. 27, 1872

To the Trustees of the Mass. Gen. Hospital

Gentlemen—

The ambulance system, recently introduced in New York, is as follows:—

The "Commissioners of Charities and Corrections of the City of New York", a body appointed by the Legislature and exercising control over all the Charity Hospitals and Penitentiaries of the City, have provided 12 ambulances, 10 of which are stationed at Bellevue Hospital, where 7 horses and 3 drivers are constantly on duty. One is kept at the Reception Hospital in 99th St. and 1 at the Reception Hospital in the City Hall Park, each with horse and driver.

The construction of these vehicles is as follows:—

The body is not unlike a light express wagon, covered above with a strong ash frame and leather-canvas cover and resting on 4 eliptic springs. The forward wheels cut under, so that the wagon can turn in the shortest space. A spring mattress stretcher with a wooden frame runs into the wagon from behind on rollers and upon this stretcher the patient is put into and taken out of the ambulance. There is also a second stretcher of canvas and side poles (the canvas being made in two pieces) on which the patient is first placed and lifted onto the frame stretcher, and on which he is again lifted after being placed upon his bed, to allow the frame stretcher to be taken away.

The patient is thus saved from unnecessary suffering while being carried from the place of accident to his hospital bed.

Each ambulance is supplied with a fracture box for the leg, an assortment, under the driver's seat in front, of the more necessary and simple surgical appliances, and also stimulants, opiates and antidotes for common poisons.

The surgeon's seat, which is removable, is inside the ambulance, across the back part, and consequently over the patient's legs. There are side lanterns in the usual place.

The ambulance system is no longer an experiment. It is not at all infrequent for 5 or 6 ambulances to be out at the same time, and in case of disaster, such as a large fire, falling of a wall, explosion of a boiler, they are all called into service.

When an ambulance is required at any point, it is telegraphed for from the nearest police station to the Police Headquarters, and thence to Bellevue or to the nearest Reception Hospital, whence the ambulance, driver and surgeon are dispatched.

It is, no doubt, the proper province of the authorities of this City [Boston] to provide ambulances at the public expense, instead of leaving the service to be done by private charity. The police and telegraph could then be used to facilitate the service. But the City does not do it, nor is it likely to, in the first instance.

Your Committee therefore recommend that this Hospital provide at first, one ambulance and horse for its own use, to be under the control of the Resident Physician, with such regulations as the Trustees may establish.

It is believed that even such limited provision would necessarily attract the favorable attention of the City Government and presently secure an adequate system of public ambulances.

Furthermore, a private ambulance, belonging to this Institution, would probably always be found useful in its own administration and also in some cases of accident or sickness among a class who are not subjects of hospital treatment.

An ambulance of the N. Y. pattern costs $600. Estimated cost of horse and harness, $400. Total cost, $1,000. Estimated current cost for maintenance, $600 per annum.

Additional charge for runners, $75.

With telephones right under our dial-fingers these days, to be used in emergencies, the statement that the telegraph was used in calling for ambulances in New York in 1872 sent us to our reference books to refresh our mind on the dates of the inventions of the telegraph and telephone. In case you may have forgotten, too—Professor Joseph Henry, in 1831, was the first American scientist to operate a sounding electric telegraph; and Samuel F. B. Morse's first commercial line, between Washington and Baltimore, was opened to the public on April 1, 1844. It was not until March 7, 1876 that a patent was granted Alexander Graham Bell for his method of transmitting speech by means of electricity.

But back again to the first MGH ambulance. The receipted bill, paid to a New York carriage manufacturer, bears the date March 31, 1873; and a notice in the Annual Report for that year reads:

> ### THE AMBULANCE
> ### of the
> ### MASSACHUSETTS GENERAL HOSPITAL
>
> Accompanied by a Medical Officer, will be dispatched to any point north of Dover and Berkeley Streets, for the conveyance of cases of *accident*, or *urgent sudden sickness, not contagious*, to this Hospital, or elsewhere, upon notice from a Physician, the Police, or other responsible source, subject to the approval of the undersigned.
>
> In cases requiring gratuitous treatment, no charge will be made.
>
> By order of the Board of Trustees.
> Norton Folsom, M.D.,
> *Resident Physician,*
> *Mass. Gen. Hospital, Blossom St.*
>
> Boston, September 1, 1873.

* * *

A few weeks back, a special kind of survey, known as the Hospital Council Project, was being conducted at M.G.H A good deal of activity was going on in one of the reception rooms off the main corridor of the White Building, and perhaps many of you—as did we—wondered what it was all about. As a result of our inquiries, this explanation of the work has been sent us by Mr. Royal Parkinson who headed the survey:

While hospitals have been concentrating upon advancing the science and art of healing, it has become increasingly clear that we may have overlooked the science and art of attracting and holding people to perform such functions. The healing art gets nowhere without people to apply it. In a hospital this means not only the professional staff (such as doctors, nurses, social workers, and dietitians), but kitchen and housekeeping workers, office personnel, and mechanics—an average of more than one well person for each patient. The problem of *people* is now the bottleneck which throttles progress. Rising hospital costs would accentuate this, even if resulting limitation of potential patient care should not.

The Hospital Council of Boston, Inc., during the presidency of our Dr. Faxon, began a broad study of this problem of human relations in hospital employment. This resulted, a year ago, in an exemplary personnel policy suggested for relations between hospital administrations and their full-time paid employees at two levels—the intermediate supervisory staff, and all other employees. The first of these was emphasized as the more urgent, because when relations at that level are sound they will almost automatically be reasonably sound, by contagion, at the subordinate level. The Council issued a report on this subject. Massachusetts General Hospital was one of the guinea pig hospitals in that study.

This year the Council, under the presidency of Dr. Wilhelm, with Dr. Faxon as Chairman of its Personnel Policies Committee, undertook another step—that of analyzing the content of the many hospital jobs with a view to grouping them for compensation purposes, and then devising an incentive method for compensation intended to attract and hold hospital workers. In this study, too, Massachusetts General Hospital was one of the guinea pigs, and the half-dozen job analysts who were with us for two or three weeks completed that part of the study. When the material is digested, a report with recommendations is expected from the consultant who conducted both studies.

THE PURPOSE OF THE SURVEY — It is generally recognized that of the total incentive to human effort, about 60% of the incentives are emotional and 40% monetary. For instance, an occasional deserved compliment—not flattery—is a real stimulant. Also, recognition in pay for the quietly efficient type of person, equal to that of the more vocal and demanding type, is an important emotional stimulant. Again, job security is more important than rate of pay to a majority of workers. Equity and orderliness in the methods of compensation are difficult to attain, but it is thought that much improvement is possible. This study aims to take into account both types of incentive.

The survey will attempt to standardize job titles in hospitals, reducing them from more than 500 to perhaps 100. This will help in recruiting workers for hospitals, and in inter-hospital pay comparisons.

A compensation scale found to be normal and fair is needed, also, to guide the allotment of Community Chest funds in a way to win and hold the confidence of contributors.

HOW JOBS ARE ANALYZED AND GROUPED — The method employed in job analysis is not uninteresting. In each of six sample hospitals, 125 jobs are studied. Standard titles are agreed upon by committees. The jobs are arranged in groups in the order of their "point values". An effort is made to determine the salaries and "leisure pay" (vacations, etc.) of some 15,000 employees in the 33 hospitals which are members of the Boston Council, and those of similar non-hospital occupations. From this information, together with a study of possible sources of income, the Hospital Council can formulate a desirable compensation and employee-progress program.

The jobs are compared and grouped by the use of four occupational "yardsticks"—one for supervisory positions, one for professional occupations, one for office jobs, and the other for "all other" occupations. It is considered important that these yardsticks be applied uniformly within the occupation—that is, that the yardstick not be stretched to favor any group. Actually, the yardsticks comprise twenty-five test points applied to each job.

The analysts ask for every type of work performed during the past twelve months in order to make up all the duties of the job being analyzed. They are interested in the content of the job basket, not in the basket—the person holding the job. They then break the job into 25 elements common to all jobs of that type, apply the "point" yardstick to them, and total the elements into a job total. True it is that apples and pears are not comparable. But when we analyze their elements we find that both are comprised mostly of water. Their other components, too, are chemicals which are comparable. Compare their parts and you can relate the fruits to each other for the purpose desired. In the same way jobs can be compared.

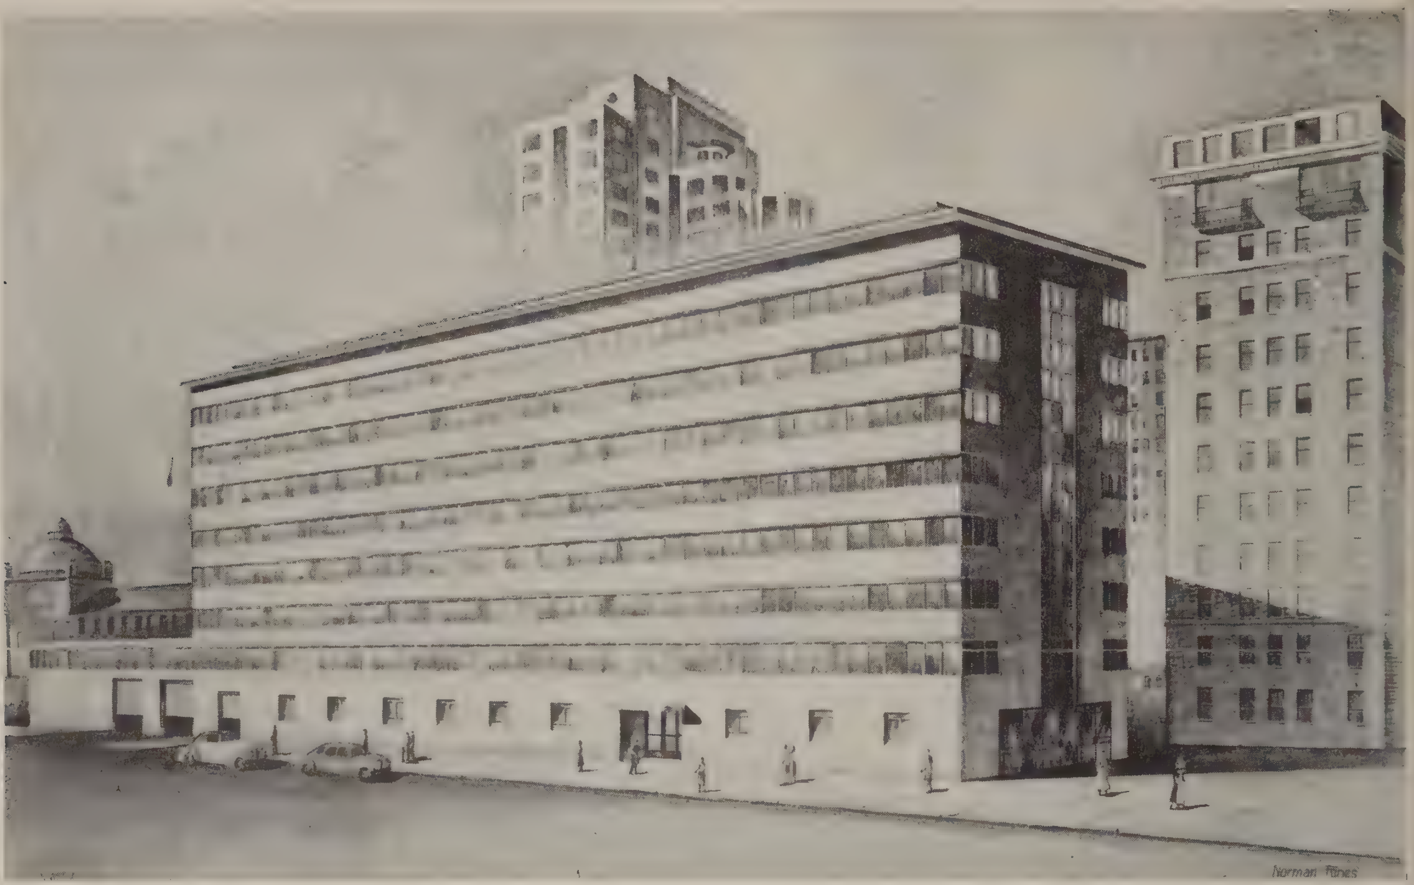
At first thought, some jobs seem to be too intangible to exhibit any content. It is not possible, however, to ask successfully to be paid for an occupation whose values are too intangible to be visible to the employer. Job analysis is a healthy aid to making the values of any occupation more visible to both the job-holder and the employer.

Job evaluation is not new. It has been done in individual cases, but often superficially and rarely uniformly.

The combined studies are intended by the Council to become guideposts toward greater job security in hospital employment and to provide incentives for greater success in such employment, greater enjoyment in it, and greater service to the sick.

* * *

Two sessions of clinical pastoral training were again sponsored at the M.G.H. this past summer by the Institute of Pastoral Care. A total of 48 theological students and clergy attended, representing the United States, Canada, and China. Members of the hospital staff provided part of the instruction. The program was directed by Rev. James H. Burns, Associate Protestant Chaplain. Similar courses were also given by the Institute at the Worcester State Hospital and the University Hospital at Ann Arbor, Michigan.



The proposed Massachusetts General Hospital Research Building

The Institute continues to publish the new *Journal of Pastoral Care* which contains articles of interest to members of all the healing professions. Sample copies will be sent upon request and without cost.

New addresses:—

- Dr. James E. Kreisle (*WM* 1943), 2009 Hopi Trail, Austin, Tex.
- Dr. Fathollah K. Mostofi (*a. P* 1943-46), Army Institute of Pathology, Washington 25, D. C.
- Dr. Frederick K. Poulin (*Dn.* 1942), 196 Marlborough St., Boston, Mass.

Brief bits:—

- Dr. Arthur A. Holbrook (*CM* 1933 & *EM* 1934) and Mrs. Holbrook made a flying trip to Boston last November—their first since 1941. Milwaukee is a long way off, and their visit was all too short.
- Dr. Nathan O. Kaplan (*a. Res. Chem.* 1945) has been appointed Assistant Professor of Biological Chemistry at the University of Illinois College of Medicine. Dr. Kaplan was associated with the Manhattan project for three years during the war.
- Dr. Marshall deG. Ruffin (*P* 1939) announces the opening of his office at 2015 R St. NW., Washington, D. C.

Sometimes it seems as if the greater the distance a letter travels on its way to us, the deeper our appreciation of it. That was how we felt about this letter from Dr. R. Nelson Hatt (*Or.* 1919).

The invitation to send a note for The News makes one feel he really belongs to the family.

It is probably an old story that I returned to Honolulu in October 1946, while on terminal leave from military service, to resume my old job as Chief Surgeon of the Honolulu Unit, Shriners' Hospital for Crippled Children. This unit, the second to be established by the Shrine, was opened January 2, 1923 by a callow youth named Hatt, whose only qualification consisted in a recommendation from his beloved Chief, Dr. Robert B. Osgood [*WS* 1900]. I was transferred to the New England Unit in 1925, but through the years there was always the call of the islands, although it took a war to effect my return.

In March 1947, Dr. Richard S. Dodge [*a.r.s. Or.* 1946] joined me, and in July of the current year we became office partners. It has been a very happy association for us both. Incidentally, I find great enjoyment in the four little Dodges who call me "Uncle Nelson".

Best wishes and a warm Aloha to all our old friends.

This interesting and amusing letter has come from Dr. Harold H. Hamilton (*r.s. PH* 1933) of Plymouth, Massachusetts.

Your stir-up note means, evidently, you expect to hear from even the country doctors once every so often.

Since my return from military activities, some three years ago, I have remained quietly a chronic subscriber and reader of The News, noting with particular interest the many letters coming through from physicians and others who have been able to make some surveys of the war-ridden countries in the postwar era. These make very absorbing reading. I hope they will keep coming. Oliver Cope's recent masterpiece should stimulate others. His geographic discourse on Switzerland made me recall. an amusing incident which happened to me in Zurich in the fall of 1945. While making an overnight stop there on one of the standard GI tours so popular at that time, it suddenly occurred to me that my forebears on one side of my tree, named Ulrich, had come from that city. I picked up a telephone directory and found forty-seven Ulrichs listed in the book. None looked familiar, but one named Hedy Ulrich caught my eye. However, the voice I heard from the other end of the line didn't sound like any of the Hollywood Hedys I had half expected to hear. It was that of at least an octogenarian, in German. I waited until my return to this country to find out more about my ancestors. My mother told me her grandfather Ulrich had come to this country in 1848, so I don't wonder that all I could get out of Zurich's Hedy was something which sounded like "nix ferstanzee".

Cranberry Bog surgery is going along very nicely down in this section, but our Community Hospitals are having the same pains in a small way that M.G.H. and the others have on a larger scale. And then we have the bugbear of Federalized Medicine down this way, too. Since November 2 it has become more than a b.b. We feel its hot breath on the backs of our necks, and we have written our Senator about it.

Col. William H. Amspacher was a Clinical Fellow in Surgery at M.G.H. during 1947. From Baylor University, College of Medicine, Houston 1, Texas, comes this letter from him.

My November issue of The News has just been forwarded to me from Washington, D. C I was so pleased to receive it, I am sending a change of address to prevent future delays.

Since leaving the General on 30 June 1947, I have spent fourteen not too happy months worrying with Army Personnel matters in the Surgeon General's office in Washington. On October 1 the big break came, however, and I am now assigned as Instructor in Surgery at Baylor Medical School.

The News is always welcome because of the interesting writings of the staff, as well as news of friends and acquaintances.

The News sends best wishes for 1949 to everybody, and submits the following suggestion to head your list of New Year resolutions:

If you have not already written us that letter, resolve that within a week it shall be done. It is such a convenient and time-saving way to keep in touch with the entire hospital family. How about it? Are you going to let another "evening sun go down without" etc.?

THE NEWS

No. 76 Boston, Mass. February 1949

NEUROLOGICAL SERVICE AFFAIRS

This department has been short-handed since the retirement of Dr. James B. Ayer, Dr. Charles A. McDonald, and Dr. George Clymer, but fortunately has had the valuable help of competent and industrious men working in the department as Clinical Fellows.

Dr. Gardner C. Quarton, who left in June and is now Resident in Psychiatry, was succeeded by Dr. Vincent P. Perlo, who had previously been Assistant Resident at the Boston City Hospital and Assistant Resident in Psychiatry at the New Haven Hospital. Dr. Edwin B. Goodall, whose specialty is ophthalmology, is spending a year in neurology before beginning his service as Resident at the Eye and Ear Infirmary. He and Dr. Perlo are making a study of the headache, fundus changes, spinal fluid findings, and the neurological complications of hypertension. Dr. Howard S. English, whose objective is neurosurgery, has been with us for some time and has made himself exceedingly useful, particularly in neuropathology. Dr. Alexander P. Arellano of Lima, Peru, is working in the Brain Wave Laboratory with Dr. Robert S. Schwab. He is on a fellowship from the United States Public Health Service.

The weekly clinical conference continues to be held in the Ether Dome on Thursday mornings. On the first Thursday in every month, this is a joint meeting with the Eye Service, at which neuro-ophthalmological conditions are shown.

On Tuesdays at 4:30, there is a meeting in the Pathology Laboratory for the demonstration of neuropathological material and discussion of the cases taken up, with emphasis on the correlation of clinical manifestations and anatomical findings.

Once a week, Dr. Schwab and Dr. John A. Abbott have a conference for the house staff and others who are interested in the interpretation of electroencephalograms.

Other long-established activities are being continued. The Myasthenia Clinic, directed by Dr. Henry R. Viets and Dr. Schwab, is held every other Friday morning. A special Clinic for Vertigo is conducted by Dr. Madelaine R. Brown on Tuesday mornings, and an Epileptic Clinic by Dr. Abbott on Saturday mornings.

The Language Clinic for the study and treatment of patients with reading difficulty, stuttering, aphasia, and other speech disorders, in charge of Dr. Edwin M. Cole, has been enlarged. One of its important functions is the treatment of veterans with speech disorders, consisting in most cases of aphasia resulting from head injuries.

Dr. Schwab, in charge of the Brain Wave Laboratory, has been carrying on studies in muscle fatigue and poliomyelitis. He has also been testing a new drug, PARPANIT, in the treatment of Parkinsonism, with encouraging results in some cases. A report of this work by him and Dr. Archibald D. Leigh will soon appear in the *Journal of the American Medical Association.*

Charles S. Kubik, M.D.,
Chief of Service

For over a year a Department of Industrial Medicine has been contemplated. Application to the U. S. Public Health Service resulted in a grant being promised, to become effective when the clinic would be established. The establishment of the clinic was delayed by reason of Dr. Harriet L. Hardy's appointment to Los Alamos, but she has now returned and it is hoped we will get under way about the first of February. This seed, which was planted so long ago, is beginning to germinate.

This is a joint enterprise of the Massachusetts General Hospital, Massachusetts Department of Public Health, Massachusetts Department of Labor and Industries, and the Department of Industrial Hygiene of the Harvard School of Public Health. Dr. Hardy, holding appointments in all of these units, brings their interest in industrial medicine to focus at the M.G.H., emphasizing the clinical, teaching, and research aspects of industrial diseases and their prevention and treatment.

Two beds in the Medical wards will be assigned for industrial cases, but it is recognized that this will be largely on an intermittent basis, dependent entirely upon the frequency with which industrial medical problems require individual hospitalization.

The out-patient service will be operated in the Medical Clinic, starting one day a week and increasing according to the demands made upon it.

In short, the whole idea is to provide a department interested in industrial problems and competent to investigate them, and then to let it expand according to the demands made upon it. It is hoped that an immediate result will be the referring of patients in other hospital departments —Medicine, Surgery, etc.—to the Industrial Clinic when there is any possibility of industrial complications.

N. W. Faxon, M.D.,
Director

Limited space in our little paper has made it impossible to publish the subjects of recent talks given at the regular monthly Medical Service meetings and those of the MGH Research Council. We do like to keep our readers—especially those who are away from the hospital —informed of the many interesting topics under discussion here, and shall do so whenever space permits.

At the January 14 Research meeting, Drs. I. T. Nathanson, B. J. Kennedy, W. J. Emerson, and J. C. Aub spoke on "Studies on hormonal alteration of carcinoma of the breast"; and Drs. F. C. Bartter, P. Fourman, A. P. Forbes, W. M. Jefferies, and F. Albright talked on "An analysis of the various factors influencing potassium and phosphorus excretion on administration of adrenocorticotrophic hormone".

Dr. Means has been acting as the Stieglitz Visiting Professor at New York University for the month of January. Dr. Means was the first professor to fill this new office.

In spite of the necessary increase in our subscription rates a year or so ago, THE NEWS received $521 in contributions during 1948, over and above the subscription fees.

We always send a note of thanks to each contributor when his donation is received, but we take this opportunity to thank you all once again for your loyal support of our hospital paper.

A few Sundays ago, Mr. Edward A. Weeks, Jr., Editor of the *Atlantic Monthly,* in his regular weekly broadcast which he gives under the title, "Editor at home", talked about Dr. Harvey Cushing, the famous brain surgeon, who was an alumnus of M.G.H. in the Class of 1896.

Near the close of his broadcast that day, Mr. Weeks read Dr. Cushing's favorite quotation, from a book by Stephen Paget. The passage made such an indelible impression upon us, we secured a copy of it from Mr. Weeks and are repeating it here for all of you to whom it so rightly belongs and who may not be familiar with the quotation.

> Every year, young men enter the medical profession who neither are born doctors, nor have any great love of science, nor are helped by name or influence. Without a welcome, without money, without prospects, they fight their way into practice, they find it hard work, ill-thanked, ill-paid. But they stick to it, and Heaven, sooner or later, lets them know what it thinks of them. . . . They hesitate to give the name of divine vocation to work paid by the job, and shamefully underpaid at that. Surely a diploma, obtained by hard examination and hard cash, and signed and sealed by earthly examiners, cannot be a summons from Heaven. But it may be. For, if a doctor's life may not be a divine vocation, then no life is a vocation, and nothing is divine.

OFFICIAL NOTICE

The Dispensary, a new unit in the Out-Patient Department, is expected to open on February 1. It is located in the basement of the Out-Patient Building across from the Orthopedic Clinic. It is under the direction of the Out-Patient Department Committee and belongs to no one Hospital Service.

The O.P.D. Dispensary is designed to fill a need of the Hospital in its provision of care to the Service patient who is ambulatory. At present, the O.P.D. serves in two major capacities. (1) As a General Practitioner for patients (primarily resident in the vicinity of the M.G.H. and the Infirmary) who receive no other medical service. (2) As a Specialist to patients who have their own family physicians but who are unable to afford the services of the Specialist and the diagnostic and therapeutic procedures which serious illness requires. Despite the difference in management which these two groups of patients demand, we now handle all of them together in our 36 General and Special Clinics. Actually, the name "General Clinic" is not proper. Our General Clinics are clinics in the major specialties.

The Dispensary will take on the first function. Its objective will be to provide good general practitioner service, expeditiously and at minimum expense, to all patients who do not have their own physicians. It is believed the objective can be obtained by:

1. Having the doctors (either Resident or Visiting Staff and regardless of special training, interests, or Service appointment) treat illnesses of all disease groups.

2. Abbreviating the administrative processing by limiting the admission and financial interview, by establishing the clerk of the Dispensary as a subsidiary Cashier and Record Room Clerk, and by sending the patient to Chest Survey after the Dispensary visit.

Each existing Clinic will then function only as a Specialist, serving as Consultant to the Dispensary and to other Clinics and accepting for management those patients requiring continued specialist care. Once a patient has been accepted for management in a Clinic, the principles for consultation, transfer between clinics, and discharge will be similar to those followed in the House.

N. W. Faxon, M.D.,
Director

The Board of Trustees, at their meetings on December 10 and 24, and January 7, voted:

To accept with regret the resignation of Dr. Wade Volwiler from the position of Assistant in Medicine;

To reinstate Dr. Harriet L. Hardy as an Assistant in Medicine, as of February 1;

That Dr. Ronald C. Sniffen's title be changed from Assistant Pathologist to that of Assistant Visiting Pathologist, as of January 1.

To appoint:

Dr. William R. Eyler as Associate Radiologist, as of July 1;

Dr. Robert H. Fennell, Jr. as Assistant in Pathology, as of July 1;

Dr. Charles S. Keuper as Assistant Resident in Dermatology, beginning January 1;

Dr. James A. O'Shea as Assistant Resident on the Children's Medical Service from July 1, 1949 to June 30, 1950.

To appoint the following Assistant Residents on the Anesthesia Service:

Dr. Armand L. Bengle, beginning July 1;

Dr. William R. Brewster, Jr., for two years beginning October 1;

Dr. George A. Culver, for two years beginning August 1;

Dr. Genesio L. D'Alessandro, for one year beginning July 1;

Dr. Bjorn Ibsen, for one year beginning March 1;

Dr. Nils Normann, beginning April 1, 1950;

Dr. David V. Thomas, beginning July 1, 1950.

To appoint the following Assistant Residents in Orthopedic Surgery for one year each, as indicated:

Dr. Robert E. Funsch, beginning April 1, 1950;

Dr. Richard M. Kilfoyle, beginning July 1, 1950;

Dr. Joseph L. Shugar, beginning January 1, 1950;

Dr. Robert J. Vitt, beginning October 1, 1950.

To appoint the following in Radiology:

Dr. DeForest E. Hale as First Assistant Resident, for six months beginning January 1;

Dr. Frederick W. O'Brien as First Assistant Resident, beginning July 1;

Dr. John D. Reeves, Jr. as Assistant Resident, beginning January 1;

Dr. Edward J. Sennett as First Assistant Resident, for one year beginning January 1;

Dr. John L. Sosman as Assistant Resident, beginning July 1.

At their meetings on December 15, 22 and 29, and January 6, the General Executive Committee voted:

To accept with regret the resignation of Dr. Nathan O. Kaplan, to become effective as of December 31, 1948.

To promote:

Dr. William V. McDermott to the position of Resident in Surgery for the months of January and February;

Dr. Gardner Quarton to the position of Resident in Psychiatry, effective January 1;

Dr. William C. Quinby, Jr. to the position of Resident in Surgery for one year, beginning March 1;

Dr. John W. Raker to the position of Resident in Surgery for one year, beginning January 1.

To appoint:

Dr. Bedford F. Boylston as Clinical Fellow in Orthopedic Surgery for the period April 1 to October 1, and to appoint him as Senior Resident on the Orthopedic Service for a period of one year, beginning October 1;

Dr. Ting C. Chou as Research Fellow in Biochemistry;

Dr. John A. Duggan as Clinical and Research Fellow on the Children's Medical Service for one year, beginning July 1;

Dr. Francis T. Gephart as Clinical Fellow in Surgery for the month of January;

Dr. Paul D. MacLean as Research Fellow in Psychiatry, to work in electroencephalography;

Dr. Albert J. D. Michel as Graduate Student Assistant in Surgery for six months, beginning January 6;

Dr. Agustin L. Roque as Graduate Student Assistant in Pathology for six months, beginning January 1;

Dr. John E. Stewart as Clinical Fellow in Orthopedic Surgery for one year, beginning February 1;

Dr. John L. Sullivan as Clinical Fellow in Neurology, assigned to the Brain Wave Laboratory, for three months, beginning January 1;

Dr. Selwyn F. Taylor as Clinical and Research Fellow in Surgery for one year, beginning December 15, 1948;

Dr. Iwao Uyeda as Clinical and Research Fellow, assigned to the Harvard Pediatric Service, for the period December 1, 1948 through June 30, 1949;

Dr. John L. Wilson as Clinical Fellow in Surgery for six months, beginning January 1.

⁂

We have been tempted many times to announce the number of hours of work some of our volunteers have contributed to the hospital, but have refrained from doing so because of the realization that perhaps in many instances greater self-sacrifice may have been necessary on the parts of some who may not have accumulated as much time to their credit as have some others. However, one of our volunteers has set some kind of all-time record, and we have decided to tell you about it.

Up to January 1, Mr. William Barroll had given 10,146 hours of volunteer service, and he is still going strong. During the month of December alone he gave 138 hours to the Vincent-Burnham Building.

Mr. Barroll has every right to feel proud of that record, and everyone associated with M.G.H. in any way is, we feel sure, very grateful to him for such devoted service.

A group consisting of the wives of the House Staff of the Massachusetts General Hospital and the Massachusetts Eye and Ear Infirmary has recently been formed. They have held, and will continue to hold, monthly evening meetings. Many of the meetings will be at the hospital; others will be held in the homes of the members.

The wives' purpose in organizing was to enable the members to become better acquainted with each other and with the hospital in which their husbands work. Although the social aspect has been of prime importance so far, the group hopes to work toward planning activities that will be of benefit to the House Staff as well as to the members themselves. For instance, they were instrumental in inaugurating the "family" Christmas dinner at the hospital this year, for those doctors who were on duty that day.

Other plans include a Housing Bureau, headed by Mrs. Royal Schaaf—telephone number ELiot 4-0416. Mrs. Schaaf would appreciate receiving any information about apartments for rent or sublease at the present time or in the future. Also being established is a Baby-sitting Bureau, headed by Mrs. Roger Wilcox—telephone CApitol 7-2914. Anyone interested in baby-sitting, day or night, please call Mrs. Wilcox.

An invitation to join this group is extended to the wives of doctors who are here as Fellows, Clinical Assistants, and such (other than Visiting Staff).

For further information, please get in touch with Mrs. Grant Rodkey—telephone LAfayette 3-0133, or Mrs. Courtney, Chief of the Volunteer Service here at the hospital.

PERIPHERAL VASCULAR CLINIC

The Peripheral Vascular Clinic at the Massachusetts General Hospital was organized approximately twenty years ago by Dr. Arthur W. Allen, then a Visiting Surgeon at the hospital and later to become Chief of the East Surgical Service. He was appointed chief of this new surgical clinic on November 21, 1928. It was the first of its kind to be organized in the United States and unique among all similar clinics since formed, because it was organized by a surgeon and is still run by surgeons, whereas in other institutions they are primarily medical clinics and the surgeons act chiefly as consultants.

Dr. Allen gathered around him a group of young surgeons interested in peripheral vascular disease, and in addition obtained the services of Dr. George W. Van Gorder, an orthopedic surgeon, to cooperate in the handling of patients with prostheses, special shoes, and braces. In addition, he enlisted the services of a well-trained podiatrist, Dr. John F. Kelly, who still carries on a Podiatry Clinic in the Out-Patient Department. The cooperation of the Social Service Department was also obtained by assigning one social worker to the clinic, who accompanied the group on the weekly ward rounds. The benefits obtained by this close association between the surgeons and the Social Service Department have proved of inestimable value in the proper care and the disposition of patients following their discharge from the hospital, and in bringing back patients at regular intervals for treatment and follow-up studies.

The original group of surgeons, in addition to Dr. Allen, included Drs. Leland S. McKittrick, James C. White, Reginald H. Smithwick, Henry H. Faxon, and Theodore C. Pratt. Many of them have made important advancements in the treatment of various peripheral vascular diseases. They were stimulated greatly, without question, by the enthusiasm, direction, and counsel of their chief, Dr. Arthur W. Allen. Dr. Leland S. McKittrick, with his special interest in the diabetic patients, contributed greatly to the handling of the diabetic arteriosclerotic, and through him a close liaison was maintained with the Diabetes Clinic at the New England Deaconess Hospital, so that as a result both doctors and patients greatly benefited. Drs. Allen, White, and Smithwick, along with Dr. Jason Mixter of the Neurosurgical Department, played important roles in the development of sympathetic neurectomy for Raynaud's disease in our hospital and, as is well known, Dr. Smithwick from this branched out into, and contributed greatly to, the surgery of the autonomic nervous system for the treatment of hypertension. Dr. Henry Faxon made important contributions to the therapy of varicose veins. He was assisted by the other members in taking care of numerous patients with this disease by means of injections with sclerosing solutions, the method in vogue at that time. Additional members were added to the group shortly after 1930, including Drs. Robert R. Linton, John B. Sears, and Richard H. Wallace. Dr. Harrison E. Kennard joined the group in 1934, Dr. Claude E. Welch in 1937, and Dr. Edward Hamlin, Jr. in 1939. Dr. James C. White left the group in 1935 to join the Neurosurgical Service, to which he was appointed Chief in 1941. Dr. Reginald H. Smithwick also left it in 1946 to become the Professor of Surgery at Boston University School of Medicine.

Dr. Leland S. McKittrick became Chief of the clinic when Dr. Allen resigned in 1940 and remained in this position until March 1946, when he resigned as Chief and Dr. Robert R. Linton was appointed. During World War II the clinic ran on a mere skeleton staff, since so many of its members were in the armed forces. After hostilities ceased and the men returned home, additional surgeons were taken into the group, as many of the former members had developed other interests or had become associated with other hospitals. The group at present includes: Drs. Henry H. Faxon, Claude E. Welch, Richard H. Wallace, Edward Hamlin, Jr., Richard Warren, Fiorindo A. Simeone, Richard H. Thompson, Gordon A. Donaldson, Irad B. Hardy, Jr., George F. Emerson, and John B. McKittrick.

The clinic functions in both the Out-Patient Department and in the hospital. Originally the out-patient clinic met every Saturday morning, but more recently it has been changed to Friday morning as a more suitable time. This part of the clinic functions more as a clearing house for the diagnosis and the disposition of patients rather than for actual therapy. The patients referred to the hospital for treatment are placed under the direct supervision of members of the clinic, so that special forms of therapy may be carried out on them which otherwise would not have been possible. Another important function of the clinic has been the weekly ward rounds held each Thursday morning from eight to nine since the clinic was first established. These are not only for the benefit of the members of the group and the patients, but they have also served as teaching rounds for both medical students and visiting doctors. Originally they were bedside rounds, but since the war, because of the attendance of so many visitors, not only from this country but from all parts of the world, they have been changed to the Surgical Amphitheatre in the George Robert White Building.

During the past year, a laboratory for the study of, and research in, peripheral vascular diseases has been established and is under the direction of Dr. Simeone. The clinic has been fortunate to obtain the services of Dr. Davitt A. Felder, from the Surgical Department of the University of Minnesota, to work in the laboratory and the Out-Patient Department. At the present time, the laboratory is used for pre- and postoperative studies in those patients who are to be subjected to sympathectomy. A careful follow-up of patients with Raynaud's disease who have been sympathectomized is under way, in an effort to determine whether it is possible to perform a more complete and lasting sympathectomy than that done heretofore on this group of patients. Dr. Simeone is also carrying out special vascular studies on veterans who sustained injuries to major arteries of the extremities.

Important advances have been made in the field of peripheral vascular surgery at the Massachusetts General Hospital by the surgeons of this clinic, notably sympathetic neurectomy for Raynaud's disease, thromboangiitis obliterans, and peripheral arteriosclerosis of the lower extremities, surgery of the lower extremities in diabetic patients, surgical treatment of varicose veins and chronic ulcerations of the lower legs secondary to thrombophlebitis, and the surgical treatment of venous thrombosis and pulmonary embolism by proximal vein interruption. Many outstanding articles concerning these subjects have been published in the surgical literature by members of the clinic. In addition, several textbooks have been published, including *The autonomic nervous system,* by Drs. White and Smithwick, *Diabetic surgery,* by Drs. McKittrick and Root, and the chapter in Nelson's *Looseleaf medicine* by Dr. Allen on "Peripheral vascular diseases". Dr. Allen was honored recently by election to the presidency for 1948 of the recently organized Society for Vascular Surgery.

The present and past members of the clinic wish to pay tribute at this time to the former Chiefs of the clinic, Dr. Arthur W. Allen and Dr. Leland S. McKittrick, who have played such important roles in many of the advances that have been made in this field of surgery, and for their teachings, stimulation, and counsel.

Robert R. Linton, M.D.,
Chief of Peripheral Vascular Clinic

A postgraduate course in Internal Medicine will be given at M.G.H. March 7-19. Dr. Means will act as Director.

This is one of nine courses arranged by the American College of Physicians, to be given at various cooperating institutions in the United States. A preliminary bulletin has this to say, in part, concerning the course to be given here:

"This course will in no sense be a 'review' or 'refresher' course. The objective will be to offer a series of exercises in the application of theory to practice, by means of certain, we hope, well chosen examples. We hope further that the course will prove to be stimulating and provocative of thought rather than refreshing.

"The course will have six divisions, each assigned to some broad subject, and under the direction of a Chairman who will arrange its detailed program. Each division will consist in a morning, an afternoon, and a second morning. Alternate afternoons will be left free for exercise, cerebration, or what have you.

"The general policy will be to devote the first morning in each division to fundamental considerations, presented largely by preclinical teachers of the Harvard Medical School. The afternoon following will become more clinical, and the second morning may be devoted to clinics in which patients are shown, their cases interpreted, and their treatment planned in terms of the scientific foundation which has preceded."

The several divisions and their chairmen will be as follows:

March 7 and 8—Some problems of endocrinology. J. H. Means, M.D., F.A.C.P., *Chairman.*

March 9 and 10—Cancer. J. C. Aub, M.D., *Chairman.*

March 11 and 12—Recent advances in the management of cardiovascular diseases. E. F. Bland, M.D., *Chairman.*

March 14 and 15—Nutritional problems which arise in the care, medical and surgical, of patients with certain gastro-intestinal diseases. C. M. Jones, M.D., F.A.C.P., *Chairman.*

March 16 and 17—Preventive aspects of clinical medicine interpreted in terms of the natural history of certain important diseases. D. D. Rutstein, M.D., *Chairman.*

March 18 and 19—Rheumatoid arthritis. Walter Bauer, M.D., F.A.C.P., *Chairman.*

The full faculty personnel and a detailed outline of this course will be published later.

The importance of the ward helper in the total hospital situation was pointed up recently by the appointment of Mrs. Irene Granski to a position involving full-time supervision of the ward helpers' program. Mrs. Granski, until a few weeks ago, handled the training program for hospital aides.

Upon the resignation early in January of Miss Claire O'Neil, Miss Marian C. Maxwell came to us as Nursing Supervisor in the Out-Patient Department. Miss Maxwell is a graduate of the Massachusetts General Hospital School of Nursing in the Class of 1927.

Several social events in recent weeks have honored groups within or connected with the Nursing Department. On December 28, Miss Sleeper, Miss Lepper, and Miss Griffin entertained at tea all staff nurses in the General Hospital and the Baker Memorial.

The students held an informal reception in Walcott House on the evening of January 6, to welcome all the new affiliating students.

On January 7, day and evening matrons of the nurses' residences were entertained by Miss Viden at after-dinner coffee.

Worthy of special mention is the Thursday Night Bowling Club of the Nursing School Faculty. Reports from the Bowdoin alleys indicate championship grace and form, and an impressive number of spares and strikes—but individual and team scores remain for the moment cloaked in secrecy.

⁂

New addresses:—

Dr. Diane Croll (*r.p. P* 1948), 3755 Joppa Ave., Minneapolis 16, Minn.

Dr. John W. Smillie (*ES* 1944), USPHS Dispensary, 4th & C Sts. SW., Washington 25, D. C.

MASSACHUSETTS EYE & EAR INFIRMARY

The Annual Meeting of the Corporation and Board of Managers was held at the Infirmary on February 9.

The members of the Corporation, many of them elected during the past year, are: the Honorable Leverett Saltonstall, William S. Ballard, Robert F. Bradford, Mrs. John W. Farley, Dr. Walter B. Lancaster, Rev. Robert G. Metters, Dr. Harris P. Mosher, Dr. Frederick H. Verhoeff, Dr. Harold Walker; the ~~four~~ 5 new members are: Dr. Nathaniel W. Faxon, Robert Hopkins, Miss Amelia Peabody, Arthur T. Lyman, and August R. Meyer.

The members of the Board of Managers now are: Henry Hixon Meyer, President; Edmund V. Keville, Secretary; Horace W. Frost, Treasurer; William H. Claflin, III, Mrs. Richard C. Curtis, James C. Howe, Patrick A. O'Connell, William A. Parker, Henry W. Porter, Edwin H. B. Pratt, Mrs. Sullivan A. Sargent, Walter H. Trumbull, and Frederic Winthrop.

This meeting was for the purpose of electing officers and new members for the year and making the 1949 appointments.

The New England Oto-Laryngological Society held its 45th Annual Meeting on January 7 at the Infirmary. The meeting was in conjunction with the Eastern Section of the American Laryngological, Rhinological and Oto-Laryngological Society, Inc. After a luncheon at the Hotel Puritan, the afternoon session was addressed mainly by guest speakers, among them the following: Laurence L. Robbins, M.D., John F. Enders, Ph. D., W. Lloyd Aycock, M.D., and Conrad Wesselhoeft, M.D.

The Annual Dinner was held at the Harvard Club, and was followed by the business meeting and the election of officers.

The speaker for the dinner was Professor Carroll M. Williams, Associate Professor of Zoology, Harvard University, whose subject was "Instinctive behavior of insects".

A program of Orthoptics, in conjunction with Simmons College, is now being offered at the Infirmary. Seniors at Simmons may elect to spend their fourth or last year at the Infirmary, to gain practical experience in the field of orthoptics and perimetry. This is one of the few schools of orthoptics in the country. In addition to the practical training, lectures are given in anatomy, physiology, optics, refraction, and ocular motility. The course was organized by Dr. Edwin B. Dunphy.

The three students taking the course this year are the Misses Carolyn King, Carolyn Dinsmore, and Marian Ritch. Miss Anne Stromberg, a graduate of George Washington School of Orthoptics at George Washington University, Washington, D. C., is the Technical Director for the course, replacing Miss Kathleen Forman, who resigned the first of December.

The Orthoptic Clinic, as part of the Eye Clinic, has shown a steady growth since its establishment about five years ago. An average of 12 squint or crossed-eye cases are treated daily, prior to surgery.

Dr. Edwin B. Dunphy, Chief of the Ophthalmic Service, gave a lecture before the Central New York Eye, Ear, Nose and Throat Society in Syracuse on January 19. His subject was "The action of miotics".

Dr. LeRoy A. Schall, Chief of the Oto-Laryngological Service, attended the New York Council meeting of the American Oto-Laryngological Association on January 8, and then went to Miami, where he gave a one-week lecture course at the Mid-Winter Seminar of the Miami Oto-Laryngological Association. Following that, he left on a two-weeks' vacation trip to Puerto Rico and Haiti.

Thirty students from the Harvard Basic Science Course are studying Ophthalmology at the Infirmary during the months of January and February.

Examinations for the Oto-Laryngological Residency will be held on March 16 at the Infirmary.

Dr. Jack A. Herman, from Johannesburg, South Africa, spent several days visiting the Infirmary's clinics and operating rooms. He showed special interest in the Eye Bank, and took literature on this service back to South Africa with him.

Dr. Garrett L. Sullivan, Director of the Boston Eye Bank, announces that Miss Olive M. Crowley has replaced Mrs. Eve Chenowith as Executive Secretary.

The Eye Bank also announces the appointment of Mrs. J. Devereux Barker, Jr., Chairman of the Projects Committee of the Junior League, and Dr. Brendan D. Leahey, Associate Surgeon in Ophthalmology at the Infirmary, to the Executive Committee of the Boston Eye Bank.

⁂

NORTH END NUTRITION CLINIC

The North End Diet Kitchen was founded in 1875 for dispensing food to the sick and needy. For nearly fifty years it operated at 8 Staniford Place, under the supervision of a group of most gracious ladies who kept the records, received donations, and allotted items of food where they were most needed. In 1923, the Board of Directors of the North End Diet Kitchen Fund made an agreement with the Massachusetts General Hospital to establish and maintain a Diet Clinic in the Out-Patient Department, to be used as a teaching center in the field of health and disease. In 1946, the name was changed to North End Nutrition Clinic, to avoid confusion with the hospital diet kitchens and to interpret more nearly its aims as a teaching unit.

The object of the Nutrition Clinic is to assist the physician in carrying out dietary treatment. The Dietitian must coordinate her dietary teaching with the medical, nursing, and social service departments. She must plan a dietary regime for and with the patient in relation to his family and home environment, based on his nutrition history. The prescribed diet, based on these factors and planned with the individual, will result in greater cooperation. Educational material includes food models, exhibits, pamphlets, and posters. Group and individual instruction, repeated on successive visits to the Clinic, is a means of teaching the patient his body needs, and combats the misunderstanding that exists regarding food fads, diets, and the problems of nutrition. Prevention of disease and the rehabilitation of the sick help to ease the economic problem of the community and lighten the load of the hospital.

The Nutrition Clinic staff includes 2 Graduate Dietitians, Miss Martha Chase and Miss Ellen Woodmansee, 2 Student Dietitians who spend six weeks of their year's dietetic internship in the Clinic, and one Student Nurse who is in the Clinic for half a day, five days a week for three weeks. The services of 3 volunteer secretaries one-half day a week—Mrs. Holbrook on Friday mornings, Mrs. Gruener on Saturday mornings, and Mrs. Hopkins on Wednesday mornings—are greatly appreciated. They efficiently procure records, weigh patients, and handle details connected with admitting the patient. The Nutrition Clinic is located on the third floor of the Out-Patient Department. Since all patients are referred from one of the 22 special or 14 general clinics in the Out-Patient Department, obtaining the patient's record is a time-consuming task, often delaying dietary instruction. If volunteers were available each day, more time could be spent for teaching both the patients and students. The Nutrition Clinic is open Monday through Friday from 8 to 4:30, and on Saturday from 8 to 2:30. Tuesday and Friday afternoons are reserved for the Diabetes Clinic. Patients are referred by the physician to the Nutrition Clinic without additional cost to the patient. A free consultation service is given the patient for follow-up care, arranged on the same day as the visit with the doctor. However, a clinic visit charge is made for return visits if the patient is seen in no other clinic.

An average of 32 patients are seen daily. Of the 12,000 patients given dietary instruction last year in the Nutrition Clinic, 3,000 were diabetics. There were 2,122 new patients receiving instruction for the first time. Of this number, 208 were new diabetic patients. The prevalence of obesity and the relationship of obesity to the total treatment of the patient is clearly shown through the high percentage of new patients referred to us by the doctor for reduction diets. Dietary instruction for simple obesity was given to 59%. Over-eating, then, may be considered the chief cause of obesity and thus of food waste. Colorful posters and exhibits are used to help the patient in the wise selection of foods to avoid obesity, emphasizing the essentials of an adequate diet and giving hints on buying low-cost foods of good nutritive value. Through social service recommendation, 122 patients were given food budgets to assist them in following more closely the diet prescribed by the doctor.

The poster space above the lunch counter in the O.P.D. gives an opportunity to promote the importance of a good breakfast, a well-planned lunch, and the contribution individual food items make to the nutritional needs of the individual. Through visual education, greater emphasis is thus placed on the normal diet.

Martha Chase, Head Dietitian,
North End Nutrition Clinic

Important events, concerning Massachusetts General Hospital, that occurred in the month of February during the earlier part of the nineteenth century:

Feb. 23, 1813—The first meeting of the Trustees was held at the house of Col. Thomas H. Perkins.

Feb. 1, 1818—Charles Bulfinch's plan for the hospital building was adopted, and immediate measures were directed for getting stone hammered at the State Prison.

Feb. 23, 1823—A committee was appointed to collect a library for each department in the institution.

Feb. 20, 1824—A patient was dismissed by the Visiting Committee for "having introduced liquor privately".

Feb. 12, 1829—The Superintendent was ordered to purchase "a suitable number of silver spoons for use at the Hospital, instead of the present pewter ones". One of these silver spoons is now in the Archives collection.

Feb. 1, 1846—A Free-bed Standing Committee was appointed.

Feb. 22, 1846—The Trustees voted, in answer to a communication from Dr. John C. Warren, that they cannot perceive any advantage to this institution to arise from the erection of a Medical College in this vicinity. However, in 1847 the new Harvard Medical School building was erected on North Grove Street, near the hospital, and there the School remained for 28 years.

Feb. 28, 1847—One of Oberhausser's microscopes was ordered to be purchased for the use of the Admitting Physician, at a cost of fifty dollars.

Feb. 19, 1854—The Visiting Committee presented a surgical operating chair, invented by Dr. Henry J. Bigelow and constructed under his supervision. It was voted "that in consideration of the excellence of the chair and the ingenuity displayed by Dr. Bigelow in its construction, it be called 'The Bigelow Operating Chair', in honor of the inventor."

Feb. 4, 1855—The urgent need of an isolation ward had long been felt. At a cost of $12,000 a "commodious building of two stories, west of the main edifice, containing sixteen rooms", had been erected. It was later called "The Brick". The above figure included the building of a necessary sea-wall. Attention was called to "the dilapidated state of the fence, and the opportunity for embellishing and improving by walks, shrubbery, flowers and culture, the extensive grounds of the Hospital, reaching as they do to low-water mark."

Feb. 3, 1856—The Annual Report for 1855 stated that the average length of time of the stay of free patients, which in 1853 had been 7 weeks, had grown to 11 weeks and 4 days. According to our Annual Report for 1946 the average stay for that year was 18+days.

Feb. 22, 1857—The Trustees voted unanimously that the Chairman of the Board be requested to subscribe, on behalf of the Massachusett's General Hospital, $1,000 toward the fund which it is proposed to establish for the benefit of Dr William T. G. Morton, as a memorial of the great service he rendered to science and humanity, in connection with the uses of ether.

Feb. 5, 1860—In the Annual Report for 1859 the Trustees say: "The object of the Hospital being to afford substantial relief to the largest possible number of persons, it is not consistent with it to use even beds temporarily unoccupied for patients with incurable diseases. It is more in conformity with the design of the institution that eight or ten sufferers by acute disease should be successfully relieved, than that the bed which they might occupy should be used, it may be for a year, by a chronic incurable."

The same Report states that "many patients have attended concerts and lectures in Boston, and public worship on Sunday in various churches. Every Sunday evening a sermon is read, with singing, in one of the wings."

Feb. 28, 1864—It was voted that a Surgeon to out-patients be established, whose duties should correspond generally with those of the Physician to the same department.

Feb. 21, 1868—The salary of the Treasurer was increased to $1,000.

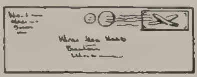
Feb. 3, 1869—The Annual Report for 1868 states that a Dental Service had been added during the year, in connection with the Dental School of Harvard College, and that 1,078 persons had received its services.

Feb. 2, 1870—Dr. John E. Tyler, Superintendent at McLean from 1858 to 1871, reported that 284 patients had been under treatment at the "Asylum" during 1869, of whom 184 remained. Wishing to further identify Dr. Tyler, we turned to Dr. Washburn's *History* and, as always,

No. 14 in a series of Staff photographs
Dr. Joseph S. Barr — Chief of Orthopedic Surgery

it did not fail us. On page 272 of his book, Dr. Washburn says:

> In his second year of office Dr. Tyler asked for and received a regular appropriation of $300 for the general library, which appropriation continues to the present day. He devoted a great deal of attention to the amusement and diversion of patients in the way of weekly entertainments, sleigh rides, singing classes, an orchestra composed of men patients, drawing and French classes for the women, and the like. Believing thoroughly in the idea that bodily infirmities influence the mind for ill, he engaged Dr. Dio Lewis as gymnastic teacher in 1860. Of an extremely religious temperament himself, he encouraged the wave of religious revival which swept over the institution in 1858, and in 1867 succeeded in getting a chaplain appointed. . . .



"Firsts" are always particularly welcome—as are, also, "seconds" and "thirds" and so on. This very interesting "first" has come from Dr. William J. Kerr (*WM* 1916), written from University of California Hospital, San Francisco 22.

> I have just returned from Japan, where I was sent as Expert Consultant in Internal Medicine by the Surgeon General's Office of the United States Army. I visited hospitals in Japan, Okinawa, Guam, and the Philippines, conducting clinics and holding medical conferences.
>
> A large number of recent graduates are doing excellent clinical work in caring for the troops and their dependents. During the next few months, most of these younger clinicians will be returning to civil life, leaving gaps in the military medical organization which can be filled by some form of recruitment (voluntary or draft) from civil life.
>
> The birth rate in Japan greatly exceeds the death rate. Further improvement in the health of children and young adults will increase the crowding and the strain on the scant food supply.
>
> When one sees how the Orientals are conserving their soil and keeping it productive, it is apparent that we are wasting our resources at an alarming rate. It is time we began to retain all areas suitable for production of food near our great cities and to restrict home building to areas which are not suitable for growing food or fibers.
>
> It may interest physicians to know that, during the recent war, Japanese medical students knew that, if they failed in their courses, they became kamikazi pilots.

Dr. Means received this letter from Lt. Frederick C. Goetz, MC, AUS (*M* 1947), which all of Dr. Goetz's friends who have not heard directly from him will find very interesting.

> Just before I left the M.G.H. in June you asked me to keep you in touch with my progress. So far, I have moved from M.G.H. to McC.G.H. and no further. This may not represent progress in all respects but it means a change which is quite complete and, on the whole, refreshing.
>
> Perhaps you may have known McCornack when it used to be the Vista del Arroyo Hotel —a very swank sort of place, I understand. I had never been to California before, and I was therefore properly bowled over when I first viewed the celebrated vista. That, of course, remains unchanged. However, the guest houses have been made into wards, and there are ramps all over the grounds so that the orthopedic patients can get about. It remains a very pleasant place, and locally it is considered one of the nicest spots in the Army. I cannot vouch for this, but along with many others I offer a silent prayer each morning that I will not be moved elsewhere.
>
> Unfortunately, the large volume of cases precludes as careful study as one would wish. There are several attractive features to my work, however. I am seeing some diseases which were known to me only in textbooks before this— coccidioidomycosis, "Q" fever, and amebiasis—and more venereal disease and tuberculosis than I had seen. Most of the patients are under 30, and most of them get well. We are very well supplied with consultants who seem to be among the best in Los Angeles. Among others are Dr. Verne Mason and Dr. George Griffith. They are generous with their time and interested in teaching. On the whole, their visits are very gratifying.
>
> The M.G.H. is held in highest esteem on all sides. I share a little of its reflected glory, and, often enough to help me retain my humility, I am reminded by everyone how fortunate I am to have spent two years there. I do my best to help maintain the MGH reputation. This is not an easy task. The general level of the younger medical officers is high; and, let it be said, most of them were trained in California!
>
> We feel we are understaffed at present to the point of being able to offer merely adequate care. The Surgeon General's Office thinks differently, and after a recent inspection tour we were told we would lose at least six medical officers. That will make the situation even grimmer next summer, when the Medical Corps as a whole loses 3,000 officers. I presume some of the house staff are pondering the same problem.
>
> I have managed to have some time for the piano and to meet some of the Pasadena people. Through friends of Dr. Pittman's I had the pleasure of meeting Dr. Robert Millikan a few evenings ago. He is over 80, I am told, but still works in the laboratory and is quite delightful. He told a story on himself which bears repeating. Not long ago he overheard the maid answering the telephone something as follows: "Yes, Dr. Millikan lives here. . . . Yes, he's a doctor, but not the kind that does anybody any good."
>
> Every good wish for everyone at the M.G.H. For myself, I am wishing that my Army years may continue as enjoyably as they have begun.

The first letter in about a year has come from Dr. Tracy J. Putnam (*ES* 1923). From 416 North Bedford Drive, Beverly Hills, California, he writes:

> I have now been practising neurology and neurological surgery in Beverly Hills and at the Cedars of Lebanon Hospital for two years and enjoy it very much. I also have an appointment as Consultant at the Camarillo State Hospital where I do lobotomies and attend to other neurological problems. With one thing and another, I find myself very busy and am about to move into a larger office so as to be able to take on cases of epilepsy, multiple sclerosis, and cerebral palsy for prolonged treatment. I am looking for an assistant who is just finishing a residency in neurology. Can any reader of The News help me find one?
>
> I still retain my position as Professor of Neurology and Neurological Surgery at Columbia, but my former associate, Dr. H. H. Merritt, has taken over most of the teaching there.

THE NEWS

No. 77 Boston, Mass. March 1949

PHYSICAL MEDICINE AFFAIRS

The Physical Medicine Department is continuing its function primarily as a service unit for patients requiring physical or occupational therapy and specialized diagnostic procedures, usually in relation to neuromuscular functions. As there is no space available for physical expansion of the department, the number of patients which can be treated has about reached its limit for the present facilities.

Some changes have been observed during the past eighteen months in relation to the types of problems for which patients are referred to the department. For example, there has been an increased awareness of the importance of preparing patients to meet the needs of daily activities at home before they are discharged. Although it is impossible without a very great increase in trained technical staff to prevent deconditioning of all bed patients by prescribing bed exercises, convalescent exercises are being utilized to greater extents in selected cases, and more and more patients are being referred to us to learn to walk properly or use whatever apparatus is necessary before their discharge. A striking example of this is in relation to the Amputation Clinic which includes representatives from the Orthopedic and Surgical Services, the Physical Medicine Department, and Social Service. Efforts are being made to see that patients are properly prepared for use of prostheses and are taught to use them when provided. The State Department of Rehabilitation, also, regularly refers such patients to us for these services. The problem of transportation and lack of space limit the extent of these procedures considerably, however. There has also been a distinct increase in the number of industrial accident cases sent to the department for both qualitative evaluation of function and for treatment to hasten rehabilitation.

In Occupational Therapy the number of patients treated has shown a slight increase. A new part-time therapist has been added to direct activities on the Children's Ward where it is felt that occupational therapy is particularly valuable. Another innovation has been a music program on Bulfinch 7 and the Burnham floors. It is hoped that occupational therapy may be extended to the convalescent patients at Storrow House in the near future. Many of our patients receive both physical and occupational therapy in a progressive fashion, particularly following disease or injuries involving locomotion or use of the hands. This represents the first step toward rehabilitation. We would like to see in the future a more widespread interest in accepted rehabilitation procedures which are at present beyond our scope, as only through insistence of doctors and patients will these things be developed. Vocational guidance and prevocational training in many instances should begin in the hospital as a part of the total medical care of the patient, and it is in this direction that we see a new avenue of growth in the Physical Medicine Department of this hospital.

Our educational endeavors have centered around the training of Fellows in Physical Medicine, to meet the requirements of the new specialty board and to prepare young men to accept responsible positions in many teaching institutions where this field is developing. There are three such Fellows now in the department and three have been trained here in the past, all of the latter now heading hospital and medical school departments of physical medicine. We are also busy in the training of physical and occupational therapists in the clinical aspects of these technical specialties. Students come to us from seven different schools in this country and from one in Canada.

To a large extent, the interns and residents on the other hospital services have very little close contact with us at present. We feel that much mutual benefit would be derived by a closer association, and we welcome it.

Our research problems are mostly confined to clinical studies of applications and techniques of various physical procedures. For example: an electronic manual strain gauge is being evaluated for quantitating muscle strength, and devices for utilizing progressive resistance exercises have been developed and their application studied. Combined research with the Brain Wave Laboratory on problems of neuromuscular dysfunction in poliomyelitis have been continued. We are also concluding a combined research project with the Psychiatric Department on problems of fatigue in psychoneurotic patients. The one piece of basic research has been on the effects of short-wave and micro-wave diathermy on the epiphyses of rats. Our laboratory facilities are not really adapted to this type of work, so in the main part it seems likely that our interest will reside chiefly in clinical problems related to physical medicine. Further advances in research, education, and rehabilitation are our aims for the future

Arthur L. Watkins, M.D.,
Chief of Physical Medicine

The Vincent Show, to benefit the Vincent Memorial Hospital, is already in rehearsal.

The Vincent Club, which started with thirty members in 1892, now has over thirteen hundred members, making it one of the oldest and largest hospital auxiliaries in Greater Boston. Last May, the Club turned over $38,000 to the Trustees of the Vincent Memorial Hospital, the largest sum the Club has ever raised in a single year. The greater part of this came from the proceeds of the Vincent Show.

This year, Miss Pamela Whitney is on leave of absence from her job as head of volunteers at the New England Deaconess Hospital to be our Show Chairman. The Show will take place, as usual, at New England Mutual Hall. The performances will be held on Tuesday through Saturday evenings, March 29 through April 2, at 8:30 o'clock. There will be a matinee Saturday afternoon at 2:30. Tickets will be on sale at New England Mutual Hall from March 7 through April 2. The Vincent Show Box Office telephone number is COmmonwealth 6-5023. The price of tickets ranges from $1.20 to $4.80.

Your attendance at this year's Vincent Show will assure you of an enjoyable evening and at the same time help in the support of one of the M.G.H.'s newer relatives.

Miss Sarah S. Reed, II,
President of the Vincent Club

A new book, of more than average interest to all of us, is just off the press. It is *The hospital in contemporary life,* edited by Dr. Faxon, and published by the Harvard University Press.

In his preface Dr. Faxon explains the purpose of the volume in these words:

"The hospital has become accepted in the United States as a necessary component of our contemporary social order. Yet few people have any knowledge or understanding of the function and complicated organization of hospitals, except that gained under the unnatural stress of sickness. This book endeavors to tell the layman something of what he should know about the past history, present operation, and future possibilities of hospitals. It includes contributions from eight members of the staff of the Massachusetts General Hospital and the faculty of the Harvard Medical School, revised from a series of lectures delivered in January 1948 under the sponsorship of the Lowell Institute in Boston. It is presented in the hope that it will promote a fuller understanding of the place of the modern hospital in the life of today and of the layman's responsibility for keeping it there."

The eight contributors and the subjects of their chapters are:

"The development of the hospital"—Edward D. Churchill, B.S., M.A., M.D., S.D., (hon.), John Homans Professor of Surgery, Harvard University, and Chief of the General Surgical Services, Massachusetts General Hospital.

"The relief of suffering" — Henry K. Beecher, A.M., M.D., Henry I. Dorr Professor of Research in Anesthesia, Harvard University, and Chief of the Anesthesia Service, Massachusetts General Hospital.

"Human nature and the understanding of disease" — Stanley Cobb, A.B., M.D., Bullard Professor of Neuropathology, Harvard University, and Chief of the Psychiatric Service, Massachusetts General Hospital.

"The care of the patient" — Leland S. McKittrick, S.B., M.D., Assistant Professor of Surgery, Harvard University, and Visiting Surgeon, Massachusetts General Hospital.

"The education of the doctor"—Oliver Cope, A.B., M.D., Assistant Professor of Surgery, Harvard University, and Visiting Surgeon, Massachusetts General Hospital.

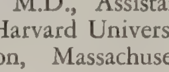
"How medicine grows and its relation to science" — Eugene M. Landis, S.M., M.D., Ph.D., George Higginson Professor of Physiology, Harvard University.

"Unsolved problems" — Joseph C. Aub, A.B., M.D., Professor of Research Medicine and Director of the Medical Laboratories of the Collis P. Huntington Memorial Hospital, and Physician to the Massachusetts General Hospital.

"The place of the hospital in the social order" — Nathaniel W. Faxon, A.B., M.D., Director of the Massachusetts General Hospital and Massachusetts Eye and Ear Infirmary.

Each chapter is followed by comprehensive notes and references.

This is not only an absorbing book for both layman and professional, but a valuable one to own for future reference.



The Board of Trustees, at their meeting on February 2, appointed Dr. Robert L. Berg as Chief Resident on the Medical Service for the period of one year, beginning January 1, 1950.

At their meetings on January 12, 19 and 26, and February 1, the General Executive Committee voted:

To promote Dr. Robinson L. Bidwell to the position of Resident on the Neurosurgical Service for six months, beginning January 1;

To change Dr. Gardner C. Quarton's appointment as Resident in Psychiatry to read "for the period April 1 through June 30."

To appoint:

Dr. Jean M. Beauregard as Clinical and Research Fellow in Medicine, to work with Dr. Walter Bauer;

Dr. George H. A. Clowes, Jr. as Clinical Assistant in Surgery, assigned to the Tumor Clinic;

Dr. Joseph Delfino as Graduate Student Assistant in Gynecology;

Dr. David Fisher as Clinical Fellow in Surgery;

Dr. Lucius A. Gessell as Research Consultant in Developmental Pediatrics, assigned to the Harvard Pediatric Study for the period January 1 through June 30;

Dr. Eugene Guralnick as Clinical Assistant in Surgery, assigned to the Tumor Clinic;

Dr. Hans G. Keitel as Clinical and Research Fellow on the Children's Medical Service for one year, beginning July 1;

Dr. Harry M. Klinger as Clinical and Research Fellow in Surgery for six months;

Dr. Albert S. Murphy as Clinical Assistant in Surgery, assigned to the Tumor Clinic;

Dr. John Nemiah as Resident in Psychiatry, for the period January 1 through March 31;

Dr. Edward P. Richardson, Jr. as Clinical Fellow in Neurology;

Dr. Eugene R. Shippen as Clinical Fellow in Psychiatry, beginning March 1;

Mr. Renato Tagiuri as Clinical Fellow in the Department of Anesthesia;

Dr. Marvin M. Wasserman as Clinical Fellow in Medicine, assigned to the Thyroid Clinic, as of January 1;

Dr. Frederick Wyatt as Research Fellow in Psychology for the year 1949.

To reappoint as Clinical Assistants for the year 1949:

Dr. W. Benjamin Bacon — Surgery
Dr. Martin J. Bellinger — Surgery
Dr. Winifred Chase — Medicine
Dr. William B. Clapp — Medicine
Dr. Clito R. Damiani — Dermatology
Dr. John J. D'Urso — Dermatology
Dr. Anne P. Forbes — Medicine
Dr. John L. Fromer — Dermatology
Dr. Emil J. Ganem — Urology
Dr. F. Thomas Gephart — Surgery
Dr. Basil C. Gray — Dermatology
Dr. William N. Jones — Orthopedic Surgery
Dr. Alfred T. Joseph — Surgery
Dr. Knowles B. Lawrence — Surgery
Dr. Theodore M. Leary — Surgery
Dr. Ralph H. Luikart, II — Dermatology
Dr. James R. Lyman — Medicine
Dr. Frederic B. Mayo — Medicine
Dr. Raymond E. Militzer — Surgery
Dr. John M. Morris — Surgery
Dr. Cecil Mushatt — Psychiatry
Dr. Abraham I. Perley — Dermatology
Dr. Eda A. Polcari — Medicine
Dr. Thomas S. Risley — Surgery
Dr. Aram Roopenian — Plastic Surgery
Dr. Raymond J. Savignac — Medicine
Dr. Arthur S. Spangler — Dermatology
Dr. Clarke Staples — Surgery
Dr. John B. Tompkins — Medicine
Dr. Charles K. Wainger — Dermatology
Dr. Edwin O. Wheeler — Medicine
Dr. Paul R. Withington — Medicine

Dr. G. Colket Caner (*WM* 1924), Neurologist at M.G.H., has been elected president of the Massachusetts Society for Mental Hygiene.

At the February 18 meeting of the MGH Research Council, Dr. Jordi Folch-Pi spoke on "Some new aspects of brain chemistry", and Dr. Thomas Paine, Jr. talked on "Antibiotics".

PLASTIC CLINIC

Under the leadership of Dr. Varaztad H. Kazanjian, the Plastic Clinic developed during the past three decades into the common meeting ground of staff members and visitors interested in plastic surgical problems. Because of mutual interests of men from the Massachusetts General Hospital and the Massachusetts Eye and Ear Infirmary, there has evolved a combined weekly Plastic Clinic session. Today representatives from the departments of Surgery, Ophthalmology and Oto-Laryngology, and from the Tumor Clinic are either in attendance or available for consultation. The several disciplines of the group members make possible valuable discussion of contemplated procedures, evaluation of different methods, and comparison of results.

In recent years much of the plastic surgery of the head and neck has gravitated to the Infirmary, and general plastic surgery is concentrated at the M.G.H. The separation of patients into these groups results in a somewhat unbalanced experience for the house officers of the two institutions who do not attend the weekly Clinic. The unquestioned value of a broader training of the house officers and the increasing number of requests for comprehensive advanced training in plastic surgery make consolidation of the whole program worthy of future consideration. An evidence of the desirability of this consideration is the appointment by the M.G.H. of a Clinical Fellow assigned to the Plastic Clinic for the year 1949. He has opportunities of studying patient care both at the Clinic and in the Hospital. Similar opportunities may be possible in the future for men seeking further specialized clinical experience if the teaching program proves to be adequate or can be further expanded.

Much of the work of the Plastic Clinic is done in collaboration with other Clinics. The members of the Dental Clinic are called upon for advice in the fixation of fractures of the face, for orthodontia in deformities of the alveolus and palate, and for help in reconstructive problems involving dental occlusion. The Speech Clinic is helpful in muscle re-education of the palate and pharynx following cleft palate repair.

The members of the Plastic Clinic in the Department of Surgery act in a consulting capacity to the various services at the M.G.H. Thus, congenital anomalies of the external genitalia have become a joint urological and plastic surgical problem. Patients with severe burns find their way to members of the Plastic Clinic for later care and for closure of raw surfaces. Reconstructive problems following radical surgery for malignant disease are supervised by a member of the Plastic Surgery Clinic. The Orthopedic, Fracture, and Neurosurgical Services not infrequently have occasion to call upon the Plastic Clinic for aid in the management of surface repairs. The Plastic Clinic is represented in the personnel of the Hand Clinic, where combined problems are often seen.

In collaboration with other services, the aim of the Plastic Clinic has been to teach the basic principles governing the management of various deformities. These principles have always come first, and the all-important details of individual patient care worked out at the bedside with the house officers.

With future expansion of the Plastic Clinic, it is hoped that the house staff may have experience with a greater variety of problems and methods of treatment. Many of the men assigned to Plastic Centers during World War II have contributed much in the civilian hospitals to which they returned either as house officers or as members of the staff. The experiences which these men had with major and minor post-traumatic reconstructive surgery are of real value, to both the general surgeon and the plastic surgeon. It is the responsibility of the Plastic Clinic to see that the broad concepts and the technical details of plastic surgery are taught to the new generation of house officers.

Bradford Cannon, M.D.,
Chief of Plastic Surgery Clinic

A VISIT TO THE NEW YORK UNIVERSITY-BELLEVUE MEDICAL CENTER

Through the kindly offices of Dr. William W. Beckman, now Assistant Dean of the New York University College of Medicine, I had the privilege of spending January as the Leopold Stieglitz Visiting Professor at that institution. This post has just been established by gifts from friends and patients of Dr. Stieglitz as a token of their affection for a beloved physician.

I found it a very invigorating, delightful, and profitable experience. The territory was not totally unfamiliar to me. As early as 1910, while still a medical student, I had been shown some of the medical wards at Bellevue, and I vividly remember a row of patients with pneumonia, done up like Eskimos, and in beds completely outdoors, exposed to the full force of a wintry blast right off the East River. It was thought for a brief time that that was the proper way to treat pneumonia! In 1916, also, I had spent some weeks with Dr. Eugene F. Du Bois in the little metabolism ward which he had set up under the aegis of the Russell Sage Institute of Pathology in the Cornell Division of Bellevue. The chief equipment of the ward was his famous Atwater-Benedict human calorimeter. Each day after a calorimeter experiment, some of which were run upon ourselves as subjects, we crossed First Avenue to the Cornell Medical College, to show the results to Professor (of Physiology) Graham Lusk who was the chief inspiration of the undertaking. This was not quite the beginning of my career in metabolism, but almost.

The old building of the Cornell Medical College, 477 First Avenue, was acquired by New York University in 1932, after Cornell had moved with the New York Hospital up to 69th Street and York Avenue. At the present time N.Y.U. is using not only the old Cornell building, but also the one which was previously the Bellevue Hospital Medical College, with which school it has fused. But all this is to be only temporary. New York University has very lately, through amendments to its charter and statutes, established, in conjunction with Bellevue Hospital, the New York University-Bellevue Medical Center which will consist of two medical colleges, one undergraduate and one graduate, a new university hospital, and about two-thirds of Bellevue's enormous clinical facilities. The University Hospital, which will be for private and semi-private patients, but available for teaching, and the medical colleges, will occupy new buildings on a three-block site along the East River adjacent to, and north of, Bellevue. Finally, a huge veterans' hospital will be built just south of Bellevue, so that the entire medical community will extend eight or nine blocks along the Roosevelt Parkway.

I was received with the greatest cordiality by both teachers and students of New York University Medical College. Each Thursday I had luncheon with the Dean and department heads, a group numbering 18 to 20. This small close-knit body of the faculty impressed me as very effective. It transacted much faculty business with both informality and dispatch, in a way impossible at Harvard with its highly decentralized arrangement. Some very able men are to be found around this table.

I was given the run of the place to do as I liked, and what I actually did was as follows. First off, I gave a lecture to the second year class which I entitled "A philosophy of case-taking". Then I gave at weekly intervals three lectures to the combined third and fourth year classes. The first was on Graves' disease, the second on peptic ulcer, and the third on phlebothrombosis. Each of these topics lent itself to joint medico-chirurgical treatment, and I was especially delighted that it was made possible to follow each of my lectures, the next day in each case, with a clinic on the same subject, in which the residents presented cases, and the Professor of Surgery, Dr. John H. Mulholland, and I batted the discussion back and forth between us.

A certain amount of my time in New York I spent preparing my lectures and clinics. It was wonderful to have the time to do this in leisurely fashion — to be able to go to the library without being called to the telephone. With Dr. William S. Tillett, Professor of Medicine, my immediate host, and with some of his associates, I made ward rounds with students, or house staff, on several occasions. Bellevue Hospital is a fabulous place — thirty-two hundred beds — all in public wards — long rows of beds close together down each side, and another row in the middle — cots everywhere — two or three visits going on at once. It sounds like bedlam, but everyone — doctors, nurses, students, social workers — was doing fine work, and the patients were well cared for and cheerful. We nearly tripped over a cot one morning on emerging from Dr. Tillett's office. He said when he finds one actually in his office he is going to protest.

At N.Y.U. the students are put on the wards as clinical clerks in their third year. As chairman of the Committee on Revision of the Curriculum at Harvard, I did my best, some years ago, to get this system adopted here, thus far without success. I was especially interested, however, to observe how third year students on N.Y.U.'s wards at Bellevue were able to get on. As far as I could see they were doing first class case work, and had an adequate grasp of fundamentals. I became more than ever convinced that the sooner medical students are given responsibility in the care of patients, the faster they learn medicine.

During the month I also had an opportunity to observe some of the important activities of the school and hospital. In the former, I had a particularly instructive experience in the biochemical department of Professor R. Keith Cannan, who invited me to the seminar which he held with his graduate students. He allowed me to select a paper, and turned his young people loose on it. I happened to have with me a manuscript on iodine metabolism by Keating and Albert, now both at the Mayo Clinic, but who formerly had both worked in our thyroid clinic. I gave them this as a topic for their disputation. It got a good going over, but in all important matters it stood up fairly well. Another day I attended a long medico-social conference in the preventive medicine department of Professor Henry E. Meleney. The group was getting at the problems presented very much as we do in our own medico-social gatherings.

A tour through Bellevue's new rehabilitation service was extraordinarily interesting. This enterprize, headed by an enthusiast in the person of Dr. Howard A. Rusk, is a civilian development of Army experience. All manner of paralyzed, legless or armless people, veritably the lame and the halt, are taken into this ward for re-education. Dr. Rusk has pointed out the enormous economic gain of restoring the handicapped to their maximum possible activity. In many instances the rehabilitation makes the difference between its being possible for the patient to return home, as against spending the rest of his life in an institution. The patients are carefully selected for this service. Only those who can develop a strong will to recover are accepted. I was greatly impressed with the fine morale of the patients and in how many cases they were helping one another. The equipment of the ward was remarkable, too. They even have the front end of a First Avenue bus, in order that patients can learn to climb on and off and pay their fare. If they can do this and some other things, they can get and hold a job. Employers appear to be definitely interested in giving jobs to handicapped persons. The handicapped are in some ways more dependable than those that are whole.

Of the many other interesting activities that I saw something of, I will mention but one. Dr. Tillett has been working for many years on lytic enzymes which he isolates from cultures of hemolytic streptococci. One of these, fibrinolysin, will liquify blood clots through a destructive action on their fibrin. Another has a similar action on nucleoproteins. Thus far, the agents have been used in humans chiefly in cases of hemo- or pyothorax (empyema). I saw several of the patients, and X-rays of many others. Pus is apparently made up, to a considerable extent, of nucleoprotein, and when Tillett's material is injected into the chest in a case of empyema full of thick pus, tuberculous or other, draining very poorly, in a matter of hours the entire exudate is liquified and becomes withdrawable or absorbable. In similar fashion, in an injured chest, full of blood clots, the pleural cavity can be cleared through the fibrinolytic action of the material injected. I am certain that this work is of extreme importance, and that it will have wide application, not only with respect to pleural lesions, but many others, also. Already a few observations have been made on osteomyelitis. It would seem that an agent which removes exudates that are hindering healing has been discovered, thus opening an altogether new approach in therapeutics.

These, then, are some of the high spots of my month in New York.

J. H. Means, M.D.

⁂

MEETING TO HONOR PROFESSOR ALEXANDER FORBES

The Eastern Association of Electroencephalographers voted at their meeting in Brookhaven, Long Island, October 23, 1948 to have a special meeting in honor of Professor Alexander Forbes of the Harvard Medical School and set the dates of this meeting as February 19 and 20, 1949. Dr. Eugene M. Landis, Professor of Physiology at Harvard Medical School, was delighted with this plan and facilitated the arrangements by offering the use of the lecture hall at the Medical School and agreed to open the meeting by an address of welcome. The Eastern Association of Electroencephalographers voted at this October meeting to invite, as the principal speaker, Professor Hallowell Davis, who for many years was associated with Dr. Forbes in neurophysiology and who is now in St. Louis, Missouri.

The program was arranged to include as many collaborators and colleagues of Dr. Forbes as could get together for the meeting. A dinner was planned by the Society for February 19, at the Hotel Continental, at which dinner Dr. Stanley Cobb would be toastmaster, and Professor Norbert Wiener, Dr. Richard H. Miller, and Dr. Alexander Forbes the speakers.

The background for the desire of this society to so honor Dr. Forbes is his contribution to the subject of neurophysiology, which is the basis of electroencephalography. Dr. Forbes was born in Milton in 1882. He graduated from Harvard College in 1904 and from the Harvard Medical School in 1910, having previously obtained an A.M. from Harvard in 1905. He was instructor in Physiology at Harvard, 1910-1921; he was Associate Professor of Physiology from 1921 to 1936, and Professor of Neurophysiology from 1936 until his retirement this past September 1948.

Dr. Forbes represents in this country the dean of the American school of Neurophysiology. His prominent work in this field began when he published his first neurophysiological paper on the "Reflex inhibition of the skeletal muscle", in 1912. He has published a distinguished group of seventy papers since that time, and his latest publication is on the program of the February meeting of the Eastern Association of Electroencephalographers — "Cerebral response to afferent stimuli as affected by barbiturate narcosis". This will be published in the new electroencephalographic journal, *Electroencephalography and clinical neurophysiology* in its second number.

It was in the laboratory of Dr. Forbes and under his influence that the first important work on electroencephalography in this continent began. In fact, in 1921, Dr. Macdonald MacPherson, working with Dr. Forbes, obtained electroencephalograms, but no publication of these results was ever made. Dr. Hallowell Davis and Dr. Gibbs began their work on the clinical application of electroencephalography in 1935 under the stimulation and help of Dr. Forbes.

One of the pleasant characteristics of great men is their breadth of interests and stimulating hobbies and collateral aptitudes. Not only is Dr. Forbes internationally famous as a neurophysiologist but he is a noted navigator, having published a classic in this field, called "Off shore navigation", in 1935.

He saw active service during the first World War. For 5½ years during the past war, he was on active duty with the United States Navy as an aerial explorer and surveyor of that stormy and treacherous area in the Atlantic between Nova Scotia and Labrador. He was an important spectator at the Bikini atom bomb performance. He was retired from the Navy with the rank of Captain. He is a skilled and competent yachtsman, whose famous Danish built schooner, *Stormsvala,* with its wishbone gaff, interested many people along these coasts. Even in his seventh decade, Dr. Forbes flies his own plane, and he is an expert in handling his plane amid the intricacies of commercial airports, direction finders, and all the other hazards of modern flying.

To illustrate the broadness of his writings — his first paper, published in 1905 with the late W. E. Castle, the famous geneticist, was entitled "The measurement of hair lengths in guinea pigs in relationship to the heredity of pure gametes".

Robert S. Schwab, M.D.

Several of our MGH staff were among the speakers at the two-day meeting.

MASSACHUSETTS EYE & EAR INFIRMARY

ANNUAL MEETING

Three new members — Mr. Thomas H. Hoare, Mr. William F. Keesler, and Mr. Huston Rawls — were elected to the Corporation at the Annual Meeting on February 9.

At the meeting, the President called attention to the fact that free care for the year 1948 cost the Infirmary $137,015, or the equivalent of both the hospital's income from endowments and allowance from the Community Fund. Also, about 90% of patients admitted to the hospital come for surgery — 6,093 operations having been performed during the year.

In the reappointments on the Ophthalmic Staff, the promotion of Dr. Brendan D. Leahey from Assistant Surgeon to Associate Surgeon was the only change made. The changes in appointments on the Oto-Laryngological Service included the appointment of Dr. Gustave B. Fred as Consulting Surgeon, to replace the late Dr. Calvin B. Faunce; the promotion of Dr. Maurice G. Evans from Associate Surgeon to Surgeon, Dr. Joseph Lentine and Dr. Burton E. Lovesey from Assistant Surgeons to Associate Surgeons, Dr. Edgar M. Holmes from Associate Surgeon for Plastic Operations to Surgeon for Plastic Operations, and Dr. Daniel Miller and Dr. George Kelemen from Clinical Assistants to Assistant Surgeons.

After the business meeting the members of the Corporation and Board of Managers heard a review of the new Retina Service by Dr. Charles L. Schepens.

Dr. Garrett L. Sullivan, Assistant Surgeon in Ophthalmology at the Infirmary and General Director of the Boston Eye Bank, delivered a speech on the Eye Bank at a meeting of the Belmont Chapter of the Lyons Club on February 8.

Dr. Edwin B. Dunphy, Chief of the Ophthalmological Service, will speak on "Ophthalmic problems of middle age" at the Annual Meeting of the National Society for the Prevention of Blindness on March 16, in New York City, after which he will travel to San Francisco to attend the meeting of the American Board of Ophthalmology on March 24.

V. Everett Kinsey, Ph.D., who is doing Eye Research work at the Infirmary, will also speak at the Annual Meeting of the National Society for the Prevention of Blindness, in New York City. His subject will be "Retrolental fibroplasia—Blindness in premature babies".

Dr. Henry T. Shaw, a graduate of Oxford University, sailed on February 18 from England, to start his residency in Oto-Laryngology at the Infirmary.

Dr. Bruce White, from Emory University, Pickens, South Carolina, spent two weeks at the Infirmary studying and observing in the Ophthalmological Department.

An exhibition explaining the Stone-Jardon Eye Implant, a movable plastic eye implant, was on display in the Brick Corridor at the M.G.H. during the early part of February.

The implant was developed by Dr. William Stone, Jr., who finished his residency at the Infirmary the last of January, and Mr. Fritz Jardon, of the American Optical Co., Southbridge, Massachusetts.

Dr. Stone won the Bronze Medal for original investigation for his exhibit at the Annual Meeting of the American Medical Association in Chicago last June.

* * *

Mrs. Shirley Nelson Shuman, one of our volunteers, has submitted this very interesting and moving account of some of her experiences while on duty in our Blood Bank.

DROPS OF KINDNESS

Once a week I devote an afternoon to the feeding of donors at the Blood Bank. This experience alone has made an altruist of me.

Side by side, these donors lie on cots behind an unsuccessful curtaining off from the rest of the basement. There is no real rest here. There cannot be. The overhead pipes and the dingy walls are hard on the eyes. The tramp of feet and the rise of workers' voices from beyond the curtain are hard on the ears. Yet, except for an occasional balking at rest in general, the donors do not complain. They come to donate blood as a means of saving a relative or friend or stranger. In that spirit of service, they accept conditions as they are, without asking questions.

They are happy as they enter the feeding room. "Been to all kinds of hospitals to give blood," is the usual comment, "but never had the expert service they give here. Why, they're whizzes—these doctors and nurses. Know their work like nobody's business. Could find my vein at a glance. At some other places I've been, they poked and pricked and still couldn't find it. . . . And they're human! When I entered, I was shaky, but it didn't take them long to make me feel at home. Kindliness and good humor go a long way."

In that spirit of unbending and unfolding, these donors tell many anecdotes that make one glow all over at the goodness of mankind —an attitude so particularly essential in these times of war hatchery, of distrust of nations and peoples, and of prejudice and antagonism.

Here are a few:

Five stalwart brothers lay side by side. They had donated their blood to save the life of a brother's mother-in-law. "It would be ghastly if she should die of that brain tumor operation," one of them told me. "We'll hang around in Boston for a while. One of us comes from California, another from Texas, and if she needs more blood we'll be here to give it."

A woman, with a face that an El Greco would have liked to have painted, confided in me. "It took me a long time to combat my anemia with liver. Ugh! When I think of it—all kinds of liver, even raw, and for breakfast, too! But I'm glad, for otherwise I would not be able to help my mother-in-law. She's such a fine old lady, so beautifully busy, until gangrene from her diabetes set in in her legs. She's had one leg amputated. Now the other is to go and she doesn't want to live. But she must. I'll keep at her so much that she'll want to."

From the far corner of the room came the restless movement of an Amazonian specimen of a woman. "It's a shame I should deprive someone else of the use of this bed—someone more in need of rest than I. You people here are wonderfully good to us. At some other places, we are not required to rest fifteen minutes. Personally, I can get along without it. I've given twenty-seven donations, during and since the war. If my neighbor knew I was giving another one, and for her, she would be upset. She asked me not to, before she went for her operation, knowing how much I've already given. But I figure what she doesn't know won't hurt her, and she's so run down she needs all the blood she can get. Besides, I've got so much of it, it would be a shame to hold onto it. As a matter of fact, I feel better after giving. Maybe it's because I'm so full-blooded." Her smile was like a benediction when she concluded.

Race consciousness becomes a figment of the imagination, as white and negro share and share alike. One quiet negro youth gave his twelfth donation for the Veterans Administration. When his period of relaxation was over, he inquired courteously about his type of blood, having been told at one place that it was A, and at another that it was O. "I know I can get the accurate information at this Blood Bank," he said, smilingly. "I have seen evidences of thoroughness and consideration here that are rarely matched elsewhere."

The same refinement was evidenced in a petite head nurse—a mulatto. "Don't bother giving me any beverage and crackers," she implored in mellifluent tones. "The Nurses' Home is close by. Save the refreshment for someone else. I can wait."

Class distinctions, also, are swept aside as the lowly laborer lies beside the aristocrat. Here—to paraphrase Dante—a man lowly born can indeed a noble become, for he immediately becomes noble because of his goodness in giving, and the low estate of his ancestors is forgotten. Blood makes brothers of man.

The contractor giving for a worker hurt on his construction job, the department head for a laborer, the engineer for a janitor, and—conversely—the painter for his boss, the maid for her mistress, the section hand for a railroad executive bear out the breaking down of barriers. Labor and capitalists take heed. Blood is thicker than money—or class.

Incidents are countless. A man came in the other day in overalls streaked with paint, right from his job, because he had heard while working that the wife of a *former* employer needed blood to undergo an operation. He could not hurry to the hospital fast enough to give his share.

Similarly, a man who had been driving his truck all night came in, sleepy-eyed but willing to contribute to the saving of a life—his sister's neighbor—a woman he had never seen.

Strange family troubles come to light in the letting of the blood. A man, who had been estranged from his wife, gave his eighth donation to save her life. A daughter, who was bitter against her father for his drunkenness, not only donated her own blood to succor him from a cirrhosis of the liver, but had rounded up for the same purpose relatives and neighbors as well.

Anonymous givers are legion. When newspapers carried an appeal for blood donations to help a little boy who was horribly burned, many who responded were people who did not know him, but answered through sheer kindness. To date, the little boy—now ten, who has spent five years in hospitals, with eighty transfusions to his record—is coming along slowly but surely, thanks to these very people.

Sometimes people will respond as a kindly gesture for the family of the recipient. One such was a young man, a fine specimen of manhood, who was giving his blood for a woman of thirty-three with third degree burns.

"She smouldered right through her quilted robe, but was too drunk to know it until morning. Cigarette smoking in bed did it."

"Do you think this experience will change her?" I asked.

"Not in the least. She'll drink harder than ever when she gets to looking like a human being again, and she'll make as big a mess of her life as she did before. Divorced three times already, but that won't keep her from being divorced three times more. She's got a lot of courage, though—cheerful and bright as if nothing had happened. You should see her—swathed in bandages beyond recognition. But you've got to hand it to her. Anyone who can smile as she does is someone special, in spite of her life. In fact, I'm going right up there now to say hello. And more—if she'll let me. . . . "

On another afternoon there were four hefty females who surrounded their puny brother-in-law. "Take good care of him. He's sweating, the poor thing. Scared as a rabbit before he came here. Better let him have a whiff of spirits of ammonia," they teased. Talk about the weaker sex!

Taking it by and large, the Blood Bank of the Massachusetts General Hospital is one of which the hospital can be inordinately proud. For its thoroughness of examinations of prospective donors, the doctors should take a bow. An accolade should also be bestowed upon the nurses, laboratory workers, secretaries, Gray Ladies, and volunteer workers for their fine precision and for their wonderful understanding and consideration of the patients. Naturally, these qualities are evidenced in abundant measure in the doctors, also.

That the donors are grateful for all that is done for them is something that the hospital should cherish. Time and again they express their appreciation. The finest compliment was paid the other day by a truck driver who came rushing in.

"No time to rest," he howled, after he had given his blood. "My truck is out there by the parking meter and I've got a job to do. What do you think I am—crazy? Me rest—and in the middle of the day!"

But he did rest—so well, in fact, that he fell asleep. When aroused, he rose sheepishly, ate his refreshments, and when he left, said, "Thank you for your very nice treatment, and thank them in *there,* also. By heck, you all make a man feel he's *something!*"

New addresses:—
